Master Selection Guide

Where We Stand. . .

Total Customer Success

Service, speed and facility of response, product quality and reliability are the goals to which we are dedicated. Our commitment to progress such as Six Sigma performance and Cycle Time Reduction are symbolic of a culture in which Total Customer Success is, overwhelmingly, our primary objective.

In today's highly competitive market, selecting the most effective semiconductor components for a given application poses a significant challenge. The range of available functions and the sheer number of components within each unique product line is staggering. Add to this the number of vendors capable of satisfying a portion of the overall system demands and the selection of a cost–effective component complement can be as time consuming as the design of the system itself.

This is where Motorola occupies a unique position among semiconductor manufacturers – one that can significantly shorten the product selection cycle. Please consider these facts:

As a manufacturer of semiconductors since the very beginning of the technology, Motorola has emerged as a leading supplier of such components to the world market.

Motorola's product line is the *broadest* in the industry, capable of filling 75–80% of the many applications for semiconductor devices.

In each of its various product categories, Motorola is a recognized leader, with leading edge products as well as commodity products for mass applications.

Motorola's vast network of sales offices and distributors, augmented by manufacturing centers throughout the world, not only ensures easy communications, cost–effective pricing and rapid service, but guarantees a continuing stream of state–of–the–art products based on world–wide experience and demand.

How To Use This Guide. . .

This Selection guide is arranged to provide three–way assistance to engineers and technicians in making a first–order selection of components best suited for a specific circuit or system design.

If you have a device number that needs identification or if you want to know if Motorola manufactures a particular device type:

1. Turn to the Device Index for a complete listing of Motorola products, and the page numbers where more detailed information is given for these products.

If you have a device name or acronym and wish to know if Motorola makes such a device:

2. Look for it in the Subject Index.

If you want an overview of Motorola products for a specific product category:

3. Refer to the quick–reference product line guide located at the front of this publication or use the table of contents located at the front of each section.

Telephone Assistance, North America Only

For literature requests or general product information, call toll–free any weekday, 8:00 a.m. to 4:00 p.m., MST.

To order technical literature by specific document title, i.e., SGXX/D or DLXXX/D, or by part number only, call

1–800–441–2447

Non–North American Locations

Please contact your local Motorola Sales Office or Authorized Distributor.

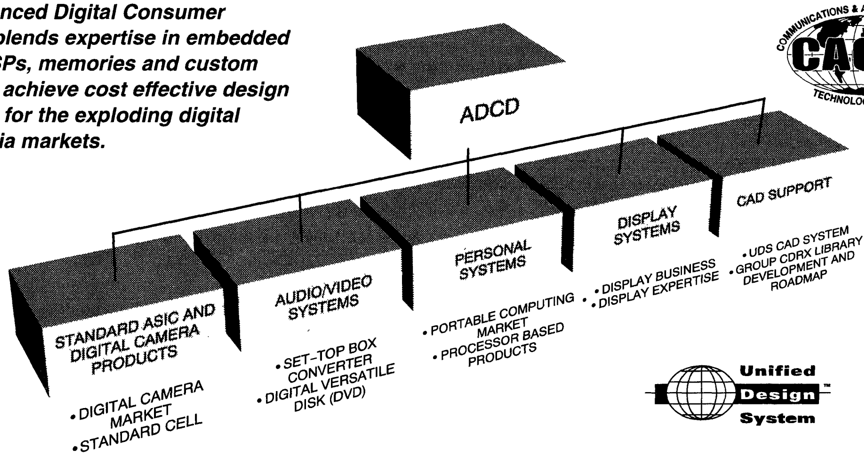
Advanced Digital Consumer Products

In Brief . . .

Motorola supports strategic programs and co–development partnerships to accelerate the availability of advanced digital consumer products.

Advanced Digital Consumer Division (ADCD) New Market Focus

The Advanced Digital Consumer Division blends expertise in embedded cores, DSPs, memories and custom silicon to achieve cost effective design solutions for the exploding digital multimedia markets.



Standard ASIC and Digital Camera Products

The ADC Division champions standard cell methodologies and libraries to provide a technology base for use across the Communications and Advanced Consumer Technologies Group (CACTG). The ADC Division is taking the lead role in the area of systems integration. Mixed (analog + digital) signal system integration is ideally suited to 'camera-on-a-chip' concepts for the digital camera market.

Audio/Video Systems

Focused to provide leadership products in multimedia markets, such as Set-Top Box (STB) converters, Advanced TV, and Digital Versatile Disk (DVD).

Set-Top Box Converters

One application of digital set-top boxes is in digital cable TV distribution networks. These systems expand the number of available channels while delivering high quality digital video and audio via cable to the home.

Cable operators are also offering high-speed data services for computer to computer communications. These modems make it possible for ordinary PCs to access the Internet at Ethernet speeds (10 Mbit/second) or higher.

Personal Systems

Personal Systems develops integrated microprocessors based on Motorola's 68K (M68328) and Embedded PowerPC™ (MPC821/MPC823) architectures for digital consumer products such as PDAs, Portable Clients, Smart Phones, Digital Cameras, and Web Appliances.

These highly integrated microprocessors include the peripherals most commonly required for these markets, such as LCD controller, serial interfaces, USB, IrDA, PCMCIA, etc. They provide solutions for systems requiring low cost, low power, and high performance using PowerPC™ and Embedded DSP to provide over 100 MIPS. By incorporating industry standard architectures these processors are backed by superior development tools and OS support. Some examples include Microware (OS–9), Microsoft (WindowsCE — 821/823 only), ISI (pSOS), WindRiver (VxWorks), Diab, SDS, Metrowerks, HP, Applied, and others. Personal Systems also provides reference designs for HandHeld PC, Digital Cameras and Web Appliances to shorten new product development time.

Display Systems

Products that provide best–in–class display system (flat panel and monitor) solutions for high growth, high volume communication and consumer electronic products. LCD Drivers for applications ranging from pager and cellular telephone displays to mid–range drivers for electronic translators, games, etc., to large LCD drivers for computer VGA displays.

CAD Support

Focused on developing next generation Cell-based libraries for delivery within the UDS design system.

Unified Design System (UDS 1.0 ASIC) – Now Available

The consumer marketplace is driven by low cost, high performance, and short development schedules. The UDS system rapidly takes a design from the system level to physical implementation, allowing designers more time to focus on system level design trade-offs and IC performance.

Now available to Sun, Solaris, and HP platform ASIC gate array customers. This CAD system is based upon the Open Architecture CAD System (OACS) and includes new graphical interfaces, silicon technology features, and enhancements to OACS tools.

Scorpion Chip (MC92100) Prototypes available – June '97

The MC92100 is a graphics display generator and digital video encoder for analog and digital video systems. The chip provides a highly integrated solution for Intelligent TV (iTV), Set-Top Box (STB), and Digital Versatile Disk (DVD) applications. The Scorpion chip support team offers customers the design talents of Motorola's Phoenix Technology Center combined with the silicon integration skills of the ADC Division.

Low Cost Plastic Ball Grid Array (LCPBGA) Packages – Now Available

The ADC Division is offering a new BGA family designed to match the cost of plastic QFP packages in the 100 - 200 lead range. The low cost BGA family presently includes packages with 100, 144, and 196 leads. The family employs a 1.0 mm solderball pitch which provides a very small, thin, and light package ideal for consumer products.

MPC821/MPC823 RISC Microprocessors and the MC68328 DragonBall™ Integrated Processor

The enhanced architecture of PowerPC™ microprocessors, created to drive the most powerful personal computers in the world, is now changing the world of embedded processing. It's the optimum solution any time:

- system performance is a principal goal,
- you need a range of software–compatible solutions that match your product's performance levels,
- you need a full computer architecture, or
- your product's software is closely related to PC software technology.

All embedded PowerPC™ microprocessors benefit — both technologically and economically — from their desktop heritage. Cutting–edge technologies are shared with desktop versions, from integral FPUs to the use of sub–half–micron process. And economies of scale make them more cost–effective than other RISC architectures.

MPC821 RISC Microprocessor

- Embedded PowerPC™ Core provides 66 MIPS (using Dhrystone 2.1) or 115K Dhrystones 2.1 at 50 MHz and 33 MIPS (using Dhrystone 2.1) or 58K Dhrystones 2.1 at 25 MHz
- Data Bus Dynamic Bus Sizing for 8–, 16–, and 32–Bit Busses
- Completely Static Design (0–50 MHz Operation)
- Four Baud Rate Generators
- Two Serial Communication Controllers (SCC)
- Two Serial Management Channels (SMCs)
- One Serial Peripheral Interface (SPI)
- One Interprocessor–Integrated Circuit (I(2)C) Port
- Time–Slot Assigner
- Parallel Interface Port
- General–Purpose Timers
- Memory Controller (Eight Banks)
- System Interface Unit (SIU)
- LCD Interface Controller
- PCMCIA Controller
- Low–Power Support
- Debug Interface
- 3.3 V Operation with TTL Compatibility on I/O Pins

MPC823 RISC Microprocessor

- Embedded PowerPC™ Core provides 66 MIPS (using Dhrystone 2.1) or 115K Dhrystones 2.1 at 50 MHz and 33 MIPS (using Dhrystone 2.1) or 58K Dhrystones 2.1 at 25 MHz
- Data Bus Dynamic Bus Sizing for 8–, 16–, and 32–Bit Busses
- Completely Static Design (0–50 MHz Operation)
- Two Baud Rate Generators
- One Serial Communication Controller (SCC)
- Two Serial Management Channels (SMCs)
- One Serial Peripheral Interface (SPI)
- One Interprocessor–Integrated Circuit (I(2)C) Port
- Time–Slot Assigner
- General–Purpose Timers
- Memory Controller (Eight Banks)
- System Interface Unit (SIU)
- LCD Interface Controller
- PCMCIA Controller
- Low–Power Support
- Debug Interface
- 3.3 V Operation with TTL Compatibility on I/O Pins

MC68328 DragonBall™ Integrated Processor

- Static 68EC000 Core
- PCMCIA Support
- LCD Controller
- Real Time Clock
- Pulse Width Modulator
- Serial Peripheral Interface
- UART
- Two 16–bit Timer/Counters
- 16 Chip Selects
- System Integration
- Low Power Consumption
- 24 Address Lines, 16 Data Lines
- 2.7 MIPS @ 16 MHz
- Available in 16 MHz
- Available in 3.3V

LCD Driver Product Summary

Part Number	Description	System	Application Examples	Display Size Examples	Package
Segmented LCD Driver for Low MUX Application					
MC14LC5003 MC14LC5004	4 MUX, total 128 Segments, Serial In 4 MUX, total 128 Segments, IIC	Low MUX, General MCU	Fax Machines, Pager, Digital Meter, Home Appliances	32 x 4	QFP, Bare die
DragonKat™ Series LCD Driver Kits with MC68HC05L10/L11					
MC141511A	DragonKat 1+ Slave Driver, 32/41 MUX, 128 Segments	DragonKat 1+ MC68HC05L10	Databank, Pager, Organizer, Games	128 x 32/41, 256 x 32/41	TAB, Bare die

MC141516 MC141518	64 MUX LCD Backplane Driver, 64 Backplane Outputs 64 MUX LCD Segment Driver, 80 Segment Outputs	DragonKat 2 MC68HC05L11, other MCU with SPI	Pager, Games, Dictionary	80 x 64, 160 x 64, 240 x 64	TQFP, Bare die
TFT LCD Driver Accepts RGB Signal Inputs					
MC141522 MC141524	TFT–LCD Gate (Row) Driver, 120 Row Outputs TFT–LCD Source (Column) Driver, 120 Column Outputs	Active LCD	Portable TV, Projector	480 x 240, 720 x 480	TAB
MC14158X Series LCD Driver with Commons, Segments, Annunciators "All In One" Chip					
MC141531 MC141532 MC141533 MC141535 MC141537 MC141539	17 Com, 120 Seg, 3 Annunciators 33 Com, 120 Seg, 4 Annunciators 33 Com, 120 Seg, 4 Annun, Split Com 17 Com, 161 Seg, 4 Annunciators 16 Com, 120 Seg, 3 Annunciators 32 Com, 120 Seg, 4 Annunciators	General MCU, 6800, 68K (Parallel Interface)	Mobile Communication Devices, Pager, Cellular, PHS	120 x 17 120 x 33 120 x 33 161 x 17 120 x 16 120 x 32	TAB, Bare die, Au bump die
300 MUX LCD Driver without Display DRAM					
MC141562 MC141563	LCD Common Driver, 100 Com o/p LCD Segment Driver, 80 Seg o/p	DragonBall™ MC68328, General MCU with LCD Controller	PDA, Palm–top, Sub–notebook	320 x 200, 320 x 240, 640 x 200	TAB, Au bump die
MC14180X Series LCD Driver for Cellular Phone/PHS Applications					
MC141800A	65 Common, 12B Segment o/p	General MCU, 6800, 68K (IIC, Parallel Interface)	Cellular Phone, PHS Large Display Pager	128 x 65, 128 x 64 plus 128 Icons	TAB, Au bump die

Monitor On Screen Display (MOSD)

Motorola's MOSD family includes **ES**(EMOSD & SMOSD) and **AG**(AMOSD2 & GMOSD) **pin–compatible** series which provide easy–to–use, sophisticated hardware to generate on screen display function for Monitor, LCD, TV and Display Systems. In **ES series**, either 128/256 number of font's device can be chosen and 8 real time programmable **RAM** are equipped for flexible icon design for different OEM models. For **AG series**, besides 128/256 font option, both devices provide a **SVGA** resolution display with maximum dot clock at **92.2MHz**. The two series offer DAC integration, programmable display resolutions and user–friendly display attribute controls. Users can freely choose Motorola MOSD devices to fulfill their full application spectrum: from low–end to high–end, from cost–sensitive to feature–oriented. In addition, **custom mask ROM** is welcome for tailor–made model design. Details of the MOSD devices can be found in the following section.

Scorpion Graphics Processor (MC92100)

Graphics Display Generator, SRAM Controller, and Digital Video Encoder – on a single chip

Scorpion is a graphic display generator and NTSC/PAL digital video encoder for analog and digital video systems including DVD, STB, and Internet TV applications. The display architecture has been designed to provide a high-quality television-oriented graphics overlay. The graphics overlay matches the resolution and color depth of the NTSC/PAL baseband video and optimizes memory usage. Scorpion can provide generation of true color graphics, mixing of video and graphics in 1.6% steps (64 different levels), and control and display on four image layers. Scorpion is controlled by high-level language instructions from a host processor (PowerPC™ or Coldfire™).

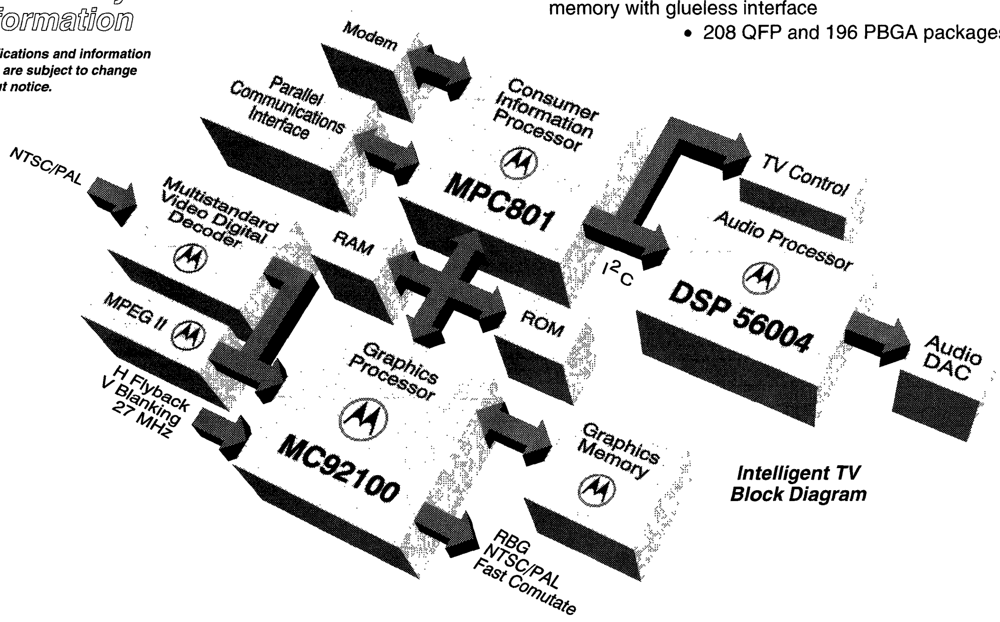
The digital video encoder accepts a CCIR-656 data stream with embedded synchronization codes or it may be genlocked with a television horizontal flyback and vertical synchronization signal. Scorpion supports both a composite and separate luma and chroma output (S-VHS) analog video generation, or composite and RGB. It also includes Macrovision™ generation of copy protection and a closed caption inserter for line 21.

MC92100 Features

- Graphics controller compatible with high-level languages
- Microware OS9000 (for PowerPC) MAUI dedicated software driver available
- Host processor interface for PowerPC and Coldfire
- True color graphics generator at VGA density with video/graphics mixing in 1.6% steps (64 levels)
- True color graphics generator for NTSC (720 x 480 pixels) and PAL (720 x 576 pixels)
- Selectable conversion from CCIR-656 aspect ratio to square pixels
- Selectable vertical filtering for flicker reduction
- Graphics matched to resolution and color depth of high-quality NTSC/PAL television graphics overlay
- Uses 12/16 bits per pixel to store images equivalent to 24-bit-per-pixel computer images and CCIR-601 data streams and/or a 2/4/8-bit color look-up table (CLUT)
- Maximum of two viewports on any horizontal line
- Multiple viewports vertically
- Supports four image levels including video, two viewports, and hardware cursor
- Graphics display requires less than 30% of memory bandwidth per viewport, allowing rapid processor updates
- Digital video encoder for converting CCIR-656 to composite and S-VHS analog video
- Macrovision generator for copy protection and closed caption inserter for line 21 data
- SDRAM controller for shared system and graphics memory with glueless interface
- 208 QFP and 196 PBGA packages

Preliminary Information

Specifications and information herein are subject to change without notice.



Intelligent TV Block Diagram

M5C™ Series Gate Arrays/M5CB™ Series Standard Cells

Deep Sub-Micron CMOS Process

The M5C/CB Series feature performance optimized 3.3 V and 5 V tolerant I/O capability, high-speed interfaces, and analog PLLs for chip-to-chip clock skew management. The gate length has been reduced to 0.45 µm nominal Leff to provide improved 3.3 V performance.

The M5C/CB Series utilizes Motorola's standard 0.5 micron CMOS process for logic, the same one used for products like the 68060 and low power 68040. The process has advanced features such as tungsten plugged, stacked vias and contacts, and planarized metalization.

High-speed SCI-LVDS, GTL, PCI and PECL macros offer enhanced chip-to-chip communication. Motorola's SCI-LVDS (Low-Voltage Differential Swing) interface enables differential operation up to 311 MHz. Analog PLLs may be embedded into three corners of the die for on-chip 50% duty cycle clock signals up to 175 MHz with only 250 ps jitter plus phase error, which provides on-chip clock synthesis.

The M5C/CB Series offers a large selection of diffused SRAM blocks through the FeliX™ Compiler. FeliX can generate a variety of word and bit length combinations in synchronous single-and dual-port RAMs.

M5C/CB Series Features

- 0.45 µm effective gate length process, triple-layer metal
- Typical gate delay of 240 ps at 3.3 V (CMND20, FO=2)
- Performance optimized 3.3 V core
- Low power of 1 µW/gate/MHz at 3.3 V
- Multiple VDD rails for the core and 3.3 V outputs
- Cell library optimized for efficient logic synthesis
- Single-, and dual-port metal and diffused SRAM compilers
- Contact programmable ROM compiler
- Internal macros characterized from 1.4 to 3.6 volts
- High-speed SCI-LVDS, GTL, PCI and PECL interface macros
- Full support of DFT and SCAN methodology; JTAG/Boundary Scan embedded in periphery
- Clock tree synthesis with clock skew management through optional embedded analog PLL macro functions for clocks up to 175 MHz at 3.3 V with a 50% duty cycle
- Powerful design environment using Mentor Graphics, Synopsys, Cadence Design Systems, Viewlogic, and Motorola's design tools
- Advanced plastic - BGA, Tape Ball Grid Array (TBGA), MQUAD, thermally enhanced QFP and PQFP packaging

M5C Series Features	Available Gates	No. of Die Pads	I/O Cells	Package Pins

H4EPlus™ Series Gate Arrays

Enhanced Density Mixed-Voltage Environments

The H4EPlus Series arrays offer a fully featured 3.3 V, 5 V and mixed-voltage capable family combined with an increased core density providing over 50% more gates in the same die area as Motorola's H4CPlus Series. It offers a wide range of mixed-voltage I/Os, high-speed interfaces, and analog PLLs for clock skew management. The gate length of 0.65 μm nominal Leff provides a competitive 3.3 V performance, with increased performance at 5 V.

The low- and mixed-voltage capability allows designers to customize the H4EPlus arrays to fit power and performance needs. All H4EPlus arrays have dual VDD rails, with custom power/ground tying, to provide full 3.3 V, 5 V and mixed-voltage I/O capability. Additionally, the core logic may be powered at either 3.3 V or 5 V.

High-speed CMTL™, GTL™, PCI and PECL macros offer enhanced chip-to-chip communication. Motorola's CMTL (Current Mode Tranceiver Logic™) have optional internal active termination and support differential clock rates of up to 300+ MHz. GTL, PCI and PECL are available for interfacing to standard logic and RAMs.

Each array can have up to two APLL (Analog Phased Lock Loop) macros with separate APLL power pins for lower noise and phase jitter. No external components are required since the VCO filter is built in. These can be used in applications such as clock synthesis with a worst–case VCO frequency of 70 to 250 MHz.

H4EPlus Series Features

- 0.65 μm Leff, channelless, triple-layer metal gate arrays
- 8,056 to 278,304 available gates
- Typical gate delay of 280 ps at 5 V and 420 ps at 3.3 V (NAN2, FO=2)
- Low power, 1 μW/gate/MHz (3.3 V), 3 μW/gate/MHz (5 V)
- 3.3 V, 5 V or mixed system and core voltage levels
- Custom power bus tying and ground bus isolation for special power needs
- Configurable I/O cell supports 2 to 24 mA, up to 48 mA using dual I/O cells
- PCI compliant 5 V and 3.3 V I/O buffers (5 V tolerant), 3 V I/O macros, and 5 V I/O fail-safe macros
- Differential and single-ended GTL I/O and PECL input macros
- Analog PLL with 70 to 250 MHz worst-case VCO frequency
- DFT methodology support (JTAG, BIST, LSSD, and ESSD)
- JTAG 1149.1 boundary scan built into I/O macros
- Single-, dual-, and quad-port metal SRAMs at 3.3 V and 5 V
- Single-, and dual-port diffused SRAMS
- Powerful design environment using Mentor Graphics, Cadence Design Systems, Synopsys, Quad Design Technology, and Motorola design tools
- GTPAC™ ball-grid array, Thin QFP, Thermally Enhanced QFP, PLCC, and Ceramic BGA packaging

Optimum Design, Service and Support

Motorola has established a worldwide network of ADC design centers to serve the design and applications needs of its customers. The centers provide support at all phases of your semi-custom design. Skilled designers provide training for Motorola's ADC design flows, as well as applications support for CAD and silicon issues during the design process.

Microcomputer Components

In Brief . . .

Motorola continues to be a leading supplier of components for microcomputer systems. The product portfolio includes digital signal processors; CISC and RISC and PowerPC advanced microprocessors and complementary full–function peripherals; a comprehensive selection of high–performance microcontrollers; VLSI functions for Local Operating Network applications; and a broad range of fast static RAM and dynamic RAM chips and modules.

Our commitment is to provide state–of–the–art devices as well as continuing support of established products, with six–sigma quality and total customer satisfaction.

Digital Signal Processors

In Brief . . .

Drawing on both design excellence and expertise in manufacturing, Motorola has created a range of architecturally compatible Digital Signal Processing chips. The philosophy behind the DSP families has been to create compatibility between products, as well as to conform to international standards.

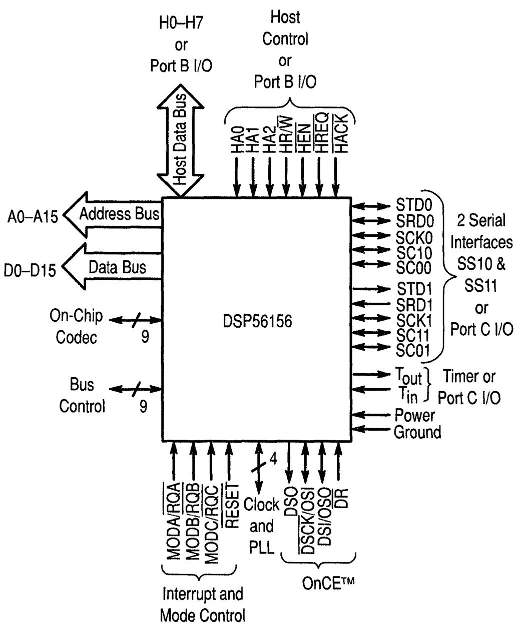
Motorola offers a complete portfolio of 16- and 24-bit fixed point and 32-bit floating point DSPs.

In addition, we offer a comprehensive array of development tools to give the designer access to the full power and versatility of the DSPs with minimum fuss. All the tools were designed for ease of use and functionality. They provide a low-cost means of evaluation and greatly simplify the design and development phase of a DSP project.

16-/24-/32-Bit Families—Your Complete DSP Solution

DSP56100—16-Bit Digital Signal Processors

The DSP56100 family of HCMOS, low-power, 16-bit fixed point general-purpose Digital Signal Processors (DSPs) is ideal for high end speech coding, telecommunications, and control applications. The first DSP56100 family member, the DSP56156, combines the high-speed core with 8 K bytes RAM, two serial ports, one parallel port, codec, Phase-Lock Loop (PLL), and an On-Chip Emulation port (OnCE™). The DSP56166, the second member of the DSP56100 family, has identical package and pinout to the DSP56156 with different memory configuration and peripherals.



PART NUMBERS

Part	Description
XC56156FV40	40 MHz in TQFP
XC56156FV50	50 MHz in TQFP
XC56156FE60	60 MHz in CQFP
XC56166FV60	60 MHz in TQFP

DSP56156 BENCHMARKS

Benchmark	Instruction Cycles
Real FIR Filter with Data Shift	1 per Tap
LMS Adaptive Real FIR Filter	2 per Tap
Double Integration Sinewave Generation	2 per Sample
Complex FIR Filter with Data Shift	4 per Tap
General Lattice Filter	4 per Tap
Real Cascaded IIR Biquad Filter Sections (4 coeff.)	5 per Section
PID Loop	5
Double Precision Multiply	6
[1 × 3][3 × 3] Matrix Multiplication	21

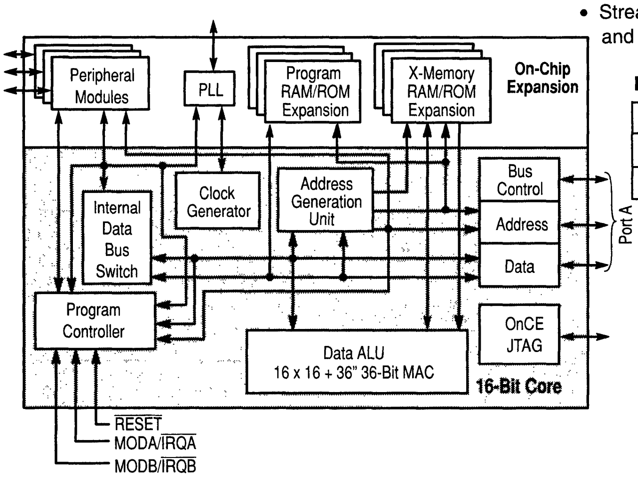
DSP56100 Features

- Up to 30 Million Instructions Per Second (MIPS) at 60 MHz; 33.3 ns Instruction cycle
- Single-cycle 16 x 16-bit parallel Multiply-Accumulate
- 2 x 40-bit accumulators with extension byte
- Fractional and integer arithmetic with support for multiprecision arithmetic
- Highly parallel instruction set with unique DSP addressing modes
- Nested hardware DO loops, including infinite loops and DO zero loop
- Two instruction LMS adaptive filter loop
- Fast auto-return interrupts
- Three external interrupt request pins
- Three 16-bit internal data and three 16-bit internal address buses
- Individual programmable wait states on the external bus for program, data, and peripheral memory spaces
- Off-chip memory-mapped peripheral space with programmable access time and separate peripheral enable pin
- On-chip memory-mapped peripheral registers
- Low power Wait and Stop modes
- OnCE port for unobtrusive, processor speed independent debugging
- Operating frequency down to DC
- 5 V single power supply
- Low power (HCMOS)

DSP56800—16-Bit Digital Signal Processors

The DSP56800 core family is the first architecture designed to enable digital signal processing and embedded microcontroller functionality. This multi-functional approach supports applications requiring both signal processing and control functionality, such as wireless messaging, digital answering machines, feature phones, and low-cost wireline modems.

The first two DSP56800 family members, the DSP56L811 and DSP56L812 are identical except for memory configuration. The DSP56L811 contains 1 K of Program RAM and 2 K of data RAM. The DSP56L812 features 22 K of Program ROM, 2 K of data ROM and 2 K of data RAM.



DSP56800 Features

- 20 MIPS at 40 MHz
- 3.3 volts
- Three 16-bit timers
- Two Serial Peripheral Interfaces (SPIs)
- Serial Synchronous Interface (SSI)
- JTAG OnCE™ Port
- Phase-Lock Loop
- Sixteen – thirty-two general purpose input/output pins. (Sixteen dedicated and sixteen shared with peripherals)
- External bus interface to allow for additional memory
- Support for high-level C and C++ programming languages
- Streamlined instruction set featuring frequently used DSP and microcontroller codes, as well as control extensions

XC56L812BU40	40 MHz in TQFP

DSP56000—24-Bit Digital Signal Processors

The DSP56000 family of 24-bit, fixed point, general purpose Digital Signal Processors is Motorola's original DSP family and has set the standard for high end DSP devices with its triple Harvard architecture of seven internal buses and three parallel execution units—Data ALU, Address Generation Unit, and Program Controller. Motorola has retained architectural compatibility with the 24-bit family into the 16-bit DSP56100 and 32-bit DSP96002 products helping to preserve our customer software investment.

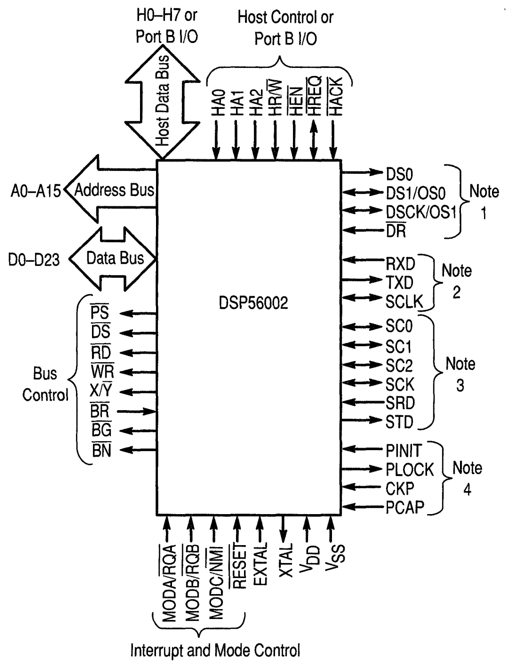
The DSP56000 family of HCMOS, 24-bit DSP devices consists of the DSP56002, DSP56L002, DSP56004, DSP56005, DSP56007, DSP56L007, DSP56009, and the transitional DSP56001A. All these products are source code compatible and are used extensively in telecommunications, control, and audio applications. The DSP56000 family's unique 24-bit architecture has made these products the industry standard for CD-quality digital audio processing.

The DSP56L002 and DSP56L007 low-voltage devices operate at 3.3 volts, which effectively extends the battery life of portable applications up to three times longer than 5 volt systems.

DSP56002 BENCHMARKS

Benchmark	Instruction Cycles
Real FIR Filter with Data Shift	1 per Tap
Two Dimensional Convolution (3 × 3 coeff. mask)	1 per Output
LMS Adaptive Real FIR Filter	3 per Tap
Real Cascaded IIR Biquad Filter Sections (4 coeff.)	4 per Section
Complex FIR Filter with Data Shift	4 per Tap
[1 × 3][3 × 3] Matrix Multiplication	17
Division	28
Leroux-Gueguen LPC Analysis:	
8th Order	473
10th Order	622
16th Order	1203

DSP56000—24-Bit Digital Signal Processors (continued)



NOTES:
1. On-Chip Emulation port (OnCE™)
2. SCI Serial or Port C I/O
3. SSI Serial or Port C I/O
4. Phase Lock Loop (PLL)

DSP56000 Family Features

- On-chip Harvard architecture permitting simultaneous accesses to program and two data memories
- Two 56-bit accumulators including extension byte
- Parallel 24 x 24-bit multiply-accumulate (MAC) in 1 instruction cycle (2 clock cycles)
- Double precision 48 x 48-bit multiply with 96-bit result in 6 instruction cycles
- 56-bit addition/subtraction in 1 instruction cycle
- Fractional arithmetic with support for multiprecision arithmetic
- Hardware support for block-floating point FFT
- Hardware nested DO loops
- Zero-overhead fast interrupts (2 instruction cycles)
- On-Chip Emulation (OnCE) port for unobtrusive, processor speed-independent debugging
- Software-programmable, Phase Lock Loop (PLL) based frequency synthesizer for the core clock
- On-chip peripheral registers memory mapped in data memory space
- Double-buffered peripherals
- Power-saving Wait and Stop modes

DSP56002 Features

- 512 x 24-bit on-chip Program RAM and 64 x 24-bit bootstrap ROM
- Two 256 x 24-bit on-chip data RAMs
- Two 256 x 24-bit on-chip data ROMs containing sine, A-law, and μ-law tables
- External memory expansion with 16-bit address and 24-bit data buses
- Bootstrap loading from external data bus, Host Interface (HI), or Serial Communication Interface (SCI)
- Byte-wide HI with Direct Memory Access (DMA) support
- Synchronous Serial Interface (SSI) to communicate with codecs and synchronous serial devices
  - 8-, 12-, 16-, 24-bit word sizes
  - Up to 32 software-selectable time slots in network mode
  - SCI for full-duplex asynchronous communications
  - 24-bit Timer/Event Counter also generates and measures digital waveforms
  - Up to twenty-five General Purpose Input/Output (GPIO) pins
  - Three external interrupt request pins; one non-maskable
  - 3.3 V (DSP56L002) and 5 V (DSP56002) power supply options

DSP56004/DSP56007 Features

- Serial Audio Interface (SAI) includes 2 receivers and 3 transmitters, master or slave capability, and implementation of I2S, Sony, and Matshushita audio protocols; two sets of SAI interrupt vectors
- Serial Host Interface (SHI) features single master capability, 10-word receive FIFO, and support for 8-, 16-, and 24-bit words
- External Memory Interface (EMI) peripheral providing glueless connection to DRAM, SRAM, and/or EPROM for audio delay buffering
- Four dedicated, independent, programmable GPIO lines
- DSP56004 memory: 512 words Program RAM, 2 x 256 words data RAM, 2 x 256 words data ROM
- DSP56007 memory: 6400 words Program ROM, 3200 words data RAM, 1024 words data ROM
- 3.3 V power supply option available (DSP56L007)
- Bootstrap loading via I2C, SPI, or byte-wide memory modes available
- Up to twenty-five GPIO pins

DSP56000—24-Bit Digital Signal Processors (continued)

DSP56005 Features

- Five Pulse Width Modulators (PWM)
- 24-bit timer/event counter also generates and measures digital waveforms
  - — Three with alternate outputs; two with open drain or TTL outputs
  - — 9-bit to 16-bit data width
  - — Alternate outputs independently selectable as active high or active low
- 16-bit Watchdog timer
- 4608 x 24-bit on-chip Program RAM and 96 x 24-bit bootstrap ROM
- Two 256 x 24-bit on-chip data RAMs
- Two 256 x 24-bit on-chip data ROMs, containing sine and arc-tangent tables
- External memory expansion with 16-bit address and 24-bit data buses
- Bootstrap loading from external data bus, Host Interface, or Serial Communication Interface

DSP56009 Features

The memory configurations available differentiate this DSP from the other family members. The DSP core is fed by a large Program ROM, two independent data RAMs, two data ROMs, a Serial Audio Interface, Serial Host Interface, External Memory Interface, dedicated I/O lines, on-chip Phase Lock Loop (PLL), and On-Chip Emulation (OnCE™) port.

- Completely pin compatible with DSP56004 and DSP56007 for easy upgrades
- 5 V power supply
- On-chip Harvard architecture permitting simultaneous accesses to program and two data memories
- 10240 x 24-bit on-chip Program ROM*
- 4608 x 24-bit on-chip X data RAM and 3072 x 24-bit on-chip X data ROM*
- 4352 x 24-bit on-chip Y data RAM and 1792 x 24-bit on-chip Y data ROM*
- 512 x 24-bit on-chip Program RAM and 64 x 24-bit bootstrap ROM
- Up to 2304 x 24-bit from X and Y data RAM can be switched to Program RAM giving a total of 2816 x 24 bits of Program RAM
- Bootstrap loading from Serial Host Interface or External Memory Interface

*These ROMs may be factory programmed with data/program provided by the application developer.

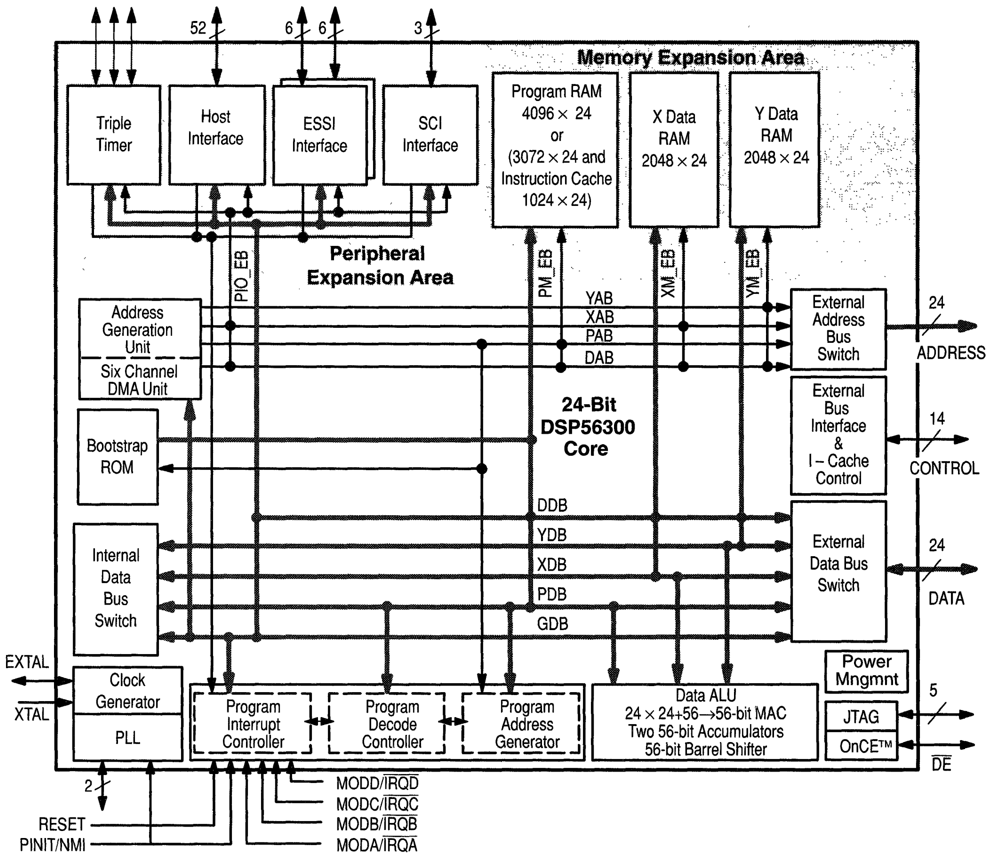
DSP56300—24-Bit Digital Signal Processors

The first programmable Motorola DSP product to provide a true single-clock-cycle execution, the DSP56300 core effectively doubles the number of instructions executed without increasing clock speed, providing 80 MIPS of performance at 80 MHz, while retaining code compatibility with the rest of the Motorola DSP offerings. The DSP56300 family offers a new level of performance in MIPS, a rich instruction set and low power dissipation, enabling a new generation of products in wireless, telecommunications, and multimedia.

Several significant architectural enhancements include a barrel shifter, 24-bit addressing, instruction cache, and DMA functionality. The DSP56301 offers 66/80 MIPS using an internal 66/80 MHz clock at 3.0–3.6 V.

DSP56301 Features



High Performance DSP56300 Core

- 66/80 Million Instructions Per Second (MIPS) with a 66/80 MHz clock at 3.3 V
- Object code compatible with the DSP56000 core
- Highly parallel instruction set
- Data Arithmetic Logic Unit (ALU)
  - Fully pipelined 24 x 24-bit parallel Multiplier-Accumulator
  - 56-bit parallel barrel shifter (fast shift and normalization; bit stream generation and parsing)
  - Conditional ALU instructions
  - 24-bit or 16-bit arithmetic support under software control
- Program Control Unit (PCU)
  - Position Independent Code (PIC) support
  - Addressing modes optimized for DSP applications (including immediate offsets)
  - On-chip instruction cache controller
  - On-chip memory-expandable hardware stack
  - Nested hardware DO loops
  - Fast auto-return interrupts
- Direct Memory Access (DMA)
  - Six DMA channels supporting internal and external accesses
  - One-, two-, and three- dimensional transfers (including circular buffering)
  - End-of-block-transfer interrupts
  - Triggering from interrupt lines and all peripherals
- Phase Lock Loop (PLL)
  - Allows change of low power Divide Factor (DF) without loss of lock
  - Output clock with skew elimination
- Hardware debugging support
  - On-Chip Emulation (OnCE™) module

— Joint Action Test Group (JTAG) Test Access Port (TAP) port
— Address tracing mode reflects internal Program RAM accesses at the external port

On-Chip Memories

- 4096 × 24-bit Program RAM (or, if the cache option is enabled, 1024 × 24-bit Instruction Cache and 3072 × 24-bit Program RAM)
- 2048 × 24-bit X data RAM
- 2048 × 24-bit Y data RAM
- 192 × 24-bit bootstrap ROM

Off-Chip Memory Expansion

- Data memory expansion to two 16 M x 24-bit word memory spaces
- Program memory expansion to one 16 M x 24-bit words memory space
- External memory expansion port
- Chip Select Logic for glueless interface to SRAMs and SSRAMs
- On-chip DRAM Controller for glueless interface to DRAMs

On-Chip Peripherals

- 32-bit parallel PCI/Universal Host Interface (HI32), PCI Rev. 2.1 compliant with glueless interface to other DSP563xx buses
- ISA interface requires only 74LS45-style buffer
- Two Enhanced Synchronous Serial Interfaces (ESSI)
- Serial Communications Interface (SCI) with baud rate generator
- Triple timer module
- Up to forty-two programmable General Purpose Input/Output pins (GPIO), depending on which peripherals are enabled

Reduced Power Dissipation

- Very low power CMOS design
- Wait and Stop low power standby modes
- Fully-static logic, operation frequency down to 0 Hz (DC)
- Optimized power management circuitry (instruction-dependent, peripheral-dependent, and mode-dependent)

Target Applications

The DSP56301 is intended for general-purpose digital signal processing, particularly in multimedia and telecommunication applications, such as videoconferencing and cellular telephony.

Product Documentation

The three documents listed in the following table are required for a complete description of the DSP56301 and are necessary to design properly with the part. Documentation is available from one of the following locations (see back cover for detailed information):

- A local Motorola distributor
- A Motorola semiconductor sales office
- A Motorola Literature Distribution Center
- The World Wide Web (WWW)

See the **Additional Support** section of the *DSP56300 Family Manual* for detailed information on the multiple support options available to you.

DSP56301 DOCUMENTATION

Name	Description	Order Number
DSP56300 Family Manual	Detailed description of the DSP56300 family processor core and instruction set	DSP56300FM/AD
DSP56301 User's Manual	Detailed functional description of the DSP56301 memory configuration, operation, and register programming	DSP56301UM/AD

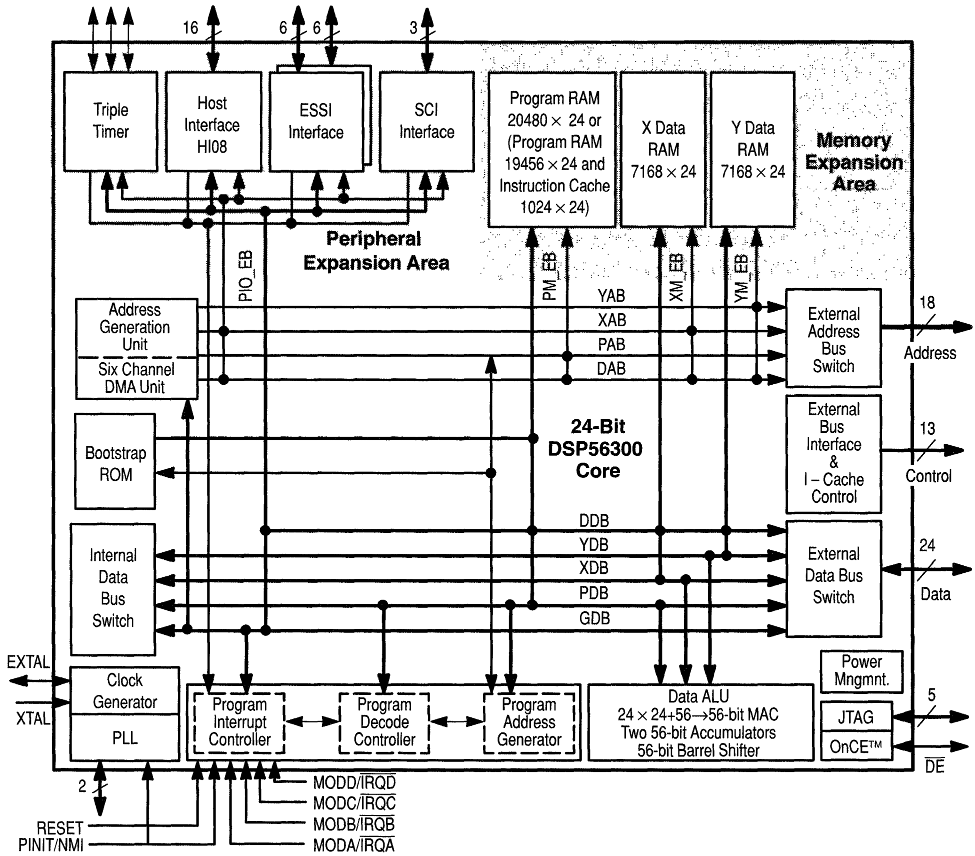
DSP56300—24-Bit Digital Signal Processors (continued)

DSP56302 Features



High Performance DSP56300 Core

- 66 Million Instructions Per Second (MIPS) with a 66 MHz clock
- Object code compatible with the DSP56000 core
- Highly parallel instruction set
- Data Arithmetic Logic Unit (ALU)
  - — Fully pipelined 24 x 24-bit parallel multiplier-accumulator
  - — 56-bit parallel barrel shifter (fast shift and normalization; bit stream generation and parsing)
  - — Conditional ALU instructions
  - — 24-bit or 16-bit arithmetic support under software control
- Program Control Unit (PCU)
  - — Position Independent Code (PIC) support
  - — Addressing modes optimized for DSP applications (including immediate offsets)
  - — On-chip instruction cache controller
  - — On-chip memory-expandable hardware stack
  - — Nested hardware DO loops
  - — Fast auto-return interrupts
- Direct Memory Access (DMA)
  - — Six DMA channels supporting internal and external accesses
  - — One-, two-, and three-dimensional transfers (including circular buffering)
  - — End-of-block-transfer interrupts
  - — Triggering from interrupt lines and all peripherals
- Phase Lock Loop (PLL)
  - — Allows change of low power Divide Factor (DF) without loss of lock
  - — Output clock with skew elimination

DSP56300—24-Bit Digital Signal Processors (continued)

- Hardware debugging support
  - On-Chip Emulation (OnCE™) module
  - Joint Action Test Group (JTAG) Test Access Port (TAP) port
  - Address tracing mode reflects internal accesses at the external port

On-Chip Memories

- Program RAM, Instruction Cache, X data RAM, and Y data RAM size is programmable

Instruction Cache	Switch Mode	Program RAM Size	Instruction Cache Size	X Data RAM Size	Y Data RAM Size
disabled	disabled	20480 × 24-bit	0	7168 × 24-bit	7168 × 24-bit
enabled	disabled	19456 × 24-bit	1024 × 24-bit	7168 × 24-bit	7168 × 24-bit
disabled	enabled	24576 × 24-bit	0	5120 × 24-bit	5120 × 24-bit
enabled	enabled	23552 × 24-bit	1024 × 24-bit	5120 × 24-bit	5120 × 24-bit

- 192 x 24-bit bootstrap ROM

Off-Chip Memory Expansion

- Data memory expansion to two 256 K x 24-bit word memory spaces
- Program memory expansion to one 256 K x 24-bit words memory space
- External memory expansion port
- Chip Select Logic for glueless interface to SRAMs and SSRAMs
- On-chip DRAM Controller for glueless interface to DRAMs

On-Chip Peripherals

- Enhanced DSP56000-like 8-bit parallel Host Interface (HI08) supports a variety of buses (e.g., ISA) and provides glueless connection to a number of industry standard microcomputers, microprocessors, and DSPs
- Two Enhanced Synchronous Serial Interfaces (ESSI), each with one receiver and three transmitters (allows six-channel home theater)
- Serial Communications Interface (SCI) with baud rate generator
- Triple timer module
- Up to thirty-four programmable General Purpose Input/Output (GPIO) pins, depending on which peripherals are enabled

Reduced Power Dissipation

- Very low power CMOS design
- Wait and Stop low power standby modes
- Fully-static logic, operation frequency down to 0 Hz (DC)
- Optimized power management circuitry (instruction-dependent, peripheral-dependent, and mode-dependent)

Target Applications

The DSP56302 is intended for applications requiring a large amount of on-chip memory, such as wireless infrastructure applications. It is also intended as a RAM-based emulation part for low-cost ROM-based solutions.

Product Documentation

The three documents listed in the following table are required for a complete description of the DSP56302 and are necessary to design properly with the part. Documentation is available from one of the following locations (see back cover for detailed information):

  - — End-of-block-transfer interrupts
  - — Triggering from interrupt lines and all peripherals
- Phase Lock Loop (PLL)
  - — Allows change of low power Divide Factor (DF) without loss of lock
  - — Output clock with skew elimination
- Hardware debugging support
  - — On-Chip Emulation (OnCE™) module
  - — Joint Action Test Group (JTAG) Test Access Port (TAP)
  - — Address tracing mode reflects internal Program RAM accesses at the external port

On-Chip Memories

- Program RAM, Instruction Cache, X data RAM, and Y data RAM size is programmable:

Instruction Cache	Switch Mode	Program RAM Size	Instruction Cache Size	X Data RAM Size	Y Data RAM Size
disabled	disabled	4096 × 24-bit	0	2048 × 24-bit	2048 × 24-bit
enabled	disabled	3072 × 24-bit	1024 × 24-bit	2048 × 24-bit	2048 × 24-bit
disabled	enabled	2048 × 24-bit	0	3072 × 24-bit	3072 × 24-bit
enabled	enabled	1024 × 24-bit	1024 × 24-bit	3072 × 24-bit	3072 × 24-bit

- 192 x 24-bit bootstrap ROM

Off-Chip Memory Expansion

- Data memory expansion to two 256 K x 24-bit word memory spaces
- Program memory expansion to one 256 K x 24-bit words memory space
- External memory expansion port
- Chip Select Logic for glueless interface to SRAMs and SSRAMs
- On-chip DRAM Controller for glueless interface to DRAMs

On-Chip Peripherals

- Enhanced DSP56000-like 8-bit parallel Host Interface (HI08) supports a variety of buses (e.g., ISA) and provides glueless connection to a number of industry standard microcomputers, microprocessors, and DSPs
- Two Enhanced Synchronous Serial Interfaces (ESSI), each with one receiver and three transmitters (allows six-channel home theater)
- Serial Communications Interface (SCI) with baud rate generator
- Triple timer module
- Up to thirty-four programmable General Purpose Input/Output (GPIO) pins, depending on which peripherals are enabled

Reduced Power Dissipation

- Very low power CMOS design
- Wait and Stop low power standby modes
- Fully-static logic, operation frequency down to 0 Hz (DC)
- Optimized power management circuitry (instruction-dependent, peripheral-dependent, and mode-dependent)

Target Applications

The DSP56303 is intended for use in telecommunication applications, such as multi-line voice/data/fax processing, videoconferencing, audio applications, control, and general digital signal processing.

Product Documentation

The three documents listed in the following table are required for a complete description of the DSP56303 and are necessary to design properly with the part. Documentation is available from one of the following locations (see back cover for detailed information):

- A local Motorola distributor
- A Motorola semiconductor sales office
- A Motorola Literature Distribution Center
- The World Wide Web (WWW)

See the **Additional Support** section of the *DSP56300 Family Manual* for detailed information on the multiple support options available to you.

DSP56300—24-Bit Digital Signal Processors (continued)

DSP56303 DOCUMENTATION

Name	Description	Order Number
DSP56300 Family Manual	Detailed description of the DSP56300 family processor core and instruction set	DSP56300FM/AD
DSP56303 User's Manual	Detailed functional description of the DSP56303 memory configuration, operation, and register programming	DSP56303UM/AD
DSP56303 Technical Data	DSP56303 features list and physical, electrical, timing, and package specifications	DSP56303/D

Ordering Product

Consult a Motorola Semiconductor sales office or authorized distributor to determine product availability and to place an order.

DSP56600—16-Bit Digital Signal Processors

The DSP56600 core can execute one 24-bit instruction per clock cycle using 16-bit data. The 60-MHz chip includes a mixture of peripherals and memories optimized for processing-intensive, yet cost-effective, low power consumption digital mobile communications applications. The DSP56600 core includes the data Arithmetic and Logic Unit (ALU), Address Generation Unit (AGU), program controller, program patch detector, bus interface unit, On-Chip Emulation (OnCE™)/JTAG port, and a Phase Lock Loop (PLL)-based clock generator.

DSP56602 Features

The DSP56602 expansion area includes program and data memories (ROM and RAM), a triple timer module, an 8-bit Host Interface (HI08) port, and two 16-bit Synchronous Serial Interface (SSI) ports. The DSP56602 also provides from three to thirty-four GPIO lines, depending on which user-enabled peripherals are used, and three external dedicated interrupt lines. The DSP56602 is designed specifically for low-power digital handset cellular applications and can perform a wide variety of fixed point digital signal processing algorithms.

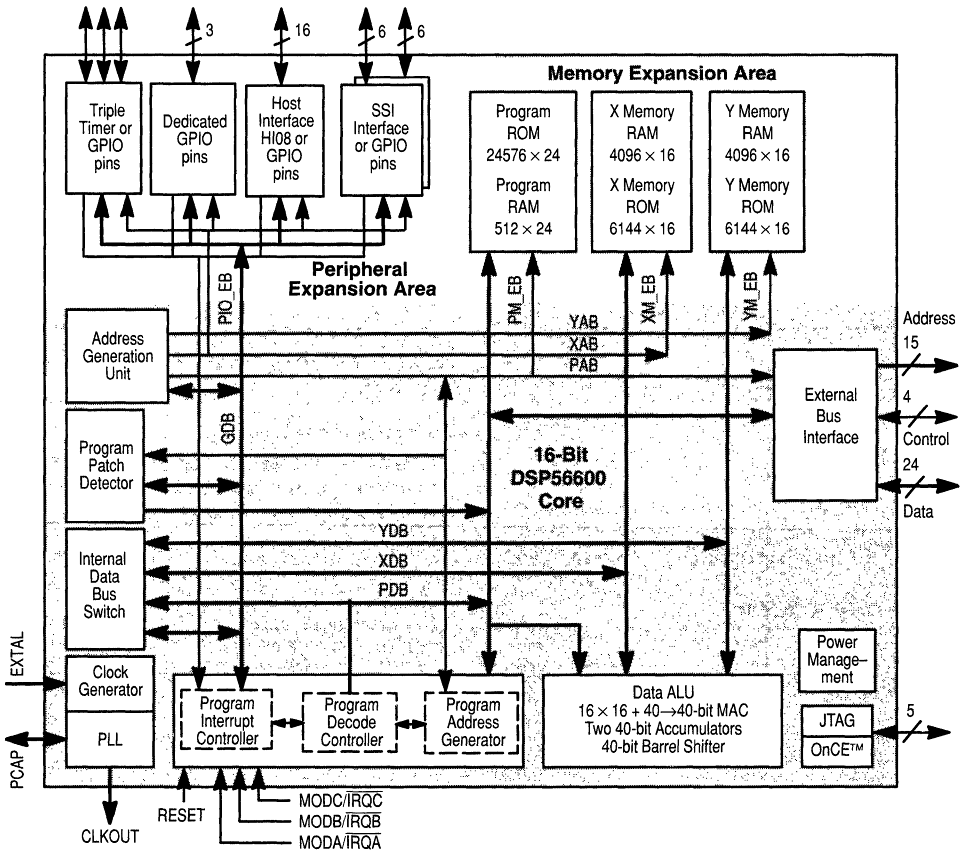
Digital Signal Processing Core

- High-performance 16-bit DSP56600 family DSP engine
- Up to 60 Million Instructions Per Second (MIPS) at 2.7–3.3 V
- Fully pipelined 16 x 16-bit parallel multiply-accumulator
- Two 40-bit accumulators including extension bits
- 40-bit parallel barrel shifter
- Highly parallel instruction set with unique DSP addressing modes
- Code-compatible with the DSP56300 core
- Position-independent code support
- Nested hardware DO loops
- Fast auto-return interrupts
- On-chip support for software patching and enhancements
- On-chip Phase Lock Loop (PLL) circuit
- Real-time trace capability via external address bus
- On-Chip Emulator (OnCE) module
- JTAG port

Memory

- 512 x 24 Program RAM
- 24 K x 24 Program ROM
- 4 K x 16 X-data RAM
- 6 K x 16 X-data ROM
- 4 K x 16 Y-data RAM
- 6 K x 16 Y-data ROM
- Off-chip expansion of both program and data memories
- Chip-select pin for direct SRAM interface
- Interface to external SRAM memories without additional logic

DSP56600—16-Bit Digital Signal Processors (continued)



Peripheral Circuits

- Three dedicated General Purpose Input/Output (GPIO) pins and as many as thirty-one additional GPIO pins (user-selectable as peripherals or GPIO pins)
- Host Interface (HI08) support: one 8-bit parallel port (or as many as sixteen additional GPIO pins)
  - — Direct interface to Motorola HC11, Hitachi H8, 8051 family, Thomson P6 family
  - — Minimal logic interface to standard ISA bus, Motorola 68K family, and Intel x86 microprocessor family
- Synchronous Serial Interface (SSI) support: two six-pin ports (or twelve additional GPIO pins)
  - — Supports serial devices with one or more industry-standard codecs, other DSPs, microprocessors, and Motorola SPI-compliant peripherals
  - — Independent transmitter and receiver sections and a common SSI clock generator
  - — Network mode using frame sync and as many as thirty-two time slots
  - — 8-bit, 12-bit, and 16-bit data word lengths
- Three programmable timers (or as many as three additional GPIO pins)
- Three external interrupt/mode control lines
- One external reset pin for hardware reset

Energy Efficient Design

- Operating voltage range: 1.8 V to 3.3 V
- Very low power CMOS design
  - — < 0.85 mA/MIPS at 2.7 V
  - — < 0.55 mA/MIPS at 1.8 V
- Low-power Wait standby mode
- Ultra-low-power Stop standby mode
- Fully static, HCMOS design for operating frequencies from 60 MHz down to DC
- Special power management circuitry

Product Documentation

The three documents listed in the table below are required for a complete description of the DSP56602 and are necessary to design properly with the part. Documentation is available from a local Motorola distributor, a Motorola semiconductor sales office, a Motorola Literature Distribution Center, or through the Motorola DSP home page on the Internet (the source for the latest information).

DSP56602 DOCUMENTATION

Name	Description	Order Number
DSP56600 Family Manual	Detailed description of the 56600-family architecture, and 16-bit DSP core processor and the instruction set	DSP56600FM/AD
DSP56602 User's Manual	Detailed description of memory, peripherals, and interfaces	DSP56602UM/AD
DSP56602 Technical Data	Electrical and timing specifications, pin descriptions, and package descriptions	DSP56602/D

For the Latest Information

Refer to the back cover of this document for:

- Motorola contact addresses
- Motorola MFAX service
- Motorola DSP Internet address
- Motorola DSP Helpline

The MFAX service and the DSP Internet connection maintain the most current specifications, documents, and drawings. These two services are available on demand 24 hours a day.

Ordering Information

The following table lists pertinent information needed to place an order. Consult a Motorola Semiconductor sales office or authorized distributor to determine availability and to order parts.

ORDERING INFORMATION

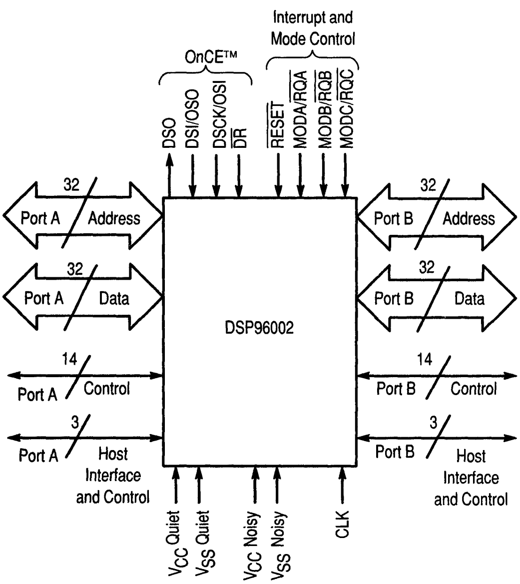
DSP96002—32-Bit Digital Signal Processors

The DSP96002 has full architecture compatibility with the 16-bit DSP56100 and 24-bit DSP56000 families. The DSP96002 is the first in a family of 32-bit IEEE floating point DSP devices. The DSP96002 has two identical memory expansion ports simplifying network configurations for multiprocessor and DSP96002 communications. These ports interface to SRAM, DRAM (operating in their fast access modes), video RAM, or directly to other processors with Host Interface logic.

Although designed primarily for image processing, other proven applications include communications, spectrum analysis, instrumentation, speech processing, and pattern recognition.



PART NUMBERS

Part	Description
XC96002RC33	33 MHz in PGA
XC96002RC40	40 MHz in PGA

DSP96002 BENCHMARKS

Benchmark	Instruction Cycles
Real	
FIR Filter with Data Shift	1 per Tap
V = V*S + V	2
Lattice Filter with Data Shift	3 per Tap
Cascaded IIR Biquad Filter Sections (4 coeff.)	4 per Section
1024-point FFT and bit reversal	12880
Complex	
V = V*V + V	4
FIR Filter with Data Shift	4 per Tap
1024-point FFT and bit reversal	20931
Graphics/Image Processing	
Divide (32-bit accuracy)	7
Square Root (32-bit accuracy)	12
Bezier Cubic Evaluation for Font Compilation	13
$[4 \times 4][4 \times 4] = [4 \times 4]$	67

DSP96002 Features

- DSP96000 family architecture
  - Full IEEE Standard 754 compatible for 32-bit (SP) and 44-bit (SEP) arithmetic
  - 20 MIPS, 50 ns instruction cycle at 40 MHz
  - 60 Million Floating Point Operations Per Second (MFLOPS) at 40 MHz
  - Single cycle 32 x 32 → 96-bit Multiply/Accumulate (MAC)
  - Ten 96-bit general purpose data registers
  - Zero-overhead nested DO loops
  - Two instruction-cycle fast interrupts
  - Low-power Wait and Stop modes
  - On-Chip Emulation port for unobtrusive, full-speed debugging
  - 4 K byte instruction cache
  - Integer mode available
  - Single precision mode available
  - Timer/Event Counter
- DSP96002 peripherals
  - Two 32-bit address and data host ports
  - Dual channel DMA controller
- DSP96002 memories
  - 1024 x 32 Program RAM
  - 2 x 512 x 32 data RAM
  - 2 x 512 x 32 data ROM (sine and cosine tables)

DSP56ADC16—The Analog-To-Digital Converter

The DSP56ADC16 is a single-chip, linear Analog-to-Digital (A/D) converter. It is an ideal choice for high-performance digital audio systems, voice-bandwidth communication, and control applications. It does not require antialiasing filters and sample-and-hold circuitry because they are an inherent part of the sigma-delta technology. The DSP56ADC16 can be easily interfaced to the DSP56001 and other host processors using its flexible serial interface.

Key Features

- 16-bit output resolution at 100 kHz from FIR filter
- 12-bit output resolution at 400 kHz from Comb filter
- 96 dB dynamic range
- 90 dB signal-to-THD ratio
- 90 dB signal-to-noise ratio
- In-band ripple: <0.001 dB
- Maximum output sample rates:
  - — FIR filter—100 kHz
  - — Comb filter—400 kHz
- Maximum input sample rate is 6.4 MHz
- Maximum internal clock rate is 12.8 MHz
- DC stability is 10 bits
- Supply voltage is single +5 V (±10%)
- Supply current is <100 mA
- Linear-phase analog front end and internal digital filters
- Simple serial interface to host microprocessors
- Fully differential inputs

DSP56ADC16S	16-bit in Ceramic DIP

DSP Development Tools

Application Development Systems

Every member of the Motorola Family of 16-, 24-, and 32-bit DSPs is supported by a multi-component Application Development System (ADS), which acts as a tool for designing, debugging, and evaluating real-time DSP target system equipment. The ADS simplifies evaluation of the user's prototype hardware/software product by making all of the essential timing and I/O circuitry easily accessible. Using an IBM PC™, Macintosh™ II, a Sun-4™, or Hewlett-Packard Series 700 as a medium between the user and the DSP hardware significantly reduces the overall complexity and cost of development while increasing the capabilities of the system. With the ADS, DSP programs can be executed in real-time, single-instruction-traced or multiple-instruction-stepped, with registers and/or memory block contents displayed. The ADS is fully compatible with the CLAS design-in software package for each product and may act as an accelerator for testing DSP algorithms.

All Application Development Systems offer an On-Chip Emulation (OnCE™) circuit for unobtrusive, processor speed independent debugging. The ADS takes full advantage of this circuit to allow the user non-intrusive control of the target.

General ADS Features

Software—

- Single/multiple stepping through DSP object programs
- Conditional/unconditional software and hardware breakpoints
- Program patching using a single-line assembler/disassembler
- Session and/or command logging for later reference
- Loading and saving of files to/from ADM memory
- Macro command definition and execution
- Display enable/disable of registers and memory
- Debug commands which support multiple DSP development
- Hexadecimal/decimal/binary calculator
- Multiple input/output file access from DSP object programs
- On-line help screens for each command and register

Hardware—

- Full speed operation
- Multiple ADM support with programmable ADM addressing
- Stand-alone operation of ADM after initial development

DSP56156ADS Features

- System commands from within ADS user interface program
- 16 K words of configurable static RAM expandable to 64 K words

DSP56002ADS Features

- Host operating system commands from within ADS user interface program
- 8 K/32 K words of configurable RAM for DSP56002 code development
- 96-pin euro-card connector for accessing all DSP56000/1 pins
- 1 K words of monitor ROM expandable to 4 K words
- Separate connectors for accessing serial or host/DMA ports

DSP96000ADS Features

- System commands from within ADS user interface program
- 128 K words of configurable static RAM expandable to 512 K words
- 2 K words of EPROM with sockets expandable to 64 K words
- Full support of multiple data memory maps
- Two sets of 96-pin connectors provide access to all DSP96002 pins
- 2 K words of EPROM with sockets expandable to 16 K words

*Supported by Graphical User Interface

Graphical User Interface

For DSP Application Development Systems and Simulators

A number of Motorola's DSP development systems and simulators come with graphical user interface software to ease working on applications based on our product families.

User Friendly

- GUI works native to three operation systems:
  - — SunOS
  - — Windows 3.1
  - — HPUX
- Multiple overlapping windows for the display of debugging information, command input registers, memory, and programs
- Pull down menus for ease of use:
  - — Dialog boxes for selecting options of complex commands
  - — Tool bar will provide fast access to commonly performed actions
  - — Keyboard accelerators will be defined for commonly executed commands
  - — Help viewer will be provided for viewing pre-defined help on selected topics

Debugging Capabilities for C Language and Assembly

- Assembly language symbolic or C Language source code debugging capabilities

DSP Development Software

Design-In Software Packages

The Simulator/Macro-Assembler/Linker/Librarian software package is a development system support tool. The Simulator program imitates the operation of the DSP on a clock-cycle by clock-cycle basis and gives an accurate measurement of code execution time. All on-chip peripheral operations, memory and register updates, and exception processing activities may be functionally simulated.

The full-featured Macro Cross Assembler translates one or more source files containing instruction mnemonics, operands, and assembler directives into a Common Object File Format (COFF) file, which is directly loadable by the Simulator. It supports the full instruction set, memory spaces, and parallel transfer fields of the DSP.

The Linker relocates and links relocatable COFF object modules from the Assembler to create an absolute load file, which can be loaded directly into the Simulator. The Librarian utility will merge separate, relocatable object modules into a single file, allowing frequently used modules to be grouped for convenient linking and storing.

The Assembler and Linker now provide support for assembly language source-level debugging via the Simulator. Global symbols, symbols local to sections, and even underscore labels may be referenced with all scoping constructs intact. In addition, the assembler generates information about included files and macros. The assembler and linker also support numbered counters ranging from 0 to 65535.

C Compiler Packages

A full ANSI C compliant compiler, based on GNU technology, provides higher efficiency and implements more than twenty major optimization techniques. It has improved in-line assembly capability and an ANSI C preprocessor. The package includes the C Compiler, a new COFF Assembler, Linker, complete ANSI C Libraries, and a new C source level debugger as well as expanded user's reference manual. The software package is available for various host computers listed.

The M68000 Family

. . . the Upward Compatible 8–/16–/32–Bit Microprocessor Family

In Brief . . .

An MPU For All Functions

To designers of the most advanced microcomputer systems, the Motorola M68000 Family of microprocessors needs no introduction. Products based on its members have become the standard for systems utilizing the UNIX operating system and for CAD/CAM engineering workstations. They are invading the next generation designs of personal computers and color graphics systems, and they find widespread implementation in multi–user/multi–tasking applications and in small business systems. M68000 MPUs are found in the leading products in fault–tolerant systems requiring high performance and parallel processing, and they are the preferred components for artificial intelligence engines requiring large linear addressing capabilities. Control applications include graphics, numerical controllers, robotics, telecommunications switching and PBX voice/data transmission.

Upward Compatibility

The M68000 MPU Family consists of a line of processors based on a 32–bit flexible register set, a large linear address space, a simple yet powerful instruction set and flexible addressing modes. The internal architecture of the 8–, 16–, and 32–bit MPU versions, and the common instruction set, provide software compatibility and offer an easy upward migration path for products requiring increasing levels of processing power.

A Host of Peripherals

A large selection of full–function peripheral chips complements the processor family. Compatible LSI and VLSI chips for memory management, data communications, DMA control, network control, system interfacing, general I/O and graphics, all simplify system design and reduce design and manufacturing cost while improving system performance.

Microprocessors

The 68K Family of Microprocessors has revolutionized virtually every segment of the electronic industry. They have set the standard for performance while still maintaining binary software compatibility from generation to generation. The combination of low cost and high performance (measured in $/system MIPS) makes every member of the Family a price performance leader. The M68000 Family provides the widest range of price and performance with choices from 1.6 MIPS to over 100 MIPS.

Table 1.

	68000	68020	68030	68040	68060

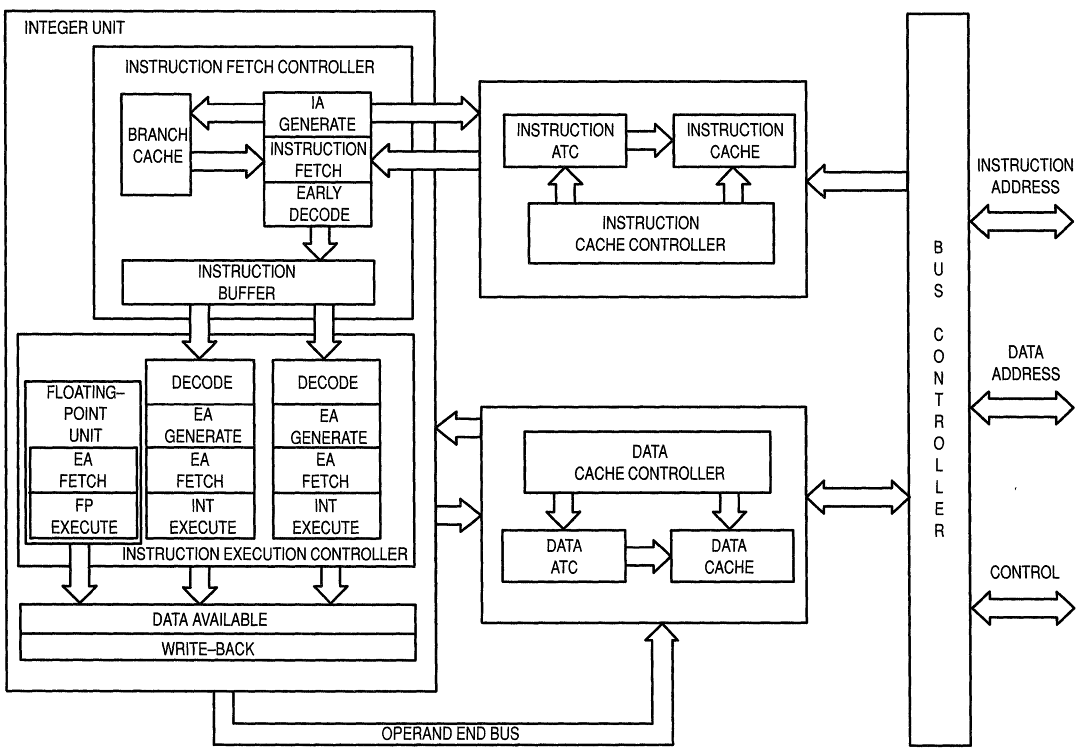

Figure 1. MC68060 Block Diagram

MC68060
Superscalar 32–Bit Microprocessor

The MC68060 is fully compatible with all previous members of the M68000 family. The MC68060 features dual on–chip caches, fully independent demand–paged memory management units (MMUs) for both instructions and data, dual integer execution pipelines, on–chip floating–point unit (FPU) and a branch target cache. A high degree of instruction execution parallelism is achieved through the use of a full internal Harvard architecture, multiple internal buses, independent execution units, and dual instruction issue within the instruction controller. Power management is also a key part of the MC68060 architecture. The MC68060 offers a low–power mode of operation that is accessed through the LPSTOP instruction, allowing for full power–down capability. The MC68060 design is fully static so that when circuits are not in use, they do not draw power. Each unit can be disabled so that power is used only when the unit is enabled and executing an instruction.

Complete code compatibility with the M68000 family allows the designer to draw on existing code and past experience to bring products to market quickly. There is also a broad base of established development tools, including real–time kernels, operating systems, languages and applications, to assist in product design. The functionality provided by the MC68060 makes it the ideal choice for a range of high–performance computing applications as well as many portable applications that require low power and high performance.

MC68040
Third–Generation 32–Bit Microprocessor

The MC68040 is Motorola's third generation of M68000–compatible, high–performance, 32–bit microprocessors. The MC68040 is a virtual memory microprocessor employing multiple, concurrent execution units and a highly integrated architecture to provide very high performance in a monolithic HCMOS device. On a single chip, the MC68040 integrates an MC68030–compatible integer unit, an IEEE 754–compatible floating–point unit (FPU), and fully independent instruction and data demand–paged memory management units (MMUs), including independent 4K–byte instruction and data caches. A high degree of instruction execution parallelism is achieved through the use of multiple independent execution pipelines, multiple internal buses, and a full internal Harvard architecture, including separate physical caches for both instruction and data accesses. The MC68040 also directly supports cache coherency in multimaster applications with dedicated on–chip bus snooping logic.

The MC68040 is an enhanced, 32–bit, HCMOS microprocessor that combines the integer unit processing capabilities of the MC68030 microprocessor with independent 4K–byte data and instruction caches and an on–chip FPU. The MC68040 maintains the 32–bit registers available with the entire M68000 Family as well as the 32–bit address and data paths, rich instruction set, and versatile addressing modes. Instruction execution proceeds in parallel with accesses to the internal caches, MMU operations, and bus controller activity. Additionally, the integer unit is optimized for high–level language environments. The MC68040 is user–object–code compatible with previous members of the M68000 Family and is specifically optimized to reduce the execution time of compiler–generated code. The MC68040 is implemented in Motorola's latest HCMOS technology, providing an ideal balance between speed, power, and physical device size.

Instruction execution is pipelined in both the integer unit and FPU. Independent data and instruction MMUs control the main caches and the address translation caches (ATCs). The ATCs speed up logical–to–physical address translations by storing recently used translations. The bus snooper circuit ensures cache coherency in multimaster and multiprocessing applications. The MC68040 FPU is user–object–code compatible with the MC68882 floating–point coprocessor. The FPU has been optimized to execute the most commonly used subset of the MC68882 instruction set, and includes additional instruction formats for single– and double–precision rounding of results.

The MMUs support multiprocessing, virtual memory systems by translating logical addresses to physical addresses using translation tables stored in memory. Each MMU has two transparent translation registers available that define a one–to–one mapping for address space segments ranging in size from 16 Mbytes to 4 Gbytes each. The instruction and data caches operate independently from the rest of the machine, storing information for fast access by the execution units. Each cache resides on its own internal address bus and internal data bus, allowing simultaneous access to both. The data cache provides writethrough or copyback write modes that can be configured on a page–by–page basis.

The MC68040 bus controller supports a high–speed, nonmultiplexed, synchronous external bus interface, which allows the following transfer sizes: byte, word (2 bytes), long word (4 bytes), and line (16 bytes). Line accesses are performed using burst transfers for both reads and writes to provide high data transfer rates.

MC68030
The Second Generation 32–Bit MPU

The 030 started with a high performance 020 core and added many performance improvement features including increased internal parallelism, dual on–chip caches with a burst fillable mode, dual internal data and address buses, improved bus interface, and on–chip paged memory management unit.

Two independent 32–bit address buses and two 32–bit data buses allow the CPU, caches, MMU, and the bus controller to operate in parallel, so the 030 can, for example, simultaneously access an instruction from the instruction cache, data from the data cache and instruction/data from external memory.

Performance is further enhanced by on–chip instruction and data caches. Separate 256–byte data and instruction caches reduce the access time and increase CPU throughput by providing data and instructions on–chip.

Overall bus requirements are reduced and multiple processors can run more efficiently thanks to increased bandwidth of the 030 bus, achieved by the enhanced bus controller allowing high speed fills of both data and instruction caches.

The on–chip paged memory management unit translates logical address to the corresponding physical address in 1/2 the time required by the 020 and MC68851 Paged Memory Management Unit. Pipelining permits this translation to be performed in parallel with other functions so that no translation time is added to any bus cycle.

MC68020

The Original 32–Bit Performance Standard

The MC68020, oh twenty, is the industry's leading 32–bit microprocessor because of high performance, architecture, ease of design–in, and long–range compatible growth path.

The 020 has a full 32–bit internal and 32–bit external, regular, symmetrical architecture designed with the customer in mind. It offers all the functionality of the other M68000 Family MPUs, and maintains software user–code compatibility which controls the expense of your product migration.

Programmers appreciate the large general purpose register set, simple yet powerful instruction set and the many flexible M68000 addressing modes. The unique on–chip instruction cache helps provide burst–mode operation to 12.5 MIPS.

The 020 is the proven leader in high performance systems in office automation, engineering workstations, fault tolerant computers, parallel processors, telephone switching systems, and intelligent controllers.

MC68010

A Virtual Memory Enhancement

The MC68010 offers the advantage of Virtual Memory. A high–speed loop mode operation executes tight software loops faster to enhance performance. Its instruction continuation feature has made it the choice for fault–tolerant and parallel processing systems. The MC68010 can support a governing operating system which handles the supervisory chores of any number of subordinate operating systems.

MC68HC000

A Micropower Alternative

HCMOS design gives the MC68HC000 all the functions and performance of its MC68000 predecessors . . . at one–tenth of the operating power requirements. With a maximum power dissipation of only 0.175 watts, the MC68HC000 is ideal for high–performance computer peripherals, industrial controllers, instrumentation and communications equipment.

MC68HC001

Low Power HCMOS 8–/16–/32–Bit Microprocessor

The MC68HC001 provides a functional extension of the MC68HC000 HCMOS 16–/32–bit microprocessor with the addition of statically selectable 8– or 16–bit data bus operation. The MC68HC001 is object–code compatible with the MC68HC000, and code written for the MC68HC001 can be migrated without modification to any member of the M68000 Family. This is possible because the user programming model is identical for all members of the M68000 Family and the instruction sets are proper subsets for the complete architecture.

MC68000

The 16–Bit Foundations

As the first member of the M68000 family, the state–of–the–art technology and advance circuit design concepts of the MC68000 16–bit MPU started a new trend in microprocessor architecture. Its seventeen 32–bit data and address registers permit rapid internal execution of its powerful yet simple instruction set. It is designed for large multiprocessing systems and realtime applications with vectored interrupts, seven priority levels and a 16 megabyte linear addressing space. It offers mainframe–like performance, supporting high–level languages and sophisticated operating systems.

The MC68000 MPU has been joined by more advanced products with even greater capabilities, yet it satisfies a large segment of the existing applications. It is extremely cost competitive and it remains one of the major growth products in the entire MPU line.

MC68008

An 8–Bit Compatible Competitor

With an 8–bit data bus and 32–bit internal architecture, the MC68008 offers performance that competes with a number of 16–bit MPUs. It has the same register set, same instructions, and the same functionality as the MC68000 with extensive exception processing. Large modular programs can be developed and executed efficiently because of the large, 1–megabit non–segmented, linear address space. It is the choice for high performance, cost effective, 8–bit designs, particularly those requiring a migration path to 16–bit or full 32–bit operation.

Embedded Controllers

The principle elements of this popular microprocessor family have now been redesigned specifically for embedded applications. The new 68EC0x0 family including the 68EC000, EC020, EC030 and EC040 MPUs are all optimized for cost–sensitive embedded control designs. The 68EC0x0 family offers the high performance of the 680x0 family, yet streamlines the feature sets for embedded applications. The 68EC0x0 family completes the triad forming the M68000 family of compatible products: the 680x0 family of computer–class central processing units; the 68300 family of integrated processors; and now, the 68EC0x0 family of embedded microprocessors.

Table 2.

MC68EC/LC060

32–Bit High–Performance Embedded Controller

The 68EC060 is the newest addition to Motorola's embedded microprocessor family. It is the performance leader for top of the line embedded applications. The 68EC/LC060 offers 100 MIPS performance while maintaining complete backward compatibility with the 680x0 family. The 68LC060 offers a paged memory management unit while the 68EC060 has been optimized for embedded systems requiring lower–cost performance.

MC68EC040

32–Bit High–Performance Embedded Controller

The EC040 is capable of delivering 44 MIPS of sustained performance with a system cost that is unattainable by competing architectures. The LC040 offers all the features of the EC040 plus adds a paged memory management unit allowing more sophisticated operating systems features, including better memory protection.

This impressive performance is a result of a six–level pipelined integer unit, independent four–way set–associative instruction and data caches, and a very high level of on–chip parallelism. The EC040 also supports multimaster and multiprocessor systems with bus snooping.

By integrating all these features into the EC040, the microprocessor is able to perform the vast majority of work on–chip, limiting external memory accesses to allow for higher system performance with less expensive DRAMs. The result is virtual immunity to the effects of memory wait states.

MC68040V

Low–Power 32–Bit Embedded Controller

The 68040V is a low–power version of the MC68LC040. Using advanced static design techniques and 3.3 Volt supply, this part offers all the performance and features of the LC040, but requires much less power. The 040V instruction set is fully 040 compatible, but adds a low–power STOP instruction to allow for software power–down of the processor to save power.

MC68EC030

32–Bit Enhanced Embedded Controller

The MC68EC030 is a 32–bit embedded controller that streamlines the functionality of an MC68030 for the requirements of embedded control applications. The MC68EC030 is optimized to maintain performance while using cost–effective memory subsystems. The rich instruction set and addressing mode capabilities of the MC68020, MC68030, and MC68040 have been maintained, allowing a clear migration path for M68000 systems. The MC68EC030 is object–code compatible with the MC68020, MC68030, and earlier M68000 microprocessors. Burst–mode bus interface is provided for efficient DRAM access.

The MC68EC030 has an on–chip data cache and on–chip instruction cache with 256 bytes each. Dynamic bus sizing is available for direct interfacing to 8–, 16–, and 32–Bit Devices. The MC68EC030 includes 32–bit nonmultiplexed address and data buses, sixteen 32–bit general–purpose data and address registers, and two 32–bit supervisor stack pointers and eight special–purpose control registers. The EC030 provides complete support for coprocessors with the M68000 coprocessor interface. There are two access control registers that allow blocks to be defined for cacheability protection. The pipelined architecture, along with increased parallelism, allows internal caches accesses in parallel with bus transfers and overlapped instruction execution. The enhanced bus controller supports asynchronous bus cycles (three clocks minimum), synchronous bus cycles (two clocks minimum), and burst data transfers (one clock).

MC68EC020

32–Bit Embedded Controller

The 68EC020, with a complete 32–bit internal implementation, has a 32–bit data bus and an on–chip instruction cache to provide dramatically increased performance over 8– and 16–bit microprocessors. In addition, upward migration to the EC020 is made simple with dynamic bus sizing, allowing 8, 16 and 32–bit peripherals to communicate with the microprocessor.

Other performance features include advanced bit manipulation capabilities that provide multiple bit shift operations in a single instruction cycle. This capability greatly simplifies and accelerates the bit operations required in graphics processing and optical recognition applications.

MC68EC000

Low–Powered HCMOS Embedded Controller

The 68EC000 is a low–power HCMOS derivative of the 68000 optimized for cost–effective embedded processing. The EC000 has a flexible data bus that can operate in either 8– or 16–bit modes and a 24–bit address bus that provides 16 Mbytes of memory addressing capability. Electrical characteristics of the 68EC000 have been optimized to ensure easy access to low–cost memories.

The 68EC000 represents the lowest cost entry point to any 32–bit architecture. Coupled with efficient support for high–level languages and real–time operating systems, the 68EC000 provides unparalleled compatible migration paths to higher performance.

Integrated Processors

Powerful solutions to cost–, space–, and power–sensitive embedded applications are provided by the 68300 family of integrated microprocessors and microcontrollers. The 68300 family combines two of Motorola's greatest strengths — the 32–bit microprocessor architecture of the 68000 family and a proliferation of peripheral circuits offering a growing family of integrated solutions.

The 68000 family is based on a proven, expandable architecture that spans the performance range from 1 to over 29 MIPS. This architecture offers the industry's highest level of compatibility for both hardware and software. Motorola's single–chip microcomputers and microcontrollers provide the industry's broadest selection of peripheral combinations, insurance that one will fit the need of practically any application. The 68300 family embraces both of these concepts.

Each member of the 68300 family contains a core processor based on the 68000 family, a System Integration Module (SIM), an on–chip bus and various peripheral modules. The SIMs include support circuitry such as clock generation, external chip selects, system protection, timers and JTAG. The on–chip intermodule bus (IMB) on the CPU32–based 68300s creates a standard interface over which the CPU and each of the modules communicate. The peripheral modules include specialized processors, system controllers, traditional peripherals and memory. Because the peripheral modules are independent from each other, they can appear in multiple 68300 devices. With so many major features incorporated into a single 68300 device, a system designer can realize improved reliability along with significant savings in design time, power consumption, cost, board space, pin count and program development. In a 68300 device, the major functions and glue logic are all properly connected, internally timed with the same fast clock, fully tested and consistently documented.

Table 3.

	68302	**68306**	**68330**	**68331**	**68332**	**68333**	**68334**	**68340**	**68307**	**68322**	**68328**

MC68302

Integrated Multiprotocol Processor

The MC68302 integrated multiprotocol processor (IMP) is a very large–scale integration (VLSI) device incorporating the main building blocks needed for the design of a wide variety of controllers used in the communications industry. The IMP is the first device to offer the benefits of a closely coupled, industry–standard M68000/MC68008 microprocessor core and a flexible communications architecture. The three–channel communications device may be configured to support a number of popular industry interfaces, including those for the Integrated Services Digital Network (ISDN) basic rate and terminal adaptor applications. Through a combination of architectural and programmable features concurrent operation of different protocols (HDLC/SDLC™, UART, BISYNC, DDCMP™, or transparent modes) can easily be achieved. Data concentrators, modems, line cards, bridges, and gateways are examples of suitable applications for this device.

The IMP is a Complementary Metal–Oxide Semiconductor (CMOS) device consisting of an M68000/MC68008 microprocessor core, a system integration block (SIB), and a Communications Processor (CP). By integrating the microprocessor core with the serial ports (in the CP) and the system peripherals (in the SIB), the IMP is capable of handling complex tasks such as all ISDN basic rate (2B+D) access tasks.

MC68306

Integrated 68EC000 Processor

The 68306 integrated EC000 processor includes many of the features commonly found in 68000–based designs. The 68306 includes a 68EC000 core processor, a 68681 Dual Universal Asynchronous Receiver Transmitter (DUART), system integration functions, and a DRAM controller. The on–chip DRAM controller gives the 68306 the family's simplest interface to DRAM–based designs. The DRAM controller easily accommodates 64 Mbytes of memory. The 68306 saves time in the design cycle by providing valuable 68000 system components pre–packaged in one chip.

MC68307

Integrated EC000 Processor

The 68307 is an integrated processor combining a static EC000 processor with multiple inter–chip bus interfaces. The 68307 is designed to provide optimal integration and performance for applications such as digital cordless telephones, portable measuring equipment, and POS terminals. By providing 3.3 V, static operation in a small package, the 68307 delivers cost effective performance to handheld battery–powered applications.

MC68322

Integrated EC000 Printer Processor

The 68322 is a high–performance integrated printer processor that combines a 68EC000 core, a RISC graphics processor, a print engine video controller and numerous system integration features on a single integrated circuit. It is the first of Motorola's M68000 family designed specifically for pinters. The 68322 provides a unique solution for new designs as well as an excellent migration path for existing M68000–powered printers.

MC68328

Integrated EC000 Processor

The 68328 processor provides key features that are suitable for many portable applications. Modules like a real–time clock, LCD controller, pulse–width modulator, timers, master and slave serial peripheral interface, UART and system integration give the engineer more flexibility and resource to design efficient and innovative products.

MC68330

Integrated CPU32 Processor

The 68330 is ideal for applications requiring 32–bit microprocessor performance without the additional expense inherent in 32–bit memory systems. The 68330 is the simplest and lowest priced member of the CPU32–based 68300 family. The 68330 allows the designer access to the high performance of the CPU32 along with minimized external glue logic, while allowing the greatest freedom in selecting needed peripherals, ASICs or gate arrays.

MC68331

32–Bit Microcontroller

The 68331 is well suited to applications requiring simple serial communications and general timing needs. The 68331 contains the CPU32, a SIM, a General Purpose Timer (GPT) and a Queued Serial Module (QSM). The general purpose timer is a simple yet flexible timer that provides four modes of operation with multiple channels for some operations. The QSM provides two modes of communication: an asynchronous channel that provides up to 524–Kbits per second transfer rate and a serial peripheral interface with separate 16–word receive/transmit queues.

MC68332

32–Bit Microcontroller

The 68332 is especially suited for high–performance timing applications such as automotive engine control, precision motor control and industrial robotics. The powerful Time Processor Unit (TPU) distinguishes the 68332 providing optimum performance in controlling time–related activity. It drastically reduces the need for CPU intervention with its dedicated execution unit, tri–level prioritized scheduler, data storage RAM and dual time bases. In addition to the TPU and CPU32, the 68332 features the QSM, a SIM and 2–Kbytes of standby static RAM.

MC68F333

32–Bit Microcontroller

The 68F333 provides the highest level of integration available to high–performance timing applications such as avionics and automotive engine control. The 68F333 contains the CPU32, the TPU and the QSM. It also adds two banks of flash EEPROM totaling 64–Kbytes, a total of 4–Kbytes of SRAM (512 bytes separately powered) and an 8–channel, 10–bit analog–to–digital converter. The Single–Chip Integration Module (SCIM) allows 18 of the external address and data pins to be converted to I/O pins, resulting in a single–chip solution suitable for many applications.

MC68334

32–Bit Microcontroller

The 68334 is a streamlined version of the 68332, taking advantage of the powerful TPU. The 68334 includes the CPU32 core processor, the TPU, a SIM, 1–Kbyte of SRAM, a 10–bit analog–to–digital converter and up to 47 discrete I/O lines.

MC68340

Integrated Multiprotocol Processor with DMA

The 68340 is excellent for applications requiring high–speed or block data transfers, such as disk drives and navigation systems. The combination of general peripherals and the extremely low power consumption possibilities of the 68340 make it ideal for many battery powered, portable applications such as hand held computers and data acquisition systems.

The most distinguishing 68340 feature is the high speed two channel, 32–bit Direct Memory Access (DMA) controller. Incorporating the CPU32 and DMA on the same chip eliminates the usual bus arbitration and synchronization delays, maximizing data throughout (25–Mbytes per second on a 16–bit bus).

In addition to the CPU32, a SIM and the DMA, the 68340 contains a 68681/2681–compatible DUART. The 68340 also has two identical, versatile counter/timers, each with a 16–bit counter and an 8–bit prescaler with 80 ns resolution.

Coprocessors

MC68851

Paged Memory Management Unit, PMMU

The PMMU is a 32–bit memory manager which provides full support for a demand paged virtual environment with the 68010 or MC68020. It supports a 4–gigabyte addressing space when used as a coprocessor with the MC68020. An on–chip address translation cache minimizes translation delays and maximizes system performance.

MC68881

A Floating Point Coprocessor

Designed specifically for arithmetic expansion of the MC68020 MPUI, this powerful coprocessor can also be used as a peripheral to all other M68000 family members, and with non–M68000 processors as well. It performs floating point math calculations in strict conformance to a full implementation of the IEEE Standard for Binary Floating Point Arithmetic (754) and, in addition to the basic add, subtract, multiply, and divide functions, it handles full selection of transcendental and non–transcendental operations. These operations include root values, trigonometric functions, exponentials, hyperbolics, and logs. All functions are calculated to 80 bits of extended precision in hardware.

MC68882

Enhanced Floating Point Coprocessor

The MC68882 is pin–to–pin hardware and software compatible with the MC68881 Floating Point Coprocessor and implements a variety of performance enhancements including dual–ported registers and an advanced pipeline. Additional circuitry allows execution of multiple instructions in parallel for more than twice the Floating Point performance of the trail–blazing MC68881. Where higher performance requirements indicate, the MC68882 is a drop–in replacement for the MC68881.

DMA Controllers

MC68450

DMA Controller, DMAC

The DMAC maintains high–performance data movement for complex M68000 MPU–based systems. While pin compatible with the MC68440 DDMA, the DMAC offers four completely independent DMA channels. In addition to all the features of the DDMA, the DMAC also provides very sophisticated manipulation of data through sequential and linked array–chained addressing capabilities.

MC68440

Dual Direct Memory Access Controller, DDMA

The DDMA complements the performance capabilities of M68000 microprocessors by moving blocks of data in a quick, efficient manner with a minimum of intervention from the MPU. The DDMA performs memory–to–memory, peripheral–to–memory, and memory–to–peripheral transfers through each of two completely independent DMA channels. The DDMA also offers two interrupt vectors per channel and supports both 8–bit and 16–bit data transfers.

Network Devices

MC68824

Token Bus Controller, TBC

The TBC is the industry's first single–chip VLSI device to implement the IEEE 802.4 Media Access Control Sublayer of the ISO Data Link Layer, as specified by General Motors Manufacturing Automation Protocol, MAP. The TBC supports serial data rates of 1, 5, and 10 Mbps and relieves the host processor of the frame formatting and token management functions. For efficient transfer of data frames, to and from memory, the TBC features an on–chip four–channel DMA with bus master capability, a 32–bit address range, an 8– or 16–bit data bus, and a 40–byte FIFO. The MC68824 also offers support options for network bridges, real–time support and network monitoring services.

MC68184

Broadband Interface Controller

The MC68184 Broadband Interface Controller (BIC) is a high–performance interface device for use with the MC68824 Token Bus Controller (TBC) to implement the digital portion of the physical layer of a broadband IEEE 802.4 token bus node. The BIC manipulates both data and control for RF transmitter circuitry and RF receiver circuitry. The CMOS BIC supports data rates up to 10 Mbps using a duo–binary modulation technique and provides 20 lines for receiver/transmitter control with 13 user–defined outputs.

The BIC performs the digital functions of the physical layer when implementing a broadband token bus node. The modem side of the BIC provides data and control for the RF transmitter/receiver circuitry. A standard serial interface is used to connect the BIC to the MC68824 TBC. The TBC performs the media access control (MAC) function. The MC68184 has the ability to scramble and descramble data.

MC68185

Twisted–Pair Modem

The MC68185 Twisted–Pair Modem (TPM) is used in conjunction with a MC68824 Token Bus Controller (TBC), an RS485 transceiver, and a twisted–pair media to implement a low–cost area network (LAN). The MC68824 TBC implements the layer 2 media access control (MAC) portion of the IEEE 802.4 LAN station and receiver portion for the IEEE 802.2 logical link control (LLC) type 3 as well as providing support for LLC type 1 and type 2. The TPM interfaces directly to the TBC, providing physical layer management, including MAC symbol encoding/decoding at data rates up to 2 Mbps.

The TPM contains an 32 kHz to 20 MHz on–chip crystal oscillator that generates a transmit clock without external circuitry. The physical layer management includes local loopback mode, transmitter enable, and reset. An on–chip digital filter provides for noise reduction of received data.

MC68194

Carrierband Modem

The bipolar LSI MC68194 Carrierband Modem (CBM), when combined with the MC68824 Token Bus Controller (TBC), provides an IEEE 802.4 single–channel, phase–coherent carrierband, Local Area Network (LAN) connection. The CBM performs the physical layer function, including symbol encoding/decoding, signal transmission and reception, and physical management.

The CBM provides the three basic functions of the physical layer: data transmission to the coaxial cable, data reception from the cable, and management of the physical layer. For standard data mode (also called MAC mode), the CBM receives a serial transmit data stream from the TBC (called symbols or atomic symbols), encodes, modulates the carrier, and transmits the signal to the coaxial cable. Also in the data mode, the CBM receives a signal from the cable, demodulates the signal, recovers the data, and sends the received data symbols to the TBC. End–of–transmission receiver blanking as required by IEEE 802.4 is supported. Communication between the TBC and CBM is through a standardized serial interface consistent with the IEEE 802.4 DTE–DCE interface.

MC68195

Local Talk Adaptor

The MC68195 LocalTalk adaptor (LA) is used in conjunction with the MC68302 Integrated Multiprotocol Processor (IMP) to build a network interface to LocalTalk™, also known as AppleTalk™. LocalTalk refers to the 230.4–kbps Local Area Network (LAN) that connects multiple Macintosh™ computers and printers.

The LA provides LocalTalk support for any two of the three IMP serial channels. Combinations of multiple LA and/or IMP devices may be used to support additional LocalTalk channels. Non–LocalTalk applications can use the LA device with the IMP to build proprietary HDLC–based LANs at up to 2.5 Mbps using bi–phase space (FMO) encoding.

MC68605

X.25 Protocol Controller, XPC

The XPC implements the 1984 CCITT X.25 Recommendation Data Link Procedure (level 2) LAPB. In addition to handling the lower level communications functions (HDLC framing, CRC generation/checking, and zero insertion/deletion), the XPC also independently handles higher level communications functions (frame sequencing, retransmission, flow control, retries limit and timeout conditions). This allows the host to operate almost totally isolated from the task of ensuring error–free transmission and reception of data.

MC68606

Multi–Link LAPD Controller CCITT Q.920/Q.921, LAPD

The MC68606 Multi–link LAPD (MLAPD) Protocol Controller fully implements CCITT Recommendation Q.920/Q.921 Link Layer Access Procedure (LAPD) protocol for ISDN networks. The MLAPD is designed to handle both signalling and data links in high–performance ISDN primary rate applications.

This VLSI device provides a cost–effective solution to ISDN link–level processing with simultaneous support for up to 8K logical links. The MC68606 is an intelligent communications protocol controller compatible with AT&T specifications for ISDN devices and features low power consumption and high performance, with an aggregate data rate in excess of 2.048 Mbps.

Data Communication Devices

MC68HC681
MC68HC2681

Dual Universal Asynchronous Receiver/Transmitter, DUART

The MC68HC681 features two completely independent full–duplex asynchronous receiver/transmitter channels that interface directly to the M68000 microprocessor bus. Receiver data registers are quadruple buffered and transmitter data registers are double buffered for minimum MPU intervention. Each has its own independently selectable baud rate. Multifunction 6–bit input port and 8–bit output port, a 16–bit programmable counter/timer, interrupt handling capabilities, and a maximum one–megabyte per second transfer rate make the DUART an extremely powerful device for complex data communication applications. Full device functionality with an M6800 bus interface is provided by the MC68HC2681.

General Purpose I/O

MC68230

Parallel Interface/Timer, PI/T

The PI/T provides versatile double–buffered parallel interfaces and a system–oriented timer for M68000 systems. The parallel interfaces operate either in a unidirectional or bidirectional mode, either 8– or 16–bit wide. The timer is 24 bits with full programmability and a 5–bit prescaler. The PI/T has a complete M68000 bus interface and is fully compatible with the MC68450 DMAC.

MC68HC901

Multifunction Peripheral, MFP

The MFP provides basic microcomputer function requirements as a single companion chip to the M68000 Family of Microprocessors. Features provided via a direct M68000 system bus interface include a full–function, single–channel Universal Serial Asynchronous Receiver/Transmitter (USART) for data communication, an 8–source interrupt controller, eight parallel I/O lines, and four 8–bit timers.

Fiber Distributed Data Interface

Fiber Distributed Data Interface (FDDI) is defined as a dual fiber–optic token ring LAN (Local Area Network) that can support rates up to 100 Mbps. It can accommodate rings with 1,000 stations. Two kilometers between stations, and up to 200 kilometers in total length. This technology is driven by the need to support high performance distributed computer systems which are becoming faster and more powerful, thus imposing a greater need for network speed and bandwidth. Other uses for FDDI include backbone networks connecting Ethernet, Token Bus, and Token Ring segments and back end networks connecting high–speed peripherals. FDDI is an American National Standards Institute (ANSI) standard. Motorola's FDDI chip set includes the MC68836, MC68837, MC68838, and MC68839.

MC68836

FDDI Clock Generator

The MC68836 FDDI Clock Generator (FCG) implements part of the Physical Layer (PHY) functions of the FDDI standard including clock recovery, data recovery, and NRZI conversions. The FCG also does a five–bit parallel to serial conversion during transmission, and a serial to five–bit parallel conversion during reception. The FCG uses the five–bit parallel interface to communicate with the MC68837 device. The FCG directly connects to fiber optic modules through differential driver/receiver pins. Features include full duplex operations, 125 MHz clock recovery from incoming serial NRZI data stream, and 125 MHz transmit clock generation.

MC68837

Elasticity Buffer and Link Manager

The Elasticity Buffer and Link Manager (ELM) implements the remaining of the PHY functions of the FDDI standard including data framing, elasticity buffer, encoding, decoding, smoothing, line state detection, and repeat filter. The ELM also implements some Station Management (SMT) functions such as the Connection Management (CMT), Physical Connection Management (PCM), Physical Connection Insertion (PCI), and Link Error Monitor (LEM).

MC68838

Media Access Controller

The Media Access Controller (MAC) implements the MAC portion of the FDDI standard. The MAC protocol is the lower sub–layer of the ISO OSI data link layer and provides for fair and deterministic sharing of the physical medium, address recognition, frame check sequence generation and verification, frame insertion, frame repetition, frame removal, token generation, and certain error recovery procedures. Features on the MC68838 include independent receive and transmit data paths and state machines, bridging support including a bit order reversal option, a count and void frame bridge stripping algorithm, and CRC appendage on a per frame basis. The MAC also contains an interface to Content Addressable Memory (CAM) for individual and multicast address recognition.

MC68839

FDDI System Interface

The FDDI System Interface (FSI) is a high performance interface device which can easily connect to any bus including high speed processors, little– and big–endian busses, and multiplexed/non–multiplexed address data busses. Its primary purpose is to interface the FDDI protocol devices to the user system bus. FSI features include support for a ring buffer structure, addressing flexibility, programmable partitioned 8K bytes internal RAM for temporary data storage, two 32–bit ports, the ability to sustain up to 250 µs bus latencies, support for synchronous and asynchronous frames, and the ability to chain multiple buffers per frame.

Support Software

M68KESW–PC1

This Intermetrics software package is for the 68K Family (68000, 68008, 68HC001, 68010, 68020, 68030, 68EC030, 68040, 683xx). The MC68KESW InterTools package includes C compiler, assembler/linker, run–time libraries, and one year of support from Intermetrics.

M68040FPSP

This software provides 68040 floating point emulation of unimplemented 68881/68882 functions. Contact factory for license agreement.

The M88000 RISC Family

In Brief . . .

Motorola's 88000 Family comes from the only company committed to long–term upward software compatibility through such features as hardware interlocked and protected pipelines. Our goal is to make sure each generation of the 88000 RISC family delivers a high performance level while maintaining software compatibility.

Motorola's 88000 RISC Microprocessors

. . . a performance architecture

Architecture, Performance, and Software Compatibility

The 88000 RISC was designed from the start for superscaler implementations. In fact, the design of the second generation 88110 microprocessor is a unique superscaler implementation called Symmetric Superscalar™. The Symmetric Superscaler design allows you to execute multiple instructions in a single clock cycle without any restrictions on instruction ordering. So there are no wait states or performance penalties because of out of order instructions.

Also, while other RISC microprocessors may be limited in the instructions they can execute in a single clock cycle, members of the 88000 are able to execute multiple instructions per clock cycle, thus providing the performance edge required for next generation system designs.

Performance Plus Software Compatibility

Although high performance is recognized as a key feature for systems design, software compatibility is also important. Motorola's 88000 Family comes from the only company committed to long term upward software compatibility through such features as hardware interlocked and protected pipelines. Our goal is to make sure each generation of the 88000 RISC family delivers a high performance level while maintaining software compatibility. This gives the opportunity for designing one of the industry's highest performance systems, while leveraging your largest dollar investment in new systems, your software.

Software compatibility is also promoted through standards to provide an open systems environment benefitting system companies, software developers, and end users because 88000 based systems from different vendors will run all of the same software.

Microprocessors

MC88100RC

32–Bit RISC Microprocessor

The MC88100 is the first processor in the 88000 Family of RISC (reduced instruction set computer) microprocessors. Implemented with Motorola's HCMOS technology, the MC88100 incorporates 32–bit registers, data paths, and addresses. In designing the MC88100, Motorola has incorporated a high degree of fine–grain parallelism; four independent execution units maintain separate, fully concurrent execution pipelines. Most instructions operate in one machine cycle or effective concurrent execution can be accomplished through internal pipelines in one machine cycle. A common register file provides data sharing and synchronization control among the execution units through register scoreboarding.

The MC88100 addresses a variety of applications requiring high operational speeds and efficient, fast–execution architectures. All data manipulation instructions are nondestructive register to register or register with immediate operations, allowing both fast operand access and operand reuse. IEEE 754 floating–point arithmetic is supported in the processor. Instruction and data memory space are accessed through separate memory ports, allowing simultaneous access to dedicated memory areas. The 88000 Family includes the MC88200 CMMU (cache/memory management unit), which adds high–speed memory caching, two–level, demand–paged memory management, and support for shared–memory multiprocessing. The 88000 Family also includes a full line of highly optimizing compilers, operating systems, development boards, and development tools.

MC88110RC

32–Bit RISC Microprocessor

The MC88110 is the second implementation of the 88000 family of reduced instruction set computer (RISC) microprocessors. The MC88110 is a Symmetric Superscalar machine capable of issuing and retiring two instructions per clock without any special alignment, ordering, or type restrictions on the instruction stream. Instructions are issued to multiple execution units, execute in parallel, and can complete out of order, with the machine automatically keeping results in the correct program sequence. The Symmetric Superscalar design allows sustained performance to approach the peak performance capability.

The MC88110 uses dual instruction issue and simple instructions with extremely rapid execution times to yield maximum efficiency and throughput for 88000 systems. Instructions either execute in one clock cycle, or effective one clock cycle execution is achieved through internal pipelining. Ten independent execution units communicate with a general register file and an extended register file through multiple 80–bit internal buses. Each of the register files has sufficient bandwidth to supply four operands and receive two results per clock cycle. Each of the pipelined execution units, including those that execute floating–point and data movement instructions, can accept a new instruction and retire a previous instruction on every clock cycle.

In a single chip implementation, the MC88110 integrates the central processing unit, floating point unit, graphics processing unit, virtual memory address translation, instruction cache, and data cache. The MC88110 maintains compatibility with MC88100 user application software.

Cache/Memory Management Units

MC88200RC

16–Kilobyte Cache/Memory Management Unit (CMMU)

The MC88200 CMMU is a high–performance, HCMOS VLSI device providing zero–wait–state memory management and data caching. The MMU (memory management unit) efficiently supports a demand–paged virtual memory environment with two logical address ranges (user/supervisor) of 4 gigabytes each. Translated addresses are provided by one of two ATCs (address translation caches), providing address translation in one clock cycle for most memory accesses. The PATC (page address translation cache) is a 56–entry, fully associative cache containing recently used translations for 4–kilobyte memory pages and is maintained by MC88200 hardware. The BATC (block address translation cache) is a 10–entry cache, loaded by software, containing translations for 512–kilobyte memory blocks. The BATC translations are used for operating system software or for other memory–resident instructions and data. In addition, the MMU provides access control for the two logical address spaces. The CMMU data cache is a 16–kilobyte, four–way, set–associative cache for instruction or data storage. The cache incorporates memory–update policies and cache–coherency mechanisms that support multiprocessor applications. The MC88200 CMMU also includes an MC88100–compatible P bus (processor bus) interface and an M bus (memory bus) interface. A processor may use two or more CMMUs for increased data cache and ATC sizes.

MC88204RC

64K–Byte Cache/Memory Management Unit (CMMU)

The MC88204 CMMU is a high–performance, HCMOS VLSI device providing zero–wait–state memory management and data caching. The memory management unit (MMU) efficiently supports a demand–paged virtual memory environment with two logical address ranges (user/supervisor) of 4 Gbytes each. Translated addresses are provided by one of two address translation caches (ATCs), providing address translation in one clock cycle for most memory accesses. The page address translation cache (PATC) is a 56–entry, fully associative cache containing recently used translations for 4K–byte memory pages and is maintained by MC88204 hardware. The block address translation cache (BATC) is a 10–entry cache, loaded by software, containing translations for 512K–byte memory blocks. The BATC translations are used for operating system software or for other memory–resident instructions and data. In addition, the MMU provides access control for the two logical address spaces. The CMMU data cache is a 64K–byte, four–way set–associative cache for instruction or data storage. The cache incorporates memory–update policies and cache–coherency mechanisms that support multiprocessor applications. The MC88204 CMMU also includes an MC88100–compatible processor bus (P bus) interface and memory bus (M bus) interface.

The MC88204 CMMU is completely software and pin–level compatible with the MC88200 16K–byte CMMU. The functionality of the MC88204 is identical to that of the MC88200. With board layout constraints in mind, a central processing unit (CPU) may use up to two MC88204 CMMUs on the data P bus and up to two MC88204 CMMUs on the instruction P bus to increase data cache and ATC sizes.

MC88410

Secondary Cache Controller

The MC88410 is a highly integrated secondary cache controller for the MC88110 microprocessor that reduces memory latency and extends multiprocessing capability for those seeking the highest level of system performance. Used with the MCM62110 Fast Static RAM, it provides a functionally complete secondary cache solution for both uniprocessor and multiprocessor environments. The MC88410 provides tag, control and buffering for 1/4, 1/2, and 1 Mbyte secondary cache configurations, all in a single chip cache controller. The MC88410 eliminates external logic between the processor and the secondary cache, provides bus arbitration for the MC88110, and requires no external programming.

The MC88410 and MCM62110 are optimized to provide low latency memory access to the MC88110 processor. Initial accesses incur only one wait state. Subsequent transactions in a burst incur zero wait states. Data streaming to the processor reduces the penalty on secondary cache misses.

The MC88410 expands the MC88110's system flexibility by providing a choice of secondary cache line size, burst byte ordering, and system clock frequency. The MC88410 extends the MC88110 multiprocessing capability by significantly reducing system bandwidth consumption. This increased available bandwidth, along with the MC88410's hardware enforced cache coherency protocol, enable the implementation of dual bus systems and scalable shared–bus multiprocessing systems.

The PowerPC™ RISC Family Microprocessors

In Brief . . .

The PowerPC architecture is derived from the IBM Performance Optimized with Enhanced RISC (POWER) architecture. The PowerPC architecture shares all of the benefits of the POWER architecture but is optimized for single–chip implementations. The architecture design emphasizes parallel instruction execution and high throughput and allows for exceptional floating–point performance. The PowerPC architecture is powerful today and is scalable from palmtops to mainframes.

PowerPC™ RISC Microprocessors

The PowerPC Architecture™, developed jointly by Motorola, IBM, and Apple, is based on the POWER Architecture™ implemented by the RISC System/6000™ family of computers. The PowerPC architecture takes advantage of recent technological advances in such areas as process technology, compiler design, and RISC (reduced instruction set computer) microprocessor design to provide software compatibility across a diverse family of implementations, primarily single–chip microprocessors, intended for a wide range of systems, including battery–powered personal computers, embedded controllers, high–end scientific and graphics workstations, and multiprocessing, microprocessor–based mainframes.

To provide a single architecture for such a broad assortment of processor environments, the PowerPC architecture is both flexible and scalable.

The flexibility of the PowerPC architecture offers many price/performance options. Designers can choose whether to implement architecturally–defined features in hardware or in software. For example, a processor designed for a high–end workstation has greater need for the performance gained from implementing floating–point normalization and denormalization in hardware than a battery–powered, general–purpose computer might.

The PowerPC architecture is scalable to take advantage of continuing technological advances — for example, the continued miniaturization of transistors makes it more feasible to implement more execution units and a richer set of optimizing features without being constrained by the architecture.

The PowerPC architecture defines the following features:

- Separate 32–entry register files for integer and floating–point instructions. The general–purpose registers (GPRs) hold source and target data for integer arithmetic instructions, and the floating–point registers (FPRs) hold source and target data for floating–point arithmetic instructions.
- Instructions for loading and storing data between the memory system and either the FPRs or GPRs.
- Uniform–length instructions to allow simplified instruction pipelining and parallel processing instruction dispatch mechanisms.
- Nondestructive use of registers for arithmetic instructions in which the second, third, and sometimes the fourth operand, typically specify source registers for calculations whose results are typically stored in the target register specified by the first operand.
- A precise exception model (with the option of treating floating–point exceptions imprecisely).
- Floating–point support that includes IEEE–754 floating–point operations.
- The ability to perform both single– and double–precision floating–point operations.
- A flexible architecture definition that allows certain features to be performed in either hardware or with assistance from implementation–specific software depending on the needs of the processor design.
- User–level instructions for explicitly storing, flushing, and invalidating data in the on–chip caches. The architecture also defines special instructions (cache block touch instructions) for speculatively loading data before it is needed, potentially reducing the effect of memory latency.
- Definition of a memory model that allows weakly–ordered memory accesses. This allows bus operations to be reordered dynamically, which improves overall performance and in particular reduces the effect of memory latency on instruction throughput.
- Support for separate instruction and data caches (Harvard architecture) and for unified caches.
- Support for both big– and little–endian addressing modes.
- Support for 64–bit addressing. The architecture supports both 32–bit or 64–bit implementations. This document typically describes the architecture in terms of the 64–bit implementations in those cases where the 32–bit subset can be easily deduced.

MPC601 RISC Microprocessor

The MPC601 is the first implementation of the PowerPC architecture. The MPC601 implements the 32–bit portion of the PowerPC architecture, which provides 32–bit effective (logical) addresses, integer data types of 8, 16, and 32 bits, and floating–point data types of 32 and 64 bits. For 64–bit PowerPC implementations, the PowerPC architecture provides 64–bit integer data types, 64–bit addressing, and other features required to complete the 64–bit architecture.

The MPC601 is a superscalar processor capable of issuing and retiring three instructions per clock, one to each of three execution units. Instructions can complete out of order for increased performance; however, the MPC601 makes execution appear sequential.

The MPC601 integrates three execution units — an integer unit (IU), a branch processing unit (BPU), and a floating–point unit (FPU). The ability to execute three instructions in parallel and the use of simple instructions with rapid execution times yield high efficiency and throughput for MPC601–based systems. Most integer instructions execute in one clock cycle. The FPU is pipelined so a single–precision multiply–add instruction can be issued every clock cycle.

The MPC601 includes an on–chip, 32–Kbyte, eight–way set–associative, physically addressed, unified instruction and data cache and an on–chip memory management unit (MMU). The MMU contains a 256–entry, two–way set–associative, unified translation look–aside buffer (UTLB) and provides support for demand paged virtual memory address translation and variable–sized block translation. Both the UTLB and the cache use least recently used (LRU) replacement algorithms.

The MPC601 has a 64–bit data bus and a 32–bit address bus. The MPC601 interface protocol allows multiple masters to compete for system resources through a central external arbiter. Additionally, on–chip snooping logic maintains cache coherency in multiprocessor applications. The MPC601 supports single–beat and burst data transfers for memory accesses; it also supports both memory–mapped I/O and I/O controller interface addressing.

The MPC601 uses an advanced, 3.6–volts (601) or 2.5 volts (601v) CMOS process technology and maintains full interface compatibility with TTL devices.

Block Diagram

Figure 1 provides a block diagram of the MPC601 that illustrates how the execution units — IU, FPU, and BPU — operate independently and in parallel.

MPC602 RISC Microprocessor

The MPC602 is a low–cost, low–power implementation of the PowerPC RISC architecture. The MPC602 implements the 32–bit portion of the PowerPC architecture, which provides 32–bit effective addresses, integer data types of 8, 16, and 32 bits, and floating–point data types of 32 and 64 bits. Floating–point operations involving either 32– or 64–bit data types in single–precision format are supported; however, floating–point operations involving 64–bit data types in double–precision format are not implemented in hardware and are instead trapped for emulation in software.

The MPC602 has four execution units—an integer unit (IU), a floating–point unit (FPU), a branch processing unit (BPU), and a load/store unit (LSU). The ability to execute four instructions in parallel and the use of simple instructions with rapid execution times yield high efficiency and throughput for MPC602–based systems. Most integer instructions execute in one clock cycle. The FPU is pipelined such that typically when the FPU pipeline is full, a single–precision instruction can complete every clock cycle.

The MPC602 provides dynamic and static power–saving modes. The three static modes — nap, doze, and sleep — progressively reduce the amount of power dissipated by the processor.

The MPC602 provides independent on–chip, 4–Kbyte, two–way set–associative, physically addressed caches for instructions and data and on–chip instruction and data memory management units (MMUs). The MPC602 MMUs contain 32–entry, two–way set–associative, data and instruction translation lookaside buffers (DTLB and ITLB). The MPC602 provides an additional memory protection mechanism not defined by the PowerPC architecture. The 602's protection–only mode can control whether instructions can be fetched from 4–Kbyte instruction pages and whether data can be written to 4–Kbyte data pages.

The MPC602 has a single bus interface used for transferring both 32–bit addresses and either 32– or 64–bit data. This bus is time–multiplexed. The MPC602 interface protocol allows multiple masters to compete for system resources through a central external arbiter. The MPC602 provides a three–state coherency protocol that supports the modified, exclusive, and invalid (MEI) cache states. This protocol is a compatible subset of the MESI (modified/exclusive/shared/invalid) four–state protocol and operates coherently in systems that contain four–state caches.

The MPC602 uses an advanced, 3.3–V CMOS process technology and maintains full interface compatibility with TTL devices.

Block Diagram

The MPC602 block diagram in Figure 2 illustrates how the execution units — IU, FPU, BPU, and LSU — operate independently and in parallel.

MPC603 RISC Microprocessor

The MPC603 is the first low–power implementation of the PowerPC architecture. The MPC603 implements the 32–bit portion of the PowerPC architecture, which provides 32–bit effective (logical) addresses, integer data types of 8, 16, and 32 bits, and floating–point data types of 32 and 64 bits. For 64–bit PowerPC implementations, the PowerPC architecture provides 64–bit integer data types, 64–bit addressing, and other features required to complete the 64–bit architecture.

The MPC603 provides four software controllable power–saving modes. Three of the modes (the nap, doze, and sleep modes) are static in nature, and progressively reduce the amount of power dissipated by the processor. The fourth is a dynamic power management mode that causes the functional units in the MPC603 to automatically enter a low–power mode when the functional units are idle without affecting operational performance, software execution or any external hardware.

The MPC603 is a superscalar processor capable of issuing and retiring a maximum of three instructions per clock. Instructions can execute out of order for increased performance; however, the MPC603 makes completion appear sequential.

The MPC603 integrates five execution units — an integer unit (IU), a floating–point unit (FPU), a branch processing unit (BPU), a load/store unit (LSU) and a system register unit (SRU). The ability to execute five instructions in parallel and the use of simple instructions with rapid execution times yield high efficiency and throughput for MPC603–based systems. Most integer instructions execute in one clock cycle. The FPU is pipelined so a single–precision multiply–add instruction can be issued every clock cycle.

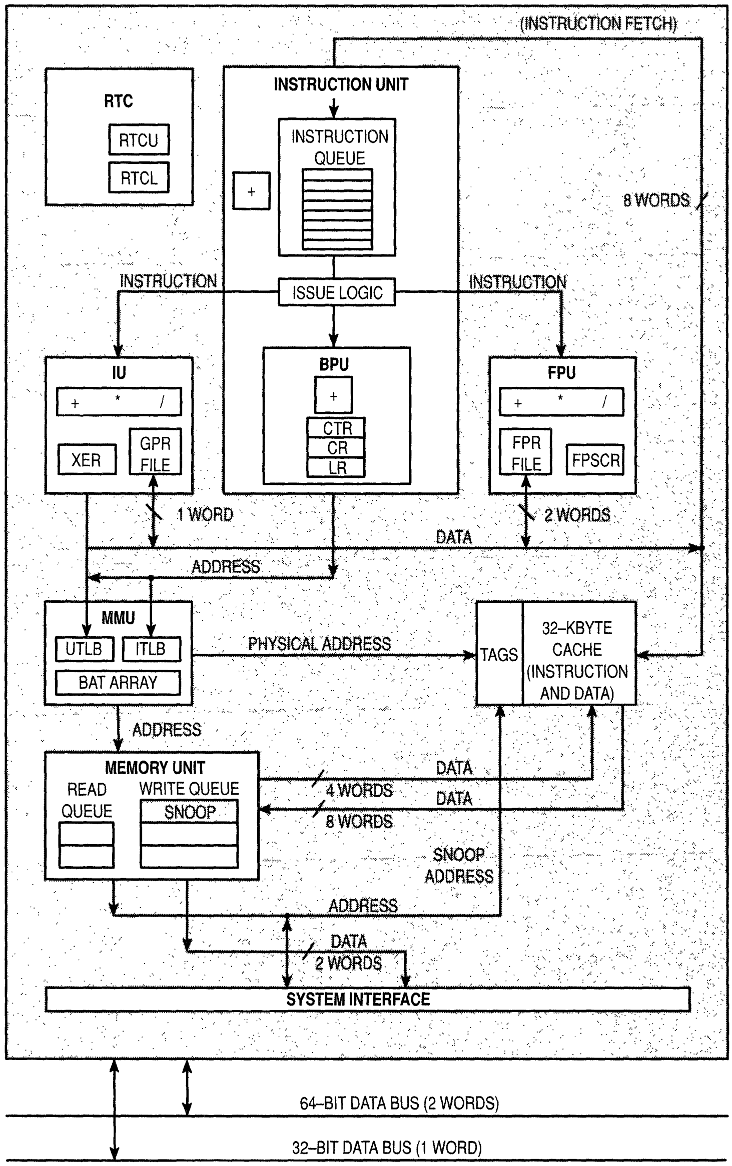

Figure 1. MPC601 Block Diagram

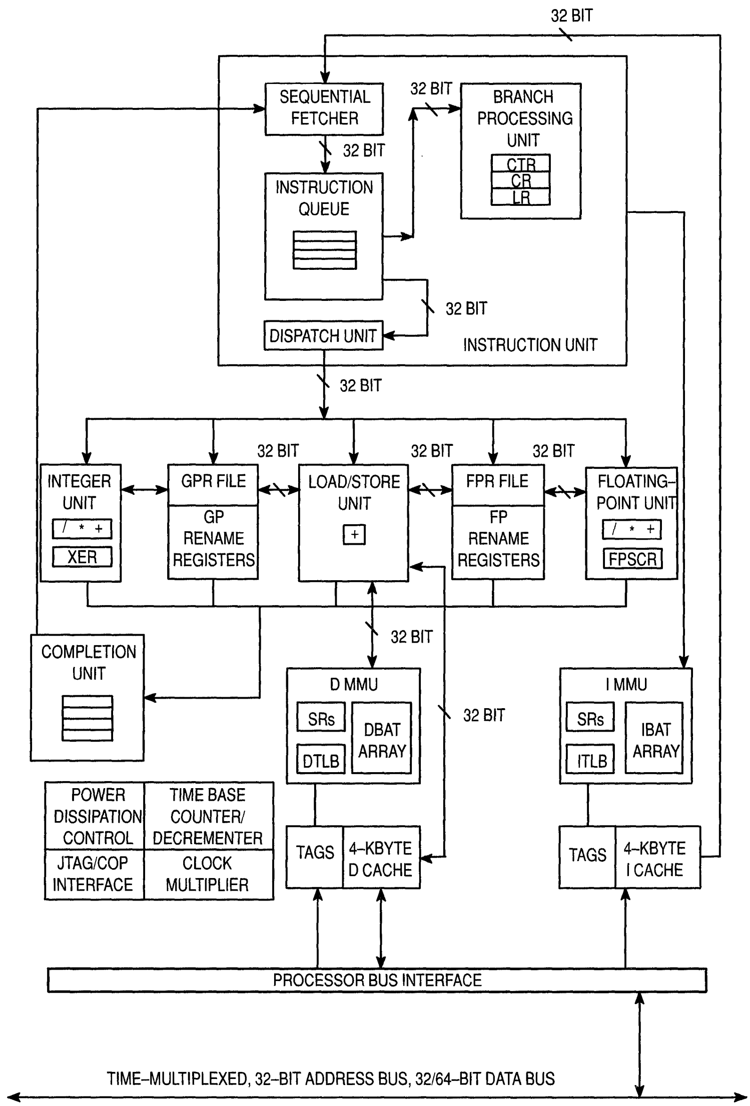

Figure 2. MPC602 Block Diagram

The MPC603 provides independent on–chip, 8–Kbyte, two–way set–associative, physically addressed caches for instructions and data and on–chip instruction and data memory management units (MMUs). The MMUs contain 64–entry, two–way set–associative, data and instruction translation lookaside buffers (DTLB and ITLB) that provide support for demand–paged virtual memory address translation and variable–sized block translation.

The MPC603 has a selectable 32– or 64–bit data bus and a 32–bit address bus. The MPC603 interface protocol allows multiple masters to compete for system resources through a central external arbiter. The MPC603 provides a three–state coherency protocol that supports the Exclusive, Modified, and Invalid cache states. This protocol is a compatible subset of the MESI four–state protocol and operates coherently in systems that contain four–state caches. The MPC603 supports single–beat and burst data transfers for memory accesses; it also supports both memory–mapped I/O and I/O controller interface addressing.

The MPC603 uses an advanced, 3.3–V CMOS process technology and maintains full interface compatibility with TTL devices.

Block Diagram

Figure 3 provides a block diagram of the MPC603 that illustrates how the execution units — IU, FPU, BPU, LSU, and SRU — operate independently and in parallel.

The MPC603 provides address translation and protection facilities, including an ITLB, DTLB, and instruction and data BAT arrays. Instruction fetching and issuing is handled in the instruction unit. Translation of addresses for cache or external memory accesses are handled by the MMUs.

MPC603e RISC Microprocessor

The MPC603e is a low–power implementation of the PowerPC RISC architecture. The MPC603e implements the 32–bit portion of the PowerPC architecture, which provides 32–bit effective addresses, integer data types of 8, 16, and 32 bits, and floating–point data types of 32 and 64 bits.

The MPC603e provides four software controllable power–saving modes. Three of the modes (the nap, doze, and sleep modes) are static in nature, and progressively reduce the amount of power dissipated by the processor. The fourth is a dynamic power management mode that causes the functional units in the MPC603e to automatically enter a low–power mode when the functional units are idle without affecting operational performance, software execution, or any external hardware.

The MPC603e is a superscalar processor capable of issuing and retiring as many as three instructions per clock. Instructions can execute out of order for increased performance; however, the MPC603e makes completion appear sequential.

The MPC603e integrates five execution units — an integer unit (IU), a floating–point unit (FPU), a branch processing unit (BPU), a load/store unit (LSU), and a system register unit (SRU). The ability to execute five instructions in parallel and the use of simple instructions with rapid execution times yield high efficiency and throughput for MPC603e–based systems. Most integer instructions execute in one clock cycle. The FPU is pipelined so a single–precision multiply–add instruction can be issued every clock cycle.

The MPC603e provides independent on–chip, 16–Kbyte, four–way set–associative, physically addressed caches for instructions and data and on–chip instruction and data memory management units (MMUs). The MMUs contain 64–entry, two–way set–associative, data and instruction translation lookaside buffers (DTLB and ITLB) that provide support for demand–paged virtual memory address translation and variable–sized block translation.

The MPC603e has a selectable 32– or 64–bit data bus and a 32–bit address bus. The MPC603e interface protocol allows multiple masters to compete for system resources through a central external arbiter. The MPC603e provides a three–state coherency protocol that supports the exclusive, modified, and invalid cache states. This protocol is a compatible subset of the MESI (modified/exclusive/shared/invalid) four–state protocol and operates coherently in systems that contain four–state caches. The MPC603e supports single–beat and burst data transfers for memory accesses, and supports memory–mapped I/O accesses.

The MPC603e uses an advanced CMOS process technology and maintains full interface compatibility with TTL devices. The MPC603e is implemented in both a 2.5–V version (PID7V–603e) and a 3.3–V version (PID6–603e).

Block Diagram

Figure 4 provides a block diagram of the MPC603e that illustrates how the execution units — IU, FPU, BPU, LSU, and SRU — operate independently and in parallel.

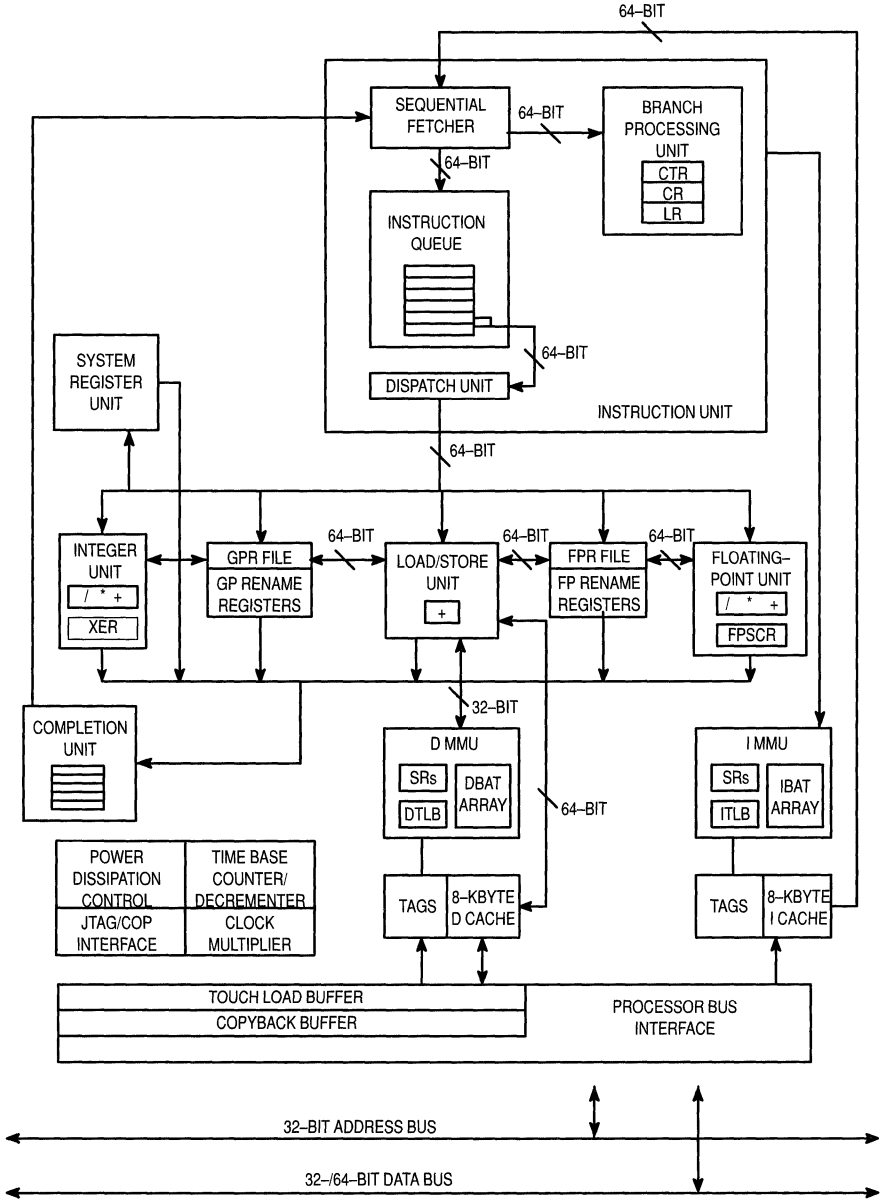

Figure 3. MPC603 Block Diagram

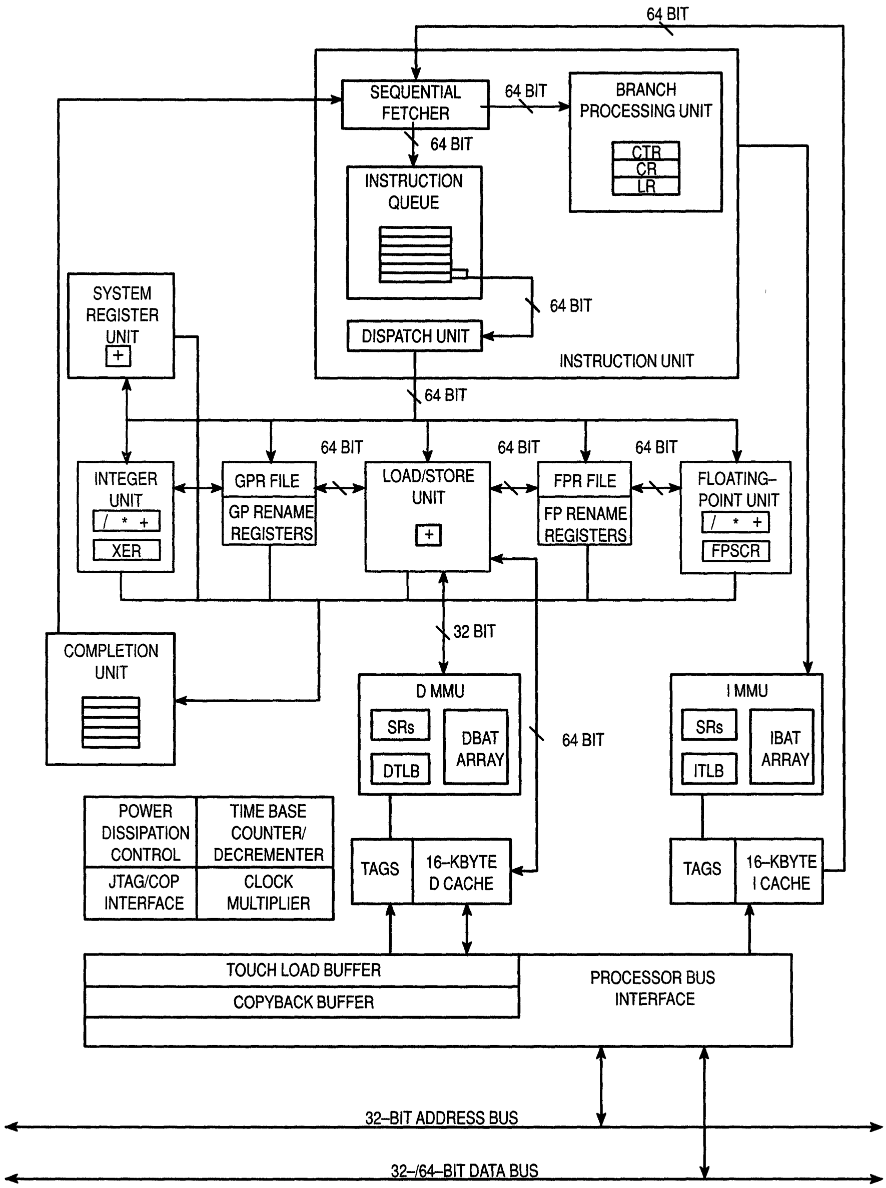

Figure 4. MPC603e Block Diagram

MPC604 RISC Microprocessor

The MPC604 is an implementation of the PowerPC family of RISC microprocessors. The MPC604 implements the PowerPC architecture as it is specified for 32–bit addressing, which provides 32–bit effective (logical) addresses, integer data types of 8, 16, and 32 bits, and floating–point data types of 32 and 64 bits (single–precision and double–precision). For 64–bit PowerPC implementations, the PowerPC architecture provides additional 64–bit integer data types, 64–bit addressing, and related features.

The MPC604 is a superscalar processor capable of issuing four instructions simultaneously. As many as six instructions can finish execution in parallel. The MPC604 has six execution units that can operate in parallel—floating–point unit (FPU), branch processing unit (BPU), load/store unit (LSU), two single–cycle integer units (SCIUs), and one multiple–cycle integer unit (MCIU).

This parallel design, combined with the PowerPC architecture's specification of uniform instructions that allows for rapid execution times, yields high efficiency and throughput. The MPC604's rename buffers, reservation stations, dynamic branch prediction, and completion unit increase instruction throughput, guarantee in–order completion, and ensure a precise exception model. (Note that the PowerPC architecture specification refers to all exceptions as interrupts.)

The MPC604 has separate memory management units (MMUs) and separate 16–Kbyte on–chip caches for instructions and data. The MPC604 implements two 128–entry, two–way set (64–entry per set) associative translation lookaside buffers (TLBs), one for instructions and one for data, and provides support for demand–paged virtual memory address translation and variable–sized block translation. The TLBs and the cache use least–recently used (LRU) replacement algorithms.

The MPC604 has a 64–bit external data bus and a 32–bit address bus. The MPC604 interface protocol allows multiple masters to compete for system resources through a central external arbiter. Additionally, on–chip snooping logic maintains data cache coherency for multiprocessor applications. The MPC604 supports single–beat and burst data transfers for memory accesses and memory–mapped I/O accesses.

The MPC604 uses an advanced, 3.3–V CMOS process technology and is fully compatible with TTL devices.

Block Diagram

Figure 5 provides a block diagram showing features of the MPC604. Note that this is a conceptual block diagram intended to show the basic features rather than an attempt to show how these features are physically implemented on the chip.

MPC604e RISC Microprocessor

The MPC604e is an implementation of the PowerPC family of RISC microprocessors. The MPC604e implements the PowerPC architecture as it is specified for 32–bit addressing, which provides 32–bit effective (logical) addresses, integer data types of 8, 16, and 32 bits, and floating–point data types of 32 and 64 bits (single–precision and double–precision). For 64–bit PowerPC implementations, the PowerPC architecture provides additional 64–bit integer data types, 64–bit addressing, and related features.

The MPC604e is a superscalar processor capable of issuing four instructions simultaneously. As many as seven instructions can finish execution in parallel. The MPC604e has seven execution units that can operate in parallel — floating–point unit (FPU), branch processing unit (BPU), condition register unit (CRU), load/store unit (LSU), two single–cycle integer units (SCIUs), and one multiple–cycle integer unit (MCIU).

This parallel design, combined with the PowerPC architecture's specification of uniform instructions that allows for rapid execution times, yields high efficiency and throughput. The MPC604e's rename buffers, reservation stations, dynamic branch prediction, and completion unit increase instruction throughput, guarantee in–order completion, and ensure a precise exception model. (Note that the PowerPC architecture specification refers to all exceptions as interrupts.)

The MPC604e has separate memory management units (MMUs) and separate 32–Kbyte on–chip caches for instructions and data. The MPC604e implements two 128–entry, two–way set associative translation lookaside buffers (TLBs), one for instructions and one for data, and provides support for demand–paged virtual memory address translation and variable–sized block translation. The TLBs and the cache use least–recently used (LRU) replacement algorithms.

The MPC604e has a 64–bit external data bus and a 32–bit address bus. The MPC604e interface protocol allows multiple masters to compete for system resources through a central external arbiter. Additionally, on–chip snooping logic maintains data cache coherency for multiprocessor applications. The MPC604e supports single–beat and burst data transfers for memory accesses and memory–mapped I/O accesses.

The MPC604e uses an advanced, 2.5–V CMOS process technology and is fully compatible with TTL devices.

Block diagram

Figure 6 provides a block diagram of the MPC604e.

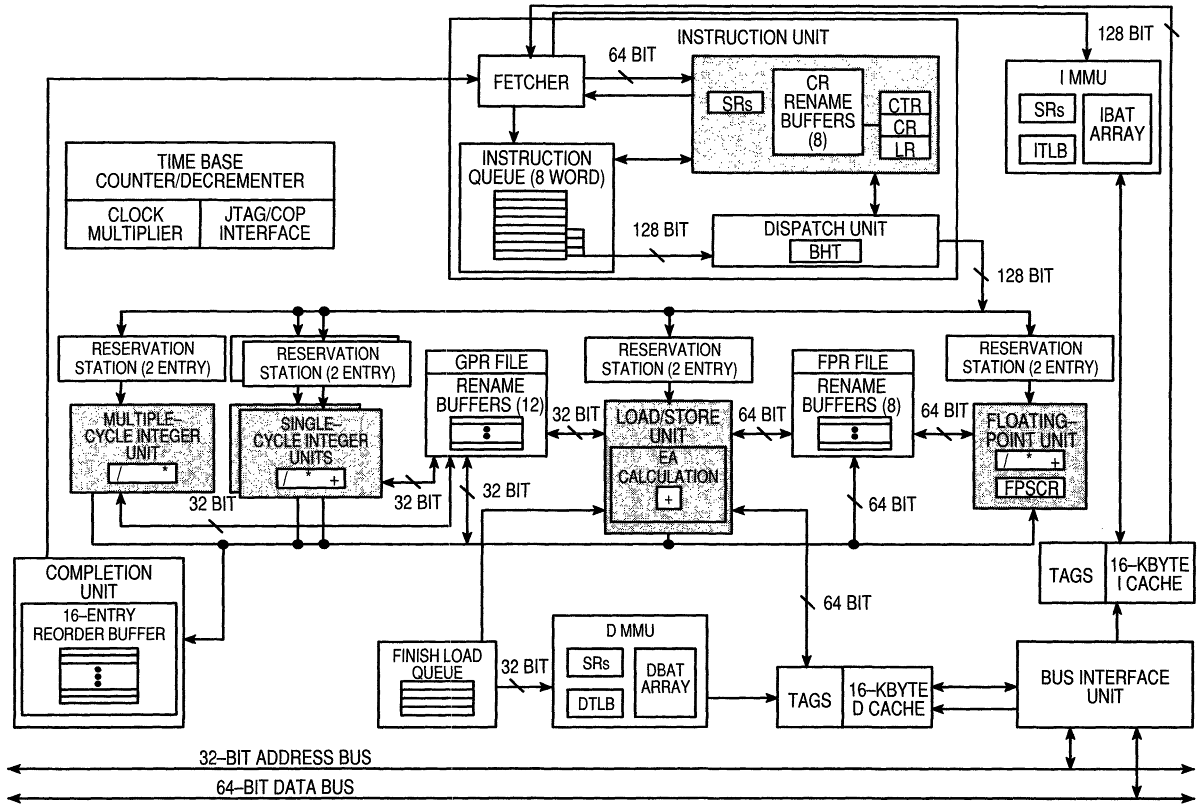

Figure 5. MPC604 Block Diagram

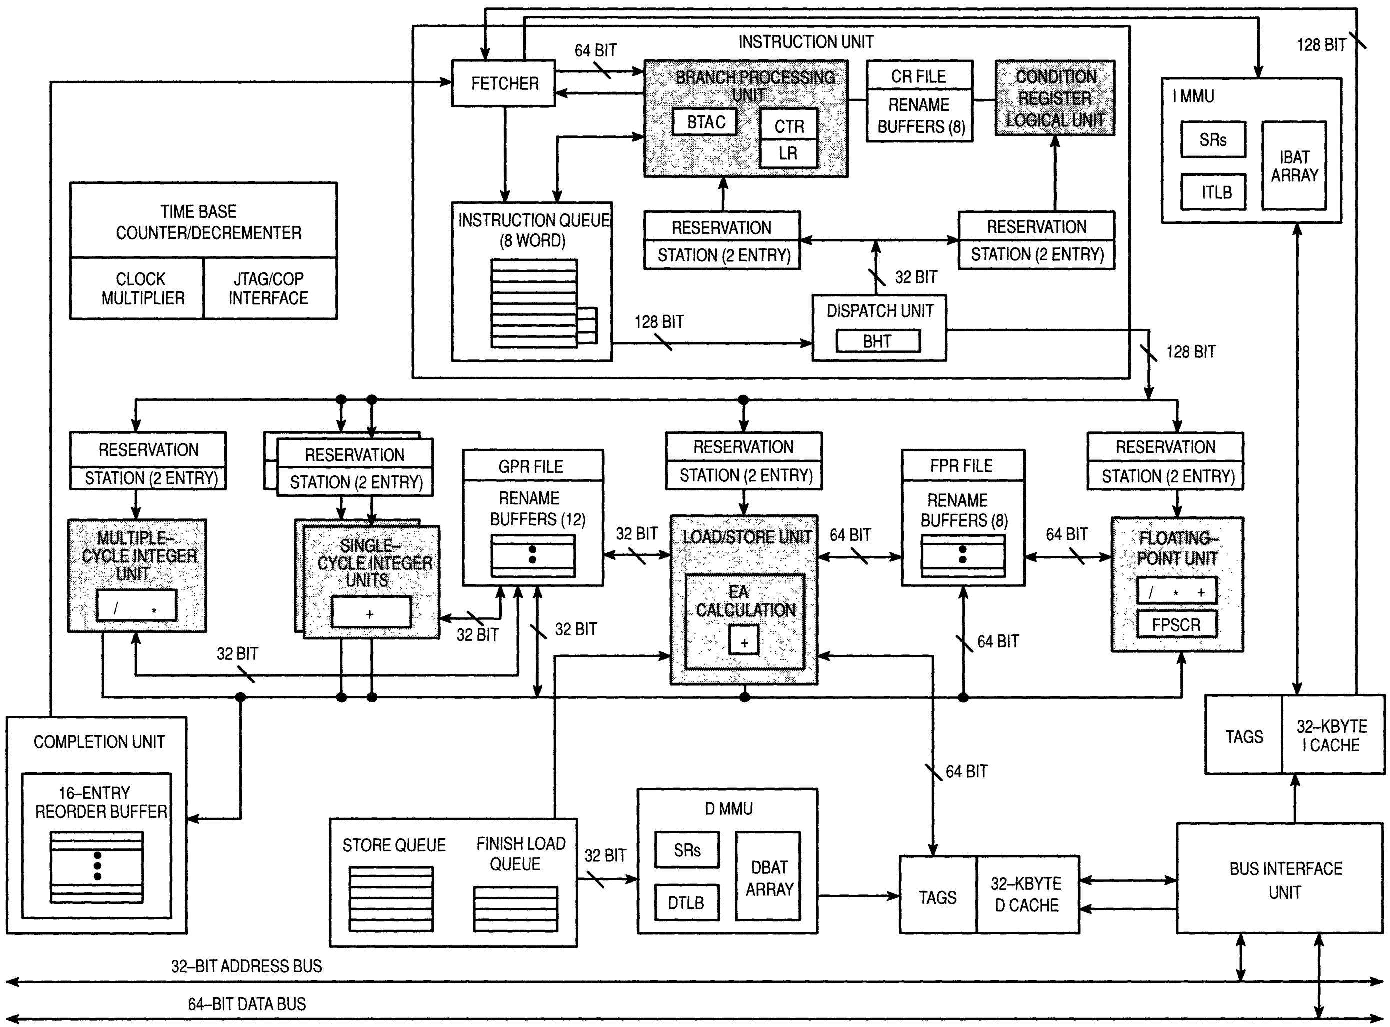

Figure 6. MPC604e Block Diagram

New Features of the MPC604e

Features of the MPC604e that are not implemented in the MPC604 are as follows:

- Additional special–purpose registers
  - — HID1 provides four read–only PLL_CFG bits for indicating the processor/bus clock ratio.
  - — Three additional registers support the performance monitor—MMCR1 is a second control register that includes bits to support the use of two additional counter registers, PMC3 and PMC4.
- Instruction execution
  - — Separate units for branch and condition register (CR) instructions. The BPU is now split into a CR logical unit and a branch unit, which makes it possible for branch instructions to execute and resolve before preceding CR logical instructions. The MPC604e can still only dispatch one CR logical or branch instruction per cycle, but it can execute both branch and CR logical instructions at the same time.
  - — Branch correction in decode stage. Branch correction in the decode stage can now predict branches whose target is taken from the count or link registers if no updates of the count and link register are pending. This saves at least one cycle on branch correction when the **mtspr** instruction can be sufficiently separated from the branch that uses the SPR as a target address.
  - — Ability to disable the branch target address cache (BTAC)—HID0[30] has been defined to allow the BTAC to be disabled. When HID0[30] is set, the BTAC contents are invalidated and the BTAC behaves as if it were empty. New entries cannot be added until the BTAC is enabled.
- Improvements to cache implementation
  - — 32–Kbyte split data and instruction caches. Like the 604, both caches are four–way set associative; however, each cache has twice as many sets, logically separated into 128 sets of odd lines and 128 sets of even lines.
  - — Data cache line–fill buffer forwarding. In the 604 only the critical double word of a burst operation was made available to the requesting unit at the time it was burst into the line–fill buffer. Subsequent data was unavailable until the cache block was filled. On the MPC604e, subsequent data is also made available as it arrives in the line–fill buffer.
  - — Additional cache copyback buffers. The MPC604e implements three copyback write buffers (as opposed to one in the 604). Having multiple copyback buffers provides the ability for certain instructions to take fuller advantage of the pipelined system bus to provide more efficient handling of cache copyback, block invalidate operations caused by the data cache block flush (**dcbf**) instruction, and cache block clean operations resulting from the data cache block store (**dcbst**) instruction.
  - — Coherency support for instruction fetching. Instruction fetching coherency is controlled by HID0[23]. In the default mode, HID0[23] is 0, $\overline{\text{GBL}}$ is not asserted for instruction accesses, as is the case with the 604. If the bit is set, and instruction translation is enabled (MSR[IR] = 1), the $\overline{\text{GBL}}$ signal is set to reflect the M bit for this page or block. If instruction translation is disabled (MSR[IR] = 0), the $\overline{\text{GBL}}$ signal is asserted.
- System interface operation
  - — The MPC604e has the same pin configuration as the MPC604; however, on the MPC604e V_{DD} and AV_{DD} must be connected to 2.5 Vdc and OV_{DD} must be connected to 3.3 Vdc. The MPC604e uses split voltage planes, and for replacement compatibility, MPC604/MPC604e designs should provide both 2.5–V and 3.3–V planes and the ability to connect those two planes together and disable the 2.5–V plane for operation with an MPC604.
  - — Support for additional processor/bus clock ratios (5:2 and 4:1). Configuration of the processor/bus clock ratios is displayed through a new MPC604e–specific register, HID1.
  - — To support the changes in the clocking configuration, different precharge timings for the $\overline{\text{ABB}}$, $\overline{\text{DBB}}$, $\overline{\text{ARTRY}}$, and $\overline{\text{SHD}}$ signals are implemented internally by the processor. The precharge timings for $\overline{\text{ARTRY}}$ and $\overline{\text{SHD}}$ can be disabled by setting HID0[7].
  - — No–DRTRY mode. In addition to the normal and fast L2 modes implemented on the 604, a no–DRTRY mode is implemented on the MPC604e that improves performance on read operations for systems that do not use the $\overline{\text{DRTRY}}$ signal. No–DRTRY mode makes read data available to the processor one bus clock cycle sooner than in normal mode. In no–DRTRY mode, the $\overline{\text{DRTRY}}$ signal is no longer sampled as part of a qualified bus grant.
- Full hardware support for little–endian accesses. Little–endian accesses take alignment exceptions for only the same set of causes as big–endian accesses. Accesses that cross a word boundary require two accesses with the lower–addressed word accessed first.
- Additional enhancements to the performance monitor.

MPC620 RISC Microprocessor

The MPC620 is an implementation of the PowerPC™ family of RISC microprocessors. The MPC620 implements the PowerPC architecture as it is specified for 64–bit addressing, which provides 64–bit effective (logical) addresses, integer data types of 8, 16, 32, and 64 bits, and floating–point data types of 32 and 64 bits (single–precision and double–precision). The MPC620 is software compatible with the 32–bit versions of the PowerPC microprocessor family.

The MPC620 is a superscalar processor capable of issuing four instructions simultaneously. As many as six instructions can finish execution in parallel. The MPC620 has six execution units that can operate in parallel — floating–point unit (FPU), branch processing unit (BPU), load/store unit (LSU), two single–cycle integer units (SCIUs), and one multiple–cycle integer unit (MCIU).

This parallel design, combined with the PowerPC architecture's specification of uniform instructions that allows for rapid execution times, yields high efficiency and throughput. The MPC620's rename buffers, reservation stations, dynamic branch prediction, and completion unit increase instruction throughput, guarantee in–order completion, and ensure a precise exception model.

The MPC620 has separate memory management units (MMUs) and separate 32–Kbyte on–chip caches for instructions and data. The MPC620 implements a 128–entry, two–way set–associative translation lookaside buffer (TLB) for instructions and data, and provides support for demand–paged virtual memory address translation and variable–sized block translation. The TLB and the cache use least–recently used (LRU) replacement algorithms.

The MPC620 has a 40–bit address bus, and can be configured with either a 64– or 128–bit data bus. The MPC620 interface protocol allows multiple masters to compete for system resources through a central external arbiter. Additionally, on–chip snooping logic maintains data cache coherency for multiprocessor applications. The MPC620 supports single–beat and burst data transfers for memory accesses and memory–mapped I/O accesses.

The MPC620 uses an advanced, 3.3–V CMOS process technology and is compatible with 3.3–V CMOS devices.

Block Diagram

Figure 7 provides a block diagram showing features of the MPC620. Note that this is a conceptual block diagram intended to show the basic features rather than an attempt to show how these features are physically implemented on the chip.

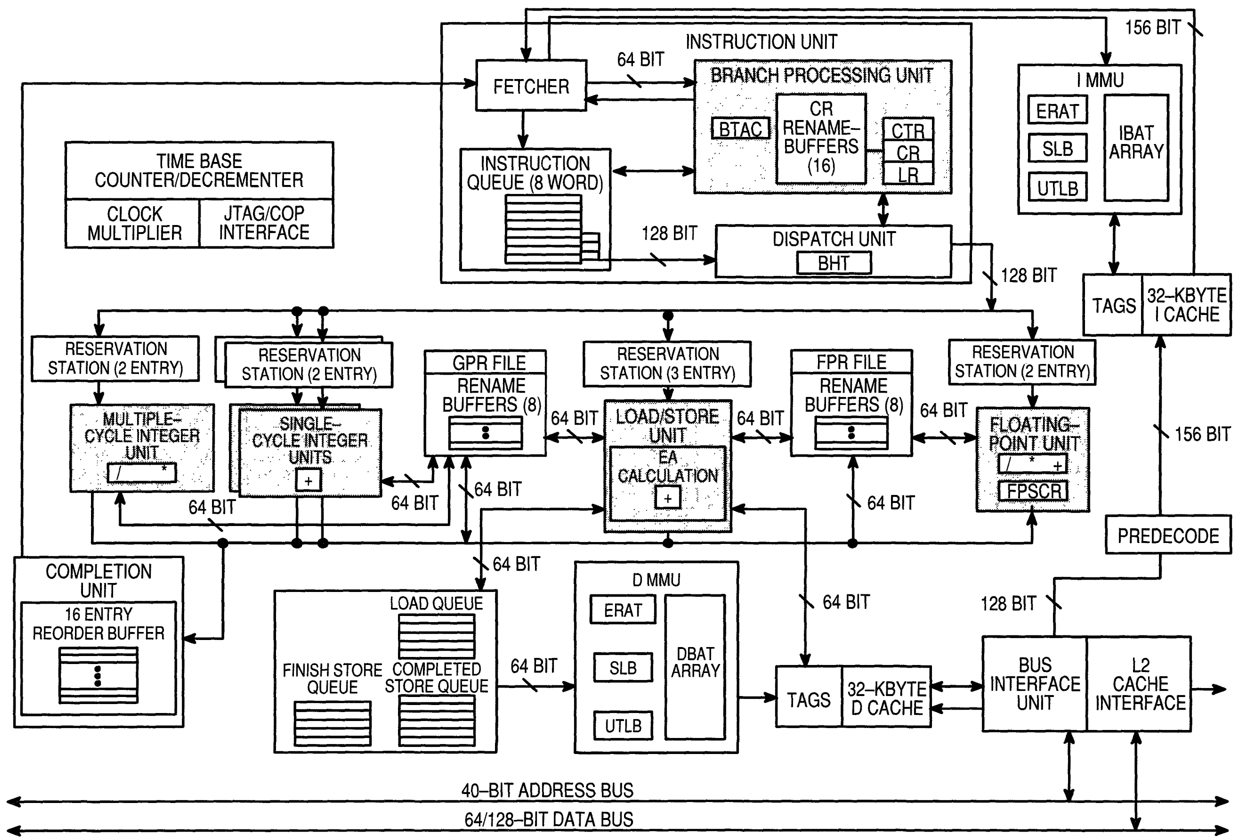

Figure 7. MPC620 Block Diagram

MPC105 PCI Bridge/Memory Controller

The MPC105 PCI bridge/memory controller (PCIB/MC) provides a PowerPC reference platform–compliant bridge between the PowerPC microprocessor family and the peripheral component interconnect (PCI) bus. PCI support allows system designers to rapidly design systems using peripherals already designed for PCI and the other standard interfaces available in the personal computer hardware environment. The MPC105 integrates secondary cache control and a high–performance memory controller that supports DRAM, SDRAM, ROM, and Flash ROM. The MPC105 uses an advanced, 3.3–V CMOS process technology and is fully compatible with TTL devices.

The MPC105 provides an integrated high bandwidth, high performance, TTL–compatible interface between a 60x processor, a secondary (L2) cache or secondary 60x processor, the PCI bus, and main memory.

The MPC105 supports a programmable interface to a variety of PowerPC microprocessors operating at various bus speeds. The 60x processor interface uses a subset of the 60x bus protocol, which enables the interface between the processor and MPC105 to be optimized for performance. The MPC105's 60x interface allows for a variety of system configurations by providing support for either a direct–mapped, lookaside, L2 cache or a secondary 60x processor. The L2 cache interface generates the arbitration and support signals necessary to maintain a write–through or write–back L2 cache. The L2 cache interface supports either burst SRAMs or asynchronous SRAMs, and L2 data a per–byte basis. The MPC105 features on–chip byte decoding for L2 data write enables or can be configured to use external logic for data write enable generation.

The PCI interface connects the processor and memory buses to the PCI bus, to which I/O components are connected, without the need for "glue" logic. This interface acts as both a master and slave device.

The memory interface controls processor and PCI interactions to main memory. It is capable of supporting a variety of DRAM or SDRAM, and ROM or Flash ROM configurations as main memory. The maximum supported memory size is 1 Gbyte of DRAM or SDRAM, with 16 Mbytes of ROM or 1 Mbyte of Flash ROM.

The MPC105 provides hardware support for four levels of power reduction; the doze, nap, and sleep modes are invoked by register programming, and the suspend mode is invoked by assertion of an external signal. The design of the MPC105 is fully static, allowing internal logic states to be preserved during all power saving modes. The following sections describe the programmable power modes provided by the MPC105.

Block Diagram

Figure 8 shows the MPC105 in a typical system implementation. The major functional units within the MPC105 are also shown in Figure 1. Note that this is a conceptual block diagram intended to show the basic features rather than an attempt to show how these features are physically implemented on the device.

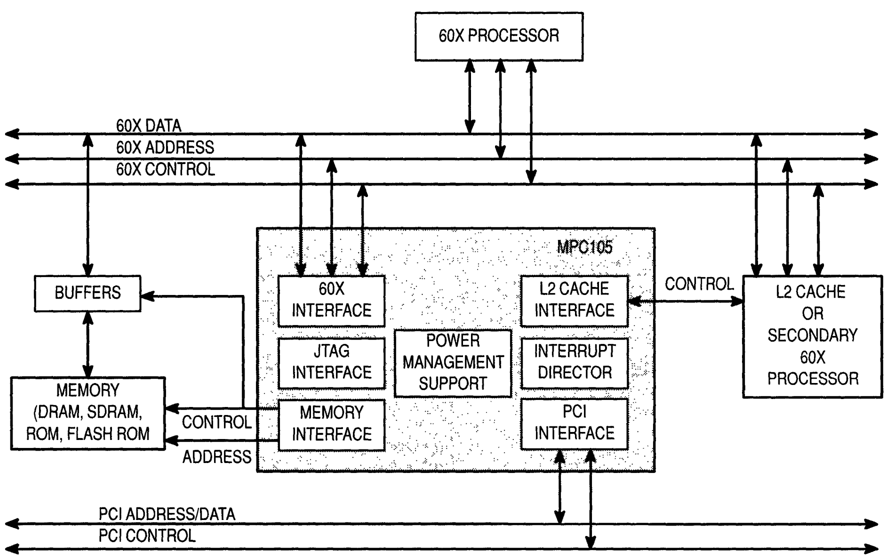

Figure 8. System Implementation and Block Diagram

MPC106 PCI Bridge/Memory Controller

The MPC106 provides a PowerPC common hardware reference platform (CHRP) compliant bridge between the PowerPC microprocessor family and the Peripheral Component Interconnect (PCI) bus. PCI support allows system designers to rapidly design systems using peripherals already designed for PCI and the other standard interfaces available in the personal computer hardware environment. The MPC106 integrates secondary cache control and a high–performance memory controller. The MPC106 uses an advanced, 3.3–V CMOS process technology and is fully compatible with TTL devices.

The MPC106 provides an integrated high–bandwidth, high–performance, TTL–compatible interface between a 60x processor, a secondary (L2) cache or secondary 60x processor, the PCI bus, and main memory.

60x Processor Interface

The MPC106 supports a programmable interface to a variety of PowerPC microprocessors operating at select bus speeds. The 60x processor interface of the MPC106 uses a subset of the 60x bus protocol, supporting single–beat and burst data transfers. The address bus is 32 bits wide and the data bus is 64 bits wide. The address and data buses are decoupled to support pipelined transactions. PCI bus accesses to system memory space are passed to the 60x processor bus for snooping purposes. Two signals on the MPC106, $\overline{\text{LBCLAIM}}$, and $\overline{\text{DBGLB}}$, are provided for an optional local bus slave. The local bus slave must be capable of generating $\overline{\text{AACK}}$ and $\overline{\text{TA}}$ signals to interact with the 60x processor(s). Depending on the system implementation, the processor(s) may operate at the PCI bus clock rate, or at two or three times the PCI bus clock rate. The bus is synchronous, with all timing relative to the rising edge of the bus clock.

L2 Cache/Multiple Processor Interface

The MPC106 provides support for the following configurations of 60x processors and L2 cache:

- A single 60x processor with no L2 cache
- A single 60x processor plus a direct–mapped, lookaside, L2 cache
- A single 60x processor plus an external L2 cache controller or integrated L2 cache module such as the Motorola MPC2604GA integrated L2 lookaside cache
- Two 60x processors with no L2 cache
- Two 60x processors plus an external L2 cache controller or integrated L2 cache module such as the Motorola MPC2604GA integrated L2 lookaside cache

The internal L2 cache controller generates the arbitration and support signals necessary to maintain a write–through or write–back L2 cache. The internal L2 cache controller supports either asynchronous SRAMs, pipelined burst SRAMs, or synchronous burst SRAMs, using byte parity for data error detection. When a second 60x processor is used, three signals of the L2 interface ($\overline{\text{BR1}}$, $\overline{\text{BG1}}$, and $\overline{\text{DBG1}}$) change their functions to allow for arbitration between the 60x processors. All 60x interface signals of the MPC106, except the bus request, bus grant, and data bus grant signals, are shared by the 60x processors. When an external L2 controller (or integrated L2 cache module) is used, three signals of the L2 interface ($\overline{\text{BRL2}}$, $\overline{\text{BGL2}}$, and $\overline{\text{DBGL2}}$) change their functions to allow the MPC106 to arbitrate between the external cache and the 60x processor(s).

Memory Interface

The memory interface controls processor and PCI interactions to main memory and is capable of supporting a variety of DRAM, or extended data–out (EDO) DRAM and ROM or Flash ROM configurations as main memory. The maximum supported memory size is 1 Gbyte of DRAM or EDO DRAM, with 16 Mbytes of ROM or Flash ROM. The memory controller of the MPC106 supports the various memory sizes through software initialization of on–chip configuration registers. Parity or ECC is provided for error detection.

PCI Interface

The MPC106's PCI interface is compliant with the PCI *Local Bus Specification, Revision 2.1,* and follows the guidelines in the *PCI System Design Guide, Revision 1.0* for host bridge architecture. The PCI interface connects the processor and memory buses to the PCI bus, to which I/O components are connected. The PCI bus uses a 32–bit multiplexed address/data bus, plus various control and error signals.

Figure 9 shows the major functional units within the MPC106. Note that this is a conceptual block diagram intended to show the basic features rather than an attempt to show how these features are physically implemented on the device.

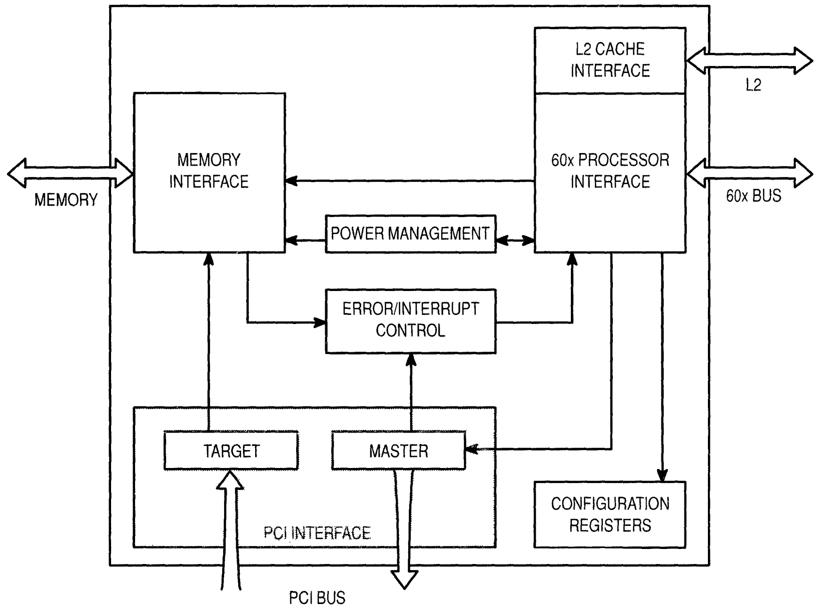

Figure 9. MPC106 Block Diagram

Single–Chip Microcontrollers (CSIC)

In Brief . . .

Motorola offers the most comprehensive selection of high–performance single–chip control systems available from a single source. Microcontroller device families range from industry–standard 8–bit controllers to state–of–the–art 16– and 32–bit modular controllers. Within the price and performance categories of each family, there are a variety of on–chip capabilities to match specific applications.

Motorola device families are structured so that upward migration need not involve complete code development. The M68HC11 Family is upward code compatible with M6800 and M6801 software, while the M68HC16 family is source–code compatible with the M68HC11 family. Motorola's newest 8–bit MCU product line, the M68HC08 family, is fully upward object code compatible with the M68HC05 and M6805 families. In addition, M68300 and M68HC16 devices share standard internal modules and bus configurations.

M68HC05 CSIC Family

It all started with the 68HC05 Family, and Motorola's CSIC (Customer–Specified Integrated Circuits) approach to microcontroller design. Today, customers can select from over 70 mask ROM 68HC05 devices and over 30 one–time programmable (OTP) 68HC705 devices — and that number is growing all the time, as Motorola continues to develop derivatives of the 68HC05 based on customer demand.

With so many standard 68HC05 microcontrollers from which to choose, most customers will find the right device for an application among these existing devices. For some high–volume applications, however, a customer may opt for Motorola to develop a new derivative to meet an application's precise requirements. The result is a new microcontroller which can then be added to the selection of standard devices.

M68HC05 Industry Solutions

Motorola's 68HC05 and 68HC08 Families consist of a variety of microcontroller designs to meet the requirements of a broad range of applications. The 68HC05 Family, already over 100 devices strong, offers a wide range of standard products from which to choose, while the flagship 68HC08 offers a large library of modules from which derivatives can be developed.

68HC05 General–Purpose Microcontrollers

68HC05 C–Family. These flexible, general–purpose devices feature a wide variety of memory options capable of handling complex programs. On–chip SCI provides asynchronous communications, with software–selectable baud rates from 75 Hz to 131 kHz. The high–speed, synchronous 4–wire serial system SPI is ideal for driving off–chip displays and peripherals.

All C–Family devices include a powerful 16–bit free–running programmable counter in conjunction with input capture and output compare functions for simultaneous input waveform measurement and output waveform generation. A watchdog timer guards against runaway software in noisy environments.

The high–packing density of Motorola's HCMOS process allows standard devices to run at bus frequencies up to 2.1 MHz. Motorola also offers high–speed versions which run at frequencies up to 4.2 MHz from an 8.4 MHz crystal or external clock. Low–voltage versions are available for applications requiring extremely low power consumption to extend battery life or minimize heat dissipation.

68HC05 J–Family. This 20–pin family provides a low–cost, low pin count, 8–bit upgrade for existing 4–bit applications. It combines a powerful 68HC05 CPU with a flexible, 15–stage multifunction timer and real–time interrupt capability.

68HC05 K–Family. Our lowest–cost family offers a 16–pin count and is appropriate for logic replacement.

68HC05 P–Family. Born out of the CSIC design concept, this family offers an extremely cost–competitive 28–lead family of microcontrollers with a variety of ROM sizes and special features such as Serial Input/Output Port (SIOP) to control display drivers and communicate with other peripherals. Other options include A/D input and on–chip EEPROM for non–volatile data storage. Low–voltage and high–speed versions are also available.

The flagship 68HC(7)08XL36 OTP and ROM versions are the first two devices in the 68HC08 Family and are intended for general purpose uses.

Low–Voltage Microcontrollers

The 68HC05 Family has been capable of 3.0 V operation since 1980 and includes some 2.2 V selections. Recently, Motorola announced several 68HC05 microcontrollers capable of 1.8 Vdc and 500 kHz operation. This new low–voltage capability affords a greater than threefold power savings over 3.0 V versions of the same chips, a significant design consideration for any portable electronic application. The new devices are collectively designated 68HCL05 and include the following versions: 68HCL05C4, C8, C12, J1A, K0, P1, and P4. They are designed to provide lower–power control technology to accommodate trends in portable applications toward compactness, lightweight design, and extended battery life.

Automotive

68HC05 B–Family. EEPROM memory in these devices makes it possible to store information that must be retained after the power is removed. Applications include electric seat control (storage of seat positions) and audio systems (storage of radio stations).

68HC05 C– and D–Families. These general–purpose microcontrollers are used for cruise control, ignition systems, and in–car entertainment systems.

68HC05 J–, K–, and P–Families. With their low pin count and low cost, these devices are ideal for automotive applications such as car alarms, power windows, keyless entry, and air bags.

68HC05 V– and X–Families. Both these groups contain integrated automotive multiplex interfaces that allow them to talk to other electronic modules within a vehicle. The V series adds an on–chip voltage regulator.

Computer

68HC05 BD–Family. These devices are ideal for computer monitor applications. They include a horizontal and vertical sync processor as well as 16 channels of pulse–width modulation.

68HC05 C–Family. These are general purpose devices for keyboard and monitor control.

68HC05 J–, P–, and E–Families. These low–cost, low pin count devices are appropriate for applications like a cordless PC mouse and trackball.

Consumer

68HC05 C– and D–Families. The multiple communication lines (I/O ports, SCI and SPI) and free–running timer in this group of devices make it possible to execute several tasks in parallel. These features are used in consumer products like CD players, automotive entertainment systems, and remote controls.

68HC05 J–, K–, and P–Families. The free–running timer in these cost–effective microcontrollers allows multitasking in applications such as washing machines, oven controls, and remote controls.

68HC05 L–Family. These low–power, small–footprint devices can drive large LCD displays, making them ideal for hand–held consumer products like portable CD players.

Industrial

68HC05 B–Family. On–chip features include EEPROM; 8–channel, 8–bit A/D converter; and Pulse Length Modulated outputs. Typical industrial applications include Programmable Logic Controllers (PLC) and data acquisition systems.

68HC05 C– and D–Families. These general–purpose devices can be used in applications such as process control systems where multiple I/O lines and LED outputs are required.

68HC05 J– and P–Families. These devices are popular in low–cost industrial applications such as smoke detectors, security devices, thermostats, and furnace ignition systems.

68HC05 L–Family. Multi–port controllers with LCD driver, 16–bit timer and watchdog timer on board. Excellent for display panels requiring tone output and low power consumption such as thermostats and alarms.

68HC705MC4. This device is intended for use in industrial motor control and power supply applications.

68HC05 X–Family. These devices have Controlled Area Network (CAN) controllers with 4K thru 32K ROM for integrated messaging on factory automation, sensor, and switch applications.

Telecommunications

68HC05 B–Family. These devices can store user–programmable telephone numbers in 256 bytes of non–volatile EEPROM memory. They can also communicate with analog inputs like battery life in hand–held equipment, using the A/D module. The D/A module can be used to control analog outputs such as telephone volume and line cards.

68HC05 C–Family. This group of microcontrollers has proven useful as a general–purpose device for communications applications.

68HC05 E–Family. Like the 68HC05 B–Series devices, E–Series devices are ideal for number storage and keyboard interrupt applications.

68HC05 F–Family. These devices — except for the F5, which features an integrated DTMF receiver — include an on–chip Dual–Tone Multi–Frequency Generator (DTMG) for digital transmission and reception, as well as an LED drive for user information. These features make the F–Family suitable for a number of telecommunications applications, including auto dialing, number storage, and display control.

68HC05 J– and P–Families. These low pin count, low–cost microcontrollers have a variety of telecommunications uses, with features ranging from EEPROM to multifunction timers.

68HC05 L–Family. With its large LCD driving capability and low power consumption, this series is well–suited to applications in hand–held communication equipment. The on–chip tone generator and display functions can be used in pager systems to alert users to incoming messages.

Television and Video

68HC05 B–Family. These devices are ideal for EEPROM storage, with 256 bytes of EEPROM to store TV or satellite channel frequencies and preset volume or brightness levels. Features include Analog–to–Digital (A/D) conversion and PWM.

68HC05 C– and D–Families. With up to 32K of user ROM, these devices can be used in the television and video market as general–purpose microcontrollers.

68HC05 CC–Family. Evolved from the T–Series, CC–Series devices feature closed–caption Data Slicer (DSL) and enhanced OSD features for decoding and displaying closed captions.

68HC05CO. This device has no on–chip user ROM, but is capable of addressing up to 64K of external memory, making it ideal for applications that require large amounts of operating code, like televisions. The I^2C bus module and 4 MHz internal bus speed also allow interconnection with standard TV peripherals.

68HC05 K– and RC–Families. These devices are used in remote control applications.

68HC05 T–Family. All T–Family devices have On Screen Display (OSD) modules that can overlay graphical images onto television screens. They also contain D/A converters that can drive analog outputs like volume control, and A/D converters that can be used to automatically adjust the fine tuning. Some members of the T–Series have I^2C interfaces that can communicate with industry–standard TV peripherals.

ONE–TIME PROGRAMMABLE (OTP) / EMULATOR MCUs

All 68HC705 products have a standard operating voltage range from 3 V to 5.5 V unless noted in Comments.
All 68HC705 products have a standard operating temperature range from 0 – 70°C.
Contact a Motorola Sales Office for availability of extended temperature versions.

*Windowed packages available only in sample quantities.

Definitions

CAN – Controller Area Network
CCTV – Closed Caption Television
COP – Computer Operating Properly (Watch Dog Timer)
DTMF – Dual–Tone Multi–Frequency
EBI – External Bus Interface
IC – Input Capture
I^2C – Inter–Integrated Circuit
IDE – Integrated Device Electronics (IBM PC/AT Type)
i/o – Bidirectional Input and Output Port Pins
i – Input Only Port Pins
KBI – Key Board Interrupt
LCD – Liquid Crystal Display
LVI – Low Voltage Interrupt
LVPI – Low Voltage Program Inhibit
LVR – Low Voltage Reset
MDLC – Message Data Link Controller (J1850)
MFT – Multi Function Timer
o – Output Only Port Pins
OC – Output Compare
OSD – On–Screen Display
PEEP – Personality EEPROM
PEP – Personality EPROM
PIO – Parallel Input Output (IBM PC/AT Type)
PLL – Phase–Lock Loop
PWM – Pulse–Width Modulation
RTC – Real–Time Clock
RTI – Real–Time Interrupt
SCI – Serial Communications Interface (asynchronous)
SCI+ – Serial Communications Interface (async. and sync.)
SIO – Serial Input Output (IBM PC/AT Type)
SIOP – Simple Serial I/O Port
SPI – Serial Peripheral Interface
VFD – Vacuum Fluorescent Display
VREG – Voltage Regulator
WDOG – Watch Dog Timer

Package Definitions

B – Shrink DIP (70 mil spacing)
DW – Small Outline (Wide–Body SOIC)
FA – 7 x 7 mm Quad Flat Pack (QFP)
FB – 10 x 10 mm Quad Flat Pack (QFP)
FE – CQFP (windowed) – Samples Only
FN – Plastic Quad (PLCC)
FS – CLCC (windowed) – Samples Only
FT – 28 x 28 mm Quad Flat Pack (QFP)
FU – 14 x 14 mm Quad Flat Pack (QFP)
FZ – CQFP (windowed) – Samples Only
K – Cersdip (windowed) – Samples Only

MCU NEW PRODUCTS

All 68HC05 and 68HC705 products have a standard operating voltage range from 3 V to 5.5 V unless noted in Comments.
All 68HC05 and 68HC705 products have a standard operating temperature range from 0 to 70°C.
Contact a Motorola Sales Office for availability of the following MCUs:

Table 3. MCU New Products

Motorola Part Number	ROM/ EPROM (Bytes)	RAM (Bytes)	EEPROM (Bytes)	Timer	Serial	A/D	PWM	Display Drive	I/O	COP	Comments	Packages
68HC05B32	32K	528	256	16–bit: (2IC, 2OC)	SCI+	8 ch (8–bit)	2 ch (8–bit)		32 i/o	✔	On–Chip Charge Pump EEPROM Write Protect	52 PLCC – FN 56 SDIP – B 64 QFP – FU
68HC05C0	0	512		16–bit: (1IC, 1OC) MFT	SCI+				18 i/o	✔	Mux or Non–Mux EBI (16–bit) 3 Chip Selects, KBI (8 pins) Programmable Pullups (8 pins) 1 High Current Pin (20 mA sink)	40 DIP – P *40 Cerdip – S 44 PLCC – FN *44 Cerquad – FS
68HC705D32A	32K	352		16–bit: (1IC, 1OC)	SCI		5 ch (6–bit)		31 i/o	✔	8 High Current Pins (24 mA sink) 30 kHz PWM, KBI (8 pins)	40 DIP – P *40 Cerdip – S 44 PLCC – FN *44 Cerquad –FS
68HC705E5	5K	384		MFT, RTI	I^2C				20 i/o	✔	32 kHz PLL Clock Synthesizer	28 DIP – P *28 Cerdip – S 28 SOIC – DW
68HC705JP7	6K + 64–bit PEP	224		16–bit: (1IC, 1OC) MFT, RTI	SIOP	See Com–ments			14 i/o	✔	Two voltage comparators used with timer to create 4 channel A/D, KBI (4 pins), Programmable Pulldowns (14 pins), 6 Hi Current Pins (10 mA sink), EPROM security feature, LVI	20 DIP – P 20 SOIC – DW
68HC805K3		64	920 16PEEP	MFT, RTI					10 i/o	✔	KBI (4 pins), Programmable Pulldowns (10 pins), 4 High Current Pins (8 mA sink), On–Chip Charge Pump, 1.8 V EE Read	16 DIP – P 16 SOIC – DW
68HC705MC4	3.5K	176		16–bit: (2IC or 1IC, 1OC) MFT, RTI	SCI	6 ch (8–bit)	2 hi sp (8–bit 24 kHz Max)		22 i/o	✔	One 8–bit High Current Port (10 mA Source Pin, 20 mA Max/Port) Low EMI Pinout 1 High Sink Current Pin (10 mA) Commutation Mux for PWM	28 DIP – P *28 Cerdip – S 28 SOIC – DW
68HC05MC4	3.5K	176		16–bit: (2IC or 1IC, 1OC) MFT, RTI	SCI	6 ch (8–bit)	2 hi sp (8–bit 24 kHz Max)		22 i/o	✔	One 8 bit High Current Port (10 mA Source Pin, 20 mA Max/Port) Low EMI Pinout 1 High Sink Current Pin (10 mA) Commutation Mux for PWM	28 DIP – P 28 SOIC – DW
68HC705P6A	4K	176		16–bit: (1IC, 1OC)	SIOP	4 ch (8–bit)			20 i/o	✔	KBI (8 pins) 2 High Current Pins (15 mA sink)	28 DIP – P 28 SOIC – DW
68HC05P9A	2K	128		16–bit: (1IC, 1OC)	SIOP	4 ch (8–bit)			20 i/o	✔	KBI (8 pins) 2 High Current Pins (15 mA sink)	28 DIP – P 28 SOIC – DW
68HC05P18		192	8K + 128	16–bit: (1IC, 1OC)	SIOP	4 ch (8–bit)			20 i/o	✔	KBI (8 pins), LVR 2 High Current Pins Pullups (8 pins), clock out option	28 DIP – P 28 SOIC – DW
68HC705RC16	16K	350		Infrared Timer					12 i/o	✔	Mask Option Pullups (12 pins) KBI (12 pins)	28 DIP – P *28 Cerdip – S 28 SOIC – DW
68HC705RC17	16K	350		Infrared Timer					12 i/o	✔	Mask Option Pullups (12 pins) KBI (12 pins) Phase–Locked Loop (PLL)	28 DIP – P *28 Cerdip – S 28 SOIC – DW
68HC05RC17	16K	350		Infrared Timer					12 i/o	✔	Mask Option Pullups (12 pins) KBI (12 pins) Phase–Locked Loop (PLL)	28 DIP – P 28 SOIC – DW
68HC05SR3	3.75K	192		8–bit Timer (7–bit prescaler)		4 ch (8–bit)			32 i/o		Mask Option Pullups (24 pins) KBI (8 pins), LED Drive (8 pins), LVR	40 DIP – P 42 SDIP – B 44 QFP – FB
68HC05V7	10K	384	128	16–bit: (1IC, 1OC) MFT, RTI	SPI	8 ch (8–bit)	1 ch (6–bit)		22 i/o 16 i	✔	MDLC (Message Datalink Control) 5 V Power Regulator KBI (16 pins) LVR	56 SDIP – B 68 PLCC – FN
68HC705X32	32K	528	255	16–bit: (21C, 2OC)	SCI+	8 ch (8–bit)	2 ch (8–bit)		32 i/o	✔	CAN (Controller Area Network)	64 QFP – FU
68HC08XL36	36K	1K		4 ch 16–bit: (IC, OC, or PWM)	SCI SPI				43 i/o	✔	8 MHz Internal Bus (5 V) Direct Memory Access Module (3 ch) Programmable PLL, LVI/LVR KBI (8 pins), Programmable Pullups (8 pins)	56 SDIP – B 64 QFP – FU

M68HC08 Family

The M68HC08 Family offers a unique combination of high–speed, low–power, enhanced processing performance for cost–sensitive 8–bit applications. Full upward object code compatibility with the world's leading 8–bit microcontroller allows current M68HC05 users to leverage their resource and time investment. M68HC08 modular design utilizes a growing library of on–chip peripherals. The flagship 68HC(7)08X36 OTP and ROM versions for general purpose use are the first two devices in the family.

Features

- Architecturally Enhanced 8–Bit CPU
  - 8 MHz bus speed yields 125 ns minimum instruction cycle
  - 16–bit stack with stack pointer operations and addressing modes
  - 16–bit index register
  - 78 new instructions including advanced looping control
  - Eight new addressing modes
- Fully upward object code compatible with the M68HC05 and M6805 families
- Direct Memory Access Module
  - Memory–to–memory transfer
  - Peripheral–to–memory and memory–to–peripheral transfer
- Timing Interface Module
  - Four independently programmable channels
  - Input capture, output compare, buffered, and unbuffered PWM configurations
- Interface Modules
  - Serial Communications Interface (UART)
  - Serial Peripheral Interface
  - System Interface Module
- System Control Modules
  - Low Voltage Inhibit, PLL, COP, and System Integration Module
- Clock Generator Module
  - Generates two different clock signals from a user–selected source

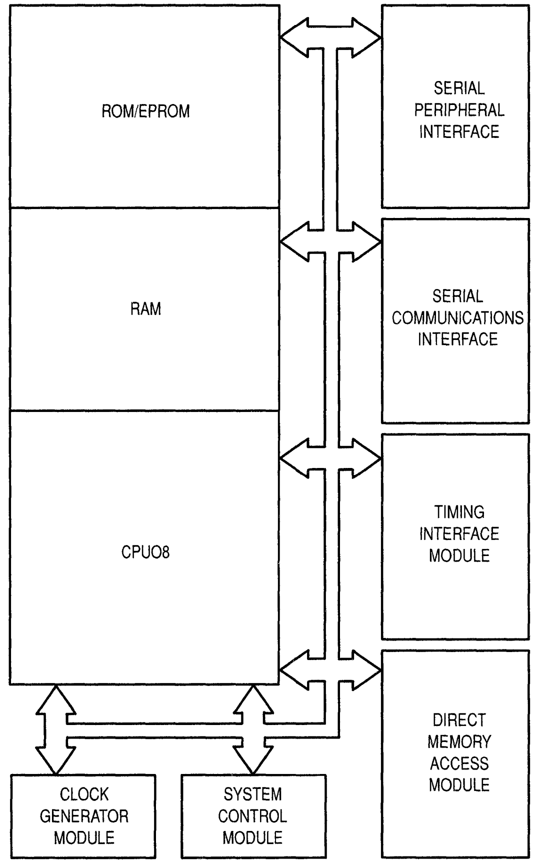

Figure 3. Block Diagram of Typical M68HC08 MCU

M68HC05 Microcontroller Development Tools

Motorola now offers two fully modular development system choices: the new Motorola Modular Evaluation System (MMEVS) and our popular, high–performance Motorola Modular Development System (MMDS). You can now build a customized MMEVS or MMDS to emulate the MCU in your target design in four simple steps. First, order the MMEVS or MMDS system platform (M68MMPFB0508 or M68MMDS05). Second, select and order the emulation module (EM) that contains circuitry specific to emulating the particular HC05/08 MCU in your target application. Third, complete the system by ordering target cable accessories to connect the MMEVS or MMDS to your target MCU socket. Finally, select the appropriate parallel programmer to program your prototype devices.

Choosing Between the MMEVS and MMDS

Build an economical MMEVS system to perform traditional debugging activities such as executing code in run or step mode; setting breakpoints; monitoring or modifying CPU registers, memory and application variables; and creating log or script files to record test results or automate the testing process. Or, create an MMDS system to add high–performance, advanced emulation features such as real–time, dual–ported memory and a real–time bus state analyzer with an 8K trace buffer. In addition, the MMDS includes a built–in power supply and is fully enclosed in a metal case. Both the MMEVS and MMDS include a host–based Integrated Development Environment (IDE) comprised of an editor, assembler, and hardware debugger.

Modular Architecture Benefits

The MMEVS replaces Motorola's older–style EVS and EVM development tool products. A proper subset of the MMDS architecture, the new MMEVS is fully compatible with all EM products supported by the MMDS. The MMEVS extends the emulation performance beyond that of the EVS and EVM by supporting full, real–time, non–intrusive, in–circuit emulation for the new high–speed devices (68HSC05) in the HC05 Family and the new HC08 architecture. The MMEVS also extends emulation support to all low–voltage HC05/HC08 derivatives. The common hardware, firmware, and software design of the MMEVS and MMDS also provide greater flexibility in mixing and matching Motorola hardware tools with the ever–increasing variety of C compilers, assemblers, and integrated development environment product offerings from Motorola's third party developer companies.

CONFIGURATION AND ORDER INFORMATION FOR MMDS/MMEVS

Table 4. Configuration and Order Information for MMDS/MMEVS

* Development tools that are scheduled for availability during 1Q96.
† To support more than one QFP target system, separate purchase of additional TQPACKs is required. Contact your Motorola representative for details.
Each QFP target head includes one TQSOCKET with guides (M68TQS0xxSyG1) and one TQPACK disposable surface mount adapter (M68TQP0xxSy1 (1.2 mm lead length) or M68TQP0xxSyMO1 (1.6 mm lead length)). Order additional TQSOCKETs and TQPACKs using part numbers referenced in the Surface Mount Adapters column to support multiple target systems. Contact your Motorola representative for details.

68HC05C5 68HC705C5	M68HC05C5EVS	40 DIP – P	Not Available			For DIP package user must supply a ribbon cable assembly to interface to user's target system.
		44 PLCC – P	Not Available			For PLCC package, user has the option to order 44PLCC05M, which is the old–style ribbon cable assembly with PLCC target adapter.
68HC05CCV 68HC705CCV	Order M68HC05CCVEM and M68HC05PFB	42 SDIP – B	M68CBL05B	M68TB05CCVB42		
		44 QFP – FB	M68CBL05C	M68TC05CCVFB44	M68TQS044SAG1† M68TQP044SAMO1†	
68HC05J1A 68HC705J1A	M68HC705JICS	20 DIP – P	20 DIP Ribbon Cable Assembly Included With M68HC705JICS			M68HC705KICS In–Circuit Simulator
		20 SOIC – DW	See Above		M68DIP20SOIC	For the SOIC package, user may order M68DIP20SOIC, which is a 20–pin DIP to SOIC adapter.
68HC05K0/K1 68HC705K1	M68HC705KICS	16 DIP – P	16 DIP Ribbon Cable Assembly Included With M68HC705KICS			M68HC705KICS In–Circuit Simulator
		16 SOIC – DW	See Above		M68DIP16SOIC	For the SOIC package, user may order M68DIP16SOIC, which is a 16 pin DIP to SOIC adapter.
68HC05L7/L9	M68HC05L9EVM2	128 QFP – FT	Not Available			
68HC05L10	M68HC05L10EVM	128 QFP – FT	Not Available			
68HC05L11	M68HC05L11EVM	100 QFP – FU	Not Available			
68HC05M4	M68HC05M4EVM	52 PLCC – FN	Not Available			For PLCC package, user has the option to order 52PLCCU, which is the old–style ribbon cable assembly with PLCC target adapter.
68HC05T1/T2	M68HC05T2EVS	40 DIP – P	Not Available			For DIP/SDIP package, user must supply a ribbon cable assembly to interface to user's target system.
		42 SDIP – B	Not Available			
		44 PLCC – FN	Not Available			For PLCC package, user has the option to order 44PLCC05M, which is the old–style ribbon cable assembly with PLCC target adapter.

CONFIGURATION AND ORDER INFORMATION FOR PROGRAMMERS

Table 6. Configuration and Order Information for Programmers

Devices	Packages Supported	Programmer Boards	Comments
68HC705A24	56 SDIP – B	M68HC05UPGMR	M68HC705UPGMR requires package adapter, M68UPA05A24B56.
68HC705B5/B16/B32	52 PLCC – FN 56 SDIP – B	M68HC05BPGMR	For QFP package, order M68HC705X32PGMR.
68HC705BD3/BD5	40 DIP – P 42 SDIP – B	M68HC705UPGMR	M68HC705UPGMR requires package adapter. For 40 DIP – P, order M68UPA05BD3P40. For 42 SDIP – B, order M68UPA05BD3B42.
68HC705C4A/C5/C8/C8A/C9	40 DIP – P/S 44 PLCC – FN/FS	M68HC05PGMR–2	Order M68ADT05P40FB44 adapter to program 44 QFP – FB.
68HC705D9	40 DIP – P/S 44 PLCC – FN/FS	M68HC05PGMR–2	Order M68ADT05P40FB44 adapter to program 44 QFP – FB.
68HC705E6	44 QFP – FB 28 SOIC – DW	M68HC705E6PGMR	
68HC705F4	28 DIP – P 28 SOIC – DW 44 QFP – FB	M68HC705F4PGMR

On–Line Help

CSIC Microcontroller Division World Wide Web Site

http://design–net.com/csic/CSIC_home.html

The CSIC WWW pages provide a direct line to the latest information and software for 68HC05 and 68HC08 microcontrollers. The web site provides access to:

The Latest News and Press Releases

Product, Market, and Development Tool Overviews

On–Line MCU and Development Tool Selector Guides

On–Line Datasheets and Application Notes

Development Tool Software Upgrades

Free Development Software

Applications Software

3rd Party Development Tool Information

On–Line Technical Support

Freeware Bulletin Board

The Freeware Data Services are now mirrored on the CSIC WWW site for easy access. Customers unable to access the Internet can still access the Freeware development software and applications software by dial–up modem at 2400 to 9600 baud. To log in:

1. Make sure to set character format to 8–bits, no parity, 1 stop bit
2. Dial (512) 891–FREE (512–891–3733)
3. Follow directions from the system

The Freeware files are also accessible by anonymous FTP server:

freeware.aus.mot.com
(use email address for password)

Single–Chip Microcontrollers (AMCU)

In Brief . . .

Motorola offers the most comprehensive selection of high–performance single–chip control systems available from a single source. Microcontroller device families range from industry–standard 8–bit controllers to state–of–the–art 16– and 32–bit modular controllers. Within the price and performance categories of each family, there are a variety of on–chip capabilities to match specific applications.

Motorola device families are structured so that upward migration need not involve complete code development. The M68HC11 Family is upward code compatible with M6800 and M6801 software, while the M68HC16 family is source–code compatible with the M68HC11 family. Motorola's newest 8–bit MCU product line, the M68HC08 family, is fully upward object code compatible with the M68HC05 and M6805 families. In addition, M68300 and M68HC16 devices share standard internal modules and bus configurations.

M68HC11 Family

The M68HC11 Family incorporates a flexible central processing unit and a large number of control–oriented on–chip peripherals. M68HC11 MCU are upward code compatible with M6800, M6801, and M68HC05 software.

Central Processing Unit

The M68HC11 CPU is optimized for low power consumption and high–performance operation at bus frequencies up to 4 MHz. Key features include:

- Two 8–bit or one 16–bit accumulator
- Two 16–bit index registers
- Powerful bit–manipulation instructions
- Six powerful addressing modes
  - Immediate, Extended, Direct, Indexed, Inherent, and Relative
- Power saving STOP and WAIT modes
- Memory mapped I/O and special functions
- 16x16 Integer and Fractional Divides
- 8x8 Multiply

Timer

M68HC11 timer architecture is based on a 16–bit free running counter driven through a software–programmable prescaler. Features include multiple Input Captures, Output Compares, Real–Time Interrupt, Pulse Accumulator, and Watchdog functions.

On–Chip Memory

Since its introduction, the M68HC11 Family has provided versatile combinations of popular memory technologies, including the first EEPROM on a CMOS microcontroller. The family has a memory option to fit virtually any application.

- ROM sizes range from 0 to 32K bytes. ROM is typically factory programmed to contain custom software. ROMless versions of most M68HC11 Family members are also available.
- RAM sizes range from 192 bytes to 1.25K bytes. M68HC11 RAM utilizes a fully static design, and all devices feature a standby power supply pin for battery back–up of RAM contents.
- EPROM sizes range from 4K to 32K bytes. EPROM is especially suited to prototype development and small production runs. EPROM versions are available in both windowed and OTP packaging.
- EEPROM sizes range from 0 to 2K bytes. EEPROM is ideal for storage of calibration, diagnostic, data logging, and security information. Each M68HC11 device with EEPROM includes an on–chip charge pump to facilitate single–supply programming and erasing.

Digital–to–Analog Conversion

The M68HC11 Family provides powerful, on–chip, multi–channel A/D converter systems. Multi–conversion and multi–channel options allow single or continuous conversion on single or multiple channels. M68HC11 A/D systems have eight input channels, and most offer 8–bit resolution, although some provide 10–bit resolution. A 2 channel, 8–bit D/A is also available.

Pulse–Width Modulation

Some M68HC11 Family members have up to six channels of 8–bit PWM. At a 4 MHz bus frequency, signals can be produced from 40 KHz to less than 10 Hz. PWM signals with a period greater than one minute are possible in the 16–bit mode.

Serial Communication

All members of the M68HC11 Family include a Serial Peripheral Interface (SPI) and a Serial Communications Interface (SCI). These on–chip peripherals are designed to minimize CPU intervention during data transfer.

- The SCI is a full duplex UART–type asynchronous system that uses standard Non–Return–to–Zero (NRZ) data format. An on–chip Baud rate generator derives standard rates from the microcontroller oscillator. Both transmitter and receiver are double buffered.
- The SPI is a four–wire synchronous communications interface used for high–speed communication with specialized peripheral devices and other microcontrollers. Data is transmitted and received simultaneously; the Baud rate is software programmable.

Digital I/O and Special Functions

M68HC11 Family I/O is extremely flexible, allowing pins to be configured to match application requirements. Most I/O lines are controlled by bits in a Data Direction Register (DDR) which can configure pins for either input or output. Most lines have a dedicated port data latch.

Some M68HC11 Family members include a 4–channel Direct Memory Access (DMA) and a Memory Management Unit (MMU). The DMA provides fast data transfer between memories and registers, and includes externally mapped memory in the expanded mode. The MMU allows up to 1 megabyte of address space in a physical 64 kbyte allocation. Integrated chip selects help to reduce glue logic.

Several members of the M68HC11 Family also include programmable chip select circuits. These circuits can be used to enable external peripherals whenever an access to a predefined block of memory addresses is made. These circuits help to reduce external logic requirements.

Math Coprocessor

New M68HC11 Family members offer a 16–bit on–chip math coprocessor that accelerates multiply and divide operations by as much as 10 times. The coprocessor functions independently of the CPU and requires no special instructions. The coprocessor is well–suited to low–bandwidth DSP functions such as closed loop control, servo positioning, and signal conditioning.

Table 1. M68HC11 Family Microcontrollers

Part Number	EPROM	RAM	EEPROM	Timer	I/O	Serial	A/D	PWM	Package	Comments
MC68HC11A0	–	256	–	16–Bit – 3 IC, 5 OC, RTI, WDOG Pulse Accumulator	22	SPI, SCI	8 Ch, 8–Bit	–	52–FN 64–FU 48–P	64K External Address Bus, 68HC24 PRU, 3.0 V Version Available
MC68HC11A1	–	256	512	16–Bit – 3 IC, 5 OC, RTI, WDOG Pulse Accumulator	22	SPI, SCI	8 Ch, 8–Bit	–	52–FN 64–FU 48–P	64K External Address Bus, 68HC24 PRU, 3.0 V Version Available
MC68HC11A7	8K	256	–	16–Bit – 3 IC, 5 OC, RTI, WDOG, Pulse Accumulator	38	SPI, SCI	8 Ch, 8–Bit	–	52–FN 64–FU 48–P	3 MHz Version Available, 64K External Address Bus, 68HC24 PRU, 3.0 V Version Available
MC68HC11A8	8K	256	512	16–Bit – 3 IC, 5 OC, RTI, WDOG, Pulse Accumulator	38	SPI, SCI	8 Ch, 8–Bit	–	52–FN 48–P	3 MHz Version Available, Low Voltage Version (3.0–5.5V) at 2 MHz, 64KExternal Address Bus, 68HC24 PRU
XC68HC11C0	–	256	512	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	36	SPI, SCI	4 Ch, 8–Bit	2 Ch, 8–Bit	68–FN 64–FU	256K Extemed Memory, 6 Chip Selects
MC68HC11D0	–	192	–	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	14	SPI, SCI	–	–	44–FB 44–FN 40–P	64K External Address Bus, 68HC27 PRU, 3.0V Version Available
MC68HC11D3	4K	192	–	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	32	SPI, SCI	–	–	44–FB 44–FN 40–P	3 MHz Version Available, Low Voltage Version (3.0–5.5V) at 2 MHz, 64K External Address Bus, 68HC27 PRU
MC68HC11ED0	–	512	–	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	30	SPI, SCI	–	–	44–FB 44–FN 40–P	Pin Compatible with 68HC11D3
MC68HC11E0	–	512	–	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	22 SCI	SPI, 8–Bit	8 Ch,	–	52–FN	64K External Address Bus, 68HC24 PRU, 3.0 V Version Available
MC68HC11E1	–	512	512	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	22	SPI, SCI	8 Ch, 8–Bit	–	52–FN 64–FU	64K External Address Bus, EEPROM Block Protect, 68HC24 PRU, 3.0 V Version Available
MC68HC11E8	12K	512	–	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	38 SCI	SPI, 8–Bit	8 Ch,	–	52–FN	3 MHz Version Available, 64K External Address Bus, 3.0 V Version Available
MC68HC11E9	12K	512	512	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	38	SPI, SCI	8 Ch, 8–Bit	–	52–FN 64–FU	EEPROM Block Protect, 3 MHz Version Available, Low Voltage Version (3.0–5.5V) at 2 MHz, 64K External Address Bus
XC68HC11E20	20K	768	512	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	38	SPI, SCI	8 Ch, 8–Bit	–	52–FN 64–FU	3 MHz Mux Bus
MC68HC811E2	–	256	2048	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	38	SPI, SCI	8 Ch, 8–Bit	–	52–FN	EEPROM Block Protect, 64K External Address Bus, 68HC24 PRU
MC68HC11F1	–	1K	512	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	54	SPI, SCI	8 Ch, 8–Bit	–	68–FN 80–FU	Programmable Chip Selects, EEPROM Block Protect, 64K External Address Bus, 68HC27 PRU, 4 MHz Non–Mux Address/Data Bus

Table 1. M68HC11 Family Microcontrollers (continued)

Part Number	EPROM	RAM	EEPROM	Timer	I/O	Serial	A/D	PWM	Package	Comments
PC68HC11G0	–	–	512	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	38	SPI, SCI	8 Ch, 10–Bit	4 Ch, 8–Bit	84–FN 80–FU	
PC68HC11G5	16K	512	–	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	66	SPI, SCI	8 Ch, 10–Bit	4 Ch, 8–Bit	84–FN 80–FU	
PC68HC11G7	24K	512	–	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	66	SPI, SCI	8 Ch, 10–Bit	4 Ch, 8–Bit	84–FN 80–FU	
PC68HC11J6	16K	–	512	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	29	SPI, SCI	8 Ch, 8–Bit	4 Ch, 8–Bit	84–FN 80–FU	
MC68HC11K0	–	768	–	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	37	SPI, SCI	8 Ch, 8–Bit	4 Ch, 8–Bit	84–FN 80–FU	4 MHz Non–Mux Address/Data Bus, Chip Selects, Extended Memory Map, 68HC27 PRU, 3.0 V Version Available
MC68HC11KA0	–	768	–	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	26	SPI, SCI	8 Ch, 8–Bit	4 Ch, 8–Bit	68–FN 64–FU	4 MHz Non–Mux Address/Data Bus, Chip Selects, Extended Memory Map, 68HC27 PRU
MC68HC11K1	–	768	640	16–Bit – 3/4 IC, 4/5 OC, RTI,WDOG, Pulse Accumulator	37	SPI, SCI	8 Ch, 8–Bit	4 Ch, 8–Bit	84–FN 80–FU	4 MHz Non–MuxBus,Chip Selects, EEPROM Block Protect, Extended Memory Map, 68HC27 PRU, 3.0 V Version Available
MC68HC11KA1	–	768	640	16–Bit – 3/4 IC, 4/5 OC, RTI,WDOG, Pulse Accumulator	26	SPI, SCI	8 Ch, 8–Bit	4 Ch, 8–Bit	68–FN 64–FU	4 MHz Non–Mux Address/Data Bus, Chip Selects,EEPROM Block Protect, Extended Memory Map, 68HC27 PRU
MC68HC11K3	24K	768	–	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	62	SPI, SCI	8 Ch, 8–Bit	4 Ch, 8–Bit	84–FN 80–FU	4 MHz Non–Mux Address/Data Bus, Chip Selects, Extended Memory Map, 68HC27 PRU, 3.0V Version Available
MC68HC11KA3	24K	768	–	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	51	SPI, SCI	8 Ch, 8–Bit	4 Ch, 8–Bit	68–FN 64–FU	4 MHz Non–Mux Address/Data Bus, Chip Selects, Extended Memory Map, 68HC27 PRU
MC68HC11K4	24K	768	640	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	62	SPI, SCI	8 Ch, 8–Bit	4 Ch, 8–Bit	84–FN 80–FU	4 MHz Non–Mux Bus, Low Voltage Version (3.0–5.5V) at 3 MHz, Chip Selects, EEPROM Block Protect, Extended Memory Map, 68HC27 PRU
MC68HC11KA4	24K	768	640	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	51	SPI, SCI	8 Ch, 8–Bit	4 Ch, 8–Bit	68–FN 64–FU	4 MHz Non–Mux Address/Data Bus, Chip Selects, EEPROM Block Protect
MC68HC11L0	–	512	–	16–Bit – 3/4 IC, 4/5 OC,RTI, WDOG, Pulse Accumulator	30	SPI, SCI	8 Ch, 8–Bit	–	68–FN 64–FU	64K External Address Bus, 68HC24 PRU, 3.0 V Version Available
MC68HC11L1	–	512	512	16–Bit – 3/4 IC, 4/5 OC,RTI, WDOG, Pulse Accumulator	46	SPI, SCI	8 Ch, 8–Bit	–	68–FN 64–FU	64K External Address Bus, EEPROM Block Protect, 68HC24 PRU, 3.0 V Version Available
MC68HC11L5	16K	512	–	16–Bit – 3/4 IC, 4/5 OC, RTI, WDOG, Pulse Accumulator	46	SPI, SCI	8 Ch, 8–Bit	–	68–FN 64–FU	64K External Address Bus, 68HC24 PRU, 3.0 V Version Available

Definitions for Tables 3 and 4

General Definitions

ADC	Analog to Digital Converter Module
A/D	Analog to Digital Converter
CPU16	16 bit Central Processing Unit
CPU32	32 bit Central Processing Unit
D/A	Digital to Analog Converter
DMA	Direct Memory Access
GPT	General–Purpose Timer
IC	Input Capture
IIC	Inter–Integrated Circuit
MCCI	Multi–Channel Communication Interface
PLL	Phase Lock Loop
OC	Output Capture
POQ	Preferred Order Quantity Multiple
PWM	Pulse Width Modulation
QSM	Queued Serial Module
RPSCIM	Reduced Pin Count SCIM
RTC	Real–Time Clock
RTI	Real–Time Interrupt
SCI	Serial Communication Interface
SCIM	Single Chip Integration Module
SIM	System Integration Module
SPI	Serial Peripheral Interface
TPU	Time Processing Unit
UART	Universal Asynchronous Receiver/Transmitter
WDOG	Watch Dog Timer

Package Definitions

FB	10x10 mm Quad Flat Pack (QFP)
FC	Fine Pitch Plastic Quad Flat Pack (PQFP)
FD	Plastic Quad Flat Pack in Molded Carrier Ring
FE	Ceramic Quad Flat Pack (CQFP)
FM	Molded Carrier Flat Pack (CQFP)
FN	Plastic Leaded Chip Carrier (PLCC)
FS	Windowed Cerquad (Ceramic LCC)
FT	28x28 mm Quad Flat Pack (QFP)
FU	14x14 mm Quad Flat Pack (QFP)
FV	20x20 mm Quad Flat Pack (QFP)
L	Ceramic
P	Dual–in–Line Plastic
PB	Thin Quad Flat Pack (TQFP) 10x10 mm
PU	Thin Quad Flat Pack (TQFP) 14x14 mm
PV	Thin Quad Flat Pack (TQFP) 20x20mm
S	Cerdip (windowed or non–windowed)
TH	16x16 mm Quad Flat Pack (QFP)

M6800 Series Microprocessors and Peripherals

These devices are a testament to the staying power of Motorola microtechnology. The original MC6800 was Introduced in 1975, and is still in demand today. Quality M6801, M6804 and M6805 systems have been performing reliably in automotive, industrial, and office equipment applications for years. Each of these devices can be combined with various peripherals to meet the requirements of a microcontroller design.

Table 3. M6801 and M6803 (HMOS)

Part Number	ROM	RAM	EEPROM	Timer	Serial	A/D	I/O	Bus Speed, MHz	Package	Comments
MC6801	2048	192	0	16 bit: 1 IC, 1 OC	SCI	No	29	0.5–2.0	40 P	
MC68701	0	128	2048	16 bit: 1 IC, 1 OC	SCI	No	29	0.5–2.0	40 P	
MC6803	0	192	0	16 bit: 1 IC, 1 OC	SCI	No	13	0.5–2.0	40 P	
MC6801U4	4096	256	0	16 bit: 2 IC, 3 OC	SCI	No	29	0.5–1.25	40 P	
MC68701U4	0	128	4096	16 bit: 2 IC, 3 OC	SCI	No	29	0.5–1.25	40 P	
MC6803U4	0	256	0	16 bit: 2 IC, 3 OC	SCI	No	13	0.5–1.25	40 P	

Table 4. 8–Bit MPU/Peripherals

Device	Pins	Package	Part Description	Speed
MC68B00	40	P	8 Bit MPU, Addresses 64K Memory, 1 or 2 MHz Versions	2 MHz
MC6802	40	P	MC6800 + Int. Clock Oscillator; 128 Bytes RAM	1 MHz
MC68B09	40	P	High Performance MPU, 10 Powerful Addressing Modes	2 MHz
MC68B09E	40	P	MC6809 With External Clock Input for External Sync.	2 MHz
MC68B21	40	P	Peripheral Interface Adapter	2 MHz
MC68B40	40	P	Programmable Timer Module Contains 3 16–Bit Timers	2 MHz
MC6845	40	P	CRT Ctrl, Refresh Memory Addressing; 2nd Source HD6845R	1 MHz
MC68B50	40	P	Asynchronous Communication Interface Adaptor	2 MHz
MC68HC24	40, 44	P, FN	MC68HC11 Port Replacement (Expanded Mode) for A8, E9	2 MHz
MC68HC27	46, 68	FU, FN	Port Replacement for D3, K4, F1	2 MHz
MC68HCB34	40	P, FN	256 Byte Dual Port RAM, 6 Semaphore Registers	2 MHz
MC68B10	24	P	128 x 8 Random Access Memory	2 MHz
MC68B44	40	P	Direct Memory Access Controller	2 MHz
MC68B488	40	P	General Purpose Interface Adapter	2 MHz
MC68B52	24	P	Synchronous Serial Data Adapter	2 MHz
MC68B54	28	P	Advanced Data Link Controller	2 MHz

Table 5. M6805 (HMOS) Microprocessors

Part Number	ROM	RAM	EEPROM	Timer	Serial	A/D	I/O	Bus Speed, MHz	Package	EPROM or EEPROM Version	Comments
MC6805P2	1K	64	0	8–Bit	–	No	20	0.1–1.0	28–P 28–FN	705P3	LVI Option

MC6805R2	2K	64	0	8–Bit	–	Yes	32	0.1–1.0	40–P 44–FN	705R3	LVI Option, Prog. Prescaler Option
MC6805R3	4K	112	0	8–Bit	–	Yes	32	0.1–1.0	40–P 44–FN	705R3	7–Bit Prescaler, LVI Option
MC6805R6	4K	112	0	8–Bit, WDOG	–	Yes	32	0.1–1.0	40–P 44–FN	705R3	7–Bit Prescaler, LVI Option
MC6805S2	1K	64	0	16–Bit, 8–Bit	SPI	Yes	16	0.1–1.0	28–P	705S3	15–Bit Prescaler, LVI
MC6805S3	4K	104	0	2 8–Bit, 16–Bit	SPI	Yes	21	0.1–1.0	28–P	705S3	1 Extra 8–Bit Timer
MC6805U2	2K	64	0	8–Bit	–	No	32	0.1–1.0	40–P 44–FN	705U3	LVI Option
MC6805U3	4K	112	0	8–Bit	–	No	32	0.1–1.0	40–P 44–FN	705U3	7–Bit Prescaler, LVI Option

Table 6. 8–Bit MPU/Peripherals

Device	Pins	Package	Part Description
MC14618	24	P	Real Time Clock, 50 Bytes RAM, Programmable Square Wave
MC146818A	24, 28	P, FN	Enhanced Version of the MC146818
MC146823	40, 44	P, FN	Three 8–Bit Ports, Handshake Control Logic
MC146805E2	40, 44	P, FN	CMOS 8–Bit Microprocessor
MC68HC68L9	80	FU	LCD Expansion to the MC05L9

Modular Microcontrollers

Modular microcontrollers are another of the innovations that make Motorola a leader in single–chip control systems. Modular controllers are built up from standard modules that interface via a common intermodule bus (IMB). The modular concept allows rapid design and manufacture of controllers tailored for specific applications.

Intermodule Bus Peripherals

Each modular microcontroller incorporates a state–of–the art pipelined CPU module, a sophisticated integration module, and a number of special–purpose modules. The rapidly–growing library of special–purpose modules includes programmable timers, serial communication interfaces, analog–to–digital converters, and a variety of memory modules.

Central Processing Units

CPU16

- 16–Bit Architecture
- Full Set of 16–Bit Instructions
- Three 16–Bit Index Registers
- Two 16–Bit Accumulators
- One Megabyte of Program Memory and One Megabyte of Data Memory
- Source code compatible with the M68HC11 CPU
- Control–Oriented Digital Signal Processing Capability
- High–Level Language Support
- Fast Interrupt Response Time
- Fully Static Implementation
- Low Power Stop Operation
- Background Debugging Mode
- Hardware Breakpoint Signal

CPU32

- 32–Bit Internal Data Path and Arithmetic Hardware
- 32–Bit Internal Address Bus – 24–Bit External Address Bus
- Eight 32–Bit General–Purpose Data Registers
- Seven 32–Bit General–Purpose Address Registers
- Separate User and Supervisor Stack Pointers and Address Spaces
- Separate Program and Data Address Spaces
- Virtual Memory Implementation
- Enhanced Addressing Modes
- Object Code Compatible with M68000 Family
- Improved Exception Handling for Controller Applications
- Rich Instruction Set
- Fully Static Implementation
- Low Power Stop Operation
- Background Debugging Mode
- Hardware and Software Breakpoints
- Trace on Change of Flow

Integration Modules

System Integration Module (SIM)

- Manages controller internal and external bus interfaces
- Provides device interrupt arbitration
- Spurious interrupt monitor
- Twelve programmable chip–select outputs
- Watchdog timer, clock monitor, and bus monitor
- PLL clock synthesizer

Single–Chip Integration Module (SCIM)

- Manages controller internal and external bus interfaces
- Provides device interrupt arbitration
- Spurious interrupt monitor
- Single–chip operation with address and data bus pins configured as I/O ports
- Optional Fully or Partially–expanded bus operation
- Nine general–purpose chip select outputs
- Emulation mode chip–select outputs can be used to address a port replacement unit and external emulation RAM
- Watchdog timer, clock monitor, and bus monitor
- PLL clock synthesizer
- Interrupt request inputs can be configured for edge or level detection
- Reduced pin SCIM (RPSCIM) available with 5 chip selects

Timers

Time Processor Unit (TPU)

- On–chip microengine dedicated to high–speed timing tasks
- Two independent 16–bit counters used as basis for timing tasks
- Real–time task scheduler
- Executes a programmed series of functions to perform complex tasks
- Each of 16 orthogonal channels can perform available time functions
- Functions contained in dedicated control store or in MCU RAM
- TPU communicates to CPU via dual port RAM

General Purpose Timer (GPT)

- Two 16–bit free–running counters
- Three input capture channels
- Four output compare channels
- One input capture/output compare channel
- One pulse accumulator/event counter input
- Two pulse–width modulation outputs
- Pulse accumulator input

Configurable Timer Module (CTM)

- Modular timer system combining different configurations of timer submodules:
- CPSM–6 TAP counter prescaler
- FCSM–16–bit free running up counter
- MCSM–16–bit modulus up counter
- SASM–(Single Action) two I/O pins for 16–bit input capture or output compare functions
- DASM–(Dual Action) one I/O pin for 16–bit I/C, O/C, PWM, or output function

Timer Module (TM)

- 16–bit free–running counter with 8–bit prescaler
- Two TM can be externally cascaded to increase count width
- Software selected input capture, output compare, pulse accumulation, event counting, or pulse–width modulation functions

Communication Modules

Queued Serial Module (QSM)

- Queued full–duplex, synchronous three–line SPI with dedicated RAM
- Standard, asynchronous NRZ–format SCI
- Polled and interrupt–driven operation
- Pins can be configured as a parallel I/O port

Multi–Channel Communications Interface (MCCI)

- One full–duplex synchronous three–line SPI
- Two independent standard, asynchronous NRZ–format SCI
- Polled and interrupt–driven operation
- Pins can be configured as a parallel I/O port

Dual Universal Asynchronous/ Synchronous Receiver Transmitter (DUART)

- Dual NRZ Serial RS–232C channels
- Independently programmable TxD and Receiver Transmitter (DUART)
- RxD Baud rates for each channel up to 76.8K Baud
- Optional external input pins provide baud clock
- Transmit operations are double buffered, and receive operations are quadruple buffered
- RTS and CTS signals are directly supported

Analog–to–Digital Conversion Modules

Analog–to–Digital Converter (ADC)

- 8 or 10 bits of resolution
- Eight input channels
- Eight result registers
- Three result alignment formats
- Eight automated conversion modes
- Programmable sample and hold times are provided
- Three result alignment modes

Queued Analog–to–Digital Converter (QADC)

- 10 bits of resolution
- 16 analog input channels (up to 27 if multiplexed externally)
- Two independent conversion queues
- 32 result registers (16 per queue)
- Three result alignment formats
- Queued conversions can be performed continuously or can be retriggered by software or the QADC module periodic interval timer and external trigger
- Programmable sample and hold times
- Alternate voltage references

Specialized Control Modules

Direct Memory Access (DMA)

- Provides low–latency transfer to external peripheral or for memory–memory data transfer
- Two independent DMA channels with full programmability

Memory Modules

Standby RAM (SRAM)

- Fast Static RAM maintained by voltage from standby voltage pin
- Available in 1K, 1.5K, 2K, 3.5K, and 4K blocks
- Fast (2 clock) access speed
- Byte, word, and long–word operations supported

Standby RAM with TPU Emulation (TPURAM)

- Fast Static RAM maintained by voltage from standby voltage pin
- Available in 1K, 1.5K, 2K, 3.5K, and 4K blocks
- Fast termination (2 clock) access speed
- Supports TPU microcode ROM emulation
- Byte, word, and long–word operations supported

Masked ROM (MRM)

- Custom–masked non–volatile 16–bit wide memory
- Available in 4K increments from 8K to 48K bytes
- Fast (2 clock) access speed
- Byte, word, and long–word operations supported
- Boot ROM capability

Flash EEPROM (FLASH)

- Word programmable, bulk erasable non–volatile 16–bit wide memory
- Available in 8K increments from 8K to 64K bytes
- Fast (2 clock) access speed
- Byte, word, and long–word operations supported
- Boot ROM capability
- External 12 volt programming/erasure source required

Block Erasable Flash EEPROM (BEFLASH)

- Available in 8K increments from 8K to 64K bytes
- Eight independently–erasable blocks
- Fast termination (2 clock) access speed
- Byte, word, and long–word operations supported
- Byte/Word programming with 12 volt external input

The M68HC16 Family

The M68HC16 family is designed for embedded control applications. Each M68HC16 MCU incorporates a true 16–bit CPU module (CPU16) that is upwardly code–compatible with the M68HC11 CPU, a sophisticated integration module, and a number of special–purpose modules. M68HC16 devices can be placed in low–power stop mode to minimize power consumption during periods of inactivity. The M68HC16 family provides the flexibility and features of the M68300 family, and also provides a convenient way for users of M68HC11 devices to move up to 16–bit performance.

The M68300 Family

The high–performance M68300 family is designed for embedded control applications. Each M68300 MCU incorporates a 32–bit M68000–based CPU module (CPU32), a sophisticated integration module, and a number of dedicated special–purpose modules. In addition to utilizing a bus protocol similar to that of the M68020, the system integration module generates external bus–control signals for M6800 devices, and provides a variety of programmable chip–select functions. M68300 devices can be placed in low–power stop mode to minimize power consumption during periods of inactivity. The M68300 family provides great design flexibility, performance, and compatibility with exiting hardware and software.

General Definitions

ADC	Analog to Digital Converter Module
A/D	Analog to Digital Converter
CPU16	16 bit Central Processing Unit
CPU32	32 bit Central Processing Unit
D/A	Digital to Analog Converter
DMA	Direct Memory Access
GPT	General–Purpose Timer
IC	Input Capture
IIC	Inter–Integrated Circuit
MCCI	Multi–Channel Communication Interface
PLL	Phase Lock Loop
OC	Output Capture
POQ	Preferred Order Quantity Multiple
PWM	Pulse Width Modulation
QSM	Queued Serial Module
RPSCIM	Reduced Pin Count SCIM
RTC	Real–Time Clock
RTI	Real–Time Interrupt
SCI	Serial Communication Interface
SCIM	Single Chip Integration Module
SIM	System Integration Module
SPI	Serial Peripheral Interface
TPU	Time Processing Unit
UART	Universal Asynchronous Receiver/Transmitter
WDOG	Watch Dog Timer

Package Definitions

FB	10x10 mm Quad Flat Pack (QFP)
FC	Fine Pitch Plastic Quad Flat Pack (PQFP)
FD	Plastic Quad Flat Pack in Molded Carrier Ring
FE	Ceramic Quad Flat Pack (CQFP)
FM	Molded Carrier Flat Pack (CQFP)
FN	Plastic Leaded Chip Carrier (PLCC)
FS	Windowed Cerquad (Ceramic LCC)
FT	28x28 mm Quad Flat Pack (QFP)
FU	14x14 mm Quad Flat Pack (QFP)
FV	20x20 mm Quad Flat Pack (QFP)
L	Ceramic
P	Dual–in–Line Plastic
PB	Thin Quad Flat Pack (TQFP) 10x10 mm
PU	Thin Quad Flat Pack (TQFP) 14x14 mm
PV	Thin Quad Flat Pack (TQFP) 20x20mm
S	Cerdip (windowed or non–windowed)
TH	16x16 mm Quad Flat Pack (QFP)

Microcontroller Development Tools

M68HC05 Family

The M68HC05 Family is supported by a variety of development tools including Evaluation Modules (EVM) and Evaluation Systems (EVS). Both provide an economical means of designing, debugging, and evaluating M68HC05 microcontrollers in a target system environment.

Many new M68HC05 CSIC devices are supported by an MCU–specific EVS. The EVS is a two–board system consisting of a 68HC05 Platform Board (PFB) and an Emulator Module (EM) which contains the emulating microcontroller, and control circuits.

The M68HC05 Family is also supported by the Compact Development System (CDS) for 8–bit microcontrollers (M68CDS8HC05), a powerful, portable, full–featured emulator for debugging hardware and software operations. The CDS8HC05 features high–speed, non–invasive, in–circuit emulation with real–time trace, and a powerful bus state analyzer. Commands are entered from an MS–DOS® host computer.

The Motorola Modular Development System for the M68HC05 Family, MMDS05, allows the use of Emulation Modules (EM) that are compatible with the existing EVS product line. The MMDS05 provides an upgrade for CDS8HC05 customers. The MMDS05 has all of the features of the CDS8HC05, and includes a notable enhancement. A dual–port RAM “memory window” allows a user to to modify memory while a program is running at full speed. An internal power supply and totally shielded enclosure assure compliance with FCC and EC92 regulations. The development software provided with the MMDS05 is an enhancement of the EVM05/EVM11 front end — it provides an integrated development environment with true Source Level Debug (SLD).

M68HC11 Family

The M68HC11 Family is supported by a variety of economical development tools. These include Evaluation Boards (EVB), Evaluation Modules (EVM), and Evaluation Systems (EVS).

An EVB allows a user to debug code under the BUFFALO (Bit User Fast Friendly Aid to Logical Operations) monitor/debugging program contained in the microcontroller ROM. The EVB emulates only the single–chip mode of operation and has no EPROM programmer. The EVBU, a “universal” version of the EVB, includes a wire–wrap area for custom interfacing.

EVM are low–cost tools for designing, debugging, and evaluating M68HC11 devices in a target system. An EVM provides essential microcontroller signals and timing, and on–board monitor/debugging firmware contains extensive commands for controlling I/O and debug operations.

An EVS is a two–board system consisting of a 68HC11 Platform Board (PFB) and an Emulator Module (EM). The EM contains control circuits and a 68HC11 MCU for the part or series of parts being emulated. An EVS provides expanded, multiplexed, special test, and single–chip mode emulation, a dual 64 kbyte memory map with 64 kbytes of emulation RAM, and an RS–232 port.

In addition, the Intermetrics Whitesmiths 68HC11 C Compiler/Assembler (M68S11CCAB) and 68HC11 Simulator Debugger (M68S11SIMAB) are now available through Motorola.

Modular Microcontroller Families

In–circuit debuggers for modular microcontroller families (M68ICD32 and M68ICD16) are economical development and debugging environments. ICD make use of the non–intrusive Background Debug Mode (BDM) interface, and provide sophisticated software debugging functions. The ICD consist of debugger and assembler development software, a small interconnect board, and target system cable. The IASM32 and IASM16 assemblers provide a single development environment that includes an editor and cross–assembler programs. ICD source–level debugger software uses easy–to–read screen windows to display register information for the CPU, the instruction pointer, breakpoints, program memory, and data memory.

The MC68331 and MC68332 are supported by evaluation kits (EVK). These multi–board systems include a common platform board, a Business Card Computer (BCC) that contains the MCU being emulated, and the CPU32BUG debug monitor program. The EVK is a cost–effective system for designing, debugging, and evaluating target system software and hardware. The MC68340 is supported by an evaluation system (EVS) similar to the EVK with the addition of a development interface board for a comprehensive development environment.

The M68HC16Z1 Evaluation Board (EVB) is an inexpensive tool for designing, debugging, and evaluating the MC68HC16Z1. Features include background–mode operation, an integrated assembly/editing/emulation environment, and logic analyzer pod connectors.

Modular evaluation boards (MEVB) for each modular family member are under development. The MEVB system is a multi–board evaluation system that consists of a common platform board (PFB) and interchangeable MCU personality boards (MPB). The MEVB system provides an economical development environment for downloading and debugging software generated with IASM16 and IASM32.

Motorola also sells the Intermetrics Whitesmiths 68HC16 C Compiler/Assembler (M68S16CCAB) and 68HC16 Simulator Debugger (M68S16SIMAB) for the M68HC16 Family. In addition, the Intermetrics InterTools™ 683XX C Compiler/Assembler (M68S32CCAB) and 683XX ROM Monitor Debugger (M68S32ROMAB) for the M68300 Family are now available through Motorola.

Fuzzy Logic

Fuzzy logic replaces conventional programming techniques with a simpler approach to control algorithms. Fuzzy logic uses a series of case statements to create sophisticated features that do not require additional memory or excessive processing time.

Motorola's portfolio of fuzzy logic products is geared for every level of user. The fuzzy logic educational kit (part number FLEDKT00) includes everything needed to learn how to use fuzzy logic with M68HC05 and M68HC11 microcontrollers.

- An easy–to–follow PC–based tutorial
  - Explains fuzzy logic fundamentals, basic concepts and terminology
  - Methodology section teaches a five–step sequence or principles and procedures for designing a fuzzy logic system. These include defining the control system, writing rules and membership functions, tuning and debugging and optimizing the design.
  - Advanced topics section covers areas such as stability, adaptability, ambiguity, noise, alpha–cuts and contribution weights
- A Knowledge Base Generator (KBG)
  - Uses natural language inputs to generate a knowledge base (rules and membership functions)
  - Inference Engines for the M68HC11 and M68HC05 families implement the fuzzy logic in software ready to embed in your Motorola microcontroller application
  - Runs a software simulation of the inference engine and displays a two–dimensional plot of the control surface
  - Generates real–time code for the standard M68HC05 or M68HC11 microcontroller families which can be downloaded to an evaluation module (EVM) for in–circuit emulation
- Demonstration–version of Aptronix's Fuzzy Inference Development Environment (FIDE) software
  - Features powerful, time–saving debug functions to help determine the correct membership functions and rules for any application
  - Demonstrates easy–to–use graphical interface for designing and debugging integrated systems

Aptronix's Fuzzy Inference Development Environment (FIDE™) is a powerful software tool that allows users to easily edit, simulate, debug, and tune the membership functions and rules of a fuzzy logic application. FIDE offers graphical and natural language editing of source files. The user–friendly debug tools allow time domain simulations, three–dimensional surface displays of input–to–output relationships, and linkage of fuzzy and non–fuzzy modules. FIDE also generates assembler code that implements fuzzy logic on Motorola microcontrollers.

On–Line Help

Microcontroller Electronic Bulletin Board

Freeware Data Service provides a direct line to the latest information and software for Motorola microcontrollers. The Freeware bulletin board provides access to:

- Development Software for PC and Macintosh Computers
  - Cross Assemblers
  - Small C Compiler for 68HC11
  - EVM and EVB Monitor/Debugger Object Code
- Development software
  - Floating Point Routines
  - Fast Fourier Transform Routines
  - 16–Bit Math Packages
  - Utility Programs
  - User Group Library Routines and User–Donated Programs
  - Kermit File Transfer Program
  - Terminal Emulation Program
- Masked ROM information
- MCU literature listings
- Updates/Erratas to existing literature
- Press releases and updates concerning new and phase–out products
- Contests, promotions and seminars
- Electronic mail service

How to Access Freeware

You can access Freeware from anywhere in the world. To log on, you'll need the following equipment:

1. 2400/1200/300 baud modem
2. Terminal, MS–DOS personal computer or Macintosh computer
3. Telephone line

This equipment will allow the user to read files and post questions. However, with a file transfer program such as XMODEM, YMODEM or Kermit, all information can be downloaded to your terminal or PC.

To log on:

1. Dial (512) 891–FREE (891–3733). Be sure to set the character format to 8 data, no parity, 1 stop bit.
2. Follow directions from the system.
3. Read log–on messages, then follow the directions on the screen display. A log–on session is limited to 120 minutes.

Third–Party Support

Development support for Motorola microcontrollers is available from a variety of independent suppliers.

LONWORKS™ NEURON IC Products

In Brief . . .

Motorola's NEURON® CHIP processors are sophisticated VLSI devices that make it possible to implement low–cost Local Operating Network applications. The unique combination of hardware and firmware provides all the key functions necessary to process inputs from sensors and control devices intelligently, and propagate control information across a variety of network media.

Used in conjunction with the LONBUILDER™ Developer's Workbench or the NODEBUILDER™ Development Tool, the NEURON CHIPS make available to a system designer an object–oriented, high–level environment providing for the easy implementation of distributed sense and control networks, flexible reconfiguration capability after network installation, and management of LONTALK™ protocol messages on the network.

Applications include distributed sense and control systems, instrumentation, machine automation, processor control, diagnostic equipment, environmental monitoring and control, power distribution and control, production control, lighting control, building automation and control, security systems, data collection/acquisition, robotics, home automation, consumer electronics, and automotive electronics.

NEURON CHIPS

Motorola's NEURON CHIPS, the MC143120 and MC143150, are the brains behind LONWORKS technology. These VLSI devices are specifically designed for distributed systems where sensing, processing, control, and communication are paramount. With LONWORKS development tools and software, they form a complete system solution that provides easy development of Local Operating Networks.

The power of both chips lies in their three respective on–board CPUs, high–speed serial communications ports (up to 1.25 MBps), and LONTALK communications protocol which is based on the OSI reference model. The difference between the two integrated circuits lies in the type and size of memory configuration; the MC143120 is targeted for cost–sensitive designs with small application programs running in internal EEPROM; the MC143150 is for larger systems with expanded memory requirements.

MC143120 Features

The MC143120B1DW/MC143120E2DW is a complete system–on–a–chip that integrates 10K ROM, 1K/2K RAM, and 512/2K bytes EEPROM. The ROM is used for storing LONTALK protocol, operating system, and 24 I/O models that can be accessed by the application program. An additional 10 I/O models are loaded into EEPROM if needed. Application program data is stored in RAM or the internal EEPROM. The application program and system configuration data reside in the MC143120's internal EEPROM. The MC143120 is available in a 32–pin SOG package.

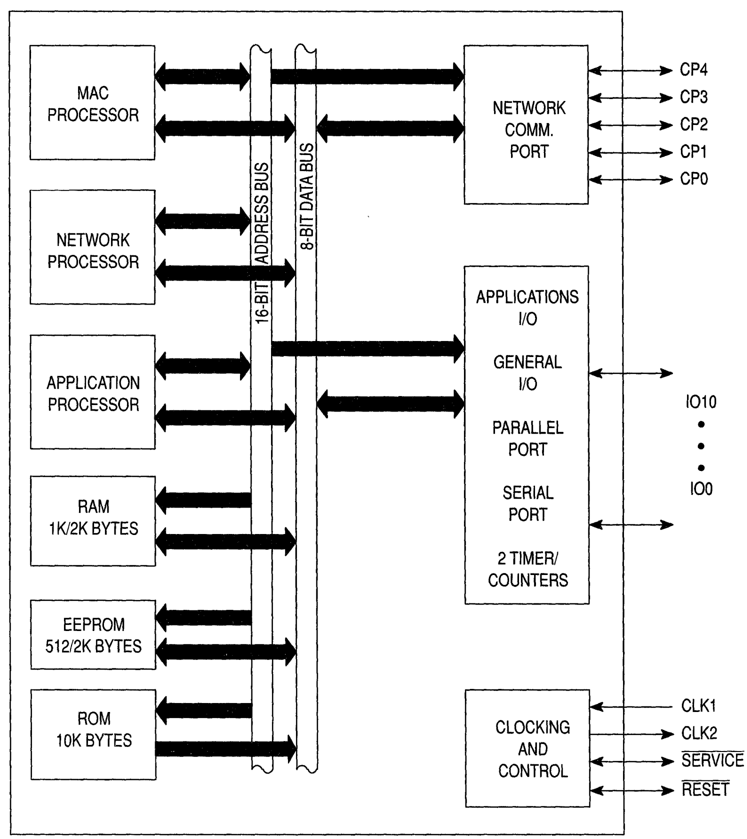

Figure 1. MC143120 (32–Lead SOG)

MC143150 Features

The MC143150 contains an additional 1K of on–chip RAM (2K total) but no on–board ROM. An external memory interface allows the system designer to use 42K of the available 64K of address space for application program storage. The remaining address space is reserved for LONTALK communications protocol, operation system, and up to 34 I/O models which are supplied with the LONBUILDER Developer's Workbench or NODEBUILDER Development Tool. The protocol and application code can be located in external ROM, EEPROM, NVRAM, or battery–backup static RAM. The MC143150 is available in a 64–pin PQFP package.

Shared Strengths

Of the three processors on–board each NEURON CHIP, two (MAC and Network processors) implement a communication subsystem, enabling the automatic transfer of information from node to node. The remaining processor handles the application program. The NEURON IC supports a maximum clock rate of 10 MHz.

Both NEURON CHIPS have eleven I/O pins (IO.0 — IO.10) to provide flexible interfacing to external hardware and access to two internal timers/counters. IO.4 — IO.7 have optional pull–up resistors. Pins IO.0 — IO.3 have high current sink capability (20 mA @ 0.8 V) while the others have a standard sink capability of 1.4 mA @ 0.4 V. All I/O pins have TTL–level inputs with hysteresis.

LonWorks Technology Overview and Architecture

LonWorks technology is a complete solution for implementing distributed control networks. These networks consist of nodes that communicate with one another over a variety of communications media using LonTalk protocol, a common, message–based communications protocol. In a LonWorks application, nodes sense, monitor, count, measure time, manage switches and relays, and respond to conditions reported by other smart nodes.

LonWorks technology includes all of the hardware and firmware functions needed to process data within nodes and to communicate information among nodes through a variety of network physical layers. In one convenient package, designers can now access all the elements required to design, install, and support control networks. Those elements include: the MC143150 and MC143120 Neuron Chips, LonWorks transceivers, the LonBuilder Developer's Workbench, or NodeBuilder Development Tool and LonTalk protocol.

LonTalk protocol features seven layers, each optimized for control networks, and is based on the OSI reference model. LonTalk protocol is embedded within the firmware of Motorola's Neuron Chips and is the foundation of the LonWorks technology networking solution.

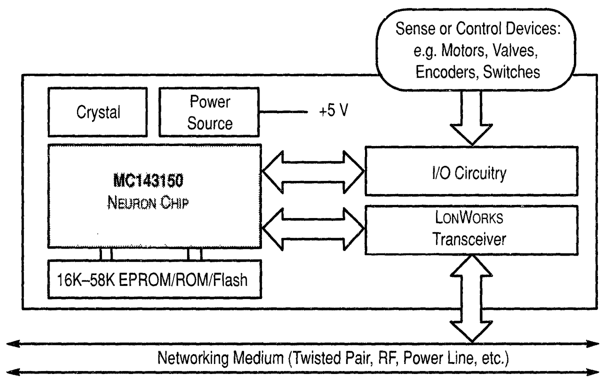

Figure 3. MC143150 in a Typical Node Block Diagram

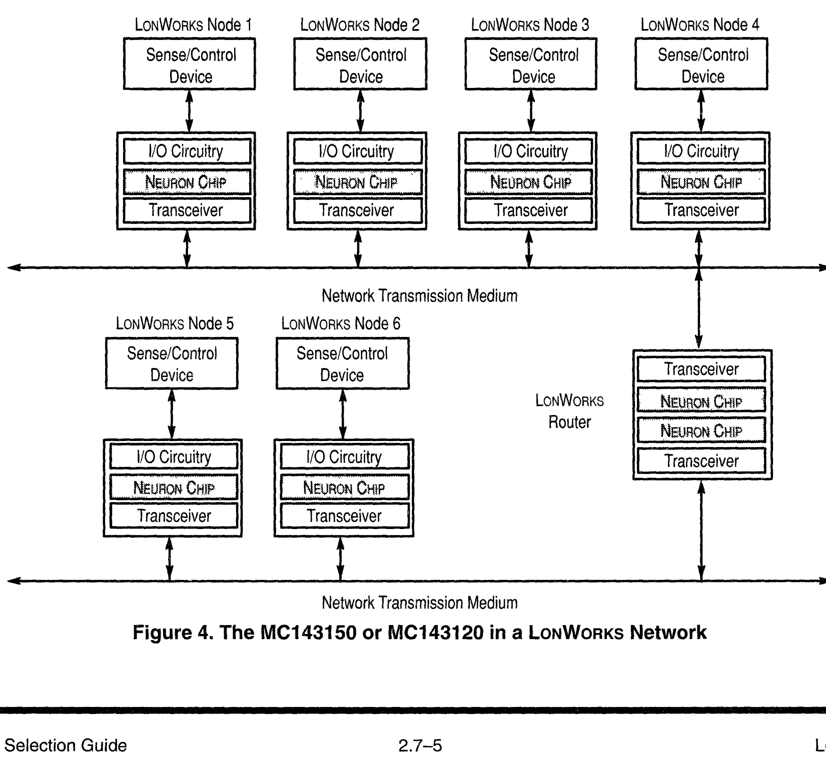

Figure 4. The MC143150 or MC143120 in a LonWorks Network

LonBuilder Developer's Workbench(1)

Thanks to Echelon's LonBuilder and NodeBuilder tools, as well as Motorola's extensive technical support network, both system and device manufacturers can now develop control networks quickly and inexpensively. These tools provide developers with everything needed to begin building LonWorks–based products immediately. The NodeBuilder Development Tool is used to design individual LonWorks products while the LonBuilder Developer's Workbench features the tools required to develop systems consisting of multiple LonWorks nodes. Best of all, technical support for LonWorks technology is available worldwide through Motorola's 30 LonWorks design centers.

LonBuilder Developer's Workbench combines three development tools — a multi–node development system, a network manager, and a protocol analyzer — into an integrated hardware and software development environment. This development system provides the tools to create software applications and prototype hardware on a network ranging from two to hundreds of nodes. The network manager installs and configures nodes during development, making them easy to connect, define, and build. The protocol analyzer monitors the network and interprets its activity.

The LonBuilder Developer's Workbench includes a PC interface cards, two LonWorks transceivers, an expandable development station with two Neuron Chip emulator cards, DOS–based software for compiling, loading, integrating and testing LonWorks applications, and software for monitoring and controlling a LonWorks application.

The LonWorks NodeBuilder Development Tool is used to design LonWorks nodes. The NodeBuilder tool does not include the system integration and test tools incorporated into the LonBuilder Developer's Workbench, but does include all the tools required to compile, load, and test code for a LonWorks node. NodeBuilder includes Windows–based software, a PC interface card, a prototype LonWorks node, and two LonWorks transceivers that are used to develop and test LonWorks nodes.

Table 2. LonBuilder Firmware Supported

LonBuilder Software Version	3150 Firmware Supported	3120 Firmware Supported	3120 E1/E2 Firmware Supported	Other Firmware Supported
3.01	3–7	3, 4	6	LTM–10
3.0	3–6	3, 4	6	
2.2	2–4	2, 3, (4) [1]	Not Supported	
2.1	2,3	2,3	Not Supported	

Notes:
1. Version 4 support available through a patch on Echelon's Website.

Table 3. NodeBuilder Firmware Supported

Node Builder Software Version	3150 Firmware Supported	3120 Firmware Supported	3120 E1/E2 Firmware Supported	Other Firmware Supported
1.0	3–6	3, 4	6	LTM–10
1.5	3–6	3, 4	6	LTM–10

(1) Motorola supports these tools, but they should be purchased through Echelon Corporation (1–800–258–4566).

LonWorks Support Tools

Motorola's LonBuilder support tools offer the user a quick and flexible means to demonstrate or test a LonWorks based product which was developed and debugged on the LonBuilder Developer's Workbench. The family of tools consist of Neuron Chip based development boards, I/O application boards, a Differential Direct Connect Transceiver Board (for the LonBuilder Developer's Workbench), and a

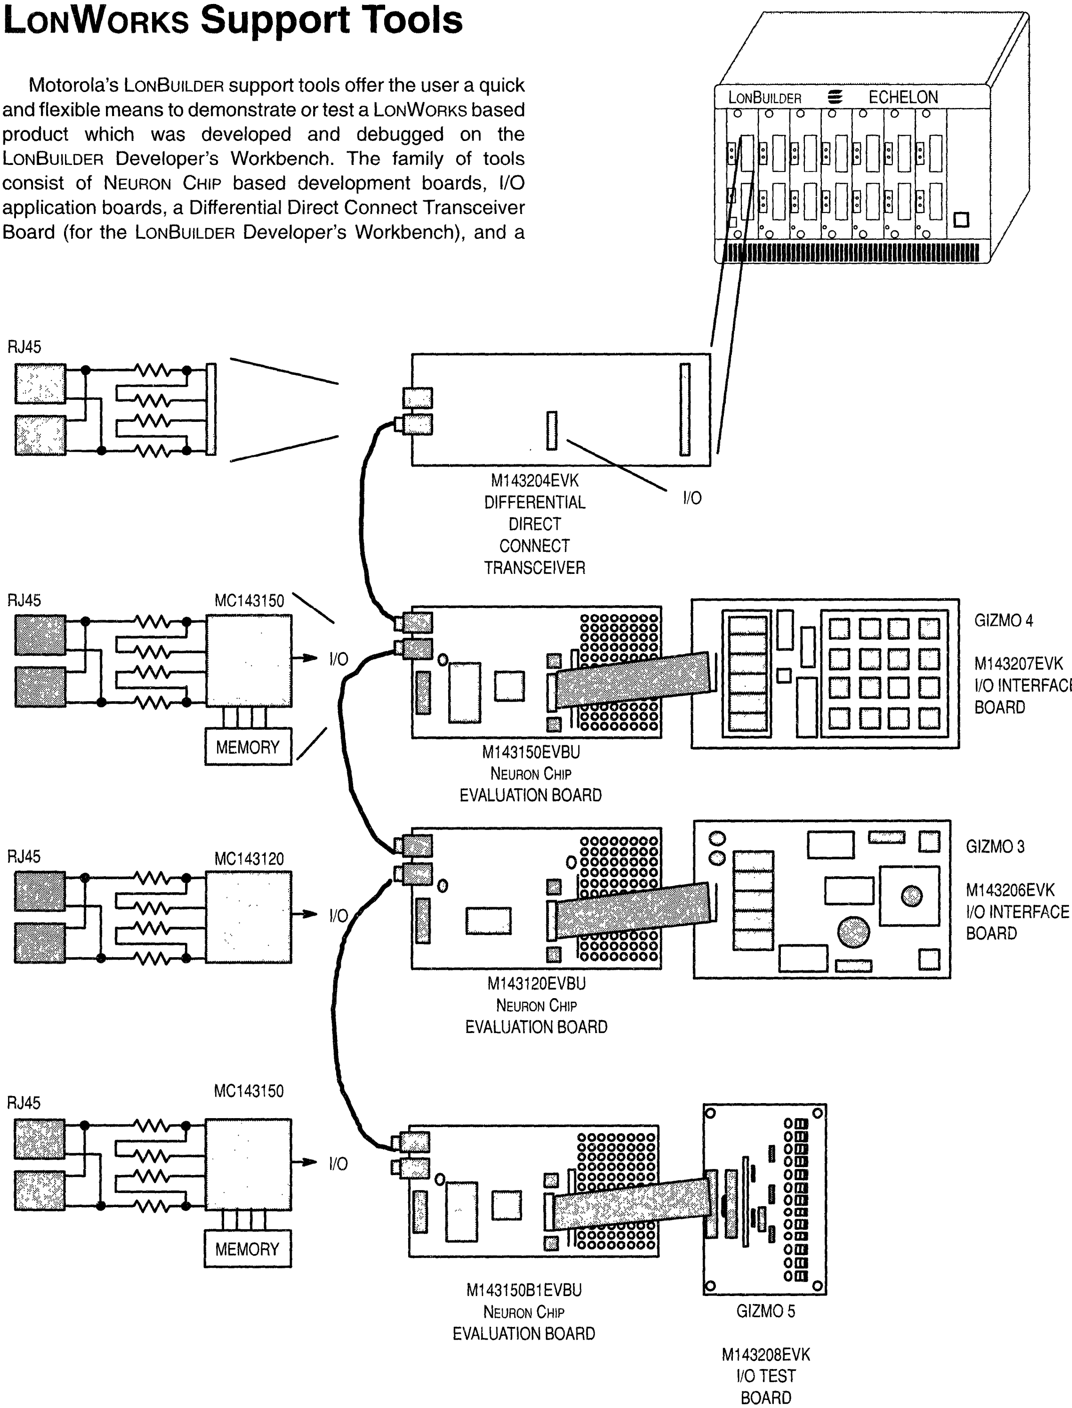

Figure 5. Evaluation and I/O Interface Boards

NEURON CHIP Test/Programming Board. The unique advantages that these tools offer are:

- The boards all have RJ45 connectors allowing ease of connectivity.
- The NEURON CHIP boards contain a 5 volt regulator allowing for a wider range of power supply voltages.
- A common 2 x 10 connector for interface to the NEURON CHIP I/O pins.
- A library of application functions are available from Motorola.
- An inexpensive means of demonstrating LONWORKS based products.

This document covers a brief detail on each of the boards. For further information, contact Motorola's LONWORKS applications support team in Austin, Texas at 512–934–8713 or FAX 512–934–7991.

Memory Products

In Brief . . .

Motorola's memory product portfolio has been expanded to support a broad range of engineering applications. Included in this portfolio are asynchronous devices with access times of 6 ns at 256K–bit density, 6 ns at 5 V 1 Megabit density, 8 ns at 3.3 V 1 Megabit density, as well as synchronous FSRAMs with access times as fast as 6 ns and 8.5 ns.

Motorola's Fast Static RAM Division goal is simple: speed. All of our SRAMs are designed to provide the highest performance, cost efficient solutions available.

The Dynamic Memory Products Division utilizes alliances as a vehicle for global customer support in the DRAM and Flash memory markets. The product portfolio consists of high–density DRAMs, standard and custom memory modules, and low power Flash memory.

Page

Fast Static RAMs

Introduction

Motorola is designing the fastest, most technologically advanced fast SRAMs. From 0.8 to 0.5 μm with access times as fast as 5 V 6 ns 256K, 6 ns 1M, 13 ns 4M, and 8 ns 3.3 V 1M; these devices are progressively smaller, faster, and lower cost. These SRAMs are designed to provide the highest performance, cost efficient solutions available. Selected fast SRAMs are also available on 2M and 8M memory modules.

Application specific memories are designed for high–performance microprocessors that require more specialization from memory cache than is available from standard devices. Products include those for use with digital signal processors as well as a variety of popular microprocessors.

	16K x 15	3.3 V	MPC27T415	80	(TQ) TQFP	9/10/12	Now	Cache tag RAM for PowerPC. 12 tag bits, 3 status bits. Drop in replacement for IDT71216.

CAMs

CAMs	16K x 64	3.3 V	MCM69C432	100	(TQ) TQFP	160 ns Match Time	2Q97	Content addressable memory for communication applications. 16K connections.
	4K x 64	3.3 V	MCM69C232	100	(TQ) TQFP	160 ns Match Time	1Q97	Content addressable memory for communication applications. 4K connections.

Integrated Cache Solutions

Integrated Cache Solutions	32K x 72	3.3 V	MPC2605	357	(ZP) PBGA	75/66 MHz	2Q97	Integrated L2 cache for PowerPC processors.One component for 256KB, two for 512KB, and four for 1MB L2 cache solution. Samples 2Q97.
	32K x 36	5 V	MPC2604GA	357	(ZP) PBGA	66 MHz	Now	Integrated L2 cache for PowerPC processors.Two components for 256KB, four for 512KB L2 cache solution.

Separate and Dual I/O Devices

4M	512K x 9	5 V	MCM67Q909	86	(ZP) PBGA	5/6	Now	General synchronous separate I/O with write pass through. 3.3 V output levels.
1M	128K x 9	5 V	MCM67Q709	86	(ZP) PBGA	5/6	Now	General synchronous separate I/O with write pass through. 3.3 V output levels.
		5 V	MCM67Q709A	86	(ZP) PBGA	5/6	Now	General synchronous separate I/O with write pass through. 3.3 V output levels. Replaces the MCM67Q709.
	256K x 4	5 V	MCM67Q804	36	400 (WJ) SOJ	5	Now	Graphics; general RISC. Register to register. Revolutionary pinout. 3.3 V output levels. Write pass through. Separate I/O.
	32K x 36	3.3 V	MCM69Q536	176	(TQ) TQFP	8/10	3Q97	Dual address, separate I/O. Samples 3Q97. NetRAM™ .
			MCM69D536	176	(TQ) TQFP	8/10	3Q97	Dual address, dual I/O. Samples 3Q97. NetRAM.
	64K x 18	3.3 V	MCM69Q618	100	(TQ) TQFP	8/10	3Q97	Dual address, separate I/O. Samples 3Q97. NetRAM.
			MCM69D618	100	(TQ) TQFP	8/10	3Q97	Dual address, dual I/O. Samples 3Q97. NetRAM.
Line Buffer	8K x 8	5 V	MCM62X308	28	300 (J) SOJ	15/17	Now	Line buffer for processing digital data.
	16K x 16	5 V	MCM62990A	52	(FN) PLCC	15/20/25	Now	For telecom switches and buffers.

Coast Modules	32K x 64	Piped Burst 8 Bit TAG	256KB Cache	66 MHz	1Q97	160 Pin Card Edge DIMM (DG)	MCM64PE32
	64K x 64	Piped Burst 8 Bit TAG	512KB Cache	66 MHz	1Q97	160 Pin Card Edge DIMM (DG)	MCM64PE64

Networking and Buffer Applications Asynchronous Modules

Description	Organization	Access Time (Max)	Production	Packaging	Comments	Motorola Part Number
Standard Asynchronous FSRAM Modules	1M x 32	20/25 ns	1Q97	72 Pin SIMM (SG)	Uses eight 1M x 4 SRAMs	MCM321024
	512K x 32	20/25 ns	1Q97	72 Pin SIMM (SG)	Uses four 512K x 8 SRAMs	MCM32515
	1M x 8	15 ns	1Q97	72 Pin SIMM (SG)	Uses eight 1M x 1 SRAMs	MCM8A10SG

Networking and Buffer Applications Synchronous Modules

Description	Organization	Access Time (Max)	Production	Packaging	Comments	Motorola Part Number
Standard Synchronous FSRAM Modules	64K x 72 512KB	9/10/12 ns	Now	168 Pin DIMM (DG)	Flow–through synchronous BurstRAM	MCM72F6DG
	128K x 32 1 MB	9/10/12 ns	Now	168 Pin DIMM (DG)	Flow–through synchronous BurstRAM	MCM72F7DG
	512K x 72 2MB	8/10/12 ns	Now	168 Pin DIMM (DG)	Flow–through synchronous BurstRAM	MCM72F8DG
	1M x 72 4 MB	8/10/12 ns	Now	168 Pin DIMM (DG)	Flow–through synchronous BurstRAM	MCM72F9DG
	2M x 72 8 MB	8/10/12 ns	Now	168 Pin DIMM (DG)	Flow–through synchronous BurstRAM	MCM72F10DG
	4M x 72 16 MB	8/10/12 ns	Now	168 Pin DIMM (DG)	Flow–through synchronous BurstRAM	MCM72F11DG

Flash Memory

Flash memory is the most cost–effective non–volatile semiconductor memory. Flash possesses a distinct advantage over traditional non–volatile memories in that it can be easily programmed while remaining in the system.

Motorola's Dynamic Memory Products Division will offer a portfolio of low power flash memory devices. Please contact your Motorola sales representative for more information.

Dynamic RAMs

Introduction

DRAMs offer the lowest cost per bit of any memory. Because of this, they are popular for a wide range of applications, particularly in the computing and communication environments. Motorola's Dynamic Memory Products include DRAM components and memory modules. The 16 MByte DRAM component is offered in various organizations and surface mount packaging. Motorola's DRAM memory modules include densities up to 32 MByte in both standard and custom configurations. All devices are fabricated using HCMOS technology.

Logic: Standard, Special and Programmable

In Brief . . .

This selector guide is a quick reference to Motorola's vast offering of standard logic integrated circuits. In TTL, popular due to its ease of use, low cost, medium–to–high speed operation and good output drive capability, Motorola offers both LS and FAST. Motorola's CMOS portfolio includes MC14000B standard CMOS series devices, High–Speed CMOS consisting of a full line of products that are pinout–compatible with many LSTTL and MC14000B standard CMOS logic devices which offers designers a solution to the long–standing combined barrier — high speed and low power. Motorola's Emitter Coupled Logic (MECL) is a non–saturated form of digital logic which eliminates transistor storage time permitting very high speed operation. Motorola offers five versions of MECL: MECL 10K, MECL 10H, MECL III, and the recently introduced families ECLinPS (ECL in picoseconds) and ECLinPS Lite. Also included are timing solution products such as clock drivers, clock generators and programmable delay chips, high performance and communications products such as VCO's, prescalers, and synthesizers, and a wide variety of translators, low–voltage bus interface and serial data transmission devices. Field programmable logic and in particular, field programmable arrays, have become the solution of choice for logic design implementation in applications where time to market is a critical product development factor. In addition, reconfigurable arrays have been used to enhance Customer product flexibility in ways that no other technology can match.

A New Product Calendar is printed quarterly that reflects any recent device releases and the approximate dates new devices are expected to be released. This New Product Calendar, BR1332/D, can be ordered from your nearest Motorola Sales Office, the Motorola Literature Distribution Center, the Motorola fax response system Mfax™ (602) 244–6609, or from Motorola Semiconductor's World Wide Web site at:

Motorola Logic Families, Which Is Best for You?

By Gary Tharalson, Motorola, Chandler, AZ

Introduction

When a logic designer is faced with developing a new product requiring performance significantly different from the past, it might be well to examine various logic family alternatives. Selecting a logic family for a new design from today's rapidly changing semiconductor technologies can be a perilous task. With the many choices available, it is easy to under–kill or over–kill an application with inadequate or excessive capabilities.

By selecting the family whose parameters most closely fit your needs, you can save many future headaches. Obviously, before selecting a specific device, a detailed review of the vendor's data sheet specifications is recommended.

Family Comparison

Table 1. compares some typical characteristics of several popular logic families available in the market today. The following sections provide brief explanations of the various parameters.

Table 1. Logic Family Comparison

Typical Commercial Parameters (0° to +70°C)	Logic Families												
	TTL/ABT				CMOS					ECL			
	LS	ALS	ABT	FAST	MG	HC	FACT	LVC	LCX	10KH	100K	ECLinPS[3]	E–Lite
Speed													
OR Gate Prop Delay (t_{PLH}) ns	9	7	2.7	3	25	8	5	3.3	3.5	1	0.75	0.33	0.22
D Flip–Flop Toggle Rate MHz	33	45	200	125	4	45	160	200	200	330	400	1000	2800
Output Edge Rate ns	6	3	3	2	100	4	2	3.7	3.6	1	0.70	0.50	0.25
Power Consumption (Per Gate)

NOTES:

1. Typical noise margin expressed as a percentage of typical output voltage swing.
2. Announced plans for Motorola offering.
3. ECLinPS is Available in both 10KH and 100K compatible versions.
4. A "YES" may not include all devices within a family.

VENDORS REFERENCED (DATA BOOK):

LS	Motorola Low power Schottky TTL (DL121)
ALS	Texas Instruments Advanced Low power Schottky TTL (SDAD001B)
ABT	Philips Semiconductor (IC23)
FAST	Motorola Advanced Schottky TTL (DL121)
MG	Motorola 14000 Series Metal Gate CMOS (DL131)
HC	Motorola High–Speed Silicon Gate CMOS (DL129)
FACT	Motorola Advanced CMOS (DL138)
LCX	Motorola Low–Voltage CMOS (BR1339)
LVC	Philips Low–Voltage CMOS (IC24)
10KH	Motorola 10KH Series ECL (DL122)
100K	National 100K Series ECL (F100K)
ECLinPS	Motorola Advanced ECL (DL140)
E–Lite	Motorola (ECLinPS Lite) Advanced ECL (DL140)

Logic Families

Although there are many family technologies available, they can be divided into roughly three broad categories: Transistor–Transistor Logic (TTL), Complementary Metal–Oxide Semiconductor logic (CMOS), and Emitter–Coupled Logic (ECL). TTL and ECL are bipolar technologies differing in implementation techniques, while CMOS (an MOS technology) differs in fundamental transistor structure and operation.

TTL

The designation "bipolar" essentially refers to the basic component utilized to build this family of integrated circuits, the bipolar transistor. By employing a bipolar transistor in a logic function's output driver as well as the input buffer, it results in a Transistor–to–Transistor (TTL) direct connection. Older technologies were interconnected via passive components such as resistors or diodes.

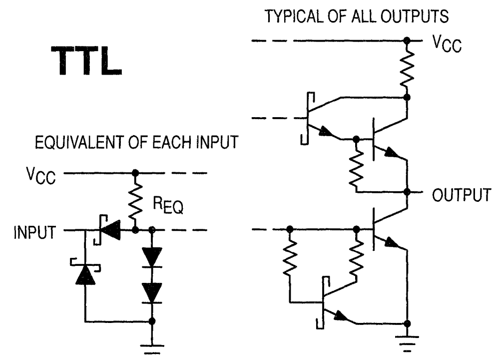
Since the original TTL design, several enhancements have been employed to reduce power and increase speed. Common to these has been the use of Schottky diodes which, ironically, no longer result in strictly TTL connections. Consequently, the two names, Schottky and TTL, are used in combination: LS (Low power Schottky), ALS (Advanced Low power Schottky), and FAST™ (Advanced Schottky) TTL.

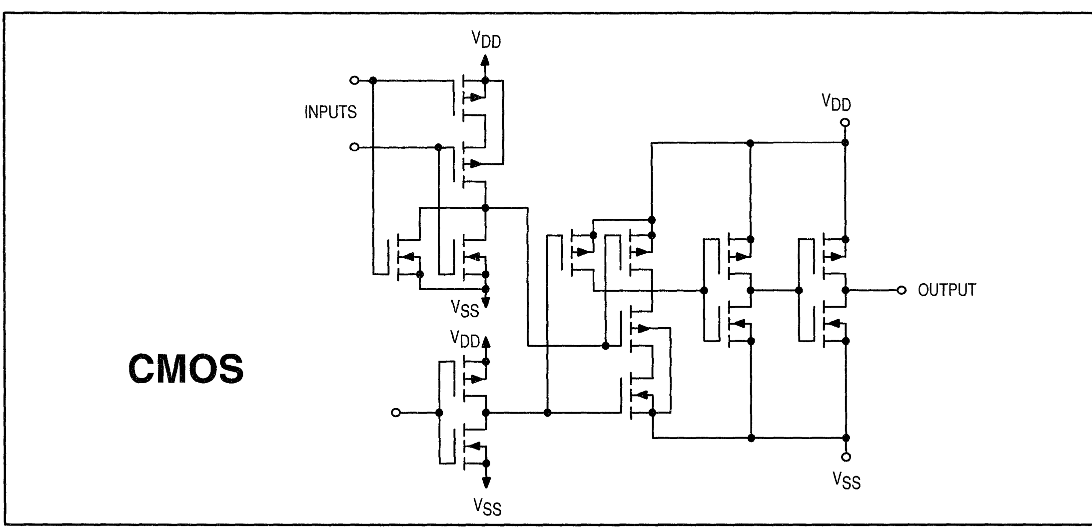
The superior characteristics of TTL compared to CMOS, in the past, have been its relatively high speed and high output drive; these advantages are rapidly diminishing as described in the next section. One family of devices, ABT (Advanced BiCMOS Technology), utilizes TTL circuitry at the inputs and outputs, and CMOS technology in between—attempting to combine the advantages of both bipolar and CMOS.

CMOS

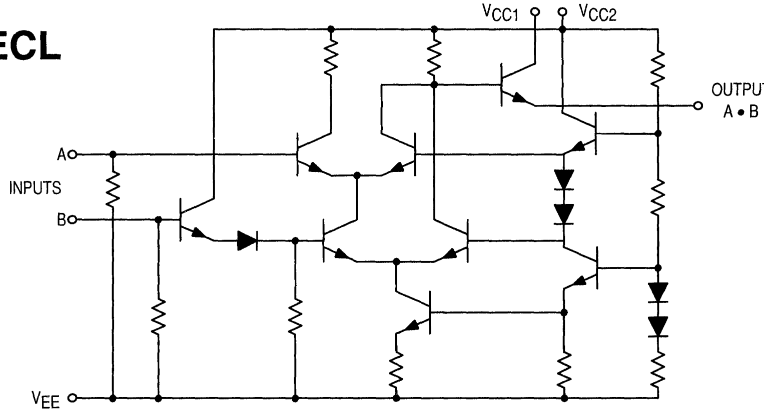
Complementary Metal–Oxide Semiconductor (CMOS) field–effect transistors differ from bipolar both in structure and operation. The primary advantages of CMOS are its low power dissipation and small physical geometry. Advances in design and fabrication have brought CMOS devices into the same speed and output drive capability as TTL. Again, enhancements have resulted in the evolvement of additional classifications: MG (Metal–Gate CMOS), HC (High–speed silicon–gate CMOS), and FACT™ (Advanced CMOS).

The most recent evolution in CMOS logic has been in reducing supply voltage without sacrificing performance. The new LCX family is one outgrowth of this trend. This family results from the joint efforts of a triumvirate of companies including Motorola, National, and Toshiba. Although each company has done its own design and fabrication, they have mutually agreed to provide identical performance specifications. In addition to the 3V operating voltage, LCX inputs and outputs are tolerant of interfacing with 5V devices.





ECL



ECL

Emitter–coupled logic (ECL) derives its name from the differential–amplifier configuration in which one side of the diff–amp consists of multiple–input bipolar transistors with their emitters tied together. An input bias on the opposite side of the diff–amp causes the amplifier to operate continuously in the active mode. Consequently, ECL consumes a relatively substantial amount of power in both states (one or zero) but also results in the fastest switching speeds of all logic families. An inherent benefit of ECL is the narrow switching level swing between devices (approximately 800 mV) which helps to reduce noise generation.

There have also been many evolutionary advancements in ECL, the following being some of the most prominent: 100K (1975), 10KH (1981), and ECLinPS™ (1987). Of most recent vintage is the ECLinPS Lite™ family of single function devices. By focusing on simplicity, this family achieves very high performance, while at the same time reducing package size.

Speed

Speed is typically the first parameter at which a designer looks, and when design engineers are asked what features of a logic family they would like enhanced, usually they want more speed. But increased speed often brings along many potential problems such as: increased noise generation, higher power consumption, increased component and system cost, more difficult board layout, etc. An assessment of the other family parameters is usually required before a final selection is possible.

In Table 1. , family speed is compared for three parameters using typical values: propagation delay through a simple OR gate, flip–flop toggle frequency, and output switching time. Typical values can be misleading as they are frequently specified according to different vendor's criteria, but they are usually close to an average of min and max values. For final assessment of a particular component's performance, the min/max spec's provided in most vendor's data sheets should be examined. Furthermore, switching (edge) rate is highly load dependent, and again, data sheet specifics must be compared.

Power Consumption

The amount of power an application consumes (and the subsequent heat generated) is frequently of prime importance. One of the major differences between the three families, the power parameter may also limit the designer's choices.

TTL consumes a moderate amount of power and is nearly constant over operating frequencies up to about 10 MHz; above 10 MHz it begins to climb rapidly. Although only a few milliwatts are consumed by each device, in a complete system a substantial amount of power may be used.

CMOS power consumption, on the other hand, is highly frequency dependent. In quiescent mode (zero frequency), it consumes almost no power at all, being measured in microwatts/device. However, its consumption grows almost linearly with frequency so that at maximum operating frequency it may be several milliwatts/device. The great power reduction advantage of CMOS derives from the fact, that in most applications, the percentage of the total number of devices operating at high frequencies at any given time is small; consequently, the average total power consumed by the system is greatly diminished.

Since power consumption is proportional to the square of supply voltage, simply reducing the operating voltage will have desirable effects. Unfortunately, speed generally falls off as well. By designing the LCX family specifically for a lower supply voltage, it was possible to maintain high overall performance. The LCX family is also designed to interface with five volt devices, being tolerant of the differences in I/O levels.

Because of its inherent design, ECL is the highest power consumer at frequencies below approximately 50 MHz; however, at higher frequencies, TTL and CMOS power consumption can exceed ECL. The amount of power used by ECL is fairly constant over its entire operating frequency range. Designers of large, high performance ECL systems may have to employ somewhat more complex cooling and power distribution techniques.

Supply Voltage

The power supply voltage required for TTL and ECL is restricted to fixed values; only a narrow voltage variation is allowed for the device to remain within specifications. Since these families also consume substantial amounts of power, there is a large current flow through the power lines. To avoid unacceptable voltage fluctuation, various preventive measures may be necessary such as remote sensing by the supply regulator, beefing up power buses and filters, and utilizing multi–layer PC boards with separate power and ground planes. Typically, a high–speed energy storage capacitor is required near each logic device; this capacitor maintains the correct device voltage during high–current switching.

An important advantage of CMOS is the large range of supply voltage over which operation is specified. By allowing systems to be operated at voltages as low as 2V, not only is power consumption lowered, but noise generation from fast signal switching is reduced. It must be noted, however, that operating speed drops off rapidly as the voltage is reduced. As mentioned previously, this was a significant reason for developing the LCX family.

Output Drive

An important characteristic of a logic device is its ability to drive relatively large loads without significant speed degradation. The older families within TTL, and especially CMOS, had only limited drive capability (below 10 mA). All advanced logic family versions have significantly increased drive capacity, and several (FACT, LCX and all ECL) are capable of driving 50 ohm transmission lines directly. Furthermore, because of the symmetrical sink/source capability of FACT and LCX, their rise and fall times are nearly equal, resulting in balanced delay times.

5V Tolerant Input/Output

Because of the limited number of functions available in the new low voltage CMOS families, a designer might might have to mix 3V and 5V devices, each operating from 3V and 5V rails, respectively. Unless the 3V device was specifically designed with proper protection to tolerate 5V at its input or output, it may not survive.

Noise Margin

Noise immunity refers to the resistance of a logic device to undesired switching. Depending on the input level, a noise glitch that causes a transient across the input switch point from either a high or low level can result in erroneous operation. Clearly, the more voltage difference there is between the switch point and the normal input high and low levels, the more immunity a logic family has to erroneous switching. In Table 1. , these differences are expressed as a percentage of the swing between typical output high and low voltage logic levels. High input noise margin is calculated from the formula:

$$HNM = \frac{V_{OH} - V_{IH}}{V_{OH} - V_{OL}}$$, and for low input noise margin,

$$LNM = \frac{V_{IL} - V_{OL}}{V_{OH} - V_{OL}}.$$

Packaging

The venerable Dual–Inline package (DIP) is rapidly being replaced by Small Outline (SO), Shrink Small Outline (SSOP), Thin Shrink Small Outline (TSSOP), and Leadless Chip Carrier (LCC) packages for surface mounting. Savings in footprint area of up to 90% are possible with these newer packages.

Device Types

In general, the older the family the larger the quantity of different functional devices available. This is only natural since it takes time (and substantial resource investment) to design and reliably manufacture increasingly more complex devices. The newer TTL and CMOS families will undoubtedly grow, but because of competition from higher integrated devices, will be more limited in scope.

Cost

Here again, the age of a family has a substantial bearing on its relative selling price. The older families have benefited longer from manufacturing learning and volume curve cost reductions. Newer technologies, because of their inherently more complex process requirements, increased performance improvements, and higher cost of production, are priced higher but should decline over time.

Mix and Match

Many designers have found that the best approach to achieving their particular application performance goal is to combine devices from several families. The obvious advantage of this is to optimize the requirements of selected portions of a design, whether it is for speed, power consumption, output drive, cost, etc. Some disadvantages are that devices must be analyzed and tested for compatibility, inventories may increase, and some performance parameters may be compromised.

Conclusion

The diversity of logic families available to today's logic designer may be likened to a bad news/good news scenario. The bad news is that you have huge ratios between the highest and lowest performance values—speeds of 500:1, power at 100,000:1, output drive at 24:1, etc. The good news is that you have lots of choices—it wasn't too many years ago that there were very few. By examining and comparing each family's parameters, an optimal selection can result.

A few potential users of standard logic devices may worry, that because of the trends towards higher–integration chips, some vendors will abandon the older product lines. This may *eventually* happen; however, the current demand, projected for at least the next decade, indicates that these families have a very solid future. The diverse applications that keep arising for semiconductor products that are inexpensive and reliable continue to mount. Until some totally revolutionary development should occur, these "oldies, but goodies" will be around for a long time to come.

INTRODUCTION TO MOTOROLA PROGRAMMABLE ARRAYS

Field programmable logic and in particular, field programmable arrays, have become the solution of choice for logic design implementation in applications where time to market is a critical product development factor. In addition, reconfigurable arrays have been used to enhance Customer product flexibility in ways that no other technology can match.

Microprocessors have traditionally been used to satisfy time to market and end product flexibility needs. This solution may not meet performance constraints and lacks the concurrency possible in an unconstrained hardware design. Typical design processes, therefore, reach a point where the overall design is partitioned into hardware and software components. An interface is defined and the design process continues along two parallel paths. Sometime later, the software and hardware components must be integrated. Problems usually develop at this point because of interface misinterpretation or partitioning that cannot meet design requirements. This impacts the hardware, the software and the schedule. If the hardware design is realized in programmable logic, the hardware can be manipulated as easily as the software.

Products which adapt to the end users particular requirements through self directed or end user directed reconfiguration are becoming more prevalent. As the number of modes of operation increases, mode specific hardware becomes a less cost effective solution. In the case where the end user is truly directing the adaptation, predetermined hardware solutions become untenable. Reconfigurable logic enables design solutions where dynamic hardware–software repartitioning is possible.

Programmable logic not only vastly improves the time necessary to implement a static design, but significant time to market and product feature benefits can be realized when hardware can be dynamically altered as easily as software.

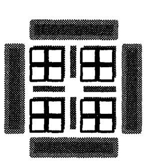
To reduce design cycles, designers have also turned towards high level design languages and logic synthesis tools. Many programmable logic solutions are poorly suited to this design methodology, however. An incompatibility exists between logic synthesis algorithms originally developed for gate level design and the block–like structures found on many programmable logic devices. This can result in significant under utilization or degraded performance. In either case a more expensive device is required. Real gate level programmable devices are ideally suited to this design methodology.

When schematic based design methods are used, some programmable logic solutions impose significant constraints on design implementation to insure satisfactory results. This imposition tends to bind the design to a particular programmable device and requires a significant learning investment. Any design specification changes which impact design decisions made to fit this imposed structure can have disastrous effects on utilization and performance and potentially require a more expensive device or even a costly redesign. Gate level programmable devices coupled with sophisticated, timing driven, implementation tools minimize device specific optimization.

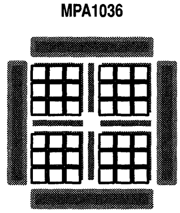
Any design process includes a significant amount of learning. Usually engineers spend most of this time learning about product requirements or prototyping critical portions of the design to prove implementation feasibility. Many programmable logic solutions are not push button; time must be spent learning programmable device architecture or implementation tool quirks. Worse yet, the design may require modification or manual component placement to meet design targets. The cost? Time to market.

The reconfigurable Motorola Programmable Array (MPA) and MPA design system maximize application flexibility and minimize time to market by delivering a gate level, push button, programmable logic solution.

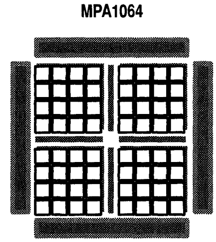
MPA1016



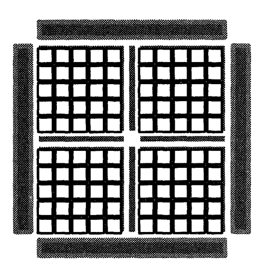
MPA1036



MPA1064



MPA1100



MPA1000Programmable Arrays

Motorola Programmable Array (MPA) products are a high density, high performance, low cost, solution for your reconfigurable logic needs. When used with our automatic high performance design tools, MPA delivers custom logic solutions in minutes rather than weeks. And the low cost keeps those solutions competitive throughout the product lifecycle.

The MPA architecture has solved the historical problems associated with fine grain devices without sacrificing re–programmability, reliability, or cost. MPA1000 devices are reprogrammable SRAM based products manufactured on a standard 0.5μ Leff CMOS process with logic capacities from 3,500 to more than 22,000 equivalent FPGA gates. MPA Logic resources hold a single gate or storage element providing a highly efficient, adaptable, design implementation medium. Gate level logic resources, abundant hierarchical interconnection resources and automatic, timing driven, tools work together to quickly provide design implementations that meet timing constraints without sacrificing device utilization.

Staying focused on end product design rather than implementation tools or device architecture gets the design done faster and, unlike other programmable solutions, without programmable logic device specificity to impede future design migration efforts. The combination of automatic tools and gate level architecture is ideal for traditional schematic driven or high level language based design methodologies. In fact, logic synthesis tools were originally designed for and produce the most efficient results when targeting gate level devices.

High MPA1000 register count and controlled clock skew is ideal for designs employing pipelining techniques such as communications. The unique set of MPA1000 I/O programming options make these devices suitable for industrial and computer Interfacing circuits.

MPA1016
MPA1036
MPA1064
MPA1100

PROGRAMMABLE ARRAY
3,500 to 22,000 GATES

- Multiple I/O from 80–200 I/O Pins
- Programmable 3V/5V I/O at Any Site
- Multiple Packaging Options
- Fine Grain Structure Is Optimized for Logic Synthesis
- Programmable Output Drive, 6/12mA @ 5.0V
- High Register Count, with 560–2,900 Flip–Flops
- IEEE 1149.1 JTAG Boundary Scan
- Eight Low–Skew (<1ns) Clocks

MPA1000 Family Members

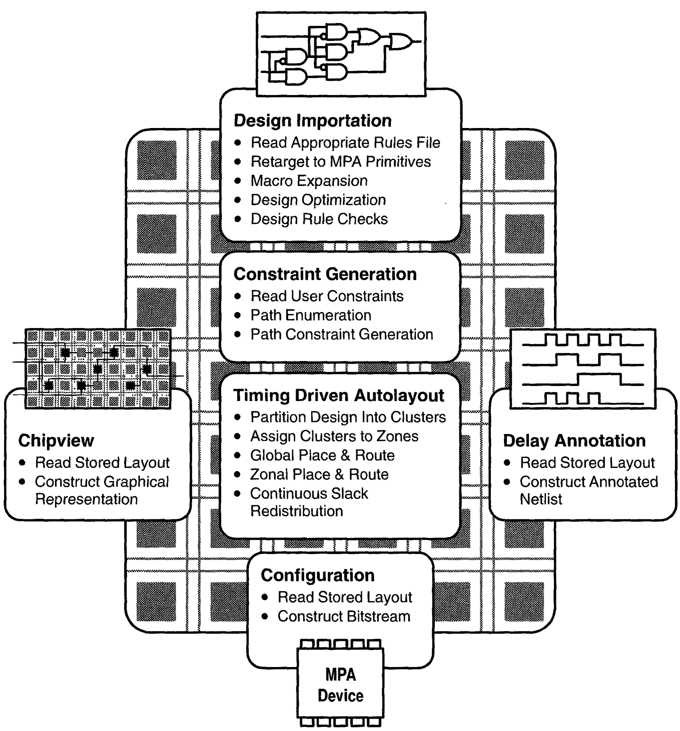
MPA1000 Design System Product Description

Overview

The Motorola Programmable Array (MPA) design system is a bridge between a design capture environment and Motorola field programmable arrays. The MPA design system automatically transforms designs into device configurations which, when loaded into an MPA device, realize a design. A design is automatically analyzed, optimized, transformed into MPA cells, partitioned, placed and routed based on timing constraints for every path in the design. MPA design tools understand and optimally utilize the MPA device architecture; this eliminates the need to learn a new set of rules and makes these tools ideally suited for use with logic synthesis. Full incremental design support reduces design implementation time and powerful library retargeting capabilities allow you to reuse designs which may have been implemented on less capable devices. The MPA design system operates on existing hardware platforms and supports design capture and simulation tools from more than 10 vendors. All these features plus on–line, hypermedia, help make the MPA design system a powerful yet extremely easy to use design implementation engine.

Features

- Push Button Implementation
- Optimal Use of MPA Device Resources
- Optimal Results with Gate Level Design Input
- Library of Common MSI Functions
- Design Flow Manager
- Design Retargeter
- Timing Driven with Integrated Static Timing Analysis
- Layout Delay extraction for post layout simulation
- Layout viewer
- Incremental design support
- On–line, hypermedia, documentation
- Supports all popular design capture and simulation tools
- Lowest cost FPGA development systems.
- Instant access; Downloading via the internet (WWW, ftp).



Push Button Design Implementation

The MPA design system minimizes training investment and automatically generates design implementations which meet timing constraints.

The gate level logic and abundant hierarchical routing resources of the MPA device present a rich implementation media for design implementation. MPA design tools understand and optimally utilize the MPA device resources so there are no elaborate rules to learn or design modifications required to begin design capture. Staying focused on end product design rather than implementation tools or device architecture gets the design done faster and, unlike other programmable solutions, without programmable logic device specificity to impede future design migration efforts. The combination of automatic tools and gate level architecture is ideal for traditional schematic driven or high level language based design capture methods. In fact, logic synthesis tools were originally designed for and produce the most efficient results for targeting gate level devices.

A design is analyzed, optimized, transformed into MPA cells, partitioned, placed and routed based on timing constraints for all paths in the design – automatically. A netlist from one of the popular design capture systems or an existing XNF or LPM netlist is imported into the MPA design system. The logic is mapped to a series of MPA cells and the entire resulting netlist is optimized and checked. Based on a simple clock specification, the MPA design system generates timing constraints for all paths in the design. During automatic partitioning, placement and routing path slack time is constantly redistributed insuring only the resources required to meet timing requirements are consumed. Because MPA tools implement the design according to constraints, tool induced design iterations are virtually eliminated. Completed layouts can be transformed into device configurations, as well as annotated simulation netlists. A layout browser is also available.

The MPA design system also includes complete on–line, hypermedia, help covers the device, the design system and the integration kits. Integration kits for Viewlogic, Exemplar, VHDL (1076), Verilog (OVI) and OrCAD are included (contact your vendor for additional kits).All these features add up to a powerful yet extremely easy to use design implementation engine for the MPA product family.

Design Importation

Designs can be captured using schematics, a high level language, or a combination of these entry methods using commercially available design capture and logic synthesis software and the appropriate interface kit. Alternatively, existing designs can be retargeted from other programmable logic devices to the MPA device using commercial logic synthesis tools or the powerful retargetting capabilities provided with MPA design system.

Design importation begins with a netlist and an optional clock specification file. The clock specification file provides a mechanism for the user or design capture tools to document system level timing requirements. In addition, a rich set of attributes can be attached to specific components or nets within the design to specify timing and design pinout constraints.

A retargetting rules file is read and the input netlist is transformed into a series of MPA cells and associated interconnections. Rules files provide a mechanism to perform attribute mapping, cell mapping and macro expansion. By creating custom rule files, the user can extend the importation process from arbitrary sources. The MPA design system comes with rules for it's native library/EDIF. The resulting netlist is optimized to clip unused logic and remove redundant logic. For example: each MPA cell has programmable input inversion capability. All Inverters or non–inverting buffers can be removed from the netlist and replaced with signal sense information attached to each input.

A series of design rule checks are performed to insure design integrity before the layout process begins.

Constraint Generation

Timing constraints, the optimized MPA netlist and static timing analysis is used to generate path slack constraints for all paths in the design. Each unique signal pathway between a register output and a register input throughout the design are enumerated. The total logic and estimated or real wire delays along the path are summed. The time between the active upstream register clock edge and the next active downstream clock edge minus the downstream register setup time is subtracted from the total path delay. This difference is called path slack. If any path in the design has a negative slack value, the implementation will not function at the required clock rate(s).

Path constraints are utilized throughout the layout process to insure that a design implementation which meets timing constraints is automatically generated. If no clock or timing specifications are provided, the MPA design system uses the fastest possible clock based on very small net delay estimates to generate the path constraints. This usually results in the best possible implementation, but may take longer than the time required to generate a satisfactory rather than best possible result.

Contrast this to other programmable logic design tools which only provide manual net constraint annotation or net criticality assignment. In these cases significant effort is necessary to generate constraints and many costly iterations are required to tune these constraints for a given design. If any changes are made to the design, another costly round of iterations is required.

Autolayout

The autolayout process makes use of the hierarchical organization of the MPA device to minimize run time and deliver implementations that meet timing requirements. Designs which have diverse timing requirements are ideally implemented because path slack estimates are refined throughout the autolayout process insuring only the resources required to meet timing requirements are consumed.

The process begins by flattening the design and partitioning it into small component groups of approximately the same size called clusters. A cluster boundary delay estimation is applied to pull the most tightly constrained paths into a minimum number of clusters. The clusters are then assigned to zones talking into account zonal boundary delay cost and relative zone placement delay costs. Other costs like total number of port connections per zone and are also considered. As assignment proceeds, cluster and zone boundary delay costs are added to each path and slack is recomputed.

Next global placement and routing is done. Global routes begin and end on either I/O cells or port cells. Intrazone placement and routing is deferred to a later phase. During global routing all the port cell and I/O cell locations are fixed and the connections between them established. High fanout nets are constructed in a highly regular manner to insure efficient resource utilization. As in partitioning, slack estimates are refined throughout global routing.

Finally the intrazonal placement and routing is done. Cells assigned to a particular zone are placed and routed to other zone cells or zone port cells. Port cells and core cells are constructed to allow port swapping. Core cells can be routed through if necessary. Allowing core cells to act as routing cells allows dynamic adjustment of routing resources within the zone. Dynamic resource adjustment is a powerful design specific adaptation mechanism.

This process produces a layout from which device configurations, delay back annotations, and chipviews can be generated.

Incremental Design Support

When specification changes necessitate design iterations, simply push the button again. Constraints are automatically recalculated and autolayout only reworks those portions of the design which have changed. Full incremental design support means simple design changes to facilitate design verification can be made quickly and easily.

Delay Back Annotation

Designs can be verified through numerous methods. One particularly useful method is the annotation of device and implementation specific delays back into the original simulation environment to improve system or device level simulation accuracy. A MPA device layout can be transformed into an appropriately formatted delay annotation file or annotated netlist quickly and easily. The annotated delay information represents the worst case delays for a given device speed grade.

Chipview

While the MPA design system provides a rich set of reports describing the implementation of a design, a graphical view of the implementation can be indispensable for reviewing overall layout quality. Chipview provides a graphical view of a completed layout. Chipview can be useful during initial design iterations to visually verify I/O pin placements before commencing PCB layout, for example.

Configuration

A layout can be transformed into a device configuration which, when loaded into the appropriate MPA device, produces a physical design realization. Many formatting options are available. The MPA download pod can be used to emulate a serial PROM. Using the pod, device configuration files can be downloaded to a device directly from the PC or workstation development environment.

Integration Kits

The MPA design system can be used with a large number of commercial electronic design automation software. For each supported vendor, an integration kit is provided which facilitates MPA design within that vendors' environment. Many of these kits are available from Motorola and included at no charge on the MPA design system CDROM. Other kits can be acquired directly from the vendor. Refer to the MPA Design System Product List for more information.

Low Cost, Easy Access

MPA Design systems are easy to use, competitively priced and widely available. Copies of MPA design system software supporting up to 8000 gates can be downloaded from the World Wide Web (WWW) @ http://sps–mot.com/fpga. Complete kits including download pod, evaluation board, MPA device, CDROM and documentation can be ordered from your local authorized Motorola distributor or Motorola sales representative.

Fast, Efficient Design Inplentation With Minimal Investment.

That's MPA!

Design System Product List

MPA Design Kits and Options

Part Number	Description	Platform		CDROM	Supports 1016/1036	Supports All MPAs	Eval Board	POD	Maintenance
		PC	WS						
MPA1E/P	Entry Level Kit	X		X	X		X	X

MPA Design Kit Description

- MPA Design System Software on CDROM
  - Design Import and Retargeting
  - Timing Driven Placement and Routing
  - Layout Viewer
  - Layout Delay Extraction (Annotation)
  - Incremental Design
  - On–Line MPA Device and Design Kit Help
- MPA Device Support
  - Entry Level: MPA1016, MPA1036
  - Standard Level: All MPA1000 Devices
- Evaluation Board with MPA Device (MPA1/BRD)
- Download POD (MPA1/POD)
- 12 Months Maintenance with Standard Kits
- All Integration Kits*

*The MPA Design System CDROM contains integration kits for Viewlogic, Exemplar, Synopsys, VHDL (1076), Verilog (OVI), and OrCAD. For other integration kits, contact your EDA vendor.

MPA Design System Maintenance

- Support Line Access 1–800–521–6274
- Upgrades

MPA Design System Download POD

- RS232 Connection to Host Computer
- Emulates Serial PROM
- Loads MPA Device via Host Computer

MPA Design System Evaluation Board

- MPA Device
- Simple PCB Facilitating MPA Evaluation

Platform Requirements

- PC Platform – 33MHz 486, 16Mb RAM, 32Mb Swap, 40MB Free Disk Space, Serial Port, Windows 3.1 or Later, Windows/NT
- Sun Platform Requirements: Sun SPARC Compatible, 32Mb RAM, 40Mb Swap, 60Mb Free Disk Space, SunOS 4.1.3, Solaris 2.3, Windows Manager: OSF/MOTIF 1.2 X11r5

MPA integrated front–to–back solutions, including schematic, VHDL entry, logic simulation and MPA device software, are also available. Contact the factory for details on a 30–day evaluation copy!

MPA17000 Serial EPROMs

MPA17128
MPA1765

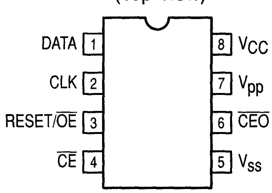
128K, 64K SERIAL EPROM

The MPA17128, MPA1765 serial OTP EPROMs provide a compact, low pin count, non–volatile configuration store for MPA1000 devices.

MPA17000 devices can be cascaded for increased memory capacity when needed. They are available in the standard 8–pin plastic DIP (N suffix), 8–pin SOIC (D suffix) and 20–pin PLCC (FN suffix) packages.

- Configuration EPROM for MPA1000 Devices
- Voltage Range – 4.5 to 6.0V
- Maximum Read Current of 10mA
- Standby Current of 10µA, Typical
- Industry Standard Synchronous Serial Interface
- Full Static Operation
- 10MHz Maximum Clock Rate at 5.0V
- Programmable Polarity on Hardware Reset
- Programs With Industry Standard Programmers
- Electrostatic Discharge Protection > 2000 Volts
- 8–Pin PDIP and SOIC; 20–Pin PLCC Packages
- Commercial (0 to +70°C) and Industrial (–40 to +85°C)

8–Lead Pinouts
(Top View)



20–Lead Pinout

V_{PP}	Programming Voltage Supply
V_{CC}	+4.5 to 6.0V Power Supply
NC	Not Connected

Selection by Function

In order to better serve our customers, we have made some modifications to the Selection by Function portion of the Logic Selector Guide. For easy selection of Logic's newer, more complex functions, as well as standard family functions, refer to the subject index below. Within the Selection by Function tables on the next 23 pages, you will find functions sorted by these broad subjects, and then broken down alphabetically into more precise functions.

Logic Functions

Selection by Function

Description	Tech.	Device(s)		Pins	DIP	SM
AMPLIFIER						
Fiber Optic Post Amplifier	ECL	MC10SX1125	–	16		D

Bus Driver	ECL	MC10128	–	16	L	
Dual Bus Driver/Receiver With 4–to–1 Output Multiplexer (25Ω)	ECL	MC10H332	–	20	P,L	FN
Hex 3–State Inverting Buffer With Common Enables	CMOS	MC54HC366	MC74HC366	16	N,J	
Hex 3–State Inverting Buffer With Separate 2–Bit and 4–Bit Sections	CMOS	MC74HC368	–	16	N	
Hex 3–State Non–Inverting Buffer With Common Enables	CMOS	MC54HC365	MC74HC365	16	N,J	DT
Hex 3–State Non–Inverting Buffer With Separate 2–Bit and 4–Bit Sections	CMOS	MC54HC367	MC74HC367	16	N,J	
Hex Buffer 4/2–Bit/Inverting With 3–State Outputs	TTL	SN54LS368A	SN74LS368A	16	N,J	D
Hex Buffer 4/2–Bit/Non–Inverting With 3–State Outputs	TTL	SN54LS367A	SN74LS367A	16	N,J	D
Hex Buffer Driver, 4+2–Bit, Inverting, With 3–State Outputs	TTL	MC74F368	–	16	N	D
Hex Buffer Gated Enable Inverting With 3–State Outputs	TTL	SN54LS366A	SN74LS366A	16	N,J	D
Hex Buffer Gated Enable Non–Inverting With 3–State Outputs	TTL	SN54LS365A	SN74LS365A	16	N,J	D
Hex Buffer/Driver Gated Enable Inverting, With 3–State Outputs	TTL	MC74F366	–	16	N	D
Hex Buffer/Driver Gated Enable Non–Inverting, With 3–State Outputs	TTL	MC74F365	–	16	N	D
Hex Buffer/Driver, 4+2–Bit, Non–Inverting, With 3–State Outputs	TTL	MC74F367	–	16	N	D
Hex With 3–State Outputs Buffer (Non–Inverting)	CMOS	MC14503B	–	16	P,L	D
Octal 3–State Non–Inverting Bus Transceiver With LSTTL Compatible Inputs	CMOS	MC54HCT245A	MC74HCT245A	20	N,J	DW, SD,DT
Octal Bidirectional Transceiver With 3–State Inputs/Outputs	CMOS	MC74AC245	–	20	N	DW
	CMOS	MC74ACT245	–	20	N	DW
Octal Bidirectional Transceiver With 3–State Outputs	CMOS	MC74AC620	–	20	N	DW
	CMOS	MC74ACT620	–	20	N	DW
	CMOS	MC74AC623	–	20	N	DW
	CMOS	MC74ACT623	–	20	N	DW
	CMOS	MC74AC640	–	20	N	DW
	CMOS	MC74ACT640	–	20	N	DW
	CMOS	MC74AC643	–	20	N	DW
	CMOS	MC74ACT643	–	20	N	DW
	TTL	MC74F245	–	20	N	DW
Octal Bidirectional Transceiver With 8–Bit Parity Generator Checker, With 3–State Outputs	TTL	MC74F657A	–	24	N	DW
	TTL	MC74F657B	–	24	N	DW
Octal Bidirectional Transceiver, With 3–State Inputs/Outputs	TTL	MC74F1245	–	20	N	DW
Octal Buffer With 3–State Outputs (81LS95)	TTL	SN54LS795	SN74LS795	20	N,J	DW
(81LS96)	TTL	SN54LS796	SN74LS796	20	N,J	DW
(81LS97)	TTL	SN54LS797	SN74LS797	20	N,J	DW
(81LS98)	TTL	SN54LS798	SN74LS798	20	N,J	DW

Selection by Function

Description	Tech.	Device(s)		Pins	DIP	SM
BUS INTERFACE						
Octal Buffer/Line Driver With 3–State Outputs	TTL	SN54LS244	SN74LS244	20	N,J	DW
	TTL	MC74F240	–	20	N	DW
	TTL	MC74F241	–	20	N	DW
	TTL	MC74F244	–	20	N	DW
	TTL	SN54LS240	SN74LS240	20	N,J	DW
	TTL	SN54LS241	SN74LS241	20	N,J	DW
	TTL	SN54LS540	SN74LS540	20	N,J	DW
	TTL	SN54LS541	SN74LS541	20	N,J	DW

	CMOS	MC74AC244	–	20	N	DW
	CMOS	MC74ACT244	–	20	N	DW
	CMOS	MC74AC540	–	20	N	DW
	CMOS	MC74ACT540	–	20	N	DW
	CMOS	MC74AC541	–	20	N	DW
	CMOS	MC74ACT541	–	20	N	DW
	CMOS	MC74AC240	–	20	N	DW
	CMOS	MC74ACT240	–	20	N	DW
	CMOS	MC74ACT241	–	20	N	DW
Octal Bus Transceiver	TTL	SN54LS245	SN74LS245	20	N,J	DW
	TTL	SN54LS623	SN74LS623	20	N,J	DW
Octal Bus Transceiver, With 3–State Outputs	TTL	MC74F623	–	20	N	DW
Octal Bus Transceiver/Inverting With 3–State Outputs	TTL	SN54LS640	SN74LS640	20	N,J	DW
	TTL	MC74F620	–	20	N	DW
	TTL	MC74F640	–	20	N	DW
Octal Bus Transceiver/Non–Inverting With 3–State Outputs	TTL	SN54LS645	SN74LS645	20	N,J	DW
Octal Bus Transceiver/Register With 3–State Outputs Non–Inverting	CMOS	MC74AC652	–	24	N	DW
	CMOS	MC74ACT652	–	24	N	DW
Octal Registered Transceiver Inverting, With 3–State Outputs	TTL	MC74F544	–	24	N	DW
Octal Registered Transceiver Non–Inverting, With 3–State Outputs	TTL	MC74F543	–	24	N	DW
Octal Transceiver/Register With 3–State Outputs Non–Inverting	CMOS	MC74AC646	–	24	N	DW
	CMOS	MC74ACT646	–	24	N	DW
Octal Transceiver/Register With 3–State Outputs Inverting	CMOS	MC74AC648	–	24	N	DW
	CMOS	MC74ACT648	–	24	N	DW
Octal Transceiver/Register, With 3–State Outputs	TTL	MC74F646	–	24	N	DW
Octal With 3–State Non–Inverting Buffer/Line Driver/Line Receiver	CMOS	MC54HC241A	MC74HC241A	20	N,J	DW
Octal With 3–State Non–Inverting Buffer/Line Driver/Line Receiver With LSTTL Compatible Inputs	CMOS	MC54HCT241A	MC74HCT241A	20	N,J	DW
	CMOS	MC54HCT244A	MC74HCT244A	20	N,J	DW, SD,DT
Octal With 3–State Outputs Inverting Buffer/Line Driver/Line Receiver	CMOS	MC54HC240A	MC74HC240A	20	N,J	DW, DT
	CMOS	MC54HC540A	MC74HC540A	20	N,J	DW
Octal With 3–State Outputs Inverting Buffer/Line Driver/Line Receiver With LSTTL Compatible Inputs	CMOS	MC74HCT240A	–	20	N	DW, SD,DT
Octal With 3–State Outputs Inverting Bus Transceiver	CMOS	MC54HC640A	MC74HC640A	20	N,J	DW
Octal With 3–State Outputs Non–Inverting Buffer/Line Driver/Line Receiver	CMOS	MC54HC541A	MC74HC541A	20	N,J	DW
Octal With 3–State Outputs Non–Inverting Buffer/Line Driver/Line Receiver With LSTTL Compatible Inputs	CMOS	MC74HCT541A	–	20	N	DW

Selection by Function

Description	Tech.	Device(s)		Pins	DIP	SM
BUS INTERFACE						
Octal With 3–State Outputs Non–Inverting Buffer/Line Driver/Line Receiver	CMOS	MC54HC244A	MC74HC244A	20	N,J	DW, SD,DT
Octal With 3–State Outputs Non–Inverting Bus Transceiver	CMOS	MC54HC245A	MC74HC245A	20	N,J	DW
Octal With 3–State Outputs Non–Inverting Bus Transceiver & D Flip–Flop	CMOS	MC54HC646	MC74HC646	24	N,J	DW
Quad Buffers With 3–State Outputs	TTL	SN54LS125A	SN74LS125A	14	N,J	D
Quad 3–State Non–Inverting Buffers	CMOS	MC74HC125A	–	14	N	D
	CMOS	MC74HC126A	–	14	N	D
Quad Buffer With 3–State Outputs	CMOS	MC74AC125	–	14	N	D
	CMOS	MC74ACT125	–	14	N	D
	CMOS	MC74AC126	–	14	N	D
	CMOS	MC74ACT126	–	14	N	D
	TTL	MC74F125	–	14	N	D
	TTL	MC74F126	–	14	N	D
	TTL	SN54LS126A	SN74LS126A	14	N,J	D
Quad Bus Driver	ECL	MC10192	–	16	P,L	FN
Quad Bus Driver/Receiver With 2–to–1 Output Multiplexer (25Ω)	ECL	MC10H330	–	24	P,L	FN
Quad Bus Driver/Receiver With Transmit & Receiver Latches (25Ω)	ECL	MC10H334	–	20	P,L	FN
Quad Bus Transceiver/Inverting With 3–State Outputs	TTL	SN54LS242	SN74LS242	14	N,J	D
Quad Bus Transceiver/Non–Inverting With 3–State Outputs	TTL	SN54LS243	SN74LS243	14	N,J	D
Quad Bus Transceivers With 3–State Outputs	TTL	MC74F242	–	14	N	D
	TTL	MC74F243	–	14	N	D
Quad With 3–State Outputs Inverting Bus Transceiver	CMOS	MC74HC242	–	14	N	
Triple 3–Input Bus Driver With Enable (25Ω)	ECL	MC10H423	–	16	P,L	FN
Triple 4–3–3 Input Bus Driver (25Ω)	ECL	MC10H123	–	16	P,L	FN
	ECL	MC10123	–	16	P,L	FN
CBM						
CBM – Carrier Band Modem	SXLG	MC68194	–	52		*FJ
CLOCK DISTRIBUTION CHIPS						
1:4 Clock Distribution Chip	ECL	MC10EL15	MC100EL15	16		D
1:5 Clock Distribution Chip	ECL	MC100LVEL14	MC100EL14	20		DW
1:6 Differential Clock Distribution Chip	ECL	MC10E211	MC100E211	28		FN
Low Voltage 1:12 Clock Distribution Chip	SXLG	MPC948	–	32		FA
Low Voltage 1:9 Clock Distribution Chip	SXLG	MPC947	–	32		FA
Low Voltage 1:9 ECL/PECL Clock Distribution Chip	ECL	MC100LVE111	–	28		FN
CLOCK DRIVERS						
1:2 Differential Clock Driver	ECL	MC10EL11	MC100EL11	8		D
1:6 PCI Clock Generator/Fanout Buffer	CMOS	MPC903	–	16		D
	CMOS	MPC904	–	16		D
	CMOS	MPC905	–	16		D
1:9 Differential Clock Driver With Low Skew, Enable, Vbb	ECL	MC10E111	MC100E111	28		FN
1:9 Differential ECL/PECL RAMBus Clock Buffer	ECL	MC10E411	–	28		FN
1:9 TTL/TTL Clock Distribution Chip	ECL	MC10H645	–	28		FN
3.3/5.0V Fully Integrated PLL Clock Driver	CMOS	MPC974	–	52		FA
50 MHz Low Skew CMOS PLL Clock Driver With µP Power Down	CMOS	MC88920	–	20		DW
66 MHz Low Skew CMOS PLL Clock Driver With µP Power–Down/Power–Up Feature	CMOS	MC88921	–	20		DW

Selection by Function

Description	Tech.	Device(s)		Pins	DIP	SM
CLOCK DRIVERS						
68030/040 PECL/TTL Clock Driver	ECL	MC10H640	MC100H640	28		FN
	ECL	MC10H642	MC100H642	28		FN

Clock Driver Quad D–Type Flip–Flop w/ Matched Propagation Delays	TTL	MC74F1803	–	14	N	D
	TTL	MC74F803	–	14	N	D
CMOS PLL Clock Driver Programmable Frequency, Low Skew, High Fan–Out	CMOS	MC88PL117	–	52		FN
Dual 3.3V PLL Clock Generator	CMOS	MPC980	–	52		FA
Dual Supply ECL/TTL 1:8 Clock Driver	ECL	MC10H643	MC100H643	28		FN
High Frequency PLL Clock Generator	ECL	MC12429	–	28		FN
	ECL	MC12439	–	28		FN
Low Skew CMOS Clock Driver	CMOS	MC88913	–	14	N	D
Low Skew CMOS Clock Driver With Reset	CMOS	MC88914	–	14	N	D
Low Skew CMOS PLL 68060 Clock Driver	CMOS	MC88LV926	–	20		DW
Low Skew CMOS PLL Clock Driver	CMOS	MC88915*55	–	28		FN
	CMOS	MC88915*70	–	28		FN
Low Skew CMOS PLL Clock Driver With Processor Reset	CMOS	MC88916*70	–	20		DW
	CMOS	MC88916*80	–	20		DW
Low Skew CMOS PLL Clock Driver 160 MHz Version	CMOS	MC88915T*160	–	28		FN
133 MHz Version	CMOS	MC88915T*133	–	28		FN
100 MHz Version	CMOS	MC88915T*100	–	28		FN
70 MHz Version	CMOS	MC88915T*70	–	28		FN
55 MHz Version	CMOS	MC88915T*55	–	28		FN
Low Voltage 1:10 CMOS Clock Driver	CMOS	MPC946	–	32		FA
Low Voltage 1:15 Differential ÷1/2 ECL/PECL Clock Driver	ECL	MC100LVE222	–	52		FA
Low Voltage 1:15 PECL to CMOS Clock Driver	CMOS	MPC949	–	52		FA
Low Voltage 1:9 Differential ECL/HSTL to HSTL Clock Driver	CMOS	MPC911	–	28		FN
Low Voltage PECL PLL Clock Driver	CMOS	MPC992	–	32		FA
Low Voltage PLL Clock Driver	CMOS	MPC930	MPC931	32		FA
Low Voltage PLL Clock Driver	CMOS	MPC950	MPC951	32		FA
Low Voltage PLL Clock Driver	CMOS	MPC956	–	32		FA
Low Voltage PLL Clock Driver	CMOS	MPC970	–	52		FA
Low Voltage Wide Fanout PLL Clock Driver	CMOS	MPC952	–	32		FA
Multiple Output Clock Synthesizer	CMOS	MPC9159–410	–	28		DW
PECL/TTL to TTL 1: 8 Clock Distribution Chip	ECL	MC10H646	MC100H646	28		FN
Single Supply PECL/TTL 1:9 Clock Distribution Chip	ECL	MC10H641	MC100H641	28		FN
÷2, ÷4/6 Clock Generation Chip (3.3V)	ECL	MC100LVEL38	MC100EL38	20		DW
÷2/4, ÷4/6 Clock Generation Chip	ECL	MC100LVEL39	MC100EL39	20		DW
÷2,4,8 Differential Clock Driver	ECL	MC10EL34	MC100EL34	16		D
COAX CABLE DRIVERS						
Fibre Channel Coaxial Cable Driver and Loop Resiliency Circuit	SDX	MC10SX1189	–	16		D
300 MBit/s LED Driver for FDDI and Fibre Channel	SDX	MC10SX1130	–	16		D
COMPARATORS						
4–Bit Magnitude Comparator	TTL	MC74F85	–	16	N	D
	CMOS	MC74HC85	–	16	N	DT
	TTL	SN54LS85	SN74LS85	16	N,J	D
	CMOS	MC14585B	–	16	P,L	D

Selection by Function

Description	Tech.	Device(s)		Pins	DIP	SM
COMPARATORS						
5–Bit Magnitude Comparator	ECL	MC10H166	–	16	P,L	FN
	ECL	MC10166	–	16	P,L	FN
8–Bit Equality Comparator	CMOS	MC54HC688	MC74HC688	20	N,J	DW
8–Bit Identity Comparator	CMOS	MC74ACT521	–	20	N	
	TTL	MC74F521	–	20	N	DW
8–Bit Magnitude Comparator	TTL	SN54LS682	SN74LS682	20	N,J	DW
	TTL	SN54LS684	SN74LS684	20	N,J	DW
	TTL	SN54LS688	SN74LS688	20	N,J	DW
9–Bit Magnitude Comparator	ECL	MC10E166	MC100E166	28		FN
Dual Analog Comparator With Latch	ECL	MC10E1651	–	16,20	L	FN
Dual Analog Comparator With Latch (Hi–Perf MC1651)	ECL	MC10E1652	–	16,20	L	FN
CONVERTERS						
4–Bit Parallel to Serial Converter	ECL	MC10E446	MC100E446	28		FN
4–Bit Serial to Parallel Converter	ECL	MC10E445	MC100E445	28		FN
Dual A/D Converter	ECL	MC1650	–	16	L	
	ECL	MC1651	–	16	L	
COUNTERS						
12–Bit Binary Counter	CMOS	MC14040B	–	16	P,L	D
12–Stage Binary Ripple Counter	CMOS	MC54HC4040A	MC74HC4040A	16	N,J	D,DT
	CMOS	MC74AC4040	–	16	N	D
14–Bit Binary Counter	CMOS	MC14020B	–	16	P,L	D

Description	Tech.	Device(s)		Pins	DIP	SM
COUNTERS						
Programmable Modulo–N Counters (N=0–9)	ECL	MC4016	–	16	P,L	
	ECL	MC4018	–	16	P,L	
	ECL	MC4316	–	16	P,L	
Synchronous 4–Bit Up/Down Counter	TTL	SN54LS669	SN74LS669	16	N,J	D
Synchronous Presettable Binary Counter	CMOS	MC74AC161	–	16	N	D
	CMOS	MC74ACT161	–	16	N	D
Synchronous Presettable Binary Counter	CMOS	MC74AC163	–	16	N	D
	CMOS	MC74ACT163	–	16	N	D
Synchronous Presettable Binary–Coded–Decimal Decade Counter	CMOS	MC74AC160	–	16	N	D
	CMOS	MC74ACT160	–	16	N	D
	CMOS	MC74AC162	–	16	N	D
	CMOS	MC74ACT162	–	16	N	D
Universal Decade Counter	ECL	MC10137	–	16	P,L	
Universal Hexadecimal Counter	ECL	MC10H136	–	16	P,L	FN
	ECL	MC10136	–	16	P,L	FN
Up/Down Counter With Preset and Ripple Clock	CMOS	MC74AC190	–	16	N	D
DECODER/DEMULTIPLEXERS						
1–of–10 Decoder	CMOS	MC74HC42	–	16	N	D
	TTL	SN54LS42	SN74LS42	16	N,J	D
1–of–10 Decoder/Driver Open–Collector	TTL	SN54LS145	SN74LS145	16	N,J	D
1–of–10 Decoder, With 3–State Outputs	TTL	MC74F537	–	20	N	DW
1–of–16 Decoder/Demultiplexer	CMOS	MC54HC154	MC74HC154	24	N,J	DW
1–of–16 Decoder/Demultiplexer With Address Latch	CMOS	MC74HC4514	–	24	N	DW
1–of–4 Decoder, With 3–State Outputs	TTL	MC74F539	–	20	N	DW
1–of–8 Decoder, With 3–State Outputs	TTL	MC74F538	–	20	N	DW
1–of–8 Decoder/Demultiplexer	CMOS	MC74AC138	–	16	N	D
	CMOS	MC74ACT138	–	16	N	D
	TTL	MC74F138	–	16	N	D
	CMOS	MC54HC138A	MC74HC138A	16	N,J	D
	CMOS	MC74HCT138A	–	16	N	D,DT
	TTL	SN54LS138	SN74LS138	16	N,J	D
1–of–8 Decoder/Demultiplexer With Address Latch	CMOS	MC74HC137	–	16	N	D
	CMOS	MC74HC237	–	16	N	D
3–Line to 8–Line Decoders/Demultiplexers With Address Latches	TTL	SN54LS137	SN74LS137	16	N,J	D
4–Bit Transparent Latch/4–to–16 Line Decoder (High)	CMOS	MC14514B	–	24	P,L	DW
4–Bit Transparent Latch/4–to–16 Line Decoder (Low)	CMOS	MC14515B	–	24	P,L	DW
8–Bit Addressable Latch/1–of–8 Decoder	CMOS	MC54HC259	MC74HC259	16	N,J	D
BCD–to–Decimal Decoder/Binary–to–Octal Decoder	CMOS	MC14028B	–	16	P,L	D
Binary to 1–4 Decoder (Low)	ECL	MC10171	–	16	P,L	FN
Binary to 1–8 Decoder, (High)	ECL	MC10H162	–	16	P,L	FN
	ECL	MC10162	–	16	P,L	FN
Binary to 1–8 Decoder, (Low)	ECL	MC10H161	–	16	P,L	FN
	ECL	MC10161	–	16	P,L	FN
Dual 1–of–4 Decoder	TTL	SN54LS155	SN74LS155	16	N,J	D
Dual 1–of–4 Decoder Open–Collector	TTL	SN54LS156	SN74LS156	16	N,J	D

Selection by Function

Description	Tech.	Device(s)		Pins	DIP	SM
DECODER/DEMULTIPLEXERS						
Dual 1–of–4 Decoder/Demultiplexer	CMOS	MC74AC139	–	16	N	D
	CMOS	MC74ACT139	–	16	N	D
	TTL	MC74F139	–	16	N	D
Dual 1–of–4 Decoder/Demultiplexer	CMOS	MC54HC139A	MC74HC139A	16	N,J	D
	TTL	SN54LS139	SN74LS139	16	N,J	D
Dual Binary to 1–4 Decoder (High)	ECL	MC10H172	–	16	P,L	FN
	ECL	MC10172	–	16	P,L	FN
Dual Binary to 1–4 Decoder (Low)	ECL	MC10H171	–	16	P,L	FN
Dual Binary to 1–of–4 Decoder (Active High Outputs)	CMOS	MC14555B	–	16	P	D
Dual Binary to 1–of–4 Decoder (Active Low Outputs)	CMOS	MC14556B	–	16	P	D
Low–Voltage CMOS 1–of–8 Decoder/Demultiplexer With 5V Tolerant Inputs and Outputs	CMOS	MC74LCX138	–	16		D,DT
Low–Voltage Quiet CMOS 1–of–8 Decoder/Demultiplexer	CMOS	MC74LVQ138	–	16		D,M, SD,DT
DETECTORS						
Analog Mixer	ECL	MC12002	–	14	P,L	
Phase–Frequency Detector	ECL	MC4044	–	14	P,L	D
	ECL	MC4344	–	14	P,L	
	ECL	MC12040	–	14	P,L	FN
	ECL	MCH12140	MCK12140	8		D
DISPLAY DECODE DRIVERS						
BCD–to–Seven Segment Decoder	TTL	SN54LS48	SN74LS48	16	N,J	D
	CMOS	MC14558B	–	16	P,L	D
BCD–to–Seven Segment Decoder/Driver	TTL	SN54LS47	SN74LS47	16	N,J	D
	TTL	SN54LS247	SN74LS247	16	N,J	D
	TTL	SN54LS248	SN74LS248	16	N,J	D
	TTL	SN54LS249	SN74LS249	16	N,J	D
BCD–to–Seven Segment Latch/Decoder/Display Driver	CMOS	MC74HC4511	–	16	N	D
BCD–to–Seven Segment Latch/Decoder/Driver	CMOS	MC14511B	–	16	P,L	D,DW
BCD–to–Seven Segment Latch/Decoder/Driver for Liquid Crystals	CMOS	MC14543B	–	16	P,L	D
BCD–to–Seven Segment Latch/Decoder/Driver With Ripple Blanking	CMOS	MC14544B	–	18	P,L	
	CMOS	MC14513B	–	18	P	
High Current BCD–to–Seven Segment Decoder/Driver	CMOS	MC14547B	–	16	P,L	DW
DIVIDERS						
÷ 2 Divider	ECL	MC10EL32	MC100EL32	8		D
	ECL	MC100LVEL32	–	8		D
÷ 4 Divider	ECL	MC10EL33	MC100EL33	8		D
	ECL	MC100LVEL33	–	8		D
DRIVER						
Coaxial Cable Driver	ECL	MC10EL89	–	8		D
300MBit/s LED Driver for FDDI and Fibre Channel	ECL	MC10SX1130	–	16		D
EDACs						
Error Detection–Correction Circuit (IBM Code)	ECL	MC10163	–	16	P,L	
Error Detection–Correction Circuit (Motorola Code)	ECL	MC10193	–	16	P,L	
ENCODERS						
10–Line to 4–Line Priority Encoder	TTL	SN54LS147	SN74LS147	16	N,J	D
8–Bit Priority Encoder	CMOS	MC14532B	–	16	P,L	D

Selection by Function

Description	Tech.	Device(s)		Pins	DIP	SM
ENCODERS						
8–Input Priority Encoder	TTL	SN54LS348	SN74LS348	16	N,J	D
	ECL	MC10H165	–	16	P,L	FN
	ECL	MC10165	–	16	P,L	FN
8–Input Priority Encoder (Glitchless)	TTL	SN54LS848	SN74LS848	16	N,J	D
8–Line to 3–Line Priority Encoder	TTL	MC74F148	–	16	N	D
	TTL	SN54LS148	SN74LS148	16	N,J	D
	TTL	SN54LS748	SN74LS748	16	N,J	D
Decimal–to–BCD Encoder	CMOS	MC74HC147	–	16	N	D
ENCODER/DECODERS						
CMI Encoder/Decoder	ECL	MC100SX1230	–	28		FN
EXPANDERS						
Dual 4–Iput Expander	HTL	MC669	–	14	P,L	
Expandable Dual 4–Input Gate (Active Pullup)	HTL	MC660	–	14	P,L	
Expandable Dual 4–Input Gate (Passive Pullup)	HTL	MC661	–	14	P,L	
Expandable Dual 4–Input Line Driver	HTL	MC662	–	14	P,L	
Expandable Dual Power Gate	DTL	MC844	–	14	P,L	
	DTL	MC944	–	14	P,L	
FIELD PROGRAMMABLE GATE ARRAY						
14,200–Gate Programmable Array With Up to 160 User I/Os	CMOS	MPA1064	–	160, 224		DH, KE
22,000–Gate Programmable Array With Up to 200 User I/Os	CMOS	MPA1100	–	229		HV
3,500–Gate Programmable Array With Up to 80 User I/Os	CMOS	MPA1016	–	84		FN
8,000–Gate Programmable Array With Up to 120 User I/Os	CMOS	MPA1036	–	84, 160, 181		FN, DH, HI
FLIP–FLOPS						
3–Bit Differential Flip–Flop	ECL	MC10E431	MC100E431	28		FN
4–Bit D Flip–Flop Individual Clock, Reset Differential Output	ECL	MC10E131	MC100E131	28		FN
4–Bit D Flip–Flop With Enable	TTL	SN54LS379	SN74LS379	16	N,J	D
4–Bit D–Type Register With With 3–State Outputs	TTL	SN54LS173A	SN74LS173A	16	N,J	D
5–Bit Differential Register	ECL	MC10E452	MC100E452	28		FN
6–Bit 2:1 Mux–Register With Common Clock, Asynchronous Master Reset Single Ended	ECL	MC10E167	MC100E167	28		FN
6–Bit D Register With Common Clock, Asynchronous Master Reset, Differential Outputs	ECL	MC10E151	MC100E151	28		FN
6–Bit D Register, With Differential Inputs, (Data & Clock) , VBB, Common Reset	ECL	MC10E451	MC100E451	28		FN
6–Bit Parallel D Register With Enable	CMOS	MC74AC378	–	16	N	D
	CMOS	MC74ACT378	–	16	N	D
9–Bit Hold Register, 700MHz, With Asynchronous Master Reset	ECL	MC10E143	MC100E143	28		FN
Clocked Flip–Flop	DTL	MC845	–	14	P,L	
Clocked Flip–Flop	DTL	MC945	–	14	P,L	
D Flip–Flop With Set & Reset	ECL	MC10EL31	MC100EL31	8		D
Differential Clock D Flip–Flop	ECL	MC10EL51	MC100EL51	8		D
	ECL	MC100LVEL51	–	8		D
Differential Data & Clock D Flip–Flop	ECL	MC10EL52	MC100EL52	8		D
Dual D Flip–Flop	CMOS	MC74AC74	–	14	N	D
	CMOS	MC74ACT74	–	14	N	D
	CMOS	MC14013B	–	14	P,L	D

Selection by Function

Description	Tech.	Device(s)		Pins	DIP	SM
FLIP–FLOPS						
Dual D Flip–Flop With Set and Reset	CMOS	MC54HC74A	MC74HC74A	14	N,J	D,DT
Dual D Flip–Flop With Set and Reset With LSTTL Compatible Inputs	CMOS	MC74HCT74A	–	14	N	D
Dual D–Type Positive Edge–Triggered Flip–Flop	TTL	MC74F74	–	14	N	D
	TTL	SN54LS74A	SN74LS74A	16	N,J	D
Dual Differential Data and Clock D Flip–Flop With Set and Reset	ECL	MC100LVEL29	MC100EL29	20		DW
Dual J–K Negative Edge–Triggered Flip–Flop	TTL	SN54LS112A	SN74LS112A	16	N,J	D
	TTL	SN54LS113A	SN74LS113A	14	N,J	D
	TTL	SN54LS114A	SN74LS114A	14	N,J	D
Dual J–K Positive Edge–Triggered Flip–Flop	TTL	SN54LS109A	SN74LS109A	16	N,J	D
Dual J–K Flip–Flop	HTL	MC663	–	14	P,L	
	TTL	SN54LS107A	SN74LS107A	14	N,J	D
Dual J–K Flip–Flop (Common Clock and CD Separate SD)	DTL	MC952	–	14	P,L	
Dual J–K Flip–Flop (Separate Clock and SD, No CD)	DTL	MC953	–	14	P,L	
Dual J–K Flip–Flop Negative Edge Trigger	CMOS	MC74AC112	–	16	N	D
	CMOS	MC74ACT112	–	16	N	D
Dual J–K Flip–Flop Negative Edge Trigger	CMOS	MC74AC113	–	14	N	D
	CMOS	MC74ACT113	–	14	N	D
Dual J–K Flip–Flop With Set and Clear	TTL	SN54LS76A	SN74LS76A	16	N,J	D
Dual J–K Flip–Flop With Set and Reset	CMOS	MC74HC112	–	16	N	D,DT
Dual J–K Flip–Flop	CMOS	MC14027B	–	16	P,L	D
Dual J–K Flip–Flop With Reset	CMOS	MC74HC73	–	14	N	D
	CMOS	MC74HC107	–	14	N	D
Dual J–K Flip–Flop With Set and Reset	CMOS	MC74HC76	–	16	N	D
Dual J–K Master–Slave Flip–Flop	ECL	MC10135	–	16	P,L	FN
	ECL	MC10H135	–	16	P,L	FN
Dual J–K Negative Edge–Triggered Flip–Flop	TTL	MC74F112	–	16	N	D
	TTL	SN54LS73A	SN74LS73A	14	N,J	D
Dual J–K Positive Edge–Triggered Flip–Flop With Set & Clear	CMOS	MC74AC109	–	16	N	D
	CMOS	MC74ACT109	–	16	N	D
Dual $\overline{\text{J–K}}$ Flip–Flop With Set and Reset	CMOS	MC74HC109	–	16	N	D
Dual $\overline{\text{J–K}}$ Positive Edge–Triggered Flip–Flop	TTL	MC74F109	–	16	N	D
Dual Type–D Master–Slave Flip–Flop	ECL	MC10131	–	16	P,L	FN
	ECL	MC10H131	–	16	P,L	FN
Hex D Flip–Flop	TTL	SN54LS174	SN74LS174	16	N,J	D
	CMOS	MC14174B	–	16	P,L	D
Hex D Flip–Flop With Enable	TTL	SN54LS378	SN74LS378	16	N,J	D
Hex D Flip–Flop With Master Reset	CMOS	MC74AC174	–	16	N	D
	TTL	MC74F174	–	16	N	D
	CMOS	MC74ACT174	–	16	N	D
Hex D Flip–Flop With Common Clock & Reset	CMOS	MC54HC174A	MC74HC174A	16	N,J	D
	CMOS	MC74HCT174A	–	16	N	D
Hex D Master–Slave Flip–Flop	ECL	MC10H176	–	16	P,L	FN
	ECL	MC10176	–	16	P,L	FN
Hex D Master–Slave Flip–Flop With Reset	ECL	MC10H186	–	16	P,L	FN
	ECL	MC10186	–	16	P,L	FN
High Speed Dual D Master–Slave Flip–Flop	ECL	MC10231	–	16	P,L	FN
J–K Flip–Flop	ECL	MC10EL35	MC100EL35	8		D

Selection by Function

Description	Tech.	Device(s)		Pins	DIP	SM
FLIP–FLOPS						
Low–Voltage CMOS Octal D–Type Flip–Flop With Set and Reset, 3–State, Non–Inverting With 5V Tolerant Inputs	CMOS	MC74LCX74	–	14		D,DT
Low–Voltage CMOS 16–Bit D–Type Flip–Flop, 3–State, Non–Inverting With 5V Tolerant Inputs and Outputs	CMOS	MC74LCX16374	–	20		DW,M, DT
Low–Voltage CMOS Octal D–Type Flip–Flop, 3–State, Non–Inverting With 5V Tolerant Inputs and Outputs	CMOS	MC74LCX374	–	20		DW,M, DT
Low–Voltage CMOS Octal D–Type Flip–Flop Flow Through Pinout, 3–State, Non–Inverting With 5V Tolerant Inputs and Outputs	CMOS	MC74LCX574	–	20		DW,M, DT
Low Voltage D Flip–Flop With Set & Reset	ECL	MC100LVEL31	–	8		D
Low–Voltage Quiet CMOS Octal D–Type Flip–Flop	CMOS	MC74LVQ374	–	20		DW,M, SD,DT
Low–Voltage Quiet CMOS Octal D–Type Flip–Flop Flow Through Pinout	CMOS	MC74LVQ574	–	20		DW,M, SD,DT
Master–Slave Flip–Flop	ECL	MC1670	–	16	L	
Master–Slave R–S Flip–Flop	HTL	MC664	–	14	P,L	
Octal 3–State Inverting D Flip–Flop	CMOS	MC54HC534A	MC74HC534A	20	N,J	DW
Octal 3–State Non–Inverting D Flip–Flop With LSTTL Compatible Inputs	CMOS	MC54HCT374A	MC74HCT374A	20	N,J	DW
Octal D Flip Flop, With 3–State Outputs	TTL	MC74F374	–	20	N	DW
Octal D Flip–Flop	CMOS	MC74AC273	–	20	N	DW
	CMOS	MC74ACT273	–	20	N	DW
Octal D Flip–Flop With 3–State Outputs/Broadside Pinout, F374	TTL	MC74F574	–	20	N	DW
Octal D Flip–Flop With Clear	TTL	SN54LS273	SN74LS273	20	N,J	DW
Octal D Flip–Flop With Clock Enable	CMOS	MC74AC377	–	20	N	DW
	CMOS	MC74ACT377	–	20	N	DW
Octal D Flip–Flop With Common Clock & Reset	CMOS	MC54HC273A	MC74HC273A	20	N,J	DW, DT
Octal D Flip–Flop With Common Clock and Reset With LSTTL Compatible Inputs	CMOS	MC74HCT273A	–	20	N	DW
Octal D Flip–Flop With Enable	TTL	MC74F377	–	20	N	DW
Octal D Flip–Flop With Enable/ Non–Inverting	TTL	SN54LS377	SN74LS377	20	N,J	DW
Octal D Type Flip–Flop With 3–State Outputs	CMOS	MC74AC374	–	20	N	DW
	CMOS	MC74ACT374	–	20	N	DW
	TTL	MC74F534	–	20	N	DW
	TTL	SN54LS374	SN74LS374	20	N,J	DW
	CMOS	MC74AC534	–	20	N	DW
	CMOS	MC74ACT534	–	20	N	DW
Octal D–Type Latch With 3–State Outputs	CMOS	MC74AC564	–	20	N	DW
	CMOS	MC74ACT564	–	20	N	DW
	CMOS	MC74AC574	–	20	N	DW
	CMOS	MC74ACT574	–	20	N	DW
Octal With 3–State Outputs Inverting D Flip–Flop	CMOS	MC74HC564A	–	20	N	DW
Octal With 3–State Outputs Non–Inverting D Flip–Flop	CMOS	MC54HC374A	MC74HC374A	20	N,J	DW, SD,DT
	CMOS	MC54HC574A	MC74HC574A	20	N,J	DW
Octal With 3–State Outputs Non–Inverting D Flip–Flop With LSTTL Compatible Inputs	CMOS	MC54HCT574A	MC74HCT574A	20	N,J	DW
Quad D Flip–Flop	CMOS	MC74AC175	–	16	N	D
	CMOS	MC74ACT175	–	16	N	D
	TTL	MC74F175	–	16	N	D

Selection by Function

Description	Tech.	Device(s)		Pins	DIP	SM
FLIP–FLOPS						
Quad D Flip–Flop	TTL	SN54LS175	SN74LS175	16	N,J	D
	CMOS	MC14175B	–	16	P,L	D
Quad D Flip–Flop With Common Clock & Reset	CMOS	MC54HC175	MC74HC175	16	N,J	D
	CMOS	MC54HC175A	MC74HC175A	16	N,J	D,SD
Quad D–Type Register With 3–State Outputs	CMOS	MC14076B	–	16	P,L	D
Quad Parallel Register With Enable	TTL	MC74F379	–	16	N	D
Quad With 3–State Outputs D Flip–Flop With Common Clock & Reset	CMOS	MC74HC173	–	16	N	D
Triple D Flip–Flop With Set and Reset	ECL	MC100LVEL30	MC100EL30	20		DW
GATES, AND/NAND						
13–Input NAND Gate	CMOS	MC74HC133	–	16	N	D
	TTL	SN54LS133	SN74LS133	16	N,J	D
8–Input NAND Gate	CMOS	MC74HC30	–	14	N	D
	TTL	SN54LS30	SN74LS30	14	N,J	D
	CMOS	MC14068B	–	14	P	D
Dual 4–Input AND Gate	TTL	MC74F21	–	14	N	D
	TTL	SN54LS21	SN74LS21	14	N,J	D
	CMOS	MC14082B	–	14	P,L	D
Dual 4–Input NAND Buffer	TTL	MC74F40	–	14	N	D
	TTL	SN54LS40	SN74LS40	14	N,J	D
Dual 4–Input NAND Gate	CMOS	MC74AC20	–	14	N	D
	CMOS	MC74ACT20	–	14	N	D
	TTL	MC74F20	–	14	N	D
	CMOS	MC74HC20	–	14	N	D

Description	Tech.	Device(s)		Pins	DIP	SM
GATES, AND/NAND						
Quad 2–Input NAND Buffer Open–Collector	TTL	MC74F38	–	14	N	D
Quad 2–Input NAND Buffer Open–Collector	TTL	SN54LS38	SN74LS38	14	N,J	D
Quad 2–Input NAND Gate	DTL	MC846	–	14	P,L	
	DTL	MC849	–	14	P,L	
	DTL	MC946	–	14	P,L	
	CMOS	MC74AC00	–	14	N	D
	CMOS	MC74ACT00	–	14	N	D
	TTL	MC74F00	–	14	N	D
	CMOS	MC54HC00A	MC74HC00A	14	N,J	D,DT
	TTL	SN54LS00	SN74LS00	14	N,J	D
	TTL	SN54LS01	SN74LS01	14	N,J	D
	TTL	SN54LS03	SN74LS03	14	N,J	D
	CMOS	MC14011B	–	14	P,L	D
Quad 2–Input NAND Gate (Unbuffered)	CMOS	MC14011UB	–	14	P,L	D
Quad 2–Input NAND Gate With LSTTL–Compatible Inputs	CMOS	MC54HCT00A	MC74HCT00A	14	N,J	D
Quad 2–Input NAND Gate With Open–Drain Outputs	CMOS	MC74HC03A	–	14	N	D,DT
Triple 3–Input AND Gate	CMOS	MC74AC11	–	14	N	D
	CMOS	MC74ACT11	–	14	N	D
	TTL	MC74F11	–	14	N	D
	CMOS	MC74HC11	–	14	N	D
	TTL	SN54LS11	SN74LS11	14	N,J	D
	TTL	SN54LS15	SN74LS15	14	N,J	D
	CMOS	MC14073B	–	14	P,L	D
Triple 3–Input NAND Gate	CMOS	MC74AC10	–	14	N	D
	CMOS	MC74ACT10	–	14	N	D
	TTL	MC74F10	–	14	N	D
	CMOS	MC74HC10	–	14	N	D
	TTL	SN54LS10	SN74LS10	14	N,J	D
	TTL	SN54LS12	SN74LS12	14	N,J	D
	CMOS	MC14023B	–	14	P,L	D
Triple 3–Input NAND Gate (Unbuffered)	CMOS	MC14023UB	–	14	P,L	D
GATES, COMPLEX						
2–Input AND/NAND Gate	ECL	MC10EL04	MC100EL04	8		D
2–Input Differential AND/NAND Gate	ECL	MC10EL05	MC100EL05	8		D
2–Input XOR/NOR Gate	ECL	MC10EL07	MC100EL07	8		D
2–Wide, 2–Input/2–Wide, 3–Input AND–NOR Gate	CMOS	MC74HC51	–	14	N	D
2–Wide, 2–Input/2–Wide, 3–Input AND–OR Gate	CMOS	MC74HC58	–	14	N	D
2–Wide, 4–Input AND/OR Invert Gate	TTL	SN54LS55	SN74LS55	14	N,J	D
3–2–2–3–Input AND/OR Invert Gate	TTL	SN54LS54	SN74LS54	14	N,J	D
4–2–3–2 Input AND–OR–Invert Gate	TTL	MC74F64	–	14	N	D
4–Bit AND/OR Selector	CMOS	MC14519B	–	16	P	D
4–Input OR/NOR Gate	ECL	MC10EL01	MC100EL01	8		D
	ECL	MC100LVEL01	–	8		D
4–Wide 4–3–3–3 Input OR–AND Gate	ECL	MC10H119	–	16	P,L	FN
4–Wide 4–3–3–3 Input OR–AND Gate	ECL	MC10119	–	16	P,L	FN
4–Wide OR–AND/OR–AND–Invert Gate	ECL	MC10H121	–	16	P,L	FN
4–Wide OR–AND/OR–AND–Invert Gate	ECL	MC10121	–	16	P,L	FN

Selection by Function

Description	Tech.	Device(s)		Pins	DIP	SM
GATES, COMPLEX						
8–Input NOR/OR Gate	CMOS	MC74HC4078	–	14	N	D
Dual 2 Wide 2–Input/3–Input AND/OR Invert Gate	TTL	SN54LS51	SN74LS51	14	N,J	D
Dual 2–Wide 2–3–Input OR–AND/OR–AND–Invert Gate	ECL	MC10117	–	16	P,L	FN
	ECL	MC10H117	–	16	P,L	FN
Dual 2–Wide 2–Input, 2–Wide 3–Input AND–OR–Invert Gate	TTL	MC74F51	–	14	N	D
Dual 2–Wide 3–Input OR–AND Gate	ECL	MC10H118	–	16	P,L	FN
	ECL	MC10118	–	16	P,L	FN
Dual 4–5 Input OR/NOR Gate	ECL	MC10H109	–	16	P,L	FN
	ECL	MC10109	–	16	P,L	FN
	ECL	MC10H209	–	16	P,L	FN
Dual 4–Input NAND, 2–Input NOR/OR, 8–Input AND/NAND Gate (Unbuffered)	CMOS	MC14501UB	–	16	P	D
Dual 4–Input OR/NOR Gate	ECL	MC1660	–	16	L	
Dual 5–Input Majority Logic Gate	CMOS	MC14530B	–	16	P	D
Dual Expandable AND OR Invert Gate (Unbuffered)	CMOS	MC14506UB	–	16	L	
Hex NAND/NOR/Invert Gate (Unbuffered)	CMOS	MC14572UB	–	16	P	D
High Speed Dual 3–Input 3–Output OR/NOR Gate	ECL	MC10212	–	16	P	
Quad 4–Input OR/NOR Gate	ECL	MC10E101	MC100E101	28		FN
Quad Differential AND/NAND Gate	ECL	MC10E404	MC100E404	28		FN
Quad OR/NOR Gate	ECL	MC10H101	–	16	P,L	FN
	ECL	MC10101	–	16	P,L	FN
Quint 2–Input AND/NAND Gate	ECL	MC10E104	MC100E104	28		FN
Quint 2–Input XOR/XNOR Gate	ECL	MC10E107	MC100E107	28		FN
Triple 2–3–2 Input OR/NOR Gate	ECL	MC10H105	–	16	P,L	FN
	ECL	MC10105	–	16	P,L	FN
Triple 2–Input Exclusive OR/Exclusive NOR Gate	ECL	MC10H107	–	16	P,L	FN
	ECL	MC10107	–	16	P,L	FN
GATES, EXCLUSIVE OR/EXCLUSIVE NOR						
Low–Voltage CMOS Quad 2–Input Exclusive OR Gate With 5V Tolerant Inputs	CMOS	MC74LCX86	–	14		D,M SD,DT
Quad 2–Input Exclusive NOR Gate	CMOS	MC74AC810	–	14	N	DW
	CMOS	MC74ACT810	–	14	N	DW
	CMOS	MC74HC7266	–	14	N	D
	CMOS	MC74HC7266A	–	14	N	D,DT
	TTL	SN54LS266	SN74LS266	14	N,J	D
Quad Exclusive NOR Gate	CMOS	MC14077B	–	14	P,L	D
Quad 2–Input Exclusive OR Gate	CMOS	MC74AC86	–	14	N	D
	CMOS	MC74ACT86	–	14	N	D
	TTL	MC74F86	–	14	N	D
	CMOS	MC54HC86	MC74HC86	14	N,J	D
	CMOS	MC54HC86A	MC74HC86A	14	N,J	D,DT
	TTL	SN74LS136	–	14	N,J	D
	TTL	SN54LS386	SN74LS386	14	N,J	D
Quad Exclusive OR Gate	TTL	SN54LS86	SN74LS86	14	N,J	D
	ECL	MC10H113	–	16	P,L	FN
	ECL	MC10113	–	16	P,L	FN
	CMOS	MC14070B	–	14	P,L	D
Triple 2–Input Exclusive–OR Gate	ECL	MC1672	–	16	L	

Selection by Function

Description	Tech.	Device(s)		Pins	DIP	SM
GATES, NOR						
8–Input NOR Gate	CMOS	MC14078B	–	14	P	D
Dual 3–Input 3–Output NOR Gate	ECL	MC10111	–	16	P,L	FN
Dual 3–Input NOR Gate + Inverter (Unbuffered)	CMOS	MC14000UB	–	14	P,L	D
Dual 3–Input, 3–Output NOR Gate	ECL	MC10H211	–	16	P,L	FN
Dual 3–Input, 3–Output NOR Gate	ECL	MC10211	–	16	P,L	FN
Dual 4–Input NOR Gate	CMOS	MC74HC4002	–	14	N	D
	CMOS	MC14002B	–	14	P,L	D
Dual 4–Input NOR Gate (Unbuffered)	CMOS	MC14002UB	–	14	P,L	D
Dual 5–Input NOR Gate	TTL	SN54LS260	SN74LS260	14	N,J	D
Low–Voltage CMOS Quad 2–Input NOR Gate, 5V–Tolerant Inputs	CMOS	MC74LCX02	–	14		D,DT
Quad 2–Input NOR Buffer	TTL	SN54LS28	SN74LS28	14	N,J	D
	TTL	SN54LS33	SN74LS33	14	N,J	D
Quad 2–Input NOR Gate	CMOS	MC74AC02	–	14	N	D
	CMOS	MC74ACT02	–	14	N	D
	TTL	MC74F02	–	14	N	D
	CMOS	MC54HC02A	MC74HC02A	14	N,J	D,DT
	TTL	SN54LS02	SN74LS02	14	N,J	D
	ECL	MC10H102	–	16	P,L	FN
	ECL	MC10102	–	16	P,L	FN
	ECL	MC1662	–	16	L	
	CMOS	MC14001B	–	14	P,L	D
Quad 2–Input NOR Gate (Unbuffered)	CMOS	MC14001UB	–	14	P,L	D
Quad 2–Input NOR Gate With strobe	ECL	MC10H100	–	16	P,L	FN
	ECL	MC10100	–	16	P,L	FN
Triple 3–Input NOR Gate	CMOS	MC54HC27	MC74HC27	14	N,J	D
	TTL	SN54LS27	SN74LS27	14	N,J	D
	CMOS	MC14025B	–	14	P,L	D
Triple 3–Input NOR Gate (Unbuffered)	CMOS	MC14025UB	–	14	P,L	D
Triple 4–3–3 Input NOR Gate	ECL	MC10H106	–	16	P,L	FN
	ECL	MC10106	–	16	P,L	FN
GATES, OR						
Dual 3–Input 3–Output OR Gate	ECL	MC10110	–	16	P,L	FN
	ECL	MC10H210	–	16	P,L	FN
	ECL	MC10210	–	16	P,L	FN
Dual 4–Input OR Gate	CMOS	MC14072B	–	14	P	D
Low–Voltage CMOS Quad 2–Input OR Gate, 5V–Tolerant Inputs	CMOS	MC74LCX32	–	14		D,DT
Low–Voltage Quiet CMOS Quad 2–Input OR Gate, 5V–Tolerant Inputs	CMOS	MC74LVQ32	–	14		D,M SD,DT
Quad 2–Input OR Gate	CMOS	MC74AC32	–	14	N	D
	CMOS	MC74ACT32	–	14	N	D
	TTL	MC74F32	–	14	N	D
	CMOS	MC54HC32A	MC74HC32A	14	N,J	D,DT
	CMOS	MC54HCT32A	MC74HCT32A	14	N,J	D
	TTL	SN54LS32	SN74LS32	14	N,J	D
	ECL	MC10H103	–	16	P,L	FN
	ECL	MC10103	–	16	P,L	FN
	CMOS	MC14071B	–	14	P,L	D

Selection by Function

Description	Tech.	Device(s)		Pins	DIP	SM
GATES, OR						
Triple 3–Input OR Gate	CMOS	MC74HC4075	–	14	N	D
	CMOS	MC14075B	–	14	P,L	D
INDUSTRIAL CONTROL UNIT						
Industrial Control Unit	CMOS	MC14500B	–	16	P	DW
INVERTERS						
Hex Inverter	DTL	MC836	–	14	P,L	
	DTL	MC837	–	14	P,L	
	DTL	MC936	–	14	P,L	
	DTL	MC937	–	14	P,L	
Hex Inverter (Without Input Diodes)	DTL	MC840	–	14	P,L	
INVERTER/BUFFERS, 2–STATE						
9–Bit Buffer	ECL	MC10E122	MC100E122	28		FN
Driver	ECL	MC10EL12	MC100EL12	8		D
Dual Complementary Pair Plus Inverter (Unbuffered)	CMOS	MC14007UB	–	14	P	D
Hex Buffer With Enable	ECL	MC10H188	–	16	P,L	FN
	ECL	MC10188	–	16	P,L	FN
Hex Buffer/Non–Inverting	CMOS	MC14050B	–	16	P,L	D
Hex Inverter	CMOS	MC74AC04	–	14	N	D
	CMOS	MC74ACT04	–	14	N	D
	TTL	MC74F04	–	14	N	D
	CMOS	MC54HC04A	MC74HC04A	14	N,J	D,SD, DT
	TTL	SN54LS04	SN74LS04	14	N,J	D
	TTL	SN54LS05	SN74LS05	14	N,J	D
Hex Inverter Gate (Unbuffered)	CMOS	MC14069UB	–	14	P,L	D
Hex Inverter With Enable	ECL	MC10H189	–	16	P,L	FN
	ECL	MC10189	–	16	P,L	FN
Hex Inverter With LSTTL Compatible Inputs	CMOS	MC74HCT04A	–	14	N	D,DT
Hex Inverter With open Drain Outputs	CMOS	MC74AC05	–	14	N	D
	CMOS	MC74ACT05	–	14	N	D
Hex Inverter With Strobe (Active Pullup)	HTL	MC677	–	14	P,L	
Hex Inverter With Strobe (Without Output Resistors)	HTL	MC678	–	14	P,L	
Hex Inverter/Buffer	ECL	MC10195	–	16	P,L	FN
	CMOS	MC14049B	–	16	P	D
Hex Inverter/Buffer (Unbuffered)	CMOS	MC14049UB	–	16	P,L	D
Hex Inverting Buffer/Logic–Level Down Converter	CMOS	MC54HC4049	MC74HC4049	16	N,J	D
Hex Non–Inverting Buffer/Logic–Level Down Converter	CMOS	MC54HC4050	MC74HC4050	16	N,J	D
Hex Unbuffered Inverter	CMOS	MC74HCU04	–	14	N	D
Low–Voltage CMOS Hex Inverter, With 5V–Tolerant Inputs	CMOS	MC74LCX04	–	14		D,DT
Low–Voltage Quiet CMOS Hex Inverter	CMOS	MC74LVQ04	–	14		D,M, SD,DT
Quad 2–Input Gate (Active Pullup)	HTL	MC672	–	14	P,L	
Quad 2–Input Gate (Passive Pullup)	HTL	MC668	–	14	P,L	
Quad Driver	ECL	MC10E112	MC100E112	28		FN
Strobed Hex Inverter/Buffer	CMOS	MC14502B	–	16	P,L	DW
Triple 3–Input Gate (Active Pullup)	HTL	MC671	–	14	P,L	
Triple 3–Input Gate (Passive Pullup)	HTL	MC670	–	14	P,L

	CMOS	MC14052B	–	16	P,L	D
Dual 4–Channel Data Selector/Multiplexer	CMOS	MC14539B	–	16	P	D
Dual 4–Input Data Selector/Multiplexer	CMOS	MC74HC153	–	16	N	D
Dual 4–Input Data Selector/Multiplexer With 3–State Outputs	CMOS	MC74HC253	–	16	N	D
Dual 4–Input Multiplexer	CMOS	MC74AC153	–	16	N	D
	CMOS	MC74ACT153	–	16	N	D
	CMOS	MC74AC352	–	16	N	DW
	CMOS	MC74ACT352	–	16	N	DW
	TTL	MC74F153	–	16	N	D
	TTL	MC74F352	–	16	N	D
	TTL	SN54LS153	SN74LS153	16	N,J	D
	TTL	SN54LS352	SN74LS352	16	N,J	D
Dual 4–Input Multiplexer With 3–State Outputs	CMOS	MC74AC253	–	16	N	DW
	CMOS	MC74ACT253	–	16	N	DW
	CMOS	MC74AC353	–	16	N	D
	CMOS	MC74ACT353	–	16	N	D
	TTL	SN54LS253	SN74LS253	16	N,J	D
	TTL	SN54LS353	SN74LS353	16	N,J	D
	TTL	MC74F253	–	16	N	D
	TTL	MC74F353	–	16	N	D
Dual 4–to–1 Multiplexer	ECL	MC10H174	–	16	P,L	FN
	ECL	MC10174	–	16	P,L	FN
Dual Differential 2:1 Multiplexer (3.3V)	ECL	MC100LVEL56	MC100EL56	20		DW
Dual Multiplexer With Latch	ECL	MC10134	–	16	P,L	FN
Dual Multiplexer With Latch and Common Reset	ECL	MC10132	–	16	P,L	FN
Low Voltage 16:1 Multiplexer	ECL	MC100LVE164	–	32		FA
Quad 2–Input Multiplexer With Latch	ECL	MC10H173	–	16	P,L	FN
Quad 2–Channel Analog Multiplexer/Demultiplexer	CMOS	MC14551B	–	16	P	D
Quad 2–Input Data Selector/Multiplexer	CMOS	MC54HC158	MC74HC158	16	N,J	D
	CMOS	MC74HC158A	–	16	N,J	D,DT
Quad 2–Input Data Selector/Multiplexer With 3–State Outputs	CMOS	MC74HC257	–	16	N	D
Quad 2–Input Data Selector/Multiplexer With LSTTL Compatible Inputs	CMOS	MC74HCT157A	–	16	N	D
Quad 2–Input Data Selectors/Multiplexers	CMOS	MC54HC157A	MC74HC157A	16	N,J	D,DT
Quad 2–Input Multiplexer	TTL	MC74F157A	–	16	N	D
	TTL	MC74F158A	–	16	N	D
	TTL	SN54LS157	SN74LS157	16	N,J	D
	TTL	SN54LS158	SN74LS158	16	N,J	D
Quad 2–Input Multiplexer (Inverting)	ECL	MC10159	–	16	P,L	FN
Quad 2–Input Multiplexer (Non–Inverting)	ECL	MC10158	–	16	P,L	FN
Quad 2–Input Multiplexer Inverting With 3–State Outputs	CMOS	MC74AC258	–	16	N	DW
	CMOS	MC74ACT258	–	16	N	DW
Quad 2–Input Multiplexer Non–Inverting With 3–State Outputs	CMOS	MC74ACT257	–	16	N	D
	CMOS	MC74AC257	–	16	N	D
Quad 2–Input Multiplexer With 3–State Outputs	TTL	SN54LS257B	SN74LS257B	16	N,J	D
Quad 2–Input Multiplexer With Storage	TTL	SN54LS298	SN74LS298	16	N,J	D

Selection by Function

Description	Tech.	Device(s)		Pins	DIP	SM
MULTIPLEXER/DATA SELECTORS						
Quad 2–Input Multiplexer, Inverting	CMOS	MC74AC158	–	16	N	D
	CMOS	MC74ACT158	–	16	N	D
Quad 2–Input Multiplexer, Inverting Output	ECL	MC10H159	–	16	P,L	FN
Quad 2–Input Multiplexer, Inverting, With 3–State Outputs	TTL	SN54LS258B	SN74LS258B	16	N,J	D
Quad 2–Input Multiplexer, Non–Inverting	CMOS	MC74AC157	–	16	N	D
	CMOS	MC74ACT157	–	16	N	D
Quad 2–Input Multiplexer, Non–Inverting Output	ECL	MC10H158	–	16	P,L	FN
Quad 2–Input Multiplexer, With 3–State Outputs	TTL	MC74F257A	–	16	N	D
	TTL	MC74F258A	–	16	N	D
Quad 2–Input Multiplexer/Latch	ECL	MC10173	–	16	P,L	FN
Quad 2–Port Register	TTL	MC74F398	–	20	N	DW
	TTL	MC74F399	–	16	N	D
	TTL	SN54LS398	SN74LS398	20	N,J	DW
	TTL	SN54LS399	SN74LS399	16	N,J	D
Quad 2:1 Mux, Individual–Select	ECL	MC10E157	MC100E157	28		FN
Quad Analog Switch/Multiplexer	CMOS	MC14016B	–	14	P,L	D
	CMOS	MC14066B	–	14	P,L	D
Quad Analog Switch/Multiplexer/Demultiplexer	CMOS	MC54HC4016	MC74HC4016	14	N,J	D
	CMOS	MC54HC4066	MC74HC4066	14	N,J	D,DT
Quad Analog Switch/Multiplexer/Demultiplexer With Separate Analog/Digital Power Supplies	CMOS	MC74HC4316	–	16	N	D
Triple 2–Channel Analog Multiplexer/Demultiplexer	CMOS	MC54HC4053	MC74HC4053	16	N,J	D, DW
	CMOS	MC14053B	–	16	P,L	D
Triple 2–Channel Analog Multiplexer/Demultiplexer With Address Latch	CMOS	MC54HC4353	MC74HC4353	20	N,J	DW
Triple 2:1 Multiplexer	ECL	MC100EL59	–	20		DW
Triple 2:1 Multiplexer (3.3V)	ECL	MC100LVEL59	–	20		DW
Triple Differential 2:1 Multiplexer	ECL	MC100E457	–	28		FN
	ECL	MC10E457	–	28		FN
MULTIVIBRATORS						
130MHz Voltage Controlled Multivibrator	ECL	MC12101	–	20	P	FN
200 MHz Voltage Controlled Multivibrator	ECL	MC12100	–	20	P	FN
Dual Monostable Multivibrator	HTL	MC667	–	14	P,L	
	CMOS	MC14528B	–	16	P,L	D
Dual Monstable Multivibrators With Schmitt Trigger Inputs	TTL	SN54LS221	SN74LS221	16	N,J	D
Dual Precision Monostable Multivibrator Retriggerable, Resettable)	CMOS	MC54HC4538A	MC74HC4538A	16	N,J	D
Dual Precision Monostable Multivibrator	CMOS	MC14538B	–	16	P,L	D, DW
Dual Voltage–Controlled Multivibrator	ECL	MC4024	–	14	P,L	
Monostable Multivibrator	DTL	MC951	–	14	P,L	
	ECL	MC10198	–	16	P,L	FN
Retriggerable Monostable Multivibrators	TTL	SN54LS122	SN74LS122	14	N,J	D
	TTL	SN54LS123	SN74LS123	14	N,J	D
Voltage Controlled Multivibrator	ECL	MC1658	–	16	P,L	D,FN
OSCILLATORS						
7–Stage Binary Ripple Counter	CMOS	MC74HC4024	–	14	N	D
Crystal Oscillator	ECL	MC12061	–	16	P,L	
Dual Voltage–Controlled Multivibrator	ECL	MC4324	–	14	P,L	
Low Power Voltage Controlled Oscillator	ECL	MC12148	–	8		D,SD

Selection by Function

Description	Tech.	Device(s)		Pins	DIP	SM
OSCILLATORS						
Voltage Controlled Oscillator	ECL	MC1648	–	14	P,L	D,FN
OSCILLATOR/TIMERS						
24–Stage Frequency Divider	CMOS	MC14521B	–	16	P,L	D
Programmable Oscillator Timer	CMOS	MC14541B	–	14	P,L	D
Programmable Timer	CMOS	MC14536B	–	16	P,L	DW
Quad Precision Timer/Driver	CMOS	MC14415	–	16	P,L	DW
PARITY CHECKERS						
12–Bit Parity Generator/Checker	ECL	MC10H160	–	16	P,L	FN
	ECL	MC10160	–	16	P,L	FN
12–Bit Parity Generator/Checker, Register–Shiftable, Diff Output	ECL	MC10E160	MC100E160	28		FN
12–Bit Parity Tree	CMOS	MC14531B	–	16	P	D
9 + 2–Bit Parity Generator–Checker	ECL	MC10170	–	16	P,L	FN
9–Bit Odd/Even Parity Generator/Checker	CMOS	MC74HC280	–	14	N	D
	TTL	SN54LS280	SN74LS280	14	N,J	D
9–Bit Parity Generator/Checker	TTL	MC74F280	–	14	N	D
Error Detection and Correction Circuit	ECL	MC10E193	MC100E193	28		FN
PHASE–LOCKED LOOP						
Phase–Locked Loop	CMOS	MC14046B	–	16	P,L	DW
PRESCALERS						
1.1GHz ÷10/20/40/80 Prescaler	ECL	MC12080	–	8	P	D
1.1GHz ÷126/128, ÷254/256 Low Power Dual Modulus Prescaler	ECL	MC12058	–	8		D,SD
1.1GHz ÷127/128, ÷255/256 Low Power Dual Modulus Prescaler	ECL	MC12038A	–	8	P	D
1.1GHz ÷8/9, ÷16/17 Dual Modulus Prescaler	ECL	MC12026A	–	8	P	D
	ECL	MC12026B	–	8	P	D
1.1GHz ÷2 Low Power Prescaler With Stand–By Mode	ECL	MC12083	–	8	P	D
1.1GHz ÷2/4/8 Low Power Prescaler With Stand–By Mode	ECL	MC12093	–	8	P	D,SD
1.1GHz ÷256 Prescaler	ECL	MC12074	–	8	P	D
1.1GHz ÷32/33, ÷64/65 Dual Modulus Prescaler	ECL	MC12028A	–	8	P	D
1.1GHz ÷32/33, ÷64/65 Dual Modulus Prescaler	ECL	MC12028B	–	8	P	D
1.1GHz ÷64 Prescaler	ECL	MC12073	–	8	P	D
1.1GHz ÷64/65, ÷128/129 Dual Modulus Prescaler	ECL	MC12022A	–	8	P	D
	ECL	MC12022B	–	8	P	D
	ECL	MC12022SLA	–	8	P	D
	ECL	MC12022SLB	–	8	P	D
	ECL	MC12022TSA	–	8	P	D
	ECL	MC12022TSB	–	8	P	D
1.1GHz ÷64/65, ÷128/129 Dual Modulus Prescaler With Stand–By Mode	ECL	MC12036A	–	8	P	D
	ECL	MC12036B	–	8	P	D
1.1GHz ÷64/65, ÷128/129 Low Voltage Dual Modulus Prescaler	ECL	MC12022LVA	–	8	P	D
	ECL	MC12022LVB	–	8	P	D
	ECL	MC12022TVA	–	8	P	D
	ECL	MC12022TVB	–	8	P	D
1.1GHz ÷64/65, ÷128/129 Super Low Power Dual Modulus Prescaler	ECL	MC12052A	–	8		D,SD
1.1GHz ÷64/65, ÷128/129 Super Low Power Dual Modulus Prescaler With Stand–By Mode	ECL	MC12053A	–	8		D,SD
1.3GHz ÷64 Prescaler	ECL	MC12075	–	8	P	D
1.3GHz ÷64/256 Prescaler	ECL	MC12066	–	8		D

Selection by Function

Description	Tech.	Device(s)		Pins	DIP	SM
PRESCALERS						
1.3GHz ÷256 Prescaler	ECL	MC12076	–	8	P	D
	ECL	MC12078	–	8	P	D
2.0GHz ÷32/33, ÷64/65 Dual Modulus Prescaler	ECL	MC12034A	–	8	P	D
	ECL	MC12034B	–	8	P	D
2.0GHz ÷32/33, ÷64/65 Low Voltage Dual Modulus Prescaler	ECL	MC12033A	–	8	P	D
	ECL	MC12033B	–	8	P	D
2.0GHz ÷64/65, ÷128/129 Dual Modulus Prescaler	ECL	MC12032A	–	8	P	D
	ECL	MC12032B	–	8	P	D
2.0GHz ÷64/65, ÷128/129 Low Voltage Dual Modulus Prescaler	ECL	MC12031A	–	8	P	D
	ECL	MC12031B	–	8	P	D
2.0GHz ÷64/65, ÷128/129 Super Low Power Dual Modulus Prescaler	ECL	MC12054A	–	8		D,SD
2.5GHz ÷2, ÷4 Low Power Prescaler With Satnd–By Mode	ECL	MC12095	–	8		D,SD
2.5GHz ÷8192 Prescaler	ECL	MC12098	–	8		D
2.8GHz ÷64/128/256 Prescaler	ECL	MC12079	–	8	P	D
	ECL	MC12089	–	8	P	D
225MHz ÷20/21 Dual Modulus Prescaler	ECL	MC12019	–	8	P,L	D
225MHz ÷32/33 Dual Modulus Prescaler	ECL	MC12015	–	8	P,L	D
225MHz ÷40/41 Dual Modulus Prescaler	ECL	MC12016	–	8	P,L	D
225MHz ÷64 Prescaler	ECL	MC12023	–	8	P	D
225MHz ÷64/65 Dual Modulus Prescaler	ECL	MC12017	–	8	P,L	D
480MHz ÷5/6 Dual Modulus Prescaler	ECL	MC12009	–	16	P,L	
520MHz ÷128/129 Dual Modulus Prescaler	ECL	MC12018	–	8	P,L	D
520MHz ÷64/65 Dual Modulus Prescaler	ECL	MC12025	–	8	P	D
550MHz ÷10/11 Dual Modulus Prescaler	ECL	MC12013	–	16	P,L	
550MHz ÷8/9 Dual Modulus Prescaler	ECL	MC12011	–	16	P,L	
750MHz ÷2 UHF Prescaler	ECL	MC12090	–	16	P,L	
PROGRAMMABLE DELAY CHIPS						
Programmable Delay Chip (Dig 80ps Anal. 1.6 Ps/mv)	ECL	MC10E196	MC100E196	28		FN
Programmable Delay Chip (Digitally Selectable 20ps Res)	ECL	MC10E195	MC100E195	28		FN
PROMs						
1024–Bit Programmable Read Only Memory	ECL	MCM10149*25	–	16	L	
32 X 8–Bit Programmable Read Only Memory	ECL	MCM10139	–	16	L	
RAMs						
1024 X 1–Bit Random Access Memory	ECL	MCM10146	–	16	L	
256 X 1–Bit Random Access Memory	ECL	MCM10152	–	16	L	
RECEIVERS						
Differential Receiver	ECL	MC10EL16	MC100EL16	8		D
	ECL	MC100LVEL16	–	8		D
High Speed Triple Line Receiver	ECL	MC10216	–	16	P,L	FN
Low–Voltage Quad Differential Line Receiver	ECL	MC100LVEL17	MC100EL17	20		DW
Quad Bus Receiver	ECL	MC10129	–	16	L	
Quad Line Receiver	ECL	MC10H115	–	16	P,L	FN
	ECL	MC10115	–	16	P,L	FN
	ECL	MC1692	–	16	L	
Quint Differential Line Receiver	ECL	MC10E116	MC100E116	28		FN
	ECL	MC10E416	MC100E416	28		FN

Selection by Function

Description	Tech.	Device(s)		Pins	DIP	SM
RECEIVERS						
Triple Line Receiver	ECL	MC10H116	–	16	P,L	D,FN
	ECL	MC10114	–	16	P,L	FN
	ECL	MC10116	–	16	P,L	FN
REGISTERS						
4 X 4 Multiport Register	CMOS	MC14580B	–	24	P,L	D
Hex Parallel D Register With Enable	TTL	MC74F378	–	16	N	D
REGISTER FILES						
16 X 4–Bit Register File (RAM)	ECL	MC10H145	–	16	P,L	FN
4 X 4 Register File Open Collector	TTL	SN54LS170	SN74LS170	16	N,J	D
4 X 4 Register File With 3–State Outputs	TTL	SN54LS670	SN74LS670	16	N,J	D
64–Bit Register File (RAM)	ECL	MCM10145	–	16	L	
8 X 2 Multiport Register File (RAM)	ECL	MCM10143	–	24	L	
SCHMITT TRIGGERS						
Dual 4–Input NAND Schmitt Trigger	TTL	MC74F13	–	14	N	D
	TTL	SN54LS13	SN74LS13	14	N,J	D
Dual Schmitt Trigger	CMOS	MC14583B	–	16	P	D
Hex Inverter Schmitt Trigger	CMOS	MC74AC14	–	14	N	D
	CMOS	MC74ACT14	–	14	N	D
	TTL	MC74F14	–	14	N	D
	TTL	SN54LS14	SN74LS14	14	N,J	D
Hex Schmitt Trigger	CMOS	MC14106B	–	14	P,L	D
	CMOS	MC14584B	–	14	P,L	D
Hex Schmitt Trigger Inverter	CMOS	MC54HC14A	MC74HC14A	14	N,J	D,DT
	CMOS	MC54HCT14A	MC74HCT14A	14	N,J	D
Quad 2–Input NAND Gate With Schmitt Trigger Inputs	CMOS	MC54HC132A	MC74HC132A	14	N,J	D
Quad 2–Input NAND Schmitt Trigger	CMOS	MC74AC132	–	14	N	D
	CMOS	MC74ACT132	–	14	N	D
	TTL	MC74F132	–	14	N	D
	CMOS	MC14093B	–	14	P,L	D
Quad 2–Input Schmitt Trigger NAND Gate	TTL	SN54LS132	SN74LS132	14	N,J	D
SCSI BUS TERMINATORS						
9–Bit Switchable Active SCSI–2 Bus Term (110Ω) with Volt Reg	CMOS	MCCS142237	–	16,20		DW, DT
9–Bit Switchable SCSI Bus Term (110Ω: Active)	CMOS	MCCS142234	–	16		D
9–Bit Switchable SCSI Bus Term (220Ω & 330Ω: Passive)	CMOS	MCCS142233	–	20		FN
18–Bit Active SCSI Bus Terminator (*Also Available in 32–Pin QFP Package)	CMOS	MCCS142235	–	24,32		DW,*FA
18–Bit Switchable Active SCSI–2 Bus Term (110Ω) with Volt Reg	CMOS	MCCS142236	–	28		DW
18–Bit Switchable Active SCSI–2 Bus Term (110Ω) with Volt Reg Plus Inverted Disconnect	CMOS	MCCS142238	–	28		DW
SERIAL EPROMs						
Serial EPROM for MPA1016: 8–Pin DIP and SOIC; 20–Pin PLCC	CMOS	MPA1765	–	8,20	N	D,FN
Serial EPROM for MPA1036: 8–Pin DIP and SOIC; 20–Pin PLCC	CMOS	MPA17128	–	8,20	P	D,FN
SHIFT REGISTERS						
1–to–64–Bit Variable Length Shift Register	CMOS	MC14557B	–	16	P,L	DW
128–Bit Static Shift Register	CMOS	MC14562B	–	14	P,L	
18–Bit Static Shift Register	CMOS	MC14006B	–	14	P,L	D
3–Bit Scannable Registered Address Driver, ECL	ECL	MC10E212	MC100E212	28		FN

Selection by Function

Description	Tech.	Device(s)		Pins	DIP	SM
SHIFT REGISTERS						
4–Bit Bidirectional Universal Shift Register	CMOS	MC74AC194	–	16	N	D
	CMOS	MC74ACT194	–	16	N	D
	TTL	MC74F194	–	16	N	D
	CMOS	MC74HC194	–	16	N	
	TTL	SN54LS194A	SN74LS194A	16	N,J	D
4–Bit Shift Register	TTL	MC74F195	–	16	N	D
	TTL	SN54LS95B	SN74LS95B	14	N,J	D
	CMOS	MC14035B	–	16	P,L	D
4–Bit Shift Register With 3–State Outputs	TTL	SN74LS395	–	16	N,J	D
4–Bit Shifter With 3–State	CMOS	MC74AC350	–	16	N	D
	CMOS	MC74ACT350	–	16	N	D
4–Bit Shifter, With 3–State Outputs	TTL	MC74F350	–	16	N	D
4–Bit Universal Shift Register	CMOS	MC74HC195	–	16	N	
	ECL	MC10H141	–	16	P,L	FN
	ECL	MC10141	–	16	P,L	FN
	CMOS	MC14194B	–	16	P,L	D
8–Bit Bidirectional Universal Shift Register With parallel I/O	CMOS	MC74HC299	–	20	N	DW
8–Bit Parallel–to–Serial Shift Register	TTL	SN54LS165	SN74LS165	16	N,J	D
8–Bit Scannable Register	ECL	MC10E241	MC100E241	28		FN
8–Bit Serial In–Serial Out Shift Register	TTL	MC74F164	–	14	N	D
8–Bit Serial or Parallel–Input/Serial–Output Shift Register	CMOS	MC54HC165	MC74HC165	16	N,J	D
8–Bit Serial or Parallel–Input/Serial–Output Shift Register With 3–State Outputs	CMOS	MC54HC589	MC74HC589	16	N,J	D
	CMOS	MC54HC589A	MC74HC589A	16	N,J	D,SD DT
8–Bit Serial or Parallel–Input/Serial–Output Shift Register With Input Latch	CMOS	MC54HC597	MC74HC597	16	N,J	D
	CMOS	MC54HC597A	MC74HC597A	16	N,J	D,DT
8–Bit Serial–In/Parallel–Out Shift Register	TTL	SN54LS164	SN74LS164	14	N,J	D
8–Bit Serial–Input/Parallel–Output Shift Register	CMOS	MC54HC164	MC74HC164	14	N,J	D
	CMOS	MC54HC164A	MC74HC164A	14	N,J	D,DT
8–Bit Serial–Input/Serial or Parallel–Output Shift Register With Latched 3–State Outputs	CMOS	MC54HC595A	MC74HC595A	16	N,J	D,DT
8–Bit Shift Register	ECL	MC10E141	MC100E141	28		FN
	TTL	SN54LS166	SN74LS166	16	N,J	D
8–Bit Shift Registers With Sign Extend	TTL	SN54LS322A	SN74LS322A	20	N,J	DW
8–Bit Shift/Storage Register With 3–State Outputs	TTL	SN54LS299	SN74LS299	20	N,J	DW
	TTL	SN54LS323	SN74LS323	20	N,J	DW
8–Bit Static Shift Register	CMOS	MC14014B	–	16	P,L	D
	CMOS	MC14021B	–	16	P,L	D
8–Input Shift/Storage Register W/Synchronous Reset and Common I/O Pins	TTL	MC74F323	–	20	N	DW
8–Input Universal Shift/Storage Register With Common Parallel I/O Pins: With 3–State Outputs	CMOS	MC74AC299	–	20	N	DW

LS – Low Power Schottky

SN VV WW XXXX Y

Standard Prefix — SN

Temperature Range — VV
- 74 Series (0 to +70°C)
- 54 Series (–55 to +125°C)

Family — WW
- LS = Low Power Schottky

Function Type — XXXX

Package Type — Y
- N for Plastic (74 Series Only)
- J for Ceramic
- D for 150 mil Plastic SOIC (74 Series Only)
- DW for 300 mil Plastic SOIC (74 Series Only)

FAST

MC VV W XXXX Y

Motorola Circuit Identifier — MC

Temperature Range — VV
- 74 Series (0 to +70°C)

Family — W
- F = FAST

Function Type — XXXX

Package Type — Y
- N for Plastic (74 Series Only)
- D for 150 mil Plastic SOIC (74 Series Only)
- DW for 300 mil Plastic SOIC (74 Series Only)
- SD for Plastic SSOP

MECL 10K, MECL 10H/100H

MC WWW XXX YY

Motorola Circuit Identifier — MC

Temperature Range — WWW
- 10 = 10K (–30 to +85°C)
- 10H = 10H (0 to +75°C)
- 100H = 100K Compatible (0 to +85°C)

Function Type — XXX

Package Type — YY
- P for Plastic
- L for Ceramic
- FN for PLCC

ECLinPS, ECLinPS Lite

MC WWW XXX YYY ZZ

Motorola Circuit Identifier
- MC = Fully Qualified Circuit
- XC = Non Reliability Qualified

Compatibility Identifier
- 10 = 10H Compatible (0 to +85°C)
- 100 = 100K Compatible (0 to +85°C)

Package Type
- FN = PLCC
- D = Plastic SOIC
- L = Ceramic DIP
- P = Plastic DIP

Function Type
- YYY = 3-Digits for ECLinPS
- YY= 2-Digits for ECLinPS Lite

ECLinPS Family Identifier
- E = ECLinPS
- EL = ECLinPS Lite
- ELT = ECLinPS Lite Translator
- LVE = Low Voltage ECLinPS
- LVEL = Low Voltage ECLinPS Lite

Metal Gate 14000 Series CMOS

MC 14XXX YY ZZ

Motorola Circuit Identifier

Function Type

Identifier (per JEDEC Standard)
- B (or Blank)= Buffered Outputs
- UB = Unbuffered Outputs

Package and Temperature Range
- CL for Ceramic –55 to +125°C
- CP for Plastic –55 to +125°C
- D/DW for Small Outline Package (Plastic) –55 to +125°C
- DT for Plastic TSSOP

High–Speed CMOS

MC VV WWW XXXX Y

Motorola Circuit Identifier

Temperature Range
- 74 Series (–55 to +125°C)
- 54 Series (–55 to +125°C)

High–Speed CMOS Specification Identifier
- HC = Buffered High–Speed CMOS
- HCU = Unbuffered High–Speed CMOS*
- HCT = High–Speed CMOS TTL Compatible

Package Type
- N for Plastic (74 Series Only)
- J for Ceramic (54 Series Only)
- D for 150 mil Plastic SOIC (74 Series Only)
- DW for 300 mil Plastic SOIC (74 Series Only)
- SD for Plastic SSOP
- DT for Plastic TSSOP

Function Type
- XX(X) Same Function and Pin Configuration as LSTTL
- 4XXX Same Function and Pin Configuration as CMOS 14000
- 7XX(X) Variation of LSTTL or CMOS 14000 Device

***Not Available On All Devices**

FACT

Packaging Information

Surface Mount

Why Surface Mount?

Surface Mount Technology is utilized to offer answers to many problems that have been created in the use of insertion technology.

Limitations have been reached with insertion packages and PC board technology. Surface Mount Technology offers the opportunity to continue to advance the state–of–the–art designs that cannot be accomplished with Insertion Technology.

Surface Mount Packages allow more optimum device performance with the smaller Surface Mount configuration. Internal lead lengths, parasitic capacitance and inductance that placed limitations on chip performance have been reduced.

The lower profile of Surface Mount Packages allows more boards to be utilized in a given amount of space. They are stacked closer together and utilize less total volume than insertion populated PC boards.

Printed circuit costs are lowered with the reduction of the number of board layers required. The elimination or reduction of the number of plated through holes in the board, contributes significantly to lower PC board prices.

Automatic placement equipment is available that can place Surface Mount components at the rate of a few thousand per hour to hundreds of thousands of components per hour.

Surface Mount Technology is cost effective, allowing the manufacturer the opportunity to produce smaller units and/or offer increased functions with the same size product.

Surface Mount assembly does not require the preparation of components that are common on insertion technology lines. Surface Mount components are sent directly to the assembly line, eliminating an intermediate step.

Pin Conversion Tables

Dual–in–Line Package to PLCC Pin Conversion Data

The following table gives the equivalent I/O pinouts of Dual–In–Line Package (DIP) configuration and Plastic Leaded Chip Carrier (PLCC) packages.*

Analog and Interface Integrated Circuits

In Brief . . .

Motorola Analog and Interface Integrated Circuits cover a much broader range of products than the traditional op amps/ regulators/consumer–image associated with Analog suppliers. Analog circuit technology currently influences the design and architecture of equipment for all major markets. As with other integrated circuit technologies, Analog circuit design techniques and processes have been continually refined and updated to meet the needs of these diversified markets.

Operational amplifiers have utilized JFET inputs for improved performance, plus innovative design and trimming concepts have evolved for improved high performance and precision characteristics. In analog power ICs, basic voltage regulators have been refined to include higher current and voltage levels, low dropout regulators, and more precise three–terminal fixed and adjustable voltages. The power area continues to expand into switching regulators, power supply control and supervisory circuits, motor controllers, and battery charging controllers.

Analog designs also offer a wide array of line drivers, receivers and transceivers for many of the EIA, European, IEEE and IBM interface standards. Peripheral drivers for a variety of devices are also offered. In addition to these key interface functions, hard disk drive read channel circuits, 10BASE–T and Ethernet circuits are also available.

In Data Conversion, a high performance video speed flash converter is available, as well as a variety of CMOS and Sigma–Delta converters. Analog circuit technology has also provided precision low–voltage references for use in Data Conversion and other low temperature drift applications.

A host of special purpose analog devices have also been developed. These circuits find applications in telecommunications, radio, television, automotive, RF communications, and data transmission. These products have reduced the cost of RF communications, and have provided capabilities in telecommunications which make the telephone line convenient for both voice and data communications. Analog developments have also reduced the many discrete components formerly required for consumer functions to a few IC packages and have made significant contributions to the rapidly growing market for electronics in automotive applications.

The table of contents provides a perspective of the many markets served by Analog/Interface ICs and of Motorola's involvement in these areas.

Amplifiers and Comparators

In Brief . . .

For over two decades, Motorola has continually refined and updated integrated circuit technologies, analog circuit design techniques and processes in response to the needs of the marketplace. The enhanced performance of newer operational amplifiers and comparators has come through innovative application of these technologies, designs and processes. Some early designs are still available but are giving way to the new, higher performance operational amplifier and comparator circuits. Motorola has pioneered in JFET inputs, low temperature coefficient input stages, Miller loop compensation, all NPN output stages, dual–doublet frequency compensation and analog "in–the–package" trimming of resistors to produce superior high performance operational amplifiers and comparators, operating in many cases from a single supply with low input offset, low noise, low power, high output swing, high slew rate and high gain–bandwidth product at reasonable cost to the customer.

Present day operational amplifiers and comparators find applications in all market segments including motor controls, instrumentation, aerospace, automotive, telecommunications, medical, and consumer products.

Operational Amplifiers

Motorola offers a broad line of bipolar operational amplifiers to meet a wide range of applications. From low–cost industry–standard types to high precision circuits, the span encompasses a large range of performance capabilities. These Analog integrated circuits are available as single, dual and quad monolithic devices in a variety of temperature ranges and package styles. Most devices may be obtained in unencapsulated "chip" form as well. For price and delivery information on chips, please contact your Motorola Sales Representative or Distributor.

High Frequency Amplifiers

A variety of high frequency circuits with features ranging from low cost simplicity to multifunction versatility marks Motorola's line of integrated amplifiers. Devices described here are intended for industrial and communications applications. For devices especially dedicated to consumer products, i.e., TV and entertainment radio. (See the Consumer Electronics Circuits section.)

AGC Amplifiers

MC1490/MC1350 Family Wideband General Purpose Amplifiers

The MC1490 and MC1350 family are basic building blocks – AGC (Automatic Gain Controlled) RF/Video Amplifiers. These parts are recommended for applications up through 70 MHz. The best high frequency performance may be obtained by using the physically smaller SOIC version (shorter leads) – MC1350D. There are currently no other RF ICs like these, because other manufacturers have dropped their copies. Applications include variable gain video and instrumentation amplifiers, IF (Intermediate Frequency) amplifiers for radio and TV receivers, and transmitter power output control. Many uses will be found in medical instrumentation, remote monitoring, video/graphics processing, and a variety of communications equipment. The family of parts using the same basic die (identical circuit with slightly different test parameters) is listed in the following table.

Table 4. High Frequency Amplifier Specifications

Operating Temperature Range –40° to +85°C	Operating Temperature Range 0° to +70°C	A_V (dB) Typical	Bandwidth @ MHz Typical	V_{CC}/V_{EE} (Vdc) Minimum	V_{CC}/V_{EE} (Vdc) Maximum	Suffix/ Package
–	MC1350	50	45	+6.0	+18	P/626, D/751
MC1490	–	50 45 35	10 60 100			P/626

Miscellaneous Amplifiers

Motorola provides several Bipolar and CMOS special purpose amplifiers which fill specific needs. These devices range from low power CMOS programmable amplifiers and comparators to variable–gain bipolar power amplifiers.

MC3405
Dual Operational Amplifier and Dual Voltage Comparator

This device contains two Differential Input Operational Amplifiers and two Comparators; each set capable of single supply operation. This operational amplifier–comparator circuit will find its applications as a general purpose product for automotive circuits and as an industrial "building block."

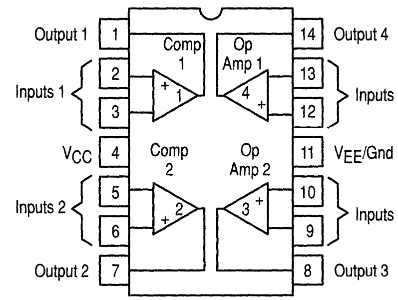

Table 5. Bipolar

Device	I_{IB} (μA) Max	V_{IO} (mV) Max	I_{IO} (nA) Max	A_{vol} (V/mV) Min	Response (μs) Typ	Supply Voltage Single	Supply Voltage Dual	Suffix/ Package
MC3405	0.5	10	50	20	1.3	3.0 to 36	±1.5 to ±18	P/646

MC14573
Quad Programmable Operational Amplifier
MC14575
Dual Programmable Operational Amplifier and Dual Programmable Comparator
MC14576C/MC14577C
Dual Video Amplifiers

Table 6. CMOS

Function	Quantity Per Package	Single Supply Voltage Range	Dual Supply Voltage Range	Frequency Range	Device	Suffix/ Package

Power Supply Circuits

In Brief . . .

In most electronic systems, some form of voltage regulation is required. In the past, the task of voltage regulator design was tediously accomplished with discrete devices, and the results were quite often complex and costly. Today, with bipolar monolithic regulators, this task has been significantly simplified. The designer now has a wide choice of fixed, low V_{Diff} and adjustable type voltage regulators. These devices incorporate many built–in protection features, making them virtually immune to the catastrophic failures encountered in older discrete designs.

The switching power supply continues to increase in popularity and is one of the fastest growing markets in the world of power conversion. They offer the designer several important advantages over linear series–pass regulators. These advantages include significant advancements in the areas of size and weight reduction, improved efficiency, and the ability to perform voltage step–up, step–down, and voltage–inverting functions. Motorola offers a diverse portfolio of full featured switching regulator control circuits which meet the needs of today's modern compact electronic equipment.

Power supplies, MPU/MCU–based systems, industrial controls, computer systems and many other product applications are requiring power supervisory functions which monitor voltages to ensure proper system operation. Motorola offers a wide range of power supervisory circuits that fulfill these needs in a cost effective and efficient manner. MOSFET drivers are also provided to enhance the drive capabilities of first generation switching regulators or systems designed with CMOS/TTL logic devices. These drivers can also be used in dc–to–dc converters, motor controllers or virtually any other application requiring high speed operation of power MOSFETs.

Linear Voltage Regulators

Fixed Output

These low cost monolithic circuits provide positive and/or negative regulation at currents from 100 mA to 3.0 A. They are ideal for on–card regulation employing current limiting and thermal shutdown. Low V_{Diff} devices are offered for battery powered systems.

Although designed primarily as fixed voltage regulators, these devices can be used with external components to obtain adjustable voltages and currents.

Adjustable Output

Motorola offers a broad line of adjustable output voltage regulators with a variety of output current capabilities. Adjustable voltage regulators provide users the capability of stocking a single integrated circuit offering a wide range of output voltages for industrial and communications applications. The three–terminal devices require only two external resistors to set the output voltage.

Micropower Voltage Regulators for Portable Applications

80 mA Micropower Voltage Regulator

MC78LC00H, N

T_A = –30° to +80°C, Case 1213, 1212

The MC78LC00 series voltage regulators are specifically designed for use as a power source for video instruments, handheld communication equipment, and battery powered equipment.

The MC78LC00 series features an ultra–low quiescent of 1.1 µA and a high accuracy output voltage. Each device contains a voltage reference, an error amplifier, a driver transistor and resistors for setting the output voltage. These devices are available in either SOT–89, 3 pin, or SOT–23, 5 pin, surface mount packages.

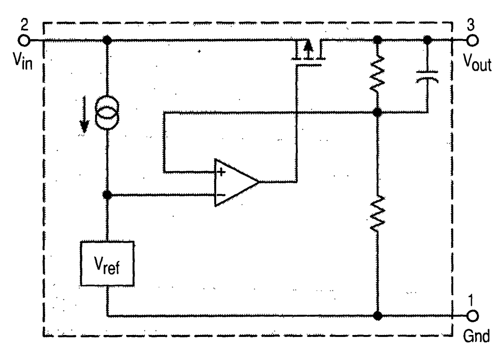
MC78LC00 Series Features:

- Low Quiescent Current of 1.1 µA Typical
- Low Dropout Voltage (30 mV Typical)
- Excellent Line Regulation (0.1%)
- High Accuracy Output Voltage (±2.5%)
- Wide Output Voltage Range (2.0 V to 6.0 V)
- Output Current for Low Power (80 mA Typical)
- Two Surface Mount Packages (SOT–89, 3 Pin, or SOT–23, 5 Pin)

ORDERING INFORMATION

Device	Output Voltage	Operating Temperature Range	Package
MC78LC30HT1	3.0	T_A = –30° to +80°C	SOT–89
MC78LC33HT1	3.3		
MC78LC40HT1	4.0		
MC78LC50HT1	5.0		
MC78LC30NTR	3.0		SOT–23
MC78LC33NTR	3.3		
MC78LC40NTR	4.0		
MC78LC50NTR	5.0		

Other voltages from 2.0 to 6.0 V, in 0.1 V increments, are available upon request. Consult your local Motorola sales office for information.



120 mA Micropower Voltage Regulator

MC78FC00H

T_A = –30° to +80°C, Case 1213

The MC78FC00 series voltage regulators are specifically designed for use as a power source for video instruments, handheld communication equipment, and battery powered equipment.

The MC78FC00 series voltage regulator ICs feature a high accuracy output voltage and ultra–low quiescent current. Each device contains a voltage reference unit, an error amplifier, a driver transistor, and resistors for setting output voltage, and a current limit circuit. These devices are available in SOT–89 surface mount packages, and allow construction of an efficient, constant voltage power supply circuit.

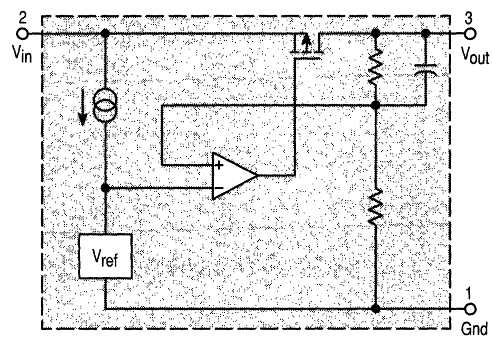
MC78FC00 Series Features:

- Ultra–Low Quiescent Current of 1.1 µA Typical
- Ultra–Low Dropout Voltage (0.5 V Typical)
- Large Output Current (120 mA Typical)
- Excellent Line Regulation (0.1%)
- Wide Operating Voltage Range (2.0 V to 10 V)
- High Accuracy Output Voltage (±2.5%)
- Wide Output Voltage Range (2.0 V to 6.0 V)
- Surface Mount Package (SOT–89)

ORDERING INFORMATION

Device	Output Voltage	Operating Temperature Range	Package
MC78FC30HT1	3.0	T_A = –30° to +80°C	SOT–89
MC78FC33HT1	3.3		
MC78FC40HT1	4.0		
MC78FC50HT1	5.0		

Other voltages from 2.0 to 6.0 V, in 0.1 V increments, are available upon request. Consult your local Motorola sales office for information.



Micropower Voltage Regulator for External Power Transistor

MC78BC00N

T_A = –30° to +80°C, Case 1212

The MC78BC00 voltage regulators are specifically designed to be used with an external power transistor to deliver high current with high voltage accuracy and low quiescent current.

The MC78BC00 series are devices suitable for constructing regulators with ultra–low dropout voltage and output current in the range of several tens of mA to hundreds of mA. These devices have a chip enable function, which minimizes the standby mode current drain. Each of these devices contains a voltage reference unit, an error amplifier, a driver transistor and resistors. These devices are available in the SOT–23, 5 pin surface mount packages.

These devices are ideally suited for battery powered equipment, and power sources for hand–held audio instruments, communication equipment and domestic appliances.

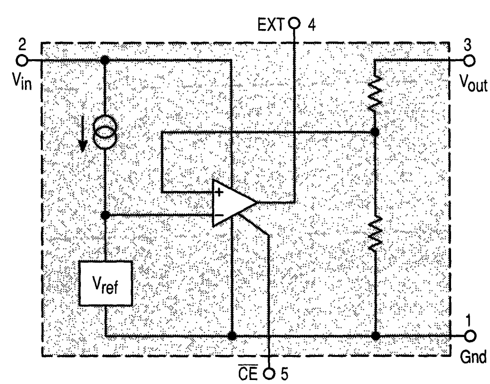
MC78BC00 Series Features:

- Ultra–Low Supply Current (50 µA)
- Standby Mode (0.2 µA)
- Ultra–Low Dropout Voltage (0.1 V with External Transistor and I_O = 100 mA)
- Excellent Line Regulation (Typically 0.1%/V)
- High Accuracy Output Voltage (±2.5%)

ORDERING INFORMATION

Device	Output Voltage	Operating Temperature Range	Package
MC78BC30NTR	3.0	T_A = –30° to +80°C	SOT–23
MC78BC33NTR	3.3		
MC78BC40NTR	4.0		
MC78BC50NTR	5.0		

Other voltages from 2.0 to 6.0 V, in 0.1 V increments, are available upon request. Consult your local Motorola sales office for information.



Micropower Voltage Regulators for Portable Applications (continued)

Micropower Voltage Regulators with On/Off Control

MC33264D, DM

T_A = –40° to +85°C, Case 751, 846A

The MC33264 series are micropower low dropout voltage regulators available in SO–8 and Micro–8 surface mount packages and a wide range of output voltages. These devices feature a very low quiescent current (100 µA in the ON mode; 0.1 µA in the OFF mode), and are capable of supplying output currents up to 100 mA. Internal current and thermal limiting protection is provided.

Additionally, the MC33264 has either active HIGH or active LOW control (Pins 2 and 3) that allows a logic level signal to turn–off or turn–on the regulator output.

Due to the low input–to–output voltage differential and bias current specifications, these devices are ideally suited for battery powered computer, consumer, and industrial equipment where an extension of useful battery life is desirable.

MC33264 Features:

- Low Quiescent Current (0.3 µA in OFF Mode; 95 µA in ON Mode)
- Low Input–to–Output Voltage Differential of 47 mV at 10 mA, and 131 mV at 50 mA
- Multiple Output Voltages Available
- Extremely Tight Line and Load Regulation
- Stable with Output Capacitance of Only
  0.33 µF for 5.0 V, 6.0 V and 4.75 V Output Voltages
  0.22 µF for 2.8 V, 3.0 V and 3.3 V Output Voltages
- Internal Current and Thermal Limiting
- Logic Level ON/OFF Control
- Functionally Equivalent to TK115XXMC and LP2980

ORDERING INFORMATION

Device	Operating Temperature Range	Package

* These ICs are intended for powering cellular phone GaAs power amplifiers and can be used for other portable applications as well.

Microprocessor Voltage Regulator and Supervisory Circuit

MC34160P, DW

T_A = 0° to +70°C, Case 648C, 751G

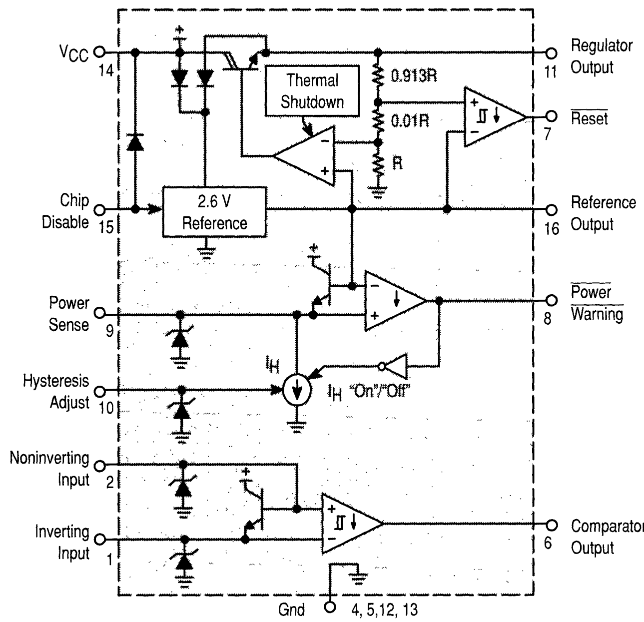
MC33160P, DW

T_A = –40° to +85°C, Case 648C, 751G

The MC34160 series is a voltage regulator and supervisory circuit containing many of the necessary monitoring functions required in microprocessor based systems. It is specifically designed for appliance and industrial applications offering the designer a cost effective solution with minimal external components. These integrated circuits feature a 5.0 V, 100 mA regulator with short circuit current limiting, pinned out 2.6 V bandgap reference, low voltage reset comparator, power warning comparator with programmable hysteresis, and an uncommitted comparator ideally suited for microprocessor line synchronization.

Additional features include a chip disable input for low standby current, and internal thermal shutdown for over temperature protection.

These devices are contained in a 16 pin dual–in–line heat tab plastic package for improved thermal conduction.



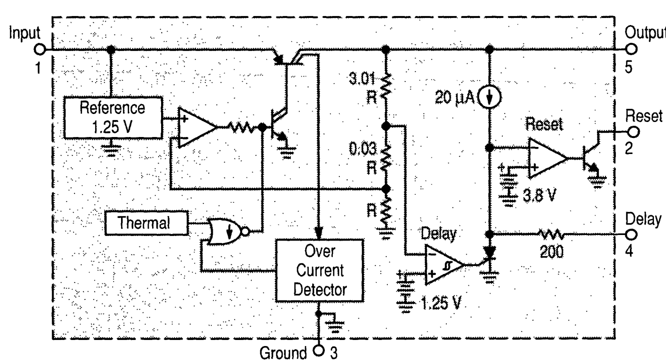
Low Dropout Regulator

MC33267T, TV

T_J = –40° to +105°C, Case 314D, 314B

The MC33267 is a positive fixed 5.0 V regulator that is specifically designed to maintain proper voltage regulation with an extremely low input–to–output voltage differential. This device is capable of supplying output currents in excess of 500 mA and contains internal current limiting and thermal shutdown protection. Also featured is an on–chip power–up reset circuit that is ideally suited for use in microprocessor based systems. Whenever the regulator output voltage is below nominal, the reset output is held low. A programmable time delay is initiated after the regulator has reached its nominal level and upon timeout, the reset output is released.

Due to the low dropout voltage specifications, the MC33267 is ideally suited for use in battery powered industrial and consumer equipment where an extension of useful battery life is desirable. This device is contained in an economical five lead TO–220 type package.



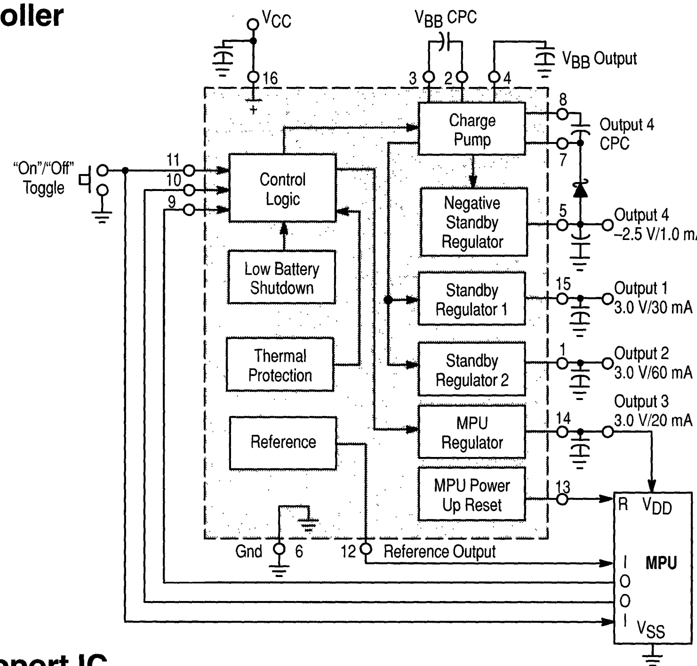
Power Management Controller

MC33128D

T_A = –30° to +60°C, Case 751B

The MC33128 is a power management controller specifically designed for use in battery powered cellular telephone and pager applications. This device contains all of the active functions required to interface the user to the system electronics via a microprocessor. This integrated circuit consists of a low dropout voltage regulator with power–up reset for MPU power, two low dropout voltage regulators for independant powering of analog and digital circuitry, and a negative charge pump voltage regulator for full depletion of gallium arsenide MESFETs.

Also included are protective system shutdown features consisting of a battery latch that is activated upon battery insertion, low battery voltage shutdown, and a thermal over temperature detector. This device is available in a 16–pin narrow body surface mount plastic package.



GaAs Power Amplifier Support IC

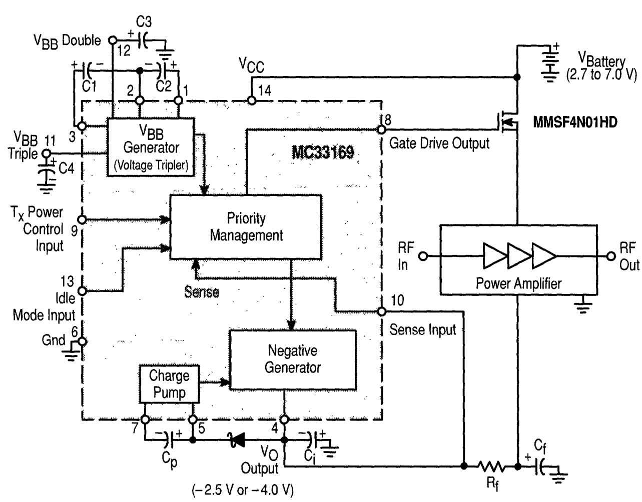
MC33169DTB

T_A = –40° to +85°C, Case 948G

The MC33169 is a support IC for GaAs Power Amplifier Enhanced FETs used in hand portable telephones such as GSM, PCN and DECT. This device provides negative voltages for full depletion of Enhanced MESFETs as well as a priority management system of drain switching, ensuring that the negative voltage is always present before turning "on" the Power Amplifier. Additional features include an idle mode input and a direct drive of the N–Channel drain switch transistor.

This product is available in two versions, –2.5 and –4.0 V. The –4.0 V version is intended for supplying RF modules for GSM and DCS1800 applications, whereas the –2.5 V version is dedicated for DECT and PHS systems.

- Negative Regulated Output for Full Depletion of GaAs MESFETs
- Drain Switch Priority Management Circuit
- CMOS Compatible Inputs
- Idle Mode Input (Standby Mode) for Very Low Current Consumption
- Output Signal Directly Drives N–Channel FET
- Low Startup and Operating Current



SCSI Regulator

Table 5. SCSI Regulator

Device	V_{out} (V)		I_{sink} (mA)	V_{in} (V)		Reg_{line} (%)	Reg_{load} (%)	T_J (°C)	Suffix/ Package
	Min	Max		Min	Max				
MC34268	2.81	2.89	800	3.9	20	0.3	0.5	150	D/751, DT

SCSI–2 Active Terminator Regulator

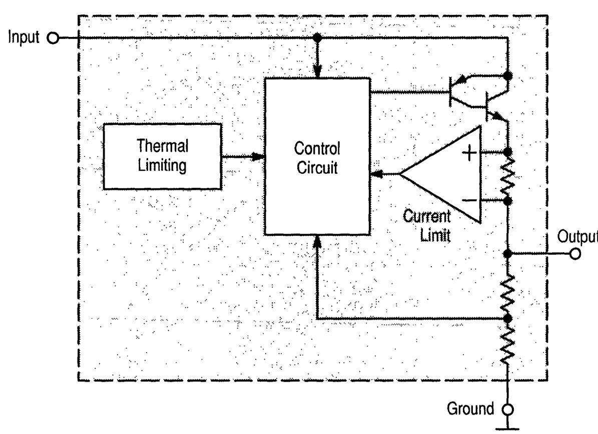
MC34268D, DT

T_J = 0° to +125°C, Case 751, 369A

The MC34268 is a medium current, low dropout positive voltage regulator specifically designed for use in SCSI–2 active termination circuits. This device offers the circuit designer an economical solution for precision voltage regulation, while keeping power losses to a minimum. The regulator consists of a 1.0 V dropout composite PNP/NPN pass transistor, current limiting, and thermal limiting. These devices are packaged in the 8–pin SOP–8 and 3–pin DPAK surface mount power packages.

Applications include active SCSI–2 terminators and post regulation of switching power supplies.

- 2.85 V Output Voltage for SCSI–2 Active Termination
- 1.0 V Dropout
- Output Current in Excess of 800 mA
- Thermal Protection
- Short Circuit Protection
- Output Trimmed to 1.4% Tolerance
- No Minimum Load Required
- Space Saving DPAK and SOP–8 Surface Mount Power Packages



Switching Regulator Control Circuits

These devices contain the primary building blocks which are required to implement a variety of switching power supplies. The product offerings fall into three major categories consisting of single–ended and double–ended controllers, plus single–ended ICs with on–chip power switch transistors. These circuits operate in voltage, current or resonant modes and are designed to drive many of the standard switching topologies. The single–ended configurations include buck, boost, flyback and forward converters. The double–ended devices control push–pull, half bridge and full bridge configurations.

Table 6. Single–Ended Controllers

These single–ended voltage and current mode controllers are designed for use in buck, boost, flyback, and forward converters. They are cost effective in applications that range from 0.1 to 200 W power output.

CMOS Micropower DC–to–DC Converters

Variable Frequency Micropower DC–to–DC Converter

MC33463H

T_A = –30° to +80°C, Case 1213

The MC33463 series are micropower switching voltage regulators, specifically designed for handheld and laptop applications, to provide regulated output voltages using a minimum of external parts. A wide choice of output voltages are available. These devices feature a very low quiescent bias current of 4.0 µA typical.

The MC33463H–XXLT1 series features a highly accurate voltage reference, an oscillator, a variable frequency modulation (VFM) controller, a driver transistor (Lx), an error amplifier and feedback resistive divider.

The MC33463H–XXLT1 is identical to the MC33463H–XXKT1, except that a drive pin (EXT) for an external transistor is provided.

Due to the low bias current specifications, these devices are ideally suited for battery powered computer, consumer, and industrial equipment where an extension of useful battery life is desirable.

MC33463 Series Features:

- Low Quiescent Bias Current of 4.0 µA
- High Output Voltage Accuracy of ±2.5%
- Low Startup Voltage of 0.9 V at 1.0 mA
- Surface Mount Package

ORDERING INFORMATION

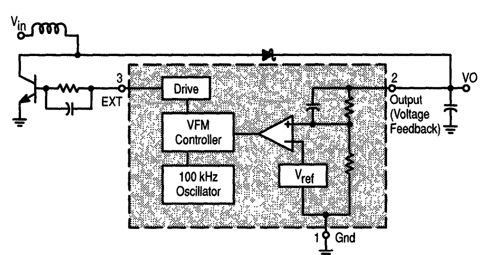
MC33463H–XXLT1



Fixed Frequency PWM Micropower DC–to–DC Converter

MC33466H

T_A = –30° to +80°C, Case 1213

The MC33466 series are micropower switching voltage regulators, specifically designed for handheld and laptop applications, to provide regulated output voltages using a minimum of external parts. A wide choice of output voltages are available. These devices feature a very low quiescent bias current of 15 µA typical.

The MC33466H–XXJT1 series features a highly accurate voltage reference, an oscillator, a pulse width modulation (PWM) controller, a driver transistor (Lx), an error amplifier and feedback resistive divider.

The MC33466H–XXLT1 is identical to the MC33466H–XXJT1, except that a drive pin (EXT) for an external transistor is provided.

Due to the low bias current specifications, these devices are ideally suited for battery powered computer, consumer, and industrial equipment where an extension of useful battery life is desirable.

MC33466 Series Features:

- Low Quiescent Bias Current of 15 µA
- High Output Voltage Accuracy of ±2.5%
- Low Startup Voltage of 0.9 V at 1.0 mA
- Soft–Start = 500 µs
- Surface Mount Package

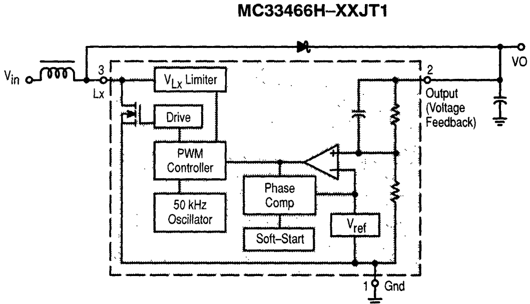
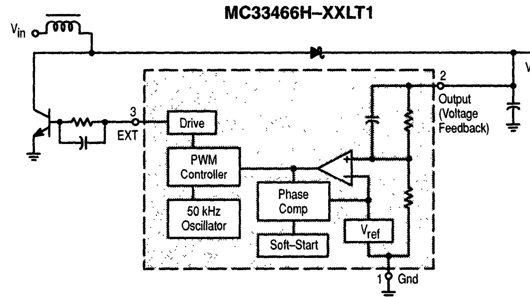
MC33466H–XXJT1



MC33466H–XXLT1



Single–Ended GreenLine™ Controllers

Mixed Frequency Mode GreenLine™ PWM Controller:

Fixed Frequency, Variable Frequency, Standby Mode

MC44603P, DW

T_A = –25° to +85°C, Case 648, 751G

The MC44603 is an enhanced high performance controller that is specifically designed for off–line and dc–to–dc converter applications. This device has the unique ability of automatically changing operating modes if the converter output is overloaded, unloaded, or shorted, offering the designer additional protection for increased system reliability. The MC44603 has several distinguishing features when compared to conventional SMPS controllers. These features consist of a foldback facility for overload protection, a standby mode when the converter output is slightly loaded, a demagnetization detection for reduced switching stresses on transistor and diodes, and a high current totem pole output ideally suited for driving a power MOSFET. It can also be used for driving a bipolar transistor in low power converters (< 150 W). It is optimized to operate in discontinuous mode but can also operate in continuous mode. Its advanced design allows use in current mode or voltage mode control applications.

Current or Voltage Mode Controller

- Operation up to 250 kHz Output Switching Frequency
- Inherent Feed Forward Compensation
- Latching PWM for Cycle–by–Cycle Current Limiting
- Oscillator with Precise Frequency Control

High Flexibility

- Externally Programmable Reference Current
- Secondary or Primary Sensing
- Synchronization Facility
- High Current Totem Pole Output
- Undervoltage Lockout with Hysteresis

Safety/Protection Features

- Overvoltage Protection Against Open Current and Open Voltage Loop
- Protection Against Short Circuit on Oscillator Pin
- Fully Programmable Foldback
- Soft–Start Feature
- Accurate Maximum Duty Cycle Setting
- Demagnetization (Zero Current Detection) Protection
- Internally Trimmed Reference

GreenLine Controller: Low Power Consumption in Standby Mode

- Low Startup and Operating Current
- Fully Programmable Standby Mode
- Controlled Frequency Reduction in Standby Mode
- Low dV/dT for Low EMI Radiations

High Safety Standby Ladder Mode GreenLine™ PWM Controller

MC44604P

T_A = –25° to +85°C, Case 648

The MC44604 is an enhanced high performance controller that is specifically designed for off–line and dc–to–dc converter applications.

The MC44604 is a modification of the MC44603. The MC44604 offers enhanced safety and reliable power management in its protection features (foldback, overvoltage detection, soft–start, accurate demagnetization detection). Its high current totem pole output is also ideally suited for driving a power MOSFET but can also be used for driving a bipolar transistor in low power converters (< 150 W).

In addition, the MC44604 offers a new efficient way to reduce the standby operating power by means of a patented standby ladder mode operation of the converter significantly reducing the converter consumption in standby mode.

Current or Voltage Mode Controller

- Operation Up to 250 kHz Output Switching Frequency
- Inherent Feed Forward Compensation
- Latching PWM for Cycle–by–Cycle Current Limiting
- Oscillator with Precise Frequency Control

High Flexibility

- Externally Programmable Reference Current
- Secondary or Primary Sensing
- High Current Totem Pole Output
- Undervoltage Lockout with Hysteresis

Safety/Protection Features

- Overvoltage Protection Facility Against Open Loop
- Protection Against Short Circuit on Oscillator Pin
- Fully Programmable Foldback
- Soft–Start Feature
- Accurate Maximum Duty Cycle Setting
- Demagnetization (Zero Current Detection) Protection
- Internally Trimmed Reference

GreenLine™ Controller:

- Low Startup and Operating Current
- Patented Standby Ladder Mode for Low Standby Losses
- Low dV/dT for Low EMI

High Safety Latched Mode GreenLine™ PWM Controller for (Multi)Synchronized Applications

MC44605P

T_A = –25° to +85°C, Case 648

The MC44605 is a high performance current mode controller that is specifically designed for off–line converters. The MC44605 has several distinguishing features that make it particularly suitable for multisynchronized monitor applications.

The MC44605 synchronization arrangement enables operation from 16 kHz up to 130 kHz. This product was optimized to operate with universal ac mains voltage from 80 V to 280 V, and its high current totem pole output makes it ideally suited for driving a power MOSFET.

The MC44605 protections provide well controlled, safe power management. Safety enhancements detect four different fault conditions and provide protection through a disabling latch.

Current or Voltage Mode Controller

- Current Mode Operation Up to 250 kHz Output Switching Frequency
- Inherent Feed Forward Compensation
- Latching PWM for Cycle–by–Cycle Current Limiting
- Oscillator with Precise Frequency Control
- Externally Programmable Reference Current
- Secondary or Primary Sensing (Availability of Error Amplifier Output)
- Synchronization Facility
- High Current Totem Pole Output
- Undervoltage Lockout with Hysteresis
- Low Output dV/dT for Low EMI
- Low Startup and Operating Current

Safety/Protection Features

- Soft–Start Feature
- Demagnetization (Zero Current Detection) Protection
- Overvoltage Protection Facility Against Open Loop
- EHT Overvoltage Protection (E.H.T.OVP): Protection Against Excessive Amplitude Synchronization Pulses
- Winding Short Circuit Detection (W.S.C.D.)
- Limitation of the Maximum Input Power (M.P.L.): Calculation of Input Power for Overload Protection
- Over Heating Detection (O.H.D.): to Prevent the Power Switch from Excessive Heating

Latched Disabling Mode

- When one of the following faults is detected: EHT overvoltage, Winding Short Circuit (WSCD), excessive input power (M.P.L.), power switch over heating (O.H.D.), a counter is activated
- If the counter is activated for a time that is long enough, the circuit gets definitively disabled. The latch can only be reset by removing and then re–applying power

Very High Voltage Switching Regulator

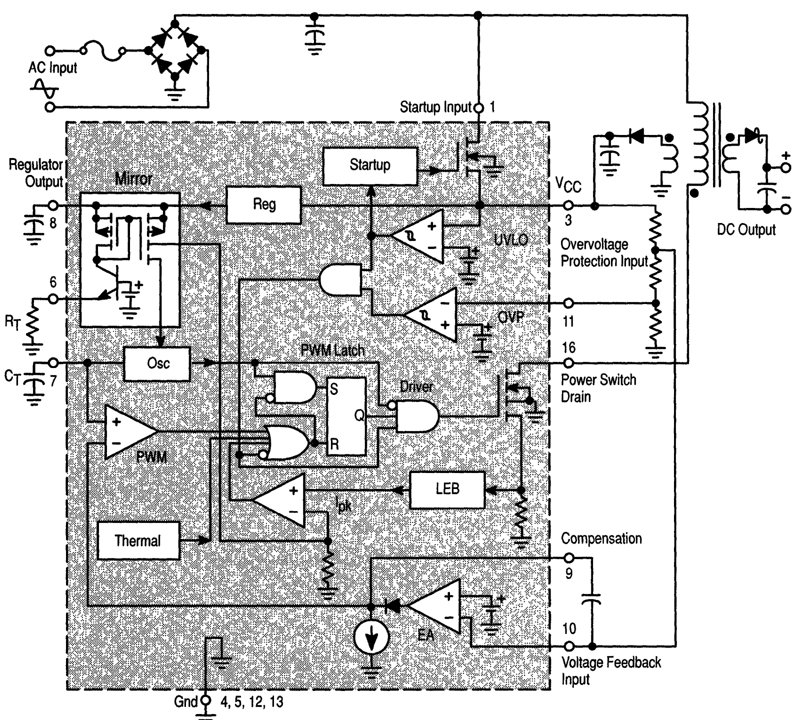
MC33362DW, P

T_J = –25° to +125°C, Case 751N, 658E

The MC33362 is a monolithic high voltage switching regulator that is specifically designed to operate from a rectified 120 VAC line source. This integrated circuit features an on–chip 500 V/2.0 A SenseFET power switch, 250 V active off–line startup FET, duty cycle controlled oscillator, current limiting comparator with a programmable threshold and leading edge blanking, latching pulse width modulator for double pulse suppression, high gain error amplifier, and a trimmed internal bandgap reference. Protective features include cycle–by–cycle current limiting, input undervoltage lockout with hysteresis, output overvoltage protection, and thermal shutdown. This device is available in a 16–lead dual–in–line and wide body surface mount packages.

- On–Chip 500 V, 2.0 A SenseFET Power Switch
- Rectified 120 VAC Line Source Operation
- On–Chip 250 V Active Off–Line Startup FET
- Latching PWM for Double Pulse Suppression
- Cycle–By–Cycle Current Limiting
- Input Undervoltage Lockout with Hysteresis
- Output Overvoltage Protection Comparator
- Trimmed Internal Bandgap Reference
- Internal Thermal Shutdown

20 W Off–Line Converter



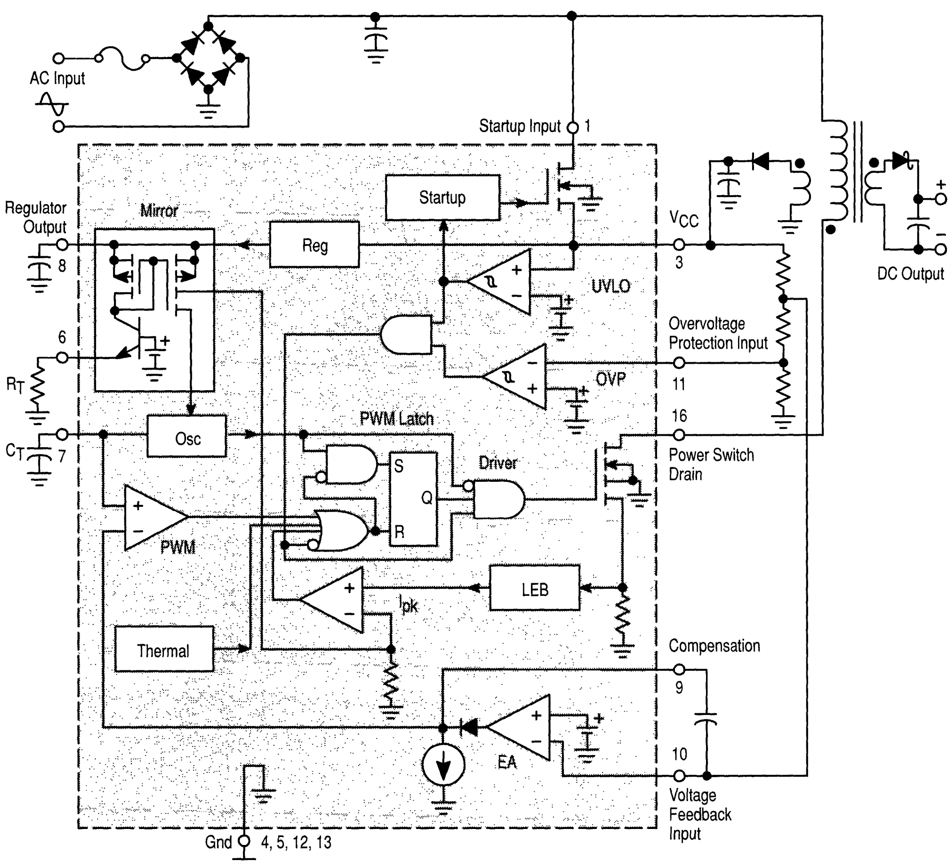
Very High Voltage Switching Regulator

MC33363DW, P, MC33363ADW, P

T_J = –25° to +125°C, Case 751N, 648E

The MC33363 is a monolithic high voltage switching regulator that is specifically designed to operate from a rectified 240 Vac line source. This integrated circuit features an on–chip 700 V/1.0 A (1.5 A in MC33363A) SenseFET power switch, 450 V active off–line startup FET, duty cycle controlled oscillator, current limiting comparator with a programmable threshold and leading edge blanking, latching pulse width modulator for double pulse suppression, high gain error amplifier, and a trimmed internal bandgap reference. Protective features include cycle–by–cycle current limiting, input undervoltage lockout with hysteresis, output overvoltage protection, and thermal shutdown. This device is available in a 16–lead wide body surface mount package.

- On–Chip 700 V, 1.0 A SenseFET Power Switch
- On–Chip 700 V, 1.5 A SenseFET Power Switch in MC33363A
- Rectified 240 Vac Line Source Operation
- On–Chip 450 V Active Off–Line Startup FET
- Latching PWM for Double Pulse Suppression
- Cycle–By–Cycle Current Limiting
- Input Undervoltage Lockout with Hysteresis
- Output Overvoltage Protection Comparator
- Trimmed Internal Bandgap Reference
- Internal Thermal Shutdown



Critical Conduction SMPS Controller

MC33364D, D1, D2

T_J = –25° to +125°C, Case 751, 751B

The MC33364 series are variable frequency SMPS controllers that operate in the critical conduction mode. They are optimized for low power, high density power supplies requiring minimum board area, reduced component count, and low power dissipation. Each narrow body SOIC package provides a small footprint. Integration of the high voltage startup saves approximately 0.7 W of power compared to resistor bootstrapped circuits.

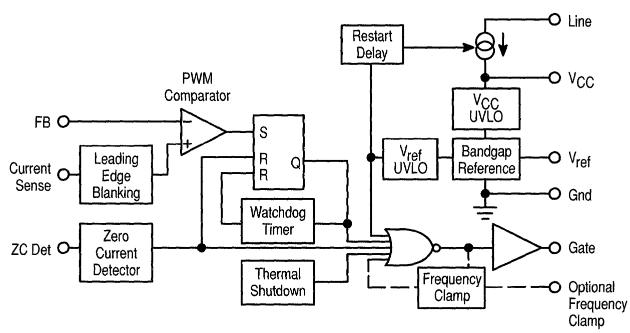
Each MC33364 features an on–board reference, UVLO function, a watchdog timer to initiate output switching, a zero current detector to ensure critical conduction operation, a current sensing comparator, leading edge blanking, and a CMOS driver. Protection features include the ability to shut down switching, and cycle–by–cycle current limiting.

The MC33364D1 is available in a surface mount SO–8 package. It has an internal 144 kHz frequency clamp. For loads which have a low power operating condition, the frequency clamp limits the maximum operating frequency, preventing excessive switching losses and EMI radiation.

The MC33364D2 is available in the SO–8 package without an internal frequency clamp.

The MC33364D is available in the SO–16 package. It has an internal 144 kHz frequency clamp which is pinned out, so that the designer can adjust the clamp frequency by connecting appropriate values of resistance and capacitance.

- Lossless Off–Line Startup
- Leading Edge Blanking for Noise Immunity
- Watchdog Timer to Initiate Switching
- Minimum Number of Support Components
- Shutdown Capability
- Over Temperature Protection
- Optional Frequency Clamp



Special Switching Regulator Controllers

These high performance dual channel controllers are optimized for off–line, ac–to–dc power supplies and dc–to–dc converters in the flyback topology. They also have undervoltage lockout voltages which are optimized for off–line and lower voltage dc–to–dc converters, respectively. Applications include desktop computers, peripherals, televisions, games, and various consumer appliances.

Table 11. Dual Channel Controllers

I_O (mA) Max	Minimum Operating Voltage Range (V)	Operating Mode	Reference (V)	Maximum Useful Oscillator Frequency (kHz)	Device	T_A (°C)	Suffix/ Package

Power Factor Controllers

MC34262D, P

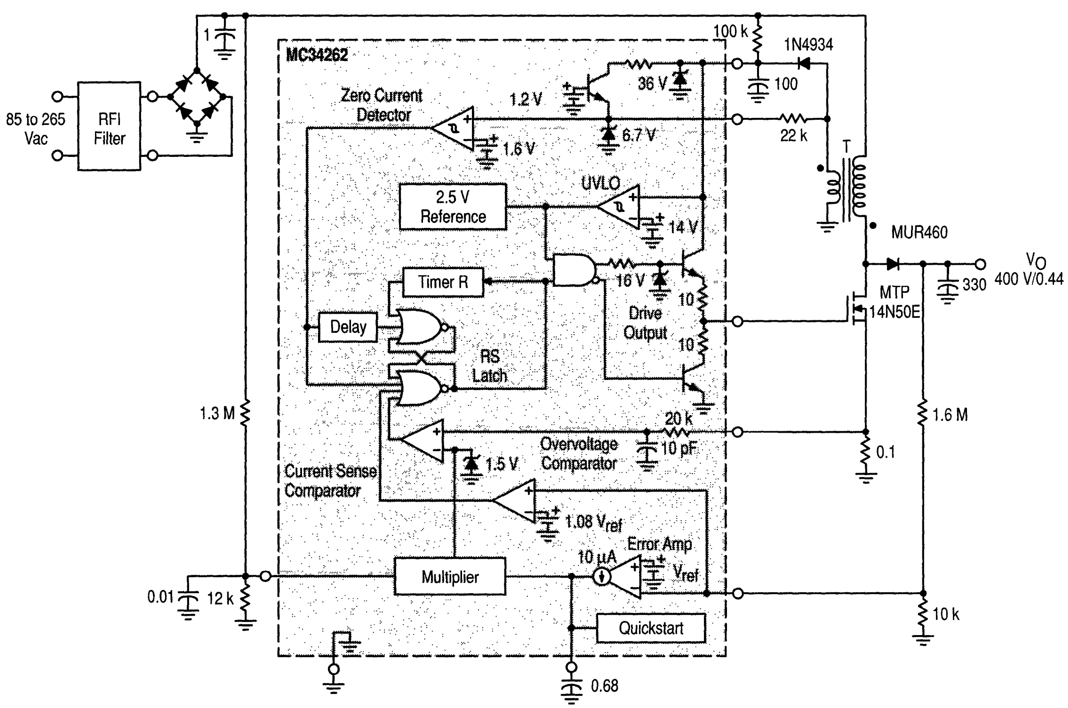
T_A = 0° to +85°C, Case 751, 626

MC33262D, P

T_A = –40° to +105°C, Case 751, 626

The MC34262, MC33262 series are active power factor controllers specifically designed for use as a preconverter in electronic ballast and in off–line power converter applications. These integrated circuits feature an internal startup timer for stand alone applications, a one quadrant multiplier for near unity power factor, zero current detector to ensure critical conduction operation, transconductance error amplifier, quickstart circuit for enhanced startup, trimmed internal bandgap reference, current sensing comparator, and a totem pole output ideally suited for driving a power MOSFET.

Also included are protective features consisting of an overvoltage comparator to eliminate runaway output voltage due to load removal, input undervoltage lockout with hysteresis, cycle–by–cycle current limiting, multiplier output clamp that limits maximum peak switch current, an RS latch for single pulse metering, and a drive output high state clamp for MOSFET gate protection. These devices are available in dual–in–line and surface mount plastic packages.



Power Factor Controllers (continued)

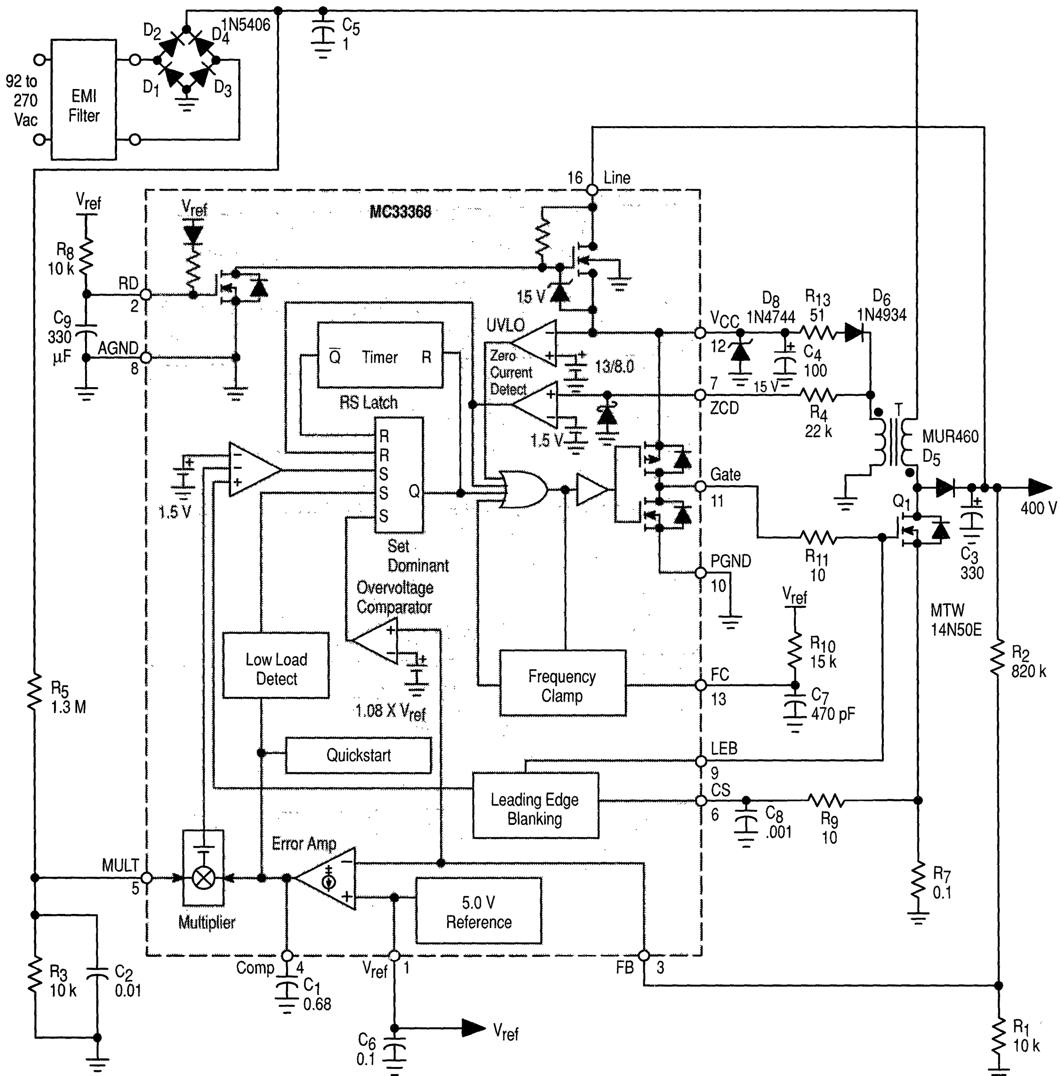
MC33368D

T_J = –25° to +125°C, Case 751K

The MC33368 is an active power factor controller that functions as a boost preconverter in off–line power supply applications. MC33368 is optimized for low power, high density power supplies requiring minimum board area, reduced component count, and low power dissipation. The narrow body SOIC package provides a small footprint. Integration of the high voltage startup saves approximately 0.7 W of power compared to resistor bootstrapped circuits.

The MC33368 features a watchdog timer to initiate output switching, a one quadrant multiplier to force the line current to follow the instantaneous line voltage, a zero current detector to ensure critical conduction operation, a transconductance error amplifier, a current sensing comparator, a 5.0 V reference, an undervoltage lockout (UVLO) circuit which monitors the V_{CC} supply voltage, and a CMOS driver for driving MOSFETs. The MC33368 also includes a programmable output switching frequency clamp. Protection features include an output overvoltage comparator to minimize overshoot, a restart delay timer, and cycle–by–cycle current limiting.

- Lossless Off–Line Startup
- Output Overvoltage Comparator
- Leading Edge Blanking (LEB) for Noise Immunity
- Watchdog Timer to Initiate Switching
- Restart Delay Timer



Supervisory Circuits

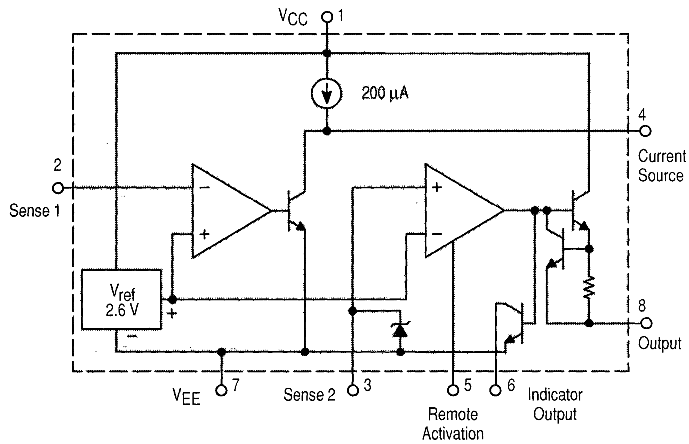
A variety of Power Supervisory Circuits are offered. Overvoltage sensing circuits which drive "Crowbar" SCRs are provided in several configurations from a low cost three–terminal version to 8–pin devices which provide pin–programmable trip voltages or additional features, such as an indicator output drive and remote activation capability. An over/undervoltage protection circuit is also offered.

Overvoltage Crowbar Sensing Circuit

MC3423P1, D

T_A = 0° to +70°C, Case 626, 751

This device can protect sensitive circuitry from power supply transients or regulator failure when used with an external "Crowbar" SCR. The device senses voltage and compares it to an internal 2.6 V reference. Overvoltage trip is adjustable by means of an external resistive voltage divider. A minimum duration before trip is programmable with an external capacitor. Other features include a 300 mA high current output for driving the gate of a "Crowbar" SCR, an open–collector indicator output and remote activation capability.

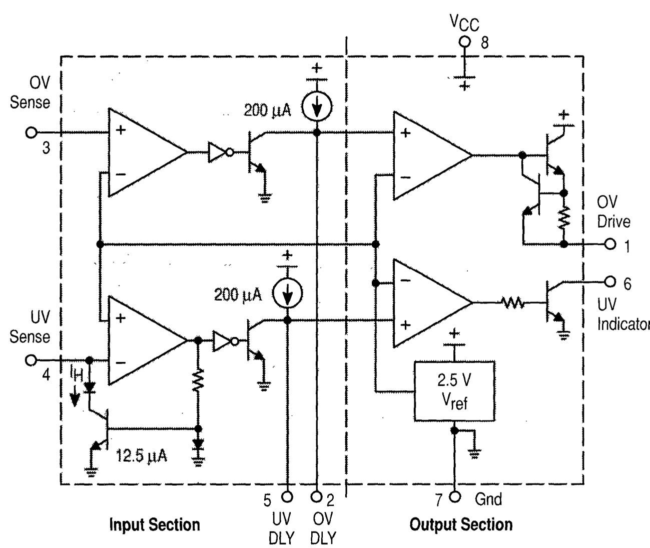


Over/Undervoltage Protection Circuit

MC3425P1

T_A = 0° to +70°C, Case 626

The MC3425 is a power supply supervisory circuit containing all the necessary functions required to monitor over and undervoltage fault conditions. This device features dedicated over and undervoltage sensing channels with independently programmable time delays. The overvoltage channel has a high current drive output for use in conjunction with an external SCR "Crowbar" for shutdown. The undervoltage channel input comparator has hysteresis which is externally programmable, and an open–collector output for fault indication.



CMOS Micropower Undervoltage Sensing Circuits

MC33464H, N

T_A = –30° to +80°C, Case 1213, 1212

The MC33464 series are micropower undervoltage sensing circuits that are specifically designed for use with battery powered microprocessor based systems, where extended battery life is required. A choice of several threshold voltages from 0.9 V to 4.5 V are available. These devices feature a very low quiescent bias current of 0.8 µA typical.

The MC33464 series features a highly accurate voltage reference, a comparator with precise thresholds and built–in hysteresis to prevent erratic reset operation, a choice of output configurations between open drain or complementary MOS, and guaranteed operation below 1.0 V with extremely low standby current. These devices are available in either SOT–89 3–pin or SOT–23 5–pin surface mount packages.

Applications include direct monitoring of the MPU/logic power supply used in portable, appliance, automotive and industrial equipment.

MC33464 Features:

- Extremely Low Standby Current of 0.8 µA at V_{in} = 1.5 V
- Wide Input Voltage Range (0.7 V to 10 V)
- Monitors Power Supply Voltages from 1.1 V to 5.0 V
- High Accuracy Detector Threshold (±2.5%)
- Two $\overline{\text{Reset}}$ Output Types (Open Drain or Complementary Drive)
- Two Surface Mount Packages (SOT–89 or SOT–23 5–Pin)

Supervisory Circuits (continued)

CMOS Micropower Undervoltage Sensing Circuits with Output Delay

MC33465N

T_A = –30° to +80°C, Case 1212

The MC33465 series are micropower undervoltage sensing circuits that are specifically designed for use with battery powered microprocessor based systems, where extended battery life is required. A choice of several threshold voltages from 0.9 V to 4.5 V are available. This device features a very low quiescent bias current of 1.0 µA typical.

The MC33465 series features a highly accurate voltage reference, a comparator with precise thresholds and built–in hysteresis to prevent erratic reset operation, a choice of output configurations between open drain or complementary MOS, a time delayed output, which can be programmed by the system designer, and guaranteed operation below 1.0 V with extremely low standby current. This device is available in a SOT–23 5–pin surface mount packages.

Applications include direct monitoring of the MPU/logic power supply used in portable, appliance, automotive and industrial equipment.

MC33465 Features:

- Extremely Low Standby Current of 1.0 µA at V_{in} = 3.5 V
- Wide Input Voltage Range (0.7 V to 10 V)
- Monitors Power Supply Voltages from 1.1 V to 5.0 V
- High Accuracy Detector Threshold (±2.5%)
- Two $\overline{\text{Reset}}$ Output Types (Open Drain or Complementary Drive)
- Programmable Output Delay by External Capacitor (100 ms typ. with 0.15 µF)
- Surface Mount Package (SOT–23 5–Pin)
- Convenient Tape and Reel (3000 per Reel)

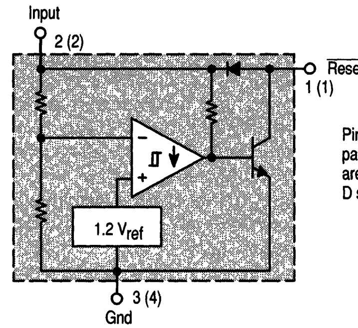
MC33164P–3, P–5, D–3, D–5, DM–3, DM–5
T_A = –40° to +85°C, Case 29, 751, 846A



Pin numbers in parenthesis are for the D suffix package.

The MC34064 and MC34164 are two families of undervoltage sensing circuits specifically designed for use as reset controllers in microprocessor–based systems. They offer the designer an economical solution for low voltage detection with a single external resistor. Both parts feature a trimmed bandgap reference, and a comparator with precise thresholds and built–in hysteresis to prevent erratic reset operation.

The two families of undervoltage sensing circuits taken together, cover the needs of the most commonly specified power supplies used in MCU/MPU systems. Key parameter specifications of the MC34164 family were chosen to complement the MC34064 series. The table summarizes critical parameters of both families. The MC34064 fulfills the needs of a 5.0 V ± 5% system and features a tighter hysteresis specification. The MC34164 series covers 5.0 V ± 10% and 3.0 V ± 5% power supplies with significantly lower power consumption, making them ideal for applications where extended battery life is required such as consumer products or hand held equipment.

Applications include direct monitoring of the 5.0 V MPU/ logic power supply used in appliance, automotive, consumer, and industrial equipment.

The MC34164 is specifically designed for battery powered applications where low bias current (1/25th of the MC34064's) is an important characteristic.

Table 14. Undervoltage Sense/Reset Controller Features

MC34X64 devices are specified to operate from 0° to +70°C, and MC33X64 devices operate from –40° to +85°C.

Device	Standard Power Supply Supported	Typical Threshold Voltage (V)	Typical Hysteresis Voltage (V)	Minimum Output Sink Current (mA)	Power Supply Input Voltage Range (V)	Maximum Quiescent Input Current	Suffix/ Package
MC34064/MC33064	5.0 V ± 5%	4.6	0.02	10	1.0 to 10	500 µA @ V_{in} = 5.0 V	P–5/29 D–5/751 DM–5/846A

MC34164/MC33164	3.0 V ± 5%	2.7	0.06	6.0	1.0 to 12	15 µA @ V_{in} = 3.0 V	P–3/29 D–3/751 DM–3/846A

Universal Voltage Monitor

MC34161P, D

T_A = 0° to +70°C, Case 626, 751

MC33161P, D

T_A = –40° to +85°C, Case 626, 751

The MC34161, MC33161 series are universal voltage monitors intended for use in a wide variety of voltage sensing applications. These devices offer the circuit designer an economical solution for positive and negative voltage detection. The circuit consists of two comparator channels each with hysteresis, a unique Mode Select Input for channel programming, a pinned out 2.54 V reference, and two open collector outputs capable of sinking in excess of 10 mA. Each comparator channel can be configured as either inverting or noninverting by the Mode Select Input. This allows over, under, and window detection of positive and negative voltages. The minimum supply voltage needed for these devices to be fully functional is 2.0 V for positive voltage sensing and 4.0 V for negative voltage sensing.

Applications include direct monitoring of positive and negative voltages used in appliance, automotive, consumer, and industrial equipment.

- Unique Mode Select Input Allows Channel Programming
- Over, Under, and Window Voltage Detection
- Positive and Negative Voltage Detection
- Fully Functional at 2.0 V for Positive Voltage Sensing and 4.0 V for Negative Voltage Sensing
- Pinned Out 2.54 V Reference with Current Limit Protection
- Low Standby Current
- Open Collector Outputs for Enhanced Device Flexibility

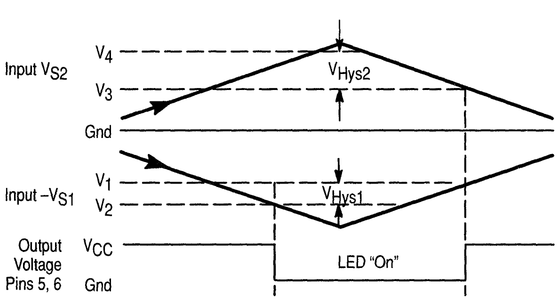
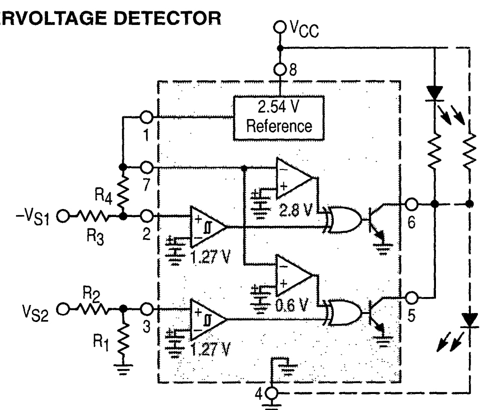
POSITIVE AND NEGATIVE OVERVOLTAGE DETECTOR





Battery Management Circuits

Battery Charger ICs

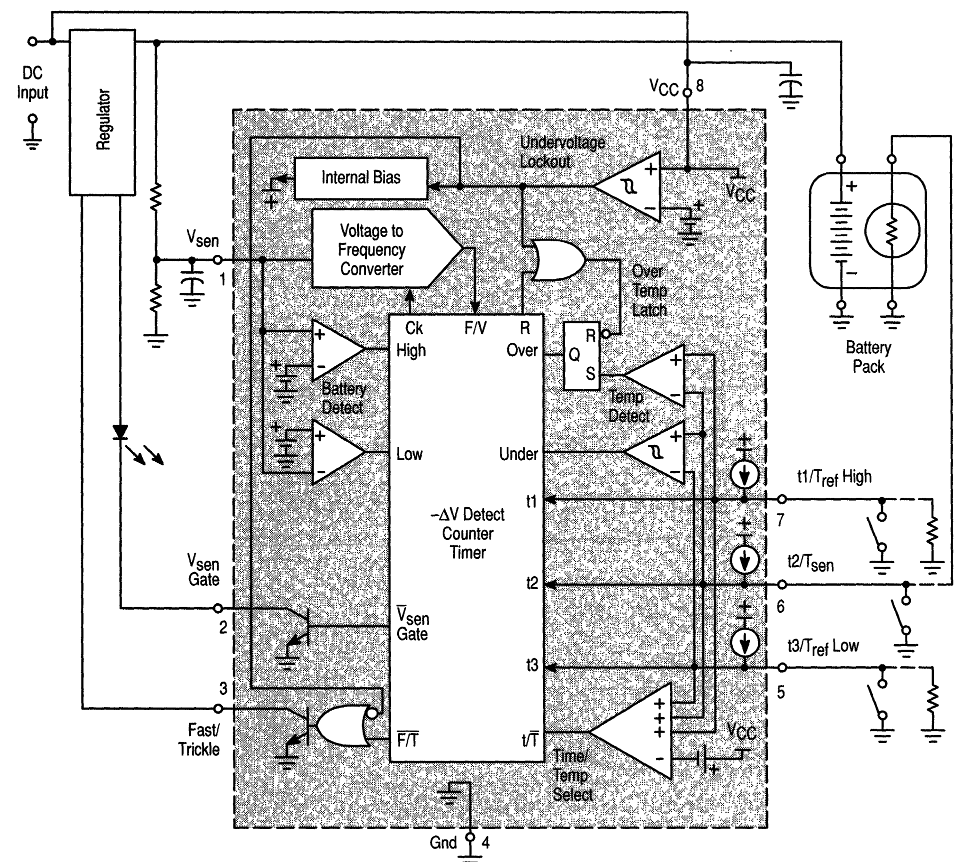
Battery Fast Charge Controller

MC33340P, D

T_A = –25° to +85°C, Case 626, 751

The MC33340 is a monolithic control IC that is specifically designed as a fast charge controller for Nickel Cadmium (NiCd) and Nickel Metal Hydride (NiMH) batteries. This device features negative slope voltage detection as the primary means for fast charge termination. Accurate detection is ensured by an output that momentarily interrupts the charge current for precise voltage sampling. An additional secondary backup termination method can be selected that consists of either a programmable time or temperature limit. Protective features include battery over and undervoltage detection, latched over temperature detection, and power supply input undervoltage lockout with hysteresis. Provisions for entering a rapid test mode are available for enhanced end product testing. This device is available in an economical 8–lead surface mount package.

- Negative Slope Voltage Detection
- Accurate Zero Current Battery Voltage Sensing
- Programmable 1 to 4 Hour Fast Charge Time Limit
- Programmable Over/Under Temperature Detection
- Battery Over and Undervoltage Fast Charge Protection
- Rapid System Test Mode
- Power Supply Input Undervoltage Lockout with Hysteresis
- Operating Voltage Range of 3.0 V to 18 V



Battery Charger ICs (continued)

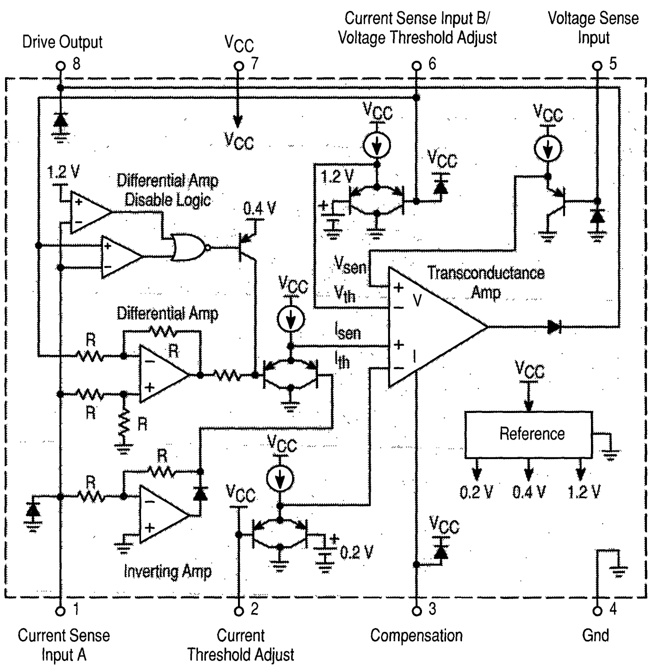
Power Supply
Battery Charger
Regulation Control Circuit

MC33341P, D

T_A = –40° to +85°C, Case 626, 751

The MC33341 is a monolithic regulation control circuit that is specifically designed to close the voltage and current feedback loops in power supply and battery charger applications. This device features the unique ability to perform source high–side, load high–side, source low–side, and load low–side current sensing, each with either an internally fixed or externally adjustable threshold. The various current sensing modes are accomplished by a means of selectively using the internal differential amplifier, inverting amplifier, or a direct input path. Positive voltage sensing is performed by an internal voltage amplifier. The voltage amplifier threshold is internally fixed and can be externally adjusted in all low–side current sensing applications. An active high drive output is provided to directly interface with economical optoisolators for isolated output power systems. This device is available in 8–lead dual–in–line and surface mount packages.

- Differential Amplifier for High–Side Source and Load Current Sensing
- Inverting Amplifier for Source Return Low–Side Current Sensing
- Noninverting Input Path for Load Low–Side Current Sensing
- Fixed or Adjustable Current Threshold in all Current Sensing Modes
- Positive Voltage Sensing in all Current Sensing Modes
- Fixed Voltage Threshold in all Current Sensing Modes
- Adjustable Voltage Threshold in all Low–Side Current Sensing Modes
- Output Driver Directly Interfaces with Economical Optoisolators
- Operating Voltage Range of 2.3 V to 18 V



Battery Pack ICs

Lithium Battery Protection Circuit for One to Four Cell Battery Packs

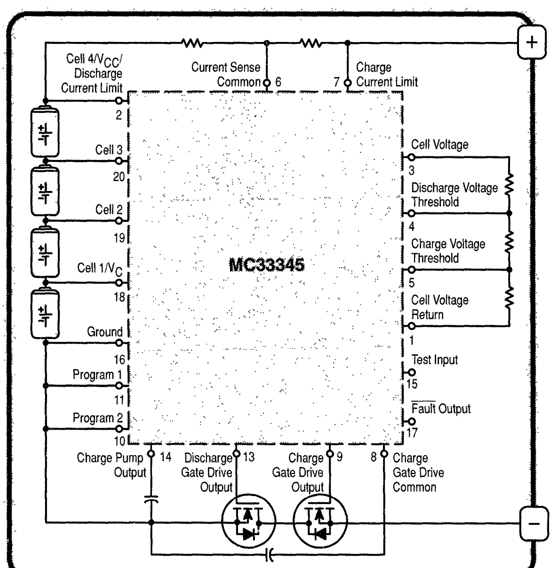
MC33345DW, DTB

T_A = –25° to +85°C, Case 751D, 948E

The MC33345 is a monolithic lithium battery protection circuit that is designed to enhance the useful operating life of one to four cell rechargeable battery packs. Cell protection features consist of independently programmable charge and discharge limits for both voltage and current with a delayed current shutdown, cell voltage balancing with on–chip balancing resistors, and a virtually zero current sleepmode state when the cells are discharged. Additional features include an on–chip charge pump for reduced MOSFET losses while charging or discharging a low cell voltage battery pack, and the programmability for a one to four cell battery pack. This protection circuit requires a minimum number of external components and is targeted for inclusion within the battery pack. The MC33345 is available in standard and low profile 20 lead surface mount packages.

- Independently Programmable Charge and Discharge Limits for Both Voltage and Current
- Charge and Discharge Current Limit Detection with Delayed Shutdown
- Cell Voltage Balancing
- On–Chip Balancing Resistors
- Virtually Zero Current Sleepmode State when Cells are Discharged
- Charge Pump for Reduced Losses with a Low Cell Voltage Battery Pack
- Programmable for One, Two, Three or Four Cell Applications
- Minimum External Components for Inclusion within the Battery Pack
- Available in Low Profile Surface Mount Packages

Typical Four Cell Smart Battery Pack



Lithium Battery Protection Circuit for Three or Four Cell Battery Packs

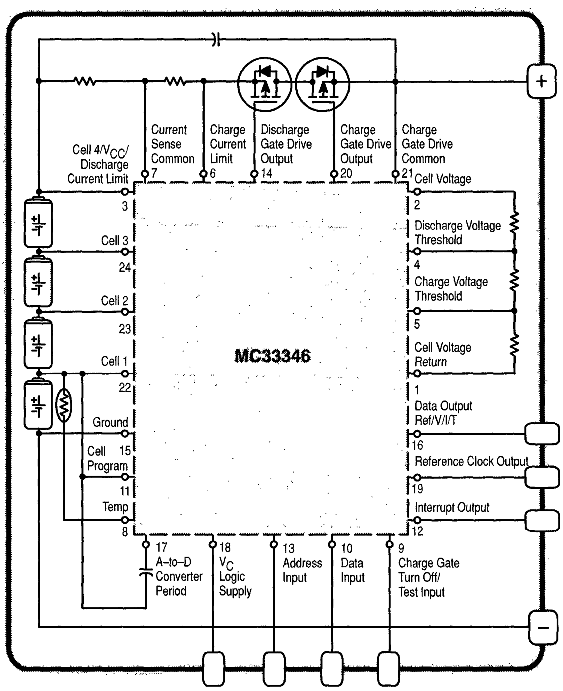
MC33346DW, DTB

$T_A = -40°$ to $+85°C$, Case 751E, 948H

The MC33346 is a monolithic lithium battery protection circuit that is designed to enhance the useful operating life of three or four cell rechargeable battery packs. Cell protection features consist of independently programmable charge and discharge limits for both voltage and current with a delayed current shutdown, cell voltage balancing with on–chip balancing resistors, and virtually zero current sleepmode state when the cells are discharged. Additional features consists of a six wire microcontroller interface bus that can selectively provide a pulse output that represents the internal reference voltage, cell voltage, cell current and temperature, as well as control the states of four internal balancing and two external MOSFET switches. A microcontroller time reference output is available for gas gauge implementation. This protection circuit requires a minimum number of external components and is targeted for inclusion within the battery pack. The MC33346 is available in standard and low profile 24 lead surface mount packages.

- Independently Programmable Charge and Discharge Limits for Both Voltage and Current
- Delayed Current Shutdown
- Cell Voltage Balancing with On–Chip Resistors
- Six Wire Microcontroller Interface Bus
- Data Output for Reference, Voltage, Current, and Temperature
- Microcontroller Time Reference Output for Gas Gauging
- Virtually Zero Current Sleepmode State when Cells are Discharged
- Programmable for Three or Four Cell Applications
- Minimum External Components for Inclusion within the Battery Pack
- Available in Low Profile Surface Mount Packages

Typical Four Cell Smart Battery Pack



Battery Pack ICs (continued)

Lithium Battery Protection Circuit for One or Two Cell Battery Packs

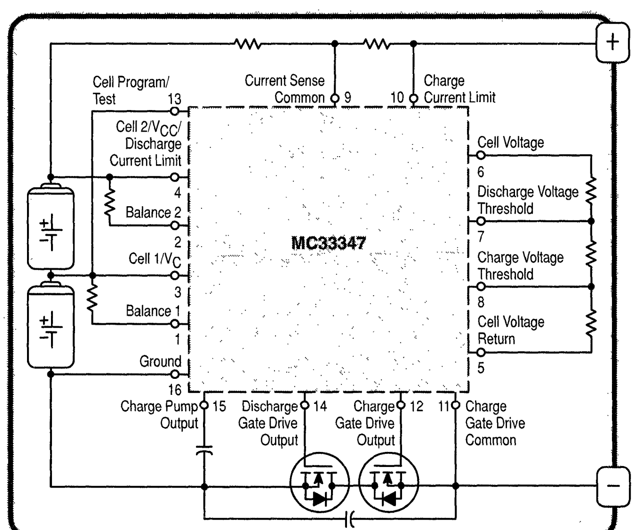
MC33347D, DTB

T_A = –25° to +85°C, Case 751B, 948F

The MC33347 is a monolithic lithium battery protection circuit that is designed to enhance the useful operating life of one or two cell rechargeable battery packs. Cell protection features consist of independently programmable charge and discharge limits for both voltage and current with a delayed current shutdown, continuous cell voltage balancing with the choice of on–chip or external balancing resistors, and a virtually zero current sleepmode state when the cells are discharged. Additional features include an on–chip charge pump for reduced MOSFET losses while charging or discharging a low cell voltage battery pack, and the programmability for one or two cell battery pack. This protection circuit requires a minimum number of external components and is targeted for inclusion within the battery pack. This MC33347 is avaialble in standard and low profile 16 lead surface mount packages.

- Independently Programmable Charge and Discharge Limits for Both Voltage and Current
- Charge and Discharge Current Limit Detection with Delayed Shutdown
- Continuous Cell Voltage Balancing
- On–Chip or External Balancing Resistors
- Virtually Zero Current Sleepmode State when Cells are Discharged
- Charge Pump for Reduced Losses with a Low Cell Voltage Battery Pack
- Programmable for One or Two Cell Applications
- Minimum External Components for Inclusion within the Battery Pack
- Available in Low Profile Surface Mount Packages

Typical Two Cell Smart Battery Pack



Battery Pack ICs (continued)

Lithium Battery Protection Circuit for One Cell Battery Packs

MC33348D, DM

T_A = –25° to +85°C, Case 751, 846A

The MC33348 is a monolithic lithium battery protection circuit that is designed to enhance the useful operating life of one cell rechargeable battery pack. Cell protection features consist of internally trimmed charge and discharge voltage limits, discharge current limit detection with a delayed shutdown, and a virtually zero current sleepmode state when the cell is discharged. An additional feature includes an on–chip charge pump for reduced MOSFET losses while charging or discharging a low cell voltage battery pack. This protection circuit requires a minimum number of external components and is targeted for inclusion within the battery pack. This MC33348 is available in standard and micro 8 lead surface mount packages.

- Internally Trimmed Charge and Discharge Voltage Limits
- Discharge Current Limit Detection with Delayed Shutdown
- Virtually Zero Current Sleepmode State when Cells are Discharged
- Charge Pump for Reduced Losses with a Low Cell Voltage Battery Pack
- Dedicated for One Cell Applications
- Minimum Components for Inclusion within the Battery Pack
- Available in Low Profile Surface Mount Packages

Typical One Cell Smart Battery Pack

MOSFET/IGBT Drivers

High Speed Dual Drivers

(Inverting)

MC34151P, D

T_A = 0° to +70°C, Case 626, 751

MC33151P, D

T_A = –40° to +85°C, Case 626, 751

(Noninverting)

MC34152P, D

T_A = 0° to +70°C, Case 626, 751

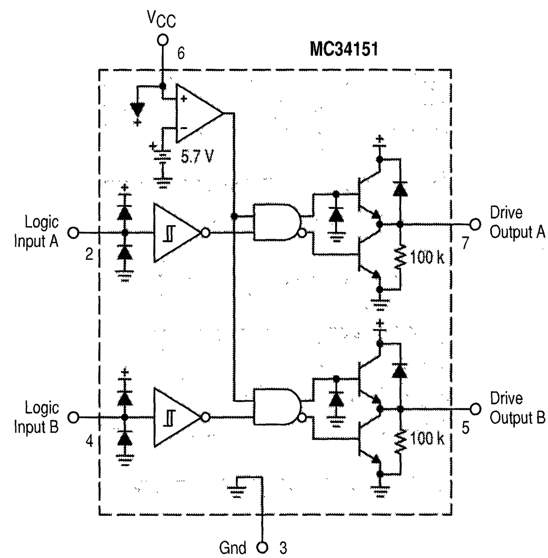
MC33152P, D

T_A = –40° to +85°C, Case 626, 751

These two series of high speed dual MOSFET driver ICs are specifically designed for applications requiring low current digital circuitry to drive large capacitive loads at high slew rates. Both series feature a unique undervoltage lockout function which puts the outputs in a defined low state in an undervoltage condition. In addition, the low "on" state resistance of these bipolar drivers allows significantly higher output currents at lower supply voltages than with competing drivers using CMOS technology.

The MC34151 series is pin–compatible with the MMH0026 and DS0026 dual MOS clock drivers, and can be used as drop–in replacements to upgrade system performance. The MC34152 noninverting series is a mirror image of the inverting MC34151 series.

These devices can enhance the drive capabilities of first generation switching regulators or systems designed with CMOS/TTL logic devices. They can be used in dc–to–dc converters, motor controllers, capacitor charge pump converters, or virtually any other application requiring high speed operation of power MOSFETs.



Single IGBT Driver

MC33153P, D

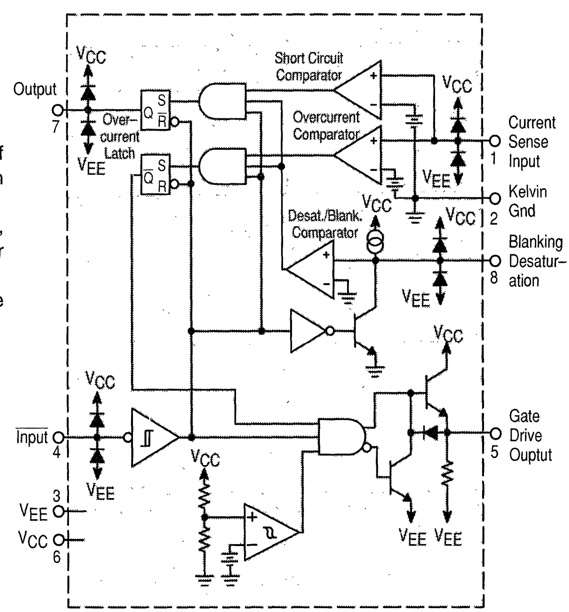
T_A = –40° to +105°C, Case 626, 751

The MC33153 is specifically designed to drive the gate of an IGBT used for ac induction motors. It can be used with discrete IGBTs and IBGT modules up to 100 A.

Typical applications are ac induction motor control, brushless dc motor control, and uninterruptable power supplies.

These devices are available in dual–in–line and surface mount packages and include the following features:

- High Current Output Stage : 1.0 A Source – 2.0 A Sink
- Protection Circuits for Both Conventional and SenseIGBTs
- Current Source for Blanking Timing
- Protection Against Overcurrent and Short Circuit
- Undervoltage Lockout Optimized for IGBT's
- Negative Gate Drive Capability



Single IGBT Gate Driver

MC33154D, P

T_A = –40° to +85°C, Case 626, 751

The MC33154 is specifically designed as an IGBT driver for high power applications including ac induction motor control, brushless dc motor control and uninterruptible power supplies.

The MC33154 is similar to the MC33153, except that the output drive is in–phase with the logic input, the output source current drive is four times higher and the supply voltage rating is higher.

Although designed for driving discrete and module IGBTs, this device offers a cost effective solution for driving power MOSFETs and Bipolar Transistors.

These devices are available in dual–in–line and surface mount packages and include the following features:

- High Current Output Stage: 4.0 A Source/2.0 A Sink
- Protection Circuits for Both Conventional and Sense IGBTs
- Programmable Fault Blanking Time
- Protection against Overcurrent and Short Circuit
- Undervoltage Lockout Optimzed for IGBTs
- Negative Gate Drive Capability
- Cost Effectively Drives Power MOSFETs and Bipolar Transistors

Power/Motor Control Circuits

In Brief . . .

With the expansion of electronics into more and more mechanical systems, there comes an increasing demand for simple but intelligent circuits that can blend these two technologies. In the past, the task of power/motor control was once accomplished with discrete devices. But today this task is being performed by bipolar IC technology due to cost, size, and reliability constraints. Motorola offers integrated circuits designed to anticipate the requirements for both simple and sophisticated control systems, while providing cost effective solutions to meet the needs of the applications.

Power Controllers

An assortment of battery and ac line–operated control ICs for specific applications are shown. They are designed to enhance system performance and reduce complexity in a wide variety of control applications.

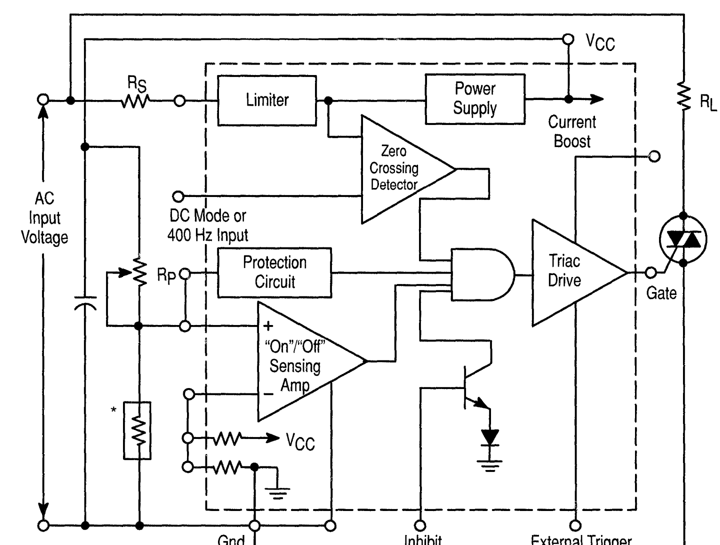
Zero Voltage Switch

CA3059

T_A = –40° to +85°C, Case 646

This device is designed for thyristor control in a variety of ac power switching applications for ac input voltages of 24 V, 120 V, 208/230 V, and 227 V @ 50/60 Hz.

- **Limiter–Power Supply** – Allows operation directly from an ac line.
- **Differential "On"/"Off" Sensing Amplifier** – Tests for condition of external sensors or input command signals. Proportional control capability or hysteresis may be implemented.
- **Zero–Crossing Detector** – Synchronizes the output pulses to the zero voltage point of the ac cycle. Eliminates RFI when used with resistive loads.
- **Triac Drive** – Supplies high current pulses to the external power controlling thyristor.
- **Protection Circuit** – A built–in circuit may be actuated, if the sensor opens or shorts, to remove the drive circuit from the external triac.
- **Inhibit Capability** – Thyristor firing may be inhibited by the action of an internal diode gate.
- **High Power DC Comparator Operation** – Operation in this mode is accomplished by connecting Pin 7 to 12 (thus overriding the action of the zero–crossing detector).



*NTC Sensor

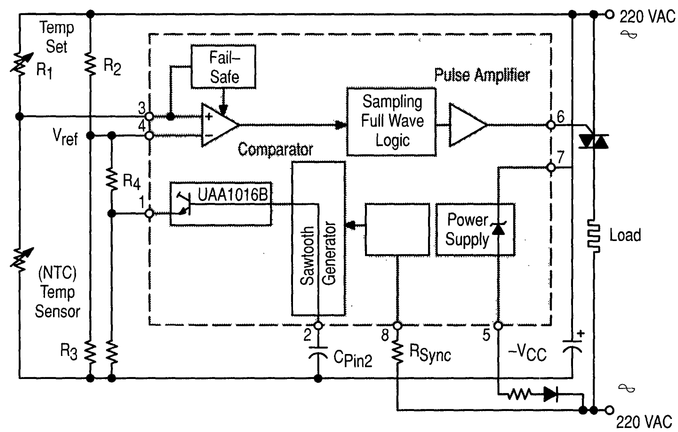
Zero Voltage Controller

UAA1016B

T_A = –20° to +100°C, Case 626

The UAA1016B is designed to drive triacs with the Zero voltage technique which allows RFI free power regulation of resistive loads. It provides the following features:

- Proportional Temperature Control Over an Adjustable Band
- Adjustable Burst Frequency (to Comply with Standards)
- No DC Current Component Through the Main Line (to Comply with Standards)
- Negative Output Current Pulses (Triac Quadrants 2 and 3)
- Direct AC Line Operation
- Low External Components Count



Zero Voltage Controller

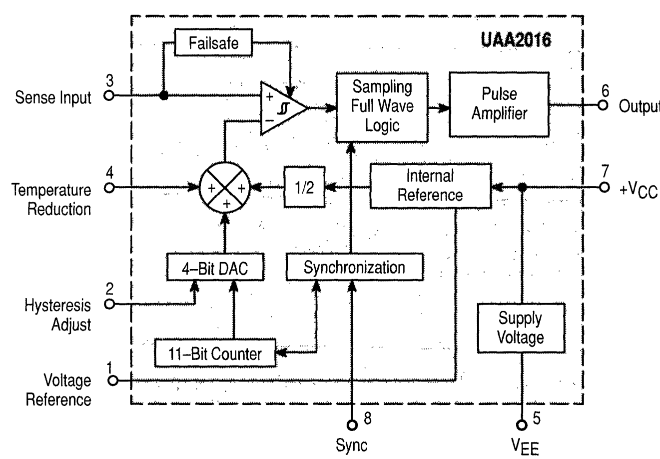
UAA2016P, D

T_A = –20° to +85°C, Case 626, 751

The UAA2016 is designed to drive triacs with the Zero Voltage technique which allows RFI free power regulation of resistive loads. Operating directly on the ac power line, its main application is the precision regulation of electrical heating systems such as panel heaters or irons.

A built–in digital sawtooth waveform permits proportional temperature regulation action over a ±1°C band around the set point. For energy savings there is a programmable temperature reduction function, and for security, a sensor failsafe inhibits output pulses when the sensor connection is broken. Preset temperature (i.e., defrost) application is also possible. In applications where high hysteresis is needed, its value can be adjusted up to 5°C around the set point. All these features are implemented with a very low external component count.

- Zero Voltage Switch for Triacs, up to 2.0 kW (MAC212A8)
- Direct AC Line Operation
- Proportional Regulation of Temperature over a 1°C Band
- Programmable Temperature Reduction
- Preset Temperature (i.e., Defrost)
- Sensor Failsafe
- Adjustable Hysteresis
- Low External Component Count



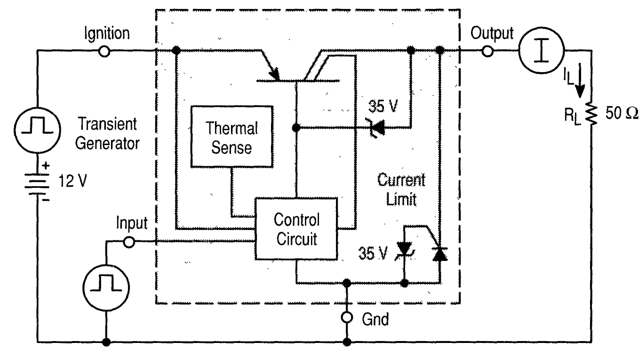
High–Side Driver Switch

MC3399T, DW

T_J = –40° to +150°C, Case 314D, 751G

The MC3399T is a high side driver switch that is designed to drive loads from the positive side of the power supply. The output is controlled by a TTL compatible Enable pin. In the "on" state, the device exhibits very low saturation voltages for load currents in excess of 750 mA. The device also protects the load from positive or negative–going high voltage transients by becoming an open circuit and isolating the transient for its duration from the load.

The MC3399T is fabricated on a Power BiMOS process which combines the best features of Bipolar and MOS technologies. The mixed technology provides higher gain PNP output devices and results in Power Integrated Circuits with reduced quiescent current.



Motor Controllers

This section contains integrated circuits designed for cost effective control of specific motor families. Included are controllers for brushless, dc servo, stepper, and universal type motors.

Brushless DC Motor Controllers

Advances in magnetic materials technology and integrated circuits have contributed to the unprecedented rise in popularity of brushless dc motors. Analog control ICs are making the many features and advantages of brushless motors available at a much more economical price. Motorola offers a family of monolithic integrated brushless dc motor controllers. These ICs provide a choice of control functions which allow many system features to be easily implemented at a fraction of the cost of discrete solutions. The following table summarizes and compares the features of Motorola's brushless motor controllers.

Table 1. Features Summary for Motorola Brushless DC Motor Controllers

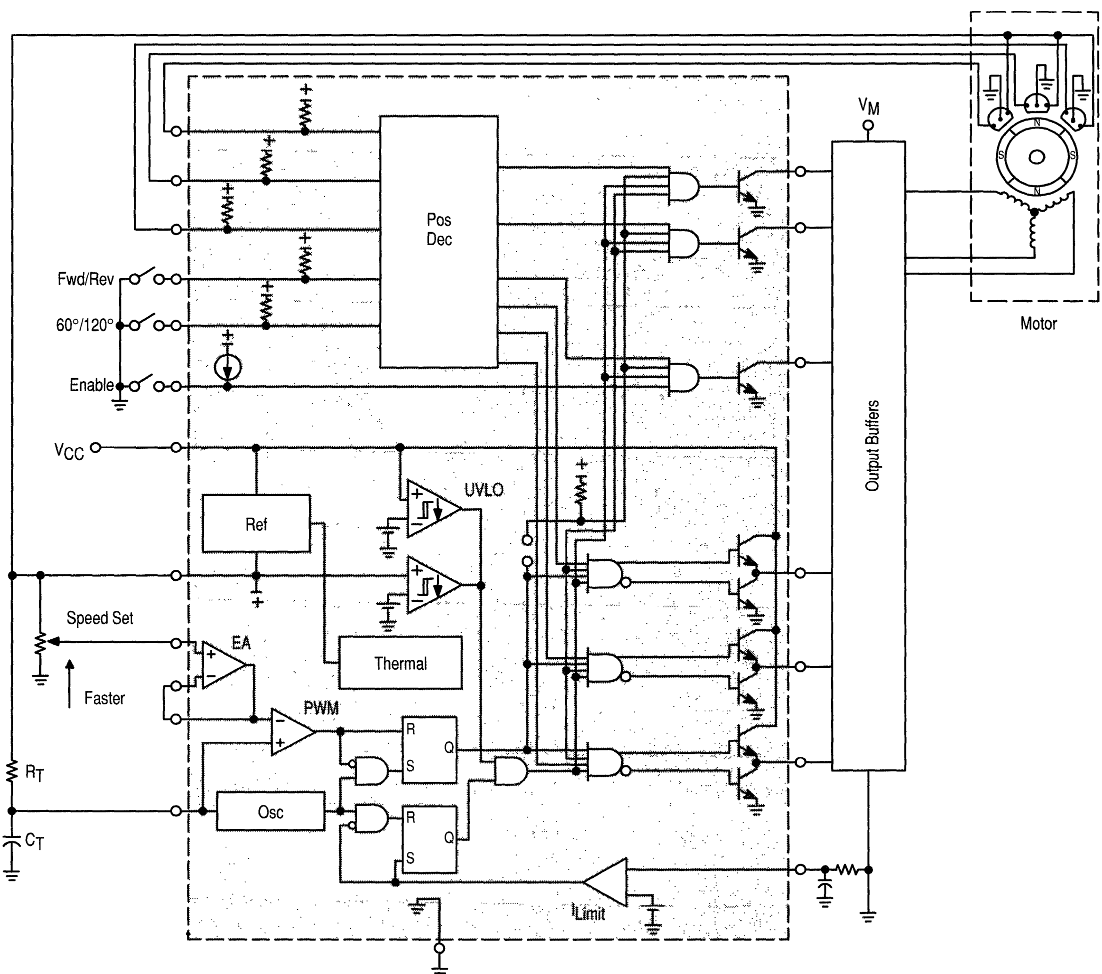
Device	Operating Voltage Range (V)		Undervoltage Lockout	Internal Thermal Shutdown	Fwd/Rev Control	Sensor Electrical Phasing	Output Enable	Output Drivers		6.25 V Reference Output	Current Sense Comparator Input(s)	Error Amplifier	$\overline{FAULT}$ Output	Separate Drive V_C	Brake Input	Suffix/ Package
	V_{CC}	V_C						Totem Pole (Bottom)	Open Collector (Top)							
MC33033	10–30	–	✓	✓	✓	60°/300° and 120°/240°	✓	✓	✓	✓	Noninv. Only	✓	–	–	–	P/738, DW/751D
MC33035	10–40	10–30	✓	✓	✓		✓	✓	✓	✓	Noninv. and Inv.	✓	✓	✓	✓	P/724, DW/751E

MC33033P, DW

T_A = –40° to +85°C, Case 738, 751D

The MC33033 is a lower cost second generation brushless dc motor controller which has evolved from the full featured MC33035 controller. The MC33033 contains all of the active functions needed to implement a low cost open loop motor control system. This IC has all of the key control and protection functions of the two full featured devices with the following secondary features deleted: separate drive–circuit supply and ground pins, the brake input, and the fault output signal. Like its MC33035 predecessor, the MC33033 has a control pin which allows the user to select 60°/300° or 120°/240° sensor electrical phasings.

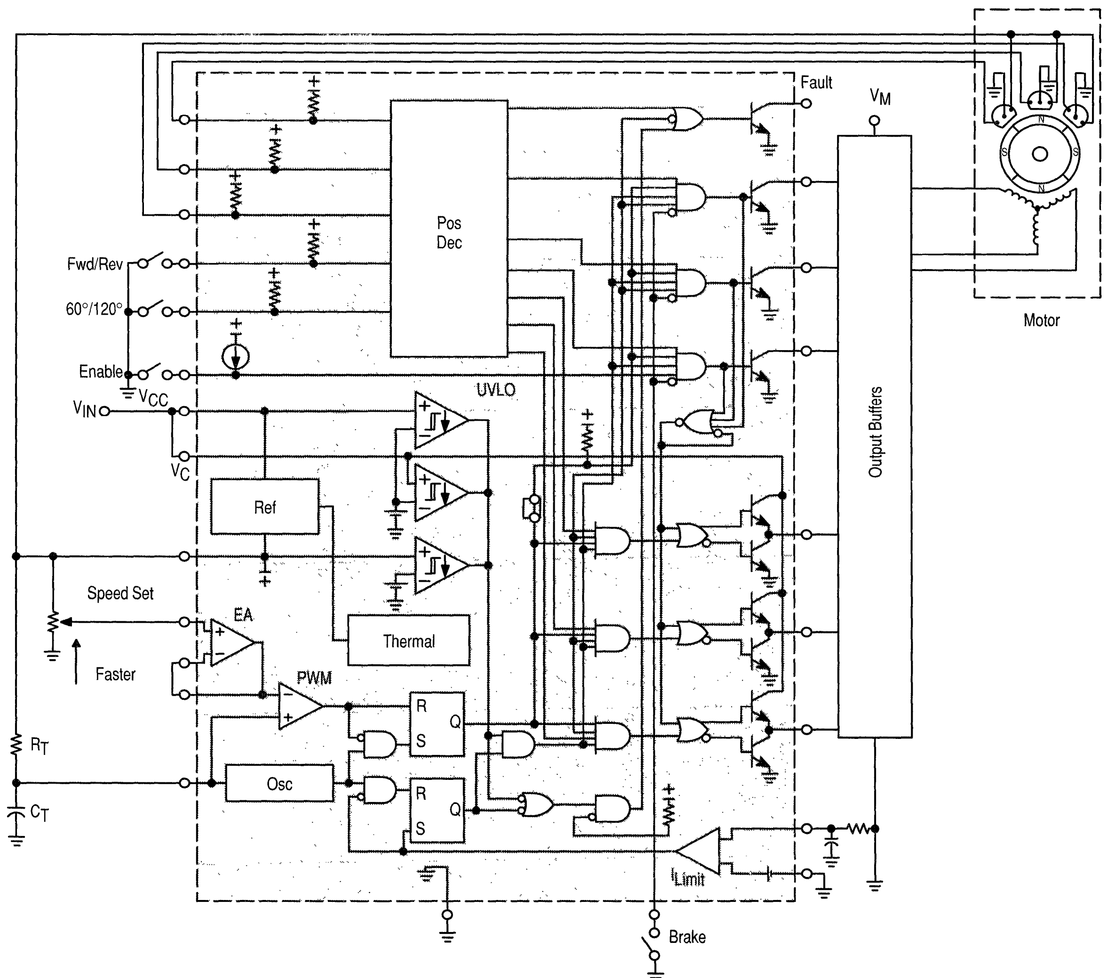
Because of its low cost, the MC33033 can efficiently be used to control brush dc motors as well as brushless. A brush dc motor can be driven using two of the three drive output phases provided in the MC33033, while the Hall sensor input pins are selectively tied to V_{ref} or ground. Other features such as forward/reverse, output enable, speed control, current limiting, undervoltage lockout and internal thermal shutdown will still remain functional.



MC33035P, DW

T_A = –40° to +85°C, Case 724, 751E

The MC33035 is a second generation high performance brushless dc motor controller which contains all of the active functions required to implement a full featured open loop motor control system. While being pin–compatible with an earlier device, the MC33035 offers additional features at a lower price. The two additional features provided by the MC33035 are a pin which allows the user to select 60°/300° or 120°/240° sensor electrical phasings, and access to both inverting and noninverting inputs of the current sense comparator. The earlier devices had two part numbers which were needed to support the different sensor phasings, and the inverting input to the current sense comparator was internally grounded. All of the control and protection features of the earlier device are also provided in the MC33035.

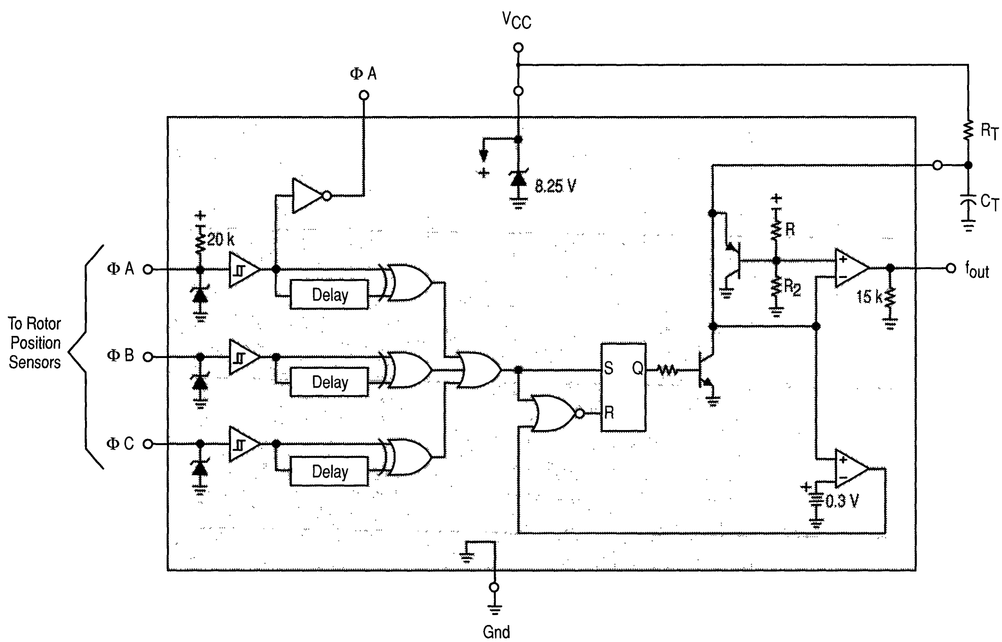


Closed Loop Brushless Motor Adapter

MC33039P, D

T_A = –40° to +85°C, Case 626, 751

The MC33039 is a high performance close loop speed control adapter specifically designed for use in brushless dc motor control systems. Implementation will allow precise speed regulation without the need for a magnetic or optical tachometer. These devices contain three input buffers each with hysteresis for noise immunity, three digital edge detectors, a programmable monostable, and an internal shunt regulator. Also included is an inverter output for use in systems that require conversion of sensor phasing. Although this device is primarily intended for use with the MC33033/35 brushless motor controllers, it can be used cost effectively in many other closed loop speed control applications.

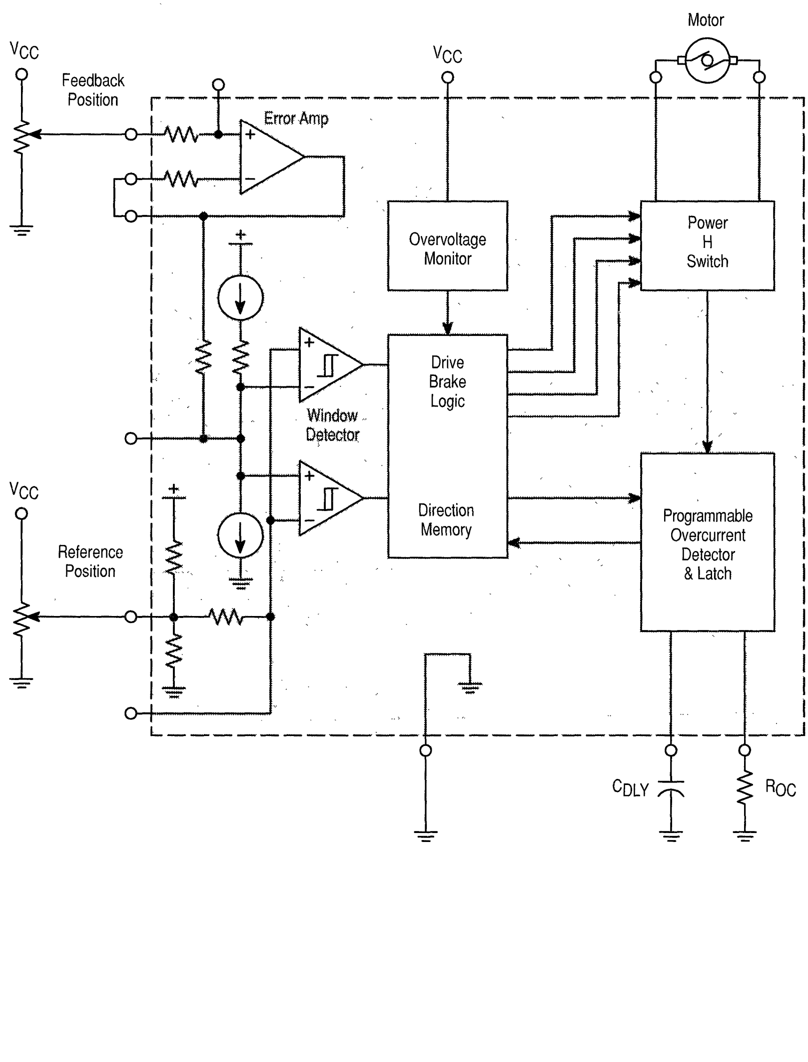


DC Servo Motor Controller/Driver

MC33030P, DW

T_A = –40° to +85°C, Case 648C, 751G

A monolithic dc servo motor controller providing all active functions necessary for a complete closed loop system. This device consists of an on–chip op amp and window comparator with wide input common mode range, drive and brake logic with direction memory, a power H switch driver capable of 1.0 A, independently programmable over current monitor and shutdown delay, and over voltage monitor. This part is ideally suited for almost any servo positioning application that requires sensing of temperature, pressure, light, magnetic flux, or any other means that can be converted to a voltage.



Motor Controllers (continued)

Stepper Motor Driver

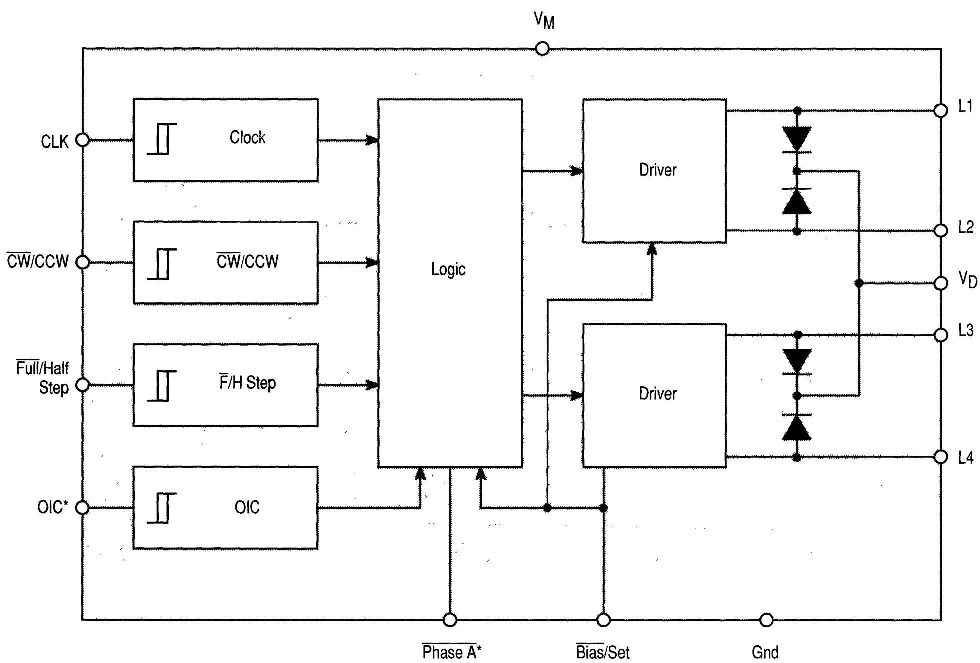
MC3479P, FN

T_A = 0° to +70°C, Case 648C, 775

SAA1042V

T_A = –30° to +125°C, Case 648C

These Stepper Motor Drivers provide up to 500 mA of drive per coil for two phase 6.0 V to 24 V stepper motors. Control logic is provided to accept commands for clockwise, counter clockwise and half or full step operation. The MC3479 has an added Output Impedance Control (OIC) and a $\overline{\text{Phase A}}$ drive state indicator (not available on SAA1042 devices).



* MC3479 Only

Universal Motor Speed Controller

TDA1085C, CD

T_A = –10° to +120°C, Case 648, 751B

The TDA1085C is a phase angle triac controller having all the necessary functions for universal motor speed control in washing machines. It operates in closed loop configuration and provides two ramp possibilities.

- On-Chip Frequency to Voltage Converter
- On-Chip Ramps Generator
- Soft Start
- Load Current Limitation
- Tachogenerator Circuit Sensing
- Direct Supply from AC Line
- Security Functions Peformed by Monitor

Voltage References

In Brief . . .

Motorola's line of precision voltage references is designed for applications requiring high initial accuracy, low temperature drift, and long term stability. Initial accuracies of ±1.0%, and ±2.0% mean production line adjustments can be eliminated. Temperature coefficients of 25 ppm/°C max (typically 10 ppm/°C) provide excellent stability. Uses for the references include D/A converters, A/D converters, precision power supplies, voltmeter systems, temperature monitors, and many others.

Precision Low Voltage References

A family of precision low voltage bandgap reference devices designed for applications requiring low temperature drift.

Table 1. Precision Low Voltage References

Data Conversion

In Brief . . .

Motorola's line of digital–to–analog and analog–to–digital converters include several varieties to suit a number of applications.

The A/D converters include an 8–bit flash converter suitable for NTSC and PAL systems. CMOS devices include 8 to 10–bit converters, as well as other high speed digitizers.

The D/A converters have 6 and 8–bit devices, and video speed (for NTSC and PAL) devices.

Data Conversion

The line of data conversion products which Motorola offers spans a wide spectrum of speed and resolution/accuracy. Features, including bus compatibility, minimize external parts count and provide easy interface to microprocessor systems. Various technologies, such as Bipolar and CMOS, are utilized to achieve functional capability, accuracy and production repeatability. Bipolar technology generally results in higher speed, while CMOS devices offer greatly reduced power consumption.

Interface Circuits

In Brief . . .

Described in this section is Motorola's line of interface circuits, which provide the means for interfacing with microprocessor or digital systems and the external world, or to other systems.

Also included are devices which allow a microprocessor to communicate with its own array of memory and peripheral I/O circuits.

The line drivers, receivers, and transceivers permit communication between systems over cables of several thousand feet in length, and at data rates of up to several megahertz. The common EIA data transmission standards, several European standards, and IEEE–488 are addressed by these devices.

The peripheral drivers are designed to handle high current loads such as relay coils, lamps, stepper motors, and others. Input levels to these drivers can be TTL, CMOS, high voltage MOS, or other user defined levels. The display drivers are designed for LCD or LED displays, and provide various forms of decoding.

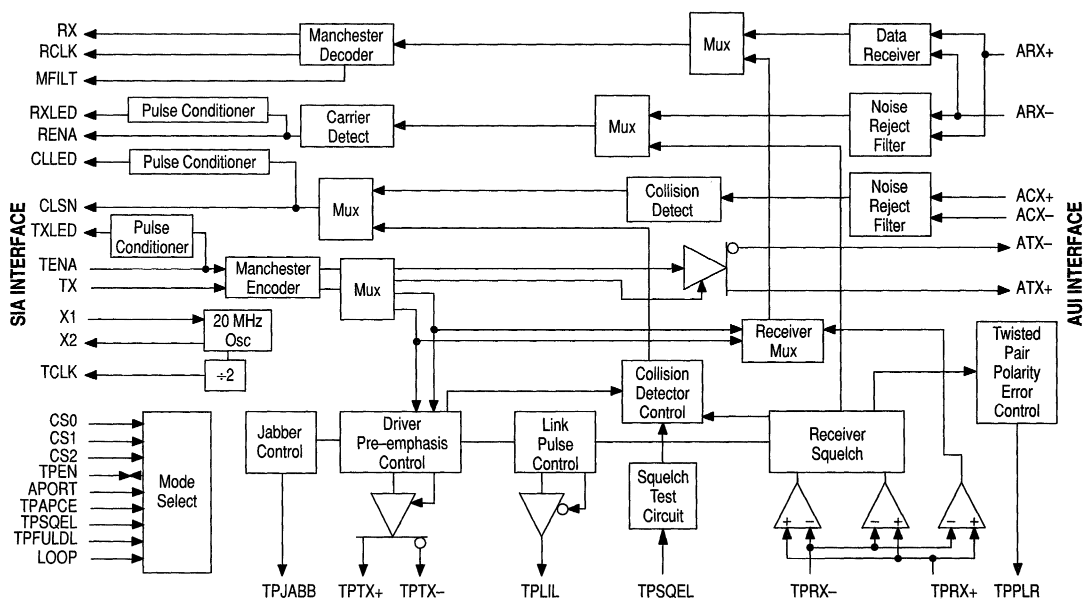
Page

Enhanced Ethernet Transceiver

MC68160FB

T_A = 0° to +70°C, Case 848D

The MC68160 Enhanced Ethernet Interface Circuit is a BiCMOS device which supports both IEEE 802.3 Access Unit Interface (AUI) and 10BASE–T Twisted Pair (TP) Interface media connections through external isolation transformers. It encodes NRZ data to Manchester data and supplies the signals which are required for data communication via 10BASE–T or AUI interfaces. The MC68160 gluelessly interfaces to the Ethernet controller contained in the MC68360 Quad Integrated Communications Controller (QUICC) device. The MC68160 also interfaces easily to most other industry–standard IEEE 802.3 LAN controllers. Prior to twisted pair data reception, Smart Squelch circuitry qualifies input signals for correct amplitude, pulse width, and sequence requirements.

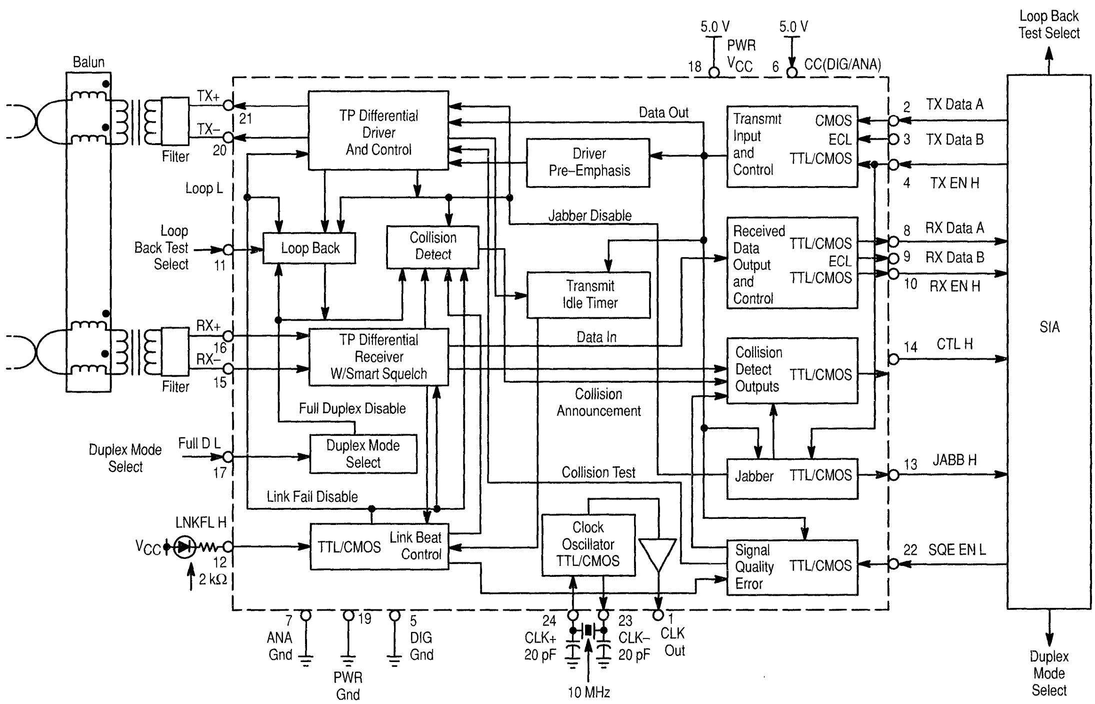


ISO 8802–3[IEEE 802.3] 10BASE–T Transceiver

MC34055DW

T_A = 0° to +70°C, Case 751E

The Motorola 10BASE–T transceiver, designed to comply with the ISO 8802–3[IEEE 802.3] 10BASE–T specification, will support a Medium Dependent Interface (MDI) in an embedded Media Attachment Unit (MAU). The interface supporting the Data Terminal Equipment (DTE) is TTL, CMOS, and raised ECL compatible, and the interface to the Twisted Pair (TP) media is supported through standard 10BASE–T filters and transformers. Differential data intended for the TP media is provided a 50 ns pre–emphasis and data at the TP receiver, is screened by Smart Squelch circuitry for specific threshold, pulse width, and sequence requirements.



Hex EIA–485 Transceiver with Three–State Outputs

MC34058/59FTA

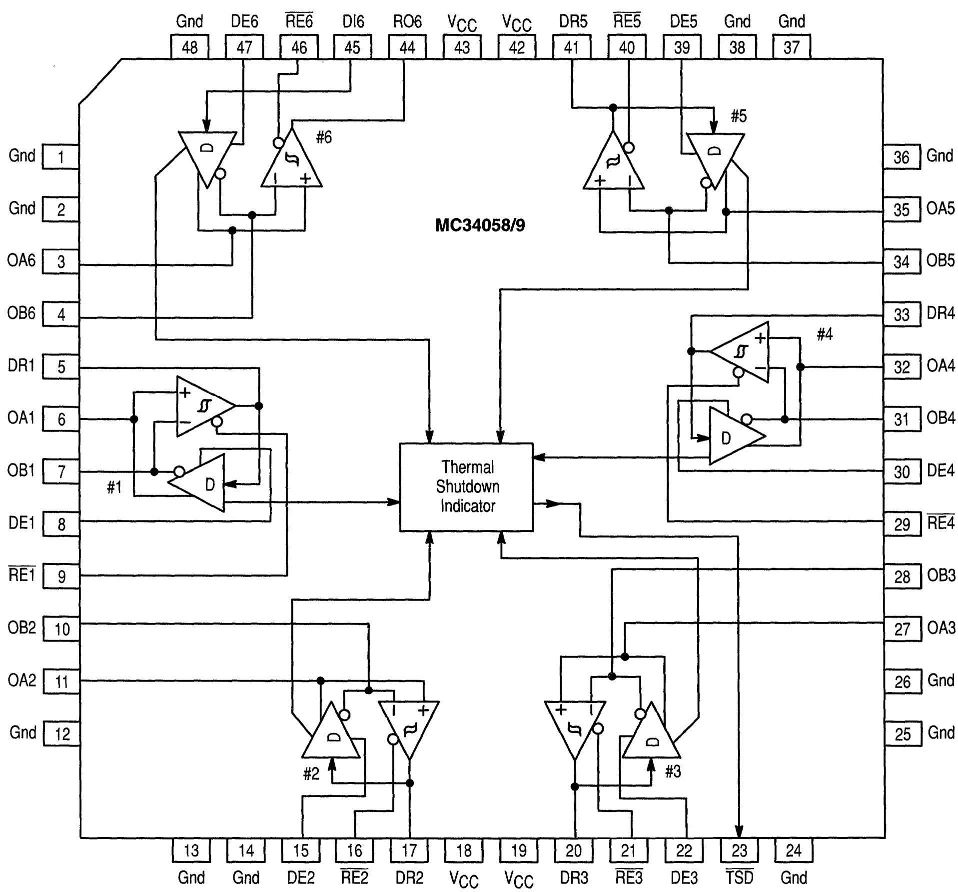
T_A = 0° to +70°C, Case 932

The Motorola MC34058/9 Hex Transceiver is composed of six driver/receiver combinations designed to comply with the EIA–485 standard. Features include three–state outputs, thermal shutdown for each driver, and current limiting in both directions. This device also complies with EIA–422 and CCITT Recommendations V.11 and X.27.

The devices are optimized for balanced multipoint bus transmission at rates to 20 MBPS (MC34059). The driver outputs/receiver inputs feature a wide common mode voltage range, allowing for their use in noisy environments. The current limit and thermal shutdown features protect the devices from line fault conditions.

The MC34058/9 is available in a space saving 7.0 mm 48 lead surface mount quad package designed for optimal heat dissipation.

- Meets EIA–485 Standard for Party Line Operation
- Meets EIA–422A and CCITT Recommendations V.11 and X.27
- Operating Ambient Temperature: 0°C to +70°C
- Common Mode Driver Output/Receiver Input Range: –7.0 to +12 V
- Positive and Negative Current Limiting
- Transmission Rates to 14 MBPS (MC34058) and 20 MBPS (MC34059)
- Driver Thermal Shutdown at 150°C Junction Temperature
- Thermal Shutdown Active Low Output
- Single +5.0 V Supply, ±10%
- Low Supply Current
- Compact 7.0 mm 48 Lead TQFP Plastic Package
- Skew Specified for MC34059



5.0 V, 200 M–Bit/Sec PR–IV Hard Disk Drive Read Channel

MC34250FTA

T_A = 0° to +70°C, Case 840F

The Motorola MC34250 is a fully integrated partial response maximum likelihood disk drive read/write channel for use in zoned recording applications. This device integrates the AGC, active filter, 7 tap equalizer, Viterbi detector, frequency synthesizer, servo demodulator, 8/9 rate (0,4/4) Encoder/Decoder with write precompensation and power management in a single 64 pin 10 mm x 10 mm TQFP package.

FEATURES:

- 50 to 200 MBPS Programmable Data Rate
- 800 mW at 200 MBPS and 5.0 V
- Channel Monitor Output
- Programmable AGC Charge Pump Currents with Different Values for Data and Servo Envelope Modes and Gain Gradient Mode
- Programmable AGC Peak Detector Droop Currents with Different Values for Data and Servo Envelope Modes
- Separate AGC Charge Pump Outputs for Data and Servo Modes
- Programmable Dual Threshold Qualifier or Hysteresis Comparator Type Pulse Detector for Servo Data Detection.
- ERD and Polarity Outputs for Servo Timing and Raw Encoded Data
- Integrated 7 pole 0.05° Equiripple Linear Phase Filter with Programmable Bandwidth from 5.0 MHz to 80 MHz and Different Values for Both Data and Servo Modes
- Programmable Symmetrical Boost from 0 to 10 dB and Different Values for Data and Servo Modes
- Programmable Asymmetrical Boost of Up to ±40% of Nominal Filter Group Delay in Both Data and Servo Modes
- 7 Tap Continuous Time Transversal Equalizer with 8 Bit Programmable Tap Weights and Integrated Decision Directed Sign–Sign Least Mean Squared Adaptation
- Internal Offset Cancellation Loops
- Fast Acquisition Data Phase Locked Loop with Zero Phase Restart
- Programmable Data Phase Locked Loop Charge Pump Current
- Integrated Soft Decision Viterbi Detectors with Programmable Merge References
- Integrated 8/9 Rate (0,4/4) Encoder and Decoder with Code Scrambler and Descrambler
- Programmable 2/4/8 Bit NRZ Data Interface
- Programmable Write Precompensation Delays Locked to the Frequency Synthesizer
- Differential PECL Write Data Outputs
- External Write Data Path for DC Erase or Other Non–Encoded Data
- Integrated Write Current DAC
- Programmable Power Management
- Bi–Directional Serial Microprocessor Interface
- Various Test Modes Controlled Via the Serial Microprocessor Interface

Communication Circuits

In Brief . . .

RF

Radio communication has greatly expanded its scope in the past several years. Once dominated by public safety radio, the 30 to 1000 MHz spectrum is now packed with personal and low cost business radio systems. The vast majority of this equipment uses FM or FSK modulation and is targeted at short range applications. From mobile phones and VHF marine radios to garage door openers and radio controlled toys, these new systems have become a part of our lifestyle. Motorola Analog has focused on this technology, adding a wide array of new products including complete receivers processed in our exclusive 3.0 GHz MOSAIC® 1.5 process. New surface mount packages for high density assembly are available for all of these products, as well as a growing family of supporting application notes and development kits.

Telephone & Voice/Data

Traditionally, an office environment has utilized two distinctly separate wired communications systems: telecommunications and data communications. Each had its individual hardware components complement, and each required its own independent transmission line system: twisted wire pairs for Telecom and relatively high priced coaxial cable for Datacom. But times have changed. Today, Telecom and Datacom coexist comfortably on inexpensive twisted wire pairs and use a significant number of components in common. This has led to the development and enhancement of PBX (Private Branch Exchanges) to the point where the long heralded "office of the future," with simultaneous voice and data communications capability at each station, is no longer of the future at all. The capability is here today!

Motorola Semiconductor serves a wide range of requirements for the voice/data marketplace. We offer both CMOS and Analog technologies, each to its best advantage, to upgrade the conventional analog voice systems and establish new capabilities in digital communications. Early products, such as the solid–state single–chip crosspoint switch, the more recent monolithic Subscriber–Loop–Interface Circuit (SLIC), a single–chip Codec/Filter (Mono–Circuit), the Universal Digital Loop Transceivers (UDLT), basic rate ISDN (Integrated Services Digital Network), and single–chip telephone circuits are just a few examples of Motorola leadership in the voice/data area.

Device	V_{CC}	I_{CC}	P_{out}	Max RF Freq Out	Max Mod Freq	Notes	Suffix/ Package
MC2833	3–8 V	10 mA	–30 dBm to +10 dBm	150 MHz	50 kHz	FM transmitter. Includes two frequency multiplier/amplifier transistors	P/648, D/751B
MC13175	2–5 V	40 mA	8.0 dBm	500 MHz	5.0 MHz	AM/FM transmitter. Single frequency PLL $f_{out} = 8 \times f_{ref}$, includes power down function	D/751B
MC13176				1.0 GHz		$f_{out} = 32 \times f_{ref}$, includes power down function	

Table 8. Balanced Modulator/Demodulator

Device	V_{CC}	I_{CC}	Function	Suffix/ Package
MC1496	3–5 V	10 mA	General purpose balanced modulator/demodulator for AM, SSB, FM detection with Carrier Balance >50 dB	P/646, D/751A

Table 9. Infrared Transceiver

Device	V_{CC}	I_{CC}	12 dB SINAD Sensitivity (Typ)	Max IF Freq	Carr Det	RSSI	Data Rate	Notes	Suffix/ Package
MC13173	3–5 V	6.5 mA	5.0 µV	10.7 MHz	✓	✓	200 kb	Includes Single Frequency PLL for T_X Carrier and R_X L_O	FTB/873

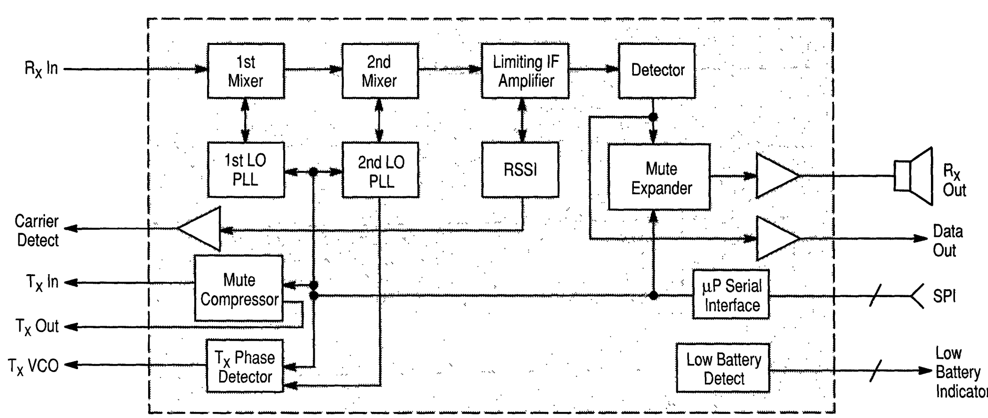
Universal Cordless Telephone Subsystem IC

MC13109FB, FTA

T_A = –20° to +85°C, Case 848B, 932

The MC13109 integrates several of the functions required for a cordless telephone into a single integrated circuit. This significantly reduces component count, board space requirements, and external adjustments. It is designed for use in both the handset and the base.

- Dual Conversion FM Receiver
  - Complete Dual Conversion Receiver – Antenna Input to Audio Output 80 MHz Maximum Carrier Frequency
  - RSSI Output
  - Carrier Detect Output with Programmable Threshold
  - Comparator for Data Recovery
  - Operates with Either a Quad Coil or Ceramic Discriminator
- Compander
  - Expandor Includes Mute, Digital Volume Control and Speaker Driver
  - Compressor Includes Mute, ALC and Limiter
- Dual Universal Programmable PLL
  - Supports New 25 Channel U.S. Standard with No External Switches
  - Universal Design for Domestic and Foreign CT–1 Standards
  - Digitally Controlled Via a Serial Interface Port
  - Receive Side Includes 1st LO VCO, Phase Detector, and 14–Bit Programmable Counter and 2nd LO with 12–Bit Counter
  - Transmit Section Contains Phase Detector and 14–Bit Counter
  - MPU Clock Output Eliminates Need for MPU Crystal
- Supply Voltage Monitor
  - Externally Adjustable Trip Point
- 2.0 to 5.5 V Operation with One–Third the Power Consumption of Competing Devices



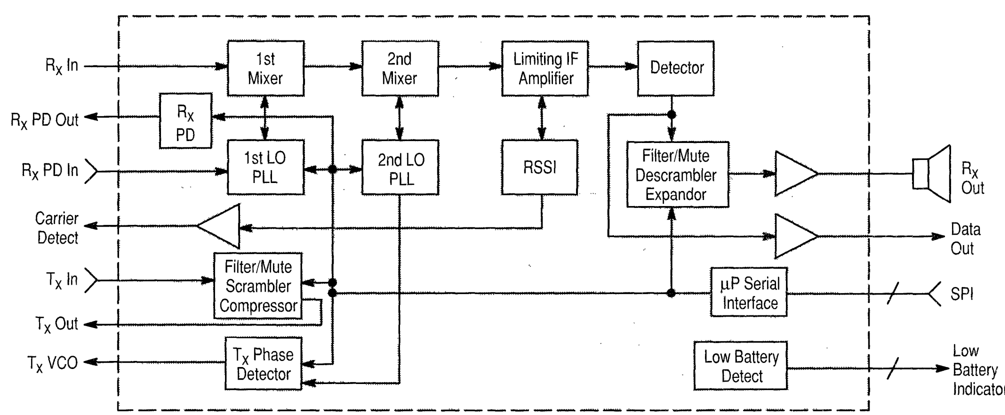
Universal Cordless Telephone Subsystem IC with Scrambler

MC13110FB

T_A = –40° to +85°C, Case 848B

The MC13110 integrates several of the functions required for a cordless telephone into a single integrated circuit. This significantly reduces component count, board space requirements, and external adjustments. It is designed for use in both the handset and the base.

- Dual Conversion FM Receiver
  - Complete Dual Conversion Receiver – Antenna In to Audio Out 80 MHz Maximum Carrier Frequency
  - RSSI Output
  - Carrier Detect Output with Programmable Threshold
  - Comparator for Data Recovery
  - Operates with Either a Quad Coil or Ceramic Discriminator
- Compander
  - Expandor Includes Mute, Digital Volume Control, Speaker Driver, 3.5 kHz Low Pass Filter, and Programmable Gain Block
  - Compressor Includes Mute, 3.5 kHz Low Pass Filter, Limiter, and Programmable Gain Block
- Dual Universal Programmable PLL
  - Supports New 25 Channel U.S. Standard with New External Switches
  - Universal Design for Domestic and Foreign CT–1 Standards
  - Digitally Controlled Via a Serial Interface Port
  - Receive Side Includes 1st LO VCO, Phase Detector, and 14–Bit Programmable Counter and 2nd LO with 12–Bit Counter
  - Transmit Section Contains Phase Detector and 14–Bit Counter
  - MPU Clock Outputs Eliminates Need for MPU Crystal
- Supply Voltage Monitor
  - Provides Two Levels of Monitoring with Separate Outputs
  - Separate, Adjustable Trip Points
- Frequency Inversion Scrambler/Descrambler
  - Can Be Enabled/Disabled Via MPU Interface
  - Programmable Carrier Modulation Frequency
- 2.7 to 5.5 V Operation with One–Third the Power Consumption of Competing Devices



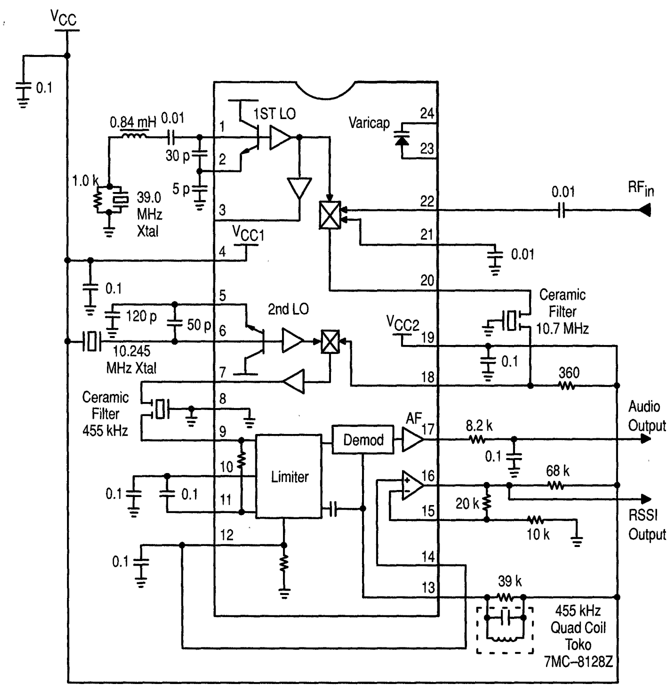
Narrowband FM Receiver

MC13135/136P, DW

T_A = –40° to +85°C, Case 724, 751E

The MC13135 is a full dual conversion receiver with oscillators, mixers, Limiting IF Amplifier, Quadrature Discriminator, and RSSI circuitry. It is designed for use in security systems, cordless phones, and VHF mobile and portable radios. Its wide operating supply voltage range and low current make it ideal for battery applications. The Received Signal Strength Indicator (RSSI) has 65 dB of dynamic range with a voltage output, and an operational amplifier is included for a dc buffered output. Also, an improved mixer third order intercept enables the MC13135 to accommodate larger input signal levels.

- Complete Dual Conversion Circuitry
- Low Voltage: 2.0 to 6.0 Vdc
- RSSI with Op Amp: 65 dB Range
- Low Drain Current: 3.5 mA Typical
- Improved First and Second Mixer 3rd Order Intercept
- Detector Output Impedance: 25 Ω Typically



Narrowband FM Coilless Detector IF Subsystem

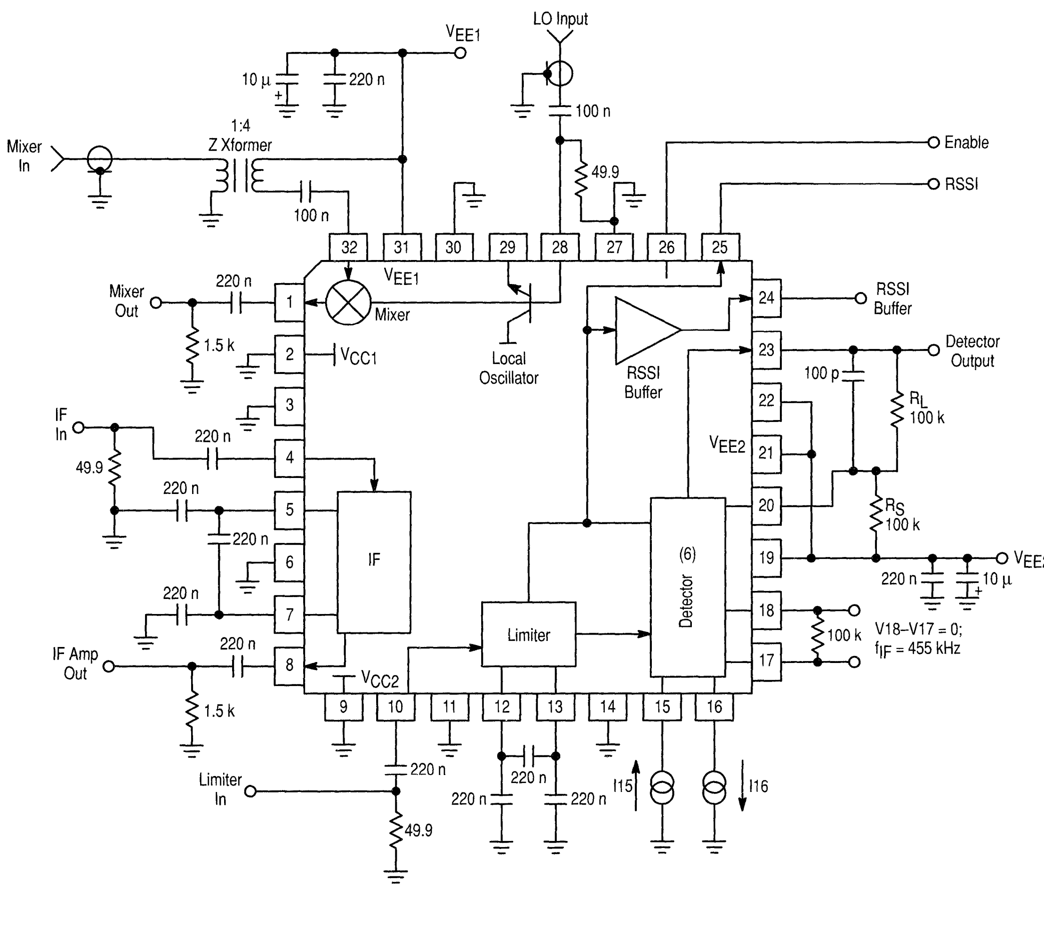
MC13150FTA, FTB

T_A = –40° to +85°C, Case 977, 873

The MC13150 is a narrowband FM IF subsystem targeted at cellular and other analog applications. Excellent high frequency performance is achieved, with low cost, through use of Motorola's MOSAIC 1.5™ RF bipolar process. The MC13150 has an onboard Colpitts VCO for Crystal controlled second LO in dual conversion receivers. The mixer is a double balanced configuration with excellent third order intercept. It is useful to beyond 200 MHz. The IF amplifier is split to accommodate two low cost cascaded filters. RSSI output is derived by summing the output of both IF sections. The quadrature detector is a unique design eliminating the conventional tunable quadrature coil.

Applications for the MC13150 include cellular, CT–1 900 MHz cordless telephone, data links and other radio systems utilizing narrowband FM modulation.

- Linear Coilless Detector
- Adjustable Demodulator Bandwidth
- 2.5 to 6.0 Vdc Operation
- Low Drain Current: < 2.0 mA
- Typical Sensitivity of 2.0 µV for 12 dB SINAD
- IIP3, Input Third Order Intercept Point of 0 dBm
- RSSI Range of Greater Than 100 dB
- Internal 1.4 kΩ Terminations for 455 kHz Filters
- Split IF for Improved Filtering and Extended RSSI Range



Wideband FM IF System

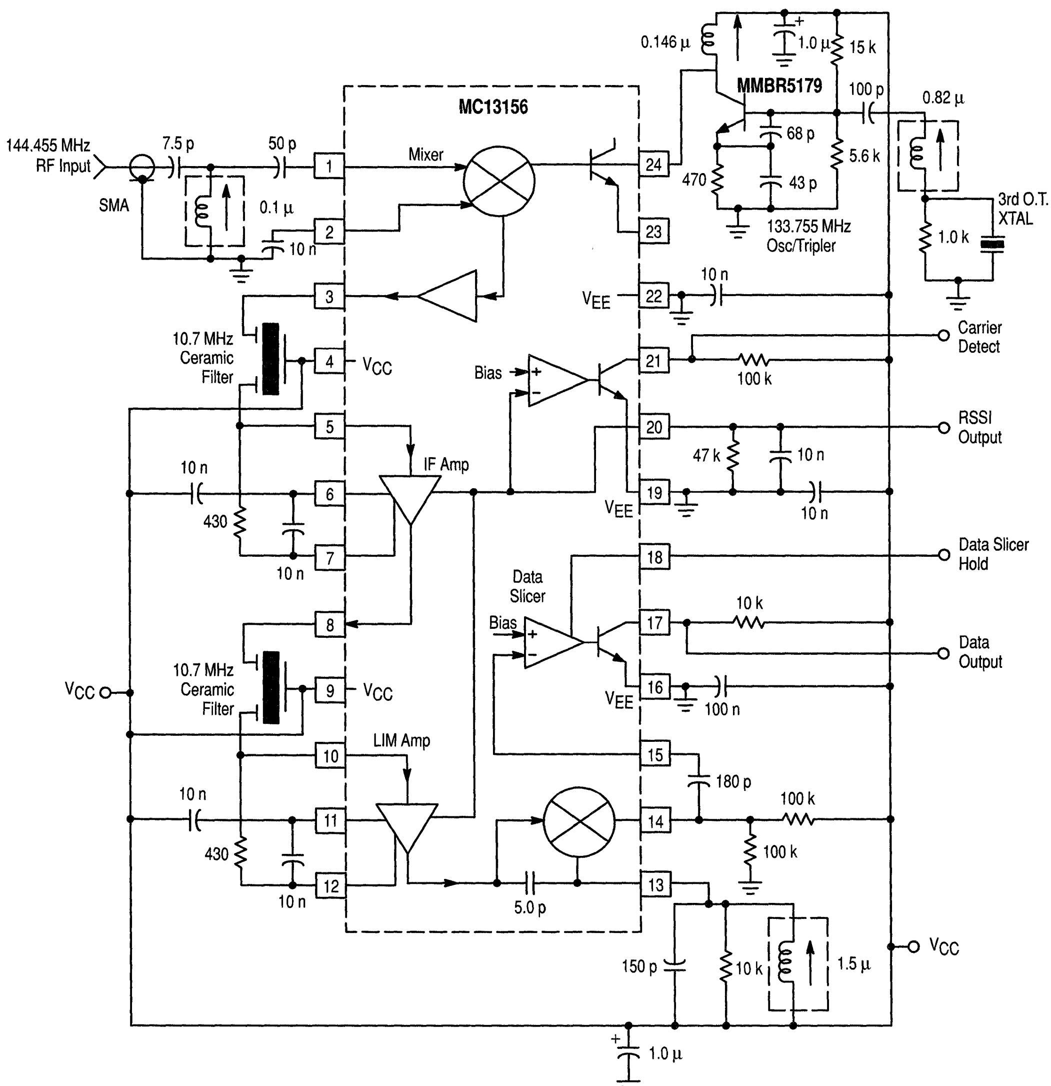
MC13156DW, FB

T_A = –40° to +85°C, Case 751E, 873

The MC13156 is a wideband FM IF subsystem targeted at high performance data and analog applications. Excellent high frequency performance is achieved, with low cost, through use of Motorola's MOSAIC 1.5™ RF bipolar process. The MC13156 has an onboard Colpitts VCO for PLL controlled multichannel operation. The mixer is useful to beyond 200 MHz and may be used in a differential, balanced, or single–ended configuration. The IF amplifier is split to accommodate two low cost cascaded filters. RSSI output is derived by summing the output of both IF sections. A precision data shaper has a hold function to preset the shaper for fast recovery of new data.

Applications for the MC13156 include CT–2, wideband data links, and other radio systems utilizing GMSK, FSK or FM modulation.

- 2.0 to 6.0 Vdc Operation
- Typical Sensitivity of 6.0 μV for 12 dB SINAD
- RSSI Dynamic Range Typically 80 dB
- High Performance Data Shaper for Enhanced CT–2 Operation
- Internal 300 Ω and 1.4 kΩ Terminations for 10.7 MHz and 455 kHz Filters
- Split IF for Improved Filtering and Extended RSSI Range



Wideband FM IF Subsystem

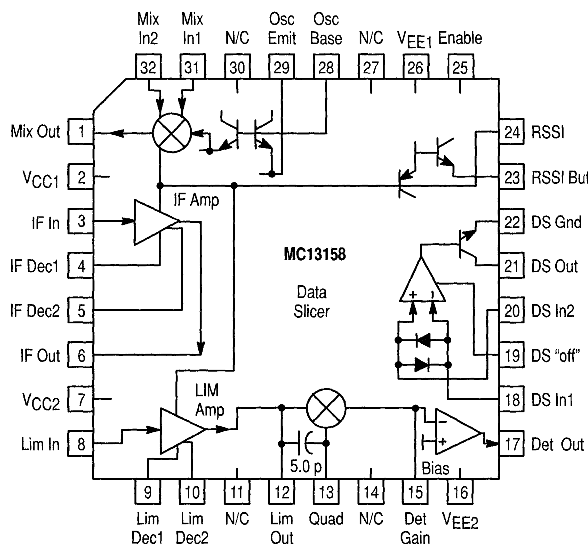
MC13158FTB

T_A = –40° to +85°C, Case 873

The MC13158 is a wideband IF subsystem that is designed for high performance data and analog applications. Excellent high frequency performance is achieved, with low cost, through the use of Motorola's MOSAIC 1.5™ RF bipolar process. The MC13158 has an on–board grounded collector VCO transistor that may be used with a fundamental or overtone crystal in single channel operation or with a PLL in multi–channel operation. The mixer is useful to 500 MHz and may be used in a balanced differential or single ended configuration. The IF amplifier is split to accommodate two low cost cascaded filters. RSSI output is derived by summing the output of both IF sections. A precision data shaper has an Off function to shut the output "off" to save current. An enable control is provided to power down the IC for power management in battery operated applications.

Applications include DECT, wideband wireless data links for personal and portable laptop computers and other battery operated radio systems which utilize GFSK, FSK or FM modulation.

- Designed for DECT Applications
- 1.8 to 6.0 Vdc Operating Voltage
- Low Power Consumption in Active and Standby Mode
- Greater than 600 kHz Detector Bandwidth
- Data Slicer with Special Off Function
- Enable Function for Power Down of Battery Operated Systems
- RSSI Dynamic Range of 80 dB Minimum
- Low External Component Count



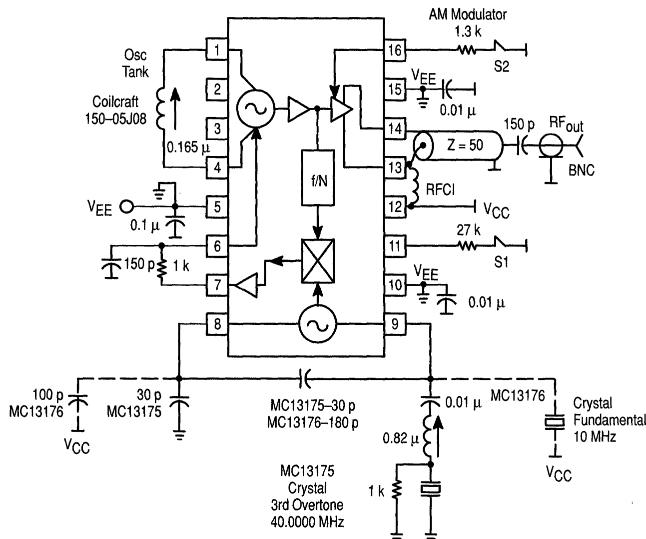
UHF, FM/AM Transmitter

MC13175/176D

T_A = 0° to +70°C, Case 751B

The MC13175 and MC13176 are one chip FM/AM transmitter subsystems designed for AM/FM communication systems operating in the 260 to 470 MHz band covered by FCC Title 47; Part 15. They include a Colpitts crystal reference oscillator, UHF oscillator, ÷8 (MC13175) or ÷32 (MC13176) prescaler, and phase detector forming a versatile PLL system. Another application is as a local oscillator in a UHF or 900 MHz receiver. MC13175/176 offer the following features:

- UHF Current Controlled Oscillator
- Use Easily Available 3rd Overtone or Fundamental Crystals for Reference
- Low Number of External Parts Required
- Low Operating Supply Voltage (1.8–5 Vdc)
- Low Supply Drain Currents
- Power Output Adjustable (Up to +10 dBm)
- Differential Output for Loop Antenna or Balun Transformer Networks
- Power Down Feature
- ASK Modulated by Switching Output "On"/"Off"
- MC13175 – f_o = 8 × f_{ref}
- MC13176 – f_o = 32 × f_{ref}



Telecommunications

Subscriber Loop Interface Circuit (SLIC)

MC33120/1P, FN

T_A = –40° to +85°C, Case 738, 776

With a guaranteed minimum longitudinal balance of 58 dB, the MC33120/1 is ideally suited for Central Office applications, as well as PBXs, and other related equipment. Protection and sensing components on the two–wire side can be non–precision while achieving required system performance. Most BORSHT functions are provided while maintaining low power consumption, and a cost effective design. Size and weight reduction over conventional transformer designs permit a higher density system.

- All Key Parameters Externally Programmable with Resistors:
  - Transmit and Receive Gains
  - Transhybrid Loss
  - Return Loss
  - DC Loop Current Limit and Battery Feed Resistance
  - Longitudinal Impedance
- Single and Double Fault Sensing and Protection
- Minimum 58 dB Longitudinal Balance (2–wire and 4–wire) Guaranteed
- Digital Hook Status and Fault Outputs
- Power Down Input
- Loop Start or Ground Start Operation
- Size & Weight Reduction Over Conventional Approaches
- Available in 20 Pin DIP and 28 Pin PLCC Packages
- Battery Voltage: –42 to –58 V (for MC33120), –21.6 to –42 V (for MC33121)

PBX Architecture (Analog Transmission)

PCM Monocircuits Codec–Filters (CMOS LSI)

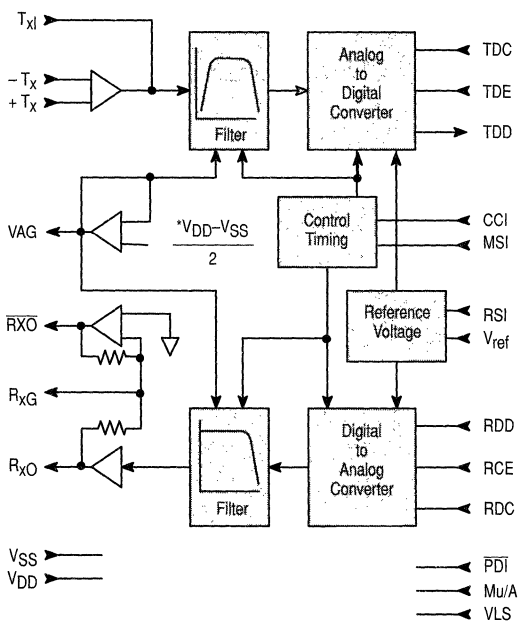
MC145500 Series

Case 648, 708, 751G, 776

The Monocircuits perform the digitizing and restoration of the analog signals. In addition to these important functions, Motorola's family of pulse–code modulation monocircuits also provides the band–limiting filter functions – all on a single monolithic CMOS chip with extremely low power dissipation.

The Monocircuits require no external components. They incorporate the bandpass filter required for antialiasing and 60 Hz rejection, the A/D–D/A conversion functions for either U.S. Mu–Law or European A–Law companding formats, the low–pass filter required for reconstruction smoothing, an on–board precision voltage reference, and a variety of options that lend flexibility to circuit implementations. Unique features of Motorola's monocircuit family include wide power supply range (6.0 to 13 V), selectable on–board voltage reference (2.5, 3.1, or 3.8 V), and TTL or CMOS I/O interface.

Motorola supplies three versions in this series. The MC145503 and MC145505 are general–purpose devices in 16 pin packages designed to operate in digital telephone or line card applications. The MC145502 is the full–feature device that presents all of the options available on the chip. This device is packaged in a 22 pin DIP and 28 pin chip carrier package.



MC145554/57/64/67

Case 648, 751D, 751G, 738

These per channel PCM Codec–Filters perform the voice digitization and reconstruction as well as the band limiting and smoothing required for PCM systems. They are designed to operate in both synchronous and asynchronous applications and contain an on–chip precision voltage reference. The MC145554 (Mu–Law) and MC145557 (A–Law) are general purpose devices that are offered in 16 pin packages. The MC145564 (Mu–Law) and MC145567 (A–Law), offered in 20 pin packages, add the capability of analog loop–back and push–pull power amplifiers with adjustable gain.

All four devices include the transmit bandpass and receive lowpass filters on–chip, as well as active RC pre–filtering and post–filtering. Fully differential analog circuit design assures lowest noise. Performance is specified over the extended temperature range of –40° to +85°C.

These PCM Codec–Filters accept both industry standard clock formats. They also maintain compatibility with Motorola's family of MC3419/MC33120 SLIC products.

MC14LC5480P, DW, SD

Case 738, 751D, 940C–02

This 5.0 V, general purpose per channel PCM Codec–Filter offers selectable Mu–Law or A–Law companding in 20 pin DIP, SOG and SSOP packages. It performs the voice digitization and reconstruction as well as the band limiting and smoothing required for PCM systems. It is designed to operate in both synchronous and asynchronous applications and contains an on–chip precision reference voltage (1.575 V).

The transmit bandpass and receive lowpass filters, and the active RC pre–filtering and post–filtering are incorporated, as well as fully differential analog circuit design for lowest noise. Push–pull 300 Ω power drivers with external gain adjust are also included.

The MC14LC5480 PCM Codec–Filter accepts a variety of clock formats, including short–frame sync, long–frame sync, IDL, and GCI timing environments. This device also maintains compatibility with Motorola's family of Telecom products, including the MC145472 U–Interface Transceiver, MC145474/75 S/T–Interface Transceiver, MC145572 U–Interface Transceiver, MC145574 S/T–Interface Transceiver, MC145532 ADPCM Transcoder, MC145422/26 UDLT–I, MC145421/25 UDLT–II, and MC33120 SLIC.

Replaces the MC145480P, DW, SD.

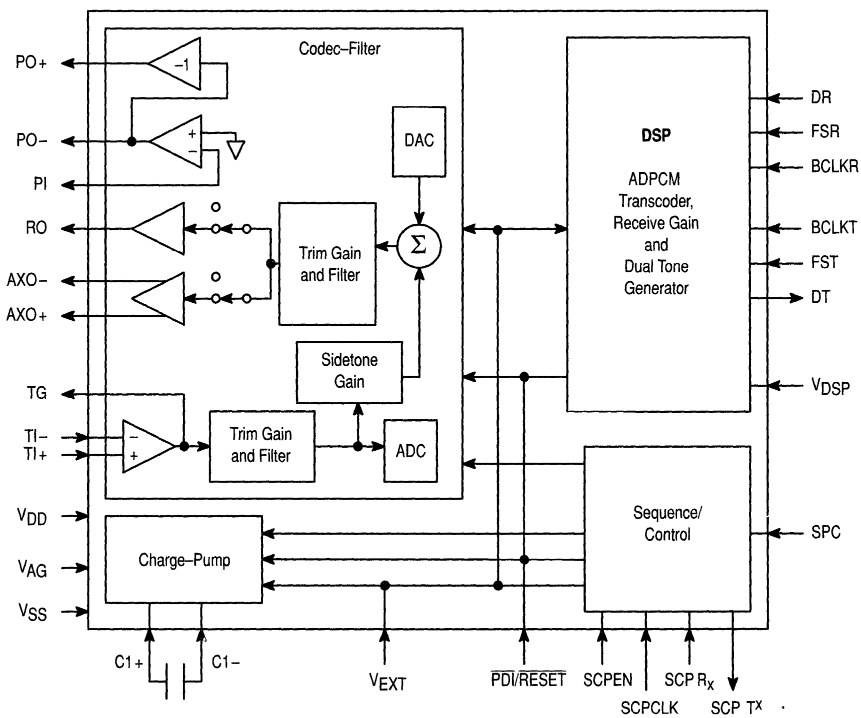
MC14LC5540P, DW, FU

Case 710, 751F, 873

The MC14LC5540 ADPCM Codec is a single chip implementation of a PCM Codec–Filter and an ADPCM encoder/decoder, and therefore provides an efficient solution for applications requiring the digitization and compression of voiceband signals. This device is designed to operate over a wide voltage range, 2.7 V to 5.25 V, and as such is ideal for battery powered as well as ac powered applications. The MC14LC5540 ADPCM Codec also includes a serial control port and internal control and status registers that permit a microcomputer to exercise many built–in features.

The ADPCM Codec is designed to meet the 32 kbps ADPCM conformance requirements of CCITT Recommendation G.721 (1988) and ANSI T1.301 (1987). It also meets ANSI T1.303 and CCITT Recommendation G.723 for 24 kbps ADPCM operation, and the 16 kbps ADPCM standard, CCITT Recommendation G.726. This device also meets the PCM conformance specification of the CCITT G.714 Recommendation.

Figure 1. MC14LC5540 ADPCM Codec Block Diagram



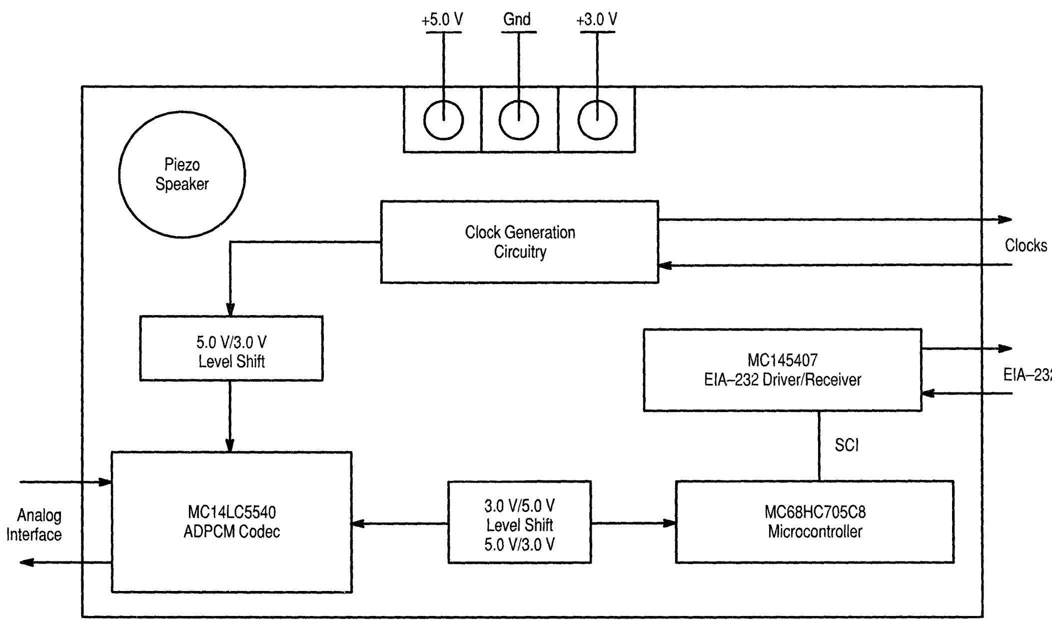
MC145537EVK

ADPCM Codec Evaluation Kit

The MC145537EVK is the primary tool for evaluation and demonstration of the MC14LC5540 ADPCM Codec. It provides the necessary hardware and software interface to access the many features and operational modes of the MC14LC5540 ADPCM Codec.

- Provides Stand Alone Evaluation on Single Board
- The kit provides Analog–to–Analog, Analog–to–Digital or Digital–to–Analog Connections – with Digital Connections being 64 kbps PCM, 32 or 24 kbps ADPCM, or 16 kbps CCITT G.726 or Motorola Proprietary ADPCM
- +5.0 V Only Power Supply, or 5.0 V Plus 2.7 to 5.25 V Supply
- Easily Interfaced to Test Equipment, Customer System, Second MC145537EVK or MC145536EVK (5.0 V Only) for Full Duplex Operation
- Convenient Access to Key Signals
- Piezo Loudspeaker
- EIA–232 Serial Computer Terminal Interface for Control of the MC14LC5540 ADPCM Codec Features
- Compatible Handset Provided
- Schematics, Data Sheets, and User's Manual Included

Figure 2. MC145537EVK Block Diagram

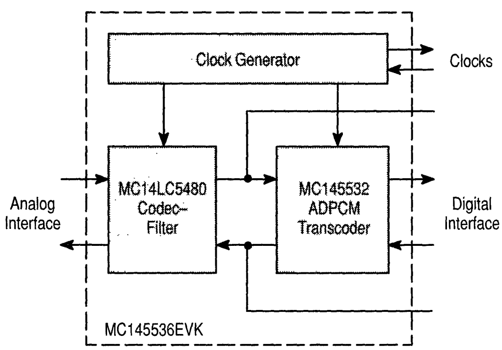


MC145536EVK

Codec–Filter/ADPCM Transcoder Evaluation Kit

The MC145536EVK is the primary tool for evaluation and demonstration of the MC14LC5480 Single +5.0 V supply PCM Codec–Filter and the MC145532 ADPCM Transcoder (see "Telephone Accessory Circuits"). The MC145536EVK provides the necessary hardware needed to evaluate the many separate operating modes under which the MC14LC5480 and MC145532 are intended to operate.

- Provides Stand Alone Evaluation on a Single Board
- Easily Interfaced to Test Equipment, Customer System, or Second MC145536EVK
- Convenient Access to Key Signals
- Generous Wire–Wrap Area for Application Development
- The kit provides Analog–to–Analog, Analog–to–Digital, or Digital–to–Analog Connections – with Digital Connections Being 64 kbps PCM; 32, 24, or 16 kbps Motorola Proprietary ADPCM
- Compatible Handset Included
- Schematics, Data Sheets, and User's Manual included



Dual Tone Multiple Frequency Receiver

MC145436AP, DW

Case 646, 751G

This device contains the filter and decoder for detection of a pair of tones conforming to the DTMF standard with outputs in hexadecimal. Switched capacitor filter technology is used together with digital circuitry for the timing control and output circuits. The MC145436A provides excellent power–line noise and dial tone rejection.

Replaces MC145436P, DW.

ISDN Voice/Data Circuits

Integrated Services Digital Network

ISDN is the revolutionary concept of converting the present analog telephone networks to an end–to–end global digital network. ISDN standards make possible a wide variety of services and capabilities that are revolutionizing communications in virtually every industry.

Motorola's ISDN product family includes the MC14LC5472 and MC145572 U–Interface Transceivers, the MC145474/75 and MC145574 S/T–Interface Transceivers, MC145488 Dual Data Link Controller, and the MC68302 Integrated Multi–Protocol Processor. These are supported by a host of related devices including the MC14LC5480 +5.0 V PCM Codec–Filter, MC145532 ADPCM Transcoder, MC14LC5540 ADPCM Codec, MC145500 family of single–chip codec/filters, MC145436A DTMF Decoder, MC33120 Subscriber Loop Interface Circuit, MC34129 Switching Power Supply Controller, and the MC145406/07 CMOS EIA 232–E Driver/ Receiver family.

Motorola's key ISDN devices fit into four ISDN network applications: a digital subscriber line card, an NT1 network termination, an ISDN terminal adapter, and an ISDN terminal. Digital subscriber line cards are used in central offices, remote concentrators, channel banks, T1 multiplexers, and other switching equipment. The NT1 network termination block illustrates the simplicity of remote U– to S/T–interface conversion. The ISDN terminal adapter and ISDN terminal block show how Motorola ICs are used to combine voice and data in PC compatible boards, digital telephones, and other terminal equipment. Expanded applications such as a PBX may include these and other Motorola ISDN circuits. Many "non–ISDN" uses, such as pairgain applications, are appropriate for Motorola's ISDN devices as well.

Second Generation U–Interface Transceivers

MC145572PB

Case 824D

MC145572FN

Case 777

The MC145572 fully conforms to ANSI T1.601–1992, the North American standard for ISDN Basic Access on a single twisted–wire pair. The transceiver achieves a remarkable 10^{-7} bit error rate performance on all ANSI specified test loops with worst–case impairments present. The state–of–the–art 0.65 micron single–chip solution uses advanced design techniques to combine precision analog signal processing elements with three digital signal coprocessors to build an adaptively equalized echo cancelling receiver.

Two modes of handling U–interface maintenance functions are provided on the MC145572. In the automatic maintenance mode the U–interface transceiver handles all ANSI specified maintenance and channel procedures internally to minimize your software development effort. Automatic procedures include generating and monitoring the cyclic redundancy check, reporting and counting far end block errors (near end block errors too), handling the ACT and DEA bits, as well as monitoring and appropriately responding to embedded operations channel messages.

The MC145572 has 275 mW maximum power dissipation. It also has an enhanced TDM interface that supports an on–chip timeslot assigner, GCI and IDL modes of operation.

The optional manual maintenance mode lets you choose an inexpensive microcontroller, such as a member of Motorola's MC68HC05 family, to control and augment the standard maintenance channel functions. This flexible feature also allows for easy implementation of proprietary maintenance functions.

Second Generation S/T–Interface Transceivers

MC145574PB

Case 873A

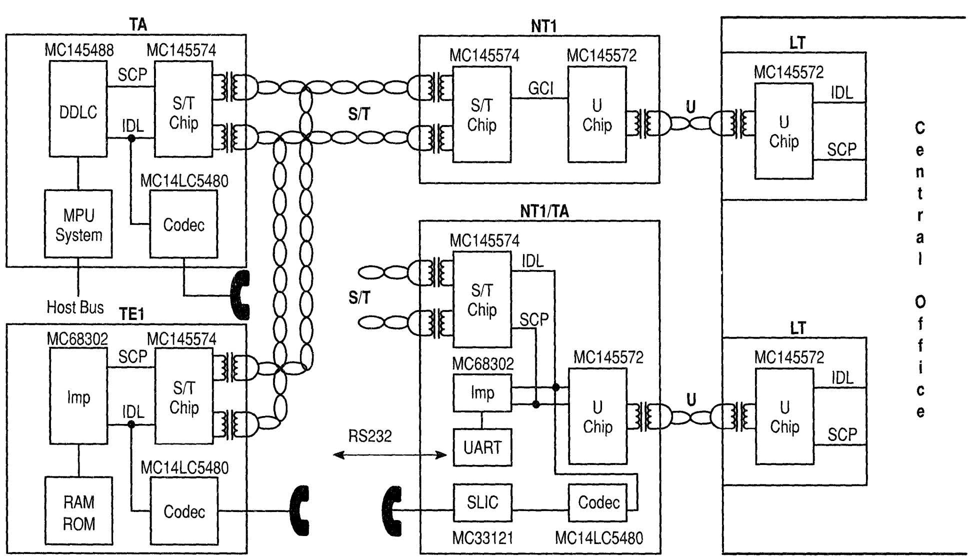
MC145574DW

Case 751F

The MC145574 S/T–Interface Transceivers provide a CCITT I.430 compatible interface for use in line card, network termination, and ISDN terminal equipment applications. Manufactured with Motorola's advanced 0.65 micron CMOS mixed analog and digital process technology, the MC145574 is a physical layer device capable of operating in point–to–point or point–to–multipoint passive bus arrangements. In addition, the MC145574 implements the optional NT1 Star topology, NT terminal mode and TE slave mode.

This device features outstanding transmission performance. It reliably transmits over 1 kilometer in a point–to–point application. Comparable performance is achieved in all other topologies as well. Other features include pin selectable terminal or network operating modes, industry standard microprocessor serial control port, full support of the multiframing S and Q channels, a full range of loopbacks, and low power CMOS operation, with a maximum power consumption of 90 mW.

The MC145574 has an enhanced TDM interface that supports GCI, IDL and an on–chip timeslot assigner.



Dual Data Link Controller

MC145488FN
Case 779

The MC145488 features two full–duplex serial HDLC channels with an on–chip Direct Memory Access (DMA) controller. The DMA controller minimizes the number of microprocessor interrupts from the communications channels, freeing the microprocessor's resources for other tasks. The DMA controller can access up to 64 kbytes of memory, and transfers either 8–bit bytes or 16–bit words to or from memory. The MC145488 DDLC is compatible with Motorola's MC68000 and other microprocessors.

In a typical ISDN terminal application, one DDLC communications channel supports the D–channel (LAPD) while the other supports the B–channel (LAPB). While the DDLC is ideally suited for ISDN applications, it can support many other HDLC protocol applications as well.

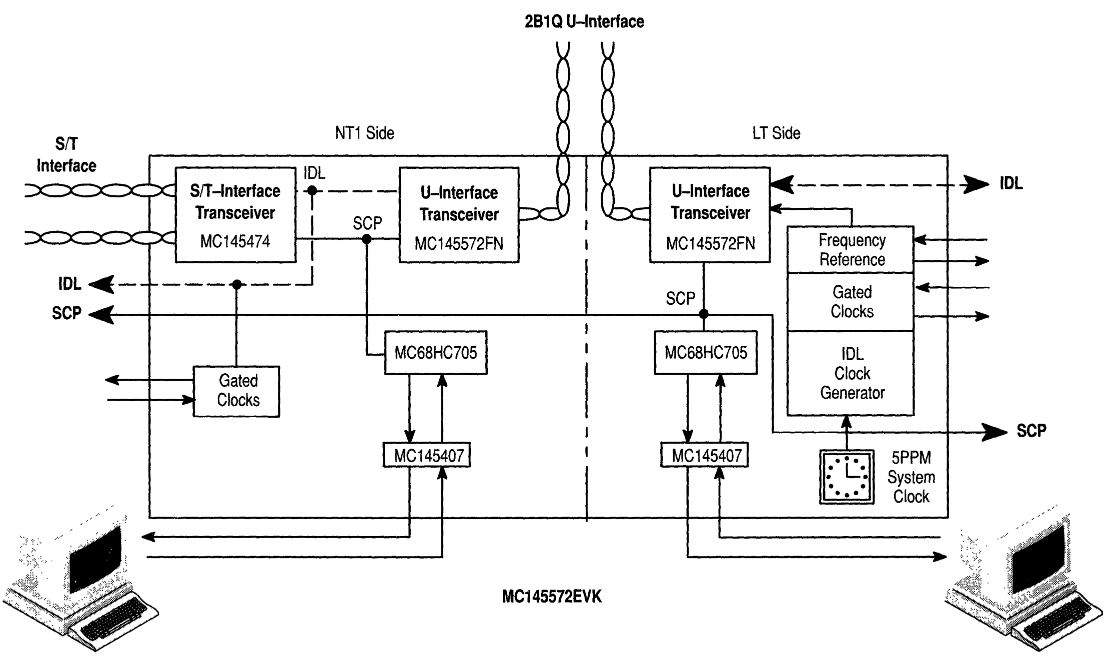
Some of the powerful extras found on the DDLC include automatic abort and retransmit of D–channel collisions in S/T–interface applications, address recognition, automatic recovery mechanisms for faulty frame correction, and several system test modes. Address recognition provides a reduction in the host microprocessor load by filtering data frames not addressed to the host. The DDLC can compare either SAPI or TEI fields of LAPD frames. For LAPD (Q.921) applications, both A and B addresses may be checked.

MC14LC5494EVK
U–Interface Transceiver Evaluation Kit discontinued

MC145572EVK
U–Interface Transceiver Evaluation Kit

This kit provides the hardware and software to evaluate the many configurations under which the MC145572EVK is able to operate. Used as a whole, it operates as both ends of the two–wire U interface that extends from the customer premises (NT1) to the switch line card (LT). The two halves of the board can be physically and functionally separated, providing independent NT1 and LT evaluation capability.

The kit provides the ability to interactively manipulate status registers in the MC145572EVK U–Interface transceiver or in the MC145474/75 S/T–Interface transceiver with the aid of an external terminal. The device can also be controlled using the MC68302 Integrated Multiprotocol Processor application development system to complete a total Basic Rate ISDN evaluation solution.



MC145572EVK

Voice/Data Communication (Digital Transmission)

2–Wire Universal Digital Loop Transceiver (UDLT)

MC145422P, DW Master Station

Case 708, 751E

MC145426P, DW Slave Station

Case 708, 751E

The UDLT family of transceivers allows the use of existing twisted–pair telephone lines (between conventional telephones and a PBX) for the transmission of digital data. With the UDLT, every voice–only telephone station in a PBX system can be upgraded to a digital telephone station that handles the complex voice/data communications with no increase in cabling costs.

In implementing a UDLT–based system the A/D to D/A conversion function associated with each telset is relocated from the PBX directly to the telset. The SLIC (or its equivalent circuit) is eliminated since its signaling information is transmitted digitally between two UDLTs.

The UDLT master–slave system incorporates the modulation/demodulation functions that permit data communications over a distance up to 2 kilometers. It also provides the sequence control that governs the exchange of information between master and slave. Specifically, the master resides on the PBX line card where it transmits and receives data over the wire pair to the telset. The slave is located in the telset and interfaces the monocircuit to the wire pair. Data transfer occurs in 10–bit bursts (8 bits of data and 2 signaling bits), with the master transmitting first, and the slave responding in a synchronized half–duplex transmission format.

UDLTs utilize a 256 kilobaud Modified Differential Phase Shift Keyed (MDPSK) burst modulation technique for transmission to minimize radio frequency, electromagnetic, and crosstalk interference. Implementation through CMOS technology takes advantage of low–power operation, increased reliability, and the proven capabilities to perform complex telecommunications functions.

Functional Features

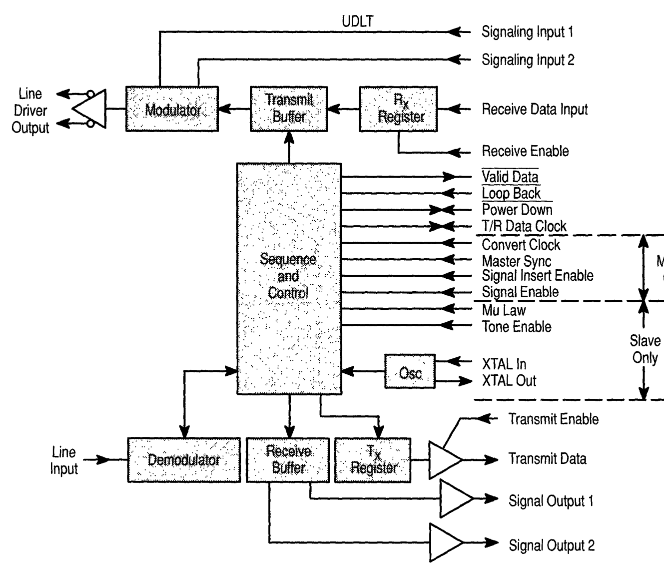
- Provides Synchronous Duplex 64 kbits/Second Voice/Data Channel and Two 8 kbits/Second Signaling Data Channels Over One 26 AWG Wire Pair Up to 2 km.
- Compatible with Existing and Evolving Telephone Switch Architectures and Call Signaling Schemes
- Automatic Detection Threshold Adjustment for Optimum Performance Over Varying Signal Attenuations
- Protocol Independent
- Single 5.0 V to 8.0 V Power Supply

MC145422 Master UDLT

- 2.048 MHz Master Clock
- Pin Controlled Power–Down and Loop–Back Features
- Variable Data Clock – 64 kHz to 2.56 MHz
- Pin Controlled Insertion/Extraction of 8 kbits/Seconds Channel into LSB of 64 kbits/Second Channel for Simultaneous Routing of Voice and Data Through PCM Voice Path of Telephone Switch

MC145426 Slave UDLT

- Compatible with MC145500 Series and Later PCM Codec–Filters
- Automatic Power–Up/Down Feature
- On–Chip Data Clock Recovery and Generation
- Pin Controlled 500 Hz D3 or CCITT Format PCM Tone Generator for Audible Feedback Applications



2–Wire ISDN Universal Digital Loop Transceiver II (UDLT II)

MC145421P, DW Master
Case 709, 751E

MC145425P, DW Slave
Case 709, 751E

Similar to the MC145422/26 UDLT, but provide synchronous full duplex 160 kbps voice and data communication in a 2B + 2D format for ISDN compatibility on a single twisted pair up to 1 km. Single 5.0 V power supply, protocol independent.

Electronic Telephone

The Complete Electronic Telephone Circuit

MC34010P, FN

T_A = –20° to +60°C, Case 711, 777

The conventional transformer–driven telephone handset is undergoing major innovations. The bulky transformer is disappearing. So are many of its discrete components, including the familiar telephone bell. They are being replaced with integrated circuits that perform all the major handset functions simply, reliably and inexpensively . . . functions such as 2–to–4 wire conversion, DTMF dialing, tone ringing, and a variety of related activities.

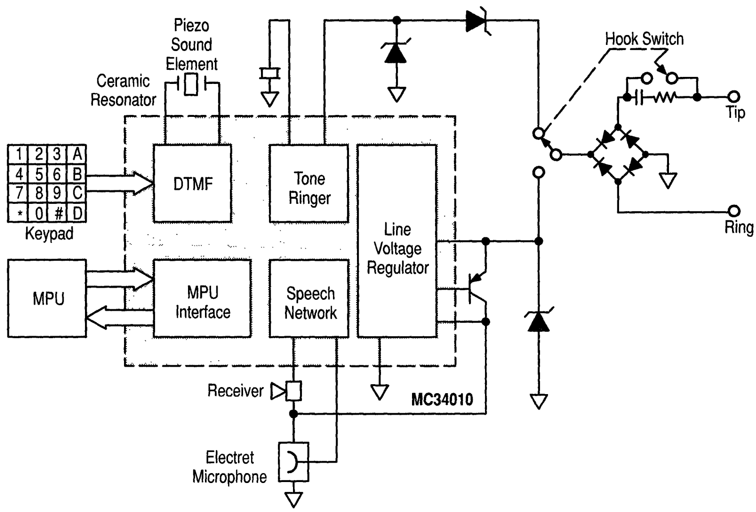
The culmination of these capabilities is the Electronic Telephone Circuit, the MC34010. These ICs place all of the above mentioned functions on a single monolithic chip.

These telephone circuits utilize advanced bipolar analog (I^2L) technology and provide all the necessary elements of a modern tone–dialing telephone. The MC34010 even incorporates an MPU interface circuit for the inclusion of automatic dialing in the final system.

- Provides all basic telephone functions, including DTMF dialer, tone ringer, speech network and line voltage regulator
- DTMF generator uses low cost ceramic resonator with accurate frequency synthesis technique
- Tone ringer drives piezoelectric transducer and satisfies EIA–470 requirements
- Speech network provides 2–to–4 wire conversion with adjustable sidetone utilizing an electret transmitter
- On–chip regulator insures stable operation over wide range of loop lengths
- I^2L technology provides low 1.4 V operation and high static discharge immunity
- Microprocessor interface port for automatic dialing features

Also Available

A broad line of additional telephone components for customizing systems design.



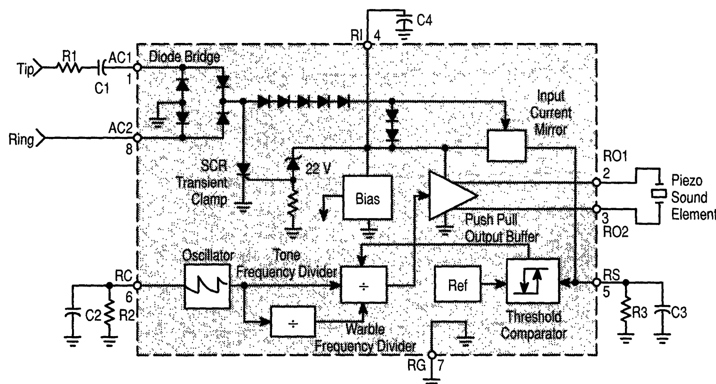
Tone Ringers

The MC34017 Tone Ringer is designed to replace the bulky bell assembly of a telephone, while providing the same function and performance under a variety of conditions. The operational requirements spelled out by the FCC and EIA–470, simply stated, are that a ringer circuit MUST function when a ringing signal is provided, and MUST NOT ring when other signals (speech, dialing, noise) are on the line. The tone ringers described below were designed to meet those requirements with a minimum of external components.

MC34017P, D

T_A = –20° to +60°C, Case 626, 751

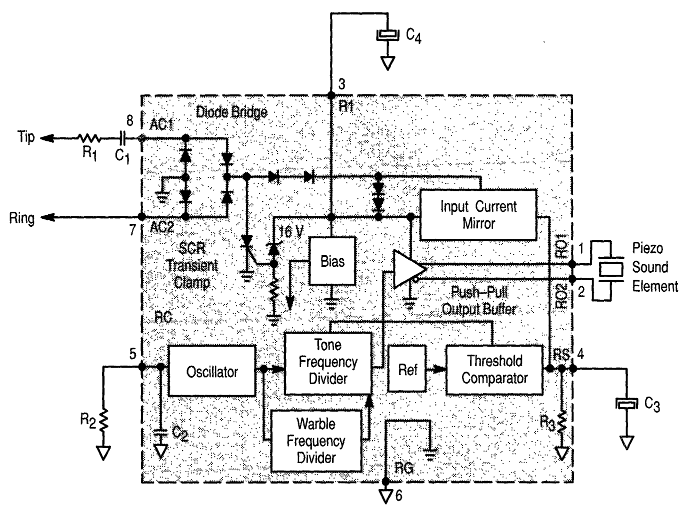
- Complete Telephone Bell Replacement Circuit with Minimum External Components
- On–Chip Diode Bridge and Transient Protection
- Direct Drive for Piezoelectric Transducers
- Push Pull Output Stage for Greater Output Power Capability
- Base Frequency Options
  - MC34017–1: 1.0 kHz
  - MC34017–2: 2.0 kHz
  - MC34017–3: 500 Hz
- Input Impedance Signature Meets Bell and EIA Standards
- Rejects Rotary Dial Transients



MC34217P, D

T_A = –20° to +60°C, Case 626, 751

- Complete Telephone Bell Replacement
- On–Chip Diode Bridge
- Internal Transient Protection
- Differential Output to Piezo Transducer for Louder Sound
- Input Impedance Signature Meets Bell and EIA Standards
- Rejects Rotary Dial and Hook Switch Transients
- Base Frequency and Warble Frequencies are Independently Adjustable
- Adjustable Base Frequency
- Reduced Number of Externals



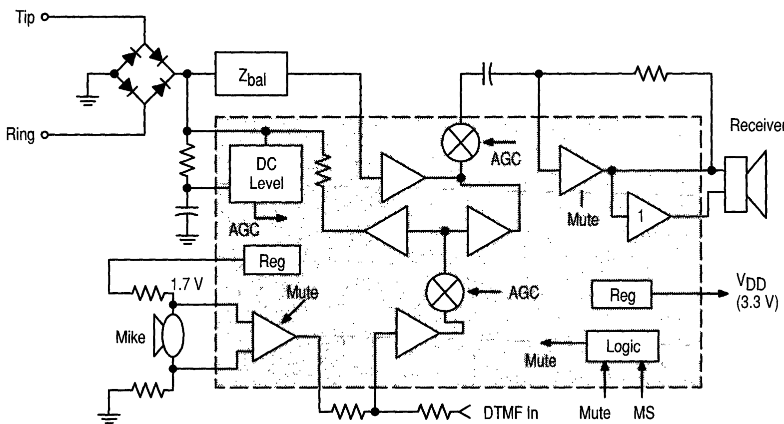
Speech Networks

Telephone Speech Network with Dialer Interface

MC34114P, DW

T_A = –20° to +70°C, Case 707, 751D

- Operation Down to 1.2 V
- Adjustable Transmit, Receive, and Sidetone Gains by External Resistors
- Differential Microphone Amplifier Input Minimizes RFI
- Transmit, Receive, and Sidetone Equalization on both Voice and DTMF Signals
- Regulated 1.7 V Output for Biasing Microphone
- Regulated 3.3 V Output for Powering External Dialer
- Microphone and Receive Amplifiers Muted During Dialing
- Differential Receive Amplifier Output Eliminates Coupling Capacitor
- Operates with Receiver Impedances of 150 Ω and Higher



Cordless Universal Telephone Interface

MC34016DW, P

T_A = –20° to +70°C, Case 751D, 738

The MC34016 is a telephone line interface meant for use in cordless telephone base stations for CT0, CT1, CT2 and DECT. The circuit forms the interface towards the telephone line and performs all speech and line interface functions like dc and ac line termination, 2–4 wire conversion, automatic gain control and hookswitch control. Adjustment of transmission parameters is accomplished by two 8 bit registers accessible via the integrated serial bus interface and by external components.

- DC Masks for Voltage and Current Regulation
- Supports Passive or Active AC Set Impedance Applications
- Double Wheatstone Bridge Sidetone Architecture
- Symmetrical Inputs and Outputs with Large Signal Swing Capability
- Gain Setting and Mute Function for T_X and R_X Amplifiers
- Very Low Noise Performance
- Serial Bus Interface SPI Compatible
- Operation from 3.0 to 5.5 V

FEATURES

Line Driver Architecture

- Two DC Masks for Voltage Regulation
- Two DC Masks for Current Regulation
- Passive or Active Set Impedance Adjustment
- Double Wheatstone Bridge Architecture
- Automatic Gain Control Function

Transmit Channel

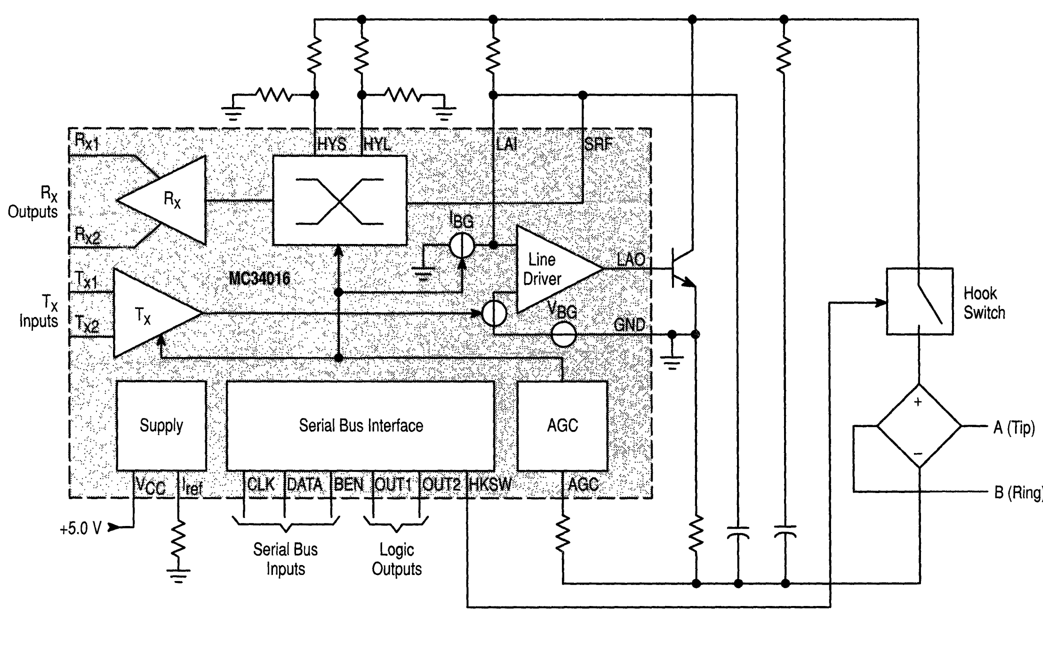
- Symmetrical Inputs Capable of Handling Large Voltage Swing
- Gain Select Option via Serial Bus Interface
- Transmit Mute Function, Programmable via Bus
- Large Voltage Swing Capability at the Telephone Line

Receive Channel

- Double Sidetone Architecture for Optimum Line Matching
- Symmetrical Outputs Capable of Producing High Voltage Swing
- Gain Select Option via Serial Bus Interface
- Receive Mute Function, Programmable via Serial Bus

Serial Bus Interface

- 3–Wire Connection to Microcontroller
- One Programmable Output Meant for Driving a Hookswitch
- Two Programmable Outputs Capable of Driving Low Ohmic Loads
- Two 8–Bit Registers for Parameter Adjustment



Programmable Telephone Line Interface Circuit with Loudspeaker Amplifier

MC34216DW

T_A = 0° to +70°C, Case 751F

The MC34216 is developed for use in telephone applications where besides the standard telephone functions also the group listening–in feature is required. In cooperation with a microcontroller, the circuit performs all basic telephone functions including DTMF generation and pulse–dialing. The listening–in part includes a loudspeaker amplifier, an anti–howling circuit and a strong supply. In combination with the TCA3385, the ringing is performed via the loudspeaker.

FEATURES

Line Driver and Supply

- DC and AC Termination of the Line
- Selectable Masks: France, U.K., Low Voltage
- Current Protection
- Adjustable Set Impedance for Resistive and Complex Termination
- Efficient Supply Point for Loudspeaker Amplifier and Peripherals

Handset Operation

- Transmit and Receive Amplifiers
- Adjustable Sidetone Network
- Line Length AGC
- Microphone and Earpiece Mute
- Earpiece Gain Increase Switch
- Microphone Squelch Function
- Transmit Amplifier Soft Clipping

Dialing and Ringing

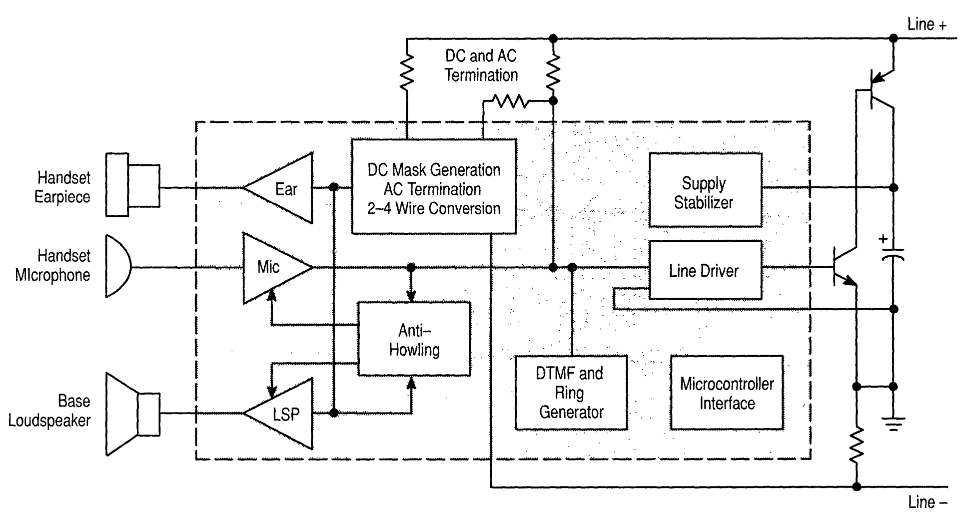
- Generates DTMF, Pilot Tones and Ring Signal
- Interrupter Driver for Pulse–Dialing
- Low Current While Pulse–Dialing
- Optimized for Ringing via Loudspeaker
- Programmable Ring Melodies
- Uses Inexpensive 500 kHz Resonator

Loudspeaking Facility

- Integrated Loudspeaker Amplifier
- Peak–to–Peak Limiter Prevents Distortion
- Programmable Volume
- Anti–Howling Circuitry for Group Listening–In
- Interfacing for Handsfree Conversation

Application Areas

- Corded Telephony with Group Listening–In
- Cordless Telephony Base Station with Group Listening–In
- Telephones with Answering Machines
- Fax, Intercom, Modem



Telephone Line Interface

TCA3388DP, FP

T_A = 0° to +70°C, Case 738, 751D

The TCA3388 is a telephone line interface circuit which performs the basic functions of a telephone set in combination with a microcontroller and a ringer. It includes dc and ac line termination, the hybrid function with 2 adjustable sidetone networks, handset connections and an efficient supply point.

FEATURES

Line Driver and Supply

- DC and AC Termination of the Telephone Line
- Selectable DC Mask: France, U.K., Low Voltage
- Current Protection
- Adjustable Set Impedance for Resistive and Complex Termination
- Efficient Supply Point for Peripherals
- Hook Status Detection

Handset Operation

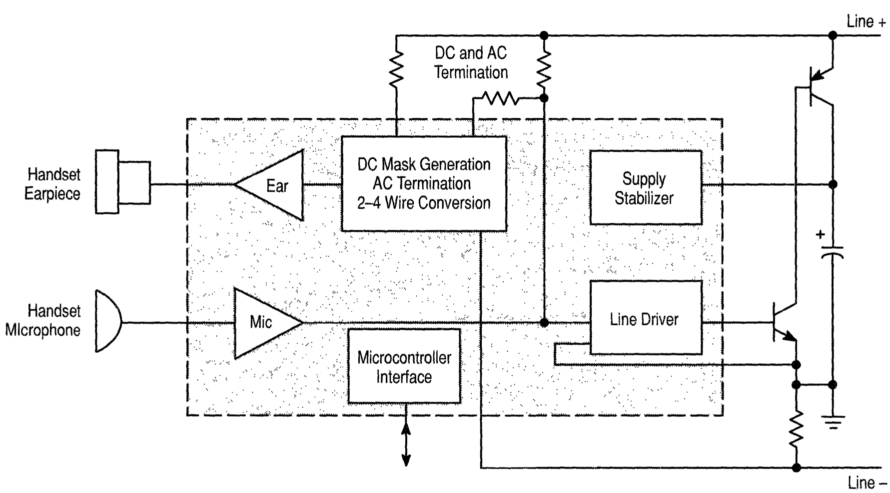
- Transmit and Receive Amplifiers
- Double Anti–Sidetone Network
- Line Length AGC
- Microphone and Earpiece Mute
- Transmit Amplifier Soft Clipping

Dialing and Ringing

- Interrupter Driver for Pulse–Dialing
- Reduced Current Consumption During Pulse–Dialing
- DTMF Interfacing
- Ringing via External Ringer

Application Areas

- Corded Telephony
- Cordless Telephony Base Station
- Answering Machines
- Fax
- Intercom
- Modem



Speakerphones

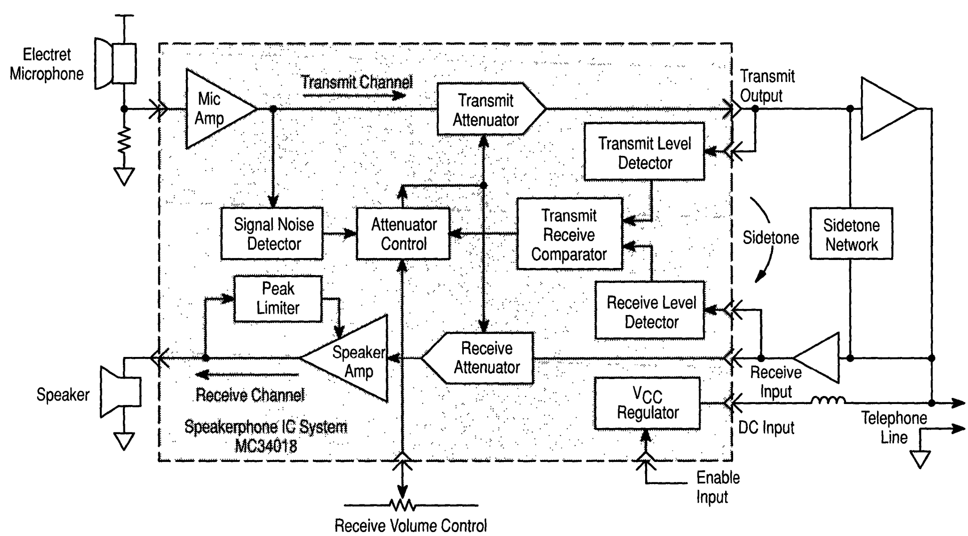
Voice Switched Speakerphone Circuit

MC34018P, DW

T_A = –20° to +60°C, Case 710, 751F

The MC34018 Speakerphone integrated circuit incorporates the necessary amplifiers, attenuators, and control functions to produce a high quality hands–free speakerphone system. Included are a microphone amplifier, a power audio amplifier for the speaker, transmit and receive attenuators, a monitoring system for background sound level, and an attenuation control system which responds to the relative transmit and receive levels as well as the background level. Also included are all necessary regulated voltages for both internal and external circuitry, allowing line–powered operation (no additional power supplies required). A Chip Select pin allows the chip to be powered down when not in use. A volume control function may be implemented with an external potentiometer. MC34018 applications include speakerphones for household and business uses, intercom systems, automotive telephones, and others.

- All Necessary Level Detection and Attenuation Controls for a Hands–Free Telephone in a Single Integrated Circuit
- Background Noise Level Monitoring with Long Time Constant
- Wide Operating Dynamic Range Through Signal Compression
- On–Chip Supply and Reference Voltage Regulation
- Typical 100 mW Output Power (into 25 Ω) with Peak Limiting to Minimize Distortion
- Chip Select Pin for Active/Standby Operation
- Linear Volume Control Function



Voice Switched Speakerphone Circuit

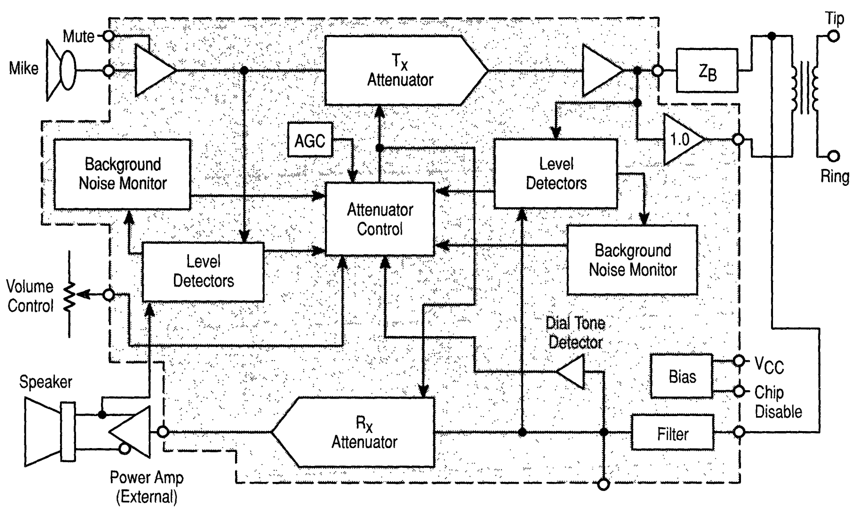
MC34118P, DW

$T_A = -20°$ to $+60°C$, Case 710, 751F

The MC34118 Voice Switched Speakerphone circuit incorporates the necessary amplifiers, attenuators, level detectors, and control algorithm to form the heart of a high quality hands–free speakerphone system. Included are a microphone amplifier with adjustable gain and mute control, Transmit and Receive attenuators which operate in a complementary manner, level detectors at input and output of both attenuators,and background noise monitors for both the transmit and receive channels. A dial tone detector prevents the dial tone from being attenuated by the Receive background noise monitor circuit. Also included are two line driver amplifiers which can be used to form a hybrid network in conjunction with an external coupling transformer. A high–pass filter can be used to filter out 60 Hz noise in the receive channel, or for other filtering functions. A Chip Disable pin permits powering down the entire circuit to conserve power on long loops where loop current is at a minimum.

The MC34118 may be operated from a power supply, or it can be powered from the telephone line, requiring typically 5.0 mA. The MC34118 can be interfaced directly to Tip and Ring (through a coupling transformer) for stand–alone operation, or it can be used in conjunction with a handset speech network and/or other features of a featurephone.

- Improved Attenuator Gain Range: 52 dB Between Transmit and Receive
- Low Voltage Operation for Line–Powered Applications (3.0 to 6.5 V)
- 4–Point Signal Sensing for Improved Sensitivity
- Background Noise Monitors for Both Transmit and Receive Paths
- Microphone Amplifier Gain Set by External Resistors – Mute Function Included
- Chip Disable for Active/Standby Operation
- On Board Filter Pinned–Out for User Defined Function
- Dial Tone Detector Inhibits Receive Idle Mode During Dial Tone Presence
- Compatible with MC34119 Speaker Amplifier



Voice Switched Speakerphone with μProcessor Interface

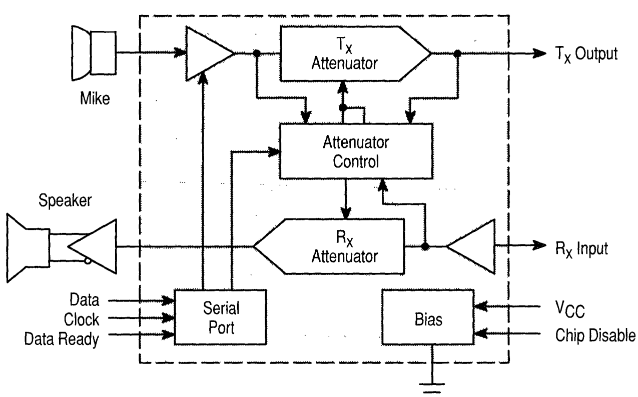
MC33218AP, DW

T_A = –40° to +85°C, Case 724, 751E

The MC33218A, Voice Switched Speakerphone circuit incorporates the necessary amplifiers, attenuators, level detectors, and control algorithm to form the heart of a high quality hands–free speakerphone system. Included are a microphone amplifier with adjustable gain, and mute control, transmit and receive attenuators which operate in a complementary manner, and level detectors and background noise monitors for both paths. A dial tone detector prevents dial tone from being attenuated by the receive background noise monitor. A Chip Disable pin permits powering down the entire circuit to conserve power.

Also included is an 8–bit serial μprocessor port for controlling the receive volume, microphone mute, attenuator gain, and operation mode (force to transmit, force to receive, etc.). Data rate can be up to 1.0 MHz. The MC33218A can be operated from a power supply, or from the telephone line, requiring typically 3.8 mA. It can also be used in intercoms and other voice–activated applications.

- Low Voltage Operation: 2.5 to 6.0 V
- 2–Point Sensing, Background Noise Monitor in Each Path
- Chip Disable Pin for Active/Standby Operation
- Microphone Amplifier Gain Set by External Resistors – Mute Function Included
- Dial Tone Detector to Inhibit Receive Idle Mode During Dial Tone Presence
- Microprocessor port for controlling:
  - Receive Volume Level (16 Steps)
  - Attenuator Range (26 or 52 dB, Selectable)
  - Microphone Mute
  - Force to Transmit, Receive, Idle or Normal Voice Switched Operation
- Compatible with MC34119 Speaker Amplifier



Voice Switched Speakerphone Circuit

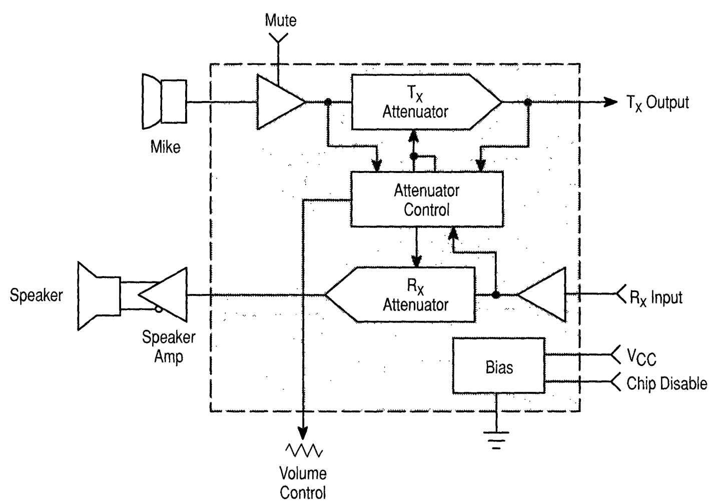
MC33219AP, ADW

T_A = –40° to +85°C, Case 724, 751E

The MC33219A Voice Switched Speakerphone Circuit incorporates the necessary amplifiers, attenuators, level detectors, and control algorithm to form the heart of a high quality hands–free speakerphone system. Included are a microphone amplifier with adjustable gain, and mute control, transmit and receive attenuators which operate in a complementary manner, and level detectors and background noise monitors. A dial tone detector prevents dial tone from being attenuated by the receive background noise monitor. A Chip Disable pin permits powering down the entire circuit to conserve power.

The MC33219A may be operated from a power supply, or it can be powered from the telephone line requiring typically 4.0 mA. The MC33219A can be interfaced directly to Tip and Ring (through a coupling transformer for stand–alone operation, or it can be used in conjuction with a handset speech network and/or other features of a featurephone.

- Low Voltage Operation: 2.7 to 6.0 V
- 2–Point Sensing, Background Noise Monitor in Each Path
- Chip Disable Pin for Active/Standby Operation
- Microphone Amplifier Gain Set by External Resistors – Mute Function Included
- Dial Tone Detector to Inhibit Receive Idle Mode During Dial Tone Presence
- Volume Control Range: 34 dB
- Compatible with MC34119 Speaker Amplifier



Telephone Line Interface and Speakerphone Circuit

MC33215B, FB

T_A = 0° to +70°C, Case 858, 848B

The MC33215 is a combination speech network/ speakerphone developed for use in fully electronic telephone sets with a speakerphone function. The circuit performs the ac and dc line terminations, 2–4 wire conversion, line length AGC and DTMF transmission. The speakerphone part includes a half duplex controller with signal and noise monitoring, base microphone and loudspeaker amplifiers, and an efficient supply. The circuit is designed to operate at low line currents down to 4.0 mA enabling parallel operation with a classical telephone set.

FEATURES

Line Driver and Supply

- AC and DC Termination of Telephone Line
- Adjustable Set Impedance for Real and Complex Termination
- Efficient Supply for Speaker Amplifier and Peripherals
- Two Supplies for Handset and Base Microphones
- Separate Supply Arrangement for Handset and Speakerphone Operation

Handset Operation

- Transmit and Receive Amplifiers
- Differential Microphone Inputs
- Sidetone Cancellation Network
- Line Length AGC
- Microphone and Earpiece Mute
- Separate Input for DTMF and Auxiliary Signals
- Parallel Operation Down to 4.0 mA of Line Current

Speakerphone Operation

- Integrated Microphone and Loudspeaker Amplifiers
- Differential Microphone Inputs
- Loudspeaker Amplifier can be Powered and Used Separately from the Rest of the Circuit
- Integrated Switches for Smooth Switch Over from Handset to Speakerphone Mode
- Signal and Background Noise Monitoring in Both Channels
- Adjustable Switching Depth for Handsfree Operation
- Adjustable Switch Over and Idle Mode Timing
- Dial Tone Detector in the Receive Channel
- Handsfree Operation via Loudspeaker and Base Microphone

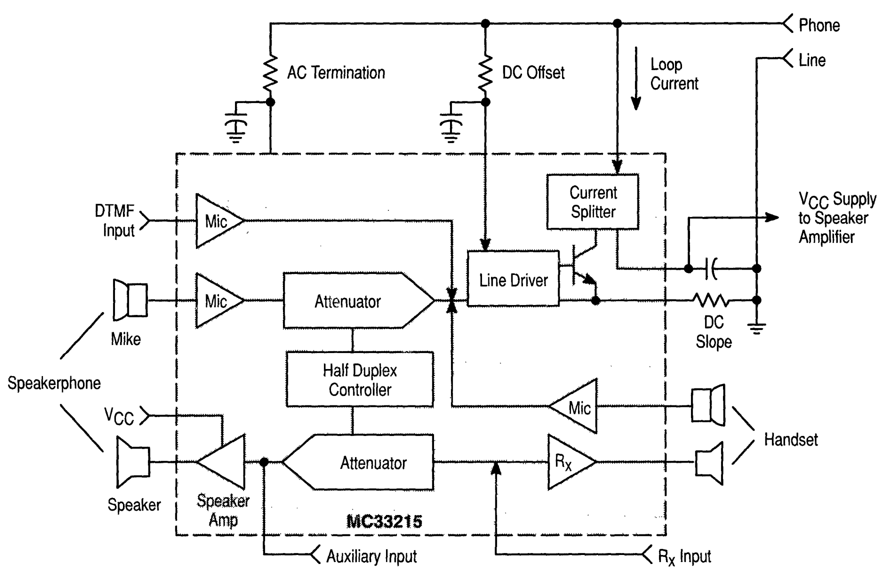


Table 10. The Motorola Family of Speakerphone Integrated Circuits

MC34018	MC34118	MC33218A	MC33219A
Two point sensing with slow idle, background noise monitor in T_X path only	Four point sensing with both fast and slow idle modes, background noise monitors in both R_X and T_X paths	Two point sensing with slow idle, background noise monitors in both R_X and T_X paths	Two point sensing with slow idle, background noise monitors in both R_X and T_X paths
No dial tone detector in receive path	Receive path has dial tone detector	Receive path has dial tone detector	Receive path has dial tone detector
Attenuator Characteristics: • Range: 44 dB • Tolerance: ±4.0 dB • Gain tracking not specified • White noise is constant	Attenuator Characteristics: • Range: 52 dB • Tolerance: ±2.0 dB • Gain Tracking: <1.0 dB • White noise reduces with volume	Attenuator Characteristics: • Range: 52 or 26 dB (selectable) • Tolerance: ±3.0 dB • Gain Tracking: <1.0 dB • White noise reduces with volume	Attenuator Characteristics: • Range: 52 dB • Tolerance: ±3.0 dB • Gain Tracking: <1.0 dB • White noise reduces with volume
External hybrid required	Hybrid amplifiers on board	External hybrid required	External hybrid required
Speaker amplifier is on board (34 dB, 100 mW)	External speaker amplifier required (MC34119)	External speaker amplifier required (MC34119)	External speaker amplifier required (MC34119)
Filtering is external	Configurable filter on board	Filtering is external	Filtering is external
Microphone amplifier has fixed gain and no muting	Microphone amplifier has adjustable gain and mute input	Microphone amplifier has adjustable gain, and can be muted through µP port	Microphone amplifier has adjustable gain and a mute input
Supply Voltage: 4.0 V to 11 V	Supply Voltage: 2.8 V to 6.5 V	Supply Voltage: 2.5 V to 6.5 V	Supply Voltage: 2.7 V to 6.5 V
Supply Current: 6.5 mA typ., 9.0 mA max	Supply Current: 5.5 mA typ., 8.0 mA max	Supply Current: 4.0 mA typ., 5.0 mA max	Supply Current: 3.0 mA typ., 5.0 mA max
Speaker amplifier reduces gain to prevent clipping	Receive gain is reduced as supply voltage falls to prevent clipping	Receive gain is reduced as supply voltage falls to prevent clipping	Receive gain is reduced as supply voltage falls to prevent clipping
Volume control is linear. Cannot override voice switched operation except through additional circuitry. Attenuator gain is fixed at 44 dB (slightly variable). No microphone mute.	Volume control is linear, and microphone mute has separate pin. Cannot override voice switched operation except through additional circuitry. Attenuator gain is fixed at 52 dB.	8–bit µP serial port controls: • Volume control (16 steps) • Microphone mute • Range selection (26 dB or 52 dB) • Force to transmit, idle, receive, or normal voice switched operation	Volume control is linear, and microphone mute has separate pin. Attenuator range fixed at 52 dB. Cannot override voice switched operation except through additional circuitry.

Telephone Accessory Circuits

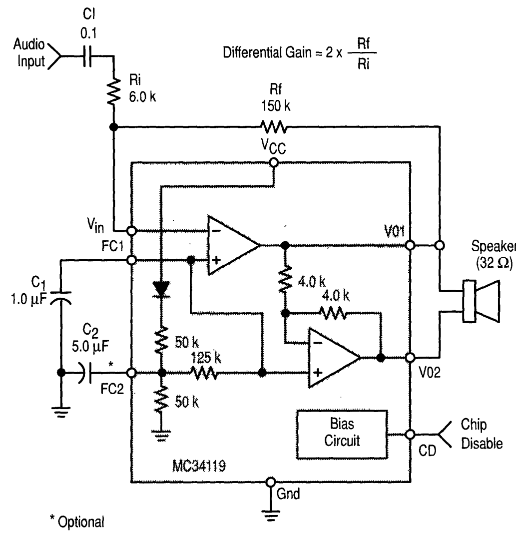
Audio Amplifier

MC34119P, D

T_A = 0° to +70°C, Case 626, 751

A low power audio amplifier circuit intended (primarily) for telephone applications, such as speakerphones. Provides differential speaker outputs to maximize output swing at low supply voltages (2.0 V min.). Coupling capacitors to the speaker, and snubbers, are not required. Overall gain is externally adjustable from 0 to 46 dB. A Chip Disable pin permits powering–down to mute the audio signal and reduce power consumption.

- Drives a Wide Range of Speaker Loads (16 to 100 Ω)
- Output Power Exceeds 250 mW with 32 Ω Speaker
- Low Distortion (THD = 0.4% Typical)
- Wide Operating Supply Voltage (2.0 V to 16 V) – Allows Telephone Line Powered Applications.
- Low Quiescent Supply Current (2.5 mA Typical)
- Low Power–Down Quiescent Current (60 µA Typical)



Current Mode Switching Regulator

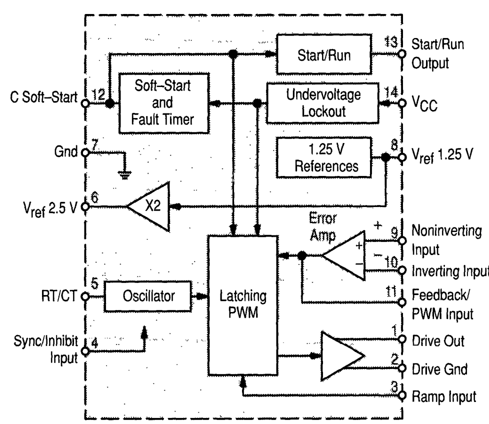
MC34129P, D

T_A = 0° to +70°C, Case 646, 751A

High performance current mode switching regulator for low–power digital telephones. Unique internal fault timer provides automatic restart for overload recovery. A start/run comparator is included to implement bootstrapped operation of V_{CC}.

Although primarily intended for digital telephone systems, these devices can be used cost effectively in many other applications. On–chip functions and features include:

- Current Mode Operation to 300 kHz
- Automatic Feed Forward Compensation
- Latching PWM for Cycle–By–Cycle Current Limiting
- Latched–Off or Continuous Retry after Fault Timeout
- Soft–Start with Maximum Peak Switch Current Clamp
- Internally Trimmed 2% Bandgap Reference
- Input Undervoltage Lockout



300 Baud FSK Modems

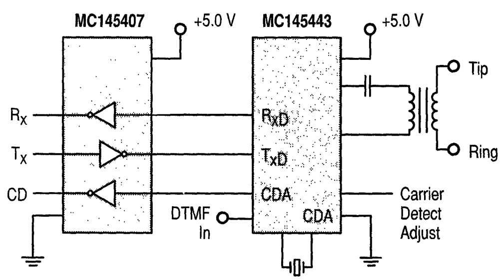
MC145442P, DW Modem – CCITT V.21
Case 738, 751D

MC145443P, DW Modem – Bell 103
Case 738, 751D

This powerful modem combines a complete FSK modulator/demodulator and an accompanying transmit/receive filter system on a single silicon chip. Designed for bidirectional transmission over the telephone network, the modem operates at 300 baud and can be obtained for compatibility with CCITT V.21 and Bell 103 specifications.

The modem contains an on–board carrier–detect circuit that allows direct operation on a telephone line (through a simple transformer), providing simplex, half–duplex, and full–duplex data communications. A built–in power amplifier is capable of driving –9.0 dBm onto a 600 Ω line in the transmit mode.

CMOS processing keeps power dissipation to a very low 45 mW, with a power–down dissipation of only 1.0 mW . . . from a single 5.0 V power supply. Available in a 20 pin dual–in–line P suffix, and a wide body surface mount DW suffix.



MC145444H, DW – CCITT V.21
Case 804, 751D

This device is a silicon gate CMOS single–chip 300 baud modem. It is compatible with CCITT V.21 and contains the entire circuit that provides a full–duplex or half–duplex 300 baud data communication over a twisted pair. The MC145444 is capable of driving 0 dBm into a 600 Ω load with a single 5.0 V power supply. In addition, this device features an on–board DTMF generator, call progress detector, and 2100 Hz answer tone generator. This device also features a three–wire serial interface for a microcontroller.

MC145446AFW – CCITT V.21
Case 751M

This device includes the DTMF generator and call progress tone detector (CPTD) as well as the other circuitry needed for full–duplex, half–duplex, or simplex 300 baud data communication over a pair of telephone lines. It is intended for use with telemeter system or remote control system applications.

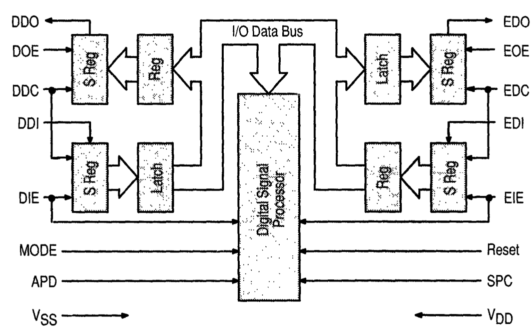
The differential line driver is capable of driving 0 dBm into a 600 Ω load. The transmit attenuator is programmable in 1.0 dB steps.

ADPCM Transcoder

MC145532DW, L
Case 751G, 620

The MC145532 Adaptive Differential Pulse Code Modulation (ADPCM) Transcoder provides a low cost, full–duplex, single–channel transcoder to (from) a 64 kbps PCM channel from (to) either a 16 kbps, 24 kbps, 32 kbps, or 64 kbps channel.

- Complies with CCITT Recommendation G.721 (1988)
- Complies with the American National Standard (T1.301–1987)
- Full–Duplex, Single–Channel Operation
- Mu–Law or A–Law Coding is Pin Selectable
- Synchronous or Asynchronous Operation
- Easily Interfaces with any Member of Motorola's PCM Codec–Filter Monocircuit Family or Other Industry Standard Codecs
- Serial PCM and ADPCM Data Transfer Rate from 64 kbps to 5.12 Mbps
- Power Down Capability for Low Cost Consumption
- The Reset State is Automatically Initiated when the Reset Pin is Released.
- Simple Time Slot Assignment Timing for Transcoder Applications
- Single 5.0 V Power Supply
- Evaluation Kit MC145536 EVK Supports the MC145532 as well as the MC14LC5480 PCM Codec–Filter. (See PBX Architecture Pages for More Information.)



Calling Line Identification (CLID) Receiver with Ring Detector

MC14LC5447P, DW

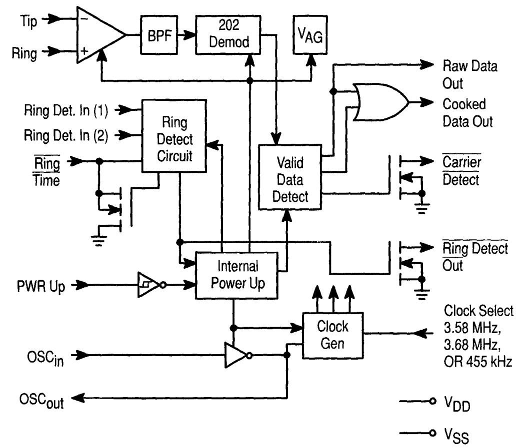
Case 648, 751G

The MC14LC5447 is designed to demodulate Bell 202 1200 baud FSK asynchronous data. Its primary application is in products that will be used to receive and display the calling number, or the message waiting indicator sent to subscribers from participating central office facilities of the public switched telephone network. The device also contains a carrier detect circuit and telephone ring detector which may be used to power up the device.

Applications include adjunct boxes, answering machines, feature phones, fax machines, and computer interface products.

Replaces MC145447P, DW.

- Ring Detector On–Chip
- Ring Detect Output for MCU Interrupt
- Power–Down Mode Less Than 1.0 μA
- Single Supply: 3.5 V to 6.0 V
- Pin Selectable Clock Frequencies: 3.68 MHz, 3.58 MHz, or 455 kHz
- Two–Stage Power–Up for Power Management Control

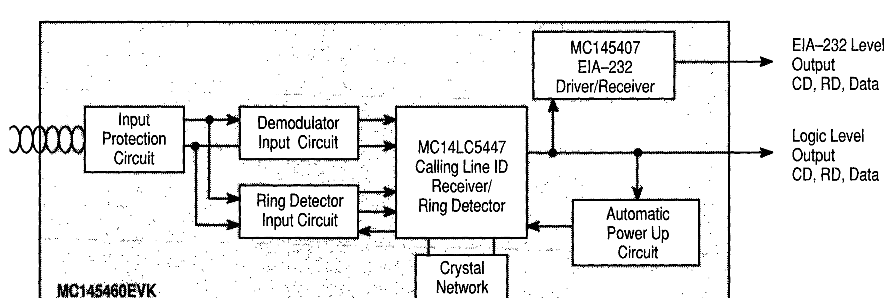


Calling Line ID Receiver Evaluation Kit

MC145460EVK

The MC145460EVK is a low cost evaluation platform for the MC14LC5447. The MC145460EVK facilitates development and testing of products that support the Bellcore customer premises equipment (CPE) data interface, which enables services such as Calling Number Delivery (CND). The MC14LC5447 can be easily incorporated into any telephone, FAX, PBX, key system, answering machine, CND adjunct box or other telephone equipment with the help of the MC145460EVK development kit.

- Easy Clip–On Access to Key MC14LC5447 Signals
- Generous Prototype Area
- Configurable for MC14LC5447 Automatic or External Power Up Control
- EIA–232 and Logic Level Ports for Connection to any PC or MCU Development Platform
- Carrier Detect, Ring Detect and Data Status LEDs
- Optional Tip and Ring Input Protection Network
- MC145460EVK User Guide, MC14LC5447 Data Sheet, and Additional MC14LC5447 Sample Included



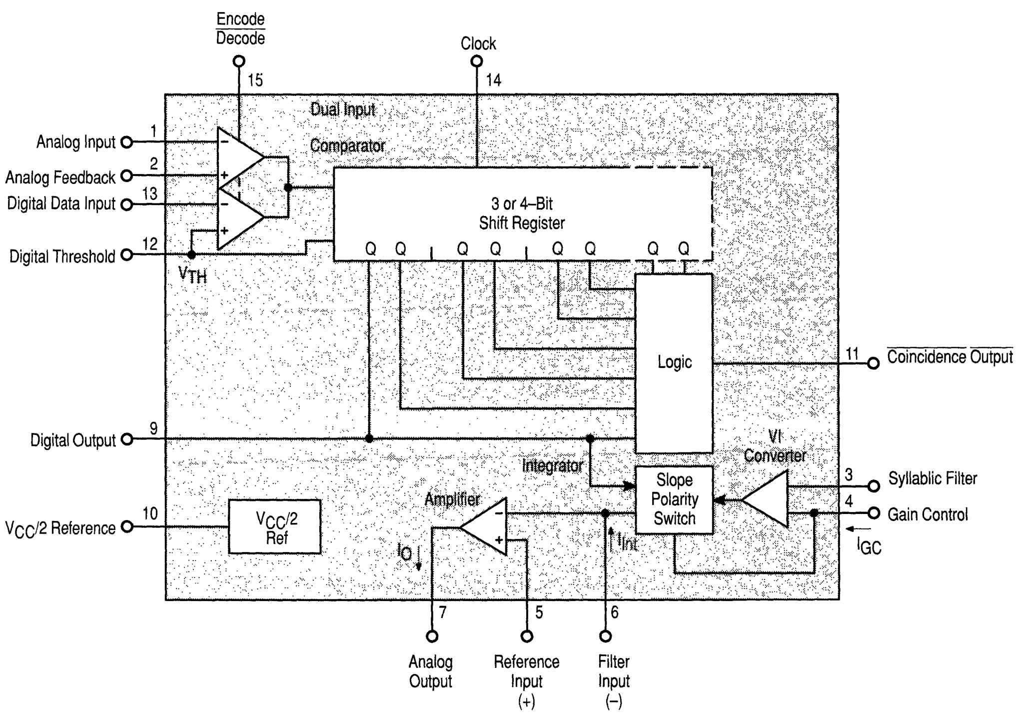
Continuously Variable Slope Delta (CVSD) Modulator/Demodulator

MC34115P, DW
T_A = 0° to +70°C, Case 648, 751G

MC3418P, DW
T_A = 0° to +70°C, Case 648, 751G

Provides the A/D–D/A function of voice communications by digital transmission. Designed for speech synthesis and commercial telephone applications. A single IC provides both encoding and decoding.

- Encode and Decode Functions on the Same Chip with a Digital Input
- CMOS Compatible Digital Output
- Digital Input Threshold Selectable (V_{CC}/2 reference provided on Chip)
- MC34115 Has a 3–Bit Algorithm (General Communications)
- MC3418 Has a 4–Bit Algorithm (Commercial Telephone)



Telephone Accessory Circuits (continued)

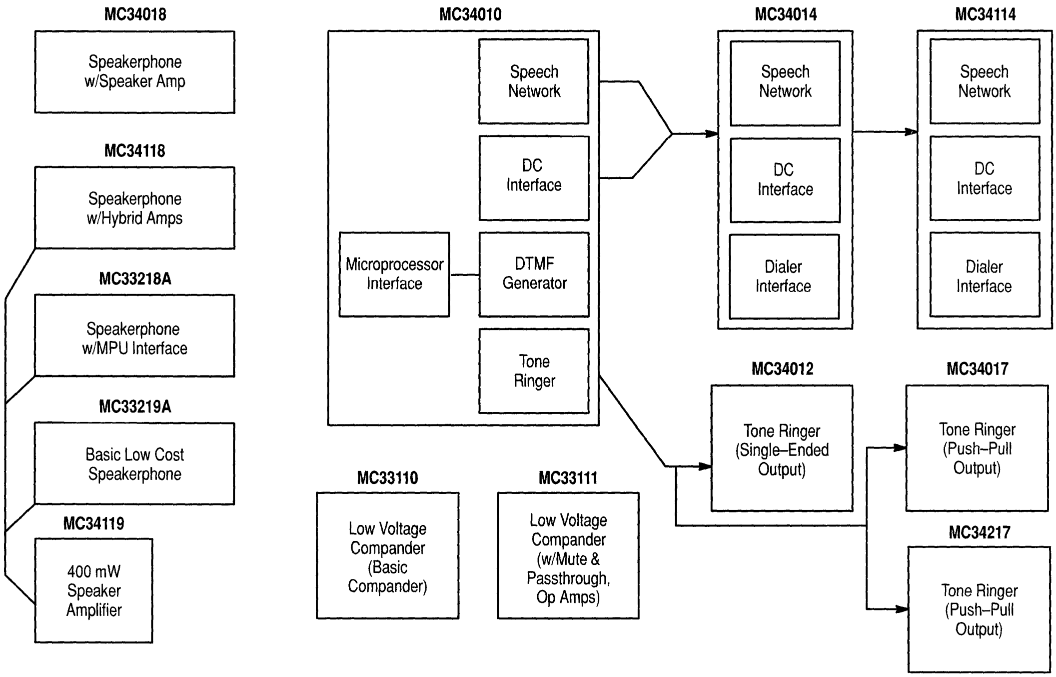
Table 11. Summary of Bipolar Telecommunication Circuits

Function	Features	Suffix/ Package	Device
Subscriber Loop Interface Circuits (SLICs)			
Central Office, Remote Terminals, PBX Applications	All gains externally programmable, most BORSHT functions, current limit adjustable to 50 mA, 58 dB Longitudinal Balance, –21.6 V to –42 V.	P/738, FN/776	MC33121
Central Office, Remote Terminals, PBX Applications	All gains externally programmable, most BORSHT functions, current limit adjustable to 50 mA, 58 dB Longitudinal Balance, –42 V to –58 V.	P/738, FN/776	MC33120
Complete Telephone Circuit			
POTS Circuit + MPU Dialing	Speech network, tone ringer, dc loop current interface, DTMF dialer with serial port control.	P/711, FN/777	MC34010
Tone Ringers			
Adjustable Tone Ringer	Single–ended output, meets FCC requirements, adjustable REN, different warble rates.	P/626, D/751	MC34012–1, 2, 3
Adjustable Tone Ringer	Differential output, meets FCC requirements, adjustable REN, different warble rates.	P/626, D/751	MC34017–1, 2, 3
Adjustable Tone Ringer	Differential output, meets FCC requirements, adjustable REN, single warble rates.	P/626, D/751	MC34217
Ring Signal Converter	Switching regulator to convert ringing voltage to regulated dc output. Provides ring detect output.	DP/626, FP/751	TCA3385
Speech Networks			
Speech Network + Speakerphone	Line powered IC provides handset and speakerphone modes, dialer interface, ac/dc terminations, and AGC. Efficient supply design provides 90% of loop current to the speaker amplifier. Speaker amplifier may be used independently. Handset operation to 4.0 mA.	B/858, FB/848B	MC33215
Basic Phone Line Interface	Loop current interface, speech network, line length compensation, speech/dialing modes, Bell System compliant.	P/707, DW/751D	MC34014
Cordless Universal Telephone Interface	For cordless telephone base for CT0, CT1, CT2 and DECT. European dc masks, double wheatstone bridge sidetone circuit. SPI port for masks, AGC hookswitch, mute and gain settings. Requires 5.0 V and µP.	P/738, DW/751D	MC34016
Basic Phone Line Interface	Loop current interface, speech network, line length compensation, speech/dialing modes, Bell System and foreign countries.	P/707, DW/751D	MC34114
Programmable Telephone Line Interface Circuit with Loudspeaker Amplifier	Group listening–in, DTMF and tones generator, ring generator, country programmable, SPI interface.	DW/751F	MC34216
European Speech Network, Programmable Speaker Amplifier	Line powered. European dc masks, DTMF and pilot tone generator, listening–in mode with anti–howling. 2–wire bus control masks, DTMF tones, speaker gain, pulse dialing, mute, AGC. Requires MCU.	DW/751	MC34216A
European Speech Network	Loop current interface, speech network, line length compensation, speech/dialing modes, programmable masks for French, U.K., low voltage and PABX systems.	DP/738, FP/751	TCA3388

Summary of Bipolar Telecommunications Circuits (continued)

Function	Features	Suffix/ Package	Device
Speakerphone Circuits			
Speech Network + Speakerphone	Line powered IC provides handset and speakerphone modes, dialer interface, ac/dc terminations, and AGC. Efficient supply design provides 90% of loop current to the speaker amplifier. Speaker amplifier may be used independently. Handset operation to 4.0 mA.	B/858, FB/848B	MC33215
Complete Speaker Phone with Speaker Amplifier	All level detection (2 pt.), attenuators, and switching controls, mike and speaker amp.	P/710, DW/751F	MC34018
Complete Speaker Phone with Hybrid, Filter	All level detection (4 pt.), attenuators, and switching controls, mike amp with mute, hybrid, and filter.	P/710, DW/751F	MC34118
Complete Speaker Phone with MPU Interface	All level detection, attenuators, and switching controls, mike amp, MPU interface for: volume control, mode selection, mike mute.	P/724, DW/751E	MC33218A
Basic Low Cost Speakerphone	All level detection, attenuators and switching controls, Mike amplifier with Mute, low voltage operation.	P/724, DW/751E	MC33219A
Audio Amplifiers			
1 Watt Audio Amp	1.0 W output power into 16 Ω, 35 V maximum.	D/751	MC13060
Low Voltage Audio Amp	400 mW, 8.0 to 100 Ω, 2.0 to 16 V, differential outputs, chip–disable input pin.	P/626, D/751	MC34119
Companders			
Basic Compander	2.1 V to 7.0 V, no precision externals, 80 dB range, –40° to +85°C, independent compressor and expander.	P/646, D/751A	MC33110
Compander with Features	3.0 V to 7.0 V, no precision externals, 80 dB range, –40° to +85°C, independent compressor and expander, pass through and mute functions, two op amps.	P/648, D/751B	MC33111
Switching Regulator			
Current Mode Regulator	For phone line power applications, soft–start, current limiting, 2% accuracy.	P/646, D/751A	MC34129
Voice Encoder/Decoders			
Continuously Variable Slope Modulator/Demodulator (CVSD)	Telephone quality voice encoding/decoding, variable clock rate, 3–bit coding, for secure communications, voice storage/retrieval, answering machines, 0° to 70°C.	P/738, DW/751G	MC34115
	Same as above except 4–bit coding.	P/738, DW751G	MC3418

Figure 3. The Motorola Family of Handset Telecom Integrated Circuits



Phase–Locked Loop Components

Motorola offers a choice of phase–locked loop components ranging from complete functional frequency synthesizers for dedicated applications to a wide selection of general purpose PLL circuit elements. Technologies include CMOS for lowest power consumption and bipolar for high speed operation. Typical applications include TV, CATV, radios, scanners, cordless telephones plus home and personal computers.

Table 12. PLL Frequency Synthesizers

Frequency (MHz)	Supply Voltage (V)	Nominal Supply Current (mA)	Phase Detector	Standby	Interface	Device	Suffix/ Case
4 @ 5 V	4.5 to 12	6 @ 5 V	Single–ended 3–state	No	Parallel	MC145106	P/707, DW/751D

Consumer Electronic Circuits

In Brief . . .

These integrated circuits reflect Motorola's continuing commitment to semiconductor products necessary for consumer system designs. This tabulation is arranged to simplify selection of consumer integrated circuit devices that satisfy the primary functions for home entertainment products, including television, hi–fi audio and AM/FM radio.

Entertainment Radio Receiver Circuits

Table 1. Entertainment Receiver RF/IF

Function	Features	Suffix/ Package	Device
E.T.R. Front End	Mixer/VCO/AGC for Electronically Tuned AM Stereo Receivers	P/648, D/751B	MC13025
AMAX Front End	Mixer/VCO/AGC with RF and Audio Noise Blanking	DW/751D, P/738	MC13027
Dual Conversion AM Receiver	1st Mixer/OSC, 2nd Mixer/OSC, High Gain IF, AGC, Detector	DW/751F	MC13030

Table 2. C–Quam® AM Stereo Decoders

Function	Features	Suffix/ Package	Device
Advanced AM Stereo Decoder	Medium Voltage 6.0 to 10 V, Decoder and IF Amp	P/710, DW/751F	MC13022A
Low V AM Stereo Receiver	IF/Decoder for Advanced C–Quam Receivers	P/648, D/751B	MC13028A
Medium V AM Stereo Decoder	IF/Decoder for Advanced C–Quam Receivers with AM/FM Switch	DW/751D, H/738	MC13029A
AMAX Stereo Decoder	Am Stereo Decoder with Audio Noise Blanker	DW/751F, P/710	MC13122

Table 3. Audio Amplifiers

Function	P_O (Watts)	V_{CC} Vdc Max	V_{in} @ Rated P_O mV Typ	I_D mA Typ	R_L (Ohms)	Suffix/ Package	Device
Mini Watt SOIC Audio Amp	1.0 W	35	80	11	16	D/751	MC13060
Low Power Audio Amp	500 mW	16	–	2.5 mA	8 – ∞	D/751, P/626, DTB/948J	MC34119

Video Circuits

Table 4. Video Circuits

Function	Features	Suffix/ Package	Device
Encoders			
Video Overlay Synchronizer	Complete Color TV Video Overlay Synchronizer, remote or local system control and RGB encoder.	P/711, FN/777	MC1378
Advanced RGB to PAL/NTSC Encoder	RGB and Sync inputs, Composite Video and S–VHS out; PAL/NTSC selectable; subcarrier from crystal or external source.	P/738, DW/751D	MC13077
TV Decoder			
Chroma 4 Multistandard Decoders (TV Set)	PAL/NTSC/SECAM decoding, Composite Video/S–VHS Inputs, RGB Outputs, horizontal and vertical drive outputs, geometry correction and beam current monitor, digital internal filters, no external tank, 16:9 capability, µP and crystal controlled.	P/711	MC44002
	Same as MC44002, but without SECAM decoding.	P/711	MC44007
	Same as MC44002, but with internal chroma delay line.	P/711	MC44030
	Same as MC44030, but without SECAM decoding.	P/711	MC44035
Video Capture Chip Sets			
Chroma 4 Multistandard Video Processor (Multimedia)	PAL/NTSC/S–VHS input, RGB/YUV outputs; horizontal and vertical timing outputs; all digital internal filters, no external tanks; µP and crystal controlled.	FN/777, FB/824E	MC44011
Chroma Digital Delay Line	For PAL and SECAM applications of the MC44011, MC44002, MC44007.	P/648, DW/751G	MC44140
Pixel Clock PLL/Sync Sep.	PAL/NTSC sync separator, 6.0–40 MHz pixel clock PLL.	D/751A	MC44145
Triple 8–Bit Video DAC	TTL inputs, 75 Ω drive outputs.	FB/824A	MC44200
Triple 8–Bit Video A/D	Video clamps for RGB/YUV, 18 MHz, High Z TTL outputs.	FN/777, FU/824A	MC44251
TV Picture–in–Picture			
Picture–in–Picture (PIP) Controller	Completely self–contained NTSC picture–in–picture function.	B/859	MC44461
Y–C Picture–in–Picture (PIP) Controller	Completely self–contained NTSC picture–in–picture function, with Y–C input and output capability, for use in high performance S–Video systems.	B/859	MC44462
Replay and Multiple Picture–in–Picture (PIP) Controller	Offers either multiple PIP windows or several seconds of replay. Used with external DRAM.	B/859	MC44463
Comb Filters			
Enhanced Comb Filter	Fast 8–Bit A/D Converter, Two 8–Bit D/A Converters, Two Line–Delay Memories, utilizes NTSC Subcarrier Frequency clock, CMOS Technology.	FU/898	MC141620
Advanced Comb Filter (ACF)	Composite Video input; YC outputs in digital and analog form; all digital internal filters.	FU/898	MC141621A
Advanced Comb Filter – II (ACF–II)	Composite Video input; YC outputs in digital and analog form; all digital internal filters; vertical enhancer circuit.	P/898	MC141622A
Advanced Comb Filter – I (ACF–I)	Low cost Ih filter.	FU/873 SP/TBD	MC141624
Advanced PAL/NTSC Comb Filter	Composite Video input; YC outputs in digital and analog form; all digital internal filters.	FB/898	MC141627
Deflection			
Horizontal Processor	Linear balanced phase detector, oscillator and predriver, adjustable DC loop gain and duty cycle.	P/626	MC1391
TV IF Circuits			
IF Amplifier	1st and 2nd video IF amplifiers, 50 dB gain at 45 MHz, 60 dB AGC range.	D/751, P/626	MC1350

Table 4. Video Circuits (continued)

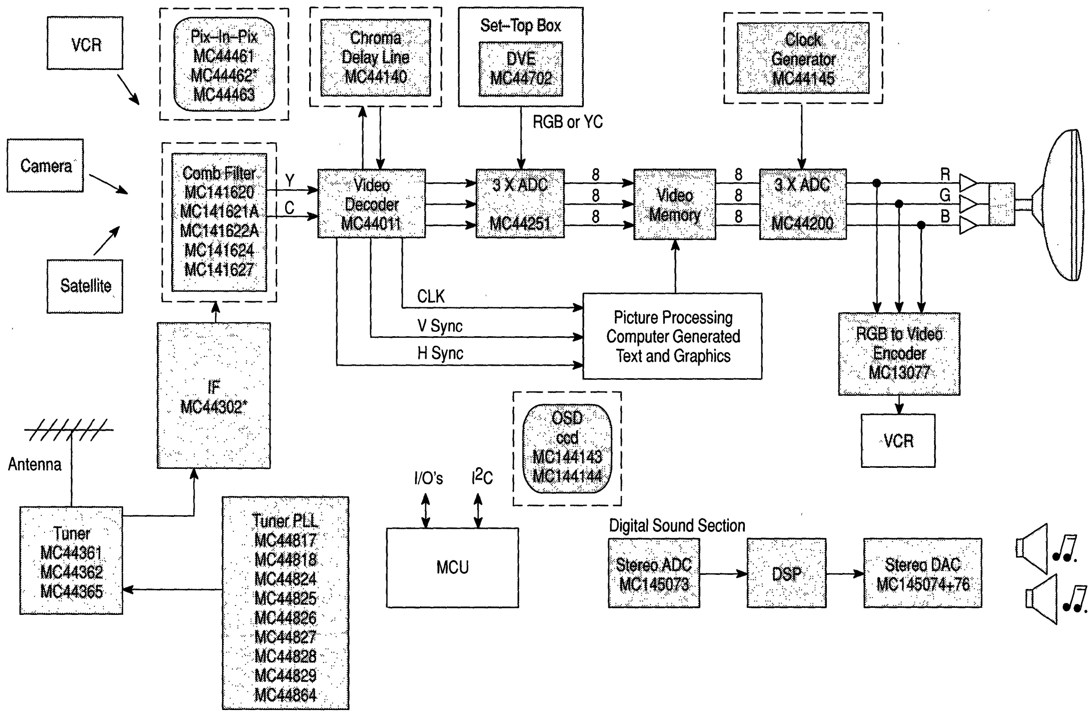
Function	Features	Suffix/ Package	Device
Tuner PLL Circuits			
PLL Tuning Circuits	1.3 GHz, 10 mV sensitivity selectable prescaler (MC44817), op amp, 4 band buffers, 3–wire bus interface, lock detect.	D/751B	MC44817, B
	1.3 GHz, 10 mV sensitivity prescaler, op amp, 4 band buffers, I^2C interface, lock detect.	D/751B	MC44818
	1.3 GHz, 10 mV sensitivity prescaler, 3 band buffers, I^2C interface, replacement for Siemens MPG3002.	D/751, D/751B	MC44824, MC44825
	Similar to MC44817, with lower power consumption, push–pull lock detector output, no divide–by–8 bypass, in a TSSOP package.	DTB/948F	MC44827
	Similar to MC44818, with lower power consumption, push–pull lock detector output, in a TSSOP package.	DTB/948F	MC44828
	1.3 GHz prescaler, 10 mV sensitivity 50 to 950 MHz, op amp, 3 band buffers, Mixer/Osc Decoder and I^2C Bus.	D/751A	MC44829
	1.3 GHz, 10 mV sensitivity selectable prescaler, op amp, 4 band buffers, I^2C interface, 3 DACs for automatic tuner alignment.	M/967	MC44864
Modulator			
Color TV Modulator with Sound	RF oscillator/modulator, and FM sound oscillator/modulator.	P/646	MC1374
UHF TV Modulator	Multi–standard PLL tuned UHF TV modulator with AM or FM sound.	DTB/948E, DW/751D	MC44353, MC44354, MC44355
Video Data Converters			
Single Channel A/D	8–Bit, 25 MHz, 2.0 V input range, ±5.0 V supplies, TTL output, no pipeline delay.	P/709, DW/751E	MC10319
Triple 8–Bit Video A/D	Video clamps for RGB/YUV, 18 MHz conversion, high Z outputs.	FN/777, FU/824A	MC44251
Triple 8–Bit Video DAC	TTL inputs, 75 Ω drive outputs.	FB/824	MC44200
Monitor Subsystem			
Multimode Color Monitor Processor	Adaptable to 30 kHz to 64 kHz horizontal, 45 to 100 Hz vertical frequency, multiple sync including sync–on–green, horizontal and vertical drive outputs, double PLL, 70 MHz RGB pre–amps, contrast and brightness controls.	B/859	MC13081X
RGB Video Processor	80 MHz bandwidth, blank and clamp inputs, main contrast and subcontrast controls.	P/738	MC13280AY
	Same as above, except 100 MHz bandwidth.	P/738	MC13281B
	Same as above, except 100 MHz bandwidth and pin compatible with MC13282A.	P/724	MC13281A
RGB Video Processor with OSD Inputs	100 MHz bandwidth, blank and clamp inputs, main contrast and subcontrast controls, OSD inputs, OSD contrast control, pin compatible with MC13281A.	P/724	MC13282A
	Same as above, except 130 MHz bandwidth.	P/724	MC13283
Miscellaneous			
Subcarrier Reference Generator	Provides continuous subcarrier sine wave and 4x subcarrier, locked to incoming burst.	P/626, D/751	MC44144
Closed Caption Decoder	Conforms to FCC, NTSC standards, underline and italics control.	P/707	MC144143
Enhanced Closed Caption Decoder	Conforms to FCC, NTSC, XDS standards, underline, italics and OSC.	P/707	MC144144
Sync Separator/Pixel Clock PLL	PAL/NTSC sync separator with vertical and composite sync output, 6 to 40 MHz pixel clock PLL.	D/751A	MC44145
Dual Video Amplifiers	Gain @ 4.43 MHz = 6.0 dB ±1.0 dB, fixed gain, internally compensated, CMOS Technology.	P/626, F/904	MC14576C
	Gain @ 5.0 MHz = 10 dB max, 10 MHz = 6.0 dB max, adjustable gain, internally compensated, CMOS Technology.	P/626, F/904	MC14577C
Transistor Array	One differential pair and 3 isolated transistors, 15 V, 50 mA.	P/646, D/751A	MC3346

Table 5. Video Decoders

Function	MC44002	MC44007	MC44030(1)	MC44035	MC44011
For TV Set Applications (RGB Outputs for CRT Driver)	Yes		Yes		No
For Video Capture Applications (RGB/YUV Outputs)	No		No		Yes
PAL/NTSC Decoding	Yes		Yes		Yes
SECAM Decoding	Yes	No	Yes	No	No
Chroma Delay Line	External		Internal		External
Composite Video Inputs	2		2		2
Y/C Inputs	1 set (Note 2)		1 set (Note 2)		1 set (Note 2)
RGB Inputs (3 Pins)	1 set		1 set		1 set
YUV Outputs/Inputs	Yes		Yes		Yes
Video Output for Teletext or Closed Caption	No		No		No
16:9 Capability on 4:3 Screen	Yes		Yes		No
Single 5.0 V Supply	Yes		Yes		Yes
Supply Current (Typical)	120 mA		150 mA		110 mA
Video Mute (Blanking Control)	No		Yes		No
Pixel Clock Generator for A/D	No		No		Yes

NOTES: 1. The MC44030 with integrated chroma delay line can replace the MC44002 + MC44140. A single PC board pattern can be made to accept either device and the software can be written to be compatible, although the MC44030 has several additional functions.
2. In Y/C mode the two CVBS inputs become Y and C inputs.
3. One set uses SCART Video input as Y and SCART Red input as C. The second set are independent inputs.

Video Capture Block Diagram



* In Development

Digitally Controlled Video Processor for Multimedia Applications

MC44011FN, FB

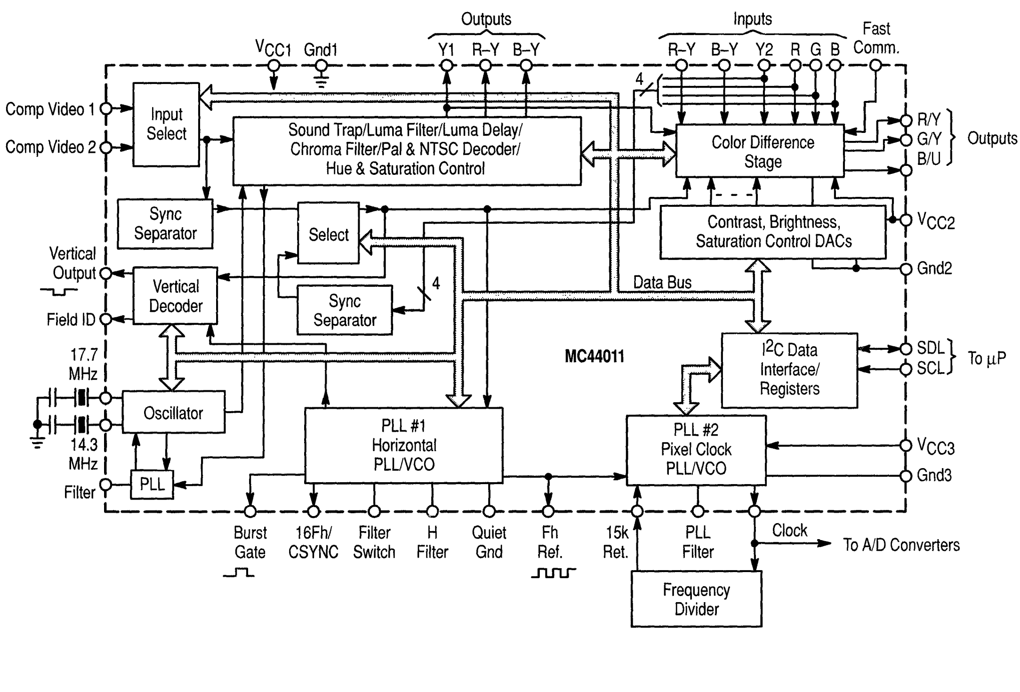
Case 777, 824E

The MC44011, a member of the MC44xxx Chroma 4 family, is designed to provide RGB or YUV outputs from a variety of inputs. The inputs may be either PAL or NTSC composite video (two inputs), S–VHS, RGB, and color difference (R–Y, B–Y).

The MC44011 provides a sampling clock output for use by a subsequent analog to digital converter. The sampling clock (6.0 to 40 MHz) is phase–locked to the horizontal frequency. Additional outputs include composite sync, vertical sync, field identification, luminance, burst gate, and horizontal frequency.

Control of the MC44011, and reading of status flags is accomplished via an I²C bus.

- Multistandard Decoder, Accepts NTSC and PAL Composite Video
- Dual Composite Video or S–VHS Inputs
- All Chroma and Luma Channel Filtering, and Luma Delay Line are Integrated Using Sampled Data Filters Requiring no External components
- Digitally Controlled via I²C Bus
- Auxiliary Y, R–Y, B–Y Inputs
- Switched RGB Inputs with Separate Saturation Control
- Line–Locked Sampling Clock for Digitizing Video Signals
- Burst Gate Pulse Output for External Clamping
- Vertical Sync and Field Ident Outputs
- Software Selectable YUV or RGB Outputs Able to Drive A/D Converters



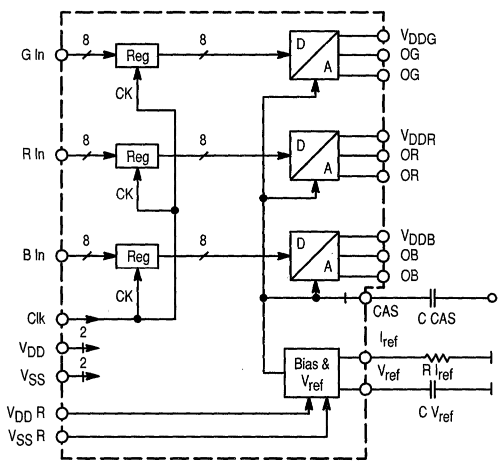
Triple 8–Bit D/A Converter

MC44200FB

Case 824A

The MC44200 is a monolithic digital to analog converter for three independent channels fabricated in CMOS technology. The part is specifically designed for video applications. Differential outputs are provided, allowing for a large output voltage range.

- 8–Bit Resolution
- Differential Outputs
- 55 msps Conversion Speed
- Large Output Voltage Range
- Low Current Mode
- Single 5.0 V Power Supply
- TTL Compatible Inputs
- Integrated Reference Voltage



Triple 8–Bit A/D Converter

MC44251FN, FU

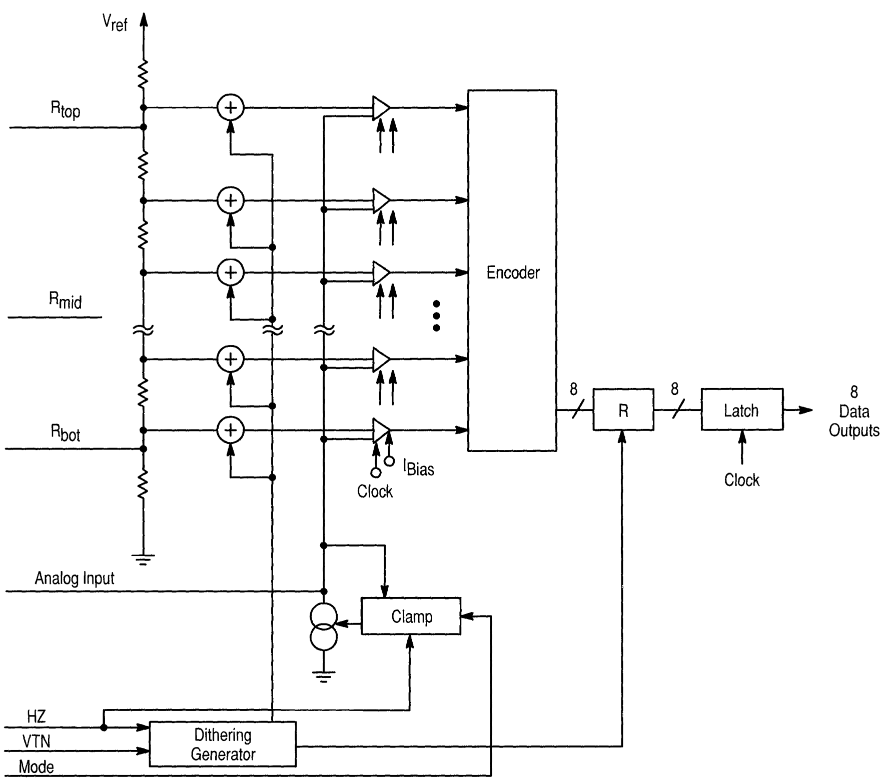
Case 777, 824A

The MC44251 contains three independent parallel analog to digital converters. Each ADC consists of 256 latching comparators and an encoder. Input clamps allow for AC coupling of the input signals, and dc coupling is also allowed. For video processing performance enhancements, a dither generator with subsequent digital correction is provided to each ADC. The outputs of the MC44251 can be set to a high impedance state.

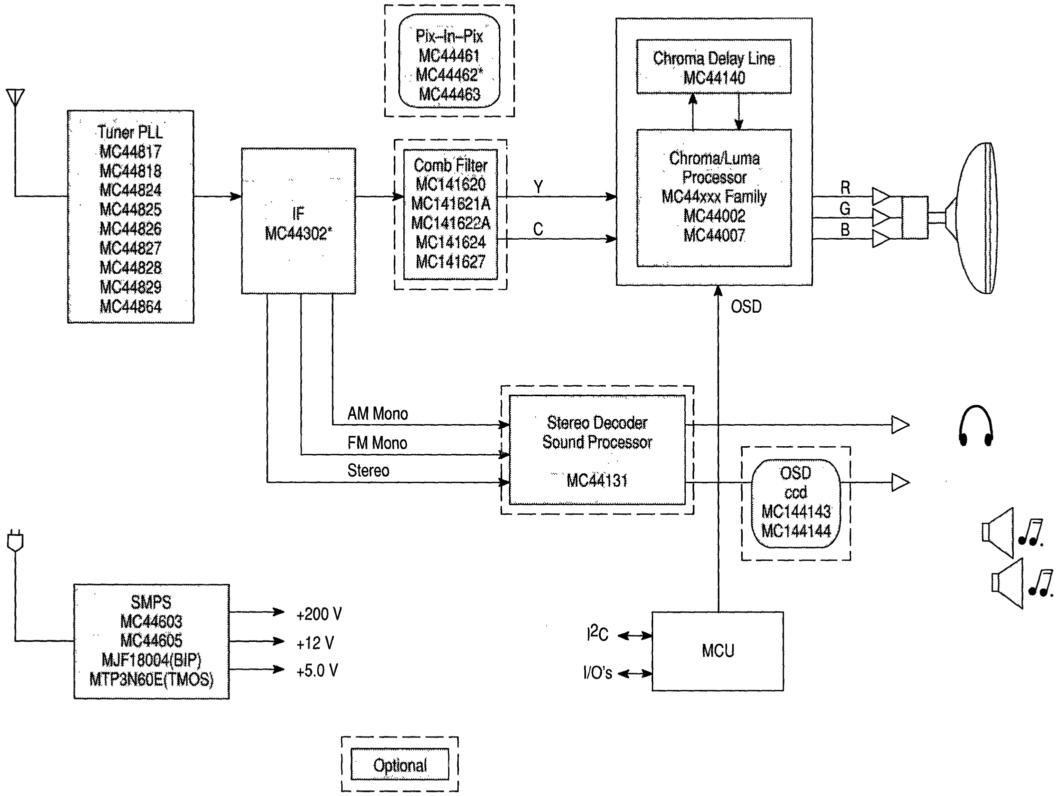
These A/Ds are especially suitable as front end converters in TV picture processing.

- 18 MHz Maximum Conversion Speed (MC44251)
- Input Clamps Suitable for RGB and YUV Applications
- Built–in Dither Generator with Subsequent Digital Correction
- Single 5.0 V Power Supply

Simplified Diagram of One of the ADCs



Color TV Block Diagram



* In Development

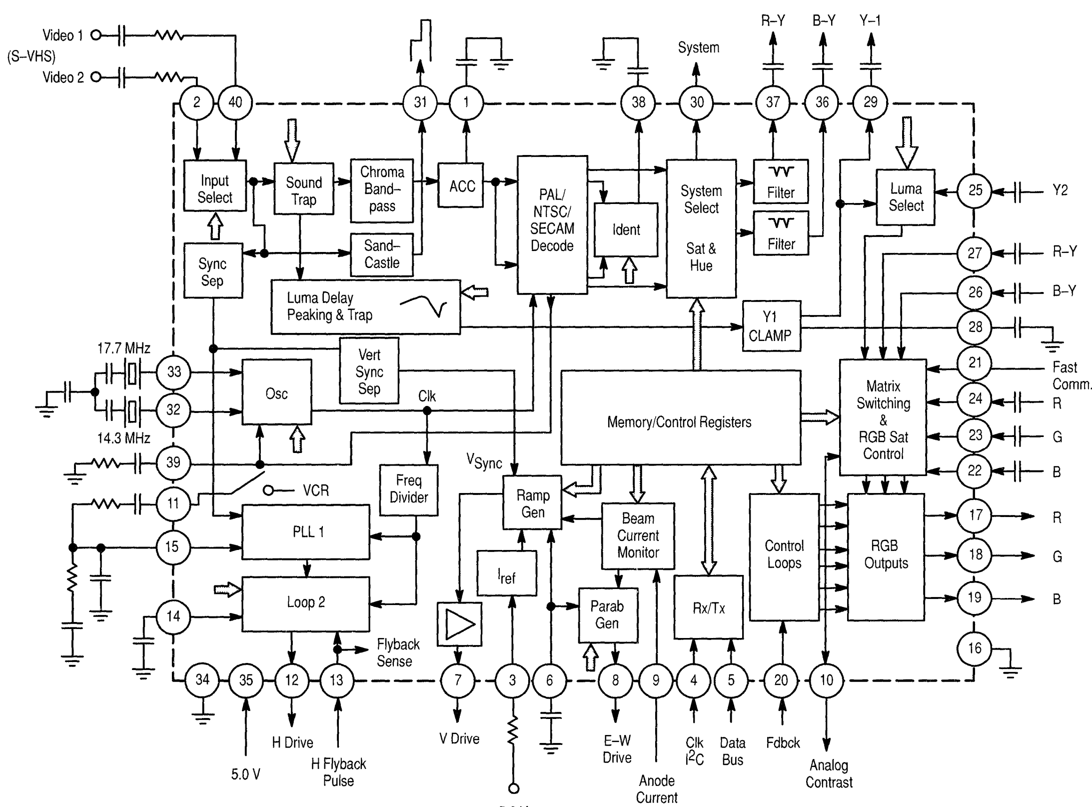
Multistandard Video/Timebase Processor

MC44002P, MC44007P

Case 711

The MC44002/7 is a highly advanced circuit which performs most of the basic functions required for a color TV. All of its advanced features are under processor control via an I2C bus, enabling potentiometer controls to be removed completely. In this way the component count may be reduced dramatically to allow significant cost savings and the possibility of implementing sophisticated automatic test routines. Using the MC44002/7, TV manufacturers will be able to build a standard chassis for anywhere in the world.

- Operation from a Single 5.0 V Supply; Typical Current Consumption Only 120 mA
- Full PAL/SECAM/NTSC Capability (MC44002 Only)
- MC44007 Decodes PAL/NTSC Only
- Dual Composite Video or S–VHS Inputs
- All Chroma/Luma Channel Filtering, and Luma Delay Line are Integrated Using Sampled Data Filters Requiring No External Components
- Filters Automatically Commutate with Change of Standard
- Chroma Delay Line is Realized with Companion Device (MC44140)
- RGB Drives Incorporate Contrast and Brightness Controls and Auto Gray Scale
- Switched RGB Inputs with Saturation Control
- Auxiliary Y, R–Y, B–Y Inputs
- Line Timebase Featuring H–Phase Control and Switchable Phase Detector Gain and Time Constant
- Vertical Timebase Incorporating the Vertical Geometry Corrections
- E–W Parabola Drive Incorporating the Horizontal Geometry Corrections
- Beam Current Monitor with Breathing Compensation
- 16:9 Display Mode Capability

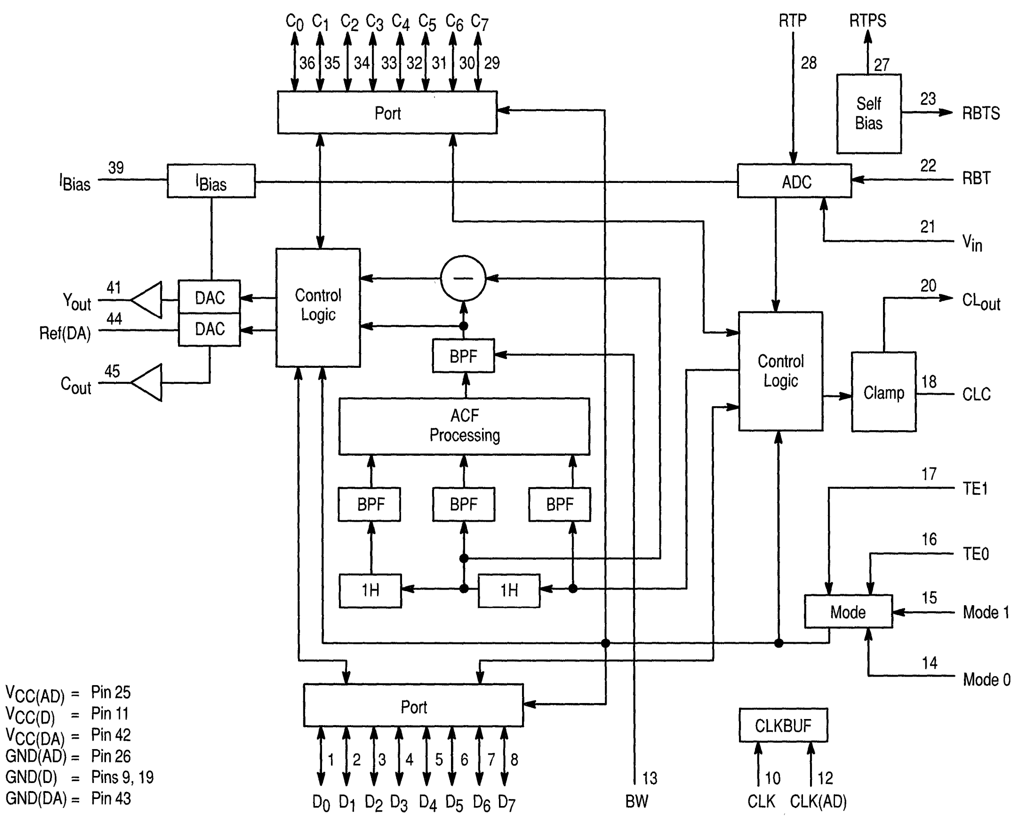


Advanced NTSC Comb Filter

MC141621FB
Case 898

The MC141621 is an advanced NTSC comb filter for VCR and TV applications. It separates the luminance (Y) and chrominance (C) signals from the NTSC composite video signal by using digital signal processing techniques. This filter allows a video signal input of an extended frequency bandwidth by using a 4.0 F_{SC} clock. In addition, the filter minimizes dot crawl and cross color effects. The built–in A/D and D/A converters allow easy connections to analog video circuits.

- Built–in High Speed 8–Bit A/D Converter
- Two Line Memories (1820 Bytes)
- Advanced Combing Process
- Two 8–Bit D/A Converters
- Built–in Clamp Circuit
- On–Chip Reference Voltage Regulator for ADC
- Digital Interface Mode



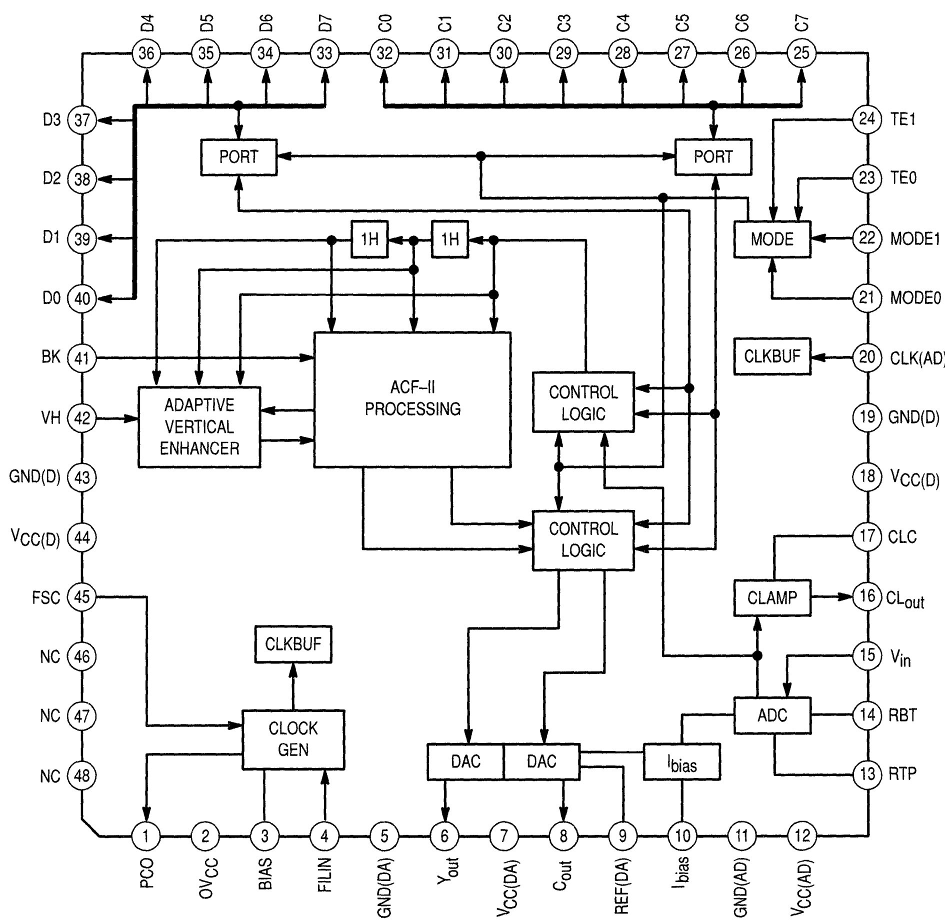
Advanced Comb Filter–II (ACF–II)

MC141622AFU

Case 898

The Advanced Comb Filter–II is a video signal processor for VCRs and TVs. It's function is to separate the Luminance Y and Chrominance C signals from the NTSC composite video signal. The ACF–II minimizes dot–crawl and cross–color. A built–in PLL provides a 4xfsc clock from either an NTSC subcarrier signal or a 4xfsc input. This allows a video signal input of an extended frequency bandwidth. The built–in vertical enhancer circuit improves the quality of the Luminance Y signal. The built–in A/D and D/A converters allow easy connection to analog video circuits.

- Built–in High Speed 8–Bit A/D Converter
- Two Line Memories (1820 Bytes)
- Advanced Comb–II Process
- Vertical Enhancer Circuit
- Two High Speed 8–Bit D/A Converters
- 4xfsc PLL Circuit
- Built–in Clamp Circuit
- Digital Interface Mode
- On–Chip Reference Voltage Regulator for A/D Converter

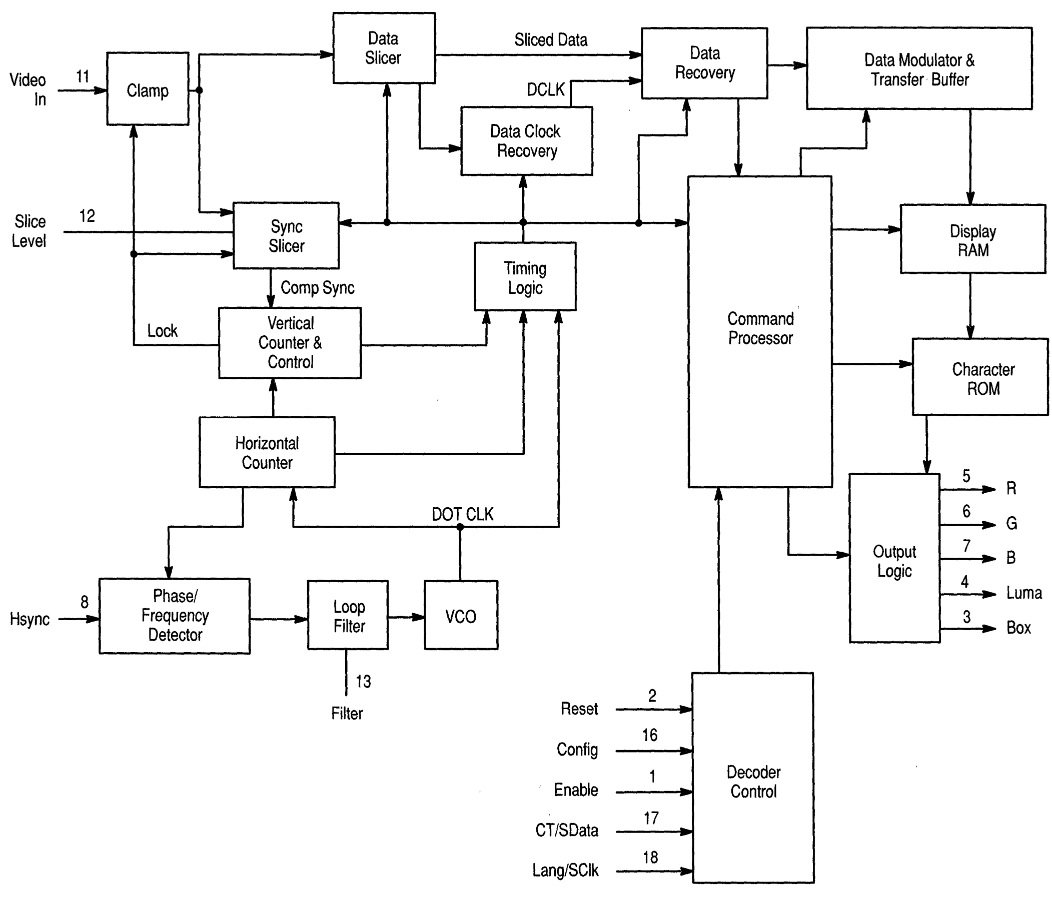


Closed–Caption Decoder

MC144143P
Case 707

The MC144143 is a Line 21 closed–caption decoder for use in television receivers or set top decoders conforming to the NTSC broadcast standard. Capability for processing and displaying all of the latest standard Line 21 closed–caption format transmissions is included. The device requires a closed–caption encoded composite video signal, a horizontal sync signal, and an external keyer to produce captioned video. RGB outputs are provided, along with a luminance and a box signal, allowing simple interface to both color and black and white receivers.

- Conforms to the FCC Report and Order as Amended by the Petition for Reconsideration on Gen. Doc. 91–1
- Supports Four Different Data Channels, Time Multiplexed within the Line 21 Data Stream: Captions Utilizing Languages 1 & 2, Plus Text Utilizing Languages 1 & 2
- Output Logic Provides Hardware Underline Control and Italics Slant Generation
- Single Supply Operating Voltage Range: 4.75 to 5.25 V
- Composite Video Input Range: 0.7 to 1.4 V_{pp}
- Horizontal Sync Input Polarity can be either Positive or Negative
- Internal Timing/Sync Signals Derived from On–Chip VCO



Enhanced Closed–Caption Decoder

MC144144P
Case 707

The MC144144 is a Line 21 closed–caption decoder for use in television receivers or set–top decoders conforming to the NTSC standard. Capability for processing and displaying all of the latest standard Line 21 closed–caption format transmissions is included. The device requires a closed–caption encoded composite video signal, a horizontal sync signal, and an external keyer to produce captioned video. RGB and box signal outputs are provided, which along with the mode select, allow simple interfacing to either color or black–and–white TV receivers.

Display storage is accomplished with an on–chip RAM. A modified ASCII character set, which includes several non–English characters, is decoded by an on–chip ROM. An on–screen character appears as a white or colored dot matrix on a black background.

Captions (video–related information) can be up to four rows appearing anywhere on the screen and can be displayed in two modes: roll–up, paint–on, or pop–on. With rollup captions, the row scrolls up and new information appears at the bottom row each time a carriage return is received. Pop–on captions work with two memories. One memory is displayed while the other is used to accumulate new data. A special command causes the information to be exchanged in the two memories, thus causing the entire caption to appear at once.

When text (non–video related information) is displayed, the rows contain a maximum of 32 characters over a black box which overwrites the screen. Fifteen rows of characters are displayed in the text mode.

An on–chip processor controls the manipulation of data for storage and display. Also controlled are the loading, addressing, and clearing of the display RAM. The processor transfers the data received to the RAM during scan lines 21 through 42. The operation of the display RAM, character ROM, and output logic circuits are controlled during scan lines 43 through 237. The functions of the MC144144 are controlled via a serial port which may be configured to be either I^2C or SPI.

- Conforms to FCC Report and Order as Amended by the Petition for
  Reconsideration on Gen. Doc. 91–1
- Conforms to EIA–608 for XDS Data Structure
- Supports Four Different Data Channels for Field 1 and Five Different Data Channels for Field 2, Time Multiplexed within the Line 21 Data Stream: Captions Utilizing Languages 1 and 2, Text Utilizing Languages 1 and 2 and XDS Support
- Output Logic Provides Hardware Underline Control and Italics Slant Generation
- Single Supply, Operating Voltage Range: 4.75 to 5.25 V
- Supply Current: 20 mA (Preliminary)
- Operating Temperature Range: 0 to 70°C
- Composite Video Input Range: 0.7 to 1.4 V_{pp}
- Horizontal Input Polarity: Either Positive or Negative
- Internal Timing and Sync Signals Derived from On–Chip VCO

PLL Tuning Circuits with 3–Wire Bus

MC44817BD, D

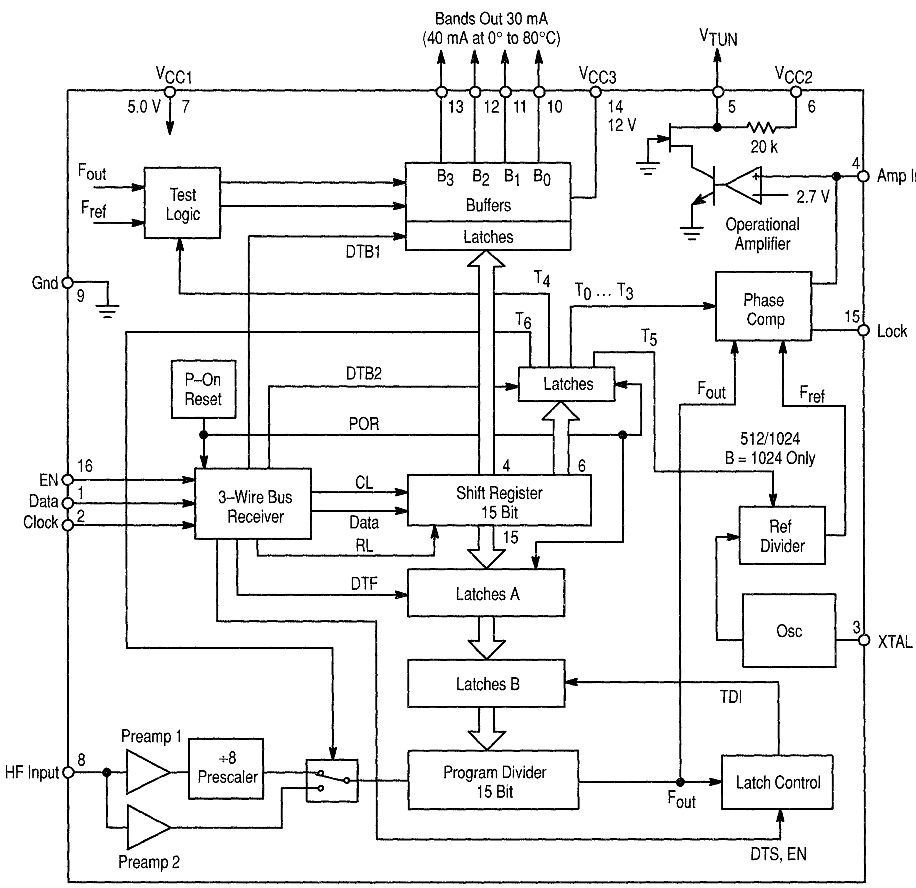
Case 751B

The MC44817/17B are tuning circuits for TV and VCR tuner applications. They contain on one chip all the functions required for PLL control of a VCO. The integrated circuits also contain a high frequency prescaler and thus can handle frequencies up to 1.3 GHz.

The MC44817 has programmable 512/1024 reference dividers while the MC44817B has a fixed reference divider of 1024.

The MC44817/17B are manufactured on a single silicon chip using Motorola's high density bipolar process, MOSAIC™ (Motorola Oxide Self Aligned Implanted Circuits).

- Complete Single Chip System for MPU Control (3–Wire Bus). Data and Clock Inputs are IIC Bus Compatible
- Divide–by–8 Prescaler Accepts Frequencies up to 1.3 GHz
- 15 Bit Programmable Divider Accepts Input Frequencies up to 165 MHz
- Reference Divider: Programmable for Division Ratios 512 and 1024. The MC44817B has a Fixed 1024 Reference Divider
- 3–State Phase/Frequency Comparator
- Operational Amplifier for Direct Tuning Voltage Output (30 V)
- Four Integrated PNP Band Buffers for 40 mA (V_{CC1} to 14.4 V)
- Output Options for the Reference Frequency and the Programmable Divider
- Bus Protocol for 18 or 19 Bit Transmission
- Extra Protocol for 34 Bit for Test and Further Features
- High Sensitivity Preamplifier
- Circuit to Detect Phase Lock
- Fully ESD Protected



PLL Tuning Circuit with I²C Bus

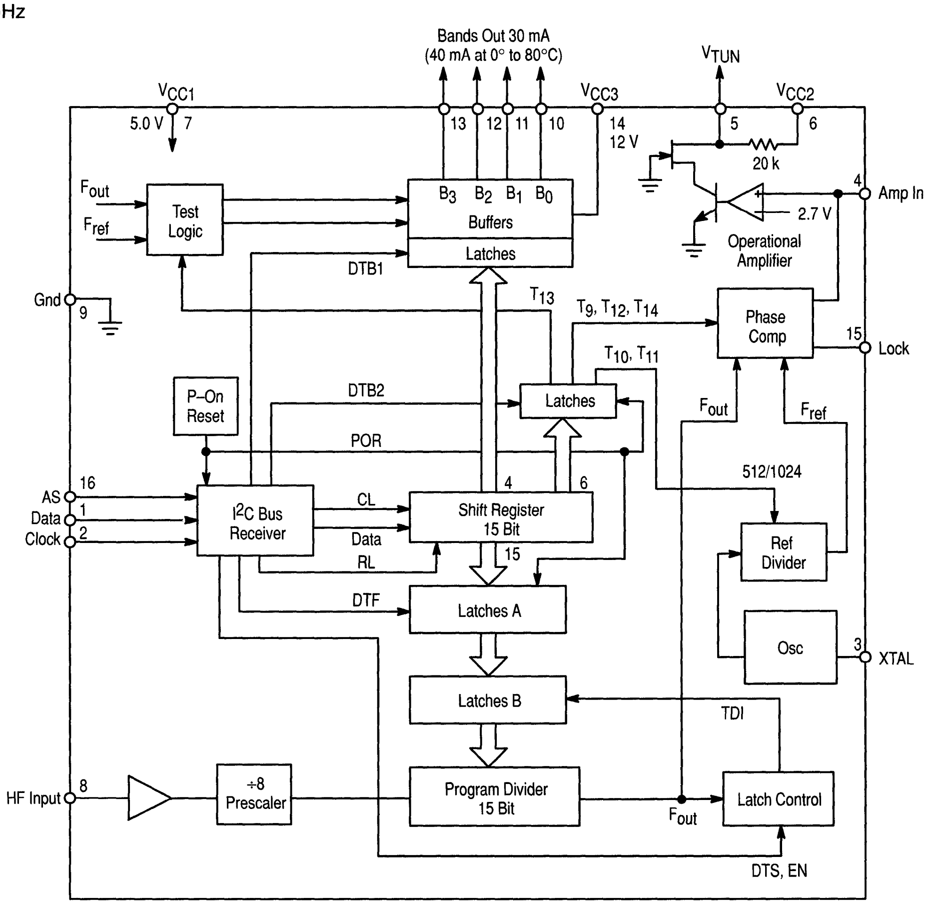
MC44818D

Case 751B

The MC44818 is a tuning circuit for TV and VCR tuner applications. It contains, on one chip, all the functions required for PLL control of a VCO. This integrated circuit also contains a high frequency prescaler and thus can handle frequencies up to 1.3 GHz. The MC44818 is a pin compatible drop–in replacement for the MC44817, where the only difference is the MC44818 has a fixed divide–by–8 prescaler (cannot be bypassed) and the MC44817 uses the three wire bus.

The MC44818 has programmable 512/1024 reference dividers and is manufactured on a single silicon chip using Motorola's high density bipolar process, MOSAIC™ (Motorola Oxide Self Aligned Implanted Circuits).

- Complete Single Chip System for MPU Control (I²C Bus). Data and Clock Inputs are 3–Wire Bus Compatible
- Divide–by–8 Prescaler Accepts Frequencies up to 1.3 GHz
- 15 Bit Programmable Divider Accepts Input Frequencies up to 165 MHz
- Reference Divider: Programmable for Division Ratios 512 and 1024.
- 3–State Phase/Frequency Comparator
- Operational Amplifier for Direct Tuning Voltage Output (30 V)
- Four Integrated PNP Band Buffers for 40 mA (V_{CC1} to 14.4 V)
- Output Options for the Reference Frequency and the Programmable Divider
- High Sensitivity Preamplifier
- Circuit to Detect Phase Lock
- Fully ESD Protected



PLL Tuning Circuits with I2C Bus

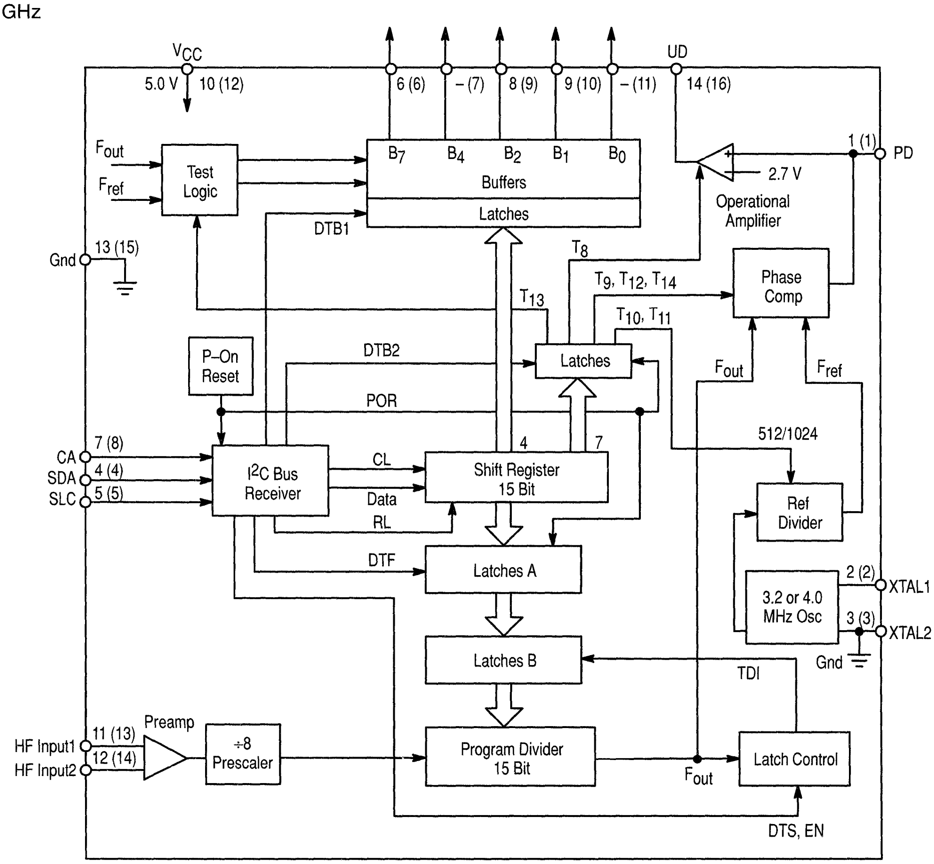
MC44824/25D

Case 751A, 751B

The MC44824/25 are tuning circuits for TV and VCR tuner applications. They contain on one chip all the functions required for PLL control of a VCO. The integrated circuits also contain a high frequency prescaler and thus can handle frequencies up to 1.3 GHz.

The MC44824/25 are manufactured on a single silicon chip using Motorola's high density bipolar process, MOSAIC™ (Motorola Oxide Self Aligned Implanted Circuits).

- Complete Single Chip System for MPU Control (I2C Bus). Data and Clock Inputs are 3–Wire Bus Compatible
- Divide–by–8 Prescaler Accepts Frequencies up to 1.3 GHz
- 15 Bit Programmable Divider
- Reference Divider: Programmable for Division Ratios 512 and 1024
- 3–State Phase/Frequency Comparator
- 4 Programmable Chip Addresses
- 3 Output Buffers (MC44824) respectively; 5 Output Buffers (MC44825) for 10 mA/15 V
- Operational Amplifier for use with External NPN Transistor
- SO–14 Package for MC44824 and SO–16 for MC44825
- High Sensitivity Preamplifier
- Fully ESD Protected



MC44825 Pin Numbers ( )

PLL Tuning Circuit with 3–Wire Bus

MC44827DTB

Case 948F

The MC44827 is a tuning circuit for TV and VCR tuner applications. This device contains on one chip all the functions required for PLL control of a VCO. This integrated circuit also contains a high frequency prescaler and thus can handle frequencies up to 1.3 GHz.

The MC44827 is controlled by a 3–wire bus. It has the same function as the MC44828 which is I^2C bus controlled. The MC44827 and MC44828 can replace each other to allow conversion between 3–wire bus and I^2C bus control.

The MC44827 is manufactured on a single silicon chip using Motorola's high density bipolar process, MOSAIC™ (Motorola Oxide Self Aligned Implanted Circuits).

The MC44827 has the same features as MC44817 with the following differences:

- Lower Power Consumption, 200 mW Typical
- Improved Prescaler with Higher Margins for Sensitivity and Temperature Range. (A typical device is functional in a temperature range greater than −40 to 100°C.)
- Lock Detector with Push–Pull Output
- No Bypass of Divide–by–8 Prescaler
- TSSOP Package

PLL Tuning Circuit with I^2C Bus

MC44828DTB

Case 948F

The MC44828 is a tuning circuit for TV and VCR tuner applications. This device contains on one chip all the functions required for PLL control of a VCO. This integrated circuit also contains a high frequency prescaler and thus can handle frequencies up to 1.3 GHz.

The MC44828 is controlled by an I^2C bus. It has the same function as the MC44827 which is 3–wire bus controlled. The MC44827 and MC44828 can replace each other to allow conversion between 3–wire bus and I^2C bus control.

The MC44828 is manufactured on a single silicon chip using Motorola's high density bipolar process, MOSAIC™ (Motorola Oxide Self Aligned Implanted Circuits).

The MC44828 has the same features as MC44818 with the following differences:

- Lower Power Consumption, 200 mW Typical
- Improved Prescaler with Higher Margins for Sensitivity and Temperature Range. (A typical device is functional in a temperature range greater than −40 to 100°C.)
- Lock Detector with Push–Pull Output
- TSSOP Package

PLL Tuning Circuit with I²C Bus

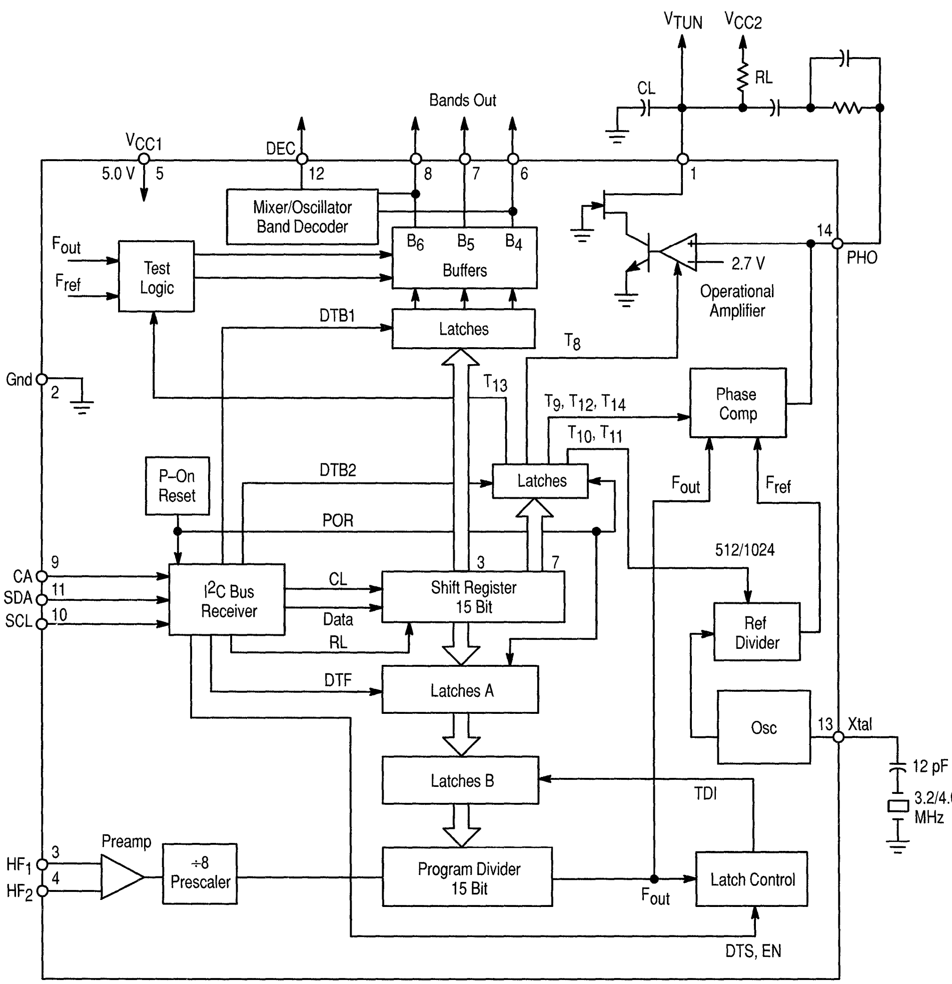
MC44829D

Case 751A

The MC44829 is a tuning circuit for TV and VCR tuner applications. It contains, on one chip, all the functions required for PLL control of a VCO. This integrated circuit also contains a high frequency prescaler and thus can handle frequencies up to 1.3 GHz. The circuit has a band decoder that provides the band switching signal for the mixer/oscillator circuit. The decoder is controlled by the buffer bits.

The MC44829 has programmable 512/1024 reference dividers and is manufactured on a single silicon chip using Motorola's high density bipolar process, MOSAIC™ (Motorola Oxide Self Aligned Implanted Circuits).

- Complete Single Chip System for MPU Control (I²C Bus)
- Divide–by–8 Prescaler Accepts Frequencies up to 1.3 GHz
- 15 Bit Programmable Divider
- Reference Divider: Programmable for Division Ratios 512 and 1024
- 3–State Phase/Frequency Comparator
- Operational Amplifier for Direct Tuning Voltage Output (30 V)
- Four Programmable Chip Addresses
- Integrated Band Decoder for the Mixer/Oscillator Circuit
- Band Buffers with Low "On" Voltage (0.4 V Maximum at 5.0 mA)
- Fully ESD Protected to MIL–STD–883C, Method 3015.7 (2000 V, 1.5 kΩ, 150 pF)



Advanced PAL/NTSC Encoder

MC13077P, DW

Case 738, 751D

The MC13077 is an economical, high quality, RGB encoder for PAL or NTSC applications. It accepts red, green, blue and composite sync inputs and delivers either composite PAL or NTSC video, and S–Video Chroma and Luma outputs. The MC13077 is manufactured using Motorola's high density, bipolar MOSAIC® process.

- Single 5.0 V Supply
- Composite Output
- S–Video Outputs
- PAL/NTSC Switchable
- PAL Squarewave Output
- PAL Sequence Resettable
- Internal/External Burst Flag
- Modulator Angles Accurate to 90°
- Burst Position/Duration Determined Digitally
- Subcarrier Reference from a Crystal or External Source

Automotive Electronic Circuits

In Brief . . .

Motorola Analog has established itself as a global leader in custom integrated circuits for the automotive market. With multiple design centers located on four continents, global process and assembly sites, and strategically located supply centers, Motorola serves the global automotive market needs. These products are key elements in the rapidly growing engine control, body, navigation, entertainment, and communication electronics portions of modern automobiles. Though Motorola is most active in supplying automotive custom designs, many of yesterday's proprietary custom devices have become standard products of today, available to the broad base manufacturers who support this industry. Today, based on new technologies, Motorola offers a wide array of standard products ranging from rugged high current "smart" fuel injector drivers which control and protect the fuel management system through the rigors of the underhood environment, to the latest SMARTMOS™ switches and series transient protectors. Several devices are targeted to support microprocessor housekeeping and data line protection. A wide range of packaging is available including die, flip–chip, and SOICs for high density layouts, to low thermal resistance multi–pin, single–in–line types for high power control ICs.

Automotive Electronic Circuits

Table 1. Voltage Regulators

Function	Features	Suffix/ Package	Device
Low Dropout Voltage Regulator	Positive fixed and adjustable output voltage regulators which maintain regulation with very low input to output voltage differential.	Z/29, T/221A, T/314D, TH/314A, TV/314B, DT/369A, DT–1/369, D2T/936, D2T/936A, D/751	LM2931, C
Low Dropout Dual Regulator	Positive low voltage differential regulator which features dual 5.0 V outputs, with currents in excess of 750 mA (switched) and 10 mA standby, and quiescent current less than 3.0 mA.	T/314D, TH/314A, TV/314B, D2T/936A	LM2935
Automotive Voltage Regulator	Provides load response control, duty cycle limiting, under/overvoltage and phase detection, high side MOSFET field control, voltage regulation in 12 V alternator systems.	DW/751D	MC33092
Low Dropout Voltage Regulator	Positive 5.0 V, 500 mA regulator having on–chip power–up–reset circuit with programmable delay, current limit, and thermal shutdown.	T/314D, TV/314B	MC33267
Low Dropout Voltage Regulator	Positive 3.3 V, 5.0 V, 12 V, 800 mA regulator.	D/751, DT/369A	MC33269

Table 2. Electronic Ignition

Function	Features	Suffix/ Package	Device
Electronic Ignition Circuit	Used in high energy variable dwell electronic ignition systems with variable reluctance sensors. Dwell and spark energy are externally adjustable. "Bumped" die for inverted mounting to substrate.	P/626, D/751, Flip–Chip	MC3334, MCCF3334
Electronic Ignition Circuit	Used in high energy electronic ignition systems requiring differential Hall Sensor control. "Bumped" die for inverted mounting to substrate.	DW/751G, Flip–Chip	MC33093, MCCF33093
Electronic Ignition Circuit	Used in high energy electronic ignition systems requiring single Hall Sensor control. "Bumped" die for inverted mounting to substrate.	DW/751G, Flip–Chip	MC33094, MCCF33094
Electronic Ignition Circuit	Used in high energy electronic ignition systems requiring single Hall Sensor control. Dwell feedback for coil variation. "Bumped" die for inverted mounting to substrate.	DW/751G, Flip–Chip	MC79076, MCCF79076

Table 3. Special Functions

Function	Features	Suffix/ Package	Device
Low Side Protected Switch	Single automotive low side switch having CMOS compatible input, 1.0 A maximum rating, with overcurrent, overvoltage and thermal protection.	T/221A, T–1/314D, DW/751G	MC3392
Low Current High–Side Switch	Drives loads from positive side of power supply and protects against high–voltage transients.	T/314D, DW/751G	MC3399
High–Side TMOS Driver	Designed to drive and protect N–channel power MOSFETs used in high side switching applications. Has internal charge pump, externally programmed timer and fault reporting.	P/626, D/751	MC33091A
MI–Bus Interface Stepper Motor Controller	High noise immunity serial communication using MI–Bus protocol to control relay drivers and motors in harsh environments. Four phase signals drive two phase motors in either half or full–step modes.	DW/751G	MC33192
Quad Fuel Injector Driver	Four low side switches with parallel CMOS compatible input control, $\leq$7.0 mA quiescent current, 0.25 Ω $r_{DS(on)}$ at 25°C independent outputs with 3.0 A current limiting and internal 65 V clamps.	T/821D, TV/821C	MC33293A
Octal Serial Output Switch	Eight low side switches having 8–bit serial CMOS compatible input control, serial fault reporting, $\leq$4.0 mA quiescent current, independent 0.45 Ω $r_{DS(on)}$ at 25°C outputs with 3.0 A minimum current limiting and internal 55 V clamps.	P/738, DW/751E	MC33298
Integral Alternator Regulator	Control device used in conjunction with a Darlington device to monitor and control the field current in alternator charging systems. “Bumped” die for inverted mounting to substrate.	D/751A, Flip–Chip	MC33095 MCCF33095
Peripheral Clamping Array	Protects up to six MPU I/O lines against voltage transients.	*/626, D/751	TCF6000
Automotive Direction Indicator	Detects defective lamps and protects against overvoltage in automotive turn–signal applications. Replaces UAA1041B in most applications.	D/751, P/626	MC33193
Automotive Wash Wiper Timer	Standard wiper timer control device that drives a wiper motor relay and can perform the intermittent, afterwash and continuous wiper timer functions.	D/751, P/626	MC33197A
Automotive ISO 9141 Serial Link Driver	Interface between the two–wire asynchronous serial communication interface (SCI) of a microcontroller and a special one–wire care diagnosis system (DIA).	D/751A	MC33199

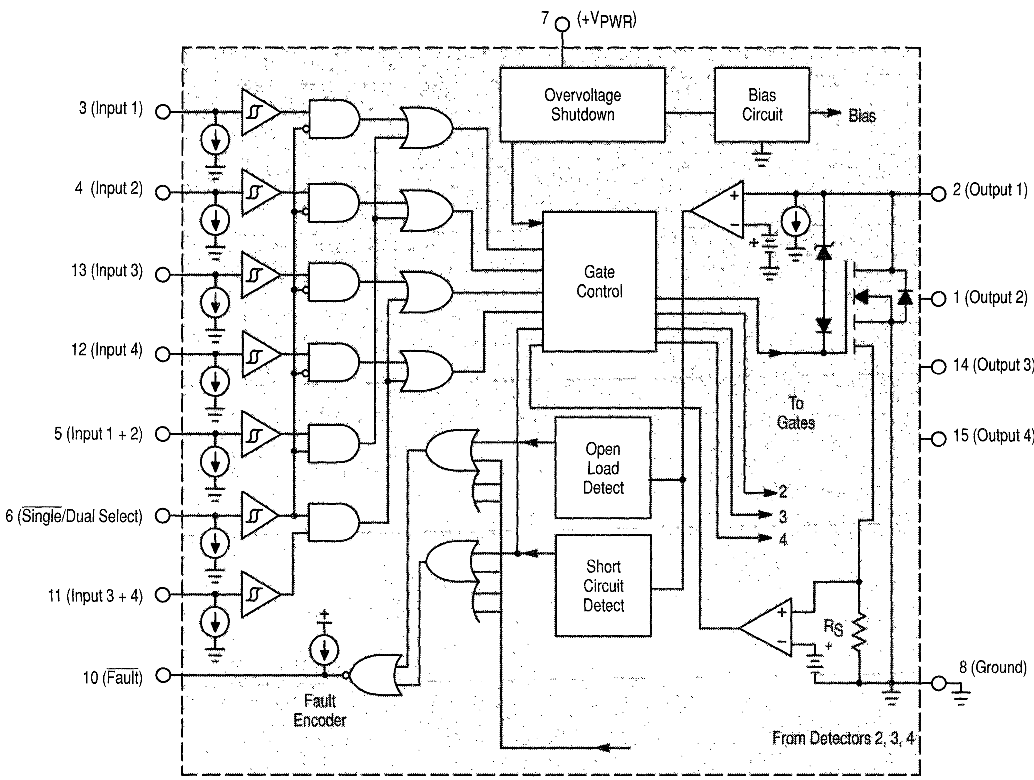
* No Suffix

Quad Fuel Injector Driver

MC33293AT, MC33293ATV

T_J = –40° to +150°C, Case 821D, C

The MC33293AT is a monolithic quad low–side switching device having CMOS logic, bipolar/ CMOS analog circuitry, and DMOS power FETs. All inputs are CMOS compatible. Each independent output is internally clamped to 65 V, current limited to ≥ 3.0 A, and has an $r_{DS(on)}$ of ≤ 0.25 Ω with V_{PWR} ≥ 9.0 V and may be paralleled to lower $r_{DS(on)}$. $\overline{\text{Fault}}$ output reports existence of open loads (outputs "On" or "Off"), shorted loads, and over temperature condition of outputs. A shorted load condition will shut off only the specific output involved while allowing other outputs to operate normally. An overvoltage condition will shut off all outputs for the overvoltage duration. A single/dual mode select pin allows either independent input/output operation or paired output operation.

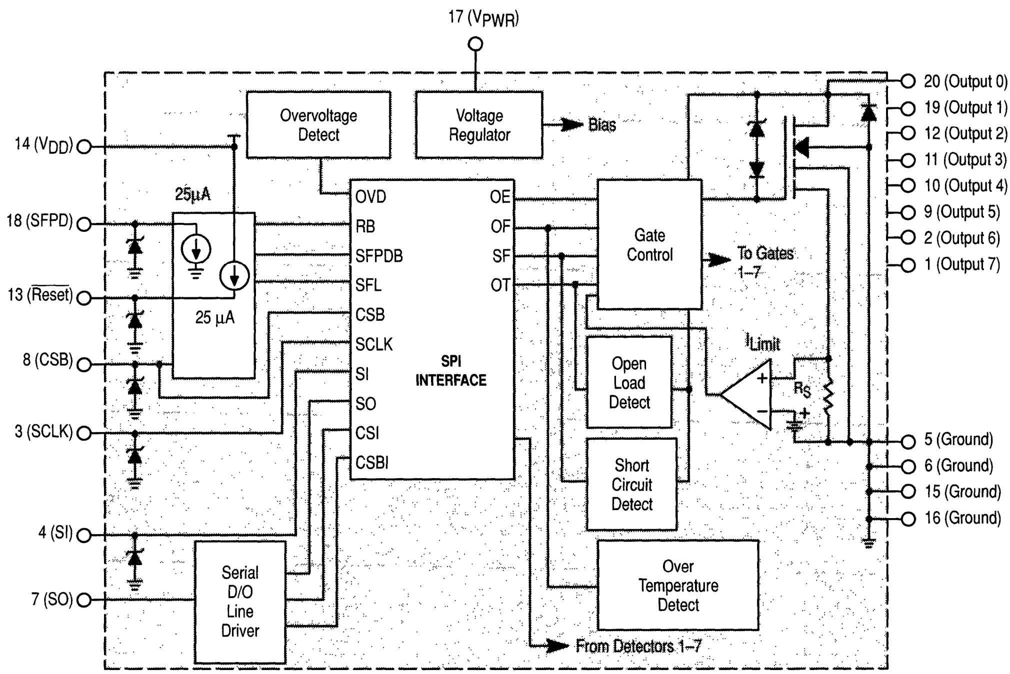


Octal Serial Switch

MC33298P, MC33298DW

T_J = –40° to +150°C, Case 738, 751E

The MC33298 is a monolithic eight output low–side switch with 8–bit serial input control. Incorporates CMOS logic, bipolar/CMOS analog circuitry, and DMOS power FETs. All inputs are CMOS compatible. It is designed to interface to a microcontroller and switch inductive or incandescent loads. Each independent output is internally clamped to 55 V, current limited to ≥ 3.0 A, and has an $r_{DS(on)}$ of ≤ 0.45 Ω with V_{PWR} ≥ 9.0 V. This device has low standby current, cascadable fault status reporting, output diagnostics, and shutdown for each output.



Dual High–Side Switch

MC33143DW

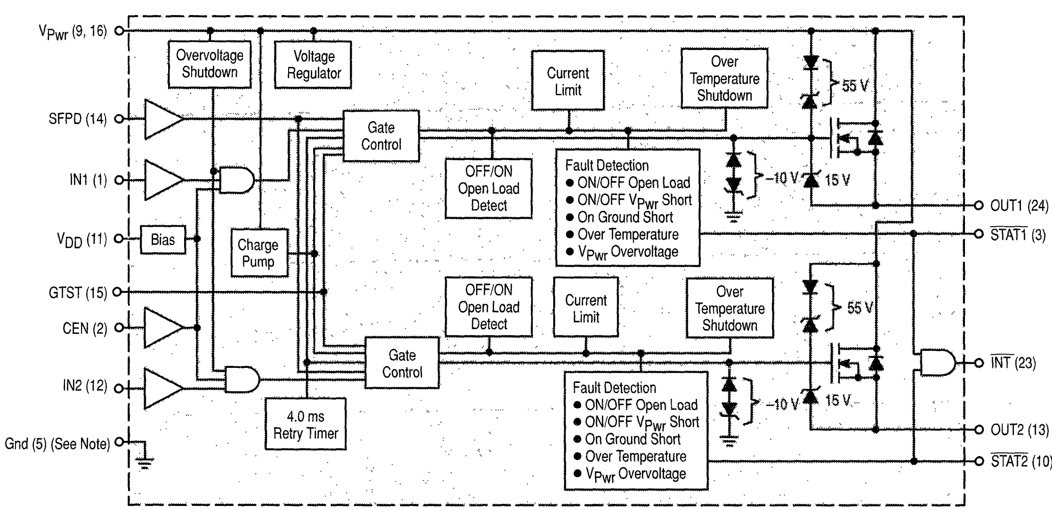
T_A = –40° to +125°C, Case 751E

The MC33143 is a dual high–side switch designed for solenoid control in harsh automotive applications, but is well suited for other environments. The device can also be used to control small motors and relays as well as solenoids. The MC33143 incorporates SMARTMOS™ technology, with CMOS logic, bipolar/MOS analog circuitry, and DMOS power outputs. An internal charge pump is incorporated for efficient gate enhancement of the internal high–side power output devices. The outputs are designed to provide current to low impedance solenoids. The MC33143 provides individual output fault status reporting along with internal Overcurrent and Over Temperature protection. The device also has Overvoltage protection, with automatic recovery, which "globally" disables both outputs for the duration of an Overvoltage condition. Each output has individual Overcurrent and Over Temperature shutdown with automatic retry recovery. Outputs are enabled with a CMOS logic high signal applied to an input to providing true logic control. The outputs, when turned on, provide full supply (battery) voltage across the solenoid coil.

The MC33143 is packaged in an economical 24 pin surface mount power package and specified over an operating voltage of 5.5 V ≤ V_{Pwr} < 26 V for –40°C ≤ T_A ≤ 125°C.

- Designed to Operate Over Wide Supply Voltages of 5.5 V to 26 V
- Dual High–Side Outputs Clamped to –10 V for Driving Inductive Loads
- Internal Charge Pump for Enhanced Gate Drive
- Interfaces Directly to a Microcontroller with Parallel Input Control
- Outputs Current Limited to 3.0 A to 6.0 A for Driving Incandescent Loads
- Chip Enable "Sleep Mode" for Power Conservation
- Individual Output Status Reporting
- $\overline{\text{Fault}}$ Interrupt Output for System Interrupt Use
- Output ON or OFF Open Load Detection
- Overvoltage Detection and Shutdown
- Output Over Temperature Detection and Shutdown with Automatic Retry
- Sustained Current Limit or Immediate Overcurrent Shutdown Output Modes
- Output Short to Ground Detection and Shutdown with Automatic Retry
- Output Short to V_{Pwr} Detection

Simplified Internal Block Diagram



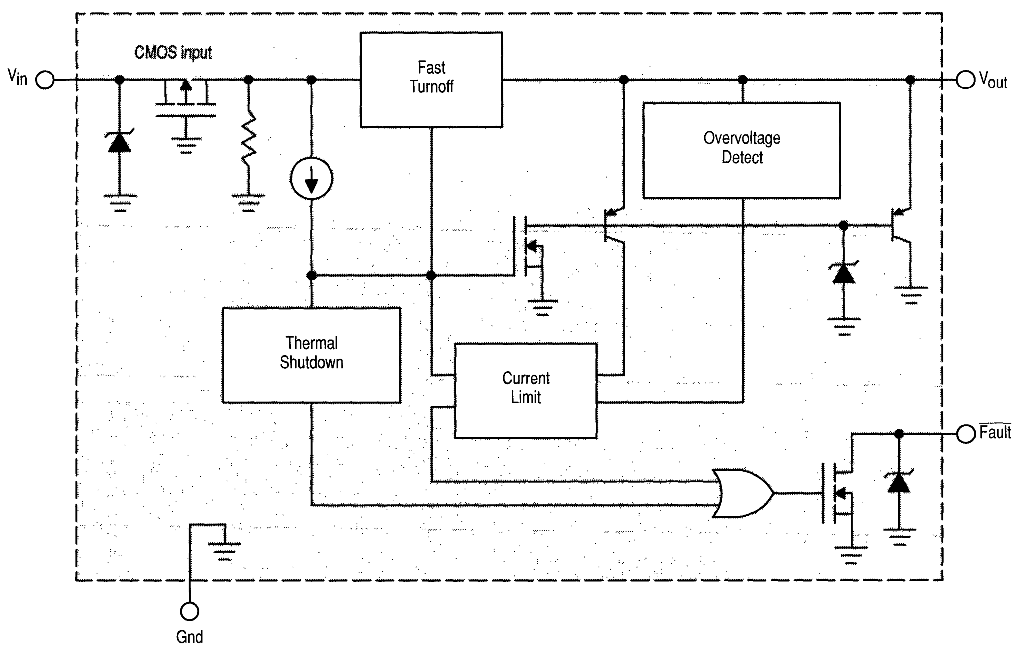
NOTE: Pins 5, 6, 7, 8, 17, 18, 19 and 20 should all be grounded so as to provide electrical as well as thermal heatsinking of the device.

Low Side Protected Switch

MC3392T, T–1, DW

T_J = –40° to +150°C,
Case 221A, 314D, 751G

Single low side protected switch with fault reporting capability. Input is CMOS compatible. Output is short circuit protected to 1.0 A minimum with a unique current fold–back feature. Device has internal output clamp for driving inductive loads with overcurrent, overvoltage, and thermal protection. When driving a moderate load, the MC3392 performs as an extremely high gain, low saturation Darlington transistor having a CMOS input characteristic with added protection features. In some applications, the three terminal version can replace industry standard TIP100/101 NPN power Darlington transistors.

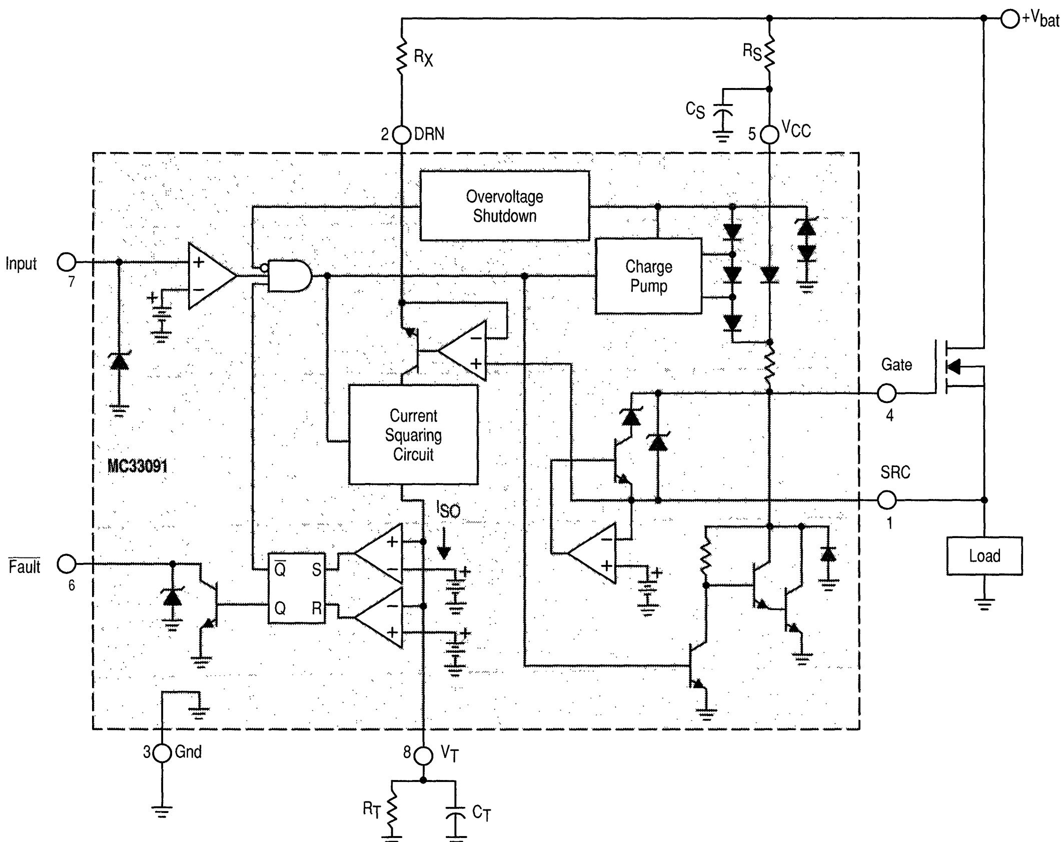


High Side TMOS Driver

MC33091AP, AD

T_J = –40° to +150°C, Case 626, 751

Offers an economical solution to drive and protect N–channel power TMOS devices used in high side switching configurations. Unique device monitors load resulting V_{DS}. TMOS voltage to produce a proportional current used to drive an externally programmed over current timer circuit to protect the TMOS device from shorted load conditions. Timer can be programmed to accommodate driving incandescent loads. Few external components required to drive a wide variety of N–channel TMOS devices. A $\overline{\text{Fault}}$ output is made available through the use of an open collector NPN transistor requiring a single pull–up resistor for operation. Input is CMOS compatible. Device uses ≤ 3.0 μA standby current and has an internal charge pump requiring no external components for operation.

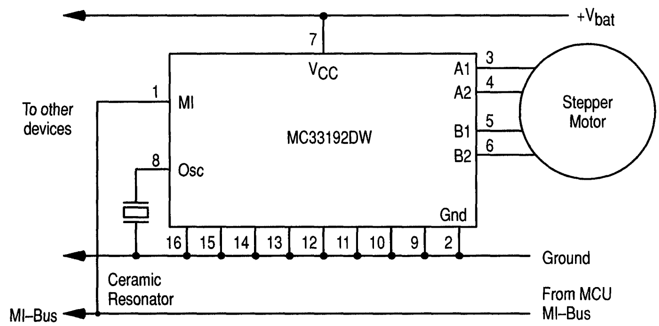


MI–Bus Interface Stepper Motor Controller

MC33192DW

T_J = –40° to +100°C, Case 751G

Intended to control loads in harsh automotive environments using a serial communication bus. Can provide satisfactory real time control of up to eight stepper motors using MI–Bus protocol. Use of MI–Bus offers a noise immune system solution for difficult applications involving relays and motors. The stepper motor controller provides four phase signals to drive two phase motors in either half of full–step modes. Designed to interface to a microprocessor with minimal amount of wiring, affording an economical and versatile system.



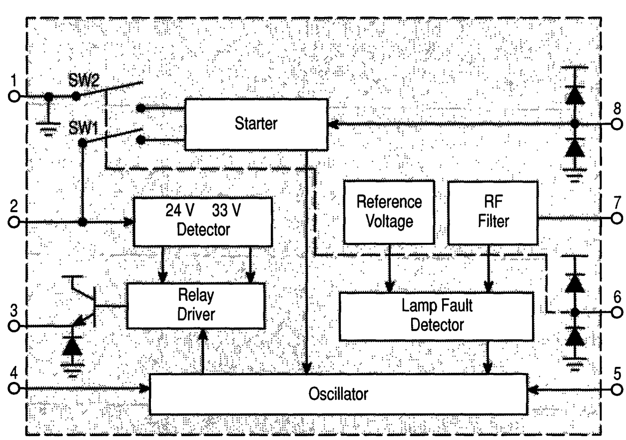
Automotive Direction Indicator

MC33193P, D

T_A = –40° to +125°C, Case 626, 751

The MC33193 is a new generation industry standard UAA1041 "Flasher". It has been developed for enhanced EMI sensitivity, system reliability, and improved wiring simplification. The MC33193 is pin compatible with the UAA1041 and UAA1041B in the standard application configuration as shown in Figure 9, without lamp short circuit detection and using a 20 mΩ shunt resistor. The MC33193 has a standby mode of operation requiring very low standby supply current and can be directly connected to the vehicle's battery. It includes a RF filter on the Fault detection pin (Pin 7) for EMI purposes. Fault detection thresholds are reduced relative to those of the UAA1041 allowing a lower shunt resistance value (20 mΩ) to be use.

- Pin Compatible with the UAA1041
- Defective Lamp Detection Threshold
- RF Filter for EMI Purposes
- Load Dump Protection
- Double Battery Capability for Jump Start Protection
- Internal Free Wheeling Diode Protection
- Low Standby Current Mode



Automotive Wash Wiper Timer

MC33197AD

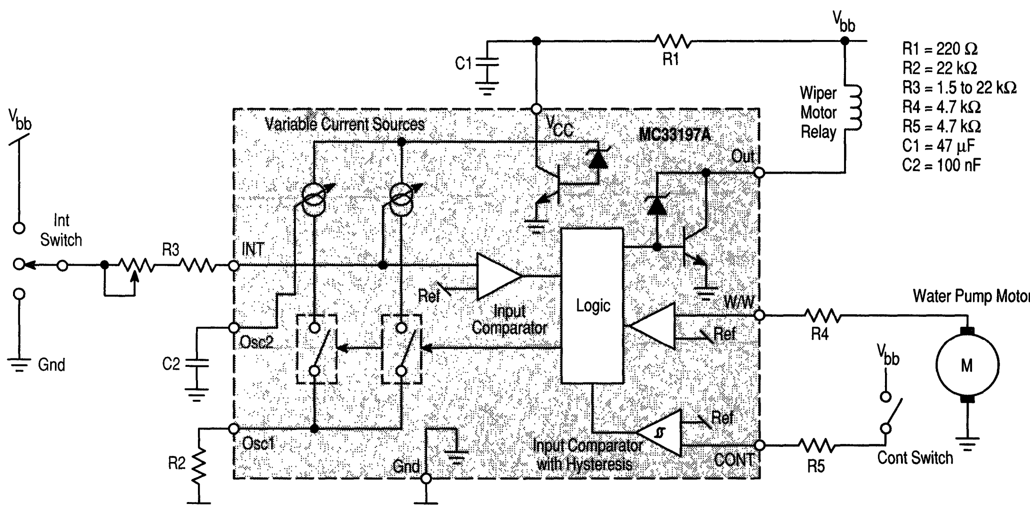
T_A = –40° to +105°C, Case 751

MC33197AP

T_A = –40° to +125°C, Case 626

The MC33197A is a standard wiper timer control device designed for harsh automotive applications. The device can perform the intermittent, after wash, and continuous wiper timer functions. It is designed to directly drive a wiper motor relay. The MC33197A requires very few external components for full system implementation. The intermittent control pin can be switched to ground or V_{bat} to meet a large variety of possible applications. The intermittent timing can be fixed or adjustable via an external resistor. The MC33197A is built using bipolar technology and parametrically specified over the automotive ambient temperature range and 8.0 to 16 V supply voltage. The MC33197A can operate in both front and rear wiper applications.

- Adjustable Time Interval of Less Than 500 ms to More Than 30 s
- Intermittent Control Pin Can Be Switched to Ground or V_{bat}
- Adjustable After Wipe Time
- Priority to Continuous Wipe
- Minimum Number of Timing Components
- Integrated Relay Driver With Free Wheeling Protection Diode
- Operating Voltage Range From 8.0 to 16 V
- For Front Wiper and Rear Wiper Window Applications



Automotive ISO 9141 Serial Link Driver

MC33199D

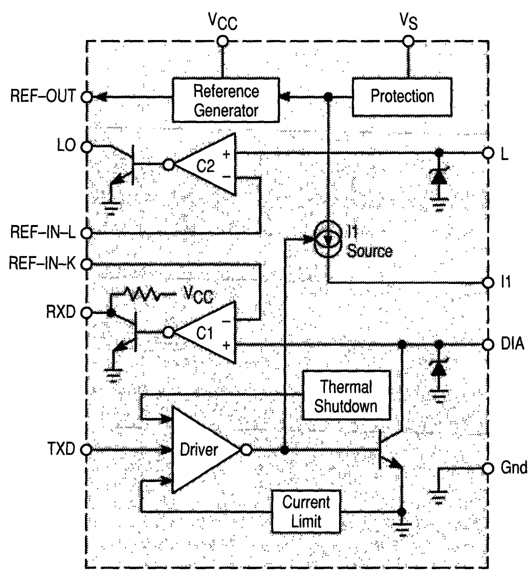
T_A = –40° to +125°C, Case 751A

The MC33199D is a serial interface circuit used in diagnostic applications. It is the interface between the microcontroller and the special K and L Lines of the ISO diagnostic port. The MC33199D has been designed to meet the "Diagnosis System ISO 9141" specification.

The device has a bi–directional bus K Line driver, fully protected against short circuits and over temperature. It also includes the L Line receiver, used during the wake up sequence in the ISO transmission.

The MC33199 has a unique feature which allows transmission baud rate up to 200 k baud.

- Electrically Compatible with Specification "Diagnosis System ISO 9141"
- Transmission Speed Up to 200 k Baud
- Internal Voltage Reference Generator for Line Comparator Thresholds
- TXD, RXD and LO Pins are 5.0 V CMOS Compatible
- High Current Capability of DIA Pin (K Line)
- Short Circuit Protection for the K Line Input
- Over Temperature Shutdown with Hysteresis
- Large Operating Range of Driver Supply Voltage
- Full Operating Temperature Range
- ESD Protected Pins



Alternator Voltage Regulator

MC33092DW

T_J = –40° to +125°C, Case 751D

Provides voltage regulation and load response control in diode rectified 12 V alternator charging systems. Provides externally programmed load response control of the alternator output current to eliminate engine speed hunting and vibration due to sudden electrical loads. Monitors and compares the system battery voltage to an externally programmed set point value and pulse width modulates an N–channel MOSFET transistor to control the average alternator field current. In addition, has duty cycle limiting, under/overvoltage and phase detection (broken belt) protective features.

Other Analog Circuits

In Brief . . .

Other analog circuits are provided for special applications with both bipolar and CMOS technologies. These circuits range from the industry standard analog timing circuits and multipliers to specialized CMOS smoke detectors. These products provide key functions in a wide range of applications, including data transmission, commercial smoke detectors, and various industrial controls.

Timing Circuits

These highly stable timers are capable of producing accurate time delays or oscillation. In the time delay mode of operation, the time is precisely controlled by one external resistor and capacitor. For a stable operation as an oscillator, the free–running frequency and the duty cycle are both accurately controlled with two external resistors and one capacitor. The output structure can source or sink up to 200 mA or drive TTL circuits. Timing intervals from microseconds through hours can be obtained. Additional terminals are provided for triggering or resetting if desired.

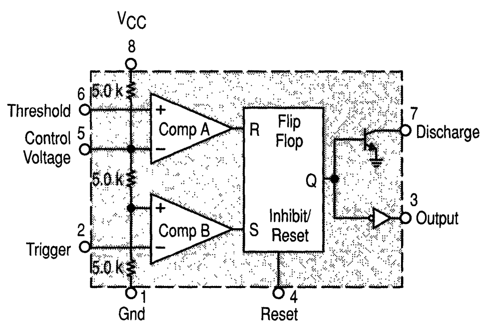
Singles

MC1455P1, D

T_A = 0° to +70°C, Case 626, 751

MC1455BP1, D

T_A = −40° to +85°C, Case 626, 751



Duals

MC3456P

T_A = 0° to +70°C, Case 646

NE556N, D

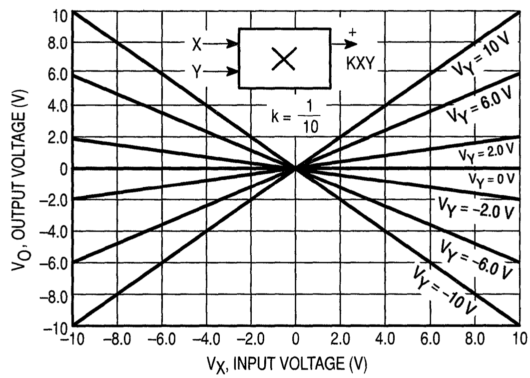
T_A = 0° to +70°C, Case 646, 751A

Multipliers

Linear Four–Quadrant Multipliers

Multipliers are designed for use where the output voltage is a linear product of two input voltages. Typical applications include: multiply, divide, square, root–mean–square, phase detector, frequency doubler, balanced modulator/demodulator, electronic gain control.

Multiplier Transfer Characteristics



MC1494P

T_A = 0° to +70°C, Case 648

This device has all the necessary internal regulation and references. The single–ended output is referenced to ground.

MC1495D, P

T_A = 0° to +70°C, Case 751A, 646

Maximum versatility is assured by allowing the user to select the level shift method.

MC1495BP

T_A = −40° to +125°C, Case 646

Linearity and offset are actually tested over temperature. This is an improved specification over previous versions.

Smoke Detectors (CMOS)

These smoke detector ICs require a minimum number of external components. When smoke is sensed, or a low battery voltage is detected, an alarm is sounded via an external piezoelectric transducer. All devices are designed to comply with UL specifications.

Table 1. Smoke Detectors (CMOS)

Tape and Reel Options

In Brief . . .

Motorola offers the convenience of Tape and Reel packaging for our growing family of standard integrated circuit products. Reels are available to support the requirements of both first and second generation pick–and–place equipment. The packaging fully conforms to the latest EIA–481A specification. The antistatic embossed tape provides a secure cavity, sealed with a peel–back cover tape.

Communications, Power and Signal Technologies Group Products

In Brief . . .

Many leading semiconductor manufacturers have either de–emphasized or eliminated discrete components from their product portfolio. At Motorola, exceptional long–term growth and outstanding customer acceptance of our portfolio are the most significant effects of Motorola's superiority in providing bipolar and MOS transistors, diodes, thyristors, zeners, opto, RF, rectifier, and sensor devices.

Consistent, ongoing improvements in product development and packaging processing continue to ensure Motorola's position as the most broad–based discrete supplier in the world. The increased use of automatic placement equipment has driven the trend towards surface mount packaging.

Motorola continues to expand upon a broad offering of surface mount packages which continue to advance state–of–the–art designs that cannot be accomplished with insertion technology. Surface mount technology is cost effective, allowing users the opportunity to utilize smaller units and increased functions with less board space. In many electronic applications, complex integrated solutions with a multitude of functions can replace several active and passive components.

SMARTDISCRETES, RF hybrid amplifiers and modules and RF monolithic integrated circuits, pressure and temperature sensors, optoelectronics and hybrid power modules are a few of the exciting new products which provide more reliable, intelligent discrete devices. Key initiatives to raise products and services to a Six Sigma standard (99.9997% defect–free), reduce total cycle time in all activities, and provide leadership in the areas of product and manufacturing ensure that Motorola will continue to be the manufacturer of choice for all your discrete semiconductor requirements.

Small Signal Transistors, FETs and Diodes

In Brief . . .

New in this revision is Motorola's GreenLine™ portfolio of devices. They feature energy–conserving traits superior to those of our existing line of standard parts for the same usage. GreenLine devices can actually help reduce the power demands of your products.

Also new are the Small Signal Multi–integrated devices. These are intended to save board space by reduced part count and functionality. Four to six devices have been integrated into one small package.

Also, this section highlights semiconductors that are the most popular and have a history of high usage for the most applications.

It covers a wide range of Small Signal plastic and metal–can semiconductors.

A large selection of encapsulated plastic transistors, FETs and diodes are available for surface mount and insertion assembly technology. Plastic packages include TO–92 (TO–226AA), 1 Watt TO–92 (TO–226AE), SOT–23, SC–59, SC–70/SOT–323 and SOT–223. Plastic multiples are available in 14–pin and 16–pin dual in–line packages for insertion applications: SO–8, SO–14, and SO–16 for surface mount applications.

Plastic–Encapsulated Transistors

Motorola's Small Signal TO–226 plastic transistors encompass hundreds of devices with a wide variety of characteristics for general–purpose, amplifier and switching applications. The popular high–volume package combines proven reliability, performance, economy and convenience to provide the perfect solution for industrial and consumer design problems. All devices are laser marked for ease of identification and shipped in antistatic containers, as part of Motorola's ongoing practice of maintaining the highest standards of quality and reliability.

Table 1. Plastic–Encapsulated General–Purpose Transistors

These general–purpose transistors are designed for small–signal amplification from dc to low ratio frequencies. They are also useful as oscillators and general–purpose switches. Complementary devices shown where available (Tables 1–4).

PBF493,S(11)	300	625	500	40	—	1.0	10	40	1

(1) Typical
(10) "S" version, h_{FE} Min 60 @ I_C = 20 mA, V_{CE} = 10 V.
(11) "S" version, h_{FE} Min 40 @ I_C = 0.1 mA, V_{CE} = 1.0 V.

Devices listed in bold, italic are Motorola preferred devices.

Plastic–Encapsulated Multiple Transistors

The manufacturing trend has been toward printed circuit board design with requirements for smaller packages with more functions. In the case of discrete components the use of the multiple device package helps to reduce board space requirements and assembly costs.

Many of the most popular devices are offered in the standard plastic DIP and surface mount IC packages. This includes small–signal NPN and PNP bipolar transistors, N–channel and P–channel FETs, as well as diode arrays.

Specification Tables

The following short form specifications include Quad and Dual transistors listed in alphanumeric order. Some columns denote two different types of data indicated by either **bold** or *italic* typeface. See key and headings for proper identification. This applies to Table 10 and 11 of this section only.

KEY

TYPE NO.	ID	Ref. Point P_D Watts One Die Only	Subscript V_{CE} Volts	I_C Amp Max	Unit h_{FE} @ I_C Min	f_T MHz Min	C_{ob} pF Max	**h_{FE1}/h_{FE2}** / *t_{on} ns Max*	**ΔV_{BE} mV Max** / *t_{off} ns Max*	**G_p dB Min, NF dB Max @ f** / *$V_{CE(sat)}$ Volts Max @ I_C/I_B & I_C Unit*

Alphanumeric listing type numbers

Identification Code

First Letter: Polarity
C — both types in multiple device
N — NPN
P — PNP
Second Letter: Use
A — General Purpose Amplifier
E — Low Noise Audio Amplifier
F — Low Noise RF Amplifier
G — General Purpose Amplifier and Switch
H — Tuned RF/IF Amplifier
M — Differential Amplifier
S — High Speed Switch
D — Darlington

Common–emitter DC Current Gain.

Units for test Current:
A — ampere
m — mA
u — µA

Current–Gain–Bandwidth Product

Continuous (DC) Collector Current

G_p — Power Gain
NF — Noise Figure
f — Test Frequency
AUD — 10–15 kHz
Frequency Units:
H — Hertz M — MHz
K — kHz G — GHz

$V_{CE(sat)}$ — Collector–Emitter Saturation Voltage
IC — Test Current
Current Units: u — µA
m — mA
A — Amp

h_{FE1}/h_{FE2} — Current Gain Ratio
V_{BE} — Differential Base Voltage $|V_{BE1} - V_{BE2}|$.
Differential Amplifiers
t_{on} — turn–on time
t_{off} — turn–off time

Power Dissipation specified at 25°C. Single die rating.
Ref. Point: A — Ambient Temperature
C — Case Temperature

Rated Minimum Collector–Emitter Voltage
Subscript letter identifies base termination listed below in order of preference.
SUBSCRIPT:
0 — V_{CEO}, open

Output Capacitance, common–base. Shown without distinction:
C_{cb} — Collector–Base Capacitance
C_{re} — Common–Emitter Reverse Transfer Capacitance

Plastic–Encapsulated Multiple Transistors (continued)

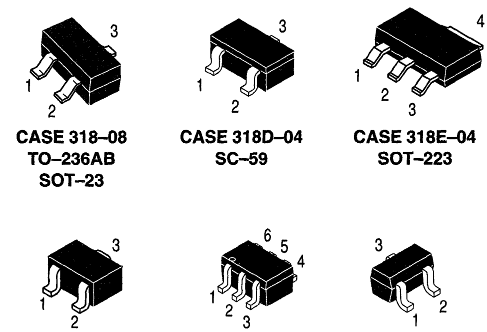
Devices listed in bold, italic are Motorola preferred devices.

Plastic–Encapsulated Surface Mount Transistors

This section of the selector guide lists the small–signal plastic devices that are available for surface mount applications. These devices are encapsulated with the latest state–of–the–art mold compounds that enhance reliability and exhibit excellent performance in high temperature and high humidity environments. This package offers higher power dissipation capability for small–signal applications.



CASE 318–08 TO–236AB SOT–23 | **CASE 318D–04 SC–59** | **CASE 318E–04 SOT–223**

CASE 419–02 SC–70/SOT–323 | **CASE 419B–01 SOT–363** | **CASE 463–01 SOT–416/SC–90**

Table 12. Plastic–Encapsulated Surface Mount General–Purpose Transistors

The following tables are a listing of small–signal general–purpose transistors in the SOT–23, SC–59, SOT–223, SC–70, SC–90, and SOT–363 surface mount packages. These devices are intended for small–signal amplification for DC, audio, and lower RF frequencies. They also have applications as oscillators and general–purpose, low voltage switches.

Pinout: 1–Base, 2–Emitter, 3–Collector

Devices are listed in order of descending breakdown voltage.

Field–Effect Transistors

JFETs

JFETs operate in the depletion mode. They are available in both P– and N–channel and are offered in both Through–hole and Surface Mount packages. Applications include general–purpose amplifiers, switches and choppers, and RF amplifiers and mixers. These devices are economical and very rugged. The drain and source are interchangeable on many typical FETs.

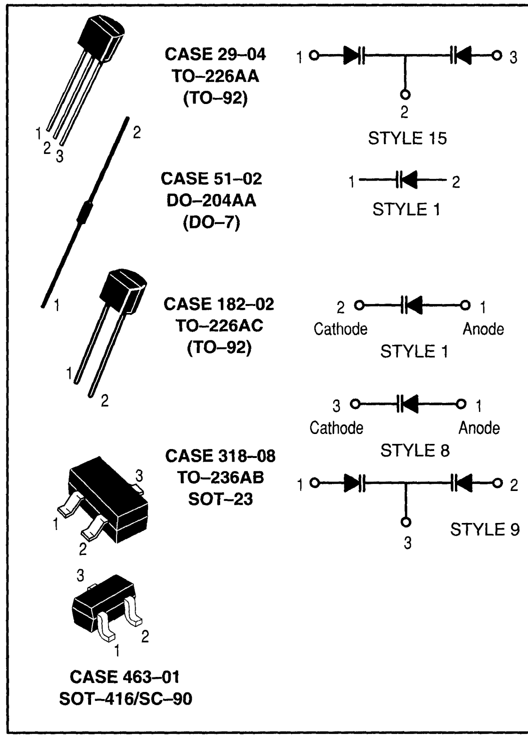
Tuning and Switching Diodes
Tuning Diodes — Abrupt Junction

Motorola supplies voltage–variable capacitance diodes serving the entire range of frequencies from HF through UHF. Used in RF receivers and transmitters, they have a variety of applications, including:

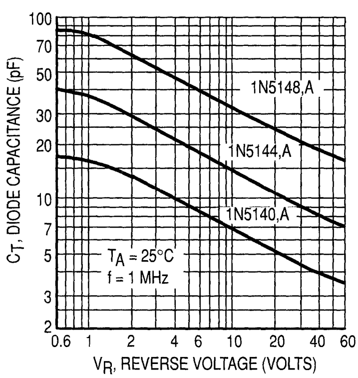
- Phase–locked loop tuning systems
- Local oscillator tuning
- Tuned RF preselectors
- RF filters
- RF phase shifters
- RF amplifiers
- Automatic frequency control
- Video filters and delay lines
- Harmonic generators
- FM modulators

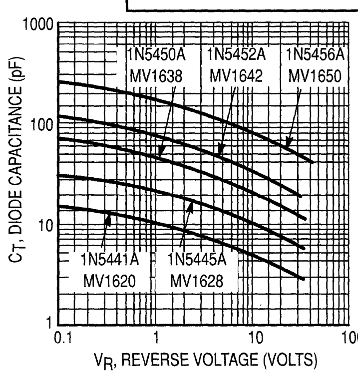
Two families of devices are available: Abrupt Junction and Hyper Abrupt Junction. The Abrupt Junction family includes devices suitable for virtually all tuned–circuit and narrow–range tuning applications throughout the spectrum.



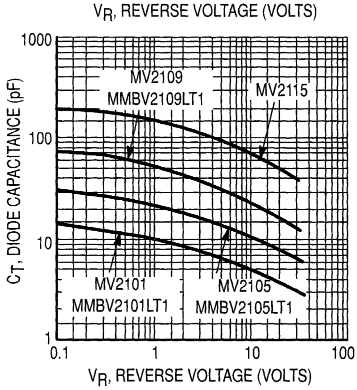
Typical Characteristics

Diode Capacitance versus Reverse Voltage

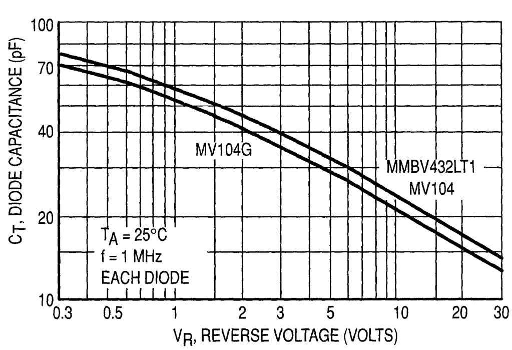




(See Tables 38 Thru 40)



(See Tables 41 and 42)



(See Table 43)

Table 38. General–Purpose Glass Abrupt Tuning Diodes
High Q Capacitance Ratio @ 4.0 Volts/60 Volts

Devices listed in bold, italic are Motorola preferred devices.

Tuning Diodes — Hyper–Abrupt Junction

The Hyper–Abrupt family exhibits higher capacitance, and a much larger capacitance ratio. It is particularly well suited for wider–range applications such as AM/FM radio and TV tuning.

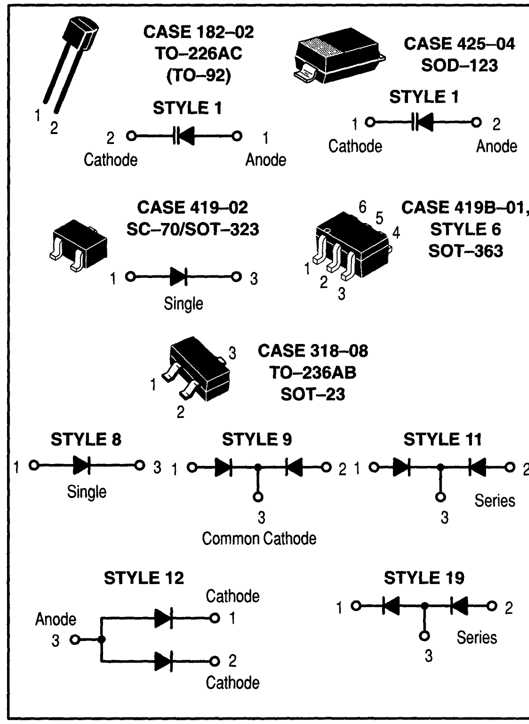
(27) V_R = 2.0 V/V_R = 10 V
(28) V_R = 1.0 V, f = 1.0 MHz
(29) V_R = 2.0 V, f = 1.0 MHz

Devices listed in bold, italic are Motorola preferred devices.

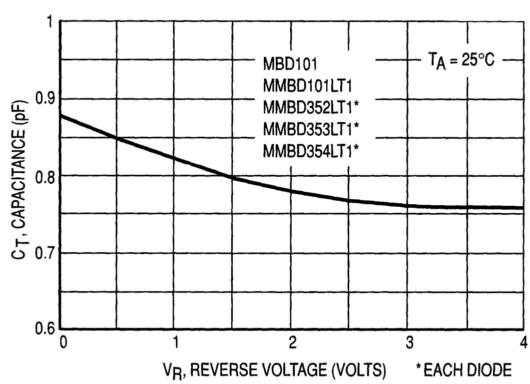
Schottky Diodes

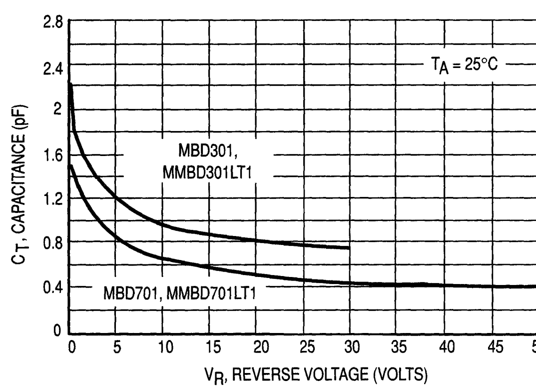
Schottky diodes are ideal for VHF and UHF mixer and detector applications as well as many higher frequency applications. They provide stable electrical characteristics by eliminating the point–contact diode presently used in many applications.



Typical Characteristics

Capacitance versus Reverse Voltage





(See Table 49)

Devices listed in bold, italic are Motorola preferred devices.

Schottky Diodes (continued)

Table 49. Schottky Diodes

The following is a listing of Schottky diodes that exhibit low forward voltage drop for improved circuit efficiency.

Device	$V_{(BR)R}$ Volts	C_T @ V_R pF Max	V_F @ 10 mA Volts Max	I_R @ V_R nA Max	Minority Lifetime pS (TYP)	Device Marking	Style

Multiple Switching Diodes

Multiple diode configurations utilize monolithic structures fabricated by the planar process. They are designed to satisfy fast switching requirements as in core driver and encoding/decoding applications where their monolithic configurations offer lower cost, higher reliability and space savings.

Plastic–Encapsulated Surface Mount Devices

Energy. It's something Motorola is putting a lot of energy into helping save. That's why we're introducing our GreenLine™ portfolio of devices, featuring energy–conserving traits superior to those of our existing line of standard parts for the same usage. GreenLine devices can actually help reduce the power demands of your products.

Wide Range of Applications

Currently, our portfolio consists of three families.

• **Low–Leakage Switching Diodes:** With reverse leakage specifications guaranteed to 500 pA, they help extend battery life, making them ideal for small battery–operated systems in which standby power is essential. Applications include ESD protection, reverse voltage protection, and steering logic.

• **Bipolar Output Driver Transistors:** Offering ultra–low collector saturation voltage, they deliver more energy to the intended load with less power wasted through dissipation loss. They are especially effective in today's lower voltage battery–powered applications, and prolong battery life in portable and hand–held communications and personal digital equipment.

• **Small Signal HDTMOS™:** These devices provide our lowest ever drain–source resistance versus package size. Lower $r_{DS(on)}$ means less wasted energy through dissipation loss, making them especially effective for low–current applications where energy conservation is crucial, such as low current switchmode power supplies, uninterruptable power supplies (UPS), power management systems, and bias switching. This makes them ideal for portable computer–type products or any system where the combination of power management and energy conservation is key.

Save Energy — Save Money

In an increasingly power–hungry world, Motorola's GreenLine portfolio makes powerful sense. So much sense that we plan to continue adding devices to the portfolio. Chances are, there are Motorola GreenLine devices applicable to one or more of your products — ones that can help save energy, dollars — and the environment.

TVS/Zeners
Transient Voltage Suppressors
Zener Regulator and Reference Diodes

In Brief . . .

Motorola's standard TVS (Transient Voltage Suppressors) and Zener diodes comprise the largest inventoried line in the industry. Continuous development of improved manufacturing techniques have resulted in computerized diffusion and test, as well as critical process controls learned from surface–sensitive MOS fabrication. Resultant high yields lower factory costs. Check the following features for application to your specific requirements:

- Wide selection of package materials and styles:
  - — Plastic (Surmetic) for low cost, mechanical ruggedness
  - — Glass for high reliability, low cost
  - — Surface Mount packages for state of the art designs
- Power Ratings from 0.25 to 5.0 Watts
- Breakdown voltages from 1.8 to 400 Volts in approximately 10% steps
- TVS from 24 to 1500 Watts and from 6.2 to 250 Volts
- ESD protection devices
- Special selection of electrical characteristics available at low cost due to high–volume lines (check your Motorola sales representative for special quotations)
- UL Recognition on many TVS device types
- Tape and Reel options available on all axial leaded and surface mount types

Page

Note: Any TVS/Zener device not listed in this Master Selection Guide may be available with a special order. Please contact your Motorola representative for details.

TVS (Transient Voltage Suppressors)

General–Purpose

Transient Voltage Suppressors are designed for applications requiring protection of voltage sensitive electronic devices in danger of destruction by high energy voltage transients. Many of the zener voltage regulator diodes listed in the previous charts are in fact used in circuits as transient voltage suppressors. The purpose of this section is to present the families of Motorola Zeners that are specified with the key transient voltage suppressor parameters and limits, e.g., maximum clamping voltage at maximum surge current rating and working peak reverse (stand–off) voltage.

Selection sequence:

1. Package type (axial or surface mount)
2. Peak surge power expected for the application
3. Working peak reverse stand–off voltage (or the breakdown voltage)
4. Maximum reverse clamping voltage

Consult the factory for special electrical selections if there is no standard device type available to fit the application.

Axial Leaded for Through–hole Designs

(1) Steady state power dissipation = 5 watts max rating.
(2) Breakdown voltage tolerance is ±5% for A suffix.
(3) For bidirectional types use CA suffix. Have cathode polarity band on each end. (Consult factory for availability).
1N6267–6303A series do not have CA option since the CA is not included in EIA Registration.
(4) UL recognition for classification of protectors (QVGV2) under the UL standard for safety 497B and file #E116110 for 1.5KE6.8A,CA thru 1.5KE250A,CA.

(1) Breakdown voltage tolerance is ±5% for A suffix.
(2) V_{BR} measured at pulse test current I_T at an ambient temperaure of 25°C.
(3) T3 suffix designates tape and reel of 2500 units.
(4) Bidirectional version available for P6SMB12AT3 thru P6SMB91AT3. Electrical characteristics apply in both directional except for V_F. Use CAT3 suffix.
(5) 1/2 sine wave (or equivalent square wave), PW = 8.3 ms, duty cycle = 4 pulses per minute maximum.

Devices listed in bold, italic are Motorola preferred devices.

(1) T3 suffix designates tape and reel of 2500 units.
(2) A transient suppressor is normally selected according to the reverse "Stand Off Voltage" (V_R) which should be equal to or greater than the DC or continuous peak operating voltage level.
(3) V_{BR} measured at pulse test current I_T at an ambient temperaure of 25°C.

Devices listed in bold, italic are Motorola preferred devices.

(1) T3 suffix designates tape and reel of 2500 units.
(2) V_{BR} measured at pulse test current I_T at an ambient temperaure of 25°C.
(3) 1/2 sine wave (or equivalent square wave), PW = 8.3 ms, duty cycle = 4 pulses per minute maximum.

Devices listed in bold, italic are Motorola preferred devices.

Overvoltage Transient Suppressors

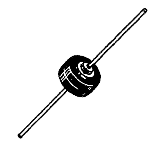
Table 13. Overvoltage Transient Suppressors

Overvoltage transient suppressors are designed for protection against over–voltage conditions in the auto electrical system including the “LOAD DUMP” phenomenon that occurs when the battery open circuits while the car is running.

OVERVOLTAGE TRANSIENT SUPPRESSOR	
	CASE 194–04 ***MR2535L***
V_{RRM} (Volts)	20
I_O (Amp)	35
$V_{(BR)}$ (Volts)	24–32
I_{RSM}(30) (Amp)	110
T_C @ Rated I_O (°C)	150
T (°C)	175

(30) Time constant = 10 ms, duty cycle ≤ 1%, T_C = 25°C.
Note: MR2535L is considered part of the rectifier product portfolio.

CASE 194–04



Devices listed in bold, italic are Motorola preferred devices.

Zener Diodes

Notes — Axial Leaded Chart

1. Zener Voltage is the key parameter for each device type. It is specified at a particular test current applied at either thermal equilibrium (T.E.) or pulse test condition. The voltage tolerance for the device types listed is, in general, ±5%; however, for some series, the voltage tolerance varies from device type to device type over a range of ±(5 to 8.5)%. Consult the complete data sheet to determine the exact test conditions and minimum/maximum limits for the zener voltage. Consult Application Note AN924 regarding measurement of Zener Voltage (pulse versus thermal equilibrium).

   Power Ratings represent the capability of the case size listed as supplied by Motorola. These ratings may be higher than the JEDEC registration and/or the same device types supplied by other manufacturers. (On tight tolerance devices, please consult factory on availability.)

V_Z Test Conditions and Tolerances

2. 1N4678 Series — I_{ZT} = 50 µA (T.E.).
   No suffix = ±5%.
   Also has delta V_Z parameter and limit.

3. 1N5221B–42B — I_{ZT} = 20 mA (T.E.).
   1N5243B–81B — I_{ZT} @ approximately 125 mW point (T.E.).
   B suffix = ±5%.

4. 1N5985B–1N6007B — I_{ZT} = 5 mA (T.E.).
   B suffix = ±5%.

5. BZX79C2V4–C16RL — I_{ZT} = 5 mA (pulse).
   BZX79C33 — I_{ZT} = 2 mA (pulse).
   C indicates ±(5 to 8.5)% depending on type number.

6. MZ4614–27 — I_{ZT} = 250 µA (T.E.).
   MZ4099–4104 — I_{ZT} = 250 µA (T.E.).
   Tolerance is ±5%.

7. MZ5520B–21B — I_{ZT} = 20 mA (T.E.).
   MZ5523B — I_{ZT} = 5 mA (T.E.).
   MZ5524B — I_{ZT} = 3 mA (T.E.).
   MZ5525B–29B — I_{ZT} = 1 mA (T.E.).
   Tolerance is ±5%.
   Also has delta V_Z parameter and limit.

8. 1N4728A–64A
   I_{ZT} @ approximately 250 mW point (T.E.).
   A suffix = ±5%.

9. MZP4728A–53A
   I_{ZT} @ approximately 250 mW point (T.E.).
   MZP Series A suffix = ±5%.

10. 1N5913B–56B
    I_{ZT} @ approximately 375 mW point (T.E.).
    B suffix = ±5%.

11. 3EZ4.3D5–400D5
    I_{ZT} @ approximately 750 mW point (pulse).
    Suffix 5 = ±5%.

12. 1N5333B–88B
    I_{ZT} varies from 0.9 to 1.5 W point depending on type number (pulse)
    B suffix = ±5%.
    Also has delta V_Z parameter and limit.

Notes — Surface Mount Chart

1. *Zener Voltage* is the key parameter for each device type. It is specified at a particular test current applied at either thermal equilibrium (T.E.) or pulse test condition. The voltage tolerance for the device types listed is, in general ±5%; however, for some series, the voltage tolerance varies from device type to device type over a range of ±(5 to 8.5)%. Consult the complete data sheet to determine the exact test conditions and minimum/maximum limits for the zener voltage.

   Power Ratings represent the capability of the case size listed as supplied by Motorola. These ratings may be higher than the same device types supplied by other manufacturers.

V_Z Test Conditions and Tolerances

2. *BZX84C2V4L–C24LT1* I_{ZT} = 5 mA (pulse).
   BZX84C27L–C75LT1
   I_{ZT} = 2 mA (pulse).

   Tolerance is ±(5 to 8.5)% depending on type number. Each device type also has other V_Z min/max limits at two other I_{ZT} pulse current values.

3. *MMBZ5221BL–42BLT1* I_{ZT} = 20 mA (pulse).
   MMBZ5243BL–70BLT1
   I_{ZT} @ approximately 125 mW point (pulse).

   BL suffix = ±5%.

4. MMSZ2V4–24T1 I_{ZT} = 5 mA (pulse).
   MMSZ27–56T1 I_{ZT} = 2 mA (pulse).

   Tolerance is ±(5 to 8.5)% depending on type number. Each device type also has other V_Z min/max limits at two other I_{ZT} pulse current values.

5. *MMSZ4678T1 Series* I_{ZT} = 50 µA (T.E.).

   No suffix = ±5%.

6. *MMSZ5221B–42BT1* I_{ZT} = 20 mA (T.E.).
   MMSZ5243B–63BT1
   I_{ZT} @ approximately 125 mW point (T.E.).

   A suffix = ±10%.
   B suffix = ±5%.

7. *1SMA5913BT3 Series*
   I_{ZT} @ approximately 375 mW point (T.E.).

   BT3 suffix = ±5%.
   T3 suffix designates tape and reel of 2500 units.

8. *1SMB5913BT3 Series*
   I_{ZT} @ approximately 750 mW point (T.E.).

   BT3 suffix = ±5%.
   T3 suffix designates tape and reel of 2500 units.

(1) V_Z is measured with a pulse test current (I_{ZT}) applied at an ambient temperature of 25°C.
(2) The zener impedance, Z_{ZT2}, for the 27 through 75 volt types is tested at 0.5 mA rather than the test current of 0.1 mA used for V_{Z2}.

Devices listed in bold, italic are Motorola preferred devices.

(2) All part numbers shown indicate a V_Z tolerance of ±5%
(3) Zener voltage is measured with the zener current applied for PW = 1.0 ms.
(4) Z_{ZT} and Z_{ZK} are measured by dividing the AC voltage drop across the device by the AC current applied. The specified (imits are for $I_{Z(AC)}$ = 0.1 $I_{Z(DC)}$, with the AC frequency = 1 kHz
(5) The zener impedance, Z_{ZT2}, for the 27 through 75 volt types is tested at 0.5 mA rather than the test current of 0.1 mA used for V_{Z2}.

Devices listed in bold, italic are Motorola preferred devices.

Voltage Reference Diodes

Temperature Compensated Reference Devices

For applications where output voltage must remain within narrow limits during changes in input voltage, load resistance and temperature. Motorola guarantees all reference devices to fall within the specified maximum voltage variations, ΔV_Z, at the specifically indicated test temperatures and test current (JEDEC Standard #5). Temperature coefficient is also specified but should be considered as a reference only — not a maximum rating.

Devices in this table are hermetically sealed structures.

Current Regulator Diodes

High impedance diodes whose "constant current source" characteristic complements the "constant voltage" of the zener line. Currents are available from 0.22 to 4.7 mA, with usable voltage range from a minimum limit of 1.0 to 2.5 Volts, up to a voltage compliance of 100 Volts, for the 1N5283 series.

Hybrid Power Module Operation

In Brief . . .

The Motorola Semiconductor Products Sector is proud to announce the formation of a new group: Hybrid Power Modules. Our operation has been in existence since August of 1992, and we're chartering new ground to become the world's fastest supplier of intelligent, energy efficient power modules for motor drive and uninterruptable power supply applications.

It's an exciting market, with 50 million motors being manufactured per year, and fewer than 5% of those using electronically controlled drives. Motorola Hybrid Power Modules will play a major role in supplying those power modules.

With Motorola's technology broadth, we're well positioned to develop highly integrated, intelligent IGBT (insulated gate bipolar transistor) power modules. The IGBT technology combines high current handling capability with low input current requirements in a smaller form factor which enables the design of more compact inverters. We have the capabilities to support custom modules (based on annual volume requirements) and offer the fastest possible time to market. Present integrated IGBT modules range from 5 to 30 amps, 600 and 1200 volts are also in our product portfolio. Our plans for the future include a family of advanced modules for applications in higher current and higher voltage devices and control networks.

To summarize, we believe that we offer the leading edge technology combined with a state–of–the–art flexible manufacturing line and rapid cycle time that can give you the unique ability to differentiate your products in this highly competitive market.

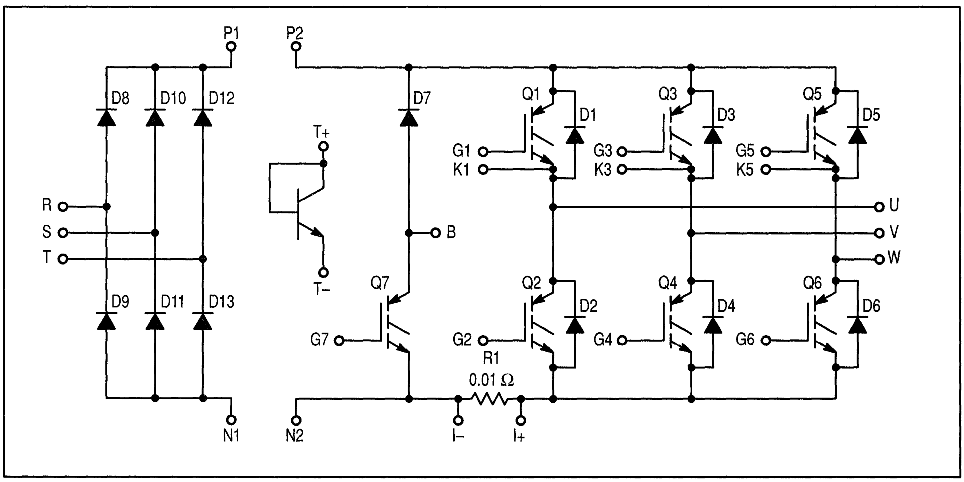
CIRCUIT



Includes sense resistor and temperature sensor.

Benefits of Motorola Integrated Power Stage

- combines a 3–phase input rectifier bridge, output inverter and brake transistor in one package
- utilizes Motorola's advanced 600 & 1200 V IGBTs with matched soft free–wheeling diodes
- positive and negative bus access to designer
- temperature and current sense integrated in module

Devices listed in bold, italic are Motorola preferred devices.

TMOS Power MOSFETs Products

In Brief . . .

Motorola continues to build a world class portfolio of TMOS Power MOSFETs with new advances in silicon and packaging technology. The following new advances have been made in the area of silicon technology.

- New high voltage devices with voltages up to 1200 volts.
- New High Cell Density (HDTMOS) family of standard and Logic Level devices in both N and P–channel are available in DPAK, D2PAK, TO–220 and SO–8 surface mount packages and in the industry standard TO–220 package.
- New TMOS V fifth generation of Motorola Power MOSFET technology. This is a new processing technique that more than doubles the present cell density of our MOSFET devices.
- New Micro8 package is the smallest power MOSFET surface mount package.
- New EZFET™ surface mount power MOSFETs incorporate back to back zener diodes across the gate–to–source to enhance ESD protection.
- New IGBTs with high short circuit capability in TO–220, TO–247 and TO–264 packages.

The following new advances have been made in the area of packaging technology.

- New SO–8 (MiniMOS) and SOT–223 packages to the surface mount portfolio.
- New High Power packages capable of housing very large die and higher power dissipation are now available in the TO–264 (formerly TO–3PBL) and SOT–227B (Isotop) packages.
- New D3PAK package allows the highest power dissipation of any standard, plastic surface–mount power semiconductor.

Power MOSFETs

TMOS Power MOSFETs Numbering System

Wherever possible, Motorola has used the following numbering systems for TMOS power MOSFET products.

MTP75N06HD

MOTOROLA
- X FOR ENGINEERING SAMPLES

TMOS
- T FOR TMOS
- L FOR SMARTDISCRETES
- G FOR IGBT

PACKAGE TYPE
- P FOR PLASTIC TO–220
- D FOR DPAK
- A FOR TO–220 ISOLATED
- W FOR TO–247
- B FOR D^{2}PAK
- Y FOR TO–264
- E FOR SOT–227B
- V FOR D^{3}PAK

CURRENT

CHANNEL POLARITY, N OR P

VOLTAGE RATING DIVIDED BY 10

OPTIONAL SUFFIX:
- L FOR LOGIC LEVEL
- E FOR ENERGY RATED
- T4 FOR TAPE & REEL (DPAK/D^{2}PAK)
- RL FOR TAPE & REEL (DPAK)
- HD FOR HIGH CELL DENSITY
- V FOR TMOS V (FIVE)

Example of exceptions: MTD/MTP3055E
MTD/MTP2955E

SO–8 (MiniMOS)™, Micro8™ and SOT–223 Power MOSFETs

- M FOR MINIATURE

PACKAGE TYPE
- DF — DUAL FET (SO–8)
- SF — SINGLE FET (SO–8)
- FT — FET TRANSISTOR (SOT–223)
- MTSF — SINGLE FET (Micro8)
- MTDF — DUAL FET (Micro8)

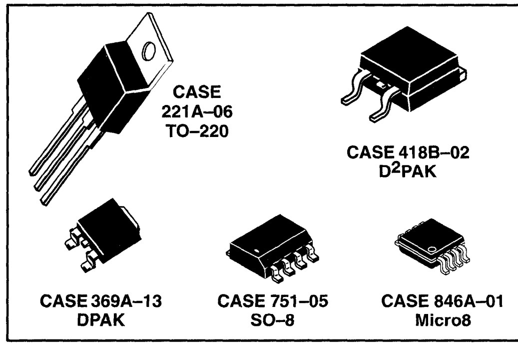
CURRENT

CHANNEL POLARITY, N OR P
C FOR COMPLEMENTARY

VOLTAGE RATING DIVIDED BY 10

OPTIONAL SUFFIX:
- E FOR ENERGY RATED
- HD FOR HIGH CELL DENSITY
- L FOR LOGIC LEVEL
- V FOR TMOS V (FIVE)
- Z FOR ESD

R1 AND R2 FOR TAPE & REEL
MiniMOS
T1 AND T3 FOR TAPE & REEL
SOT–223



TMOS™

HDTMOS Power MOSFETs N and P–Channel

HDTMOS Technology is a design technique that reduces the on–resistance contribution in virtually every portion of the power FET. The aggressive six million cells per square inch design is easily manufactured using wafer fabrication techniques that Motorola has used for several years to manufacture highly successful 8–bit microcontrollers.

HDTMOS devices are designed for use in low voltage, high speed switching applications where power efficiency is important. Typical applications are dc–dc converters and power management in portable and battery powered products such as computers, printers, cellular and cordless phones. They can also be used for low voltage motor controls in mass storage products such as disk drives and tape drives.

TMOS V

Motorola Introduces Fifth Generation TMOS Technology

Power Products Division introduces a new technology in the low voltage TMOS transistor family. This new generation technology is currently referred to as TMOS V. It is revolutionary rather than evolutionary.

The TMOS V technology will more than double the present cell density of our TMOS Power MOSFETs. This new technology will result in a tighter overall distribution of electrical parameters and optimizes the performance of our 50 and 60 volt portfolio.

This is a high cell density process of the future that will produce a new line of industry standard devices. Power transistors can now be built with the same high resolution/small geometry MOS fabrication technology that is standard in Motorola's ASIC, microprocessor and Memory Wafer Fabs.

SMARTDISCRETES Products

From a standard power MOSFET process, several active and passive elements can be obtained that provide on–chip protection to the basic power device. Such elements require only a small increase in silicon area and/or the addition of one masking layer to the process. The resulting device exhibits significant improvements in ruggedness and reliability and a system cost reduction. These SMARTDISCRETES™ functions can now provide an economical alternative to smart power ICs for power applications requiring low on–resistance, high voltage and high current.

These devices make up a series of "smart" power devices that automatically clamp spikes in automotive ignition systems and guard against ESD. The devices feature a logic level IGBT (Insulated Gate Bipolar Transistor) with integral active collector clamp and ESD gate protection and are designed primarily as ignition coil drivers to withstand high current in a pulsed mode without latching.

Table 1. Ignition IGBTs

The MLP1N06CL is a SMARTDISCRETES device that has integrated on–chip current limit capability, drain–to–source voltage clamping and gate voltage protection. The logic level processing allows operation of this device at half of the gate–to–source (5 volts) voltage of the conventional MOSFETs and can now be driven directly from CMOS or TTL logic drivers. This integration of technologies results in an intelligent, monolithic power circuit that offers a reduced parts count and improved reliability by replacing resistors, diodes, a bipolar transistor and a MOSFET with one device all of which are packaged in a TO–220AB package.

SO–8 MiniMOS™ and Micro8 Surface Mount Products

MiniMOS devices are an advanced series of power MOSFETs which utilize Motorola's High Cell Density HDTMOS process. These miniature surface mount MOSFETs feature ultra low $R_{DS(on)}$ and true logic level performance.

MiniMOS devices are designed for use in low voltage, high speed switching applications where power efficiency is important. Typical applications are dc–dc converters and power management in portable and battery powered products such as computers, printers, cellular and cordless phones. They can also be used for low voltage motor controls in mass storage products such as disk drives and tape drives.

- Ultra Low $R_{DS(on)}$ Provides Higher Efficiency and Extends Battery Life
- Logic Level Gate Drive — Can Be Driven by Logic ICs
- Miniature SO–8 Surface Mount Package — Saves Board Space
- Diode Is Characterized for Use In Bridge Circuits
- Diode Exhibits High Speed, with Soft Recovery
- I_{DSS} and $V_{DS(on)}$ Specified at Elevated Temperature
- Avalanche Energy Specified

D^{3}PAK

- D^{3}PAK is a high power surface mount package designed to accommodate die which is too large for a D^{2}PAK.
  - Utilized for Size 5, Size 6 or larger MOSFET and IGBT.
  - Used for dual die IGBT and diode combination.
- 24 mm Tape and Reel, 500 units per 13' reel.
- D^{3}PAK is thermal characterized for use on FR–4 and IMS board materials.

- Applications:
  - Surface mount motor drives
  - Power supplies both AC/DC and DC/DC

Multiple Chip TMOS Products in SOIC Surface Mount Packages

MiniMOS devices are an advanced series of power MOSFETs which utilize Motorola's High Cell Density HDTMOS process. These miniature surface mount MOSFETs feature ultra low $R_{DS(on)}$ and true logic level performance.

MiniMOS devices are designed for use in low voltage, high speed switching applications where power efficiency is important. Typical applications are dc–dc converters and power management in portable and battery powered products such as computers, printers, cellular and cordless phones. They can also be used for low voltage motor controls in mass storage products such as disk drives and tape drives.

Table 1. SO–8 Products — P–Channel

$V_{(BR)DSS}$	$R_{DS(on)}$ @ V_{GS}			I_D			P_D(3)
(V)	10 V (mΩ)	4.5 V (mΩ)	2.7 V (mΩ)	(A)	Device(5)	Package Type	(Watts) Max

Insulated Gate Bipolar Transistors (IGBTs)

These devices make up a series of "smart" power devices that automatically clamp spikes in automotive ignition systems and guard against ESD. The devices feature a logic level IGBT (Insulated Gate Bipolar Transistor) with integral active collector clamp and ESD gate protection and are designed primarily as ignition coil drivers to withstand high current in a pulsed mode without latching.

Bipolar Power Transistors

In Brief . . .

Motorola's broad line of Bipolar Power Transistors includes discrete and Darlington transistors in a variety of packages from the popular surface mount DPAK at 1.75 watts to the 250 watt TO-3 and TO–264. New products include the MJE/MJF 18000 series for lamp ballast and power supplies, MJW16212 — a new 1500 V deflection transistor for video monitor applications, and high performance audio output devices in the TO–264 package. We have the broadest line of Bipolar Power Transistors in the industry and the Motorola commitment to quality and total customer satisfaction to go with them.

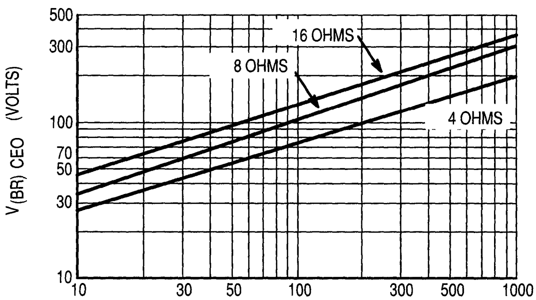
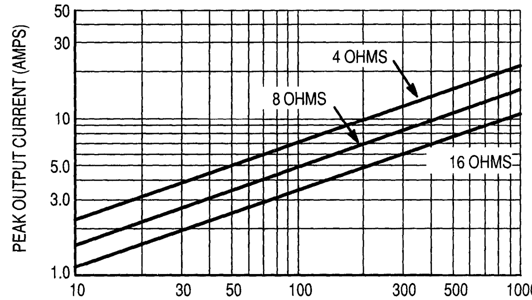
Audio

GENERAL DESIGN CURVES FOR POWER AUDIO OUTPUT STAGES

$V_{(BR)CEO}$ Required on Output and Driver Transistor versus Output Power for 4, 8 and 18 Ohm Loads



Output Transistor Peak Collector Current versus Output Power for 4, 8 and 16 Ohm Loads



Another important parameter that must be considered before selecting the output transistors is the safe–operating area these devices must withstand. For a complete discussion see Application Note AN485.

The Power Transistors shown are provided for reference only and show device capability. The final choice of the Power Transistors used is left to the circuit designer and depends upon the particular safe–operating area required and the mounting and heat sinking configuration used.

Electronic Lamp Ballasts

As in many other areas of its semiconductor activity, Motorola is an industry leader in the fast growing market of Electronic Ballast Semiconductors. We introduced the first dedicated devices for this market in 1988. Today, devices based on advanced technologies such as H2BIP (High Gain, High Frequency Bipolar) and ZPCMOS (Zero Power Control MOS) are leading the way in providing benefits for ballast manufacturers, consumers and the environment.

Two factors make the Electronic Lamp Ballast market grow at an ever increasing rate — Economics and the Environment.

Lamps based on Electronic Ballasts have long lifetimes and very low power consumption, so contributing to the efficient use of energy and to preservation of the environment. Motorola designs silicon solutions specifically for these applications.

For this growing ballast market Motorola offers optimized devices such as Power MOSFETs, Bipolar Transistors, Linear drive ICs, custom Start–Stop ICs, Diodes and Silicon Bilateral Switches.

Even more important are our efforts to develop the technology for tomorrow in close cooperation with the world's leading manufacturers of Electronic Transformers and Lamp Ballasts, as well as assisting them today in their choice of technology.

This capability is driven from our centre of competence based in Toulouse, France. An important team of Applications, Design, Product, Manufacturing and Marketing Engineers drives our worldwide dedication to this market.

The intention of this section is to provide you with a 'snapshot' of our bipolar transistor products and capabilities. It is a document showing Motorola's professionalism in this area, and illustrating some of the expertise available to *you* — the Electronic Lamp Ballast manufacturer.

Rectifiers

In Brief . . .

Continuing investment in research and development for discrete products has created a rectifier manufacturing facility that matches the precision and versatility of the most advanced integrated circuits. As a result, Motorola's silicon rectifiers span all high tech applications with quality levels capable of passing the most stringent environmental tests . . . including those for automotive under–hood applications. Additionally, the introduction of Motorola's first generation GaAs power devices is pushing the limits of today's rectifier technology.

Product Highlights:

- GaAs Rectifiers Power Manager™ with incredibly soft and hyperfast (<15 ns) reverse recovery are ideally suited for high frequency power supplies, free wheeling diodes, and as polarity protection diodes.
- Surface Mount Devices — A major thrust has been the development and introduction of a broad range of power rectifiers, Schottky and Ultrafast, 1/2 amp to 25 amp, 15 to 600 volts.
- Application Specific Rectifiers —
  - — MEGAHERTZ™ series for high frequency power supplies and power factor correction.
  - — Schottky rectifiers having lower forward voltage drop (0.3 to 0.6 volts) for use in low voltage SMPS outputs and as "OR"ing diodes.
  - — Automotive transient suppressors.
- Ultrafast rectifiers having reverse recovery times as low as 25 ns to complement the Schottky devices for higher voltage requirements in high frequency applications.
- A wide variety of package options to match virtually any potential requirement.

The rectifier selector section that follows has generally been arranged by package and technology. The individual tables have been sorted by voltage and current with the package types for the devices listed shown above each table. The Application Specific Rectifiers are also included in their respective tables.

Motorola's commitment to Six–Sigma is showing its worth. Refined processes no longer produce fallout as such and therefore only **Motorola Preferred Devices** are listed in the tables. The non–preferred devices will continue to be offered, but customers are encouraged to begin designing using the preferred types.

RECTIFIER NUMBERING SYSTEM

PART NUMBER KEY XXX X XX XX XX X

PREFIX (TYPE DESIGNATOR) — XXX

X:
- F = FULLY ISOLATED
- S = SURFACE MT (SMB/SMC)
- D = DPAK
- B = D^2PAK
- H = MEGAHERTZ
- V = D^3PAK

XX — I_O

XX — V_R (X10 EXCEPT SCHOTTKY)

XX — SUFFIX (DUAL DESIGNATOR)

X:
- R = REVERSE
- L = LOW V_F
- E = ENERGY

PREFIX KEY

- MUR = MOTOROLA ULTRA FAST RECTIFIER
- MBR = MOTOROLA (SCHOTTKY) BARRIER RECTIFIER
- MGR = MOTOROLA GaAs RECTIFIER
- MR = MOTOROLA STANDARD & FAST RECOVERY

SUFFIX KEY

- CT = CENTER TAP (DUAL) TO–220, TO–3, POWERTAP II
- PT = CENTER TAP (DUAL) TO–218 PACKAGE
- WT = CENTER TAP (DUAL) TO–247 / TO–3P

EXAMPLE:	MUR	30	20	WT
	MOTOROLA ULTRAFAST	30 AMP	200 V	CENTER TAP (DUAL) TO–247
EXAMPLE:	MBR	30	45	WT
	MOTOROLA SCHOTTKY	30 AMP	45 V	CENTER TAP (DUAL) TO–247

Application Specific Rectifiers

The focus for Rectifier Products continues to be on Schottky and Ultrafast technologies, with process and packaging improvements to achieve greater efficiency in high frequency switching power supplies, and high current mainframe supplies. Our new product thrust is intended to be more "application specific" than in the past, while continuing to strive for broad market acceptance.

Table 1. Low V_F Schottky Rectifiers

State of the art geometry is used in low V_F Schottky devices for improved efficiency in low voltage, high frequency switching power supplies, free–wheeling diodes, polarity protection diodes and "OR"ing diodes.

Device	I_O Amps	V_{RRM} (Volts)	V_F @ Rated I_O and Temperature Volts (Max)	I_R @ Rated V_{RRM} mAmps (Max)	Package
MBR0520LT1	0.5	20	0.33	0.25	SOD–123
MBRS130LT3	1	30	0.395	1	SMB
MBRD835L	8	35	0.41	1.4	DPAK
MBRD1035CTL	10	35	0.41	6	DPAK
MBR2030CTL	20	30	0.48	5	TO–220
MBRB2535CTL	25	35	0.41	10	D^2PAK
MBR2535CTL	25	35	0.41	5	TO–220
MBRB2515L	25	15	0.42	15	D^2PAK
MBR2515L	25	15	0.42	15	TO–220
MBRB3030CTL	30	30	0.58	5	D^2PAK
MBR4015LWT	40	15	0.42	5	TO–247
MBR5025L	50	25	0.58	0.5	TO–218
MBRP20030CTL	200	30	0.39	5	POWERTAP II
MBRP60035CTL	600	35	0.50	10	POWERTAP II

Table 2. MEGAHERTZ Rectifiers

MEGAHERTZ Series — This group of ultrafast rectifiers is designed to provide improved efficiency in very high frequency switching power supplies and for use in power factor correction circuits.

Device	I_O Amps	V_{RRM} (Volts)	Maximum V_F @ Rated I_O and Temp. (Volts)	Maximum I_R @ Rated V_{RRM} (mAmps)	t_{rr} (Nanosecond)
MURH840CT/MURHB840CT	8	400	1.7	0.01	28
MURH860CT	8	600	2.0	0.01	28

Table 3. SCANSWITCH Rectifiers

These ultrafast rectifiers are designed for improved performance in very high resolution monitors and work stations where forward recovery time (t_{fr}) and high voltage (1200–1500 volts) are primary considerations.

Device	I_O Amps	V_{RRM} (Volts)	Maximum t_{fr} (Nanoseconds)	Maximum t_{rr} (Nanoseconds)	V_{RFM} (6) (Volts)
MUR880E	8	800	—	75	—
MUR10120E	10	1200	175	175	14
MUR10150E	10	1500	175	175	16

Table 4. Automotive Transient Suppressors

Automotive transient suppressors are designed for protection against over–voltage conditions in the auto electrical system including the "LOAD DUMP" phenomenon that occurs when the battery open circuits while the car is running.

Device	I_O Amps	V_{RRM} (Volts)	$V_{(BR)}$ (Volts)	I_{RSM}(7) (Amps)	T (°C)
MR2535L/MR2535S	35	20	24–32	110	175

(6) V_{RFM} = Maximum Transient Overshoot Voltage.
(7) Time constant = 10 ms, Duty Cycle ≤ 1%, T_C = 25°C.

Devices listed in bold, italic are Motorola preferred devices.

SWITCHMODE™ Rectifiers

Schottky power rectifiers with the high speed and low forward voltage drop characteristic of Schottky's metal/silicon junctions are produced with ruggedness and temperature performance comparable to silicon–junction rectifiers. Ideal for use in low–voltage, high–frequency power supplies, and as very fast clamping diodes, these devices feature switching times less than 10 ns, and are offered in current ranges from 0.5 to 600 amperes, and reverse voltages to 200 volts.

In some current ranges, devices are available with junction temperature specifications of 125°C, 150°C and 175°C. Devices with higher T_J ratings can have significantly lower leakage currents, but higher forward–voltage specifications. These parameter tradeoffs should be considered when selecting devices for applications that can be satisfied by more than one device type number.

All devices are connected cathode–to–case or cathode–to–heatsink, where applicable. Contact your Motorola representative for more information.

There are many other standard features in Motorola Schottky rectifiers that give added performance and reliability.

1. GUARDRINGS were pioneered by Motorola and are included in all Schottky die for reverse voltage stress protection from high rates of dv/dt to virtually eliminate the need for snubber networks. The guardring also operates like a zener and avalanches when subjected to voltage transients.
2. MOLYBDENUM DISCS on both sides of the die minimize fatigue from power cycling in all metal products. Plastic encapsulated devices have a special solder formulation for the same purpose.
3. QUALITY CONTROL monitors all critical fabrication operations and performs selected stress tests to assure constant processes. Motorola's commitment to six sigma has provided significant quality improvement.

GaAs Rectifiers Power Manager™

For use in state–of–the–art high power density DC–DC converters and high frequency power supplies, GaAs power rectifiers have several unique characteristics that make them superior to Si–based devices. In particular, GaAs devices are acclaimed for their hyperfast and soft reverse recovery characteristics with low stored charge. Also, the device parameters are stable over a wide temperature range.

GaAs devices as drop–in replacements for Si may eliminate the need for a snubber network or allow for a significant reduction in network size. Performance improvements can therefore be achieved while reducing circuit size (increasing power density), decreasing EMI, and enhancing overall system efficiency.

Table 16. TO–220 and D²PAK GaAs Rectifiers Power Manager™

Thyristors and Triggers

In Brief . . .

Motorola's broad line of Thyristors includes. . . .

- A full line of TRIACs and SCRs covering a forward current range from 0.5 to 55 amperes and blocking voltages from 15 to 800 volts.
- Plastic package for lowest cost which includes the fully insulated plastic Case 221C (TO–220 Isolated).
- An extensive line of trigger devices that includes SIDACs, PUTs and SBS.

Then there are the special applications devices for Ignition circuits and Crowbar applications. Also included are isolated packaged devices for appliances and surface mount packages for surface mounting in space–saving requirements.

Finally, there is the continued Motorola investment in discrete–product R & D producing new capabilities such as transient SIDACs for use in circuits sensitive to high voltage transients.

Optoelectronic Devices

In Brief . . .

Motorola's families of optoelectronic components encompass red and infrared GaAs emitters and silicon detectors that are well matched for a variety of applications.

Optoisolators

Motorola's "Global" 6–Pin Dual In–line Package (DIP) devices use infrared emitting diodes that are optically coupled to a wide selection of output (Transistor, Darlington, Triac, and Schmitt trigger) silicon detectors. These devices are guaranteed to provide at least 7500 volts of isolation between the input and output and are 100% VISO tested. The entire line of Motorola 6–pin DIP packages are recognized by all major safety regulatories including UL and VDE. This extensive line of regulatory approvals attest to their suitability for use under the most stringent conditions. Motorola also offers a line of SOIC–8 small outline, surface mount devices that are UL approved and ideally suited for high density applications.

POWER OPTO™ Isolators

The MOC2A60 series is the first member of the POWER OPTO™ Isolator family from Motorola. The MOC2A60 is a 2 Amp @ 40°C/600 Vac[pk]/Zero–Crossing/Optically Coupled Triac. This isolated AC output device is ruggedized to survive the harsh operating environments inherent in Industrial Controller applications. Additionally, the thermally optimized SIP package profile allows for high density stacking on 0.200″ centers and can handle 2 Amps @ 40°C (Free–Air Rating) *without the need for heatsinks, thermal grease, etc.*

Page

Safety Regulatory Approvals for Motorola's "Global" Optoisolators

Motorola's entire line of 6–pin optoisolators are approved by all major safety regulatories.

Regulatory Approval Certification Index

Regulatory Agency	Certificate File Number
VDE(0883)	41853 (expired 12/31/91)
VDE(0884)(1)	62054 (replaces VDE0883)
UL (isolation)	E54915
UL (flammability)	E–8436
CSA	CA93952
FIMKO	41990
SEMKO	9313138
DEMKO	Approved per SEMKO
NEMKO	A99177
BABT	CR/0117
AUSTEL	03 887 0711

Note: Motorola's 8–pin surface mount optocouplers are approved by UL only and have a guaranteed isolation voltage of 3000 Vac(rms).

All Motorola 6–pin optocouplers are 100% tested for isolation voltage and are guaranteed to 7500 Vac(peak).

UL Flammability Rating = 94VO (File number E–8436) for all optocouplers.

(1) VDE 0884 testing is an option; the suffix letter "V" must be added to the standard part number.

VDE Approved Optoisolators

VDE has approved Motorola's entire portfolio of 6–pin DIP optoisolators against their new components standard VDE 0884 which replaces VDE 0883. The VDE 0884 components standard requires additional electrical testing to a stringent isolation partial discharge test.

The VDE 0883 specification expired 12/31/91. Motorola optoisolators can now be ordered to comply with the VDE 0884 specification.

VDE approval is based on mechanical and electrical performance of the Motorola package, shown in Figure 3. This 6–Pin DIP package incorporates specially developed materials and assembly processes optimizing thermal and moisture stability while maintaining the high level of LED life and isolation voltage. All Motorola 6–pin DIP optoisolators are made in this package, and have these approvals.

VDE 0884 Component Standard (replaces VDE 0883)

Electrical ratings in this standard are:

Input–to–Output Voltage, 1 second

V_{Pr1} = 1.6 V_{IDRM}, Partial Discharge < 5 picocouloumbs, V_{Pr1} = 1280 V(pk)

Maximum operating peak voltage, V_{IDRM} = 800 V(pk)

Isolation resistance: V_{I-O} = 500 Vdc, 10^{11} Ω, T_A = 100°C.

Note: The isolation partial discharge test V_{Pr1}, is performed after the completion of the high voltage withstand (hipot) tests.

VDE 0883 Component Standard (expired 12/31/91)

Electrical ratings in this standard were:

Isolation withstand voltages:

3750 V_{RMS}, 1 min, T_A = 100°C

5300 Vdc, 1 min, T_A = 100°C

Isolation surge withstand voltage:

10 kV per IEC 65, 50 discharges

Isolation resistance:

10^{11} Ω, 500 Vdc, T_A = 100°C

NOTE: **VDE 0884/8.87 testing is an option**; the suffix letter "V" must be added to the standard part number. (See below.)

Standard thru hole — MOC3063V

0.4″ wide spaced leadform — MOC3063TV (to satisfy 8 mm spacing requirement)

Standard–profile surface mount — MOC3063SV

Tape and Reel for surface mount — MOC3063S/SR2V

Optoisolators, a block diagram of which is shown in Figure 1, are devices which contain at least one emitter, which is optically coupled to a photo–detector through some sort of an insulating medium. This arrangement permits the passage of information from one circuit, which contains the emitter, to the other circuit containing the detector.

Because this information is passed optically across an insulating gap, the transfer is one–way; that is, the detector cannot affect the input circuit. This is important because the emitter may be driven by a low voltage circuit utilizing an MPU or logic gates, while the output photo–detector may be part of a high voltage dc or even an ac load circuit. The optical isolation prevents interaction or even damage to the input circuit to be caused by the relatively hostile output circuit.

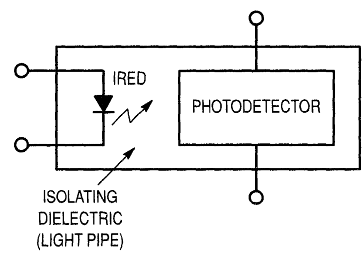

Figure 1. Block Diagram of Optoisolator

Various geometric designs have been used over the years for the internal light cavity between the emitter and detector. Motorola is the industry leader in isolation technology. All 6–pin optoisolators are guaranteed to meet or exceed 7500 Vac (pk) input–to–output isolation. See Figure 2.

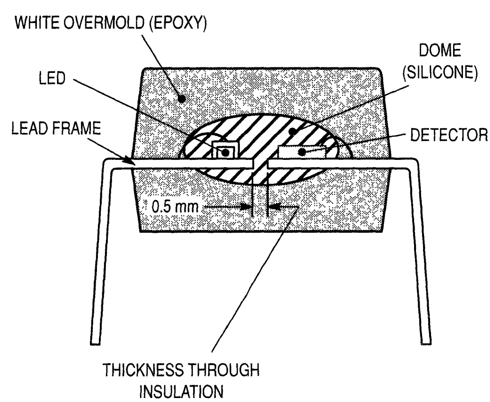

Figure 2. Geometric Design for Optoisolators

VDE Approved Optoisolators (continued)

Equipment Standards Compliance

With the approval of the Motorola package to these component standards, combined with its VDE approval ratings, a wide range of Equipment Standards are covered. The table below summarizes these Equipment Standard coverages.

Two levels of electrical interface, or insulation, are used: 1. Reinforced, or safe, insulation; 2. Basic insulation.

Reinforced Insulation (sometimes referred to as "safe" electrical isolation) is required in an optoisolator interfacing between a hazardous voltage circuit, like an ac line, and a **touchable** safe **e**xtra **l**ow **v**oltage (SELV) circuit.

Basic Insulation is required in an optoisolator which interfaces between a hazardous voltage circuit and a **non–touchable, e**xtra **l**ow **v**oltage (ELV) circuit.

The 6–pin DIP optoisolators are suitable for both levels of electrical interface. The smaller SOIC–8 optoisolators comply with basic Insulation standards only.

Mechanical ratings are shown in the table below.

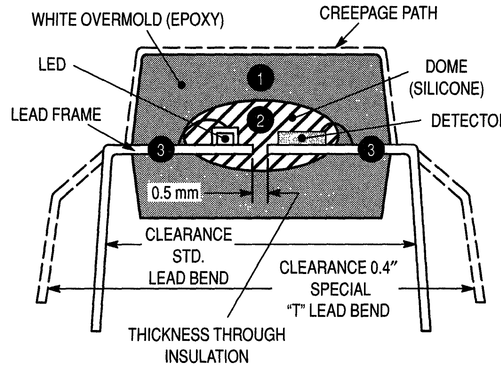

Figure 3. "DOME" Package

Examples for Safety Applications for Motorola VDE Approved Optoisolators

			VDE Rating for Motorola 6–pin DIP Optoisolators				

All Motorola 6–pin DIP Optoisolators meet or exceed the requirements of above listed VDE and DIN IEC Standards.

* Impulse discharge withstand voltage.

(1) To satisfy 8.0 mm creepage path on a PC board Motorola offers a special lead bend of 0.4 inch on all 6–pin dual in–line optoisolators. Order by attaching "T" to the end of the Motorola part number.

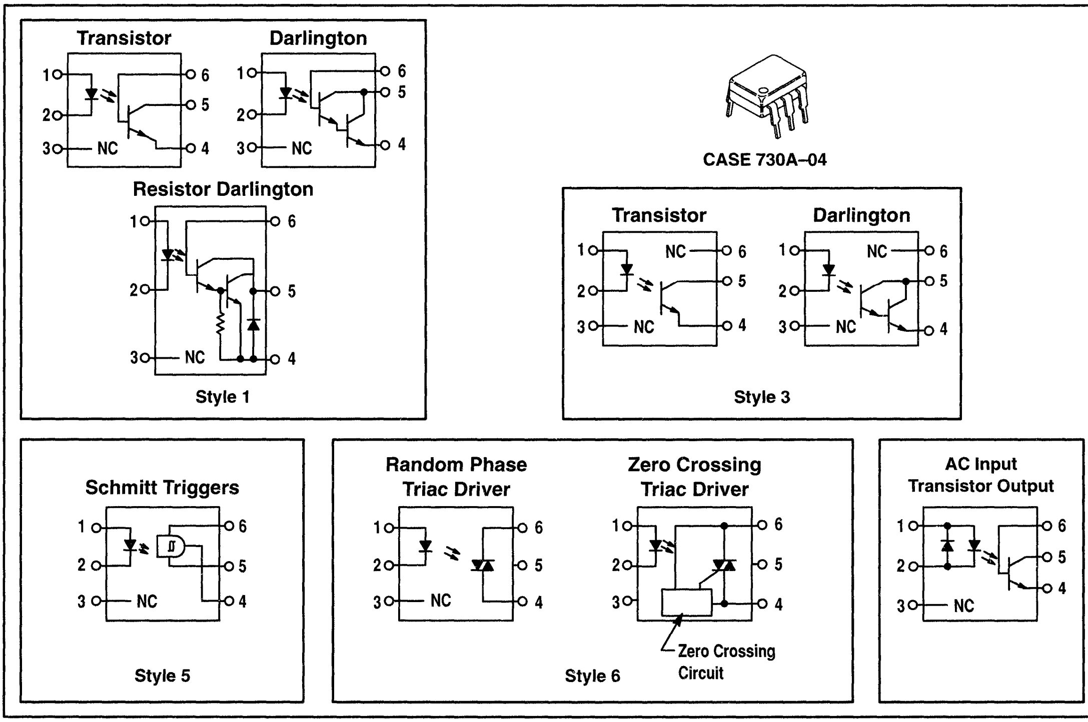
(2) VDE standards (translated into English language) and IEC standards can be ordered from the American National Standard Institute ANSI, 1430 Broadway, N.Y., N. Y. 10018, Sales Department, 212–642–4900.

(3) Creepage path distances are measured from lead to lead across the top, bottom and ends of the package body.

(4) VDE 0884 testing is an option; the suffix letter "V" must be added to the standard number.

(5) For more information regarding the use of VDE approved devices, refer to "VDE Circuit Board Layout Design Rules" in the Applications Information section.

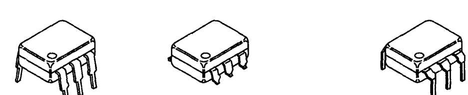
Optoisolators 6–Pin DIP Varieties and Lead Form Options



An optoisolator consists of a gallium arsenide infrared emitting diode, IRED, optically coupled to a monolithic silicon photodetector in a wide array of standard devices and encourages the use of special designs and selections for special applications. All Motorola optoisolators have V_{ISO} rating of 7500 Vac(pk), exceeding all other industry standard ratings.

Motorola offers global regulatory approvals, including UL, CSA, AUSTEL, NEMKO, BABT, SETI, SEMKO, and DEMKO. VDE(1) approved per standard 0884/8.87, with additional approvals to DIN IEC950 and IEC380/VDE 0806, IEC435/VDE 0805, IEC65/VDE 0860, VDE 110b, also covering all other standards with equal or less stringent requirements, including IEC204/VDE 0113, VDE 0160, VDE 0832, VDE 0833.

(1) VDE 0884/8.87 testing is an option; the suffix "V" must be added to the standard part number (see VDE Approved Optoisolators in Section 3).



CASE 730A–04	(S) CASE 730C–04 Surface–mountable gull–wing option	(T) CASE 730D–05 Wide–spaced (0.400) lead form option

Optoisolator Lead Form Options:

Most of Motorola's 6–pin, dual in–line optoisolators can be ordered in either a surface–mountable, gull–wing lead form or a wide–spaced 0.400″ through–hole lead form, which is used to satisfy 8 mm PC board spacing requirements. ***All available tape and reel and lead form options are available on designated prime devices. Please first reference "prime" device designation tables, prior to ordering!***

- Attach "S" to any Motorola 6–pin, dual in–line part number for surface–mountable, gull–wing lead form.
- Attach "T" to any Motorola 6–pin, dual in–line part number for wide–spaced 0.400" through–hole lead form.

Tape and Reel Options:

- Attach "SR2" suffix to any Motorola 6–pin, dual in–line part number for tape and reeled, surface–mountable, gull–wing lead form.

Sensors

In Brief . . .

Motorola's Sensor Products Division features three SENSEON™ families of acceleration, chemical (gas) and pressure sensor products. These sensors combine silicon micromachining with semiconductor manufacturing technology and processes for highly accurate, reliable, repeatable sensor products.

Acceleration Sensors

The acceleration sensor portfolio includes the MMAS40G (16–pin DIP) and XMMAS40GWB (6–pin wingback) sensors. This family of sensors integrates the silicon micromachined g–cell sensing element with a control chip packaged in a rugged, plastic package for maximum versatility and functionality.

Target applications: Automotive systems

Chemical Sensors

The newest member of the SENSEON sensor family is the MGS1100 carbon monoxide (CO) gas sensor introduced to the general market in October 1996. The MGS1100 represents the first mass produced, silicon micromachined sensor for carbon monoxide gas detection. Based on a technology licensed from MicroSens, (Neuchatel, Switzerland) these sensors feature an embedded heater layer that raises the temperature of the metal–oxide film to be sensitive to the target gas. Available in production quantities second quarter 1997, this line will continue to add new device enhancements and devices, including the MGS1200 methane sensor, in third quarter 1997 along with a new smoke detection product.

Target applications: Industrial, commercial and consumer environmental detection products and systems.

Pressure Sensors

Combining integrated circuit technology with advanced pressure sensor architecture, this diverse family of pressure sensing products offers performance, reliability and design adaptability in a single monolithic device. The versatile MPX–series of pressure transducers are available in a number of versions:

- Fully signal conditioned for high–level output;
- High Impedance, temperature compensated and calibrated, for low current designs;
- Temperature compensated and calibrated, for simplified circuits
- Uncompensated for unlimited adaptability and;
- Packaging options for surface mount and piston fit applications

In addition, this series of sensors provides electrical, mechanical and media tolerant design–in options that uniquely fit the varying requirements of the system designer.

Target applications: Automotive, industrial controls, biomedical and consumer products and systems.

Pressure Sensors

Introduction

Motorola pressure sensors combine advanced piezoresistive sensor architecture with integrated circuit technology to offer a wide range of pressure sensing devices for automotive, biomedical, consumer and industrial applications. Selection versatility includes choice of:

Pressure Ranges in PSI
0 to 1.45, 0 to 6, 0 to 7.3, 0 to 14.5, 0 to 29, 0 to 75, 0 to 100, 0 to 150

Sensing Options

Uncompensated, Temperature Compensated/Calibrated, High Impedance, and Signal Conditioned (with on–chip amplifiers)

Application Measurements
Absolute, Differential, Gauge

Package Options

Basic Element, Ported Elements for specific measurements

The Basic Structure

The Motorola pressure sensor is designed utilizing a monolithic silicon piezoresistor, which generates a changing output voltage with variations in applied pressure. The resistive element, which constitutes a strain gauge, is ion implanted on a thin silicon diaphragm.

Applying pressure to the diaphragm results in a resistance change in the strain gauge, which in turn causes a change in the output voltage in direct proportion to the applied pressure. The strain gauge is an integral part of the silicon diaphragm, hence there are no temperature effects due to differences in thermal expansion of the strain gauge and the diaphragm. The output parameters of the strain gauge itself are temperature dependent, however, requiring that the device be compensated if used over an extensive temperature range. Simple resistor networks can be used for narrow temperature ranges, i.e., 0°C to 85°C. For temperature ranges from –40°C to +125°C, more extensive compensation networks are necessary.

Motorola's Patented X–ducer™

Excitation current is passed longitudinally through the resistor (taps 1 and 3), and the pressure that stresses the diaphragm is applied at a right angle to the current flow. The stress establishes a transverse electric field in the resistor that is sensed as voltage at taps 2 and 4, which are located at the midpoint of the resistor. The single–element transverse voltage strain gauge can be viewed as the mechanical analog of a Hall effect device.

Using a single element eliminates the need to closely match the four stress and temperature sensitive resistors that form a Wheatstone bridge design. At the same time, it greatly simplifies the additional circuitry necessary to accomplish calibration and temperature compensation. The offset does not depend on matched resistors but instead on how well the transverse voltage taps are aligned. This alignment is accomplished in a single photolithographic step, making it easy to control, and is only a positive voltage, simplifying schemes to zero the offset.

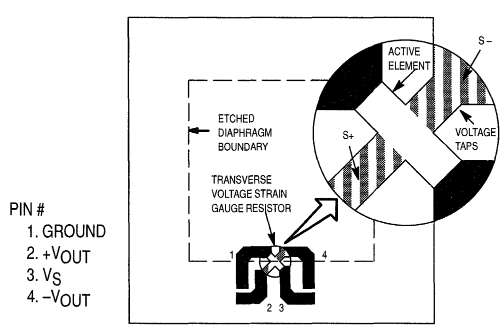

Figure 1. Basic Uncompensated Sensor Element — Top View

Linearity

Linearity refers to how well a transducer's output follows the equation: $V_{out} = V_{off}$ + sensitivity x P over the operating pressure range. There are two basic methods for calculating nonlinearity: (1) end point straight line fit (see Figure 2) or (2) a least squares best line fit. While a least squares fit gives the "best case" linearity error (lower numerical value), the calculations required are burdensome.

Conversely, an end point fit will give the "worst case" error (often more desirable in error budget calculations) and the calculations are more straightforward for the user. Motorola's specified pressure sensor linearities are based on the end point straight line method measured at the midrange pressure.

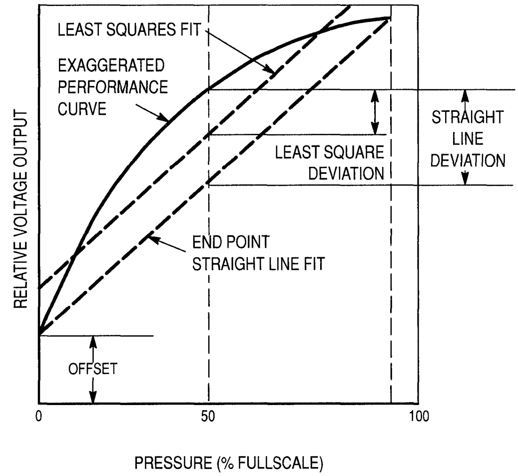

Figure 2. Linearity Specification Comparison

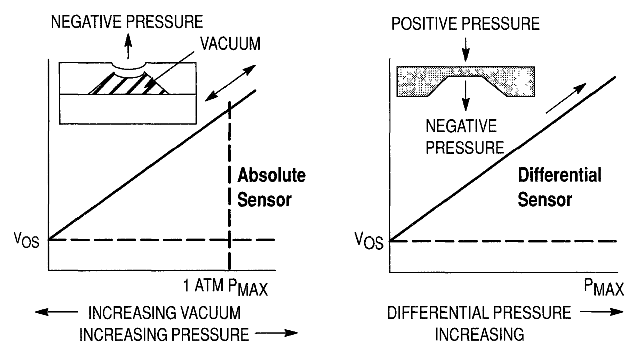
Operation

Motorola pressure sensors support three types of pressure measurements: Absolute Pressure, Differential Pressure and Gauge Pressure.

Absolute Pressure Sensors measure an external pressure relative to a zero–pressure reference (vacuum) sealed inside the reference chamber of the die during manufacture. This corresponds to a deflection of the diaphragm equal to approximately 14.5 psi (one atmosphere), generating a quiescent full–scale output for the MPX100A (14.5 psi) sensor, and a half–scale output for the MPX200A (29 psi) device. Measurement of external pressure is accomplished by applying a relative negative pressure to the "Pressure" side of the sensor.

Differential Pressure Sensors measure the difference between pressures applied simultaneously to opposite sides of the diaphragm. A positive pressure applied to the "Pressure" side generates the same (positive) output as an equal negative pressure applied to the "Vacuum" side.



Motorola sensing elements can withstand pressure inputs as high as four times their rated capacity, although accuracy at pressures exceeding the rated pressure will be reduced. When excessive pressure is reduced, the previous linearity will immediately be restored.

Figure 3. Pressure Measurements

Gauge Pressure readings are a special case of differential measurements in which the pressure applied to the "Pressure" side is measured against the ambient atmospheric pressure applied to the "Vacuum" side through the vent hole in the chip of the differential pressure sensor elements.

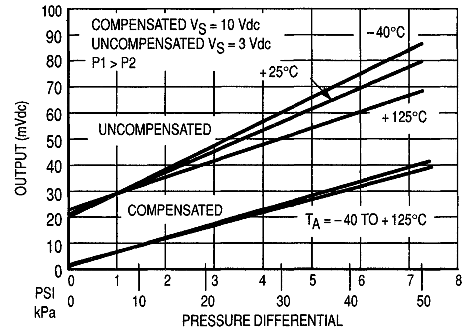

Figure 5. Typical–Output Voltage versus Pressure and Temperature for Compensated and Uncompensated Devices

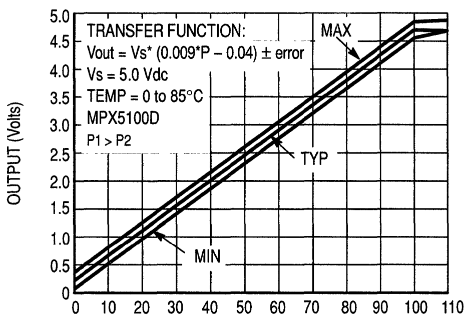

Figure 6. Signal Conditioned MPX5100

Unibody Cross–sectional Drawings

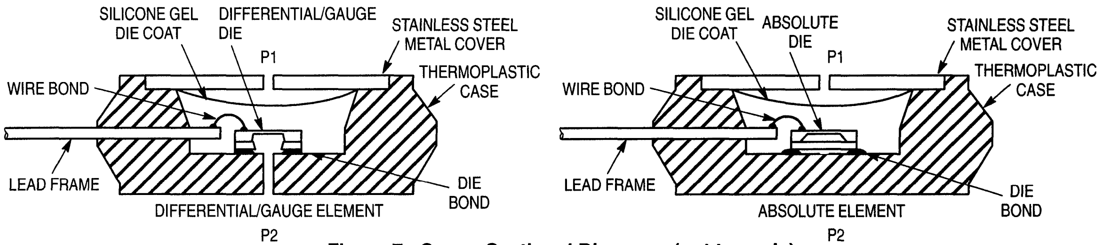

Figure 7. Cross–Sectional Diagrams (not to scale)

Figure 7 illustrates the absolute sensing configuration (right) and the differential or gauge configuration in the basic chip carrier (Case 344). A silicone gel isolates the die surface and wire bonds from harsh environments, while allowing the pressure signal to be transmitted to the silicon diaphragm.

The MPX series pressure sensor operating characteristics and internal reliability and qualification tests are based on use of dry air as the pressure media. Media other than dry air may have adverse effects on sensor performance and long term stability. Contact the factory for information regarding media compatibility in your application.

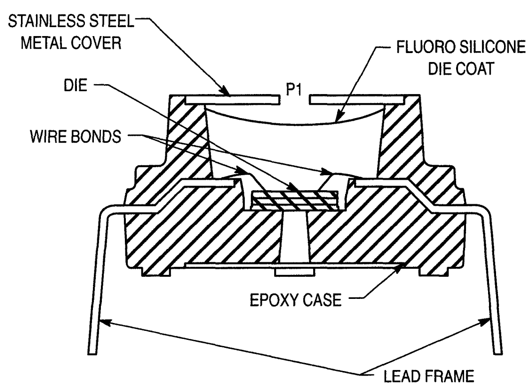

Figure 8. Cross–Sectional Diagram (not to scale)

Figure 8 illustrates the differential/gauge die in the basic chip carrier (Case 434). A silicone gel isolates the die surface and wirebonds from the environment, while allowing the pressure signal to be transmitted to the silicon diaphragm.

Pressure Side Identification

Motorola designates the two sides of the pressure sensor as the Pressure (P1) side and the Vacuum (P2) side. The Pressure (P1) side is the side containing the silicon gel which protects the die. The differential or gauge sensor is designed to operate with positive differential pressure applied, P1 > P2. The absolute sensor is designed for vacuum applied to P1 side.

The Pressure (P1) side may be identified by using the table below.

Table 1. Pressure (P1) / Vacuum (P2) Side Identification

RF Products

In Brief . . .

While Motorola is considered to be the supermarket for semiconductor products, there is not a category in which the selection is more diverse, or more complete, than in products designed for RF system applications. From MOS, bipolar power and signal transistors to integrated circuits, Motorola's RF components cover the entire spectrum from HF to microwave to personal communications. Yet, product expansion continues — not only to keep pace with the progressive needs of the industry, but to better serve the needs of designers for a reliable and comprehensive source of supply.

How to Use This Selector Guide

This new selector guide combines the RF products of Motorola Phoenix, Motorola Toulouse (France), and Motorola Hong Kong. The products in this guide are separated FIRST into major categories such as Power FETs, Power Bipolar, Medium Power Transistors, Small Signal, Monolithic Integrated Circuits, Power Amplifier Modules and CATV Distribution Amplifiers. SECOND, within each category parts are listed by frequency band, except for medium power transistors, small signal transistors and monolithic integrated circuits, which are divided by application. Small signal transistor applications are low noise, linear amplifiers, switches, and oscillators. Monolithic integrated circuit application groupings are switching, receiver functions and transmitter functions. THIRD, within a frequency band, transistors are further grouped by operating voltage and, finally, output power.

Remember

Applications assistance is only a phone call away — call the nearest Semiconductor Sales office or 1-800-521-6274.

Page

RF Discrete Transistors

In the following pages, the reader will find the most extensive group of RF Discrete Transistors offered by any semiconductor manufacturer anywhere in the world today.

From Bipolar to FET, from Low Power to High Power, the user can choose from a variety of packages. They include plastic, metal can and ceramic that are microstrip circuit compatible or surface mountable. Many are designed for automated assembly equipment.

Major sub–headings are MOSFETs, Power Bipolar and Small Signal.

RF Power MOSFETs

Motorola RF Power MOSFETs are constructed using a planar process to enhance manufacturing repeatability. They are *N–channel field effect transistors* with an oxide insulated gate which controls vertical current flow.

Compared with bipolar transistors, RF Power FETs exhibit higher gain, higher input impedance, enhanced thermal stability and lower noise. The FETs listed in this section are specified for operation in RF Power Amplifiers and are grouped by frequency range of operation and type of application. Arrangement within each group is first by order of voltage then by increasing output power.

Table 1. To 54 MHz

Designed for broadband HF/SSB commercial and industrial applications. The high gain, broadband performance and linear characterization of this device makes it ideal for large–signal, common–source amplifier applications in 12.5 volt mobile and amateur radio transmitters.

★New Product

RF Power Bipolar Transistors

Motorola's broad line of bipolar RF power transistors are characterized for operation in RF power amplifiers. Typical applications are in base stations, military and commercial landmobile, avionics and marine radio transmitters. Groupings are by frequency band and type of application. Within each group, the arrangement of devices is by major supply voltage rating, then in the order of increasing output power. All devices are NPN polarity except where otherwise noted.

HF Transistors

Table 1. 1.5 – 30 MHz, HF/SSB

Designed for broadband operation, these devices feature specified Intermodulation Distortion at rated power output. Applications include mobile, marine, fixed station, and amateur HF/SSB equipment, operating from 12.5, 13.6, 28, or 50 volt supplies.

Device	P_{out} Output Power Watts	P_{in} (Max) Input Power Watts	G_{PE} (Min) Gain @ 30 MHz dB	θ_{JC} °C/W	Package/Style
V_{CC} = 12.5 or 13.6 Volts, Class AB					
MRF421	100 PEP/CW	10	10	0.6	211–11/1
V_{CC} = 28 Volts, Class AB					
MRF426	25 PEP/CW	0.16	22	2.5	211–07/1
MRF422	150 PEP/CW	15	10	0.6	211–11/1
V_{CC} = 50 Volts, Class AB					
MRF429	150 PEP/CW	7.5	13	0.8	211–11/1
MRF448	250 PEP/CW	15.7	12	0.6	211–11/1

Table 2. 14 – 30 MHz, CB/Amateur Band

These HF transistors are designed for economical, high–volume use in CW, AM and SSB applications.

Device	P_{out} Output Power Watts	P_{in} (Max) Input Power Watts	G_{PE} (Min) Gain @ 30 MHz dB	θ_{JC} °C/W	Package/Style
V_{CC} = 12.5 or 13.6 Volts, Class AB

Table 12. L–Band Long Pulse Power

These products are designed for pulse power amplifier applications in the 960–1215 MHz frequency range. They are capable of handling up to 10 µs pulses in long pulse trains resulting in up to a 50% duty cycle over a 3.5 millisecond interval. Overall duty cycle is limited to 25% maximum. The primary applications for devices of this type are military systems, specifically JTIDS and commercial systems, specifically Mode S. Package types are hermetic.

RF Medium Power Transistors

RF Medium Power Transistors are used in portable transmitter applications and low voltage drivers for higher power devices. They can be used for analog cellular, GSM and the newer digital handheld cellular phones. GaAs, LDMOS and Bipolar devices are available. RF Medium Power Transistors are supplied in industry standard SOT packages as well as Motorola's high performance PLD line of surface mount power RF packages. Other applications include talkback pagers, wireless modems and LANs, cable modems, highspeed drivers and instrumentation.

RF Small Signal Transistors

Motorola's broad line of RF Small Signal Transistors includes NPN and PNP Silicon Bipolar Transistors characterized for low noise amplifiers, mixers, oscillators, multipliers, non–saturated switches and low–power drivers.

These devices are available in a wide variety of package types: plastic Macro–X and Macro–T, ceramic and surface mounted. Most of these transistors are fully characterized with s–parameters.

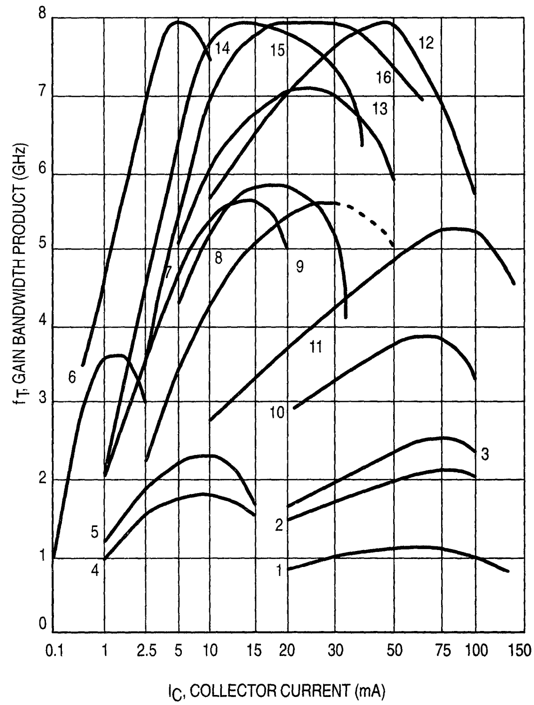
RF Small Signal Transistors

RF Small Signal Transistor Gain Characteristics

Curve numbers apply to transistors listed in the subsequent tables.



Selection by Package

In small–signal RF applications, the package style is often determined by the end application or circuit construction technique. To aid the circuit designer in device selection, the Motorola broad range of RF small–signal amplifier transistors is organized by package. Devices for other applications such as oscillators or switches are shown in the appropriate preceding tables. **These devices are NPN polarity unless otherwise designated.**

Monolithic Integrated Circuits

Motorola's RF monolithic integrated circuit devices provide an integrated solution for the personal communications market. These devices are available in plastic SOIC–8, SOIC–16, SOT–143, TSSOP–16, TSSOP–16HS, TSSOP–20, TSSOP–20HS, TQFP–48 or PFP–16 packages.

Evaluation Boards

Evaluation boards are available for RF Monolithic Integrated Circuits by adding a "TF" suffix to the device type. For a complete list of currently available boards and ones in development for newly introduced product, please contact your local Motorola Distributor or Sales Office.

RF Amplifiers

Motorola's line of RF amplifiers designed and specified for use in land mobile radios, CATV distribution systems and general purpose wideband amplification applications. They feature small size, matched inputs and outputs, high stability and guaranteed performance specifications. For the user, they offer the benefits of smaller and less complex system designs in less time and at lower overall cost.

Each amplifier uses modern transistor chips which are gold metallized and have silicon nitride passivation for increased reliability and long life. Chip and wire construction features MOS capacitors and laser trimmed nichrome resistors. Circuit substrates and metallization have been selected for optimum performance cost and reliablity.

RF Amplifier Modules

Complete amplifiers with 50 ohm in/out impedances are available for a variety of applications including land mobile radios, base stations, TV transmitters and other uses requiring large–signal amplification, both linear and Class C. Frequencies covered range from 68–1990 MHz with power levels extending to 180 watts.

Land Mobile/Portable

The advantages of small size, reproducibility and overall lower cost become more pronounced with increasing frequency of operation. These amplifiers offer a wide range in power levels and gain, with guaranteed performance specifications for bandwidth, stability and ruggedness.

Surface Mount Information

In Brief . . .

Surface Mount Technology is now being utilized to offer answers to many problems that have been created in the use of insertion technology.

Limitations have been reached with insertion packages and PC board technology. Surface Mount Technology offers the opportunity to continue to advance the state–of–the–art designs that cannot be accomplished with Insertion Technology.

Surface Mount Packages allow more optimum device performance with the smaller Surface Mount configuration. Internal lead lengths, parasitic capacitance and inductance that placed limitations on chip performance have been reduced.

The lower profile of Surface Mount Packages allows more boards to be utilized in a given amount of space. They are stacked closer together and utilize less total volume than insertion populated PC boards.

Printed circuit costs are lowered with the reduction of the number of board layers required. The elimination or reduction of the number of plated through holes in the board contribute significantly to lower PC board prices.

Surface Mount assembly does not require the preparation of components that is common on insertion technology lines. Surface Mount components are sent directly to the assembly line, eliminating an intermediate step.

Automatic placement equipment is available that can place Surface Mount components at the rate of a few thousand per hour to hundreds of thousands of components per hour.

Surface Mount Technology is cost effective, allowing the manufacturer the opportunity to produce smaller units and offer increased functions with the same size product.

INFORMATION FOR USING SURFACE MOUNT PACKAGES

RECOMMENDED FOOTPRINTS FOR SURFACE MOUNTED APPLICATIONS

Surface mount board layout is a critical portion of the total design. The footprint for the semiconductor packages must be the correct size to ensure proper solder connection interface between the board and the package. With the correct pad geometry, the packages will self align when subjected to a solder reflow process.

POWER DISSIPATION FOR A SURFACE MOUNT DEVICE

The power dissipation for a surface mount device is a function of the drain/collector pad size. These can vary from the minimum pad size for soldering to a pad size given for maximum power dissipation. Power dissipation for a surface mount device is determined by $T_{J(max)}$, the maximum rated junction temperature of the die, $R_{\theta JA}$, the thermal resistance from the device junction to ambient, and the operating temperature, T_A. Using the values provided on the data sheet, P_D can be calculated as follows:

$$P_D = \frac{T_{J(max)} - T_A}{R_{\theta JA}}$$

The values for the equation are found in the maximum ratings table on the data sheet. Substituting these values into the equation for an ambient temperature T_A of 25°C, one can calculate the power dissipation of the device. For example, for a SOT–223 device, P_D is calculated as follows.

$$P_D = \frac{150°C - 25°C}{156°C/W} = 800 \text{ milliwatts}$$

The 156°C/W for the SOT–223 package assumes the use of the recommended footprint on a glass epoxy printed circuit board to achieve a power dissipation of 800 milliwatts. There are other alternatives to achieving higher power dissipation from the surface mount packages. One is to increase the area of the drain/collector pad. By increasing the area of the drain/collector pad, the power dissipation can be increased. Although the power dissipation can almost be doubled with this method, area is taken up on the printed circuit board which can defeat the purpose of using surface mount technology. For example, a graph of $R_{\theta JA}$ versus drain pad area is shown in Figures 1, 2 and 3.

Another alternative would be to use a ceramic substrate or an aluminum core board such as Thermal Clad™. Using a board material such as Thermal Clad, an aluminum core board, the power dissipation can be doubled using the same footprint.

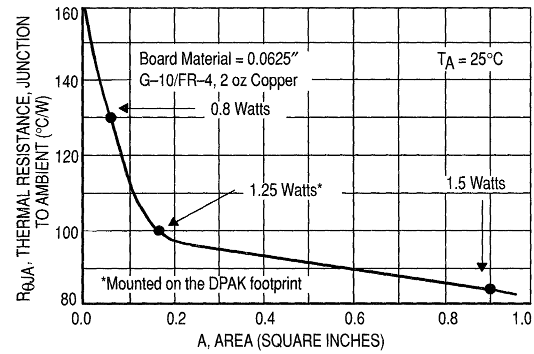

Figure 1. Thermal Resistance versus Drain Pad Area for the SOT–223 Package (Typical)

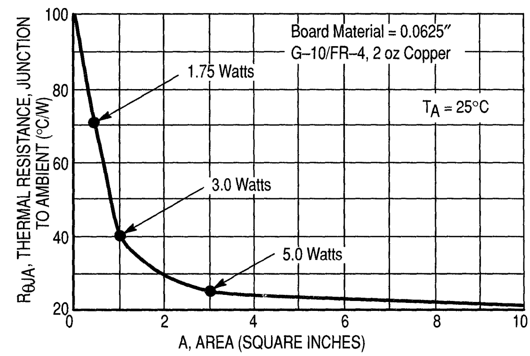

Figure 2. Thermal Resistance versus Drain Pad Area for the DPAK Package (Typical)

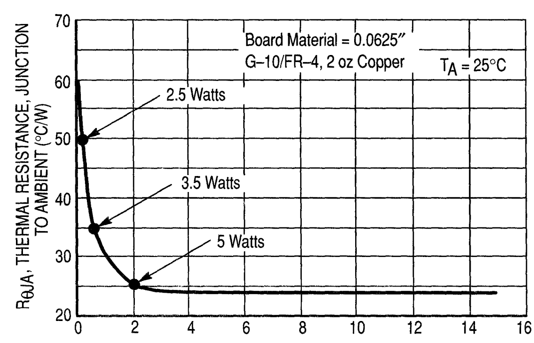

Figure 3. Thermal Resistance versus Drain Pad Area for the D^2PAK Package (Typical)

SOLDER STENCIL GUIDELINES

Prior to placing surface mount components onto a printed circuit board, solder paste must be applied to the pads. Solder stencils are used to screen the optimum amount. These stencils are typically 0.008 inches thick and may be made of brass or stainless steel. For packages such as the TSOP–6, SC–59, SC–70/SOT–323, SOD–123, SOT–23, SOT–143, SOT–223, SO–8, SO–14, SO–16, Micro8, and SMA/SMB/SMC diode packages, the stencil opening should be the same as the pad size or a 1:1 registration. This is not the case with the DPAK, D^2PAK and D^3PAK packages. If a 1:1 opening is used to screen solder onto the drain pad, misalignment and/or "tombstoning" may occur due to an excess of solder. For these two packages, the opening in the stencil for the paste should be approximately 50% of the tab area. The opening for the leads is still a 1:1 registration. Figure 4 shows a typical stencil for the DPAK, D^2PAK and D^3PAK packages. The pattern of the opening in the stencil for the drain pad is not critical as long as it allows approximately 50% of the pad to be covered with paste.

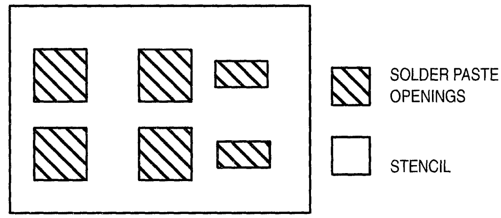

Figure 4. Typical Stencil for DPAK, D^2PAK and D^3PAK Packages

SOLDERING PRECAUTIONS

The melting temperature of solder is higher than the rated temperature of the device. When the entire device is heated to a high temperature, failure to complete soldering within a short time could result in device failure. Therefore, the following items should always be observed in order to minimize the thermal stress to which the devices are subjected.

- Always preheat the device.
- The delta temperature between the preheat and soldering should be 100°C or less.*
- When preheating and soldering, the temperature of the leads and the case must not exceed the maximum temperature ratings as shown on the data sheet. When using infrared heating with the reflow soldering method, the difference should be a maximum of 10°C.
- The soldering temperature and time should not exceed 260°C for more than 10 seconds.
- When shifting from preheating to soldering, the maximum temperature gradient shall be 5°C or less.
- After soldering has been completed, the device should be allowed to cool naturally for at least three minutes. Gradual cooling should be used since the use of forced cooling will increase the temperature gradient and will result in latent failure due to mechanical stress.
- Mechanical stress or shock should not be applied during cooling.

* Soldering a device without preheating can cause excessive thermal shock and stress which can result in damage to the device.

* Due to shadowing and the inability to set the wave height to incorporate other surface mount components, the D^2PAK is not recommended for wave soldering.

TYPICAL SOLDER HEATING PROFILE

For any given circuit board, there will be a group of control settings that will give the desired heat pattern. The operator must set temperatures for several heating zones and a figure for belt speed. Taken together, these control settings make up a heating "profile" for that particular circuit board. On machines controlled by a computer, the computer remembers these profiles from one operating session to the next. Figure 5 shows a typical heating profile for use when soldering a surface mount device to a printed circuit board. This profile will vary among soldering systems, but it is a good starting point. Factors that can affect the profile include the type of soldering system in use, density and types of components on the board, type of solder used, and the type of board or substrate material being used. This profile shows temperature versus time. The line on the graph shows the actual temperature that might be experienced on the surface of a test board at or near a central solder joint. The two profiles are based on a high density and a low density board. The Vitronics SMD310 convection/infrared reflow soldering system was used to generate this profile. The type of solder used was 62/36/2 Tin Lead Silver with a melting point between 177–189°C. When this type of furnace is used for solder reflow work, the circuit boards and solder joints tend to heat first. The components on the board are then heated by conduction. The circuit board, because it has a large surface area, absorbs the thermal energy more efficiently, then distributes this energy to the components. Because of this effect, the main body of a component may be up to 30 degrees cooler than the adjacent solder joints.

Tape and Reel Specifications and Packaging Specifications

Tape and Reel Specifications and Packaging Specifications

Embossed Tape and Reel is used to facilitate automatic pick and place equipment feed requirements. The tape is used as the shipping container for various products and requires a minimum of handling. The antistatic/conductive tape provides a secure cavity for the product when sealed with the “peel–back” cover tape.

- Two Reel Sizes Available (7″ and 13″)
- Used for Automatic Pick and Place Feed Systems
- Minimizes Product Handling
- EIA 481, –1, –2
- SOD–123, SC–59, SC–70/SOT–323, SC–70ML/SOT–363, SOT–23, SOT–143, TSOP–6, in 8 mm Tape
- SO–8, Micro8, OPTO SO–8, SOT–223, SMA, SMB in 12 mm Tape
- DPAK, PFP–16, SO–14, SO–16, SMC, TSSOP–16, TSSOP–20, 430 and 430B in 16 mm Tape
- D^{2}PAK, D^{3}PAK, 6–Pin Optoisolators in 24 mm Tape

Use the standard device title and add the required suffix as listed in the option table on the following page. Note that the individual reels have a finite number of devices depending on the type of product contained in the tape. Also note the minimum lot size is one full reel for each line item, and orders are required to be in increments of the single reel quantity.

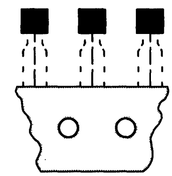
TO–92 EIA, IEC, EIAJ Radial Tape in Fan Fold Box or On Reel

Radial tape in fan fold box or on reel of the reliable TO–92 package are the best methods of capturing devices for automatic insertion in printed circuit boards. These methods of taping are compatible with various equipment for active and passive component insertion.

- Available in Fan Fold Box
- Available on 365 mm Reels
- Accommodates All Standard Inserters
- Allows Flexible Circuit Board Layout
- 2.5 mm Pin Spacing for Soldering
- EIA–468, IEC 286–2, EIAJ RC1008B

TO–92 RADIAL TAPE IN FAN FOLD BOX OR ON REEL



Ordering Notes:

When ordering radial tape in fan fold box or on reel, specify the style per Figures 3 through 8. Add the suffix "RLR" and "Style" to the device title, i.e. MPS3904RLRA. This will be a standard MPS3904 radial taped and supplied on a reel per Figure 9.

Fan Fold Box Information — Minimum order quantity 1 Box/$200LL.
Order in increments of 2000.

Reel Information — Minimum order quantity 1 Reel/$200LL.
Order in increments of 2000.

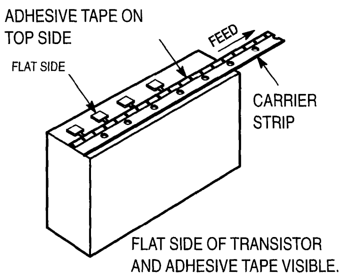
W1	Adhesive Tape Width	0.2165	0.2841	5.5	6.3
W2	Adhesive Tape Position	.0059	0.01968	.15	0.5

NOTES:
1. Maximum alignment deviation between leads not to be greater than 0.2 mm.
2. Defective components shall be clipped from the carrier tape such that the remaining protrusion (L) does not exceed a maximum of 11 mm.
3. Component lead to tape adhesion must meet the pull test requirements established in Figures 5, 6 and 7.
4. Maximum non–cumulative variation between tape feed holes shall not exceed 1 mm in 20 pitches.
5. Holddown tape not to extend beyond the edge(s) of carrier tape and there shall be no exposure of adhesive.
6. No more than 1 consecutive missing component is permitted.
7. A tape trailer and leader, having at least three feed holes is required before the first and after the last component.
8. Splices will not interfere with the sprocket feed holes.

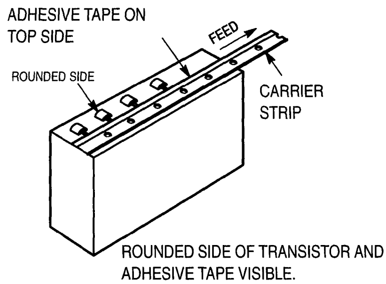
TO–92 EIA RADIAL TAPE IN FAN FOLD BOX OR ON REEL

FAN FOLD BOX STYLES



Style M fan fold box is equivalent to styles E and F of reel pack dependent on feed orientation from box.

Figure 2. Style M



Style P fan fold box is equivalent to styles A and B of reel pack dependent on feed orientation from box.

Figure 3. Style P

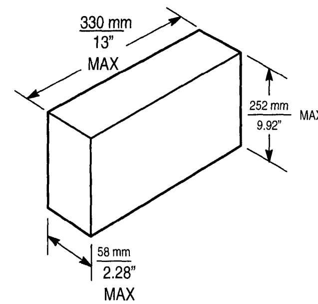


Figure 4. Fan Fold Box Dimensions

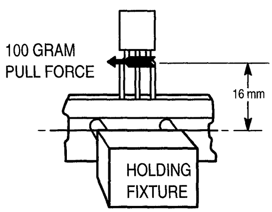
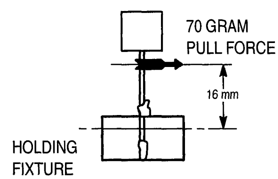
ADHESION PULL TESTS



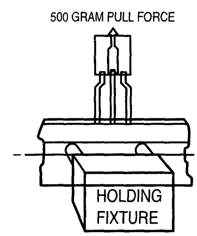
The component shall not pull free with a 300 gram load applied to the leads for 3 ± 1 second.

Figure 5. Test #1



The component shall not pull free with a 70 gram load applied to the leads for 3 ± 1 second.

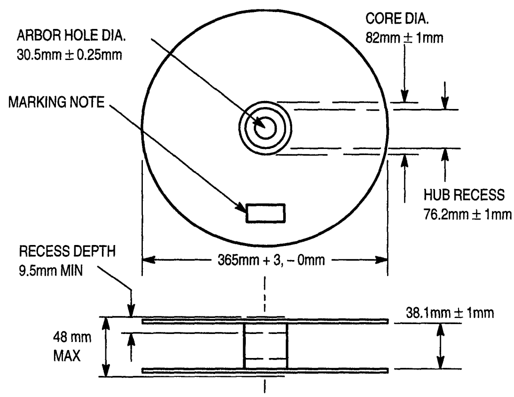
Figure 6. Test #2



There shall be no deviation in the leads and no component leads shall be pulled free of the tape with a 500 gram load applied to the component body for 3 ± 1 second.

Figure 7. Test #3

REEL STYLES



Material used must not cause deterioration of components or degrade lead solderability

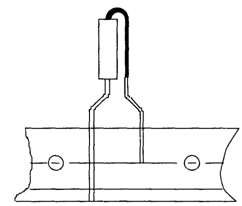
DO–35, DO–41, Surmetic 30 Radial Tape in Fan Fold Box or On Reel

AXIAL LEADED DEVICE RADIAL TAPE IN FAN FOLD BOX OR ON REEL



Radial tape in fan fold box or on reel for axial leaded devices is the best method of capturing devices for automatic insertion in printed circuit boards. These methods of taping are compatible with various equipment for active and passive component insertion.

- Available in Fan Fold Box
- Available on 365 mm Reels
- Accommodates All Standard Inserters
- Allows Flexible Circuit Board Layout
- 2.5 mm Pin Spacing for Soldering

Ordering Notes:

When ordering radial tape in fan fold box or on reel, specify the style per Figures 4 through 13. Add the appropriate suffix per Tables A and B as listed below:

Fan Fold Box Information — Minimum order quantity 1 Box/$200LL.
Order in increments of 3000.

Reel Information — Minimum order quantity 1 Reel/$200LL.
Order in increments of 3000.

Product Literature and Technical Training

In Brief . . .

With the pace of new semiconductor product introductions, the task of providing an effective and up–to–date perspective of available components is beyond the means of any single document. Hence, a comprehensive Motorola Literature System has been put in place to keep semiconductor users totally informed of all aspects of the Motorola product lines — from new product introductions, to applications, to major changes in directions.

The Motorola technical literature library and associated services consist of the following:

- An extensive library of Data Books, each containing a complete selection of data sheets associated with a particular product line.
- A series of User's Manuals and Design Manuals dealing with the application of highly complex products.
- A wide range of Application Notes and Article Reprints detailing the utilization of new and significant products.
- Instructor–led Training for: Digital Signal Processing (DSP) Family; M68000 Family; Embedded Controllers (EC); MC68360 QUIC; PowerPC; Microcontroller (MCU); RISC Family; plus the MC68302, MC68332, MC68340 and the MC68HC16.

These products and services are described on the following pages. However, because of different conditions and standards, some of these may not be available outside the USA.

Technical Data Services

Motorola Semiconductor Master Selection Guide

For the identification and preliminary selection of components for circuit and system designs

For the design engineer, the Motorola Master Selection Guide is perhaps the most important single document for the identification and preliminary selection of components for circuit and system designs. Within its pages is a complete listing and description of Motorola semiconductor devices currently in general use, and those recommended for new designs. It serves two purposes:

1. It lists all standard products in the vast Motorola semiconductor inventory for rapid identification.
2. It divides this total product offering into a variety of major product categories, with sufficient technical information to permit an intelligent first–order evaluation as to the most suitable devices for a specific application.

"IMAGINE" SPS Customer Magazine

Innovative new developments from Motorola's Semiconductor Products Sector

This highly informative periodical is available to all semiconductor users on a free subscription basis. The magazine provides information on new semiconductor products and developments and provides a quick–scan insight into new–product offerings. Concise, informative articles discuss significant new product capabilities as well as newly introduced services. In short, it represents an overview of the latest and most important events at Motorola that influence the efficient implementation and most cost–effective use of semiconductor devices.

To receive "IMAGINE" Magazine, in the USA, please contact the Literature Distribution Center by calling 1–800–441–2447.

M*fax* — Touch–Tone Fax

M*fax* offers access to over 30,000 Motorola documents for faxing to customers worldwide. With menus and voice instruction, customers can request the documents needed using their own touch–tone telephones from any location 7 days a week and 24 hours a day.

A number of features are offered within the **M*fax*** system, including HOT DOCS (4–digit code identifiers for currently referenced promotional or advertising material), product data sheets, application notes, engiineering bulletins, article reprints, selector guides, Literature Order Forms, and Technical Training Information.

Motorola has a full time staff dedicated to supporting the Internet service as well as the **M*fax*** Touch–Tone Faxing service.

How to reach us:
MFAX: RMFAX0@email.sps.com
or (602) 244–6609
or 1–800–774–1848 (U.S. and Canada)

Motorola SPS World Marketing Internet Server

Motorola SPS's Electronic Data Delivery organization has set up a World Wide Web Server to deliver Motorola SPS's technical data to the global Internet community.

Technical data such as the complete Master Selection Guide along with the OEM North American price book are available on the Internet server with full search capabilities. Other data on the server include abstracts of databooks, application notes, selector guides, and textbooks. All have easy text search capability. Ordering Literature from the Literature Distribution Center is available on line.

Other features of Motorola SPS's Internet server include the availability of a searchable press release database, technical training information with on–line registration capabilities, complete on–line access to the MFAX system for ordering faxes, an on–line technical support form to send technical questions and receive answers through email, information on product groups, full search capabilities of device models, a listing of the Domestic and International sales offices, and links directly to other Motorola world wide web servers.

After accessing the Internet, to locate the Motorola SPS World Marketing server, use the following URL:

http://sps–mot.com

For more information on Motorola SPS's Internet server you can request BR1307/D from MFAX or request a copy from Literature Distribution Center by calling 1–800–441–2447.

Motorola Data and Application Literature

Complete technical data for the world's most comprehensive inventory of semiconductor components

To complement the industry's broadest line of semiconductor products, Motorola offers a complete library of Data books which detail the electrical characteristics of its products. These documents are supplemented by User's Manuals describing the capabilities of the products in circuit and system design.

Motorola attempts to fill the need for applications information concerning today's highly complex electronic components. Each year dozens of authors from colleges and universities, and from the industry, add their individual contributions to the collective literature. From these, Motorola has selected a number of texts which add substantially to the comprehension and applications of some of the more complex products. By buying these in large quantities and providing them to customers at lower than retail cost, Motorola hopes to foster a more comprehensive acquaintance with these products at greatly reduced prices.

For complete summaries and prices, order BR101/D from the Literature Distribution Center.

Motorola Application Literature

Semiconductors in theory and practice

Application Notes, Engineering Bulletins and Article Reprints are part of a total information system to define the characteristics and applications of semiconductor devices. Motorola's library consists of more than 300 such documents dealing with the applications of all types of semiconductors from discrete power transistors to the most complex microprocessors. All are described in an Application Note Catalog available from our Literature Distribution Center.

Individual application notes, application reports, engineering bulletins and article reprints can also be ordered from our Literature Distribution Center.

Contact the Literature Distribution Center for prices and ordering information. In addition, there may be an alternative document available in some countries, contact your local Motorola Sales Office.

For complete summaries: order BR101/D from the Literature Distribution Center.

Motorola Technical Training Courses

Dear Customer:

Our primary goal as an organization is to enhance the designer's effectiveness in implementing Motorola's offering of microprocessors and microcontrollers. This is accomplished by providing our customers with formalized training, including application examples reinforced with hands–on labs, to empower the designer with the tools to efficiently accomplish their design.

Teaming with our training partners, Ascent Technologies and Arnewsh, Inc., we continue to strive for excellence in our offering of quality instruction in the application of Motorola products. Motorola's Technical Training organization develops new training courses in cooperation with our applications engineers and product marketing resources very early in the new product cycle, thus assuring vital and timely training to assist with your design. We then certify our training partners to assure the best possible training experience for engineers/programmers.

Our technical training is structured to offer the best instruction in the semiconductor industry, and we look forward to providing training that will adequately serve your design and application needs.

Thank you for choosing Motorola.

Jay Nunez
Director
Technical Operations

Sherril A. Harmon
Manager
Technical Training

We can bring the training to your facility!

Courses listed in this brochure can be taught at your facility and can be tailored to fit your needs. For details and information please call one of the training providers: Motorola Technical Training (602) 302–8008, Arnewsh, Inc. (970) 223–1616, or Ascent Technologies (800) 410–3601.

DSP561xx Family Microprocessor

Description: This is a four–day course in which the student (with digital signal processing design experience) learns to design with the DSP561xx digital signal processor. The course consists of lectures, labs, and exercises.
Prerequisites: The student must have knowledge of at least one microprocessor and its assembly language. A prior understanding of digital signal processing theory is important for those whose applications are DSP oriented.

DSP5600x Family Microprocessor (with intro to DSP563xx/6xx)

Description: This is a five–day course in which the student (with digital signal processing design experience) learns to design with the DSP5600x digital signal processor. The course consists of lectures, labs, and exercises.
Prerequisites: The student must have knowledge of at least one microprocessor and its assembly language. A prior understanding of digital signal processing theory is important for those whose applications are DSP oriented.

DSP563xx/6xx Family Digital Signal Processor

Description: This is a two or four–day course in which the student (with digital signal processing design experience) learns to design with the DSP563xx/6xx digital signal processor. Students who have DSP5600x experience may choose to attend the last two days only. The course consists of lectures, labs, and exercises.
Prerequisites: The student must have knowledge of at least one microprocessor and its assembly language. A prior understanding of digital signal processing theory is important for those whose applications are DSP oriented.

DSP568xx Family Digital Signal Processor

Description: This is a four–day course in which the student (with digital signal processing design experience) learns to design with the DSP568xx digital signal processor. The course consists of lectures, labs, and exercises.
Prerequisites: The student must have knowledge of at least one microprocessor and its assembly language. A prior understanding of digital signal processing theory is important for those whose applications are DSP oriented.

DSP96002 Microprocessor

Description: This course prepares the student for designing systems which include the DSP96002. The course consists of four days of lecture.
Prerequisites: This course assumes no prior knowledge of the DSP56001 device.

MC68HC05/08 Microcontroller

Description: This is a four–day introductory course to the 68HC08 microcontroller family. This course covers the major modules of the 68HC08 including discrete I/O, timer functions, serial communications interfaces, multiplex communications modules, and the exception related modules. Many application examples are included. If needed, or if the actual target platform is the HC05, there is one–day (optional) added to the beginning of the class.
Prerequisites: No prior MC68HC08 knowledge is assumed. Some basic understanding of embedded system operations and their target applications is helpful.

MC68HC11 Microcontroller Family

Description: This is a four–day introduction to the MC68HC microcontroller family which covers major features of this industry–standard microcontroller. Students will understand how to program and apply all the major subsystems of the MC68HC11 including discrete I/O, timer functions, serial communication interfaces, analog to digital conversion, and the computer operating properly (COP) watchdog timer. Many application examples are included.
Prerequisites: Students should have a basic understanding of embedded system operations and their target application.

MC68HC12 Microcontroller

Description: This three–day course is designed to help the student understand the MC68HC12 family and their applications. The student will write I/O routines to configure an entire system to meet application requirements.
Applications such as angle base engine control, anti–skid breaking system and serial communication will be discussed in detail.
Prerequisites: 8 or 16–bit microcontroller knowledge and design experience will be helpful.

MC68HC16 Microcontroller Family

Description: This is a four–day course in which the MC68HC16 family major features are covered, including the CPU16, general purpose timer, and analog–to–digital converter. In addition, the system integration module, single–chip integration module, queued serial module, standby RAM, multi–channel communications interface, and time processor unit will be covered. Lecture, labs and exercises are a major part of the learning process for this course.
Prerequisites: Knowledge of microprocessor fundamentals. Previous experience with either MC68HC05 or MC68HC11 is helpful.

MC68332 Embedded Controller

Description: This is a five–day intensive introduction to the MC68332 embedded controller family. Students will understand how to program and apply all the major subsystems of the 68332, including discrete I/O, timer functions, serial communication interfaces, analog to digital conversion, computer operating properly (COP) watchdog timer. Many application examples are included.
Prerequisites: Students should have a basic understanding of embedded system operations and their target application.

MC68376 Microcontroller

Description: This is a five–day intensive introduction to the MC68376 microcontroller. Students will understand how to program and apply all the major sub–systems of the 68376, including discrete I/O, time processor unit, the configurable timer module, the queued analog to digital converter, the queued serial module, and the Toucan module. Application examples are included.
Prerequisites: Students should have a basic understanding of embedded systems operations and their target application.

ANSI C for Embedded Systems

Description: This four–day course is a fast–paced introduction to programming Motorola microcontrollers using the C language. The course covers all essential C language constructs their typical implementation on Motorola microcontrollers and how to strategically design embedded system C software. Particular attention is paid to unique embedded system issues such as compiler ROM and RAM usage and throughput minimization. Hands–on lab exercises reinforce all major topics and use commercially available cross–compilers and simulators.
Prerequisites: Students should have a basic understanding of the 68HC11 or 68332 microcontroller and embedded systems operation. No familiarity with C is assumed.

MC68EC/000 Microprocessor

Description: This is a four–day course which covers both the software and hardware aspects of the MC68EC/000 processor. The course will cover programming model, data types, instruction set, addressing modes, exception processing, signal function and characteristics.
Prerequisites: A basic understanding of microprocessor systems, digital logic and memory concepts is required.

MC68EC/000 Family Programming

Description: This is a three–day course which presents the software functionality of all the MC68/EC0x0 microprocessors. The course covers the programming model, data types, instruction set, addressing modes, exception processing, and an overview of the caches and memory management unit in 020/030/040. The course consists of lectures, exercises, and labs.
Prerequisites: A basic understanding of microprocessor systems and assembly language is required.

MC68EC/040/060 Microprocessors

Description: This is a two–day course which covers all the hardware and system aspects of both the MC68040 and MC68060 members. The first one and a half days is used to cover the MC68040 and the common issues of the MC68060. The last half day is used to point out MC68060 differences and the new features.
Prerequisites: Students should have complete familiarity with the software aspects of the M68K family. Students who also need the software and programming background may attend the M68K family programming course offered in the same week.

MC68302 Integrated Multiprotocol Processor

Description: This is a four–day course in which students learn to design and write programs for the various chip submodules. This includes the MC68000 core, communication processor (CP) and system integration block (SIB). The course consists of lectures, exercises, and labs.
Prerequisites: Students need the software and hardware understanding of the MC68000 processor.

MC68360 QUICC–QUad Integrated Communication Controller

Description: This is a four–day course in which students learn to design and write programs for the various chip modules. This includes the CPU32+ core, communication processor module (CPM) and system integration module (SIM60). Labs are a major part of the learning process; lecture and exercises are also a part of the course.
Prerequisites: To benefit most from the course, a S/W and H/W understanding of the MC68000 microprocessor is a requirement.

MC6834x Family Integrated Processor ('330, '340, '341, '349)

Description: This is a three–day course in which students will learn to design with the CPU32/CPU32+, DMA channels, timers, serial I/O modules, and system integration module. The course consists of lectures, exercises, and labs.
Prerequisites: Students need the software and hardware understanding of the M68K processor family.

PowerPC™ 6xx Family Microprocessor

Description: The MPC6xx is primarily targeted for the desktop marketplace. The PowerPC™ MPC6xx course is a four–day course that details all publicly announced MPC6xx implementations such as the MPC602, MPC603 and MPC604. This course contains lectures, labs, and exercises.
Prerequisites: The student must have advanced microprocessor and assembly language knowledge. An understanding of memory management, multi–processing/master, and cache concepts is also beneficial.

MPC505 PowerPC™ Microcontroller

Description: This is a three–day course in which the student learns to design with the embedded PowerPC™ core, system integration unit (SIU), and associated components of the MPC505. The course consists of lectures and exercises.
Prerequisites: The student must have advanced microprocessor and assembly language knowledge. PowerPC™ experience is not required.

MPC821 PowerPC™ Integrated Microcontroller

Description: This is a four–day course in which the student learns to design with the MPC821, i.e. the embedded PowerPC™ core, and the enhanced communications processor module. The course will contain lectures, labs, and exercises.
Prerequisites: The student must have advanced microprocessor and assembly language knowledge. The first day of this course is optional, intended for designers with no PowerPC™ background.

MPC860 Power QUICC–QUad Integrated Communication Controller

Description: This is a four–day course in which students learn to design and write programs for the various chip submodules. This includes the embedded PowerPC™ Core, the RISC communication processor module (CPM), and system integration unit. Labs are a major part of the learning process; lectures and exercises are also a part of the course.
Prerequisites: To benefit most from the course, some S/W and H/W understanding of the PowerPC™ RISC processor is a requirement. However, if students do not have this requirement, the first day is a must to attend. The first day will cover PowerPC™ basics and fundamentals.

TPU Microcode

Description: The TPU Microcode course is a three–day lab–intensive course in which the student learns how to write microcode functions for the TPU. The course is approximately 50% lecture and exercises and 50% lab time.
Prerequisite: The student must have advanced microprocessor experience.

ColdFire MCF5200

Description: This is a three–day course that covers the ColdFire family of microprocessors. This "variable length" RISC MPU is contrasted with traditional RISC and CSIC architectures, and the advantages of the ColdFire family are highlighted.
The software portion of this course covers the programming model, addressing modes, and instruction set. Code density, exception processing and program examples are also reviewed.
The hardware portion begins with the system integration module (SIM). The SIM includes the external bus interface and timing, chip select operation, DRAM controller, and system protection features.
The hardware portion also covers in detail the on–board debug module. The course will demonstrate to the student how to debug application programs using the advanced features of the background debug mode (BDM), including real–time trace and hardware breakpoints.
This course also covers the other ColdFire family resources, including on–chip caches, timers, uarts and the M–bus interface.
Each hardware topic includes a lab session and an application example is provided to insure the student has a clear understanding of the features of the ColdFire family.
Prerequisite: 32, 16 or 8–bit microprocessor/microcontroller knowledge or design experience.

Motorola Technical Training Courses (continued)

For information regarding the following courses, call (800) 262–5486. RTEK support and course information offered by Embedded System Product, Inc.

Please call (800) 262–5486 to speak with the RTEK Training Coordinator concerning course pricing, enrollment, or on–site training.

Use of the RTEK Kernel

Description: This is a three–day course in which the student receives an in–depth presentation of the RTEK kernel with reinforcement from extensive "hands–on" usage. The course covers all aspects of RTEK kernel usage beginning with an overview of real–time software architectures, a presentation of RTEK features, its kernel objects and services, system configuration and generation, and interrupt servicing concepts for device drivers. Lecture time is interspersed with lab exercises to achieve maximum benefit for the student. Each day ends with a question and answer session to cover application topics or items of special interest to the student.
Prerequisites: Prior knowledge or use of a real–time kernel is not required but will benefit the student. Students should be familiar with the C language and a source level debugger.

RTEK Training Class Dates for 1997

January 14–16
February 11–13
March 18–20
April 8–10
May 13–15
June 17–19
July 15–17
August 12–14
September 16–18
October 14–16
November 11–13
December (No Scheduled Class)

All scheduled classes are held in Houston, TX at the Embedded System Products Training Center. Closed classes are available on–site by special arrangement.

Device Index and Subject Index

In Brief . . .

Device Index

The following index lists the device numbers of the products contained in this selector guide and references the page number where each device is described in greater detail.(1) The listing is in a numeric sequence organized in a "computer sort." This means that all the devices listed herein follow a 39 character alphabet. This "new" alphabet starts with a Period, a Dash and a Slash (. – /), followed by the 26 letter alphabet (A thru Z), which is then followed by 10 numbers (0 thru 9).

The ranking or hierarchy of this 39 character alphabet is as follows:

. – / A B C D E F G H I J K L M N O P Q R S T U V W X Y Z 0 1 2 3 4 5 6 7 8 9

Therefore, if you are looking for a device starting with a letter of the alphabet like an MC1741CP, it would appear before a device starting with a number, such as 2N1132.

To find a device in this index, start with the first character of the device and find that section of the index; next move to the second character in the device number, and move to that character within the same portion of the listing; and so on until the device number is found. In other words, it is used just like a dictionary, character by character.

For example, to find the 2N6837, go to that section of the listing that begins with the number "2" (Notice that the section follows all devices that begin with a letter of the alphabet or "1"). Next, find that portion of the listing that begins with "2N" (Notice it follows those devices that begin with "2K"). Next, find that portion of the listing that begins with "2N6" (Notice it follows those devices that begin with "2N5"). Continue looking for those portions that begin with the next consecutive character until you have found the entire number.

Because of the way "Computer Sort" works it is not necessary to be concerned with the absolute value or number of characters in a part number, just move across the device part number, left to right, one character at a time until you find the number.

Subject Index

This listing is intended to simplify the identification of products where specific device numbers are not known.

(1) The device numbers contained in this index are for reference only and do not necessarily represent the complete device number necessary to order the device. Contact your local Sales Office or Authorized Distributor for complete ordering information.
