MISCELLANEOUS.

[COMMUNICATED.]

IN THESE DAYS OF PATENT QUACKERY and Humbug every worthy article finds some enterprising man who sees the chance to make it pay. It is subject to misapprehension that a valuable preparation of real merit has been able to make its way into popular favor, and that it owes its success to the puffing it has received. Such is not the fact with regard to the celebrated HOSTETTER'S CELEBRATED STOMACH BITTERS—an appeal with perfect confidence to the intelligent and enlightened portion of the commercial community of the Southern States, whose good sense and discrimination hereafter unknown. A few facts upon this point will speak more powerfully than volumes of high sounding and boastful puffery. The consumption of Hostetter's Stomach Bitters for the last year amounted to over half a million bottles, and from its manifest steady increase for times past, it is evident that during the coming year the consumption will reach some one million bottles. This immense amount would never have been sold but for the intrinsic medicinal properties contained in the preparation, and the mention of the most important physicians in those cases of the country where the article is best known, who not only recommend the Bitters to their patients, but are ready at all times to give testimonials to the efficacy in all cases of stomachic derangements and the diseases resulting therefrom.

This is not a temporary popularity obtained by extraordinary efforts in the way of transporting the qualities of the Bitters into the hands of the physicians, but a permanent institution, which is destined to be as enduring as time itself.

During the summer and fall the vicinity of Gout of our Atlantic streams is rendered extremely unhealthy by the deadly miasma which hangs over them. This is especially the case, to my nothing of the densely populated and filthy cities, where ship-fevers and cholera are quite prevalent. Hostetter's Stomach Bitters have proved a powerful antidote against the ravages of these and other kindred complaints. Have recently received from the agent here a large number of testimonials from distinguished chief officers by hundreds of Truthfulness Bitters, which I have given satisfactory the fact that the unequal powers of the Bitters to counteract the baneful effects of the miasma, the diseases, the malaria and through them the whole system, and thus arming the body against the insidious attack of the enemy to undermine it and destroy life, I can bring with it certain diseases of the stomach and bowels, which greatly increase the list of mortality. Not only will persons who are apparently flushed with health indulge in an unusual quantity of fruit, or fall victims to the effects of a sudden diarrhoea and dysentery, but the best of fruit will operate upon the system of the latter in the same way. Hostetter's Bitters are invaluable in such cases, and the Bitters have been found a speedy and certain remedy for diarrhoea, dysentery, and cholera, and a sure and speedy cure in warm weather a powerful preventive against cholera, dysentery, and certain other diseases, on account of its tonic properties, which are particularly adapted to the system of the Southern and Western States. Hostetter's Bitters has achieved such a wide reputation, that it is not necessary to have recourse to health by the ordinary means of advertising, whose all others known to physicians and the public. If operative upon the liver, stomach, and other digestive organs, mildly but powerfully and speedily restores them to a condition essential to the healthy discharge of the functions of a healthy nature. Hostetter's Bitters is nothing that can be compared to them—a valuable Bitters for certainty of action. Persons of sedentary habits are often driven to the use of stimulating liquors by bodily weakness, and the habit becomes inveterate, and the cause of our fellow-citizens is ruined in consequence. Hostetter's Bitters properly taken will obviate this result. It is potent as a cordial, and quite palatable to the taste, and acts upon the enfeebled frame of the drunkard with a wholesome influence, depriving the appetite for drink. Literary men and others whose occupation compels them to sit for long periods in sedentary and freak air, will find well by try this stimulating agent before having recourse to alcoholic drinks, and thus avoid the evil consequences. Invalids, who have been confined to the place of their vocation would find it an agreeable tonic for debility of action.
