## IBM 1311 DISK STORAGE DRIVE FOR IBM 1410 AND 7010 SYSTEMS

### Additions to Direct Seek and Scan Disk Sections

#### Page 8

Under "Direct Seek," add a zero as the second character to all discussion of the direct seek address. The zero follows the alternate code character (\* or alternate digit). For example, in Figure 7, the additional zero goes between the \* and the n. Note that both direct seek addresses and disk control fields are now ten characters long.

#### Page 12

Add to bottom of left column:

An attempt to execute a scan instruction in overlap mode causes an instruction check. Scan operations cannot be overlapped because the 1411 Processing Unit is used for the scan operation.
