---

**Seventh Edition (May 1987)**

This major revision obsoletes and replaces GC20-0001-05.

References in this publication to IBM products, programs, or services do not imply that IBM intends to make these available in all countries in which IBM operates.

Publications are not stocked at the address given below. Requests for copies of IBM publications should be made to your IBM representative or to the IBM branch office serving your locality.

A form for readers' comments has been provided at the back of this publication. If the form has been removed, address comments to IBM Corporation, Publications Support Services, Dept. 6R2/M23, 180 Kost Road, Mechanicsburg, Pennsylvania 17055. IBM may use or distribute whatever information you supply in any way it believes appropriate without incurring any obligation to you.

## Preface

The IBM publications listed in this bibliography apply to the System/370 including 30xx Processors, the IBM 4300 Processors and the 9370 Information System Processors. Look here for publications that address **planning for, programming, installing, and operating** these processors. References to specialized bibliographies and other supplemental items are also found here. Refer to the *Bibliography of Industry Systems and Application Programs*, GC20-0370, for specific product solutions applicable to all areas of your organization.

### General Information

The following descriptions are for the readers who are not familiar with the publication terms used in this bibliography.

### Subject Code

The subject code is a two digit number that represents a topic: e.g., **25** = FORTRAN, **15** = Physical Planning Information. A complete subject code listing is found in *Subject Code Definitions of this Preface*.

### File Number

The file number e.g., **S370-36**, identifies the system in the prefix (S370) and the subject code in the suffix (36, represents Control Program). File numbers are often printed on publications to aid in filing system library manuals by topic. Refer to *Organizing and Maintaining a System Library*, GE20-0731, for more details.

### Order Number

The order number identifies publications and other items for ordering from IBM. The order number is alphameric and consists of three parts — **use key, form number, and suffix**: e.g., **GH20-1234-0**.

**Note:** When ordering publications it is not necessary to include the **suffix** as part of the order number. The most current version will be sent. Although the complete order number is listed, publications are listed in **form number sequence**, that is the **use key** is ignored.

- **use key** is the first character of the order number that controls the availability of the item. Use key *G* means the item is available to customers, through the IBM representative, without charge for quantities that meet normal requirements. Use key *S* means that the item is for sale through IBM branch offices. In some cases a user can receive the first copy of an *S* publication free. Additional copies are available at the selling price. Use key *L* means that the item is available to licensees for the IBM program Product or other licensed program. Requests for licensed materials should be directed to your IBM representative.
- **form number** consists of seven characters (*H20-1234*) and has two parts — *a prefix* (*H20*) and a *base number* (*1234*). IBM designates unique prefixes to identify various facts about an item, including:

**Logic** — *Yxx* prefixes identify publications that explain program logic: i.e., *SY28-1234-5*, *LY30-1234-0*. Such manuals are intended for use by persons who are involved in program support or alteration of the program design. They are not required for normal use or operation of the program.

**Bill of Forms** — *BOF* prefixes identify a *Bill Of Forms*: e.g., *GBOF-1234*. A bill of forms order-number allows a package of separately available items (order numbers) to be ordered with a single order number.

**Microfiche** — *xxX* prefixes (*X* being an alphabetic character) identify publications on microfiche: e.g., *S2C0-1234-4*, *LYBO-1234-1*. An alphabetic character in the *third* position of an order number identifies microfiche. The only exception is a *bill of forms (BOF)*, in which the third character is alphabetic (not zero).

**Pseudonumber** — *Txx* or *Qxx* prefixes identify a *pseudonumber*. e.g., *GT00-1234-0*, *SQ26-1234-0*. These prefixes when used in an order number allow users of back level pro-

grams to continue to order and receive publications concerning the level of program they are using. Issuing pseudonumbers for back editions allows the order numbers for the *latest* editions to remain unchanged except for the revision suffix. The same basic order number carries over from release 1 to release 2, release 2 to release 3, . . . etc. . .

**Technical Newsletter** — Nxx prefixes identify Technical Newsletters (TNLs): e.g., SN20-9876, GN20-1302. To keep publications current, changes and additions to them are distributed quickly in the form of TNLs. When the pages released in a TNL are inserted in the manual to which it applies, the base publication is brought up to date. When ordering a manual for which a TNL applies, the TNL is automatically shipped with the manual.

**Supplement** — Dxx prefixes identify System Library Supplements: i.g., GD23-1234-0, SD30-1234-0. Supplements are issued to revise a base publication to reflect added program function. Like TNLs, Supplements contain replacement pages for base publications. Unlike TNLs, Supplements are not updates.

- **suffix** is a one or two digit number that identifies the revision level of the item: e.g., GH20-1234-0 (first edition), GH20-1234-10 (eleventh edition). In rare instances, the first edition will bear a suffix of -1 or higher. It is not necessary to include the suffix when ordering a publication, as the most current version will be sent.

### Acronym Index

Publications whose titles contain commonly used program acronyms such as COBOL, CICS, or JCL can be most easily retrieved. *An Index for Some Common Program Acronyms* (beneath the table of contents) refers you directly to the starting page for such titles.

### Extra Symbols (Flags)

Maximum case: \*\*GC19-0001-5\* or: GC28-6421-3  
+ A double asterisk (\*\*) preceding the order number indicates either a change in the publication (such as a major revision) or an item newly added to the bibliography.

An asterisk (\*) after an order number means the item is for IBM World Trade use only; a plus sign (+), for U.S.A. use only.

### System Library Subscription Service (SLSS)

SLSS is an optional customized publications distribution service that provides subscribers with initial libraries and automatic updating of manuals. SLSS serves a worldwide subscriber base of over 400,000 IBM customers and internal personnel. Each subscription is created and maintained by using the SLSS Subscription Form (available at the IBM branch office).

Users may subscribe in two ways: by *interest profile* and by *order number*. The profile method is especially useful because it provides the subscriber with existing publications and with single copies of *new* publications (as they become available), related to the subscribers' profile. The order number method requires the subscriber to list the order number(s) of the base publication(s). This method is used when: more than one copy of a publication is needed, a publication is available by order number only, or when fewer publications are desired than those available by profile.

Publication order numbers/profiles and subscriber order numbers/profiles are stored in a data base. When the subscriber order number/profile and the publication order number/profile match the publication is sent.

Refer to *Entering an SLSS Subscription*, G320-1561 for detailed information.

### • SLSS Notes

- Supplements (if use key S or G) are auto-shipped to each subscriber, in quantities matching those for the applicable base publications. If the order number method was used to order the initial copy of the base publication, the subscriber will not receive copies of any *new* document automatically. If such information is needed, the profile method should be added to the subscription.

- Distribution of publications supporting new releases, revisions, and TNLs, in the quantities indicated on SLSS subscriptions, is automatic; no IBM branch office activity is required.

- Subject codes 00 through 40 are used in subscribing to SLSS.

- Two copies of the SLSS Subscription List are mailed to your IBM branch office each week that there are changes to your subscription, or each six months if there is no change. Please contact your IBM representative to obtain your copy.

## Organization

To make reference easy, this bibliography has these parts:

In Part 1, the publications are clustered by subject and sorted by title keywords.

Part 2 contains abstracts describing the items listed in Part 1.

Part 3 lists, in form-number sequence, all items sorted by subject and keyword in Part 1.

**Note:** *Form-number sequence by second character. The first character (G, S, or L) is the use key. The three parts are described in more detail.*

## Part 1

In Part 1, the subject-code listing, each publication has only one code. Items within the cluster for each code are put in sequence. Sequencing for manuals is alphameric, by the most apparent single keyword in each title — such as 3890 for the IBM 3890 Document Processor physical planning template, or I/O for the OS/VS2 I/O supervisor logic manual. Sequencing for microfiche listings is by order number.

Part 1 gives the order number of each publication. Listings such as those for VS1 and MVS show manuals supporting back releases (identified by T or Q order numbers) under the *current* edition which supports the latest release. The title of each back edition identifies the earlier release(s) it supports, and includes the order number originally printed on that back edition.

The alphameric sorting of titles is done with single keywords. In a list of manuals all concerning virtual storage, words such as virtual, or variations such as V or VS, are not considered useful

in sorting; thus, VSAM items appear at the beginning of subject code 30 under *Access Method* (A's), whereas BTAM, QTAM and VTAM appear (in that order) under the specific keyword *Telecommunications* (T's).

When one publication applies to more than one type of SCP (system control programming), it is repeated in each applicable listing.

## Part 2

An abstract in Part 2 provides you with a description which ordinarily adds much to the indications of the title. Abstracts are listed in form-number sequence. (Second character of order-number)

## SLSS Profiles

Part 2 gives you, beneath the abstract, the number of pages and the publication profile used for distributing the individual publication under SLSS. The profile is shown in the format of five fields separated by slashes: System or processor/C/SC/ Machines & subsystems/Prog. No. or SLSS ID

These fields correspond to the five sections B/C/D/F/E on the SLSS subscription form. (See *Entering an SLSS Subscription*, G320-1561.)

The "C" field is used to restrict the distribution of communications items, in cases where no other profile element performs that function. "SC" means subject code.

For example, a publication describing the IBM Direct Access Storage has the profile of: //07/3380/. This means that any subscriber expressing an interest in subject code 07 and 3380 will get the publication.

Technically, the profile elements are ANDed among fields and ORed within a field. Thus if the manual itself had applied to only the System/370 or to only certain models or processors of the System/370, either "370" or the processor numbers would also have been shown, in the first field, to prevent distribution to other than the appropriate subscribers.

Many programming manuals show a profile such as //34//5665-295 or //30//5740-XYN, meaning that only the program number and a subject code

are needed to match the publication's profile to that of the SLSS subscriber's expressed interests.

Subject codes in the 20-40 range are normally included in the profiles of publications which are part of task-oriented libraries, whether for licensed or unlicensed programming.

These codes provide an extra level of selectivity for the subscriber to programming publications, who may choose to receive only certain categories instead of all the profiled literature related to the program. For example, only diagnosis may be selected, or all categories except general information may be selected.

Some of the names of categories are new in task oriented libraries now being introduced. A new such library might be categorized as follows:

<i>Task or Name</i>	<i>Subject Coded</i>
Application Development	40
Administration (or Planning)	34
Customization	34
Diagnosis (or Debugging)	37
End use, e.g. Operator's Guide	40
Evaluation (or General Information)	20
Installation	34
Operations	40
Resource Definition	34

If no subject code in the 20-40 range is included in the subscriber interest profile, none of the above types of publications will be received.

### **Part 3**

Part 3, in form-number sequence, enables you to find any order number easily, to see whether a manual is included in the bibliography or what subject code is assigned to it, or to learn whether any TNLs have been issued since the latest edition.

If you know the order number for one of several related manuals, identification of its subject code in Part 3 (leftmost column) enables you to find the place in Part 1 where it is listed and where its companion publications will also be found. For example, GA27-2739 or GC28-1374.

## **VM and VSE Pregenerated Package Users**

A Pregenerated Package is an integrated set of component programs, including system control programming and IBM licensed programs, tailored to run on a particular set of IBM processors and their associated configurations. It contains user aids to simplify the installation and day-to-day operation of the system in VM or VSE operating environments. VM and VSE Pregenerated Packages are described as a SYSTEM IPO/E (System Installation Productivity Option/Extended), or a System Package, or a System Offering

Some examples are:

VSE System IPO/E 1.2.0  
VSE/SP (System Package) 2.1.1  
VM/SP System IPO/E 1.2.1  
VM/SP System Offering 1.3.1

Listings of publications supporting VM and VSE Pregenerated Packages are on the pages indicated in the table of contents. They show all the publications supporting each component program of the Pregenerated Package.

The component programs within a package have been pregenerated with a preapplied release level of service. The release levels of some of these component programs will be independently advanced beyond the release level associated with the Pregenerated Package, and therefore no longer apply to the installation. To prevent reception under SLSS of advanced release levels of component program publications that do not apply to the release level publications of the Pregenerated Package component program installed, an SLSS ID is used in profiling the publications instead of the real program number.

Nearly all the individual publications can be changed to new levels that no longer apply to the Pregenerated Package installed; so, "pseudonumbers" are presumed in advance. (At the time of a new release of the Pregenerated Package many pseudonumbered publications are also the latest revisions; but as time goes on, many will become back editions.)

The SLSS subscription process for these Pregenerated Packages has been automated. Special numbers of three different functions cause stabilization and automation of the SLSS subscriptions for VM and VSE Pregenerated Packages. They are:

- 1. SLSS IDs** (substitute program numbers). Example: 7799-DEV. Their purpose is to allow shipment of editions that support the particular release of the VM or VSE Pregenerated Package, but prevent shipment of publications for new program release levels not supported.
- 2. Pseudonumbers** (substitute manual numbers assigned to previous editions). Example: GT20-1234. As stated under the full description of pseudonumbers, their purpose is to allow users of back levels of programs to receive only publications that relate to the level of the program they are using.
- 3. SLSS Keys.** Examples: 7703, 7751. The first purpose of the SLSS key is to automate the whole process of converting program numbers to SLSS IDs, and manual order numbers to pseudonumbers. The second purpose of the SLSS key is to allow subsequent migration to a higher release of the Pregenerated Package simply by entering a four-digit number. Entry of a valid SLSS key will cause it to appear under the "System IPO/E" head at the top left of your next subscription list, and in that place only. Program numbers may be changed at the same time an SLSS key is added. This is also true of other kinds of subscription changes (except a change in item quantity).

#### Example

As an example of how these three numbers work, say that one copy of ST28-1234 appears on your subscription because of an SLSS ID entered to support a certain component of release 2.1 or the VSE System IPO/E. Later you increased the quantity of this item to five. Still later, after SLSS keys were announced, the release 2.1 status of your System IPO/E subscription was identified by the entry of the corresponding SLSS key (7701).

The product represented by the SLSS ID then went to a new release supporting release 3.0 of the System IPO/E. Therefore a new SLSS ID was assigned and the individual pseudonumber went

from ST28-1234 to SQ28-1234. You entered 7702 to migrate the subscription to release 3.0 checked Initial Library "Yes," and received five copies of SQ28-1234.

Later, the same product went to another new release supporting release 3.1 of the System IPO/E; therefore, a second new SLSS ID was assigned and the individual pseudonumber supporting it went from SQ28-1234 to ST00-0765. You entered 7703 to migrate to release 3.1, and received five copies of ST00-0765.

**Note:** *Pregenerated Package Release control is at the SLSS-key level, and program release control is at the SLSS-ID level. If only pseudonumbers are entered, they will have to be individually replaced when the release levels of installed products are increased.*

#### Initial Entry of SLSS Key

Existing and new VM and VSE Pregenerated Package subscriptions should be identified as such by the initial entry of one of the following SLSS keys in the program number section (E) of the subscription form. This initial entry both stabilizes publications support at the levels corresponding to the installation (preventing shipment of new revisions and TNLs which do not apply) and prepares the subscription for subsequent migration to a later release of the Pregenerated Package. (Migration to support a new release does not happen automatically, but only when the right SLSS key is entered in the subscription at the proper time.)

SLSS keys and their corresponding version, releases, and modification levels are:

7700 VSE System IPO/E 1.2.0  
7701 VSE System IPO/E 1.2.1  
7702 VSE System IPO/E 1.3.0  
7703 VSE System IPO/E 1.3.1  
7704 VSE System IPO/E 1.4.0-1.4.4  
7705 VSE/SP (System Package) 2.1.1-2.1.6  
7750 VM/SP System IPO/E 1.1.1  
7751 VM/SP system IPO/E 1.2.1  
7752 VM/SP System Offering 1.2.2  
7753 VM/SP System Offering 1.3.1  
7754 VM/SP System Offering 1.4.0  
7755 VM/SP System Offering 1.4.1  
7756 VM/SP System Offering 1.4.2

Newer releases of the above Pregenerated Packages will be identified by consecutively higher SLSS keys. New releases of the following System IPO/E's will not be available:

7720 for VM System IPO/E Release 2.0

7740 for VM/VSE System IPO/E Release 2.0

If correct publications for 7720 and 7740 System IPO/E's have already been received and migration to either (1) VM/SP or (2) both VM/SP and VSE System IPO/E's is planned, it is better to avoid 7720 or 7740 and enter only the migrate-to SLSS key(s) — about a month before publications for the new System IPO/E(s) should be received.

When entering an SLSS key, be sure that all required programs are included in the subscription. Also be sure to enter any machines or subsystems, such as 3705, 8101, 3600 or 3790, that apply to the installation and would restrict the distribution of certain support manuals (such as the 4700/3600/3630 guide for CICS/DOS/VS, or the 3705 user's guide for the emulator support package (EP/VS).

Normally, actual program numbers should be entered instead of SLSS ID, and actual manual numbers should be entered instead of pseudonumbers.

If an SLSS key is being entered for the first time, and every product which is a part of the pregenerated Package has already been manually converted to the corresponding SLSS ID (7799 number), reenter one actual product number in addition to the SLSS key. If any of the actual product numbers associated with the Pregenerated Package already appears on the subscription, this single reentry is unnecessary.

Any Pregenerated Package program may be changed at the same time as the SLSS key is entered. Entries unrelated to the Pregenerated Package may also be made.

There can be only one Pregenerated Package per subscription. (For a second Pregenerated Package, a second subscription must be used. Thus when a VM/VSE installation is changed to VSE and VM/SP, common practice is to enter the VM/SP Pregenerated Package on a second subscription.) The only other restriction is that item quantities cannot be changed at the same time that

the SLSS key is entered. Quantity changes must be made *before* or *after* the SLSS key is entered.

### Results of Initial Use of SLSS Key

- All Pregenerated Package component program numbers are converted to their corresponding SLSS IDs for the Pregenerated Package release identified.
- All manual order numbers associated with the Pregenerated Package are converted to specific pseudonumbers for the release identified.
- Quantities of each publication are unchanged.
- Non-Pregenerated Package products appearing on the same subscription are not affected.
- The subscription is identified for later migration when that is specifically requested.
- Contradictions and duplications are eliminated:

If any Pregenerated Package product had appeared on a subscription under its actual number as well as by its corresponding SLSS ID, the actual product number and the publications supporting it are removed.

If any relevant publication had appeared on a subscription under its actual manual number as well as by its corresponding pseudonumber, the actual order number is removed. For example:

3 copies of an actual order number plus 1 copy of its equivalent pseudonumber will be netted out to 3 copies of the pseudonumber.

**Note:** *If you want the latest updates applying to a component of the Pregenerated Package, you can order them by entering the actual product number (or order numbers) on a separate subscription. A way of identifying these updates - which will not normally apply to the Pregenerated Package, because they apply to a later release of the component - is to have the suffix NS (non-Pregenerated Package) added to the second subscription number. Updates received under the NS subscription can be then identified and kept separate from the Pregenerated Package library.*

**Caution:** In large installations where reception of the latest updates is normal and required, enter the Pregenerated Package on the separate subscription. This will prevent back-leveling publications support for the rest of the installation.

## Migration

Migration must be within the same environment (VSE or VM) to the next sequential release or may skip one or more releases.

SLSS keys also cause automatic conversion of migration to higher-level releases for SLSS subscriptions for which a key has already been entered. (To check on this, see what number, if any, appears under the “System IPO/E” head on your SLSS subscription list.)

If your subscription already includes all Pregenerated Package programs of interest, and the 7701 key is in effect, then you have only to enter the key 7703; this will upgrade your subscription from VSE release 2.1 to 3.1 automatically.

**Note:** When migrating from 7704 to 7705, enter each SLSS ID for the base programs for 7705.

When you enter the key, check Initial Library “Yes.” Only the publications which were not previously on the subscription will be shipped.

If an SLSS key was not previously used but migration is necessary, you may simply enter the migrate-to key (7703 to migrate directly to VSE release 3.1 from any prior release, for example). The same quantities will be maintained for each publication. However, duplications may be received one time if you use this shortcut. (See “Condition 3: System IPO/E Subscription for which No Number Appears . . .,” in the following example.)

## Example, VSE Release 3.1, All Conditions

### Condition 1: Migration

(When the number under the “System IPO/E” head, at the top left of your SLSS subscription list, is 7700, 7701, or 7702):

- Enter 7703 in Section E.

The following checks should also be made:

- a Check the list of release 3.1 component programs to verify that all the products for which support is needed are on the subscription. (Enter program numbers, not SLSS ID)

**Note:** Any option dropped from the new release will be automatically dropped from the subscription (but can be restored at any time by reentering its program number, now considered a Non-Pregenerated Package product).

- b Verify the entry of any associated machines appearing in the titles of certain programming publications you may require (see the list of support publications).
- c Check Initial Library “Yes.” Nothing else is required to receive new and changed support documentation applying to release 3.1. (When migrating from 7704 to 7705, you must enter each program number or SLSS ID for the base products).

### Condition 2: New Subscription

- Enter 7703 in Section E.
- Do checks *a* (disregarding the note), *b*, and *c* per above.

**Condition 3: Pregenerated Package Subscription for which No Number Appears** under the “System IPO/E” head:

- Enter 7703 in Section E.
- Do Checks *a*, *b*, and *c* per above. Item quantities will be maintained. **Caution:** This subscription was not identified by entry of an SLSS key applying to the old release. Hence, duplicate manuals may be received one time, the number of them increasing with the higher level of the old release and the components of it for which manuals have already been shipped.

To avoid all duplications, the best way is to identify the old release still in use by entering its SLSS key and checking Initial Library “No,” then migrating the following week to release 3.1 per Condition 1 above. This will provide you with

only those new or changed manuals that have not been received. The alternatives are to use either Initial Library "No" or Initial Library "Yes" selectively, under regular SLSS procedure.

### **Error Messages**

SLSS keys are powerful instructions, causing many actions in converting a Pregenerated Package subscription to the automated state. Extra care is needed to enter the right number. Certain wrong input will be ignored, with the reason indicated only be one of the following messages, printed on the next SLSS subscription list.

#### **1. DUPLICATE SLSS KEY IGNORED**

More than one SLSS key was entered in the same processing week. No action was taken on the second or subsequent entries.

#### **2. 2ND SLSS KEY CHECK**

A different Pregenerated Package was entered on the same subscription via its SLSS key. A second subscription must be used to contain the second SLSS key.

#### **3. INVALID MIGRATE**

The SLSS key entered was not an announced key with a higher number in the same series. (For example, an entry of 7701 or 7751 is invalid on a subscription identified as 7702 under the "System IPO/E" heading at the top left of your SLSS subscription list.)

#### **4. INVALID DELETION**

The only way you can delete an SLSS key is to delete all the associated SLSS IDs (7799 numbers); this also causes the SLSS key to delete.

#### **5. INVALID BASE PROD DELETE**

If deletion of a basic product from the Pregenerated Package is not allowed, this message will appear.

#### **6. SYSTEM IPO/E RELEASE NOT READY**

The files were not ready to handle the release of the Pregenerated Package at the time you entered its SLSS key. Try now. (It is not likely that this message will be received.)

## Subject Code Definitions

### NUMERICAL INDEX

#### Hardware

- 00 General System Information (basic System Summary, Bibliographies, all Configurators)
- 01 Machine System (Processor, Channels)
- 02 Card Readers and/or Punches, Control Units

5973-L02 NETWORK INTERFACE ADAPTER (NIA) PRODUCT  
DESCRIPTION  
 The 5973-L02 Network Interface Adapter (NIA) specify code 9843 is used to connect SNA Clusters (PUs type 1 and 2) to a 3705 Communications Controller loaded with Program 5799-ARJ through either TRANSPAC in France, or DATAPAC in Canada.  
 This manual provides the operator of the 5973-L02 NIA with the information that is necessary to understand in what environment and how the 5973-L02 NIA operates.  
 Manual, 8 1/2 x 11 inches, 38 pages, 05/79

5935-L03 BANKING TERMINAL RPQ Y96695 REFERENCE  
 This publication describes the 5935-L03 Banking Terminal. It also gives installation planning information. The 5935 is a full-function workstation in one unit specially designed for the bank personnel.  
 The 5935 can operate directly with either a local or remote data processing system (online operation) or it can operate separately (offline operation), the transactions being recorded on magnetic tapes for transmission to the processing system later (batch procedure).  
 This manual is intended for managers or specialists evaluating telecommunication equipment, and planners or programmers preparing the installation of the 5935 in a data communication system. It can also be used by the supervisor in the bank branch office. The supervisor is the person in the bank branch office who manages the tellers' work on the 5935.  
 Detailed instructions for operating and servicing the 5935 are in the IBM 5935-L03 Banking Terminal Operating Guide, GA11-8636.  
 Maintenance information is given in the 5935-L03 Banking Terminal, Maintenance Information Manual, SY12-8769. Manual, 8 1/2 x 11 inches, 188 pages, 4/79

5935-L03 BANKING TERMINAL REFERENCE INFORMATION RPQS Y96695  
AND Y96750 (VERSION 2)  
 This publication gives reference information for the IBM 5935-L03 Banking Terminal, RPQs Y96695 and Y96750 (version 2), to the following bank personnel:  
 Data processing manager or specialist evaluating the 5935 Planner preparing the installation of the terminal  
 Programmer coding the bank applications  
 Instructor preparing education package  
 Supervisor (the person who manages the tellers' work on the 5935 in the bank branch office)  
 Manual, 8 1/2 x 11 inches, 286 pages, 08/82

3767 COMMUNICATION TERMINAL OPERATOR'S GUIDE  
 This manual contains operating procedures for the 3767 Communication Terminal. A brief introduction presents general information that is of interest to the operator. Following chapters describe how to prepare the machine for operation (power-on, select mode, and so forth), how to handle the printer (replace ribbon, insert paper, adjust printing, and so forth), how to operate online (to host system) how to correct or edit data (stored in the buffer), and how to operate offline (as a keyboard printer). A separate chapter is devoted to Problem Determination Procedures (PDP); this chapter contains error recovery procedures and instructions for those cases where the error recurs or is not recoverable. Appendixes contain operating instructions for the Calculate-Scientific feature, and descriptions of 3767 lights, switches and keys.  
 Manual, 104 pages  
 //16/3767/
- GA18-2012**  
3767 COMMUNICATION TERMINAL ERROR RECOVERY AND PROBLEM  
DETERMINATION GUIDE  
 This publication is directed to operators of the 3767 Communication Terminal Models 1, 2, and 3. It describes the procedures the operator should use if an error or breakdown occurs. These procedures will help the operator identify and eliminate the problem and possibly avoid the need to call for assistance.  
 Subjects in this publication include recognizing errors.

GA18

responding to check indicators, restarting a job after an error, and requesting maintenance.  
Manual, 8 1/2 x 3 5/8 inches, 30 pages, 11/79  
//16/3767/

3270 INFORMATION DISPLAY SYSTEM 3276 CONTROL UNIT DISPLAY STATION PROBLEM DETERMINATION GUIDE

This item is intended for use by customer operators to recover from an error or a problem with 3276 Control Unit Display Station, the keyboard, the host, or the communication line. It should help operators pinpoint possible failure causes and avoid unnecessary calls for assistance.

Major topics include:

    Readying, keyboard check test procedures for display station and control unit, and symptom indexes.  
Manual, 10 x 1 3/4 inches, 58 pages, 04/78

3767 COMMUNICATION TERMINAL MODEL 2 DUAL DRIVE PINFEED PLATEN RPQ MF6321 USER INFORMATION ADDENDUM

This manual gives the 3767 Communication Terminal user the additional information required for using the Dual Drive Pinfeed Platen (DDPFP) device (RPQ MF6321). Basic terminal setup instructions and operating procedures for the terminal should be followed, to supplement the operation of this device.

Information in this manual is written for all users of this device. They must thoroughly understand the 3767 Communication Terminal and the following publications:

- . 3767 Models 1, 2, and 3 Communication Terminal Component Description, GA27-3096
- . Communication Terminal Setup Instructions, GC30-3026
- . 3267 Communication Terminal Operator's Guide, GA18-2000

3101 DISPLAY TERMINAL DESCRIPTION

This manual provides customer executives, management, planners, programmers, system analysts, system engineers, installation personnel, and IBM marketing representatives with a component description, programming considerations, setup and site preparation information relating to the IBM 3101 Display Terminal.

Manual, 8 1/2 x 11 inches, 164 pages, 10/79  
//09/3101/

GA18-2035

3101 DISPLAY TERMINAL OPERATOR REFERENCE INFORMATION

This publication provides a brief information in operating the IBM 3101 Display Terminal. The 3101 is a tabletop terminal consisting of three workstation elements, which is designed for setup, relocation, and problem analysis and resolution by a customer. The readers are customer operators who are familiar with normal typewriter keyboard.

GA18-2040

3270 INFORMATION DISPLAY SYSTEM 3276 CONTROL UNIT DISPLAY STATION OPERATOR'S GUIDE

The information in this publication is intended to familiarize operators of the IBM 3276 Control Unit Display Station with its features and to guide the operators in its use.

Manual, 8 1/2 x 11 inches, 162 pages, 12/78  
//16/3276/

GA18-2041

3270 INFORMATION DISPLAY SYSTEM 3276 CONTROL UNIT DISPLAY STATION PLANNING AND SETUP GUIDE

Provides planning and setup information about the 3276 Control Unit Display Station. This information was formerly contained in IBM 3270 Information Display System Planning, and Setup Guide, GA27-2827. For customers, planners, and IBM representatives who may be responsible for planning the installation and setup of the 3276, 3278, 3287, and 3289.

Manual, 8 1/2 x 11 inches, 11/78  
//09/3276/

GA18-2042

3270 INFORMATION DISPLAY SYSTEM PROBLEM DETERMINATION FOR 3276 CONTROL UNIT DISPLAY STATIONS

Contains information intended to assist customer personnel who are responsible for coordinating problem determination activities on those IBM 3270 Information Display Systems which include an IBM 3276 Control Unit Display Station.

This information is not intended to replace the problem determination guides supplied with each unit of the 3270 system, but is intended to supplement them and to coordinate their use.

Manual, 8 1/2 x 11 inches, 40 pages, 12/78  
//16/3276/

GA18-2044

3270 INFORMATION DISPLAY SYSTEM DESCRIPTION & CONFIGURATION APL/TEXT FEATURE FOR 3276 CONTROL UNIT DISPLAY STATION, 3278 DISPLAY STATION, 3287 PRINTER, AND 3289 LINE PRINTER

This manual provides descriptive and configuration information about the APL and text functions and features for 3276, 3278, 3287, and 3289. This publication is intended for data processing personnel, including managers, system analysts and programmers, and for operations and administrative managers.

Manual, 8 1/2 x 11 inches, 34 pages, 11/78

//03/3102/

GA18-2081

3270 INFORMATION DISPLAY SYSTEM 3276 CONTROL UNIT/DISPLAY STATION DESCRIPTION AND PROGRAMMER'S GUIDE

This publication provides programmers and system analysts with detailed reference material relating to the 3276 Control Unit and Display Station.

Manual, 8 1/2 x 11 inches, 366 pages, 06/81  
//09/3276/

GA18-2083

7486 DISPLAY TERMINAL DESCRIPTION

This publication provides system analysts/planners, programmers, system engineers, and installation personnel with detailed reference material relating to the 7486 Display Terminal.

Manual, 8 1/2 x 11 inches, 66 pages, 8/81  
//09/7486/

GA18-2084

3104 DISPLAY TERMINAL OPERATOR REFERENCE GUIDE

This publication is to be used for reference when the user sets up an IBM 3104, operates it, packs it to return it to an IBM location for repair. This publication is also to be used as a guide for the user to isolate a failing element when the terminal is not operating normally.

Manual, 3 3/4 x 8 1/2 inches, 96 pages, 3/82  
8130,8140,4331//16/3104/

GA18-2085

3104 DISPLAY TERMINAL OPERATOR'S REFERENCE GUIDE

This publication is to be used for reference when the user sets up an IBM 3104, operates it, and packs it to return it to an IBM designated location for repair. This publication is also to be used as a guide for the user to isolate a failing element when the terminal is not operating normally.

Manual, 3 3/4 x 8 1/2 inches, 96 pages, 3/82  
8130,8140,4331//16/3104/

GA18-2094

SCANMASTER I DESCRIPTION

IBM Scanmaster I (Machine Type IBM 8815) is a floor-standing terminal for capturing and transmitting noncoded (image) documents. This publication describes IBM Scanmaster I models, features, functions, and operator controls. Since IBM Scanmaster I can transmit and receive from other IBM Scanmaster I's and a host computer, the publication also describes the facilities and programming information needed for telecommunications. Problem recovery is also included.

This publication is for those who must evaluate the IBM Scanmaster I's functions and features, for those who must analyze an existing system and the IBM Scanmaster I in terms of system configuration, operating system, and applications,

GA18

for those who must install the IBM Scanmaster I, and for those who are responsible for developing host application programs.

Manual, 8 1/2 x 11 inches, 250 pages, 11/82  
//09/8815/

GA18-2095

SCANMASTER I PLANNING AND SITE PREPARATION GUIDE

IBM Scanmaster I (Machine Type IBM 8815) is a floor-standing terminal for capturing and transmitting noncoded (image) documents. This publication provides planning information such as customer's and IBM's installation responsibilities, IBM Scanmaster I's features, supplies, setup personnel, and key operators. The publication also provides site-preparation information such as space, electrical, environmental, and communication requirements.

This publication is for those who are responsible for planning the installation and setup of the IBM Scanmaster I, and for those who actually prepare the site for the IBM Scanmaster I.

Manual, 8 1/2 x 11 inches, 94 pages, 11/82  
//15/8815/

GA18-2097

SCANMASTER I OPERATOR'S REFERENCE

This publication is intended for customer key operators, describing the operating and problem determination procedures for Scanmaster I. It contains brief introductory information explanations of the indicators, keys and switches, all the operating procedures for using Scanmaster I, problem determination procedures, and miscellaneous procedures.

Manual, 8 1/2 x 7 3/8 inches, 112 pages, 7/83  
//09/8815/

GA18-2098

SCANMASTER I 8815 INSTRUCTIONS

This is a set of flipcards, stored on the top cover of IBM Scanmaster I for easy access. It is intended for casual operators, providing a handy reference to use with IBM Scanmaster I.

Reference Card, 242 x 56 millimeters, 102 cards, 7/83  
//09/8815/

GA18-2127

3178 DISPLAY STATION DESCRIPTION

This publication provides system analysts/programmers, site planners, and installation personnel with detailed reference material relating to the IBM 3178 Display Station.

Manual, 8 1/2 x 11 inches, 82 pages, 10/82  
//09/3178/

GA18-2128

3178 DISPLAY STATION OPERATOR REFERENCE GUIDE

This manual provides customer operators and installers with the information on the IBM 3178 Display Station. Included are: Set up instructions, Operator reference information, Customer problem analysis and resolution (CPAR), and Packing instructions.

Manual, 3 3/4 x 8 1/2 inches, 104 pages, 10/82  
//16/3178/

GA18-2135

SCANMASTER I GROUP II COMMUNICATION CAPABILITY, RPQ'S 8J4801, 8J4802, 8J4803, 8J4804, 8J4805, USER'S GUIDE

This book describes installation requirements and operation procedures for the IBM Scanmaster I that has the Group II Communication Capability RPQ Feature.

5230 DATA COLLECTION SYSTEM USER'S GUIDE SUPPLEMENT, IN/OUT CLOCKING RPQ X95797

This publication is a World Trade addendum to the IBM 5230 Data Collection System User Guide, 6A34-0040.

This manual describes the functions and operating procedures of the In/Out Clocking special feature (RPQ

GA19

X95797) on the IBM 5234 Time Entry Station. It is directed to programmers, operators and other users of the 5234 equipped with this RPQ and assumes that the reader is familiar with the terminology and basic operation of the 5230 Data Collection System.  
Manual, 8 1/2 x 11 inches, 6 pages, 06/77  
SLSS: ORDER NO. SUBSCRIPTION ONLY

GA19-5087

3270 INFORMATION DISPLAY SYSTEM 5914 DOCUMENT INSCRIBER USER'S GUIDE, RPQS U74485 MODEL U01 & 7U0007 MODEL U02  
This book tells you how to use the IBM 5914 Document Inscrubber. The book tells you

- how to use the Document Inscrubber to inscribe (that is, print on) a document,
- how to recognize that a document is printed correctly,
- and how to perform simple jobs to keep the Document Inscrubber working correctly.

The book does not tell you how to operate the IBM 3277 Display Station. For this information, refer to Operator's Guide for IBM 3270 Information Display Systems, GA27-2742.  
You should not need any previous knowledge of, or experience of using, a Document Inscrubber to understand this book.  
Manual, 8 1/2 inches, 24 pages, 09/77

3843 LOOP CONTROL UNIT, OPERATOR'S GUIDE  
This manual tells how to operate the IBM 3843 Loop Control Unit. Included in this manual are directions for normal operation as well as procedures to help determine whether the 3843 is working correctly.  
The information in this manual is intended primarily for the 3843 operator. However, it is also intended for persons who will write user operating procedures and train operator personnel, and for IBM customer engineers.  
Although knowledge of data processing or data communications is not necessary, it is assumed that the reader is familiar with the user's remote loop and normal operation of equipment on the loop. The reader may also find it helpful to read the component description manuals for the modem and the subsystem controller to which the IBM 3843 is connected.

GA19-5320

5922 DOCUMENT READER MODEL S02 SITE PREPARATION GUIDE  
This guide is intended for those persons concerned with planning and preparing the user's premises for the IBM 5922 Document Reader Model S02. It provides information that

## GA19

will help the user prepare for the setup of the 5922 when it arrives.

Manual, 8 1/2 x 11 inches, 18 pages, 4/81  
SLSS: ORDER NO. SUBSCRIPTION ONLY

## GA19-5330

5922 DOCUMENT READER MODEL S04 OPERATING GUIDE

This publication describes the operating procedures for the 5922 Document Reader Model S04. It is intended primarily for those who operate the document reader terminal.

This guide also contains problem determination procedures, relocation setup instructions, and instructions on how to connect the terminal to the system.

Manual, 8 1/2 x 11 inches, 58 pages, 8/81

## GA19-5381

5922 DOCUMENT READER MODEL S04 SITE PREPARATION GUIDE

This guide is intended for those persons concerned with planning and preparing the user's premises for the 5922-S04. It provides information that will help the user prepare for the setup of the terminal when it arrives.

Manual, 8 1/2 x 11 inches, 22 pages, 7/81  
SLSS: ORDER NO. SUBSCRIPTION ONLY

## GA19-5386

4723 DOCUMENT PROCESSOR INSTALLATION PLANNING

This publication provides information that guides the user in planning the installation of the 4723 Document Processor, a terminal designed for use with either the 4700 or 3600 Finance Communication System. It is intended primarily for those persons who are responsible for installation planning and for the those who are responsible for site preparations.

Manual, 8 1/2 x 11 inches, 46 pages, 4/85  
//15/4723//WT-ONLY

## GA19-5431

7350 IMAGE PROCESSING SYSTEM INSTALLATION MANUALPHYSICAL PLANNING

This manual provides information necessary for physical planning. Describes what considerations the customer must take into account prior to installation of a 7350 by a CE.

Manual, 8 1/2 x 11 inches, 42 pages, 2/83  
//15/7350/

## GA19-5433

7350 IMAGE PROCESSING SYSTEM OVERVIEW

This manual provides a general introduction to the IBM 7350 Image Processing System. It contains a system overview, describes the software support, and lists examples of applications.

Manual, 8 1/2 x 11 inches, 44 pages, 5/83  
//06/7350/

357/1030/2790 BADGE SPECIFICATIONS

This publication provides the specifications for the manufacture of laminated and embossed badges for the IBM 357 and IBM 1030 Data Collection Systems and the IBM 2790 Data Communication System. Included in this publication are: dimensions, a material listing, suggested laminating procedures, quality control measures, and punched-hole registration-checking procedures.

Individual differences in manufacturing equipment may require some modification to time, temperature, and pressure specification; test badges should be manufactured and checked to provide a basis for possible modifications. SRL, 16 pages

GA21-9081

S/360 COMPONENT DESCRIPTION, 1288 OPTICAL PAGE READER MODEL 1

This publication is a reference manual for the IBM 1288 Optical Page Reader, which serves as an input device for the IBM System/360 Models 25, 30, 40, and 50. This manual, which is organized by function, discusses:

Interconnection between the 1288 and the processing unit.

Characters read by the 1288 and their data codes.

Data transfer between the 1288 and the system.

Programming information about 1288 control, status signals, and sense indications.

Optical Mark data recording and reading.

Operator controls for the 1288.

Operating procedures for the 1288 that are not application dependent.

Input document design and printing.

Special features for the 1288.

Input data printing.

The principle audience for this publication will be IBM System/360 programmers, system analysts, supervisors, and operators. Others who will use the manual are forms designers, forms manufacturers, and input document printers.

Programmers, systems analysts, and supervisors using this manual will need to be familiar with the system to which the 1288 is attached.

Systems Reference Library Manual, 54 pages

GA21-9124

3504 AND 3505 CARD READER, 3525 CARD PUNCH SUBSYSTEM

This is an assembler-level programmer's reference manual and an operator's guide. It describes the IBM 3504 Card Reader (an 80-column device that natively attaches to the IBM System/370), the IBM 3505 Card Reader (an 80-column device that attaches to a System/370 channel) and the IBM 3225 Card Punch (an 80-column device that attaches natively to either an IBM 3505 Card Reader or a System/370). These card devices and their interfaces with the system comprise subsystems that do much of the error logging and error recovery support usually provided by the system. The subsystem is buffered, channel overrun cannot occur, and data can be transferred to and from the subsystem in burst mode.

The manual contains information about instructions and commands error indications, conditions, and recovery procedures, a description of the devices, data about operator procedures and controls, and application hints.

Manual, 136 pages

3741 DATA STATION OPERATOR'S GUIDE

This book gives a 3741 operator procedures for doing normal key entry operations. It is for people who are, or will be doing key entry jobs with a 3741. The operator's guide is to be used as a reference to find the necessary steps to perform a job.

Manual, 128 pages

//16/3741/

GA21-9136

3742 DUAL DATA STATION OPERATOR'S GUIDE

This book gives a 3742 operator procedures for doing normal key entry operations. It is for people who are, or will be doing key entry jobs with a 3742. The operator's guide is to be used as a reference to find the necessary steps to perform a job.

Manual, 120 pages  
//16/3742/

GA21-9143

3881 OPTICAL MARK READER MODELS 1 & 2 REFERENCE MANUAL AND OPERATOR'S GUIDE

This manual describes the use of the 3881 Model 1 as an on-line reader, and the use of the 3881 as a reader that reads marks onto magnetic tape via an IBM Model 2 3410.

The manual provides customer management, analysts, and programmers with detailed information about the functions and capabilities of the 3881. It describes the format of 3881 forms, explains forms layout, and printing and ink specifications. It contains sections on marking the forms with pencil, preprinted marks, and IBM line printers. The manual describes how to control 3881 by means of the IBM 3881 Format Control Sheets and how to control on-line 3881s by System/370 commands (assembler level programming). An operator's guide section provides detailed information about lights, keys, error stops, and operating procedures.

Manual, 100 pages  
//16/3881/

GA21-9144

2596 CARD READ PUNCH PROGRAMMER'S REFERENCE MANUAL AND OPERATOR'S GUIDE

This manual describes the IBM 2596 Card Read Punch. The manual is intended for IBM System/360 or IBM System/370 systems analysts, programmers experienced in assembler language, and operators.

This manual describes the following:

- o General hardware characteristics of the 2596.
- o Commands, status bytes, sense bytes and timing considerations.
- o Keys, lights, and operating procedures.

Manual, 41 pages

GA21-9147

3886 OPTICAL CHARACTER READER MODEL 1 REFERENCE MANUAL

The IBM 3886 Optical Character Reader Reference Manual (MODEL I) contains operational capabilities and programming requirements for the 3886 Model I. The manual is written for customer management, systems analysts, and data processing equipment operators, familiar with data processing operations, but not necessarily with OCR devices or techniques.

Manual, 70 pages  
//04/3886/

GA21-9148

3886 OPTICAL CHARACTER READER INPUT DOCUMENT DESIGN GUIDE AND SPECIFICATIONS

The 3886 Document Design Guide contains detailed instructions and specifications for the preparation of acceptable input documents for the IBM 3886. The manual is written for systems analysts, forms design personnel, and forms manufacturers.

Manual, 45 pages

GA21-9150

S/360 & S/370 COMPONENT DESCRIPTION & OPERATING PROCEDURES: 1287 OPTICAL READER MODEL 5

This publication is a reference manual for the IBM 1287 Optical Reader, Model 5, which serves as an input device for the IBM System/360 Models 22, 25, 30, 40, 50, 65, 65MP, 75, and when in 65 mode, 67; and IBM System/370 Models 135, 145, 155, 158, 165 and 168. This manual which is organized by function, discusses:

- o Interconnection between the 1287 and the processing unit.
- o Characters read by the 1287 and their data codes.
- o Special features for the 1287.
- o Data transfer between the 1287 and the system.
- o Programming information about 1287 control, status signals, and sense indications.
- o Operator controls for the 1287.
- o Operating procedures for the 1287 that are not application dependent.
- o Input document design and printing.
- o Input data printing.

The principal audience for this publication will be IBM System/360 and IBM System/370 programmers, system analysts, supervisors, and operators. Others who will use the manual are forms designers, forms manufacturers, and input document printers. Programmers, systems analysts, and supervisors using this manual will need to be familiar with the system to which the 1287 is attached.

GA21-9152

3740 DATA ENTRY SYSTEM, SYSTEM SUMMARY & INSTALLATION PLANNING

This manual is intended for customer executives, customer DP managers, key entry supervisors and installation planning consultants. It should be used where general information about the system is required.

The manual contains descriptive information about the system and each unit. Discussions of available functions and features, information on the media, probable programming changes, and suggested operating procedures are included. Installation planning information is also part of this publication. In addition, a bibliography of applicable teleprocessing publications is included in the teleprocessing section.

Manual, 5/76

GA21-9154

3886 OPTICAL CHARACTER READER MODEL 2 COMPONENT REFERENCE MANUAL

The IBM 3886 Model 2 Component Reference Manual contains component description and operational capabilities of the 3886 Model 2. The manual is written for 3886 Model 2 users, systems analysts, supervisors, and operators. Sections of the manual also contain information of interest to programmers.

Manual, 92 pages  
//10/3886/

GA21-9167

5424 AND 5425 MULTIFUNCTION CARD UNITS OPERATOR'S GUIDE AND PROGRAMMER'S REFERENCE MANUAL

This manual describes the IBM 5424 Models A1, A2, K1, K2, and K3 and the IBM 5425 Models A1 and A2. It includes operating instructions for this 96 column card reader when it is natively attached to IBM System/370 or IBM 4331 Processing Unit or used with the 5424 Stand Alone Feature.

The manual will be of interest to System/370 and IBM 4331 Processing Unit system analysts, programmers

GA21

experienced in assembler, and operators.

Besides describing the devices, the manual describes the commands, status bytes, sense bytes, and timing considerations for the 5424 and 5425, and describes the keys, lights, and operating procedures.  
Manual, 8 1/2 x 11 inches, 44 pages, 3/79

3741 MODELS 3 AND 4 PROGRAMMING WORKSTATION PROGRAMMING REFERENCE  
This publication contains detailed reference material about Application Control Language (ACL) programming for the 3741 Models 3 and 4. This publication is intended to satisfy the requirements of ACL programmers and 3741 Model 3 and 4 operators.  
Manual, 136 pages  
SLSS: ORDER NO. SUBSCRIPTION ONLY

GA21-9195

PROGRAMMER'S INTRODUCTION TO THE APPLICATION CONTROL LANGUAGE FOR 3741 MODELS 3 AND 4 PROGRAMMING WORKSTATION  
This publication is intended for persons who want to learn how to write programs using Application Control Language. ACL is the programming language used on the 3741 Models 3 and 4 Programmable Workstation. The publication is an educational tool for programmers who either already know a computer language, or have just learned programming by attending a class in ACL. The reader should be familiar with the data processing concepts and the operation of the 3741 Models 1 and 2 Data Station.  
This publication is divided into two chapters. The first chapter is an introduction to ACL. It briefly describes ACL control statements and instructions and gives a procedure to code an ACL program. The second chapter describes the ACL control statements and instructions that a programmer must use. The information in this chapter is arranged so that users learn the functions and structure of the language first and then the operations. After reading this publication, the user should have enough knowledge to write a program. The Order Entry program is used as an example throughout the chapter.  
Manual, 244 pages  
SLSS: ORDER NO. SUBSCRIPTION ONLY

GA21-9221

3742 DUAL DATA STATION FUNCTION CONTROL FEATURE,  
REFERENCE MANUAL SUPPORTING RPQ 843866

This manual describes the operation and use of the FCF (Function Control Feature) of the IBM Dual Data Station The FCF is made available by RPQ 843866.

This manual is written with the assumption that you can operate the IBM 3742 Dual Data Station and are familiar with the IBM 3742 Dual Data Station Operator's Guide, GA21-9136, and the IBM 3742 Dual Data Station Reference Manual, GA21-9184. This manual does not contain any information covered in these publications. You should have an understanding of general programming concepts to make full use of this manual. You should also read the general description of the FCF and its operation with the 3742 programs before going on to the following sections.

Several examples illustrate functions for which the RPQ was intended. There is considerable flexibility in the FCF functions that can be performed. You can also implement functions not addressed in this manual. However, no programming support or assistance is provided beyond that contained in the manual.

2701 DATA ADAPTER UNIT COMPONENT DESCRIPTION

The IBM 2701 Data Adapter Unit Component Description is a reference manual describing the functions of the IBM 2701. The IBM 2701 permits an IBM System/360 or System/370 to communicate with a variety of remote terminals, devices, and stations.

This publication is designed to help the 2701 user, operator, and programmer to achieve efficient use of the 2701. Detailed descriptions are presented for:

- o The 2701 in the IBM System/360 and System/370 environment
- o Characteristics of the 2701 (including features)
- o Terminal adapter types: IBM Start/Stop Terminal Adapters, Telegraph Terminal Adapters, Parallel Data Adapter, Synchronous Transmit Receive (STR) Adapter, and Binary Synchronous Communications (BSC) Adapter
- o Programming considerations for the 2701
- o Line control sequences to and from the 2701 and attached terminals
- o Ending status and sense bit descriptions

The reader should have a knowledge of teleprocessing and be familiar with the principles of operation for the IBM System/360 or System/370. For detailed information about Binary Synchronous Communication, refer to General Information - Binary Synchronous Communications (GA27-3004). For detailed information about a specific terminal, refer to the appropriate publication for that terminal.

GA22-6935

SYSTEM/370 MODEL 165 FUNCTIONAL CHARACTERISTICS

This publication describes the organization and the functional characteristics of the IBM System/370 Model 165, an information-processing system designed for very high-speed, large-scale scientific and business applications.

The system components are described, and a detailed consideration is given to the functions of processor storage, the central processing unit, the input/output channels, and the operator-control and operator-intervention portions of the system control panel. In addition, certain coding and timing considerations are described.

The reader is assumed to have a knowledge of information-processing systems and to have an understanding of the System/360, as that system is described in the IBM SYSTEM/360 PRINCIPLES OF OPERATION, Order No. GA22-6821. The IBM SYSTEM/370 PRINCIPLES OF OPERATION, GA22-7000, should be used in conjunction with the IBM SYSTEM/360 PRINCIPLES OF OPERATION. Functional Characteristics Manual, 48 pages  
3165//01//

GA22-6942

S/370 MODEL 155 FUNCTIONAL CHARACTERISTICS

This publication describes the organization, functional characteristics, and features of the IBM System/370 Model 155. System components are described, and consideration is given to the central processing unit, main storage, input/output channels, and the operator control and operator intervention portions of the system control panel. Instruction timing information is also given.

This publication is intended for users and potential users of the Model 155. The reader is assumed to have a background knowledge of data processing systems. Functional Characteristics Manual, 46 pages  
3155//01//

GA22-6943

S/360 & S/370 MODEL 195 FUNCTIONAL CHARACTERISTICS

This publication describes the organization and functional characteristics of the IBM System/360 Model 195, an information-processing system designed for ultrahigh-speed, large-scale scientific applications.

System components are described, and detailed consideration is given to the functions of processor storage, central processing unit, input/output channels, and operator-control and operator-intervention portions of the system control panel. Coding and timing considerations are discussed.

The reader is assumed to have a knowledge of information-processing systems and to have read the IBM System/360 Principles of Operation, Order Number GA22-6821. Systems Reference Library Manual, 40 pages  
3195//01//

GA22-6944

S/360 & S/370 MODEL 195 CONFIGURATOR

Sheet shows all units that can be configured on the System/360, Model 195.

GA22-6955

SYSTEM/370 SPECIAL FEATURE DESCRIPTION: 709/7090/7094/7094II COMPATIBILITY FEATURE FOR S/370 MODEL 165

This publication contains information about the IBM 7094 compatibility feature (#7119), which adds interpretive

facilities to System/370 Model 165 for use by the IBM 7094 emulator program. The combination of the feature and the program (referred to as the 7094 emulator) allows execution on IBM System/370 Model 165 of programs written for the IBM 709, 7090, 7094, and 7094 II Data Processing Systems. Systems Reference Library Manual, 52 pages  
3165,3168//13/7090,7094,0709/

GA22-6956

3155//00//

GA22-6958

7070/7074 COMPATIBILITY FEATURE: S/370 MODELS 165, 165II & 168

This publication contains information about the IBM 7070/7074 compatibility feature, which adds interpretive facilities to System/370 Model 165 for use by the IBM 7074 emulator program. The combination of the feature and the program (referred to as the 7074 emulator) allows execution on IBM System/370 Model 165 of programs written for the IBM 7070 and 7074 Data Processing Systems. Systems Reference Library Manual, 36 pages  
3165,3168//13/7070,7072,7074/

GA22-6962

S/370 MODEL 155 CHANNEL CHARACTERISTICS

This publication describes methods used to calculate System/370 Model 155 data handling capabilities that are dependent upon I/O-channel configurations and operations. Considerations of methods are also presented for priority attachment of I/O devices for maximum throughput.

Information related to specific I/O devices is contained in separate Systems Reference Library publications. These publications are listed by order number and briefly described in IBM System/360 Bibliography, GA22-6822.

This manual is intended for users at the system programmer level; it assumes a thorough background in I/O programming techniques.

Systems Reference Library Manual, 52 pages  
3155//01//

GA22-6963

7080 COMPATIBILITY FEATURE: S/370 MODELS 165, 165II & 168

This publication contains information about the IBM 7080 compatibility feature, which adds interpretive facilities to System/370 Model A65 for use by the IBM 7080 emulator program. The combination of the feature and the program (referred to as the 7080 emulator) allows execution on IBM System/370 Model 165 of programs written for the IBM 7080 Data Processing System.

Systems Library Manual, 48 pages  
3165,3168//13/7080/

GA22-6966

S/370 MODEL 155 OPERATING PROCEDURES

This manual describes operator procedures for an IBM System/370 Model 155. Machine coverage includes console indicators, switches, and keys; printer-keyboard; and operating procedures. The manual is intended for the Model 155 system operator. The reader is assumed to have a knowledge of information-processing systems and to have read the IBM SYSTEM/360 OPERATING SYSTEM: OPERATOR'S PROCEDURES, GC28-6692.

Systems Library Manual, 40 pages  
3155//16//

SA22-6968

129 CARD DATA RECORDER OPERATOR'S REFERENCE MANUAL

This manual describes the functional and operating characteristics and the operator procedures for the IBM 129 Card Data Recorder. The 129, operating with or without a prepunched card program, is manually keyed (and corrected, in memory storage), then automatically punches, providing conventional 80-column punched cards. Models are provided with these functions:

- Model 1 Punch, verify
- Model 2 Print, punch
- Model 3 Print, punch, verify

Keyed input errors may be erased and corrected before being punched into the card. Verification compares keyed data with data read into storage; correction is made in storage. After reverification in storage, the corrected card is punched.

This manual is addressed to the card data recorder operator.  
Manual, 72 pages

GA22-6969

S/370 MODEL 165 OPERATING PROCEDURES

This manual describes the manual operator procedures for an IBM System/370 Model 165. This material provides a guide to performing the procedures which cover the bulk of the operator's job in operating the Model 165. This publication is written for the working operator who has already received training in general computer operation. This book is prepared specifically for the Model 165 system operator; other models have their own manuals. Covering the overall daily manual operation, this information includes System Procedures, Operator Intervention Procedures, How the System Works (control panels), and supplementary appendixes useful for operating this model. The reader is assumed to have read the IBM SYSTEM/360 OPERATING SYSTEM: OPERATOR'S PROCEDURES, GC28-6692.

Systems Library Manual, 80 pages  
3165//16//

GA22-7000

S/370 PRINCIPLES OF OPERATION

This publication provides, for reference purposes, a detailed definition of the machine functions performed by System/370. System/370, like System/360, consists of many models of general purpose computers, each of which can process both commercial and scientific data.

The manual describes each function to the level of detail that must be understood in order to prepare an assembly language program that relies on that function. It does not, however, describe the notation and conventions that must be employed in preparing such a program, for which the user must instead refer to the appropriate assembly language manual.

The information in this manual is provided principally for use by assembly language programmers, although anyone concerned with the functional details of System/370 will

find it useful.

Because this manual is written as a reference document, it should not be considered to be an introduction or a textbook for System/370. It assumes the user has a basic knowledge of data processing systems, and specifically, the System/370, such as can be derived from the Introduction to IBM Data Processing Systems, GC20-1684, and the IBM System/370 System Summary, GA22-7001.

The information presented in this manual is grouped into 14 chapters and several appendixes. The major topics presented include: Control, Dynamic Address Translation, Interruptions, Multiprocessing, System Control Instructions, General Instructions, Decimal Instructions, Floating Point Instructions, Machine-Check Handling, Input/Output Operations, and System Console.

Manual, 318 pages  
SLSS: ORDER NO. SUBSCRIPTION ONLY

GA22-7001

S/370 SYSTEM SUMMARY PROCESSORS

This publication provides basic information about System/370, the data processing system based on System/360 but extending beyond its capabilities. Discussed are System/370 basic structure, models, and features. A basic knowledge of data processing systems as described in Introduction to Data Processing Systems, GC20-1684, is assumed.

More detailed information about System/370 is available in System/370 Principles of Operation, GA22-7000. For more information about any individual System/370 model, see the functional characteristics publication for the model. This publication can be ordered separately by using, GA22-7001, or together with two companion publications: Input/Output Device Summary, GA32-0039, and Data Communication Device Summary, GA27-3185, by using, 6BOF-4550.

Manual, 8 1/2 x 11 inches, 130 pages, 08/78  
370//00//

GA22-7002

S/370 INPUT/OUTPUT CONFIGURATOR

This publication contains information about the attachment of input/output devices to System/370 processors. The information covers local attachment by channel or integrated adapter, remote attachment by communication line, and input/output device priority.

Manual, 8 1/2 x 11 inches, 40 pages, 5/80  
370,3090//00//

GA22-7010

S/370 MODEL 168 FUNCTIONAL CHARACTERISTICS

This publication provides management, programming, and operations personnel with information on the organization and functional characteristics of the IBM System/370 Model 168.

The manual first describes the highlights of the system, configurations, facilities, and features. It then presents a more in-depth description of the central processing unit, storage control unit, storage, channels, functions, controls, indicators, and multiprocessing.

Details concerning programming and peripheral equipment are not given in this manual.

The reader is assumed to have an understanding of data processing systems including fundamental knowledge of IBM System/370 as defined in IBM System/370 Principles of Operation, GA22-7000.

Manual, 46 pages  
3168//01//

## GA22-7011

S/370 MODEL 158 FUNCTIONAL CHARACTERISTICS

This manual describes the characteristics and features of the Model 158. It provides experienced management, programming, and operations personnel with a fundamental understanding of this model. Knowledge of System/370 as provided in IBM System/370 Principles of Operation, GA22-7000, is required. Only information of particular concern to Model 158 users is covered in this manual which summarizes the processing unit, storage functions, system console, programmed operations, multiple-processor systems including the attached processor and facilities and features. A glossary and the index completes the manual. Manual, 8 1/2 x 11 inches, 60 pages, 8/78  
3158//01//

## GA22-7012

S/370 MODEL 158 CHANNEL CHARACTERISTICS

This publication describes methods used to calculate System/370 Model 158 Data Handling Capabilities that are dependent on I/O channel configurations and operations. In addition, consideration is given to priority attachment of I/O devices for maximum throughput, and to calculating CPU interference caused by channel operations. This manual is intended for users having system programmer experience, and a thorough background in I/O programming techniques. Manual, 70 pages  
3158//01//

## GA22-7016

SYSTEM/370 MODEL 165 II DYNAMIC ADDRESS TRANSLATION FACILITY

This manual is a general description of the field installable Dynamic Address Translation (DAT) facility and also the ancillary functions which implement the feature. Management, computer operators, system engineers, service personnel, programmers, and computer science students should refer to IBM System/370 Model 165 Functional Characteristics, GA22-6935, for an overall picture of the system. Manual, 13 pages  
3165//13//

## GA22-7017

SYSTEM/370 MODEL 155 II DYNAMIC ADDRESS TRANSLATION FACILITY

This publication describes the field-installable Dynamic Address Translation facility. It provides experienced management, programming and operations personnel with a fundamental understanding of this facility. For additional information concerning dynamic address translation, refer to IBM System/370 Principles of Operation, GA22-7000. Manual, 9 pages  
3155//13//

## GA22-7056

S/370 MODEL 158 HIERARCHICAL MONITORING SYSTEM, FEATURE DESCRIPTION

This manual describes the hierarchical monitoring system of the IBM System/370 Model 158 Data Processing System. Written to the system engineer level, this manual, addressed to management, programming, and operations personnel, lists the instructions for a user program of system facility monitoring. This manual should be considered a supplement to IBM System/370 Model 158 Functional Characteristics, GA22-7011. Manual, 37 pages, 11/75  
3158//01//

## GA22-7060

3033 PROCESSOR COMPLEX & 3033 MULTIPROCESSOR COMPLEX FUNCTIONAL CHARACTERISTICS

This manual describes the functional characteristics and features of the 3033 Processor Complex, Attached Processor Complex, and Multiprocessor Complex. For management, programming, and operations personnel experienced in System/370 operation, this manual provides a fundamental understanding of three 3033 complexes. The reader should have an understanding of data processing systems, including a fundamental knowledge of the System/370 as defined in the System/370 Principles of Operation, GA22-7000. The manual focuses on the 3033 Processor (with its processing storage, functions and channels) and the 3036 Console. For management, programming, and operations personnel experienced in System/370 operation, this manual provides a fundamental understanding of both 3033 complexes. Manual, 8 1/2 x 11 inches, 50 pages, 9/79  
3033//01//

## GA22-7061

3032 PROCESSOR COMPLEX FUNCTIONAL CHARACTERISTICS

This publication describes the characteristics and features of the 3032 Processor Complex. It provides experienced data processing management, programming and operations personnel with a fundamental understanding of this processor complex. Knowledge of System/370 as described in System/370 Principles of Operation, GA22-7000, is desirable. Manual, 8 1/2 x 11 inches, 48 pages, 7/82  
3032//01//

## GA22-7062

3032 PROCESSOR COMPLEX CONFIGURATOR

This configurator shows the standard and optional features, processor storage capacities, channels and subchannels, and plan view of the 3032 Processor Complex. Manual, 8 1/2 x 11 inches, 1 page, 7/81  
3032//00//

## GA22-7065

3033 CONFIGURATOR

This configurator shows the standard and optional features, processor storage capacities, channels, and subchannels of the 3033 Processor Complex, 3033 Processor Complex Model Group S, 3033 Processor Complex Model Group N, 3033 Attached Processor Complex, and 3033 Multiprocessor Complex. Also shown are plan views of these processor complexes. Manual, 8 1/2 x 11 inches, 2 pages, 10/81  
3033//00//

## GA22-7066

3031 PROCESSOR COMPLEX AND 3031 ATTACHED PROCESSOR COMPLEX FUNCTIONAL CHARACTERISTICS

This publication describes the characteristics and features of the 3031 Processor Complex and 3031 Attached Processor

Complex. It provides experienced data processing management, programming and operations personnel with a fundamental understanding of these processor complexes. Knowledge of System/370 as described in System/370 Principles of Operation, GA22-7000, is desirable. Manual, 8 1/2 x 11 inches, 48 pages, 7/82  
3041,3031//01//

## GA22-7070

**4300 PROCESSORS PRINCIPLES OF OPERATION FOR ECPS:VSE MODE**  
This manual provides, for reference purposes, a detailed definition of the functions performed by IBM 4300 Processors when operating in ECPS:VS mode.

This manual describes each function to the level of detail that must be understood in order to prepare an assembler-language program that relies on that function. It does not, however, describe the notation or conventions that must be used to prepare such a program.

The information in this manual is provided principally for use by assembler-language programmers, although anyone concerned with the functional details of the IBM 4300 Processors will find it useful.

This manual is written as a reference document, and should not be considered an introduction or textbook. Manual, 8 1/2 x 11 inches, 350 pages, 3/79

## GA22-7071

**3031 CONFIGURATOR**

This configurator shows the standard and optional features, processor storage capacities, channels, and subchannels of the 3031 Processor Complex and 3031 Attached Processor Complex. Also shown are plan views of these processor complexes.

Manual, 8 1/2 x 11 inches, 2 pages, 6/80  
3041,3031//00//

## GA22-7072

**S/370 EXTENDED FACILITY & ECPS: MVS**

This manual describes the System/370 extended facility and the extended-control-program facility for MVS (EXCP:MVS), which is an extended-facility subset that does not include other low-address protection of the common-segment bit.

The manual is intended for system programmers and IBM Field Engineering personnel. The reader should be familiar with the general machine functions of System/370, as described in the IBM System/370 Principles of Operation, GA22-7000, and with the MVS system. This feature is available on some models and processor complexes of System/370. Developed to support the internal structure of the MVS control program, this facility enhances the capabilities and performance of the MVS system when it is used with MVS/System Extensions, 5740-XE2.

Manual, 8 1/2 x 11 inches, 20 pages, 11/80  
SLSS: ORDER NO. SUBSCRIPTION ONLY

## GA22-7073

**3848 CRYPTOGRAPHIC UNIT PRODUCT DESCRIPTION AND OPERATING PROCEDURES**

This manual provides executives, system and data security officers with introductory and reference information about the IBM 3848 Cryptographic Unit, which attaches to either System/370 selector or block multiplexer channels.

The content is:

- Chapter 1 - Introduction
- Chapter 2 - Data Security
- Chapter 3 - Operating Procedures
- Chapter 4 - Input/Output Channel commands
- Appendix A - Glossary

Manual, 8 1/2 x 11 inches, 50 pages, 10/79

## GA22-7074

**ASSISTS FOR VM/370**

This publication, intended for system programmers, summarizes the assists for Virtual Machine Facility/370 (VM/370) and gives a detailed description of the Virtual-Machine Assist and Shadow-Table-Bypass Assist. This edition obsoletes GA22-7072, System/370 Extended Facility. Manual, 8 1/2 x 11 inches, 90 pages, 7/82  
SLSS: ORDER NO. SUBSCRIPTION ONLY

## GA22-7075

**3814 SWITCHING MANAGEMENT SYSTEM PRODUCT DESCRIPTION**

This manual describes the organizational and functional characteristics of the IBM 3814 Switching Management System. The 3814 is an advanced technology, channel to I/O control unit switch that allows attachment to systems with a wide range of channel and control unit configurations. The 3814 may be used on System/370 Model 135 and up, 3031, 3032, 3033, 4331, and 4341 Processors.

Manual, 8 1/2 x 11 inches, 28 pages, 6/80  
//08/3814/

## GA22-7076

**3081 FUNCTIONAL CHARACTERISTICS**

This publication contains descriptions of the components and functions of the 3081 Processor Complex for management, programming and operations personnel. Readers of this publication are assumed to be familiar with the System/370 architecture as defined in System/370 Principles of Operation, GA22-7000, and to have a knowledge of virtual-storage and virtual-machine concepts.

Manual, 8 1/2 x 11 inches, 64 pages, 2/86  
3081//01//

## GA22-7077

**3081, 3083, AND 3084 CHANNEL CHARACTERISTICS AND CONFIGURATION GUIDE**

This publication provides system engineers, system analysts and system programmers with a description of the channel operations, components and functions of the 3081, 3083, and 3084 Processor Complexes when operating in System/370 mode or 370-XA mode. The publication also provides guidelines for configuring channel loads in a 3081, 3083, or 3084 Processor Unit.

Manual, 8 1/2 x 11 inches, 40 pages, 2/84  
3081,3083,3084//01//

## GA22-7078

**3814 SWITCHING MANAGEMENT SYSTEM OPERATOR GUIDE FOR 3604 SUPPORT****3814 3604**

This manual describes the functions available to the operator to control the operation of the IBM 3814 Switching Management System.

Manual, 8 1/2 x 11 inches, 9/84  
//16/3814/

## GA22-7079

**SYSTEM/370 ASSISTS FOR MVS**

This publication describes 13 instructions used to assist the MVS control program. Twelve of these instructions are provided when the System/370 Extended Facility or the Extended-Control-Program-Support for MVS feature is installed. They include four lock-handling instructions, six trace instructions, and the instructions Fix Page and

SVC Assist. The thirteenth instruction, Add FRR, is provided when the 3033 Extension feature is installed, along with modifications to the Fix Page and SVC Assist instructions.

This publication is intended for system programmers and IBM field engineering personnel. The reader should be familiar with the general machine functions of System/370, as described in the IBM System/370 Principles of Operation, GA22-7000, and with the MVS system. The following are considered prerequisite reading: MVS/System Extensions: Debugging Handbook (Volume 2) SD23-0002; OS/VS2 Data Areas, SYB8-0606 (This document is on microfiche); OS/VS2 MVS/System Extensions General Information Manual, GC28-0872; and OS/VS2 System Logic Library, SBOF-8210. Manual, 8 1/2 x 11 inches, 20 pages, 3/81  
SLSS: ORDER NO. SUBSCRIPTION ONLY

GA22-7081

3088 MULTISYSTEM CHANNEL COMMUNICATION UNIT PRODUCT DESCRIPTION

This manual describes the operating characteristics and organization of the IBM 3088 Multisystem Channel Communication Unit. The 3088 is a self-powered, advanced technology, microprocessor-controlled, I/O product that is used to interconnect multiple systems by using channels. Manual, 8 1/2 x 11 inches, 50 pages, 3/82  
//08/3088/

GA22-7083

3083 FUNCTIONAL CHARACTERISTICS

This publication contains descriptions of the components and functions of the 3083 Processor Complex for management, programming, and operations personnel. Readers of this publication are assumed to be familiar with the System/370 architecture as defined in System/370 Principles of Operation, GA22-7000, and to have a knowledge of virtual-storage and virtual-machine concepts. Manual, 8 1/2 x 11 inches, 60 pages, 2/86  
3083//01//

SA22-7085

370/XA PRINCIPLES OF OPERATION

This publication provides a detailed definition of the machine functions performed by systems operating in System/370 extended-architecture (370-XA) mode. It is provided principally for Assembler Language programmers, although anyone concerned with the functional details of systems operating in 370-XA mode can find it useful. Manual, 8 1/2 x 11 inches, 560 pages, 03/83  
SLSS: ORDER NO. SUBSCRIPTION ONLY

GA22-7088

3084 FUNCTIONAL CHARACTERISTICS

This publication contains descriptions of the components and functions of the 3084 Processor Complex for management, programming, and operations personnel. Readers of this publication are assumed to be familiar with the System/370 architecture as defined in System/370 Principles of Operation, GA22-7000, and to have a knowledge of virtual-storage and virtual-machine concepts. Manual, 8 1/2 x 11 inches, 64 pages, 2/86

3814 OPERATOR'S GUIDE FOR THE DISPLAY/PRINTER ATTACHMENT FEATURE

This manual describes the functions available to the operator to control the operation of the IBM 3814 Switching Management System from an IBM 3278 Display Station Model 2.

Manual, 8 1/2 x 11 inches, 200 pages, 3/83  
//08/3814/

SA22-7091

CHANNEL-TO-CHANNEL ADAPTER

This publication describes the architecture for all channel-to-channel adapters (CTCAs). Before the creation of this publication, the CTCA architecture was described by a combination of the following two publications, which this one supersedes: System/360 Special Feature Channel-to-Channel Adapter, GA22-6892, and System/370 Special Feature Description: Channel-to-Channel Adapter, GA22-6983. The reader should have a basic knowledge of data processing systems. Such information can be found, for example, in System/370 Principles of Operation, GA22-7000, and in System/360 and System/370 I/O Interface Channel to Control Unit Original Equipment Manufacturer's Information, GA22-6974.

Manual, 8 1/2 x 11 inches, 54 pages, 6/83  
SLSS: ORDER NO. SUBSCRIPTION ONLY

SA22-7092

ASSISTS FOR MVS/XA

This publication is intended for system programmers and IBM Field Engineering personnel. The reader should be familiar with the general machine functions of 370-XA, as described in the IBM 370-XA Principles of Operation, SA22-7085, and with the MVS/SP Version 2 Licensed Program, referred to in this publication as the MVS/XA control program. The standard names for MVS/XA control blocks are used throughout the publication. The formats of these control blocks are described in the MVS/XA Debugging Handbook, Volumes 1 through 5, LC28-1164 through LC28-1168, respectively. Manual, 8 1/2 x 11 inches, 14 pages, 3/83  
SLSS: ORDER NO. SUBSCRIPTION ONLY

SA22-7093

SYSTEM/370 HIGH ACRITH ARITHMETIC RPG

This is a component of SK2T-0897. Manual, 8 1/2 x 11 inches, 28 pages, 12/83  
4361//01//

SA22-7094

SYSTEM/370 MATHEMATICAL ASSISTS

This publication describes a number of instructions which assist in providing improved performance in certain mathematical computations. The description is in three parts. The first part, which obsoletes and replaces the publication Multiply-Add Facility, GA22-7082, describes the instruction MULTIPLY AND ADD. The second part describes the instruction SQUARE ROOT. The third part describes instructions which evaluate certain transcendental functions; they are COMMON LOGARITHM, EXPONENTIAL, and NATURAL LOGARITHM. Manual, 8 1/2 x 11 inches, 30 pages, 12/84  
4361,4381,4341//01//

SA22-7095

SYSTEM/370 EXTENDED ARCHITECTURE/INTERPRETIVE EXECUTION

GA22-7097

3044 FIBER-OPTIC CHANNEL EXTENDER LINK PRODUCT DESCRIPTION

This publication contains information about the attachment capability, operator controls and indicators, installation, and maintenance and repair of the 3044 Fiber-Optic Channel

GA22

Extender Link. Also discussed are advantages of fiber-optic data transmission and the design of fiber-optic cable.  
Manual, 8 1/2 x 11 inches, 36 pages, 9/85  
//08/3044/

SA22-7099

3044 FIBER-OPTIC CHANNEL EXTENDER LINK: CUSTOMER PROBLEM DETERMINATION GUIDE  
This publication is a problem determination flowchart to be used by the customer before calling for service. Using this flowchart, the customer can resolve most problems caused by conditions external to machines.  
Card, 8 1/2 x 5 inches, 2 pages, 6/85

GA22-7108

7406 DEVICE COUPLER PRODUCT DESCRIPTION AND OPERATING PROCEDURES  
This manual introduces the IBM 7406 Device Coupler to the user. Subjects described include:  
o Individual modules of the Device Coupler and their operation.  
o Character set and commands to operate the Device Coupler.  
o Interface cables, line names, voltages and timings.  
o Applications in the research field.  
Manual, 8 1/2 x 11 inches, 100 pgs, 2/77  
//16/7406/

GA22-7112

7409 SCANNING COLOR SENSOR PRODUCT DESCRIPTION, OPERATING PROCEDURES, AND INSTALLATION PLANNING  
This manual describes the components, functions, and spectrophotometric unit for attachment to a sample holder and a programmed control device. Readers should have a working knowledge of spectrophotometric functions.  
Manual, 8 1/2 x 11 inches, 76 pages, 9/80  
//16/7409/

GA22-7113

7410 COLOR SENSOR ANALYZER PRODUCT DESCRIPTION AND OPERATING PROCEDURES  
This publication describes the components, functions, and operations of the 7410 Color Sensor Analyzer. The 7410 analyzes reflectance and transmittance data when attached to an IBM 7409 Scanning Color Sensor (or equivalent) and a sample holder. Readers should have a working knowledge of Spectrophotometric functions and color measurement procedures in laboratory and production environments.  
Manual, 8 1/2 x 11 inches, 136 pages, 9/80  
//16/7410/

SA22-7120

3090 CHANNEL CHARACTERISTICS AND CONFIGURATION GUIDE  
This publication contains channel operation information and channel performance and configuration considerations for the 3090 Processor Complex.  
Manual, 8 1/2 x 11 inches, 40 pages, 04/85  
3090//01//

SA22-7121

3090 FUNCTIONAL CHARACTERISTICS  
This publication contains a broad overview of Configuration, Function, Architecture, and Features for the 3090 Processor Complex.  
Manual, 8 1/2 x 11 inches, 70 pages, 04/85  
3090//01//

GA23

SA22-7125

SYSTEM/370 VECTOR OPERATIONS  
This publication defines the machine functions provided by the System/370 Vector Facility. This publication is written as a reference for use principally by assembler language programmers. It is useful to anyone concerned with the functional details of vector operations.  
Manual, 8 1/2 x 11 inches, 108 pages, 1/86  
SLSS: ORDER NO. SUBSCRIPTION ONLY

GA23-0020

3278 MODEL 2A DISPLAY CONSOLE PROBLEM DETERMINATION GUIDE  
The Problem Determination Guide for the 3278 model 2A is used to give the operator quick reference information and procedures to assist in determining the cause of problems encountered while operating. This problem determination guide is designed to be mounted in the 3278 model 2A console Keyboard using a two-sided tape on the back cover.  
Manual, 1 3/4 x 10 inches, 2/79  
4331,4341,3081,4321//16/3278/

GA23-0021

3290 INFORMATION PANEL DESCRIPTION AND REFERENCE  
This manual describes the IBM 3290 Information Panel and its functions. It is intended for system programmers and system engineers.  
Manual, 200 pages, 3/83  
//09/3290/

GA23-0044

3270 INFORMATION DISPLAY SYSTEM PROGRAMMING AND COMPONENT DESCRIPTION INFORMATION TRANSFER  
This manual describes information transfer between publications in the 3270 Information Display System library.  
Manual, 8 1/2 x 11 inches, 1/81  
//09/3271,3272,3274,3275,3276,3277,3279/

GA23-0046

3274 CONFIGURATION DATA CARD (CONFIGURATION SUPPORT A, B, C, T)  
A history card to record configuration data of the 3274 Control Unit.  
Card form, u/m 25, 2 sides, 4/83

GA23-0049

3270 INFORMATION DISPLAY SYSTEM, 3274 CONTROL UNIT ENTRY ASSIST, RPQ 8K1147 USER'S GUIDE.  
This manual describes functions and use of 3274 entry assist RPQ. Intended for any user of 3270 displays in text related activity.  
Manual, 5 1/2 x 8 1/2 inches, 1/83  
//14/3274/

GA23-0056

3845/3846 DATA ENCRYPTION DEVICES RPQS 8K0987 AND 8K0946  
This document contains descriptions of RPQs 8K0987 and 8K0946 which apply to certain models of the IBM 3845 and 3846 Data Encryption Devices. The information is directed at the persons who set up, operate, or perform problem determination on the 3845 and 3846.  
Manual, 8 x 10 inches, 12 pages, 05/80  
SLSS: ORDER NO. SUBSCRIPTION ONLY

GA23-0058

3270 INFORMATION DISPLAY SYSTEM LIBRARY USER'S GUIDE  
Lists 3270 library publications with abstracts and audience of each publication.  
Reference Card, 8 1/2 x 11 inches, 02/81  
//09/3271,3272,3274,3275,3276,3277,3279/

3270 DATA STREAM PROGRAMMER'S REFERENCE  
This manual introduces and describes all of the functions used in the 3270 data stream such as commands, control characters, orders, attributes, and structured fields. It also describes partitioning, magnetic stripe reader operation, keyboard functions, character sets, and printer operations as they affect the 3270 data stream.  
Manual, 8 1/2 x 11 inches, 200 pages, 01/81  
//30/3271,3272,3274,3276,3278,3279,3275,3277,8775/

GA23-0060

3270 INFORMATION DISPLAY SYSTEM - 3271 CONTROL UNIT, 3272 CONTROL UNIT, 3275 DISPLAY STATION - DESCRIPTION AND PROGRAMMER'S GUIDE  
Provides management, programmers, and system analysts with detailed reference material relating to the 3271 Control Unit, 3272 Control Unit, and 3275 Display Station and their attached units.  
Manual, 8 1/2 x 11 inches, 250 pages, 11/80  
//09/3271,3272,3275/

GA23-0061

3270 INFORMATION DISPLAY SYSTEM: 3274 CONTROL UNIT DESCRIPTION AND PROGRAMMER'S GUIDE  
Provides the people who manage, analyze, and program IBM 3270 Information Display System installations with reference material concerning the 3274 control unit and attached terminals. The 3270 data stream display and printer operations, features and host system communications are covered.  
Manual, 8 1/2 x 11 inches, 12/80  
//09/3274/

GA23-0064

3270 INFORMATION DISPLAY SYSTEM, 3274 CONTROL UNIT SITE PLANNING AND PREPARATION GUIDE MODELS 41A, 41C, 41D AND 61C  
This publication identifies the tasks involved in planning for the installation of a 3274 Control Unit Models 41A, 41C, 41D, and 61C and provides guidelines for accomplishing those tasks. A handy checklist is included. Communications cabling and device cabling information is also included.  
Manual

## GA23-0142

3299 TERMINAL MULTIPLEXER CUSTOMER PROBLEM ANALYSIS AND RESOLUTION

This publication contains a step-by-step procedure which permits customer personnel to determine if a problem exists within the 3299, and tells what to do if a problem does exist.

Manual, 8 1/2 x 11 inches, 6 pages, 4/83

//09/3299/

## GA23-0171

3270 INFORMATION DISPLAY SYSTEM SUPPLEMENT TO 3274 CONTROL UNIT DESCRIPTION AND PROGRAMMING GUIDE 3274 RESPONSE TIME MONITOR (RTM) FUNCTION 3274 SNA ALERT FUNCTION

The supplement describes the 3274 RTM and 3274 SNA Alert functions in detail for use by anyone planning to implement the functions on a 3270 Information Display Station.

Manual, 68 pages, 8/83

SLSS: ORDER NO. SUBSCRIPTION ONLY

## GA23-0176

3270 INFORMATION DISPLAY SYSTEM, 3274 CONTROL UNIT CUSTOMIZING GUIDE, CONFIGURATION SUPPORT P

Provides a planning guide and worksheets for those who must customize a 3274 Control Unit using Configuration Support P. To complete the customization, the 3274 Control Unit Planning, Setup, and Customizing Guide (6A27-2827) must also be used.

Manual, 8 1/2 x 11 inches, 104 pages, 12/83

//09/3274/

## GA23-0187

3270 INFORMATION DISPLAY SYSTEM KEYBOARD DEFINITION UTILITY USER'S GUIDE

This manual describes how to define keyboard layouts to 3270 display product control units (for users of terminals with modifiable keyboards such as the 3179 and 3180). The manual is intended for planners who customize the control unit.

Manual, 8 1/2 x 11 inches, 96 pages, 3/84

//09/3179,3180,3274/

## GA23-0196

3270 INFORMATION DISPLAY SYSTEM 3180 SUPPLEMENT FOR THE CONTROL UNIT

This manual supplements the 3274 Control Unit Description and Programmer's Guide publication, 6A23-0061. For all persons needing information concerning the 3274 Control Unit support of attached 3180 Display Stations.

Manual, 8 1/2 x 11 inches, 50 pages, 3/84

//09/3180/

## GA23-0204

3270 INFORMATION DISPLAY SYSTEM X.25 OPERATION

This publication describes the steps required to plan for and implement the operation of terminals attached to a 3274 Control Unit as part of an X.25 network. These steps include customizing or recustomizing the 3274 to all X.25 operation, affixing labels to keyboards, and giving operators instructions for sending and receiving data through the X.25 network.

Manual, 8 1/2 x 11 inches, 52 pages, 1/84

//09/3274/

## GA23-0206

3270 INFORMATION DISPLAY SYSTEM CABLING SYSTEM SUPPLEMENT FOR PHYSICAL PLANNING

This publication describes how the Cabling System can be

used to interconnect the 3274 Control Unit with attachable terminals. It should be distributed through SLSS in the same quantity as the 3274 Customizing Guide (6A23-0065) and should be shipped with every copy of the 3270 IDS Installation Manual - Physical Planning (6A27-2787). Manual, 8 1/2 x 11 inches, 18 pages, 5/84

//15/3274/

## GA23-0217

3174 SUBSYSTEM CONTROL UNIT HELP DESK REFERENCE

This publication contains Status Codes and Corrective actions, written to User's Qualifications, Reference Summaries, SNA Alert Functions, Request Formatted Maintenance Statistic Formats, and Response Time Monitor.

Manual, 8 1/2 x 11 inches, 310 pages, 06/86

//09/3174/

## GA23-0236

3290 INFORMATION PANEL SUPPLEMENT TO 3290 DESCRIPTION AND REFERENCE

This publication describes information introducing a new function for the 3290 Information Panel. It is designed for systems engineers and operators.

Manual, 8 1/2 x 11 inches, 8 pages, 10/84

//09/3290/

## GA23-0242

3290-2 INFORMATION PANEL OPERATOR'S GUIDE

This publication gives general information on how to operate the 3290-2 Information Panel. The intended audience is anyone who uses a 3290-2.

Manual, 8 1/2 x 11 inches, 7/85

//16/3290/

## GA23-0279

ROLM 3270 COAX TO TWISTED-PAIR ADAPTER SUPPLEMENT TO 3270 INSTALLATION MANUAL PHYSICAL PLANNING

This supplement to the 3270 Information Display System Installation Manual Physical Planning provides a brief overview of how the 3270 Coax to Twisted-Pair Adapter can be used with the 3270 system, what environmental requirements must be met, and examples of configurations.

Manual, 10/85

//15/3279,3289,3275,3286,3272,3284,3287,3274,3277,3288,

## GA24-1499

1219 READER SORTER, 1419 MAGNETIC CHARACTER READER

This publication describes the operating characteristics, controls, indicators, and features of the IBM 1219 Reader Sorter and the IBM 1419 Magnetic Character Reader.

GA24

Operating theory and procedures are given for off-line operation of both machines and on-line operation of the IBM 1419 within the 1400 series and System/360.

Document handling and data flow are discussed fully, and step-by-step procedures and practical examples are given for each machine. Programming notes and error recovery procedures are also given.  
Systems Reference Library Manual, 96 pages  
//04/1219,1419/

GA24-3018

1030 DATA COLLECTION SYSTEM

This reference publication discussed in detail the operating features, controls, and special features for the:

IBM 1031 Input Station  
Card Reader  
Manual Entry Unit  
Data Cartridge Reader  
Badge Reader  
IBM 1032 Digital Time Unit  
IBM 1033 Printer  
IBM 1034 Card Punch  
IBM 1035 Badge Reader

These components provide on-line and off-line capabilities for this Tele-processing system. System timing calculations for the transmission line, for the IBM 1034 Card Punch, and for packed-card operation with the IBM 1034 are all fully discussed. Also included is a summary of system checking, and instructions for making wiring charts to be used at installation time.  
Manual, 72 pages  
//09/1030,1031,1032/

GA24-3020

1050 REFERENCE DIGEST

This publication is a summary of the capabilities, operating controls, special features, and physical characteristics of each component in the IBM 1050 Data Communication System. Items are listed alphabetically and a reference is made (by item) to the publication containing more detailed information on the subject.

If no publication is referenced, it indicates that all information on the subject is contained within this manual under the heading(s) specified. Refer to the preface in this manual for the titles and form numbers of publications referenced in the manual and other machine publications available for the 1050 System.  
Systems Reference Library Manual, 64 pages  
//09/1050,1051,1058,1052,1053,1054,1055,1056/

GA24-3021

1030 DATA COLLECTION SYSTEM INSTALLATION MANUAL, PHYSICAL PLANNING

This publication contains pertinent, detailed information concerning installation of the IBM 1030 Data Collection System. Included are physical characteristics and electrical environmental requirements for each unit of the system. Typical system configurations with inter-unit and mainline cabling requirements are presented. Particular attention is devoted to those aspects of installation performed by the customer.

The following IBM publications are recommended for use with the Manual:

IBM 1030 CONFIGURATOR, Form A24-3045  
PLANNING AND INSTALLATION OF A DATA COMMUNICATIONS SYSTEM, Form A24-3435  
Systems Reference Library Manual, 24 pages  
//15/1030,1031,1032/

GA24

GA24-3022

1050 DATA COMMUNICATIONS SYSTEM INSTALLATION MANUAL, PHYSICAL PLANNING

This publication presents detailed information concerning the physical characteristics of the IBM 1050 Data Communications System. Included are environmental and electrical requirements and installation information for each unit of the system. Particular attention is devoted to those aspects of installation performed by the customer. Typical system configurations for the individual terminals and for private communication networks are presented. This information is necessary for preparing the customer's premises for the actual installation of the equipment.  
Systems Reference Library Manual, 38 pages  
//15/1050,1051,1058,1052,1053,1054,1055,1056/

GA24-3120

1443 PRINTER MODELS 1-4 & NI & 1445 PRINTER MODELS I & NI, COMPONENT DESCRIPTION

This reference publication describes the operation of the IBM 1443 and 1445 Printers with the IBM 1240, 1401, 1440, 1450, 1460, 1800, and the IBM System/360 Data Processing System Models 25 through 85.

This manual discusses timing information for the printer and the tape controlled carriage, as well as their functional and operating characteristics. The speed of the printer using the various character sets is described. Also, included is command, status, and sense information for these printers used with the IBM System/360 Data Processing System.  
Manual, 36 pages  
//03/1443,1445/

GA24-3125

1050 OPERATOR'S GUIDE

This publication is designed specifically for operating personnel using the IBM 1050 Data Communication System. It consists of five individual sections, with each section prepared as a complete stand-alone unit. The sections of this manual are:

Section 1. Introduction: description of all system components including standard and special features.

Section 2. System and Component Controls - Detailed description of all controls and indicators for each component of the system.

Section 3. Operator Procedures: Step by step instructions covering all setup and operating procedures for the system.

Section 4. Basic Applications: Step by step instructions covering the various input/output operations possible with the 1050 System for both home-loop and line-loop operations.

Section 5. Tips and Techniques: Methods for improving operating efficiency for specific situations.  
Manual, 144 pages  
//16/1050,1051,1058,1052,1053,1054,1055,1056/

GA24-3203

3644 AUTOMATIC DATA UNIT - PROGRAM WORKSHEETS FOR DOS/V5 (5747-CJ1) AND OS/V5 (5744-CR1)

Program control worksheets for use with 3644 Programming Guide GC24-5178.  
Manual, 13 pages, 9/78  
//09/3644/

GA24-3266

1092 AND 1093 PROGRAMMED KEYBOARDS

This reference publication describes, in detail, the operation of the IBM 1092 and 1093 Programmed Keyboards when attached directly to either an IBM 1050 Data Communications

GA24

System or a common-carrier data set. A detailed description of the data keys, control buttons, keymats, and special features is also included.  
Manual, 8 1/2 x 11 inches, 24 pages, 2/65  
//09/1092,1093/

GA24-3312

2821 CONTROL UNIT COMPONENT DESCRIPTION

This reference publication presents a description of input/output operations controlled through the IBM 2821 Control Unit. The IBM 2540 Card Read-Punch and the IBM 1403 and 1404 Printers controlled by the IBM 2821 Control Unit are briefly described.

Commands, status, and sense information pertaining to the attached input/output is presented. Programming timing considerations for control unit, card reader, card punch, and printers are also presented.

Systems Reference Library Manual, 76 pages  
//03/2821/

GA24-3342

BATCH NUMBERING FEATURE FOR 1241 AND 1419 MAGNETIC INK CHARACTER RECOGNITION READERS

This publication describes the functions and features of the Batch Numbering special feature when used with the IBM 1241 Magnetic Ink Character Recognition Reader and the IBM 1419 Magnetic Character Reader.

The operation of the keys, lights, and switches, as well as the programming information needed to operate the feature, is covered in detail.

Systems Reference Library Manual, 16 pages  
//13/1241,1419/

GA24-3403

2740 COMMUNICATION TERMINALS MODEL 1 & 2 COMPONENT DESCRIPTION

This publication describes the application areas, principles of operation, line-control signals, and special features of the IBM 2740 Communication Terminal Models 1 and 2. The communication facilities and data sets that can be used with this Tele-processing terminal are also discussed. Included is a glossary of communication terms used in this publication, and the timing formulas necessary to calculate the data-handling capability of the terminal.

Systems Reference Library Manual, 60 pages  
//09/2740,2741/

GA24-3415

2741 COMMUNICATION TERMINAL

This manual is written for those interested in the concepts and applications of conversational terminals. A general knowledge of computer principles and programming concepts is a prerequisite for complete understanding of the information presented. The publication describes application areas, principles of operation, line-control signals, and special features of the IBM 2741 Communication Terminal. The communications facilities that can be used with this teleprocessing terminal are discussed. Also included are programming considerations, code charts, and keyboard arrangements.

Systems Reference Library Manual  
//09/2741/

GA24-3426

2712 REMOTE MULTIPLEXOR

This reference publication describes the IBM 2712 Remote Multiplexor and its operation. The 2712 is used with IBM 1050, 1060, 2740, and 2741 terminals (134.49 baud) and with telegraph terminals (74.2 baud) connected to IBM System/360

GA24

through the IBM 2702 and 2703 Transmission Control Units. Communication facilities that can be used with the 2712 are specified.  
Manual, 8 1/2 x 11 inches, 12 pages, 8/65  
//09/2712/

GA24-3435

PLANNING AND INSTALLATION OF A DATA COMMUNICATION SYSTEM USING IBM LINE ADAPTERS

This reference publication contains information, for systems engineers and installation planning engineers, on the planning and installation of data communications systems that use IBM Line Adapters (modems). A brief introduction to data communication and to the general purposes and functions of line adapters is presented. Included is technical information applicable to an in-plant user-installed data communications system, and to the local facilities of common carriers. Specifications and requirements are provided for each IBM Line Adapter type, including those intended for limited-distance use only, and for those designed to operate over unlimited-distance common-carrier lines. A Glossary is included as an appendix.

Prior knowledge of data communications systems is helpful, but not essential.

For a description of the switched network, automatic answering, and automatic call origination features of the IBM 1200 Bit-per-Second Line Adapter, this manual refers to SYSTEMS manual, IBM 3872 Modem User's Guide, GA27-3058. General Information, 74 pages  
//15/2701,2735/

GA24-3471

1050 SYSTEM SUMMARY

This publication provides an introduction to the IBM 1050 Data Communication System and its associated components. A general description of each of the system components is provided here, along with a summary of all pertinent features for each. The communication facilities and data sets available for the 1050 System are also provided as a general guide. For a detailed description of the system components and their operation, consult IBM 1050 PRINCIPLES OF OPERATION, Form A24-3474.

System Reference Library Manual, 20 pages  
//09/1050,1051,1052,1053,1054,1055,1056,1058/

GA24-3474

1050 DATA COMMUNICATION SYSTEM PRINCIPLES OF OPERATION

This reference publication provides a complete description of the operating principles of this IBM Tele-processing system. The functional characteristics of the system and of each component is discussed in detail. Additional information, pertaining to the overall system and World Trade considerations, are provided in the appendix.

Systems Reference Library manual, 90 pages

GA24-3488

FORM DESIGN REFERENCE GUIDE FOR PRINTERS

This publication contains information to be considered by personnel designing, ordering, or using forms for the system printers listed below.

This manual has two sections: general forms-design information applicable to system printers, and specific information (Appendix) for particular printers. The general information relates to items such as form length, width, weight, fastenings, and other forms-related items that must be considered and/or met when forms are designed for system printers. The specifications are not intended to be restrictive, but to permit the customer to purchase

continuous forms from the manufacturers of his choice.

For detailed information on forms feeding and operating procedures, see the appropriate component description and operating procedures manuals for the particular printer or system.

- Companion publications useful in designing forms are:
- o OCR Input Preparation Guide, Order No. GC20-1686
  - o Print Chart (Six Lines per Inch), 6X20-1816
  - o Print Chart (Eight Lines per Inch), 6X20-1818

Another publication which is not an IBM publication but may be helpful in designing forms and for comparison purposes is International Standard ISO, 2784. Dimensions in this manual are to this standard. IBM printers included are:

1132	3211	3618
1403	3213	3713
1404	3215	3715
1443	3284	3717

1255 MAGNETIC CHARACTER READER MODELS 1, 2 & 3 COMPONENT DESCRIPTION

This publication contains information describing the purpose, function, and operation of the reader/sorter for bank management, IBM sales representatives, systems engineers, and customer engineers. For machine operators it contains operating, recovery, and jam removal procedures.

Component Description, 64 pages  
//04/1255/

## GA24-3543

IBM 3211 PRINTER 3216 INTERCHANGEABLE TRAIN CARTRIDGE AND 3811 PRINTER CONTROL UNIT COMPONENT DESCRIPTION AND OPERATOR'S GUIDE

The 3211 Printer, 3216 Interchangeable Train Cartridge and 3811 Printer Control Unit constitute a high-speed printer subsystem for attachment to System/360 and System/370 data processing systems via the System/360/370 Standard I/O Interface. This reference publication is intended for:

- o System planners who require information about features, character sets, subsystem performance, forms and ribbons.
- o System programmers who use printer commands, status and sense information, and error-recovery procedures.
- o Operators who perform basic setup, operating, and error-recovery procedures.

A basic knowledge of System/360/370 is assumed. The manual is organized into three sections:

- o Subsystem Components describes the subsystem features, available character sets, and performance characteristics.
- o Programming Information describes valid subsystem commands and available status and sense bytes, and provides buffer loading and suggested error recovery procedures.
- o Operating Information describes the subsystem keys, indicators, and controls, and provides procedures for initial setup, running, and error recovery.

Appendixes contain reference information, such as an EBCDIC chart, for all users. The following publications are referenced for additional forms requirements and ribbon recommendation information:

Form Design Reference Guide for Printers, GA24-3488

System/360 and System/370 Component Description and Operating Procedures: IBM 1287 Optical Reader, GA21-9064

System/360 and System/370 Component Description and Operating Procedures: IBM 1288 Optical Page Reader, Model 1, GA21-9081

Paper and Print Quality Requirements for IBM 1270 and 1275 Optical Reader Sorters, GA19-0036

IBM System/360 Component Description: IBM 1270 Optical Reader Sorter, GA19-0035

IBM System/360 Component Description: IBM 1275 Optical Reader Sorter, GA19-0034

The following publications are referenced for additional FCB and UCS buffer loading information:

## GA24-3550

3215 CONSOLE PRINTER-KEYBOARD COMPONENT DESCRIPTION

This reference publication describes the functions and operation of the IBM 3215 Console Printer-Keyboard. This information is intended for those planning for and operating an IBM System/370 Models 135, 145, and 155. Presented are the printing method, control keys and lights, functional timing, forms controls and specifications, and make-ready procedures.

For system operation (including programming and operating procedures), refer to the IBM System/370 Bibliography (GC20-0001), for the functional Characteristics and Operating Procedures manuals for the particular system and model.

Manual, 8-1/2 x 11 inches, 18 pages  
//01/3215/

## GA24-3552

3210 CONSOLE PRINTER-KEYBOARD COMPONENT DESCRIPTION

This manual is intended as an introduction to the IBM 3210 (Models 1 and 2) Console Printer-Keyboards. The 3210's are described according to the way in which they operate with IBM System/370's.

A description of the physical and functional characteristics of the IBM 3210's is contained in this manual. The purpose of all control keys and indicator lights, supplementing the keyboard, is included.

Because the 3210 Model 2 is a standalone I/O unit, the assigned functions of the control keys and indicator lights

described here may vary according to the particular requirements of another system.

A section describing "Operator's Procedures" contains the following:

1. Forms insertion procedure
2. Platen removal and replacement

For additional information on forms specifications refer to "Form Design Reference Guide for Printers", GA24-3488.

For additional information on 3210 operating procedures, refer to the IBM System/370 Model 145 Operating Procedures, GC38-0015.  
Manual, 10 pages  
//01/3210/

RCA 301 Compatibility feature, and the data management facilities of DOS and DOS/VS to emulate the RCA 301 processor unit, input/output, and console operations. Publications useful as reference material are:

IBM System/360 Principles of Operation, Order No. GA22-6821.

IBM System/370 Principles of Operation, Order No. GA22-7000.

For information about the Disk Operating System, refer to: System/360 and System/370 Bibliography, Order No. GA22-6822.

Manual, 28 pages  
///5799-ADR

GA24-3557

S/370 MODEL 145 FUNCTIONAL CHARACTERISTICS

This publication describes the relationship of the Model 145 to other System/370 models and to System/360. Included is information concerning the system features and capabilities, console file, input/output channels, integrated file adapter, OS/DOS compatibility, IBM 1401, 1440, 1460, 1410, and 7010 emulation features, console printer-keyboard, additional instructions, and instruction timings.

Manual, 84 pages, 8-1/2 x 11

GA24-3595

IBM EMULATOR FOR HONEYWELL SERIES 200 ON SYSTEM/370 USING DOS AND DOS/VS (PRPQ): PLANNING GUIDE, PROG. NO. 5799-ADT

This publication describes the IBM Emulator for Honeywell Series 200, an integrated emulator program, for the IBM System/370 Models 135 and 145. This publication also provides introductory and planning information for management and planning personnel.

The emulator is a problem program that operates in either a batched-job foreground or the background partition under control of the IBM Disk Operating System (DOS), or the IBM Disk Operating System/Virtual Storage (DOS/VS). The emulator uses the System/370 standard instruction set, a Honeywell Series 200 Compatibility feature, and the data management facilities of DOS or DOS/VS to emulate the Honeywell Series 200 processor unit, input/output, and console operations.

Publications useful as reference material are:

IBM System/360 Principles of Operation, Order No. GA22-6821.

IBM System/370 Principles of Operation, Order No. GA22-7000.

For information about the Disk Operating System, refer to: System/360 and System/370 Bibliography, Order No. GA22-6822.

Manual, 28 pages  
///5799-ADT

GA24-3562

IBM 2911 MODEL 14 INTERFACE SWITCH UNIT RPG 911503 INSTALLATION, PHYSICAL PLANNING

This publication provides physical planning information for the IBM 1925 Model 14 Interface Switch Unit used with the IBM System/360 and the IBM System/370. Included are physical specifications and cable, electrical, and environmental requirements.

For a list of related publications and abstracts, see the IBM SYSTEM/360 AND SYSTEM/370 BIBLIOGRAPHY, GA22-6822. Installation Planning Guide, 8-1/2 x 11 inches, 8 pages  
//14/2911/

GA24-3573

S/370 MODEL 145 CHANNEL CHARACTERISTICS

This publication describes methods used to calculate System/370 Model 145 data-handling capabilities that are dependent upon I/O-channel configurations and operations. Considerations of methods are also presented for priority attachment of I/O devices for maximum throughput.

Information related to specific I/O devices is in separate Systems Reference Library publications. These publications are listed by order number and briefly described in IBM SYSTEM/360 AND SYSTEM/370 BIBLIOGRAPHY (GA22-6822).

This manual is intended for users at the system programmer level; it assumes a thorough background in I/O programming techniques.

Manual, 72 pages  
3145//01//

GA24-3604

EMULATOR FOR HONEYWELL SERIES 200 ON SYSTEM/370 USING DOS AND DOS/VS (PRPQ), PROG. NO. 5799-ADT

This publication describes the IBM Emulator for Honeywell Series 200, an integrated emulator program, for IBM System/370 Models 135 and 145. It provides planning, implementation, and operating information for managers, programmers, and operators.

The emulator is a problem program that operates in either a batched-job foreground or the background partition under control of the IBM Disk Operating System (DOS). The emulator uses the System/370 standard instruction set, the Honeywell Series 200 Compatibility Feature, and the data management facilities of DOS to emulate the Honeywell Series 200 processor unit, input/output, and console operations.

Manual, 50 pages  
///5799-ADT

GA24-3594

IBM EMULATOR FOR RCA 301 ON SYSTEM/370 USING DOS AND DOS/VS PLANNING GUIDE - PROGRAM NUMBER 5799-ADR

This publication describes the IBM Emulator for RCA 301, an integrated emulator program, for the IBM System/370 Models 135 and 145. Also provided are introductory and planning information for management and planning personnel.

The emulator is a problem program that operates in either a batched-job foreground or the background partition under control of the IBM Disk Operating System (DOS) or the IBM Disk Operating System/Virtual Storage (DOS/VS). The emulator uses the System/370 standard instruction set, the

GA24-3605

IBM EMULATOR MANUAL FOR RCA 301 ON SYSTEM/370 USING DOS & DOS/VS, PROG. NO. 5799-ADR

This manual describes the IBM Emulator for RCA 301, an integrated emulator program, for the IBM System/370 Models 135 and 145. Also provided are planning, implementation, and operating information for management and planning personnel.

The emulator is a problem program that operates in either a batched-job foreground or the background partition under control of the IBM System/370 Disk Operating System

(DOS) or the IBM Disk Operating System/Virtual Storage (DOS/VS). In this manual the term "DOS" is used unless it is necessary to distinguish between DOS and DOS/VS. The emulator uses the System/370 standard instruction set, the RCA 301 Compatibility Feature, and the Data Management facilities of the Disk Operating System to emulate the RCA 301 processor unit, input/output, and console operations. Manual, 108 pages

## GA24-3612

3890 DOCUMENT PROCESSOR MACHINE & PROGRAMMING DESCRIPTION  
 This publication describes the 3890 capabilities, storage assignments, record formats, operating principles, and features. It is intended for the use of system programmers and system analysts. Manual, 8 1/2 x 11 inches, 300 pages, 6/85  
 //04/3890/

## GA24-3619

3890 DOCUMENT PROCESSOR OPERATOR'S GUIDE  
 This operator's manual contains information primarily for personnel operating the 3890 Document Processor Models A and B. No prior operating experience is necessary. The operating information includes:

- A description of the 3890 by functional units (modules)
- A description of the special features
- The operator panel: keys, lights, and switches
- Machine operation: start, run, and stop conditions, and error recovery procedures
- Operator maintenance for optimum machine performance.

Operating information for related programming is not included. For more detailed information, refer to IBM 3890 Document Processor, Machine and Programming Description, GA24-3612. Manual, 84 pages, (9/75)  
 //16/3890/

## GA24-3620

3895 DOCUMENT READER/INSCRIBER - MACHINE & PROGRAMMING DESCRIPTION  
 This publication is a comprehensive description of the IBM 3895 Document Reader/Inscriber for system analysts, planners, programmers, system engineers, and customer engineers. Included are descriptions of machine data flow, functions, operational principles, microfilm feature, programming information (DOS/VS, OS/VS1, OS/VS2 (MVS), OS/VS2 (SVS), and EXCP level support), and operating controls. The reader must have an understanding of bank data processing operations. Manual, 8 1/2 x 11 inches, 100 pgs, 9/77  
 //04/3895/

## GA24-3632

S/370 MODEL 138 FUNCTIONAL CHARACTERISTICS  
 This publication describes the capabilities, features, input/output channels, integrated adapters and attachments, system console, and operations of the IBM System/370 Model 138. Also provided is information on program operating systems and compatibility features that are available with other systems and programs. The publication is intended for users and potential users, such as system analysts and programmers of the System/370 Model 138. The reader is assumed to have a working knowledge of IBM System/370 Principles of Operation, GA22-7000 and IBM System/370 System Summary, GA22-7001.

Manual, 105 pages, 5/76  
 3138//01//

## GA24-3633

S/370 MODEL 138 CHANNEL CHARACTERISTICS  
 This manual provides information needed for checking that a proposed configuration of I/O devices on the channels of IBM System/370 Model 138 will work satisfactorily. The book is intended for use in systems assurance work at the planning stages.

Procedures with examples are given for testing the effects of imposing heavy loads on the Model 138 channels. The effects covered are: data overrun, loss of device performance, channel interference with the CPU, program overrun, and excessive channel utilization.

Additional but related topics covered in the book are: (1) priority sequence of devices on the byte-multiplexer channel (with examples that include the 1419 Magnetic Character Reader with expanded capability); (2) the effects of block-multiplexing on channel busy time and percentage channel utilization; and (3) channel programming conventions, upon which the validity of test procedures in the book is based.

## Prerequisite Publications

The reader must be familiar with System/370 input/output operations as presented in:

IBM System/360 Principles of Operations, GA22-6821  
 IBM System/370 Principles of Operation, GA22-7000  
 IBM System/370 Model 138 Functional Characteristics, GA24-3632

IBM System/360 and System/370 Interface Channel Unit Original Equipment Manufacturers Information, GA22-6974  
 For testing data overrun on the byte-multiplexer channel, the following special worksheet is required: IBM System/370 Models 135 and 138 Byte-Multiplexer Channel: Load Sum Worksheet, GX33-6004. Manual, 8 1/2 x 11 inches, 116 pgs, 9/77  
 3138//01//

## GA24-3634

S/370 MODEL 148 FUNCTIONAL CHARACTERISTICS  
 This manual describes the characteristics and features of the Model 148. It provides experienced management, programmers, and operations personnel with a fundamental understanding of this model. Knowledge of System/370 as provided in the System/370 Principles of Operation, GA22-7000, is required. Only information of a particular concern to Model 148 users: the processing unit, storage, channels, system display console, features, and instruction timings. Manual, 60 pages, 6/76  
 3148//01//

## GA24-3635

S/370 MODEL 148 CHANNEL CHARACTERISTICS  
 This publication describes methods used to calculate System/370 Model 148 data handling capabilities that are dependent upon I/O channel configurations and operations. Considerations of methods are also presented for priority attachment of I/O devices for maximum throughput. Information related to specific I/O devices is in separate Systems Library publications. These publications are listed by order number and briefly described in IBM System/370 Bibliography (GC20-0001).

This manual is intended for users at the system programmer level; it assumes a thorough background in I/O programming techniques.

Manual, 8 1/2 x 11 inches, 8/77  
 3148//01//

## GA24-3638

3896 TAPE-DOCUMENT CONVERTER MACHINE DESCRIPTION AND KEY OPERATOR'S GUIDE

This manual contains information describing the use, operation, and operator maintenance responsibility of the IBM 3896 Tape-Documents Converter. It is intended for use by supervisory or key operators. It is the primary document to be used by key operators for maintaining the 3896 in good operating condition.

Manual, 8 1/2 x 11 inches, 40 pages, 10/80  
//16/3896/

## GA24-3639

3838 ARRAY PROCESSOR FUNCTIONAL CHARACTERISTICS

This reference publication is intended for management, system programmers, and system operators who require information about the IBM 3838 Array Processor. This manual provides the user with information about system configuration, machine features, channel attachment, algorithms and array data format, and operator instructions.

Manual, 8 1/2 x 11 inches, 52 pages, 10/76  
//08/3838/

## GA24-3653

3644 AUTOMATIC DATA UNIT, COMPONENT DESCRIPTION

The IBM 3644 Automatic Data Unit provides sensor communication and control capability on the IBM 3630 Plant Communication System. The 3644 contains an internal microcontroller that can be programmed to control a variety of user specified accessory cards.

This publication contains information for engineers designing and building the connection from the 3644 to the customer devices, for customer personnel responsible for planning the customer installation, for personnel who install the 3644 and maintain the sensor cards, and customer management, programming, and operating personnel.

Manual, 106 pages, 6/78  
//09/3644/

## GA24-3656

3890 DOCUMENT PROCESSOR MODELS C & D OPERATOR'S GUIDE

This reference manual contains information necessary to operate the IBM 3890 Document Processor Models C and D including the following optional features:

Item Numbering/Endorsing and Microfilming. The specific operating information includes: A brief description of the standard machine and available optional features, operating controls (keys, lights, and switches), machine operation (document loading and unloading, film loading and unloading), error conditions and recovery procedures, and operator maintenance.

This publication is intended for machine operators and those persons required to operate and control the IBM 3890. No prior operating experience is necessary, but is helpful. A feature of the manual is removable pages containing information to be used with the operator run book.

Operating information for related programming is not included. For more detailed information, refer to IBM 3890 Document Processor Machine and Programming Description, Order No. GA24-3612.

Manual, 100 pgs, 2/77  
//16/3890/

## GA24-3663

MAGNETIC HAND SCANNER - MAGNETIC SLOT READER REPLACEMENT PROCEDURES

Both the IBM Magnetic Hand Scanner (MHS) and the IBM Magnetic Slot Reader (MSR) read encoded magnetic-stripped documents. These two accessories differ in general appearance and method of operation, but their internal

design and construction are sufficiently similar to allow a common set of procedures for problem determination and repair.

The MHS and MSR attach to several types of IBM terminals. Each of these terminals has problem determination procedures (PDP) that should be used with this publication when isolating and repairing scanning failures.

A plastic magnetic test stripe for isolating a failure is supplied with each terminal to which the MHS/MSR can be attached. The test stripe should be kept in the clear plastic envelope in which it is supplied, near the MHS/MSR. The PDPs for each terminal describe the use of the test stripe.

Manual, 4 1/4 x 5 1/2 inches, 16 pages, 10/78  
//13/3641,3643,3646,3276,3278/

## GA24-3664

3895 DOCUMENT READER/INSCRIBER OPERATOR'S GUIDE

This publication describes the functions, operating procedures, and operator maintenance of the 3895.

It is intended for the use of bank data processing operations management and machine operators.

There are no prerequisites for the use of this manual.

Manual, 8 1/2 x 11 inches, 50 pages, 10/77  
//16/3895/

## GA24-3669

4341 PROCESSOR OPERATOR'S GUIDE

This manual contains both reference and instructional information necessary to operate either the model group 1 or model group 2 processors. It contains information regarding startup, control, monitoring and problem response.

This book is intended primarily for the system operator.

Manual, 8 1/2 x 11 inches, 120 pages, 4/81  
4341//16//

## GA24-3671

4341 PROCESSORS MODEL GROUP 1 AND 10 CHANNEL CHARACTERISTICS

This manual describes how to check the effects of loads imposed on the channels of the IBM 4341 Processor Model Groups 1 and 10. This manual is for programmers and systems analysts to verify that a proposed configuration of input/output (I/O) devices can work satisfactorily with the 4341 Processor Model Groups 1 and 10.

Manual, 8 1/2 x 11 inches, 68 pages, 9/79  
4341//01//

## GA24-3672

4341 PROCESSOR FUNCTIONAL CHARACTERISTICS AND PROCESSOR COMPLEX CONFIGURATOR

This reference publication is for system analysts and programmers who require information about processor features, input/output characteristics, timing, machine instructions and functions of the integrated I/O devices.

The reader is assumed to have a working knowledge of the IBM 4300 Processors Principles of Operation for ECPS:VSE Mode, Order No. GA22-7070, and to have had programming experience with System/360, System/370, or other 4300 Processors.

Prerequisite publications: IBM 4300 Processors and Input/Output and Data Communications Equipment Configurator, GA33-1523 IBM System/370 Principles of Operation, GA22-7000. Manual, 8 1/2 x 11 inches, 56 pages, 1/79

3838 ARRAY PROCESSOR RESERVOIR MODELING FUNCTIONAL CHARACTERISTICS & PROGRAMMING GUIDE

Provides information required by applications and system programmers to construct reservoir modeling programs running under the MVS Vector Processing Subsystem.

Section 1: Functional Characteristics describes the mathematics and processing performed by each algorithm and the way it references data in bulk storage.

Section 2: Programming Guide presents an overview of the data formats supported by the Reservoir Modeling Set and a description of the general VPSS CALL and CIT formats unique to these algorithms. Section 2 also provides information for each algorithm, such as op code, mnemonic, call statement, options, CIT entry length, special parameter considerations, array parameter table, array description, and CIT format.

Prerequisite publications:

- IBM 3838 Array Processor, Functional Characteristics, order number GA24-3639
- OS/VS1 and OS/VS2 MVS Vector Processing Subsystem, Programmers Guide, GC24-5125
- IBM System/370 Principles of Operation, GA22-7000.

Manual, 136 pages, 9/78  
//08/3838/

GA24-3733

3262 PRINTER MODELS 1 AND 11 COMPONENT DESCRIPTION

This manual provides reference information about the 3262 Printer Models 1 and 11 for supervisory personnel, system analysts, and application programmers who are using the 3262 as an output printer for their IBM 4331 Processor.

The manual describes the general functions of the printer, printing method, speed (throughput) calculations, attachment to the 4331 Processor, programming information, printer components, and printer controls.

This is a major revision of and obsoletes GA24-3733-1 dated April 1980. The "Programming Information" section has been completely revised, the "Audible Alarm" feature has been added, and various other changes have been incorporated.

3262 PRINTER MODELS 3 AND 13 OPERATOR'S GUIDE

This manual provides both reference and instructional information necessary to operate the IBM 3262 Printer Models 1 and 11. It is intended mainly for machine operators, but may also be of interest to system supervisors and engineers.

The manual provides a general description of printer operation and performance, operator panel functions, operating and error-recovery procedures, operator maintenance routines, and relocation instructions.

The 3262 Models 3 and 13 printers are designed exclusively for use with the IBM 3270 Information Display System.

OPERATOR INSTRUCTIONS AND STATUS CODES 3262 PRINTER MODELS 1  
AND 11

These cards, for installation in the 3262 Printer Models 1 and 11, contain brief descriptions for loading paper, replacing print ribbon, etc. Status code listings and actions to be followed for each code are also listed. When the 3262 Printer stops, the status code defines whether the problem is the printer or the 4331 system onto which the printer is attached.

20 cards and 4 tabs, 8/80

## GA24-3797

4341 PROCESSORS MODEL GROUP 10 & 11, FUNCTIONAL CHARACTERISTICS & PROCESSOR COMPLEX CONFIGURATOR

This reference publication is for system analysts and programmers who require information about processor features, input/output characteristics, timings, machine instructions, and the functions of integrated I/O devices. The main chapters cover general information and features and functions common to all models. The appendixes cover features and characteristics of specific models. The reader is assumed to have had programming experience with System/360, System/370, or other 4300 processors.  
Prerequisite Publications: 4300 Processors Principles of Operation for ECPS:VSE Mode, GA22-7070; System/370 Principles of Operation, GA22-7000; 4300 Processors Summary and Input/Output & Data Communications Configurator, GA33-1523.

Manual, 8 1/2 x 11 inches, 80 pages, 11/81  
#200-1400,100

This reference publication is for system analysts and programmers who require information about 4341 Processor features, input/output characteristics, timings, machine instructions, and the functions of integrated I/O devices.

This document has two sections. The main section describes the 4341 Processor Model Groups 10 and 11 in general and contains those features and functions that are common to all models.

The appendixes contain the features and characteristics of a specific model of the 4341.

2835 STORAGE CONTROL AND 2305 FIXED HEAD STORAGE MODULE REFERENCE

The 2835 Storage Control and 2305 Fixed Head Storage Module form a large capacity, high speed direct access storage facility for general purpose data storage and system residence. It attaches to the central processing unit through a block multiplexor channel, and operates under direct program control of the CPU.

For experienced programmers, this manual provides readily accessible reference material related to channel command words, sense bytes, track format, track capacities, and error recovery.

Less experienced programmers will find sufficient information to create channel programs to best utilize the standard and special features of the facility.

A complete description of the switches and indicators is provided for systems installation operators.

Programmers should be familiar with the information contained in IBM System/360 Principles of Operation, Order Number GA22-6821 and IBM System/370 Principles of Operation Order Number GA22-7000. Operators should be familiar with the material presented in the system summary for the parent system.

Manual, 8 1/2 x 11 inches, 96 pages, 12/83

INSTALLATION MANUAL PHYSICAL PLANNING IBM 2984 MODEL 1 CASH ISSUING TERMINAL RPQ 834660

This manual contains technical information, recommendations, and suggestions to be used in installing the IBM 3984-1 Cash Issuing Terminal. Included are physical specifications, cable, electrical, and environmental requirements. The customer should arrange for professional assistance in planning his installation, if necessary, to ensure that local and national codes are met.

It is assumed that the customer has both a system (CPU) and a transmission control unit (2701, 2703, or equivalent) either installed or to be installed.

The following publications provide necessary additional information:

- o IBM System/360 Installation Manual Physical Planning, GC22-6820
- o IBM System/370 Installation Manual Physical Planning, GA22-7004

Manual, 8 pages  
//14/2984/

GA26-1625

3348 DATA MODULE HANDLING PROCEDURES

This manual is a guide for handling the IBM 3348 Data Module. It is intended for personnel who operate the 3340 Disk Storage. Except for being familiar with the 3340 Disk Storage, operating personnel need no other prerequisites. The following topics are covered: Introduction, General Handling Procedure, Storage, Receiving and Shipping, Labeling, and Operating Instructions.

Manual, 16 pages  
370,4361,4381,3090,4331,4341,4321//16/3348,3340/

GA26-1630

3330 SERIES DISK STORAGE MODEL 1-11, CUSTOMER CONVERSION GUIDE

This manual is intended to guide the IBM customer in planning a field conversion of the 3330 Series Disk Storage Model I to a 3330 Series Disk Storage Model II. This manual is organized into two distinct categories: hardware and programming considerations. The hardware considerations cover topics concerning bills of material; power and cabling requirements; configuration requisites; and conversion times.

The program considerations define programming support and lists available programs. Also included are procedures

for making programming updates to provide for the 3330 Model 11 (ELEVEN).  
Manual, 20 pages  
//07/3330/

## GA26-1632

3340 DISK/STORAGE - FIXED HEAD FEATURE USER'S GUIDE  
The manual describes the IBM 3340 Disk Storage Fixed Head Feature. It is intended to provide system and application information to guide systems analysts and experienced programmers in installing and using the fixed-head feature.

Note: The manual serves as the central information document for current supporting releases and thus fully describes the fixed-head feature and all anticipated restrictions for those systems.

The material presented requires that users be familiar with data management concepts as they apply in OS and DOS virtual storage programming systems and to have a working knowledge of Job Control Language (JCL) coding.

Manual, 16 pages  
370,4361,4381,3090,4331,4341,4321//13/3340/

## GA26-1633

3800 PRINTING SUBSYSTEM FORMS DESIGN REFERENCE GUIDE  
This publication contains instructions for preparation of forms overlays for the IBM 3800 Printing Subsystem. Included are paper considerations, printer capability, preprinted forms, paper storage requirements, and photo negative specifications. Print charts and overlay master illustrations are included together with tables showing the print character capacities of all common use and ISO paper sizes.

A companion publication with additional information useful for the forms designer is: Introducing the IBM Printing Subsystem and its Programming, Order No. GC26-3829.  
Manual, 50 pages  
//03/3800/

## GA26-1634

3800 PRINTING SUBSYSTEM OPERATOR'S GUIDE  
This publication provides operating instructions for the IBM 3800 Printing Subsystem. These instructions include descriptions of the controls, switches, and indicators used for initial setup, running, and error recovery. This publication is written as a reference for the working operator who has received training in the 3800 printer operation. It is assumed that the user of this manual has a basic knowledge of printer I/O operation. It is not intended to be a self-study text. The publication is intended for the operators who will perform the basic setup, operation, error recovery, and cleaning tasks associated with the 3800.  
Manual, 114 pages, 07/76  
//16/3800/

## GA26-1635

REFERENCE MANUAL FOR THE IBM 3800 PRINTING SUBSYSTEM  
This manual provides information on the functions and features of the IBM 3800 Printing Subsystem relating to channel commands, sense bytes, and error detection, recovery, and recording. In addition, specific information and examples are given of copy modification and control, and graphic character modification.

The manual is intended for use by systems analysts, installation managers, systems programmers, and other personnel requiring 3800 reference information.  
Manual, 8 1/2 x 11 inches, 160 pages, 7/83  
//03/3800/

## GA26-1638

3350 DIRECT ACCESS STORAGE REFERENCE MANUAL  
Intended for experienced data processing personnel, this publication describes the characteristics, formats, features, commands, and compatibility modes of the IBM 3350 Direct Access Storage Subsystem.  
Manual, 47 pages  
//07/3350/

## GA26-1646

3800 PRINTING SUBSYSTEM REFERENCE: OCR DOCUMENT PREPARATION  
This manual provides supplemental Optical Character Recognition (OCR) information for systems analysts, forms designers, programmers, and operators. The manual is intended for use in OCR document preparation with the IBM 3800 Printing Subsystem and the IBM 1287/1288, and 3886 Optical Character Readers. Most of the existing OCR manuals contain information that is generally applicable except for some differences which are listed in this manual. Prerequisite knowledge of optical readers and forms design is assumed for users of this manual.  
Manual, 16 pgs, 9/76  
//03/3800/

## GA26-1647

3803-3/3420-3, 5 MAGNETIC TAPE SUBSYSTEM  
This manual contains a description of the 3803-3/3420 attachment to IBM System/370 Models 115 and 125. For programmers and Operators, this manual contains commands, sense and status bytes, procedures for loading and unloading tape, controls and indicators, and error recovery procedures.  
Manual, 60 pgs  
3115,3125//05/3803,3420/

## GA26-1653

INTRODUCING THE IBM 3800 TAPE-TO-PRINTING SUBSYSTEM FEATURE AND ITS UTILITY, PROG PROD 5748-UT2  
This publication provides introductory information for prospective users of the Tape-to-Printing Subsystem Feature and the Offline IBM 3800 Utility for the IBM 3800 Printing Subsystem. The intended audience is data processing managers and system analysts planning for these 3800 features, and others seeking initial information about the features. The information is presented in general terms and assumes that the reader understands the basic functions of the 3800 printer and either the 3410/3411 or the 3803/3425 magnetic tape subsystem. This publication has three main sections (1) Introduction, briefly describes the features; (2) Tape-To-Printing Subsystem Feature, contains a brief description of the printer, tape units, configuration, and tape formats; (3) Offline IBM 3800 Utility, briefly describes the program product which includes storage requirements and operating considerations. A glossary is also included.  
Manual, 8 1/2 x 11 inches, 16 pgs, 6/77  
//13/3800/

## GA26-1654

OPERATOR/REFERENCE MANUAL FOR THE IBM 3800 TAPE-TO-PRINTER SUBSYSTEM FEATURE  
This publication provides information about the IBM 3800 Tape-To-Printer subsystem feature for operators and programmers. The operator instructions include descriptions of the controls, switches, indicators, and selection of the printing options for initial setup, running, and error recovery. Examples are provided for the typical tape-to-printer operating modes. Programming related information consists of channel commands, sense bytes and status, error detection, recovery, and recording, which are

associated with tape-to-printer operation.

Also provided is a section that describes tape formats, which includes information concerning labels, control and data fields, and record lengths. Performance considerations for maintaining maximum throughput are defined and illustrated by an example calculation.

This publication is intended as a reference for operators who have received training in tape-to-printer operation and for system analysts, and system programmers. It assumes that users understand the basic functions of the 3800 printer and either the 3410/3411 or the 3803/3420 Magnetic tape subsystem and the steps involved in preparing magnetic tape files.

Manual, 8 1/2 x 11 inches, 90 pgs, 12/77  
//13/3800/

## GA26-1656

3800 PRINTING SUBSYSTEM CHARACTER SET CATALOG

This character set catalog provides a graphic representation of each character contained in every character set available with the IBM 3800 Printing Subsystem.

This catalog is intended for system programmers, application programmers, or other persons responsible for designing or modifying characters to be used by the 3800 printer as defined in the reference manual or programmer's guides. See related publications for manual titles and order numbers.

Manual, 8 1/2 x 11 inches, 150 pages, 12/77  
//03/3800/

## GA26-1657

3370 DIRECT ACCESS STORAGE DESCRIPTION

This manual contains a description of IBM 3370 Direct Access Storage. The audience should be familiar with direct access storage and concepts. The manual describes the 3370 storage models, the storage medium, operator controls and indicators, fixed block data format, and methods used to ensure data integrity and privacy. The user should order a copy of the host system functional characteristics manual for a description of the sense bytes and error recovery methods.

Manual, 8 1/2 x 11 inches, 20 pages, 9/79  
4361,4381,3090,4331,4341,4321//07/3370/

## GA26-1659

8809 MAGNETIC TAPE UNIT INTRODUCTION

This manual contains general information to introduce the reader to a new tape product, the IBM 8809. It includes general descriptions of the operations that the 8809 executes, and of its performance characteristics. The 8809 can be attached to an IBM 8100 Information System. The manual is intended for IBM sales representatives and customers.

Manual, 8 1/2 x 11 inches, 16 pages, 1/79  
4361,4381,8150,8130,8140,4331,4341,4321//05/8809/

## GA26-1660

3310 DIRECT ACCESS STORAGE REFERENCE MANUAL

The purpose of the manual is to enable data processing personnel to become familiar with the characteristics of IBM 3310 Direct Access Storage Device. The manual lists the functional characteristics, describes the data format, storage capacity, and data transfer between the 3310 and the using system.

Manual, 72 pages  
4331//07/3310/

## GA26-1661

3880 STORAGE CONTROL DESCRIPTION

For experienced programmers, this manual provides readily accessible reference material related to channel commands, sense bytes, ERPs, and features for the 3880 and its attached disk storage.

Dividers Tabs for IBM 3880 Storage Control Description, Order NO. GX26-1663, are available for this manual.  
Manual, 8 1/2 x 11 inches, 240 pages, 9/77  
//07/3880/

## GA26-1666

3375 DIRECT ACCESS STORAGE DESCRIPTION AND USER'S GUIDE

This manual describes the 3375 Direct Access Storage and gives installation and conversion information. It contains detailed information on 3375 models, attachment configurations, device characteristics, addressing, and capacity formulas. These formulas, allow calculations for equal and unequal data lengths. The formulas are supplemented with tables that list capacities for commonly used data lengths.

This manual also contains general information and guidelines on how to use this particular storage system, including the supporting programs. A checklist aids the user with step-by-step conversion tips.

It is assumed that the reader has a knowledge of disk storage data management, and system operations, including the particular IBM operating system to be used in the installation.

Manual, 8 1/2 x 11 inches, 58 pages, 6/81  
//07/3375/

## GA26-1672

DISK STORAGE MANAGEMENT GUIDE-ERROR HANDLING

This manual provides guidelines on disk storage error handling for the customer. It describes how to read the EREP Subsystem Exception reports and how to use this information to determine the appropriate recovery action. Possible recovery action is to call a service representative or to use the Device Support Facilities program. For given conditions, determined from the EREP reports, there are pointers to the appropriate Device Support Facilities functions. This manual is to be used in conjunction with the EREP manual, 6C28-0772 and the Device Support Facilities manual, 6C35-0033.

This manual, and a second manual, IBM Disk Storage Management Guide - Background Reference Information, GA26-1675, may be ordered under GBOF-1205.  
Manual, 8 1/2 x 11 inches, 70 pages, 12/82

## GA26-1675

DISK STORAGE MANAGEMENT GUIDE-BACKGROUND REFERENCE INFORMATION

This manual provides introductory level information on the characteristics of disk storage. It includes descriptions and definitions of subsystem and path components, device and record identifiers, volume initialization, and formats and controls. It gives information on the subsystem and system roles in error detection, recovery, and logging. The descriptions of errors given in this manual are prerequisite of the use of the "Error Handling" manual, GA26-1672.

This manual, together with IBM Disk Storage Management Guide - Error Handling, GA26-1672, may be ordered under GBOF-1205.

Manual, 8 1/2 x 11 inches, 40 pages, 12/82  
370,4361,4381,4331,4341,4321//07/3330,3340,3344,3370,3375,3380,3350/

GA26-3599

S/360 COMPONENT DESCRIPTIONS - 2314 DIRECT ACCESS STORAGE FACILITY AND 2844 AUXILIARY STORAGE CONTROL

This publication describes the IBM 2314 Direct Access Storage Facility and the IBM 2844 Auxiliary Storage Control, and presents functional and operating characteristics for these devices. Capacities, timing considerations, commands, operating procedures, and sense and status information are described. The user of this publication should be thoroughly familiar with the I/O programming considerations described in IBM System/360 Principles of Operation, Order Number GA22-6821.

Systems Reference Library Manual, 76 pages  
//16/2314,2844/

GA26-5756

IBM DISK PACK AND CARTRIDGE HANDLING PROCEDURES

This manual is a guide for handling IBM Disk Packs and cartridges. Included are procedures for shipping and receiving, installation and removal, labeling of disks and cartridges and general operating procedures.

The information contained in this manual applies to IBM 1316, 2316, and 3336 Disk Packs, and 2315 Disk cartridges. Manual, 16 pages  
//16/2316,1316,2315,3336/

GA26-5893

IBM 2560 MULTI-FUNCTION CARD MACHINE: COMPONENT DESCRIPTION AND OPERATING PROCEDURES

This publication describes the operating principles and features of the IBM 2560 Multi-Function Card Machine (MFCM). Descriptions of the programmed operations, indicators, and operator's console are included. Since this device is natively attached, you should have a thorough understanding of the using system before using this manual. The book is intended for system engineers, programmers, and operators.

The 2560 is compared with conventional card equipment in file-updating operations. In addition to descriptions and flowcharts of these operations, tables are provided for a ready comparison of the operational steps, card volumes, and running times of the two systems.

Restart procedures for a particular type of program (RPG, IOCS, etc.) are covered in the operating procedures manual associated with the particular program and using system.

Manual

50 MAGNETIC DATA INSCRIBER COMPONENT DESCRIPTION

This manual describes the functional and operating characteristics of the IBM 50 Magnetic Data Inscrubber. The IBM 50 Magnetic Data Inscrubber is a key-operated device that records data on cartridge-contained magnetic tape. Each IBM 50 generated tape can be used as a data storage medium or as a vehicle for entering data into an IBM System/360, via the IBM 2495 Tape Cartridge Reader. In addition to its data recording capability, the IBM 50 can also be used to verify data stored on tapes generated on the same or other IBM 50's.

Systems Reference Library Manual, 28 pages  
//10/0050/

## GA27-2740

IBM 7412 MODEL 1 CONSOLE, CUSTOM SYSTEMS RPQ AA2846, CUSTOM FEATURE DESCRIPTION

This reference manual describes the functional characteristics and features of the IBM 7412-1 Console with the IBM 3215-1 Console Printer-KeyBoard. This publication is intended for System Analysts, Programmers, and Operators. Assumed is a background knowledge of the IBM System/360 and System/370, and of the I/O Interface.

Manual, 26 pages

3270 INFORMATION DISPLAY SYSTEM: 3277 CUSTOM FEATURE  
DESCRIPTION, SIGNATURE DISPLAY RPQS 7U0010 & 8K0438

This document describes the Signature Display Feature, an option for the IBM 3277 Display Station Models 1 and 2. (The 3277 is a unit of the IBM 3270 Information Display System.)

In addition to presenting a general description of the feature, the document briefly discusses Signature Display's basic functions, data-handling characteristics, and alphameric display capabilities.

GA27-2899

3846 DATA ENCRYPTION DEVICE, PRINCIPLES OF INFORMATION

The 3846 encryption device allows a user to protect a telecommunication line from electronic eavesdropping by encrypting the transmitted data and decrypting it again as it is received (via the same DES algorithm). This manual provides information for the selection of initialization, personalization, and key-variable data. It also gives procedures for customer setup and customer problem determination.

Manual, 8 1/2 x 11 inches, 65 pages, 1/79  
//09/3846/

GA27-3001

2740/2741 COMMUNICATIONS TERMINAL OPERATOR'S GUIDE

This publication describes the setup and operating procedures for the IBM 2740 and IBM 2741 Communications Terminals when operating in local and communicate mode. The line-control signals and transmission controls are fully described for each terminal. Removal and replacement procedures for the typewriter are also fully described along with recommended typing procedures to ensure the most efficient operation of the terminals.

Systems Reference Library Manual, 62 pages  
//16/2740,2741/

GA27-3004

GENERAL INFORMATION - BINARY SYNCHRONOUS COMMUNICATIONS

This publication describes the Binary Synchronous Communications (BSC) procedures in general terms. The major topics covered are: BSC concepts (including transmission codes and data-link operation), message formats, additional data-link capabilities, and planning considerations.

Systems Reference Library Manual, 36 pages  
//09//

GA27-3005

2780 DATA TRANSMISSION TERMINAL COMPONENT DESCRIPTION

This Component Description manual describes the principles of operation of the IBM 2780 Data Transmission Terminal. The data-link control characters, code structures, timeouts, and throughput rates associated with the Binary Synchronous method of transmission are described.

The communications facilities, data sets, and special features available for this Tele-processing terminal are also discussed.

Systems Reference Library Manual, 78 pages  
//09/2780/

GA27-3006

COMMUNICATIONS TERMINALS INSTALLATION MANUAL - PHYSICAL PLANNING

Contains physical planning information about standalone remote terminals. Previous editions of the manual contained information about the 3705 with remote program loader. This information can now be found in IBM Input/Output Equipment Installation Manual - Physical Planning: System/360, System/370, 4300 Processors, GC22-7064.

Manual, 8 1/2 x 11 inches, 172 pages, 2/83

GA27-3013

SYSTEM COMPONENTS: IBM 2770 DATA COMMUNICATION SYSTEM

This System Components manual describes the principles of operation of the component units of the IBM 2770 Data Communication System. The data link control characters, code structures, and timeouts associated with the Binary Synchronous method of transmission used by the 2770 are described. Also described are the operating characteristics of the various input/output devices and the specifications of the input/output media. Special features and specify features for all system units are included.

This manual comprises descriptions of individual units within the 2770 Data Communication System.  
Systems Reference Library Manual

GA27-3015

2790 DATA COMMUNICATION SYSTEM COMPONENT DESCRIPTION

The IBM 2790 Data Communication System is a two-way, in-plant communication and production reporting system. This publication describes the units of the 2790 system, along with its capabilities, features, and applications. This publication presumes a telecommunications background and IBM System/360 experience. The purpose of this publication is to assist programmers and systems analysts in designing and operating the 2790 system.

This publication describes the 2790 system using the 2715 Transmission Control Unit as the system controller.

IBM 2793 Area Station  
IBM 2795 Data Entry Unit  
IBM 2796 Data Entry Unit

GA27-3017

2790 DATA COMMUNICATION SYSTEM INSTALLATION MANUAL PHYSICAL PLANNING

This manual provides technical information necessary for planning the physical installation of the IBM 2790 Data Communications System. Included are physical specifications and electrical requirements for each unit of the system. Typical system configurations with interunit cabling requirements are presented.

The intended customer audience includes facilities planners such as architects and consultants, contractors, operating management of the system, building superintendents, and communications technical representatives.

The intended IBM audience includes Sales Representatives, Systems Engineers, Installation Planning Representatives, and Customer Engineers.  
System Reference Library Manual, 66 pages  
//15/2790,2791,2793/

GA27-3019

2770 DATA COMMUNICATION SYSTEM INSTALLATION  
PHYSICAL PLANNING

This publication presents detailed information concerning the physical characteristics of the IBM 2770 Data Communication System. Dimensions, weights, service clearances, physical information for each unit, and environmental and electrical requirements are included. Particular attention is devoted to information necessary for the customer to prepare his premises for actual installation of equipment. Planning assistance is available from IBM sales and installation planning representatives. Systems Reference Library Manual, 42 pages  
//15/2770,2772/

GA27-3039

2721 PORTABLE AUDIO TERMINAL HANDBOOK

This manual provides instructions for installing and operating the IBM 2721 Portable Audio Terminal. A section on problem determination is provided to assist the operator in deciding if the terminal requires maintenance.

For more detailed information on the functions and operation of the terminal, refer to the Systems Reference Library publication, Component Description: IBM 2721 Portable Audio Terminal, GA27-3029. Handbook, 3 3/8 x 7 3/8 inches, 16 pages, 8/70  
//16/2721/

GA27-3043

IBM 3735 PROGRAMMABLE BUFFERED TERMINAL CONCEPT AND APPLICATION

The purpose of this manual is two-fold: first, it introduces the IBM 3735 Programmable Buffered Terminal; and, second it provides planning information for those who may be involved in installing a 3735. Because of this dual purpose, not all sections of the manual may be of interest to each reader. Those interested in an overview and in the highlights of the 3735 will find the Introduction of most value; those who need more detailed information on the terminal's operation and functional capabilities will find the sections on Operating Characteristics and Implementation Considerations of most interest; systems and application programmers will find information on Programming Considerations for the 3735 in Appendix B.

Generally, the prerequisites for this manual are an understanding of the concept and application of the IBM System/360 and the IBM System/370 in a teleprocessing environment. The section on Programming Considerations requires more extensive knowledge of the applicable operating system (OS or DOS).

Although not intended as a terminal operator's guide or as a programmer's guide, the manual presents general information concerning these subjects.

System Reference Library, 50 pages  
370,3090,4331,4341,4321//09/3735/

GA27-3029

2721 PORTABLE AUDIO TERMINAL COMPONENT DESCRIPTION

This manual is designed to acquaint the reader with the basic concepts and use of the IBM 2721 Portable Audio Terminal. The publication should be used as a general guideline for useful application of the terminal. Functional and operational characteristics are discussed in detail, and no previous reading is required for an understanding of how the terminal operates as a remote input/output device. The operation of the 2721 terminal in a systems environment depends largely on how the user's program is written; therefore, the operating procedures outlined in this manual are of a general nature. The ultimate operation of the terminal depends upon the programmer's ingenuity and the applications involved.

For detailed information regarding the handling of data by the IBM 7770 Audio Response Unit, refer to the SRL manual, Component Description - IBM 7770 Audio Response Unit Model 3, GA27-2712. Related manuals are shown in the following Publications Availability Guide. Manual, 8 1/2 x 11 inches, 28 pages, 7/70

GA27-3044

2976 MOBILE TERMINAL SYSTEM CUSTOM SYSTEM DESCRIPTION OPERATOR'S GUIDE - PHYSICAL PLANNING

This manual is the primary source of information on the IBM 2976 Mobile Terminal System. The Mobile Terminal System provides high-speed, two-way data communications between a central IBM System/360 or System/370 and mobile terminals. It is comprised of an IBM 2976 Model 3 Transmission Control Unit, an IBM 2976 Model 5 Signal Converter, and a number of IBM 2976 Model 4 Mobile Terminals.

The manual contains both introductory and in-depth information about the system components, a discussion of programming requirements for the system, the operator information needed to use the components of the system, diagnostic procedures for rapid problem determination, and the physical planning and installation information required for planning and installing the Mobile Terminal System.

Organization of the manual into separate parts allows the expected users to go directly to the information they require. These users include: management, programming, system analyst, and central site operating personnel; mobile terminal operators; and site planning and installation personnel.

Users who require the detailed information provided in this publication should have a basic understanding of telecommunications and radio operations and should have IBM System/360 or System/370 programming and operating experience.

Manual, 50 pages  
//14/2976/

GA27-3038

OPERATOR'S GUIDE: IBM 2770 DATA COMMUNICATION SYSTEM

This Operator's Guide is designed specifically for personnel operating or implementing the IBM 2770 Data Communication System. Step-by-step operating procedures and flowchart-type error recovery procedures are included for the control unit and for each of the input/output devices.

The procedures for initiating, answering and terminating a switched-network communications link with another terminal or processor are discussed. Error message formatting and transmission procedures are also described in detail.

Operator's Guide, 150 pages  
//16/2770,2772/

## GA27-3051

INTRODUCTION TO THE IBM 3704 AND 3705-11 COMMUNICATIONS CONTROLLERS (CURRENT RELEASE)

This publication contains introductory information on the hardware components of the controllers and on the programs provided to support them. Any user or potential user of a 3704 or 3705 II, including management, programmers, operators, and maintenance personnel, should be familiar with the contents of this manual. The only prerequisite for this manual is an understanding of basic teleprocessing operations.

Manual, 8 1/2 x 11 inches, 100 pages, 12/80  
//09/3705,3704/

## GA27-3058

3872 MODEM USER'S GUIDE

The IBM 3872 Modem can transfer data at rates of 2400 or 1200 bits per second. It operates on dedicated (leased or privately owned), voice-grade communications facilities. In the USA and Canada, the 3872 also operates on the public switched network.

In this publication, the 3872 is described as an item of equipment in the medium-speed modem field. The manual is in four main parts: Part 1 describes (in general terms) the IBM 3872 Modem, planning considerations, and equipment and facility considerations; Part 2 presents 3872 operating procedures and offline problem determination procedures; Part 3 describes (in detail) the IBM 3872 Modem: interface specifications, installation specifications, channel specifications, and special features. Considerations in using the 3872 in World Trade countries are included in appropriate places in the manual and are summarized in Part 4, which also contains the glossary.

This publication is intended for system planners, systems engineers, installation planners, operators, and supervisory personnel. A knowledge of teleprocessing systems is a prerequisite for Part 3 only. Operator information (Part 3) is separated from general and specific descriptive information, for easier accessibility. System Library User's Guide, 70 pages  
//16/3872/

## GA27-3061

3735 PROGRAMMABLE BUFFERED TERMINAL OPERATOR'S GUIDE

The IBM 3735 Programmable Buffered Terminal consists of two cable-connected units: a keyboard/printer and a control unit. In its typical application, the 3735 is used to prepare source documents (preprinted forms on which the terminal operator adds variable information). Programs, stored within the 3735 control unit, guide the operator during preparation of the forms, and cause selected input data to be stored for later batch transmission to a central data processing system.

This operator's guide introduces the 3735 and describes its operating procedures. Both normal operating procedures and error recovery techniques are described.

The manual assumes that the user has been previously trained in the operation of an office typewriter such as the IBM Selectric.

Manual, 100 pages

//16/3872/

## GA27-3063

COMPONENT INFORMATION FOR THE IBM 3780 DATA COMMUNICATION TERMINAL

This manual introduces the IBM 3780 Communication Terminal, designed to transmit and receive data accurately, quickly, and economically in a teleprocessing environment. The terminal's applications, capabilities, and design highlights are discussed, as well as use of the binary synchronous communication, a description of the associated data-link control characters, code structures, and timeouts. The manual also discusses communication facilities, IBM modems, and special features available for this teleprocessing terminal.

In-depth information for those who implement customer applications is also included. Readers concerned with the 3780's capabilities and design highlights will find the Introduction, Card Reader, and Printer sections useful, while those needing more detailed information on the terminal's operation and its binary synchronous method of communication should read the Operating Characteristics and Programming Considerations sections.

Prerequisites for this manual include an understanding of the IBM System/360 and the IBM System/370 in a teleprocessing environment, together with knowledge of the binary synchronous method of data-link control as outlined in the IBM Systems Reference Library publication, General Information, Binary Synchronous Communications, GA27-3004. Manual, 70 pages

It lists the procedures to be followed in preparing the 3705 for operation (up to IPL) and the basic error recovery procedures.

Reference Summary, 6 panels  
//16/3705/

## GA27-3093

SYNCHRONOUS DATA LINK CONTROL GENERAL INFORMATION

This manual describes the procedures that comprise Synchronous Data Link Control (SDLC). It includes a brief background and a basic description to familiarize the reader with the terminology and concepts of SDLC. This is followed by a catalog of the components of SDLC and some representative examples of their uses. The IBM Data Processing Glossary, 6C21-1699, is a useful reference for the definitions of terms used in this manual. A reader who is familiar with other systems of line control should not assume that familiar terms have the same definitions in SDLC procedures. This manual does not provide instructions for the implementation of SDLC, nor does it describe any specific information about an IBM SDLC implementation, refer to the appropriate IBM publication for that machine or system.

Manual, 60 pages

OPERATING PROCEDURES GUIDE: 3774 AND 3775 COMMUNICATION TERMINALS

This Operating Procedures Guide is designed specifically for personnel writing detailed operator procedures for IBM 3774 or IBM 3775 Communication Terminal job applications, and for operators of the terminals. Included are:

- o Operating procedures for the basic configuration (the console printer, the keyboard, the operator's console, and the controller).
- o Operating procedures for the input and output devices.
- o Job definition and job start procedures for the terminal.
- o Error recovery and problem determination procedures for the terminal

This guide describes the purpose and use of the terminal controls as they apply to all jobs. This manual can be used in preparing a detailed operator procedure for a specific job in an application.

Manual, 200 pages

## GA27-3096

3767 MODELS 1 & 2 COMMUNICATION TERMINAL COMPONENT DESCRIPTION

This manual describes the IBM 3767 Communication Terminal, a multipurpose terminal that communicates with an IBM System/370. The information it contains is directed to customer executives, systems analysts, and systems engineers already aware of the operating procedures for the applications in which they plan to use the terminal.

The first chapter gives an overview of the 3767. It describes the applications and features of the 3767 and the communication facilities required.

The chapter on operating controls follows the chapters on operating characteristics and special features so that the reader can better appreciate the functions of these controls.

Information on installation and physical planning is given in IBM Remote Multiplexers and Communications Terminals Installation Manual -- Physical Planning, GA27-3006.  
Manual, 80 pages  
//09/3767/

## GA27-3099

ADVANCED FUNCTION FOR COMMUNICATIONS: SYSTEM SUMMARY

This manual provides summary information about IBM System Network Architecture elements, a selection of equipment and programs comprising compatible components as a basis for a data communications network. It briefly describes the concepts of the System Network Architecture and the interrelationships of its components. Short descriptions of equipment components are also included.

Manual, 28 pages

## GA27-3100

OPERATING PROCEDURES GUIDE: IBM 3771 AND 3773 COMMUNICATION TERMINAL

This Operating Procedures Guide is directed specifically to personnel writing detailed operator procedures for IBM 3771 or IBM 3773 Communication Terminal job applications, and for operators of the terminals. Included are:

- o Operating procedures for the basic configuration (the console printer, the keyboard, the operator's console, and the controller).
- o Operating procedures for the input and output devices.
- o Job start procedures for the terminals.
- o Error recovery and problem identification procedures for the terminals.

This guide describes the purpose and use of the terminal's controls as they apply to all jobs. You can use this manual in preparing a detailed operator procedure for a specific job in your application.

Manual, 120 pages  
//16/3771,3773/

## GA27-3101

3771 & 3773 COMMUNICATION TERMINALS REFERENCE SUMMARY

This Reference Summary contains information that is already included in the Operating Procedures Guide: IBM 3771 and 3773 Communication Terminals (GA27-3100), and gives a quick reference to the information needed for the routine operation of the IBM 3771 or IBM 3773 Communication Terminals.

Reference Card, 1 page  
//16/3771,3773/

## GA27-3104

3767 COMMUNICATION TERMINAL CUSTOMER SITE PREPARATION GUIDE

This manual will be given to the customer by the IBM Marketing Representative at the time the customer orders a 3767 Communication Terminal. The manual provides the customer with the information necessary to prepare his site for the installation of the 3767 which he will perform.

Reference Summary, 15 pages  
//15/3767/

## GA27-3106

OPERATOR'S INTRODUCTION TO THE 3767 COMMUNICATION TERMINAL

This brochure is intended to serve as the preferred means of first exposure to the equipment (i.e., before delivery) by presenting to the prospective user or operator some of the characteristics and features of the 3767 Communication Terminal. Locations and functions of keys and controls are presented in a facts folder form.

Reference Summary, 18 pages  
//16/3767/

## GA27-3107

OPERATING PROCEDURES GUIDE: IBM 3776 COMMUNICATION TERMINAL

This Operating Procedures Guide is directed to personnel writing detailed operator procedures for IBM 3776 Communication Terminal job applications, and for operators of the terminals. Included are: (1) operating procedures for the basic configuration (the printer, the keyboard, the operator's console, and the controller), (2) Operating procedures for the input and output devices; (3) job definition and job start procedures for the terminal, and (4) error recovery and problem identification procedures for the terminal.

Manual, 148 pages  
//16/3776/

## GA27-3108

3776 COMMUNICATION TERMINAL REFERENCE SUMMARY

This reference summary contains information that is already included in the Operating Procedures Guide: IBM 3776 Communication Terminal, GA27-3107, and provides a quick reference to information needed for routine operation of the 3776. Use the Operating Procedures Guide if you need more detailed information about terminal operation than is provided in this summary.

Reference card, 4 panels  
//16/3776/

## GA27-3113

3773, 3774 & 3775 PROGRAMMABLE COMMUNICATION TERMINALS REFERENCE SUMMARY

This reference summary contains information that is already included in the publication IBM 3773, 3774, and 3775 Programmable Communication Terminal Operator's Guide, GA27-3114, and provides a quick reference to information needed for routine operation of these terminals. For more detailed information about terminal operation, the Operator's Guide must be used.

Reference card, 5 panels  
//16/3773,3774,3775/

## GA27-3114

3773 PROGRAMMABLE COMMUNICATION TERMINAL OPERATOR'S GUIDE

This manual contains operating instructions for the IBM 3773 Programmable Communication Terminal, Models P1, P2, and P3. This guide describes the purpose and use of the terminal's controls and functions. You can use this manual in preparing detailed operator procedures for a specific job in your application. This manual is written for personnel having the following responsibilities:

- Operating the terminals
- Programming the terminals
- Creating the specific job run books

Manual, 200 pages  
//16/3773,3774,3775/

## GA27-3120

2790 INSTALLER'S GUIDE

This publication gives simple installation techniques and precautions that, when followed, will insure proper cable installation. It should be used as an on-the-job reference for terminating cable ends, making splices, connecting grounds and testing the cable installation.

Manual, 3 5/8" x 8 1/2", 44 pages, 1/76  
//15/2790,2791,2793/

## GA27-3123

3767 COMMUNICATION TERMINAL FRONT DOCUMENT INSERT DEVICE USER'S INFORMATION ADDENDUM (RPQ MF5272)

This manual is a supplement to user information for the 3767 Communication Terminal equipped with the Front Document Insertion Device (RPQ MF5272). This device enables the operator to easily insert documents for printing in front of the terminal platen without having to use the platen knobs.

This manual furnishes the information needed by management, programming, and operator personnel to successfully use this device.

Major subjects include: operating procedures, paper specifications, and print specifications.

It is essential that users of this manual be familiar with the 3767 Communication Terminal characteristics and operating procedures, and the following manuals: IBM 3767 Model 1, 2, and 3 Communication Terminal Component Description, GA27-3096, and IBM 3767 Communication Terminal Operator's Guide, GA18-2000.  
Manual, 12 pages, 7/76

//14/3767/

GA27-3124

OPERATING PROCEDURES GUIDE: IBM 3777 COMMUNICATION TERMINAL

This operating procedures guide is directed to personnel writing detailed operator procedures for the IBM 3777 Communication Terminal, and for operators of the terminal. This manual also includes operating procedures for the IBM 3203 Printer, and for other devices that can be attached to the 3777. Users of this manual should already be familiar with the information contained in the publication IBM 3770 Data Communication System, System Components, GA27-3097. Manual, 140 pages 8/76  
//16/3777/

GA27-3125

3777 COMMUNICATION TERMINAL REFERENCE SUMMARY

This reference summary contains information that is already included in the Operating Procedures Guide: IBM 3777 Communication Terminal, GA27-3124, and provides a quick reference to information needed for routine operation of the 3777. Use the Operating Procedures Guide if you need more detailed information about terminal operation than is included in this summary.  
Reference Card, 2 pages, 8/76  
//16/3777/

GA27-3126

3767 COMMUNICATION TERMINAL PINFEED PLATEN USER INFORMATION (RPG EG0314 AND 851142)

This manual is a supplemental source of user information for the 3767 Communication Terminal equipped with the Pinfeed Platen Device (RPGs EG0314 and 851142). These devices allow accurate feeding of marginally prepunched forms.

Major subjects include descriptions of components which are part of the pinfeed platen devices, platen removal and installation procedures, and forms insertion procedures.

This manual furnishes the information needed by management and operator personnel to successfully use this device.

It is essential that users of this manual be familiar with the 3767 Communication Terminal characteristics, operating procedures, and the contents of the following manuals: IBM 3767 Model 1, 2, and 3 Communication Terminal Component Description, GA27-3096, and IBM 3767 Communication Terminal Operator's Guide, GA18-2000.  
Manual, 10 pages, 3/76  
//14/3767/

GA27-3127

3767 COMMUNICATION TERMINAL INTEGRATED MODEM WITH AUTO-ANSWER AND DIAL DISCONNECT (RPG 853134) USER INFORMATION ADDENDUM

This manual is a supplemental source of user information for the 3767 Communication Terminal equipped with Integrated Modem with Auto-Answer and dial Disconnect (RPG 853134).

This modem makes possible manual dial-up auto answer over a point-to-point switched communications network.

Major subjects include: Description of Functions, and Installation of Modem Data Cable. This manual furnishes the User with all information necessary to use a terminal equipped with this modem.

It is essential that users of this manual be familiar with the 3767 Communication Terminal characteristics and operating procedures, and the following manuals: IBM 3767 Model 1, 2, and 3 Communication Terminal Component Description, GA27-3096, and IBM 3767 Communication Terminal Operator's Guide, GA18-2000.  
Manual, 10 pages, 5/76

//14/3767/

GA27-3129

3777 MODEL 2 COMMUNICATION TERMINAL OPERATOR'S GUIDE

This manual is directed to operators of the IBM 3777 Model 2 Communication Terminal. This manual describes the operation of the IBM 3777 Model 2 Communication Terminal operating with a System/360 Model 20 Submodel 5 BSC MULTI-LEAVING workstation program, and communicating with a System/370 using one of the following BSC MULTI-LEAVING programming systems:

- o OS/VS1 RES
- o OS/VS2 HASP
- o OS/VS2 JES2
- o OS/VS2 ASP
- o OS/VS2 JES3
- o VM/370 RECS

It is assumed that the user of this manual is already familiar with the programming system used. In conjunction with this Operator's Guide, the user will also require a copy of the programming systems publication that describes the system commands for controlling the system (refer to the publication IBM System/370 Bibliography, 6C20-0001). Additional information about the IBM 3777 Model 2 can be found in the publication IBM 3770 Data Communication System, System Components, GA27-3097.

SYSTEMS NETWORK ARCHITECTURE FORMATS

This publication describes the Systems Network Architecture (SNA) formats used between subarea nodes and peripheral nodes, and between type 2.1 nodes using peer-to-peer protocols.  
Manual, 8 1/2 x 11 inches, 450 pages, 03/87  
///5743-SNA,5735-SC3

## GA27-3141

3289 MOD 1, 2 ERROR RECOVERY AND PROBLEM DETERMINATION GUIDE

Directed to the printer operator and describes the procedures to use if an error or breakdown occurs. These procedures will help the operator identify and eliminate the problem and possibly avoid the need to call for assistance.

Subjects in this guide include recognizing errors, responding to status indicators, restarting a job after an error, and requesting maintenance.

When an error occurs, the operator goes to page 1 and follows the flowchart until the problem is found. The operator then corrects the problem or calls for assistance.

Other publications that should be available for the operator's use are:

- IBM 3289 Line Printer Models 1 and 2 Operator's Guide, GA27-3147
- IBM 3289 Line Printer Models 1 and 2 Operator's Reference Summary, GA27-3148
- IBM 3289 Line Printer Models 1 and 2 Operator's Trouble Report Form, GX27-2922

Manual, 8 1/2 x 11 inches, 25 pages, 8/78  
//16/3289/

## GA27-3142

3773, 3774 & 3775 PROGRAMMABLE COMMUNICATION TERMINALS PROGRAMMER'S HANDBOOK

This handbook summarizes selected reference information about the 3773, 3774, and 3775 Programmable Communication Terminals. The information was extracted from the 3770 Programmer's Guide GC30-3028), which is the authoritative source. Some of the contents are:

- o 3770 Programming Statements
- o Supervisor Instructions
- o BSC Message Headers
- o SNA FM Headers
- o PVS Control Statements
- o Error and Abend Codes
- o Record Formats
- o I/O Status Information
- o Condition Codes and System Indicators

For comprehensive information, refer to the 3770 Programmer's Guide.

Handbook, 3 3/4 x 6 3/4 inches, 72 pgs, 8/77  
//09/3773,3774,3775/

## GA27-3143

3773 & 3774 PROGRAMMABLE COMMUNICATION TERMINALS OPERATOR'S GUIDE FOR PINFEED PLATEN RPQ MJ0436

Describes how to install and remove the pinfeed platen (RPQ MJ0436) for the IBM 3773 and 3774 Programmable Communication Terminals. It also describes how to load and align margin-punched forms on the terminals.

The publication supplements operating procedures contained in the IBM 3773, 3774, and 3775 Programmable Communication Terminals Operator's Guide, GA27-3114. Users should be thoroughly familiar with the above publication and with the operation of either the 3773 or 3774. Users who need more technical information on the functions and features of the terminals should refer to the IBM 3770 System Components manual, GA27-3097.

Manual, 8 1/2 x 11 inches, 12 pgs, 10/77  
//14/3774/

## GA27-3144

INTRODUCTION TO THE IBM 3770 DATA COMMUNICATION SYSTEM

Introduces the terminals and components of the IBM 3770 Data Communication System. Describes the capabilities, functions, features, and performance of the 3770 system for readers responsible for planning a data communication network or for integrating 3770 terminals into an existing network.

This publication describes the capabilities, functions, speeds, options, specify features, special features, accessories, and attachable input/output devices for the following 3770 terminal types: the general purpose nonprogrammable terminals, the general purpose programmable terminals, the general remote job entry (RJE) terminals, the BSC Multi-Leaving RJE workstation terminal, and the SNA Multiple Logical Unit RJE workstation terminals.

Information in this manual was previously in the IBM 3770 Data Communication System: System Components, GA27-3097, except for the information on the following new terminals: the IBM 3776 Communication Terminal Models 3 and 4 and the IBM 3777 Communication Terminal Model 3, SNA Multiple Logical Unit Workstation.

Manual, 8 1/2 x 11 inches, 100 pgs, 10/77  
//09/3770,3771,3774,3775,3776,3777/

## GA27-3145

COMPONENT DESCRIPTION FOR THE IBM 3776 AND 3777 COMMUNICATION TERMINALS

This publication presents introductory and reference information about the 3776 and 3777 terminals used in the following applications: 1) medium and high speed remote job entry terminals (BSC or SNA single logical unit), 2) high speed BSC MULTI-LEAVING workstation, and 3) medium and high speed SNA multiple logical-unit workstations. It describes the capabilities and functions of these terminals for those concerned with planning for a data communication network or for integrating the terminals into an existing network. It is also a reference source for system and application programmers, and for personnel planning job setups for the 3776 and 3777 terminals. Application personnel planning job setups will also require a copy of the appropriate Operating Procedures Guide or Operator's Guide.

It is assumed that the reader of this manual understands the concept and application of the IBM System/370 in a data communication environment, and is familiar with data link control procedures - Synchronous Data Link Control (SDLC) or Binary Synchronous Communications, whichever is used.

Manual, 8 1/2 x 11 inches, 336 pages, 3/78  
//09/3776,3777/

## GA27-3146

3771, 3773, 3774 & 3775 COMMUNICATION TERMINALS COMPONENT DESCRIPTION

This publication describes the capabilities and functions of the general purpose terminals of the IBM 3770 Data Communication System: the IBM 3771, 3773, 3774, and 3775 Communication Terminals. The publication is directed to readers planning for a data communication network or for integrating the general purpose terminals into an existing network. It also contains reference information for system and application programmers, and for personnel planning job setups for the terminals.

Although this publication describes the operating controls of the terminals, it is not intended to provide detailed operating procedures. The controls are described only to illustrate the capabilities, functions, and features of the general purpose terminals. Operating procedures are described fully in the appropriate Operating Procedures Guide for the terminals.

Manual, 8 1/2 x 11 inches, 246 pages, 1/78  
//09/3771,3774,3775/

## GA27-3147

3289 LINE PRINTER MODELS 1 & 2 OPERATOR'S INSTRUCTIONS

Describes the basic operating procedures for the IBM 3289 Line Printer Models 1 and 2. It is intended for those who either operate the printer or write its detailed operating procedures.

It is assumed that the reader of this publication has

previous operating experience, with a working knowledge of the 3289 printer or related data processing equipment. Detailed procedures for a particular application are not presented. Rather, this publication describes the use and capabilities of the printer as they apply to all applications. Chapter 1 describes models, printing speeds, character sets, and the operator panel. Chapter 2 describes basic operating procedures such as turning power on and off, setting format, reprinting a job, etc. Chapter 3 provides information for installing forms, ribbons, and print belts.

Publications that should be available for the operator's use are:

- IBM 3289 Line Printer Models 1 and 2 Error Recovery and Problem Determination Guide, GA27-3141
- IBM 3289 Line Printer Models 1 and 2 Operator's Reference Summary, GA27-3148
- IBM 3289 Line Printer Models 1 and 2 Operator's Trouble Report Form, GX27-2922.

Manual, 8 1/2 x 11 inches, 65 pages, 8/78  
//16/3289/

## GA27-3148

3289 LINE PRINTER MODELS 1 & 2 OPERATOR'S REFERENCE SUMMARY

Directed to the operator of the printer and contains reference information needed for routine operation of the IBM 3289 Line Printer Models 1 and 2. A complete listing of status codes is found here, plus other information that is also included in either the 3289 Operator's Guide or the 3289 Error Recovery and Problem Determination Guide.

Other publications that should be available for the operator's use are:

- IBM 3289 Line Printer Models 1 and 2 Operator's Guide, GA27-3147
- IBM 3289 Line Printer Models 1 and 2 Error Recovery and Problem Determination Guide, GA27-3141
- IBM 3289 Line Printer Models 1 and 2 Operator's Trouble Report Form, GX27-2922

Card, 3 5/8 x 8 1/2 inches, 8/78

3776 MODELS 3 & 4 & 3777 MODEL 3 COMMUNICATION TERMINALS OPERATOR'S GUIDE

This manual is designed specifically for personnel writing detailed operator procedures for remote job entry (RJE) applications that use the IBM 3776 Models 3 and 4 and the IBM 3777 Model 3 Communication Terminals, and for operators of the terminals. Included are:

- Operating procedures for:
    - Starting up and initializing the terminal for communication with the host processor.
    - Logging on to and logging off from the System Services Control Point (SSCP) in the host processor
    - Sending messages to the host application program
    - Defining, storing, retrieving, and executing cataloged procedures for sending job input to the host processor and for receiving job output at the terminal executing immediate commands for sending and receiving jobs
    - Setting up the input and output devices and recovering from media problems such as card jams
    - Performing data transfers between local input and output devices
  - Error Recovery and Problem Identification procedures for the terminal
  - Operational comparisons to aid in converting from IBM 3777 Model 2 to IBM 3777 Model 3 terminal operation and converting from IBM 3776 Models 1 and 2/3777
- This guide describes the purpose and use of the terminals' controls and operator commands as they apply to all jobs. You can use this manual in preparing a detailed operator procedure (runbook) for a specific remote job entry application.
- This manual also contains information describing changes for Multiple Logical Unit (MLU) enhancement.
- Manual, 8 1/2 x 11 inches, 4/79

3287 PRINTER OPERATOR'S GUIDE FOR TRACTOR/FORMS SEPARATOR RPQ MJ3112

This publication describes for the 3287 Printer operator how to install, operate, and remove the IBM 3287 Printer Tractor/Separator (RPQ MJ 3112). It also describes how to load and align margin-punched continuous forms on this device.

Manual, 8 1/2 x 11 inches, 21 pages, 10/78  
SLSS: ORDER NO. SUBSCRIPTION ONLY

GA27-3176

3289 LINE PRINTER MODELS 1 & 2 COMPONENT DESCRIPTION

Presents introductory and reference information about the IBM 3289 Line Printer Models 1 and 2. The 3289 connects to an IBM 3270 Information Display System through an IBM 3274 Control Unit or an IBM 3276 Control Unit/Display Station. Model 1 has a maximum print speed of 155 lines per minute and Model 2 has a maximum print speed of 400 lines per minute.

Describes the capabilities and functions of the 3289 Printer for those concerned with planning a new system or integrating a Model 1 or Model 2 into an existing system. It also provides information needed by those who write detailed operating procedures for the printer.

It is assumed that the reader of this manual understands the concepts and applications of the IBM 3270 Information Display System. Information about 3270 publications can be found in the publication IBM System/370 Bibliography, 6C20-0001.

Chapter 1 contains general information about configurations and basic characteristics of the Model 1 and Model 2 printer. Chapter 2 explains operating controls and characteristics including modes of operation and how to handle abnormal conditions. Chapter 3 contains programming information including the control codes for each mode of printing. The appendixes describe code charts, character sets, throughput controlling factors, and the printer control information area (PCIA).

Manual, 8 1/2 x 11 inches, 75 pages, 12/78

GA27-3177

3289 LINE PRINTER MODEL 4 COMPONENT DESCRIPTION

Presents introductory and reference information about the IBM 3289 Line Printer Model 4. The 3289 connects to a 4331 Processor through a coaxial cable and has a maximum print speed of 400 lines per minute.

This publication describes the capabilities and functions of the 3289 for those concerned with planning a new system or integrating a Model 4 into an existing system. It also provides information needed by those who write detailed operating procedures for the 3289.

It is assumed that the reader of this manual understands the concepts and applications of the IBM 4331 Processor.

Chapter 1 contains general information about configurations and basic characteristics of the Model 4 printer. Chapter 2 explains operating controls and status codes. Chapter 3 contains programming information, including printer commands, forms control buffer, status and sense information, and error recovery information.

Appendixes A through D describe code charts, character sets, a summary of sense bytes, and throughput controlling factors.

Related Publications: The 3289 Line Printer Model 4 Operator's Guide, GA27-3159 is available for those who operate the 3289 or who write its detailed operating procedures.

3863, 3864, AND 3865 MODEMS INTRODUCTION AND SITE PREPARATION GUIDE  
This manual describes briefly the IBM 3863, 3864, and 3865 Modems and their roles in data communication networks. Also described, in general terms, are options, features, interfaces, and problem determination procedures. Site preparation requirements for the modems are described in detail.  
This manual is intended for managers and planners who are knowledgeable in data communication networks and who are considering installing a data communication network using the IBM 3863, 3864, and/or 3865 Modems. The site preparation information in this manual is also useful to the modem user's contractors or other personnel who, before the arrival of the modems, prepare the user's site for setup of the modems.

## GA27-3304

INTRODUCTION TO THE 3705-80 COMMUNICATION CONTROLLER

The IBM 3705-80 is a programmed transmission control unit designed to assume many data processing control functions formerly assigned to an access method. The controller is intended for data processing installations with limited communications requirements that intend to enter a systems network architecture (SNA) environment. The 3705-80 is controlled by programs that reside in the controller.

This publication contains introductory information on the 3705-80 control programs and hardware components. Any user or potential user of the 3705-80, including management, programmers, operators, and maintenance personnel, should be familiar with the contents of this manual. The only prerequisite for this manual is an understanding of basic telecommunication concepts.

Manual, 8 1/2 x 11 inches, 99 pages, 3/81  
//09/3705/

## GA27-3267

3268 PRINTER MODEL 1 DESCRIPTION

This manual provides reference information about the 3268 Printer Model 1 for supervisory personnel, system analysts, and application programmers who are using the 3268 as an output printer for their loop. The 3268 Printer connects to a 4300 or 8100 processor through a directly or data-link attached loop.

This publication presents introductory and reference information on the 3268 Printer. It describes the capabilities and general functions of the printer, including the printing method, speed (throughput), color printing, programmable symbols, attachment to a loop, 3268 commands, printer components, and printer controls.

GA27-3428

GUIDE 3710 NETWORK CONTROLLER HOST

This publication describes how to operate a 3710 from the host location and diagnose problems involving the 3710 or its attached devices. It also describes the dump format of 3710 configuration data and the sense codes that are displayed for the 3710 at the Network Communications Control Facility (NCCF) console, as well as request and response units for the 3710.

This publication is intended primarily for network operators. The reader should know how to control the network using NCCF and should have experience in responding

to network problems. If the Network Problem Determination Application (NPDA) is installed, the reader should know how to use it for network problem determination. The reader should understand the concepts of Systems Network Architecture (SNA) and the basic requirements of defining a network to the Advanced Communications Function for the Network Control Program (ACF/NCP).

The reader should also be familiar with the functions and services provided by the 3710 Network Controller as described in 3710 Network Controller Introduction, GA27-3430.

Manual, 3/85  
//16/3710/

GA27-3430

3710 NETWORK GATEWAY INTRODUCTION

This publication summarizes the advantages and applications of the 3710 Network Gateway. It is written for those who will evaluate or plan for the machine.

The Network Gateway is a device that concentrates data from many lines onto one or more lines. It enables SNA and non-SNA devices to communicate, through communication controllers, with SNA program products in an MVS or MVS/XA environment.

Topics covered include the role of the machine in a network, functions and services provided by the Network Gateway, installation, operation and maintenance of the Network Gateway, and enhanced Network Gateway applications provided by network program products installed at the host.

Manual, 8 1/2 x 11 inches, 60 pages, 7/84

3803/3420 MAGNETIC TAPE SUBSYSTEMS

This manual describes the IBM 3803 Model 1 Tape Control and the IBM 3420 Models 3, 5, and 7 Magnetic Tape Units. The 3803 Model 1 tape control provides communication between the tape units and the system input/output interface. The 3420 Models 3, 5, and 7 tape units read and write one-half inch magnetic tape at 75, 125, and 200 inches per second respectively. All three basic tape units read and write nine-track, 1,600 bytes per inch (bpi), phase-encoded format. Nine-track, 800 bpi NRZI recording mode is available as a feature on all models. Seven-track, 556/800 bpi NRZI recording mode is an optional feature on all models.

Readers should be familiar with the contents of IBM SYSTEM/360 PRINCIPLES OF OPERATION, Form GA22-6821 (sections on input/output operations). System/370 users should also refer to IBM SYSTEM/370 PRINCIPLES OF OPERATION, Form GA22-7000.

Systems Reference Library Manual, 32 pages //05/3803,3420/

GA32-0021

3803-2/3420 MAGNETIC TAPE SUBSYSTEMS SUBSYSTEM DESCRIPTION

This manual describes the IBM 3803 Model 2 Tape Control and the IBM 3420 Models 3 through 8 Magnetic Tape Units. The 3803 Model 2 Tape Control provides communication between the tape units and the system input/output interface.

The 3420 Models 3/4, 5/6, and 7/8 read and write one-half inch magnetic tape at 75, 125, and 200 inches per second respectively. The 3420 Models 4, 6, and 8 read and write 9-track 6,250 bytes per inch (bpi) group coded recording (GCR) format.

The basic 3420 Models 3, 5, and 7 read and write nine track, 1,600 bpi, phase-encoded format. Nine track, 800 bpi NRZI recording mode and seven-track 800/556/200 bpi NRZI recording mode are available as features on the 3420 Models 3, 5, and 7 and on the 3803 Model 2.

A reader should be familiar with IBM System/360 Principles of Operation, GA22-6821 (section on I/O operations) and IBM System/370 Principles of Operation, GA22-7000 (section on I/O Operations).

Manual, 60 pages //05/3803,3420/

GA32-0022

3410/3411 MAGNETIC TAPE SUBSYSTEM COMPONENT DESCRIPTION MANUAL

This manual describes the IBM 3410/3411 Magnetic Tape Subsystem, Models 1, 2, and 3. In most instances, operational descriptions are limited to the channel and command level. Operations common to all I/O devices are described in IBM System/360 Principles of Operation, Form GA22-6821, and IBM System/370 Principles of Operation, Form GA22-7000.

Subjects covered include keys and lights, tape handling procedures, status and sense information, and error recovery procedures.

Systems Programmers who are writing programs for magnetic tape  
Systems engineers who are planning installation using magnetic tape  
Sales personnel

3850 MASS STORAGE SYSTEM (MSS) INTRODUCTION AND PREINSTALLATION PLANNING

This publication contains general information describing the

physical characteristics of the IBM 3850 Mass Storage System (MSS), and a general description of the programming support provided for the Mass Storage System by OS/VS1 and OS/VS2. This publication provides you with an introductory knowledge of the Mass Storage System and also provides you with preinstallation planning information. The information in this publication is directed toward data processing managers, space managers, and system programmers.

8809 MAGNETIC TAPE UNIT INSTALLATION MANUAL - PHYSICAL PLANNING

This manual is provided for IBM personnel and customers who will assist in planning the installation of 8809 Magnetic Tape Units, attached to either an IBM 4331 Processor or an IBM 8100 Information System. The manual contains a plan view of 8809 installation, a table listing 8809 specifications, and cable order information.

GA33-0001

3875 MODEM USER'S GUIDE

In this publication the 3875 Modem is described, and interface details, installation planning, and operating and operator maintenance procedures are given. Differences between operation in the USA and other countries are described in the appropriate parts of the publication, and a summary is given in an appendix.  
The content is intended for:

- o Systems Engineers
- o Installation Planning Engineers
- o Operators

The information for systems engineers presupposes a knowledge of teleprocessing, but the information for installation planning engineers and operators requires no such understanding.

Manual, 78 pages, 6/76  
//16/3875/

GA33-0002

3874 MODEM USER'S GUIDE

This publication is primarily intended for system planners, operators, systems engineers, installation planners and

supervisory personnel. It is also required for its operating procedures by IBM customer engineers who must maintain the IBM 3874 Modem.

The publication describes the 3874 Modem, which can operate on non-switched and switched lines at a speed of 4800 or 2400 BPS and is in four main parts:

- Part 1 describes (in general terms) the 3874, with planning and equipment considerations
- Part 2 shows the operator controls and gives the operating and operator maintenance procedures
- Part 3 describes (in detail) the 3874 giving functional description, interface specifications strapping options, physical installation specifications, and communication channel specifications.
- Part 4 summarizes counting differences, gives abstracts from the communication channel specifications, and describes switched network back-up operation with BTAM.

The information for Part 3 for systems engineers presupposes a knowledge of teleprocessing, but the information for installation planning engineers and operators requires no such understanding.

Manual, 8 1/2 x 11 inches, 102 pages, 4/77  
//16/3874/

## SA33-0010

INTRODUCTION TO THE 3725 MODEL 1 COMMUNICATION CONTROLLER

This publication describes the 3725 Communication Controller and the 3726 Communication Controller Expansion. It is intended for data processing management, teleprocessing specialists, programmers, operators, and maintenance personnel.

Manual, 8 1/2 x 11 inches, 96 pages, 10/84  
//09/3725/

## SA33-0012

3725 MODEL 1 COMMUNICATIONS CONTROLLER CONFIGURATION GUIDE

This publication is a guide for selecting a 3725/3726 Communication Controller and Expansion configuration. The purpose of the publication is to give the structure of the 3725/3726, explaining what the 3725 and 3726 features do and how they are related and to explain how these features should be ordered to meet the customer's requirements. It is assumed that the user of this publication has become familiar with the subject by reading 3725 Model 1 Communication Controller, Introduction, GA33-0010. familiar with the subject by reading 3725 Model 1 Communication Controller, Introduction, GA33-0010.

//09/3725,3725-001/

## GA33-0013

3725 COMMUNICATION CONTROLLER PRINCIPLES OF OPERATION (CURRENT RELEASE)

This publication is intended to help users to write a control program or modify a supplied Network Control Program or Emulation Program. The reader should have an understanding of basic data communication and a thorough knowledge of System/370 channel operations.

This publication can be used for both the 3725 and 3720/3721 Communication Controllers. Any information that refers to one and not the other is noted. The Introduction Manual for each Communication Controller gives specific characteristics for the system described.

Manual, 8 1/2 x 11 inches, 482 pages, 06/85  
//09/3725/

## GA33-0014

3725 COMMUNICATION CONTROLLER PROBLEM DETERMINATION AND EXTENDED SERVICES (CURRENT RELEASE)

This publication is designed to help the customer operator to perform daily 3725 operations; that is, power on and initialization and customer teleprocessing specialists to identify and fix 3725 problems. This publication incorporates information previously available in GA33-0027, 3725 Wrap Test.

Manual, 8 1/2 x 11 inches, 602 pages, 7/86  
//16/3725/

## GA33-0015

3727 OPERATOR CONSOLE REFERENCE AND PROBLEM ANALYSIS GUIDE

This manual is intended primarily for the customer's operator. It describes how to operate the 3727 Operator Console, and how to interpret and handle the messages displayed by the 3727 in normal and test operation. It also gives the problem analysis procedures for identifying which element (keyboard, logic, or video) is faulty when the 3727 is found failing by the problem determination procedures given in the IBM 3725 Communication Controller, Operating Guide, GA33-0014.

Manual, 50 pages, 9/83  
//16/3725/

## GA33-0017

3725 MODELS 1 AND 2 COMMUNICATION CONTROLLER ORIGINAL EQUIPMENT MANUFACTURER'S INFORMATION

This publication provides information to assist customers and non-IBM engineers in selecting or designing compatible interfaces that can be attached to the 3725 Communication Controller.

Manual, 8 1/2 x 11 inches, 58 pages, 6/85  
SLSS: ORDER NO. SUBSCRIPTION ONLY

## GA33-0018

7427 CONSOLE SWITCHING UNIT, CUSTOMER INFORMATION MANUAL

This manual provides the user with the following information about the IBM 7427 Console Switching Unit: General information about its use and operating environment; A description of its controls and indicators; and Physical planning information.

Manual, 8 1/2 x 11 inches, 20 pages, 9/83  
//09/7427/

3725 COMMUNICATION CONTROLLER (VHSA)

This publication describes the Very High Speed Adapter (VHSA) RPOs. It is intended for data processing management, teleprocessing specialists, programmers, operators, and maintenance personnel.

Manual, 8 1/2 x 11 inches, 24 pages, 8/84  
//14/3725/

## GA33-0036

5865, 5866, 5868 MODEMS DESCRIPTION

This publication describes the use of 5865-1 and 5866-1 stand-alone modems and 5868-51 and 5868-61 rack-mounted modems in user application networks, including options, interfaces, and problem determination procedures. Site preparation requirements for these modems are described in the associated Planning and Site Preparation Guides.

This publication is intended for managers and planners who are familiar with networks and who are considering the installation of a data communications network using modems.  
Manual, 8 1/2 x 11 inches, 54 pages, 6/85

## GA33-0044

3725 COMMUNICATION CONTROLLER OPERATOR'S GUIDE (CURRENT RELEASE)

This publication is designed to enable personnel without specialist knowledge to carry out routine daily operations with the 3725 Communication Controller, and to know when to seek expert help.

Appendixes include a summary of the messages and codes which may be displayed, and what action to take if they are, and a description of the control panel.

Manual, 8 1/2 x 11 inches, 32 pages, 06/85  
//16/3725/

## GA33-1506

S/370 MODEL 125 FUNCTIONAL CHARACTERISTICS

This manual contains information on the operations that can be performed on the System/370 Model 125, including channel and I/O operations.

The Model 125 is a general purpose data processing system, controlled from a central processing unit, with a direct attachment for disk drives as a standard feature. It can be equipped with a multiplexer channel and with integrated attachments and adapters for magnetic tape units, card I/O devices, a printer, and teleprocessing devices.

The manual describes the basic architecture and features of the central processing unit, and the channel characteristics.

The intended readership consists mainly of systems analysts evaluating the capabilities of the Model 125 in terms of its manual and program operations, and of system programmers writing channel programs or operating systems for the Model 125. The manual is only of limited use to application programmers because it contains little information related to programming languages.

The first main section of the publications, "System Control," describes the architectural features such as the program status word control registers, and fixed areas in main storage, and gives details of mode selection and other manual operations. The second main section describes the channel characteristics, and specifies the commands, status and sense information of the natively attached I/O devices. A separate chapter describes the teleprocessing attachment. Instruction timings are listed in an appendix.

3125 PROCESSING UNIT INTEGRATED COMMUNICATIONS ADAPTER, CONFIGURATOR

System/370-125 Integrated Communications Adapter Configurator consists of a number of text pages and overlays to be used when selecting a System/370 Model 125 teleprocessing configuration. The system/370 Model 125 Integrated Communications Adapter is a teleprocessing attachment that can serve up to six binary synchronous lines and up to sixteen start/stop (asynchronous) lines. The publication is intended to be used by IBM marketing representatives, or experienced customer personnel, when detailed information is required about line speeds,

interface types, line control types load factors and the line adapters and their interrelationship. Feature and specified codes are also given for ordering purposes. Textbook, 54 pages, 40 acetate overlays  
3125/C/00//

## GA33-1509

OPERATOR'S LIBRARY: SYSTEM/370 MODEL 125 PROCEDURES

This manual is intended for operating personnel using the System/370 Model 125.

The manual is divided into four sections: The Introduction, The Operation Console, Operation Actions and the Appendix. The section on the operator console describes the hardware and the facilities available for the manual control of the system. The section on the operator actions describes how the facilities are used, how to handle unexpected situations, and how to recover from a fault. The appendix provides reference information for the handling of I/O devices that can be directly attached (no control unit or channel is needed) to the Model 125. Restart procedures for the 2560 multifunction Card Machine, attached directly to the Model 125, are also given.  
Manual, 120 pages  
3125//16//

## GA33-1510

S/370 MODEL 115 FUNCTIONAL CHARACTERISTICS

This publication describes the characteristics of the IBM System/370 Model 115, including the central processing unit, multiplexer channel, direct disk attachment, and the integrated attachments and adapters for other input/output devices.

Its main purpose is to give systems analysts an understanding of the structure, features, and operations of the system. The manual also provides system programmers with information which is essential when writing and maintaining channel programs and operating systems for the System/370 Model 115.

In the six chapters of the manual, the characteristics of the Model 115 are described in terms of:

1. The basic system structure
2. Main storage addressing
3. The operations which can be performed and the means of manual and program control.
4. Compatibility features
5. The commands, status and sense information for input/output devices attached other than through the multiplexer channel.
6. The characteristics of the integrated communications adapter.

Appendixes A, B, and C provide (respectively) code tables for the integrated communications adapter, instruction timings, and an example procedure for conversion from 2311 Model 1s to a 3340 disk subsystem. Appendix D gives some information on magnetic tape unit compatibility. Appendix E gives definitions of the abbreviations and special terms used in this manual.

The reader is assumed to be conversant with the IBM System/370 installation sets, data formats, channel operations, and basic programming concepts such as status switching and interruption.

## GA33-1512

S/370 MODEL 125 CHANNEL CHARACTERISTICS

This manual describes how the effects of imposing loads on the channels of the IBM System/370 Model 125 can be checked. The book is intended for physical planning engineers and systems analysts who wish to check that a proposed configuration of input/output devices will work satisfactorily in the System/370 Model 125.

The manual is divided into four sections. Section one describes the channels in terms of type, theoretical data rates, and the effects of loading. Section two describes how to test for data overrun, and how to assign priorities to devices on the byte multiplexer channel. Section three describes how the interference of the activities of the channels with the IPU can be assessed. Section four describes the concept of channel utilization.

Before using this manual the reader should understand input/output operations for the Model 125 as described in: IBM System/370 Model 125 Functional Characteristics, GA33-1506  
IBM System/370 Principles of Operation, GA22-6821  
IBM System/370 Principles of Operation, GA22-7000  
Manual, 36 pages

## GA33-1513

3115 PROCESSING UNIT INTEGRATED COMMUNICATIONS ADAPTER, CONFIGURATOR

Consists of a number of text pages and overlays to be used when selecting a System/370 Model 115 teleprocessing configuration. The System/370 Model 115 Integrated Communications Adapter is a teleprocessing attachment that can serve up to five binary synchronous lines and up to eight start/stop (asynchronous) lines. The publication is intended to be used by IBM marketing representatives, or experienced customer personnel, when detailed information is required about line speeds, interface types, line control types load factors and the line adapters and their interrelationship. Feature and specified codes are also given for ordering purposes.

Manual  
3115//00//

## GA33-1514

OPERATOR'S LIBRARY SYSTEM/370 MODEL 115 PROCEDURES

This manual provides operating and reference information for operators of the IBM System/370 Model 115. The reader is assumed to have a working knowledge of Introduction to IBM Data Processing Systems, GC20-1684, and some previous operating experience on either a similar system or on related data processing equipment.

This manual describes how to operate the system hardware of the IBM 3115 Processing Unit.

The manual is divided into:

1. Preliminary information, including action to be taken in an emergency.
2. "Introduction", which briefly describes the system
3. "Facilities", which describes the preparation of the keyboard and video display screen.
4. "Actions", which briefly describes the preparation of the

system for operation, and the handling of unexpected situations which may occur during preparation and operation.

5. "Appendix", provides
  - a. Reference information on the:
    - o Direct disk attachment
    - o Magnetic tape adapter
    - o Integrated communications adapter
    - o Integrated console printer attachment
    - o Integrated printer attachment
    - o Integrated card I/O attachment.
  - b. Restart Procedures for the IBM 2560 Multi-Function Card Machine (MFCM) and the IBM 5425 Multi-Function Card Unit (MFCU).
  - c. A description of the choices on the "Line Modes for ICA" displays.
  - d. Conversion tables.
6. A glossary, bibliography, and index.  
Systems library manual, 130 pages  
3115//16//

## GA33-1515

**3203 PRINTER COMPONENT DESCRIPTION AND OPERATOR'S GUIDE**  
This manual provides operating procedures and programming information for the IBM 3203 Printer, Models 1, 2, 3, and 4 for operators and programmers.  
Manual, 8 1/2 x 11 inches, 154 pages, 3/83  
//16/3203/

## GA33-1516

**S/370 MODEL 115 CHANNEL CHARACTERISTICS**  
This manual describes how the effects of imposing loads on the channels of the IBM System/370 Model 115 can be checked. The book is intended for physical planning engineers and systems analysts who wish to check that a proposed configuration of input/output (I/O) devices will work satisfactorily in the System/370 Model 115.

The first section of the book describes the types of channels to which I/O devices can be connected, the theoretical data rates of the channels, and the possible effects of imposing heavy I/O loads on those channels. The effects considered are: data overrun, loss of device performance, channel interference with the machine instruction processor (MIP), program overrun, and excessive channel utilization.

The second section gives the procedures for testing data overrun on the byte-multiplexer channel. This section also includes a description of how to assign priorities to devices on the byte-multiplexer channel.

The third section deals with interference with the MIP that is caused by activities on the channels, and describes how the interference can be assessed. The same section also shows how to check for the possibility of program overrun.

The fourth section describes the concept of channel utilization.

Before using this manual, the reader should have a thorough understanding of input/output operations for the Model 115 as described in: IBM System/370 Model 115 Functional Characteristics, GA33-1510. IBM System/370 Principles of Operation, GA22-7000.

When calculating for data overrun on the byte multiplexer channel, a special worksheet is required: IBM System/370 Model 115 Byte-Multiplexer Channel: Load Sum Worksheet GX33-6007, available in pads of 50.  
System library manual, 44 pages  
3115//01//

## GA33-1519

**3203 PRINTER REFERENCE SUMMARY FOR OPERATORS**  
Provides quick reference information for operators on 3203 Printer, which can be attached to the System/370 Models 115

and 125.

Consists of extract from GA33-1515 and describes forms loading procedure, operator controls, stacker settings, keys, lights and switches, and correction of forms jam. In handy pocket format for use at the machine.  
Reference Card, 2 sides 18-1/8 x 8-1/2 inch, 10 panels  
//16/3203/

## GA33-1520

**S/370 MODEL 115 CHANNEL CHARACTERISTICS FOR SYSTEMS WITH 3115-2 PROCESSING UNIT**

This manual describes how to check the effects of imposing loads on the channels of an IBM 3115-2 Processing Unit in an IBM System/370 Model 115. The book is intended for physical planning engineers and systems analysts who wish to check that a proposed configuration of input/output (I/O) devices will work satisfactorily in the System/370 Model 115.

The first section of the book describes the types of channels to which I/O devices can be connected, the theoretical data rates of the channels, and the possible effects of imposing heavy I/O loads on those channels. The effects considered are: data overrun, loss of device performance, channel interference with the instruction processing unit (IPU), program overrun, and excessive channel utilization.

The second section gives the procedures for testing data overrun on the byte-multiplexer channel. This section also includes a description of how to assign priorities to devices on the byte-multiplexer channel.

The third section deals with interference with the IPU that is caused by activities on the channels, and describes how the interference can be assessed. The same section also shows how to check for the possibility of program overrun.

The fourth section describes the concept of channel utilization.

Before using this manual, the reader should have a thorough understanding of input/output operations for the 3115-2 as described in:

IBM System/370 Model 115 Functional Characteristics, GA33-1510,

IBM System/370 Principles of Operation, GA22-7000.

Detailed information on the standard I/O interface is given in IBM System/360 and System/370 I/O Interface Channel to Control Unit, Original Equipment Manufacturer's Information, GA22-6974.

When calculating for data overrun on the byte-multiplexer channel, a special worksheet is required: IBM System/370 Model 115 Byte-Multiplexer Channel: Load Sum Worksheet, GX33-6007, available in pads of 50, or an equivalent worksheet from a System/360 machine may be used.  
Manual, 44 pages, 8/76  
3115//01//

## GA33-1521

**3203 MODEL 3 PRINTER REFERENCE SUMMARY FOR OPERATIONS**

Provides quick reference information for operators on 3203 Printer Model 3, which can be attached to the IBM 3777 Communication Terminal. Consists of extract from GA33-1515 and describes forms loading procedure, operator controls, stacker settings, keys, lights and switches, and correction of forms jam.

In handy pocket format for use at the machine.  
Reference card, 18 1/2 x 8 1/2 inches, 10 panels  
//16/3777/

## GA33-1523

**4321/4331/4341/4361 PROCESSORS SUMMARY AND INPUT/OUTPUT DATA COMMUNICATION CONFIGURATOR**

This publication gives general understanding of 4321/4331/4341/4361 Processors and describes their structure and features.

The configuration lists all locally attachable I/O devices and shows how they can be attached to the processors.  
Manual, 8 1/2 x 11 inches, 82 pages, 12/83  
4361,4331,4341,4321//00//

## GA33-1525

4321/4331 PROCESSORS OPERATING PROCEDURES AND PROBLEM DETERMINATION GUIDE

This manual describes how to operate the IBM 4321/4331 Processors. You are assumed to have a knowledge of Introduction to IBM Data Processing Systems, GC20-1684, and some experience in operating a similar computing system.  
Manual, 8 1/2 x 11 inches, 160 pages, 10/82  
4331//16//

## GA33-1526

4321/4331 PROCESSORS FUNCTIONAL DESCRIPTION & PROCESSOR COMPL 4321/4331 PROCESSORS FUNCTIONAL DESCRIPTION AND PROCESSOR

The characteristics of the IBM 4321/4331 Processors with its I/O adapters and standard channels are described in this publication for the use of system analysts and programmers. The reader is assumed to have a working knowledge of IBM 4300 Processors Principles of Operation for ECP5: VSE Mode, GA22-7070 and IBM System/370 Principles of Operation, GA22-7000, and to have had programming experience with other 4300 Processors or with System/360 or System/370.  
Manual, 8 1/2 x 11 inches, 246 pages, 12/82  
4331,4321//01//

## GA33-1527

4321/4331 PROCESSORS GROUPS 1 CHANNEL CHARACTERISTICS

This manual is provided mainly for users of the System/360 the channels of IBM 4321/4331 Processors can be checked. The book is intended for physical planning engineers and systems analysts who wish to check that a proposed configuration of input/output devices will work satisfactorily in IBM 4321/4331 Processors.  
Manual, 8 1/2 x 11 inches, 106 pages, 10/82  
4331,4321//01//

## GA33-1528

4321 AND 4331 PROCESSORS COMPATIBILITY FEATURES

This publication is provided mainly for users of the System/360 and System/370 with attached 2311, 2314, 2319, 3330, or 3340 disk devices, who wish to transfer their current programs to the 4321/4331 Processors. The publication also contains information for users of the 1401/1440/1460-series equipment who are transferring programs to the 4321 or 4331 Processors.  
Manual, 8 1/2 x 11 inches, 106 pages 10/82

## GA33-1529

3203 PRINTER MODEL 5 COMPONENT DESCRIPTION AND OPERATOR'S GUIDE

This publication provides reference and operating information for users of the 3203 Model 5 Printer. It is written mainly for systems planners, programmers, and operators, but may also be of interest to systems supervisors and engineers. The publication provides a general introduction to the 3203 Model 5, its components and method of operation, and explains the various operating procedures. The Programming Information section describes the commands used to control the printer, the status and sense information returned to the system, and the error recovery procedures. The reader should be familiar with the system to which the printer is attached. For system and programming information, refer to the publications listed in the

bibliography for the system being used.  
Manual, 8 1/2 x 11 inches, 160 pages, 12/84  
//16/3203/

## GA33-1531

3203 PRINTER MODEL 5 REFERENCE SUMMARY FOR OPERATORS

This publication contains operating information for operators on the 3203-5 printer.  
Reference Card, 8 1/2 x 3 5/8 inches, 14 panels, 5/84  
//16/3203/

## GA33-1532

4321/4331 PROCESSORS MODEL GROUP 1: CHANNEL LOAD SUMMARY WORKSHEET

This form is provided for use when calculating the channel load on IBM 4321/4331 Processors Model Group 1. The use of the form is explained in detail in IBM 4321/4331 Processors Channel Characteristics Form, GA33-1527.  
Padded form, 11 x 17, w/m 50, 10/82  
SLSS: ORDER NO. SUBSCRIPTION ONLY

## GA33-1535

4331 PROCESSOR MODEL GROUP 2 CHANNEL CHARACTERISTIC

This manual describes how the effects of imposing loads on the channels of the IBM 4331 Processor Model Group 2 can be checked. The book is intended for physical planning engineers and systems analysts who wish to check that a proposed configuration of input/output (I/O) devices will work satisfactorily with the IBM 4331 Processor Model Group 2.  
Manual, 8 1/2 x 11 inches, 178 pages, 10/80  
4331//01//

## GA33-1536

4321/4331 PROCESSORS DISPLAY/PRINTER ADAPTER COMPONENT DESCRIPTION

The manual provides management, programmers, and system analysts with detailed reference material relating to the IBM 3270 devices attached to 4321/4331 Processors.  
Manual, 8 1/2 x 11 inches, 110 pages, 12/82  
4331,4321//01//

## GA33-1538

4321/4331/4361 PROCESSORS MULTIUSE COMMUNICATIONS LOOP OPERATING PROCEDURE

This publication is intended for 4321/4331/4361 system operators, terminal operators, system engineers, and programmers. It provides the information required to control the processor loop adapter.  
Manual, 8 1/2 x 11 inches, 172 pages, 2/84  
4361,4331,4321//16//

## GA33-1539

4321/4331/4361 PROCESSORS DASD ADAPTER FOR 3370 DIRECT ACCESS STORAGE REFERENCE

With the fifth edition, information on 3370 Model 2 has been added. This publication describes the functions of the 3370 Direct Access Storage when attached to the 4321/4331/4361 Processors. It is for readers who already have a knowledge of direct access storage devices and require reference material on 4321/4331/4361 installations. The publication describes the channel commands, unit and channel status, and sense bytes which apply when the 3370 is under control of the DASD adapter. apply when the 3370 is under control of the DASD adapter.  
Manual, 8 1/2 x 11 inches, 58 pages, 9/84  
4361,4331,4321//07/3370/

## GA33-1540

4321/4331/4361 PROCESSORS LOOP ADAPTER PROBLEM DETERMINATION GUIDE

This publication describes characteristics of the 4321/4331/4361 Processors for system analysts and programmers. Lists architecture exceptions and gives timing formulas for machine instructions.  
Manual, 8 1/2 x 11 inches, 180 pages, 2/84  
4361,4331,4321//16//

## GA33-1545

4321/4331/4361 PROCESSORS, REMOTE OPERATOR CONSOLE FACILITY (ROCF)

This manual contains a description of operating procedures and provides maintenance hints for those familiar with MVS OCPF and/or PVM. The manual tells how to operate a 4331/4321 remote processor via a host system.  
Manual 8 1/2 x 11 inches, 54 pages, 9/83  
4361,4331,4321//16//

## GA33-1550

4331 PROCESSOR MODEL GROUP 11 CHANNEL CHARACTERISTICS

This manual allows the reader to check whether a specific I/O configuration on the 4331 Model Group 11 processor will run without incurring overrun.

The manual addresses only the skilled engineer or experienced system analyst. Sample calculations and all relevant data for computing the overrun risks are contained in appendices.

Manual, 8 1/2 x 11 inches, 155 pages, 2/82  
4331//01//

## GA33-1551

4250 PRINTER OPERATOR'S GUIDE

This publication provides operating and reference information for user's of the 4250 Printer. It is written for operators.

The publication provides a general introduction to the 4250 Printer, its components and method of operation and explains the various operating procedures.

Manual, 8 1/2 x 11 inches, 52 pages, 12/84  
//16/4250/

## GA33-1552

4250 PRINTER PLANNING AND SITE PREPARATION

This publication provides reference and programming in planning for the setting-up of the 4250 Printer and for National Service Division installation planning representatives.

Manual, 8 1/2 x 11 inches, 48 pages, 12/84  
//15/4250/

## GA33-1554

4250 PRINTER COMPONENT DESCRIPTION AND PROGRAMMING INFORMATION

This publication provides reference and programming information for users of the IBM 4250 Printer. It is mainly written for system planners and programmers, but may also be of interest to system supervisors and engineers.

The manual provides a general introduction to the IBM 4250 Printer, its components and method of operation. It also describes the commands used to control the printer, the status and sense information returned to the system and the error recovery procedures.

Manual, 8 1/2 x 11 inches, 42 pages, 7/83  
//03/4250/

## GA33-1566

4361 PROCESSOR FUNCTIONAL CHARACTERISTICS

This publication contains information about the 4361 Processor features, configurations, input/output characteristics, and control unit functions. It is intended for those users who have to do system evaluation, system programming, and education. Only items that are unique to the 4361 Processor Model Groups 3, 4 and 5 are discussed in detail.

Readers of this publication should be familiar with 4361 Processor Summary, GA33-1572, 4300 Processors Principles of Operation for ECPS: VSE Mode, GA22-7070, and System/370 Principles of Operation, GA22-7000.

Manual, 8 1/2 x 11 inches, 64 pages, 9/84  
4361//01//

## GA33-1567

4361 PROCESSOR CHANNEL CHARACTERISTICS

This publication shows which types of channels and direct attachments are available at the various processor models and what their data rates are. Easy-to-follow procedures for checking configuration for overrun-free operation, and advice on which device types to connect to which channel are also contained.

Manual, 8 1/2 x 11 inches, 46 pages, 9/84  
4361//01//

## GA33-1569

4361 PROCESSOR DASD COMPATIBILITY FEATURE

This publication is intended for users of the System/360 and System/370 with attached 2311, 2314, 2319, 3330, or 3340 disk devices, who wish to transfer their current programs to the 4361 Processor for operation by disk devices with fixed block architecture.

Manual, 8 1/2 x 11 inches, 3/84  
4361//07//

## GA33-1570

4361 PROCESSOR OPERATING PROCEDURES

This publication is used to operate the 4361 processors. It will automatically be shipped with the 4361 processor, as part of the shipping group.

Related publications are 4361 Operating Procedures, GA33-1570, 4361 Processor System Event Trace and System Status Display, GA33-1581, and 4361 Processor Remote Operator Console Facility (ROCF), GA33-1582.

Manual, 8 1/2 x 11 inches, 208 pages, 12/84

## GA33-1571

4361 PROCESSOR COMMUNICATIONS ADAPTER REFERENCE MANUAL

This publication shows the five different line control procedures (Start/Stop, TTY, BSC, SDLC, and X.25) that are available and explains in detail the control characters and channel command words (CCMs) used in each. Also explained is the X.21 switched line protocol as well as the interrelation between physical interfaces and line control procedures. Detailed error reports (sense codes) are given for each normal and abnormal situation. This information is helpful for anyone concerned with writing or maintaining access procedures (software).

Manual, 8 1/2 x 11 inches, 178 pages, 9/84  
4361/C/09//

## GA33-1572

4361 PROCESSOR SUMMARY

This publication provides information on extended Workstation Adapter capabilities, Communications Adapter increased data rate, and IX1370 programming support is supplied. Also, minor additions and corrections are made

GA33

throughout the manual.  
Manual, 8 1/2 x 11 inches, 38 pages, 9/84

GA33-3007

S/370 MODEL 135 TERMINAL ADAPTER TYPE I MODEL II (FOR ICA): SPECIAL FEATURE DESCRIPTION SYSTEM LIBRARY

This manual provides information for writing channel programs for the Terminal Adapter Type I Model II subfeature in the Integrated Communications Adapter (ICA) base feature of the IBM System/370 Model 135.

The manual is intended for applications programmers who use the assembler language and who are familiar with input/output programming as described in IBM System/360 Principles of Operation (GA22-6821) and IBM System/370 Principles of Operation (GA22-7000).

The Terminal Adapter Type I Model II subfeature covered by this manual allows the Model 135 to communicate with remote start/stop terminals such as the IBM 1050 Data Communications Terminals, and IBM System/7.

The first section of the manual outlines the relationship of the ICA to the CPU main storage and to the external communication link. Subsequent sections give details of transmission codes, methods of error detection, special characters, status and sense information, and communication procedures. Appendixes give information about the particular requirements of the remote devices.

GA33-3008

IBM SYSTEM/370 MODEL 135 TERMINAL ADAPTER TYPE III FOR ICA: SPECIAL FEATURE DESCRIPTION

This manual provides information for writing channel programs for the Terminal Adapter Type III subfeature in the integrated communications adapter (ICA) base feature of the IBM System/370 Model 135.

The manual is intended for applications programmers who

use assembler language and who are familiar with input/output programming as described in IBM System/360 Principles of Operation (GA22-6821) and IBM System/370 Principles of Operation (GA22-7000).

The Terminal Adapter Type III subfeature allows the Model 135 to communicate with remotely sited IBM 2260 or 2265 Display Stations, via IBM 2848 or 2845 Display Controls, respectively.

The first section of the manual outlines the relationship of the ICA to the CPU main storage and to the external communication link. Subsequent sections give details of transmission codes, methods of error detection, special characters, commands, status and sense information, and communication procedures.

System Library Manual, 36 pages

GA33-3009

SYSTEM/370 MODEL 135 SYNCHRONOUS DATA ADAPTER TYPE II (FOR ICA): SPECIAL FEATURE DESCRIPTION

This manual provides reference information for programmers writing channel programs for the Synchronous Data Adapter Type II subfeature in the Integrated Communication Adapter (ICA) feature of the IBM System/370 Model 135.

The Synchronous Data Adapter Type II subfeature allows the Model 135 to communicate with other processing systems and terminals that operate under binary synchronous communications procedures.

The manual is intended for applications programmers who use assembler language and who are familiar with input/output programming as described in IBM System/360 Principles of Operation (GA22-6821) and IBM System/370 Principles of Operation (GA22-7000). The reader should also be familiar with the basic principles of binary synchronous communications, such as is given in General Information - Binary Synchronous Communications (GA27-3004).

The first section of the manual outlines the relationship of the ICA to the CPU main storage and to the external communication link; the second section summarizes the principles of binary synchronous communications. Subsequent sections give details of the transmission codes used in the Synchronous Data Adapter Type II, the error detection methods used, control characters, commands, status and sense information, and operations of the adapter.  
Manual, 64 pages

GA33-3010

S/370 MODEL 135 CHANNEL CHARACTERISTICS

This manual provides information needed for checking that a proposed configuration of I/O devices on the channels of IBM System/370 will work satisfactorily. The book is intended for use in systems assurance work at the planning stage.

Procedures with examples are given for testing the effects of imposing heavy loads on the Model 135 channels. The effects covered are: data overrun, loss of device performance, channel interference with the CPU, program overrun, and excessive channel utilization.

Additional but related topics covered in the book are: (1) priority sequence of devices on the byte-multiplexer channel (with examples that include the 1419 Magnetic Character Reader with expanded capability); (2) the effects of block-multiplexing on channel busy time and percentage channel utilization; and (3) channel programming conventions, upon which the validity of test procedures in the book is based.

Prerequisite Publications

The reader must be familiar with System/370 input/output operations as presented in:

IBM System/360 Principles of Operation GA22-6821  
IBM System/370 Principles of Operation GA22-7000  
IBM System/370 Model 135 Functional Characteristics

GA33-3005  
 IBM System/360 and System/370 Interface Channel Unit  
 Original Equipment Manufacturers Information GA22-6974.  
 For testing data overrun on the byte-multiplexer channel,  
 the following special worksheet is required: IBM System/370  
 Model 135 and Model 138 Byte-Multiplexer Channel: Load Sum  
 Worksheet, GX33-6004.  
 Manual, 8 1/2 x 11 inches, 110 pgs  
 3135//01//

## GA33-3014

S/370 MODEL 135 CONFIGURATOR  
 This publication lists the standard, optional, and selective  
 features of the IBM System/370 Model 135, and describes how  
 these features attach to the System/370 Model 135. Details  
 of feature numbers, prerequisite features, programming  
 support, and control storage requirements are also given.  
 This configurator is intended for IBM marketing  
 personnel, and for customer systems planners; that is, it is  
 intended for readers who are involved with planning Model  
 135 system configurators and who need to know how the  
 features and combinations of features can be attached to the  
 Model 135. To make the best use of this configurator, the  
 reader should be familiar with the information in IBM  
 System/370 Model 135 Functional Characteristics.  
 This configurator lists the Model 135 features under the  
 following general headings:

- o standard, optional, and selective features
- o instruction sets
- o channels
- o integrated adapters

Manual, 44 pages

## GA33-3015

REFERENCE MANUAL FOR IBM 5985 COLOR DISPLAY CONTROL UNIT  
 MODEL H02 AND IBM 5941 DISPLAY CONSOLE, MODEL H02 (SEE  
 ABSTRACT FOR RPQS)

U.S.A. Canada: RPQs Y94176 and 7H0014. Other countries:  
 RPQs 7H0020 and 7H0023. Provides reference information  
 for operating and programming the color display subsystem,  
 which attaches to IBM System/370. The subsystem displays  
 text and graphic data on color television monitors that are  
 provided by the user.

The manual has two sections. The first section  
 describes the operation of the keys, pushbuttons and  
 lights of the 5941-H02 Display Console, and gives corrective  
 actions to be taken in unexpected situations. It is  
 intended for operators who have a working knowledge of  
 Introduction to IBM DTA Processing Systems, 6L20-1684.

The second section, which is for programmers,  
 describes how to generate a character set, manipulate the  
 information on the screen, control some of the lights on  
 the display console for operator guidance and simulate  
 messages from the display console to check its operation.

The commands and the status and sense information  
 are described for both local (channel-attached) and remote  
 (BSC) control units.

For a local control unit, the programmers is assumed to be  
 familiar with channel programming for System/370.

For a remote control unit, the programmer is assumed to be  
 familiar with General Information Binary Synchronous  
 Communications, GA27-3004.

Transmission codes for a remote control unit are  
 described briefly.

Appendix A contains physical planning information,  
 Dimensions, service ares, and user supplied cables are  
 specified for the display console and control unit.

Appendix B lists the RPQ numbers that must be quoted in  
 an order for the color display subsystem and its optional  
 features; and shows possible configurations of the subsystem  
 components.

Manual, 8 1/2 x 11 inches, 50 pages, 3/75

## GA33-3016

3740 DATA ENTRY SYSTEM SPECIAL SELF-CHECK NUMBER DEVICE  
 CUSTOM UNIT DESCRIPTION

This publication describes the Self-Check Number Device  
 Special Arithmetic feature which is available on the IBM  
 3741 Data Station, Models 1 and 2, and the IBM 3742 Dual  
 Data Station. The feature implements many special  
 algorithms by utilizing the modulus 11 program field  
 definition characters.

For U.S. and Canada: RPQs NE0408 (3742) and  
 Z07465 (3741)

For other countries: X10260 (3741/3742)  
 Systems Library manual, 28 pages  
 SLSS: ORDER NO. SUBSCRIPTION ONLY

## GA33-3035

AN INTRODUCTION TO THE IBM 3250 GRAPHICS DISPLAY SYSTEM

This publication provides introductory information about the  
 IBM 3250 Graphics Display System. The information addresses  
 (1) the graphics functions of the 3250 Graphics Display  
 System; (2) the units of the 3250 system; (3) attachment to  
 a System/370; (4) performance considerations;  
 (5) programming support; (6) conversion of 2250 Display Unit  
 Model 33 applications to use the 3250 system; (7)  
 introductory installation planning information.

This publication is intended for customer executives,  
 data processing managers, system programmers, and  
 programmers of graphics applications.

Manual, 8 1/2 x 11 inches, 84 pages  
 //06/3250,3258/

## GA33-3036

3250 GRAPHICS DISPLAY SYSTEM INSTALLATION MANUAL  
 PHYSICAL PLANNING

This publication contains physical planning information for  
 the IBM 3250 Graphics Display System. It includes  
 dimensions, weights, calling information, service  
 clearances, and electrical and environmental requirements  
 for each unit of the system. The publication is intended  
 for customer's data processing managers, physical planning  
 staff, architects, contractors and technical communications  
 representatives.

Manual, 8 1/2 x 11 inches, 40 pages, 11/83  
 //15/3250,3258/

## GA33-3037

3250 GRAPHICS DISPLAY SYSTEM, COMPONENT DESCRIPTION

This publication contains reference information for users of  
 the IBM 3250 Graphics Display System. The information is  
 primarily intended to assist the user who is writing  
 programs for execution in the 3250 Graphics Display System,  
 but is also of interest to data processing personnel,  
 operators, and engineers who require an understanding of the  
 functions provided by the 3250 system. It is assumed that  
 the reader has a basic knowledge of data processing and of

This publication contains reference information for users of  
 the 3250 Graphics Display System. The information is  
 primarily intended to help the user to write their own  
 application programs. It is also of interest to data  
 processing personnel, engineers and operators who need to  
 understand the functions of the 3250 system. This edition  
 incorporates the functional changes brought about by the  
 introduction of the 3255 Display Control Unit, Model 2.

Manual, 8 1/2 x 11 inches, 144 pages, 9/83  
 //06/3250,3258/

## GA33-3039

3277 DISPLAY STATION, GRAPHICS ATTACHMENT RPQ 7H0284, CUSTOM FEATURE DESCRIPTION

This publication provides information about the Graphics Attachment, RPQ 7H0284, for the IBM 3277 Display Station Model 2. It is intended to be read by data processing managers, systems analysts, system programmers, and programmers of graphics applications.

Chapter 1 provides an overview of the Graphics Attachment RPQ, its features and functions, and some applications for which it might be used. The remaining chapters provide a more detailed description of the product and its programming support.

This information is provided to enable customers:

- To plan for the installation of the product itself and of the graphics workstation that the product would enable the customer to install.
- To understand the architecture so as to undertake any programming that is not provided by the IBM-supplied software.

Manual, 8 1/2 x 11 inches, 114 pages, 4/79

## GA33-3040

AN INTRODUCTION TO THE 8775 DISPLAY TERMINAL

This reference manual provides an introduction to the IBM 8775 Display Terminal for customer executives, organization and methods managers, administrative services managers, data processing managers and planners, and IBM marketing representatives.

Manual, 8 1/2 x 11 inches, 86 pages, 10/82

//09/8775/

## GA33-3041

8775 DISPLAY TERMINAL, CHARACTER SET REFERENCE

This manual provides general reference material about the character sets, alphanumeric keyboards, and input/output (I/O) interface codes (bit patterns) for languages that are available with the IBM 8775 Display Terminal. The manual is intended for management personnel, programmers, and system analysts.

The manual has three chapters:

- Chapter 1 describes the various language character sets for the 8775 Display Terminal
- Chapter 2 describes and illustrates the keyboards that are available for the terminal:
  - Typewriter keyboards
  - Extended typewriter keyboards
  - Data entry keyboards
  - Data entry (high volume) keyboards
  - Japanese (Katakana) keyboards
- Chapter 3 contains:
  - Matrix drawings of the I/O interface codes that support the various keyboards;
  - A table that shows the differences in I/O interface codes for the various national languages;
  - An I/O interface code matrix for the magnetic slot reader.

The reader is assumed to have a general knowledge of display terminals. For further information on the 8775, see An Introduction to the IBM 8775 Display Terminal, GA33-3040. For information about the system to which the 8775 is attached, see An Introduction to the IBM 8100 Information System, GA27-2875.

Manual, 8 1/2 x 11 inches, 94 pages, 10/82

//09/8775/

## GA33-3042

8775 DISPLAY TERMINAL CONFIGURATOR

This publication contains configuration information for the IBM 8775 Display Terminal. The configurator is intended for

customer system planning purposes and for IBM marketing personnel. Chapter 1 introduces the other two chapters and the appendixes; Chapter 2 lists the features and accessories that are available for configurations of the 8775 Display Terminal; and Chapter 3 describes the feature changes that can be made. Appendixes A and B provide indexes of the features.

A prerequisite publication to the configurator is IBM 8100 Information System: Configurator, GA27-2876.

Other related publications are:

- An Introduction to the IBM 8775 Display Terminal, GA33-3040;
- An Introduction to the IBM 8100 Information System, GA27-2875;
- IBM 8775 Display Terminal: Character Set Reference, GA33-3041; and
- IBM 8775 Display Terminal: Site Preparation Guide, GA33-3043.

Manual, 8 1/2 x 11 inches, 48 pages, 5/83

//00/8775/

## GA33-3043

8775 DISPLAY TERMINAL, SITE PREPARATION GUIDE

This guide is intended for those persons concerned with planning and preparing the customer's premises for the IBM 8775 Display Terminal.

Using the information in this guide will help you to ensure that your personnel can unpack, position, setup, and checkout the 8775 Display Terminal. As a result, you will be able to use the 8775 soon after it is delivered. If you later choose to relocate a 8775, your personnel should be able to do that, because the 8775 is designed for setup, relocation, and discontinuance by the customer.

Manual, 8 1/2 x 11 inches, 38 pages, 11/80

//15/8775/

## GA33-3044

8775 DISPLAY TERMINAL COMPONENT DESCRIPTION

This publication describes the 8775 from the point of view of a host programmer, and is not intended to provide operating instructions for the terminal operator. The manual provides sufficient information for an 8775 to be used in a System Network Architecture (SNA) environment, and for application programs to be written using the IBM 8100 Information System.

Manual, 8 1/2 x 11 inches, 338 pages, 12/82

//09/8775/

## GA33-3045

8775 DISPLAY TERMINAL: TERMINAL USER'S GUIDE

Describes all the features and functions of the IBM 8775 Display Terminal. The guide, intended to be used for reference by users of the 8775, includes (1) descriptions of keyboard keys, (2) explanations of indicators and messages displayed, (3) instructions for checking or changing options selected at 8775 setup, and (4) procedures for determining the cause of problems and the appropriate remedial actions to be taken.

Manual, 8 1/2 x 11 inches, 150 pages, 8/82

//16/8775/

## GA33-3049

8775 DISPLAY TERMINAL PROBLEM DETERMINATION GUIDE

Mounted in the keyboard, this document provides quick reference and procedures to assist the operator in (1) determining the cause of problems encountered in operating the 8775 Display Terminal, and (2) solving those problems that do not require technical assistance from a service representative.

Manual, 10 x 1 3/4 inches, 116 pages, 10/82

5275 MACHINE TOOL CONTROL UNIT (MCU) ACCESSORY RPQ D08286:  
GENERAL INFORMATION MANUAL

This publication is intended to be instructional and will introduce the reader to the Machine Tool Control Accessory Unit (D08286) and how it relates to the IBM 5275 and the Machine Tool Control Unit. This publication was written for service personnel and individuals concerned with machine tool control. It is assumed that the reader of this publication is familiar with the IBM 5275 and how it interfaces with the Machine Tool Control Unit. This publication covers the following topics:

- o General description of accessory and associated hardware
- o Functions of accessory D08286
- o Signal considerations
- o Interface specifications
- o MCU Identification
- o Maintenance requirements
- o Installation-physical planning information

Manual, 40 pages

3800 PLOTTING, IFP 5798-AAA DESCRIPTION/OPERATIONS,  
This program description and operations manual describes the general characteristics of the International Field Program, number 5785-AAA. This program makes it possible to process and print drawings on an IBM 3800 Printing Subsystem in a more precise way than on a printer that uses points or asterisks.  
This manual also provides the user with the necessary information allowing him to modify the IFP, in order to adapt it either to specific installation conditions or to special graphic usage. To implement these modifications, however, the user should have a good knowledge of the IBM 3800 Printing Subsystem and the IEBIMAGE Utility Program, see the Reference Manual for the IBM 3800 Printing Subsystem, 6A26-1635.

SYSTEM/370 HIGH-SPEED SEQUENTIAL RETRIEVAL OF IMS DATA BASES VERSIONS 1.2, IFP 5787-LAA, DESCRIPTION/OPERATIONS  
The International Field Program High Speed Sequential Retrieval (HSSR) was designed as high performance option to improve throughput for sequential retrieval of large physical IMS/VS Data Bases.  
The Program Description and Operations Manual of HSSR contains:  
- An Introduction  
- A Functional Description of HSSR  
- A list of supported functions and restrictions  
- A description of how to use HSSR: how to code an application program, how to code a PSB and how to code JCL for the execution of an application program  
- A chapter about performance figures  
- A chapter about installation, maintenance and problem determination  
- Messages and codes.  
It is necessary to have a knowledge of IMS/VS in order to understand this manual.

SYSTEM/370 OS/VS INTERACTIVE PL/I FOR VSPC PL/I PROCESSOR FOR VS PERSONAL COMPUTING (VSPC), IFP 5785-EAB, NOTICE  
This Availability Notice for the International Field Program Interactive PL/I Virtual Storage Personal Computing (VSPC), for the International Field Program, explains the System, Installation and other requirements of this Program.

VSPC PL/I is a single-pass batch compiler which operates under OS/VS1 and OS/VS2 (MVS) VSPC. It provides a subset of the OS PL/I Optimizing Compiler Release 3.0 language level and is compatible at the source statement level with the OS PL/I Optimizing Compiler. VSPC PL/I provides a powerful, easy-to-use, programming language. Its facilities are appropriate to the VSPC interactive environment.

VSPC PL/I is known to VSPC as a Foreground Processor with the name PLI. Thus it is accessible to any users of VSPC.

A primary objective of VSPC PL/I is to provide a straightforward language implementation which is easily invoked and understood.

IBM SYSTEM/370 DOS/VS CICS-IMS ONLINE INTERFACE, INTERACTIVE AND QUEUED EXTENDED 3270 SCREEN SUPPORT, INTERNATIONAL FIELD PROGRAM 5785-DAW, NOTICE  
The CICS-IMS Online Interface (CIMONI) Availability Notice explains the System Features, Installation and other Requirements of this International Field Program, CIMONI. It also gives reference material compatibility.

CIMONI is used to create a link between an IMS/VS DB/DC System and a CICS/DOS/VS System. Each CICS/DOS/VS user benefits from facilities offered by IRSS and has the possibility to communicate with IMS/VS in conversational mode, as well as in batch mode. It is then possible to implement a computer hierarchy, based on the distribution of data and functions.

Flyer, 8 1/2 x 11 inches, 6 pages, 2/78

SB11-5071

SYSTEM/370 CICS-IMS ONLINE INTERFACE PROGRAM DESCRIPTION AND OPERATIONS, INTERNATIONAL FIELD PROGRAM 5785-DAW  
The IBM System/370 CICS-IMS Online Interface Program Description and Operations Manual is designed to be used in conjunction with existing CICS/DOS/VS documentation.

It describes the functions, the installation and the operating procedures of the CICS-IMS Online Interface.

The International Field program contains the information to run a sample problem using the CIMONI features. The reader of this publication should have a basic knowledge of CICS/DOS/VS and be familiar with the CICS/DOS/VS and IMS/VS terminology.

The first part describes the basic structure and operating system requirements of CIMONI and gives functional specifications.

The next part indicates how to write application programs and describes installation procedures with instructions on how to use CIMONI.

Instructions on installing and executing the CIMONI sample programs and a list of usable messages and abend codes are given in the last chapters.

Requisite Publications:

LB11-5072

IBM SYSTEM/370 CICS-IMS ONLINE INTERFACE SYSTEMS GUIDE, INTERNATIONAL FIELD PROGRAM 5785-DAW  
The IBM System/370 CICS-IMS Online Interface Systems Guide provides a description of the internal logic of each CIMONI International Field Program.

It is intended for system programmers in charge of the maintenance of CIMONI systems. To understand this manual, the reader should have a good knowledge of CICS/DOS/VS, be familiar with the usual BTAM line procedures, and have a basic knowledge of IMS/VS.

The manual describes the functional structure of CIMONI and the relationship between CICS/DOS/VS, IMS/VS the user's application programs and the CIMONI system programs.

The second part of the manual describes how the CIMONI system programs are written and the assembling and cataloging of single CIMONI programs.

Part 3 describes the functions and contents of the tables exclusively used by the CIMONI programs, as well as the contents of the CICS/VS areas accessed by the CIMONI task.

Part 4 describes how the COMINI system can be modified, if necessary.

DL/I PERFORMANCE ENHANCEMENT-DOS/VS & OS/VS, LIC PROG 5785-DAX, NOTICE

DL/I Performance Enhancement organizes the physical position of root segments of data bases and their dependents, according to their frequency of usage. The objective is to reduce as far as possible the physical movement of the disk arm, thereby reducing the elapsed time required to process jobs.

Information about the frequency of root segment usage may be provided to the performance aid. For Bill of Material data bases, the performance aid can predict the frequency of the usage of root segments, using as a basis their frequency of occurrence in other Bill of Material structures.

With the DL/I Performance Enhancement, it may be possible to:

- Reduce the time required for processing
- Reduce the frequency of data base reorganization

3850 MASS STORAGE SYSTEM TRACE INTERPRETATION PACKAGE,  
IFP 5785-DBW, NOTICE

The IBM 3850 Mass Storage System Trace Interpretation Package (MSSTIP) is a set of programs for processing Mass Storage System Trace data to produce reports on Mass Storage System activity for status and performance analysis.

The raw Mass Storage System Trace data is the source of information for the evaluation of subsystem performance. A reformatted data set, created from the raw Mass Storage System Trace data, can be used as input to high level language programs. The package contains programs written in Assembler language and PL/I to create various reports and statistical information about Mass Storage System activity. These reports assist the system programmer in determining the reasons for subsystem problems. The reformatted data set can serve the user as a base for writing additional Mass Storage System Trace report programs of his own. Flyer, 8 1/2 x 11 inches, 4 pages, 2/79

SB11-5259

3850 MASS STORAGE SYSTEM TRACE INTERPRETATION PACKAGE,  
IFP 5785-DBW, DESCRIPTION/OPERATIONS

Runs under any OS/VS Operating System supporting IBM 3850 (Mass Storage System). Because part of the program is written in PL/I, installation of the IBM PL/I optimizing Compiler is required.

This publication contains "how to install," "how to use," and reference information concerning the Mass Storage System Trace Interpretation Package. For information about the internals of the package see the Systems Guide, LB11-5260. Basic knowledge of the Mass Storage System functions and the IDCAMS TRACE-command is required. SYSTEM/370 IMS/VS HDAM GENERALIZED SYNONYMS ANALYZER  
PROGRAM OPERATIONS, 5785-6AH

IMS/VS HDAM Generalized synonyms Analyzer Program helps in evaluating keys distribution performed by a randomizing algorithm, for an IMS/VS HDAM data base.

It allows the user to analyze and plot the way a particular randomizing module works without really loading the data base. The program nevertheless, handles real not simulated data. The user can thus select the most effective randomizing module and set off parameters (such as space allocation for Root Addressable Area (RAA), number of Root Anchor Points (RAP per block), thus resulting in improved performances, more efficient space utilization and, last but not least, reducing the need for data base reorganization.

SB11

Used against existing data bases, this tool provides the Data Base Administrator with an inexpensive and easy-to-use way of evaluating the need for data base reorganization and the most effective set of parameters to use for reorganized data base.

VS1 UTILITY GENERATOR, IFF 5785-LAG, DESCRIPTION/OPERATIONS

This VS1 Utility Generator (VS1UG) is a powerful tool for system programmers, operators, and less trained system users who wish to use OS/VS1 system utilities with a minimal effort.

Jobs involving system utilities as they occur in each OS/VS1 installation can be performed with great ease and efficiency on a master console, MCS console, or any VM/CMS terminal.

The user can solve his problems in a conversational manner, with the VS1 Utility Generator guiding him and checking the replies. JCL errors and utility statement errors are largely eliminated.

This manual describes the capabilities of the system and the program. It is both a system description and an installation and operations reference manual.

Manual, 8 1/2 x 11 inches, 46 pages, 4/79

IMS/VS QUEUE LOADER, S/370 303X PROCESSORS, IFF 5785-GAJ, NOTICE

The IMS/VS Queue Loader (IQL) basic component is an IMS application program that runs in a batch message processing (BMP) region, which can feed IMS/VS Message Queue data sets on the basis of data communication records extracted from a log tape of a previous IMS run. The log tape contains the transaction mix and rate that the user wishes to employ as the basis of IQL runs.

IQL is designed to assist the system programmer responsible for the maintenance and tuning of the IMS/VS system in performing regression tests during migrations to new IMS/VS workload. In this way, the performance and resource utilization may be optimized. In order to allow the evaluation of future requirements, the user can also simulate an increase in the system workload for measuring response time and throughput trends.

## SB11-5337

VS APL - DL/I INTERFACE, IFF 5785-FAL, DESCRIPTION/OPERATIONS

This manual provides information about the functions and the installations tasks for the VS APL-DL/I interface IFF. This program is a generalized interface between VS APL running under VS PC and DL/I. It is running as an auxiliary processor for VS PC and it can be used as a batch program in a DB system or controlled by an online DB-DC (IMS/VS) system. The VS APL user can directly read from online data bases. One request can result in a large number of DL I calls and only the interesting segment fields will be translated and passed to the APL user in a character vector format.

The interface can handle any number of simultaneously active APL users and can extract from any number of data bases (logical, physical, support of secondary indexes).

The data bases or segments can be protected by passwords. For editing purposes user exits can be called. Start-up parameters are available to adapt the interface to specific installation requirements.

Manual, 8 1/2 x 11 inches, 34 pages, 5/79

IMS/VS QUEUE LOADER, IFF 5785-GAJ, DESCRIPTION/OPERATIONS

The IMS/VS Queue Loader (IQL) basic component is an IMS application program that runs in a batch message processing (BMP) region, which can feed IMS/VS Message Queue data sets on the basis of data communication records extracted from a log tape of a previous IMS run. The log tape contains the transaction mix and rate that the user wishes to employ as the basis of IQL runs.

By means of IQL, an IMS situation may be repeated more than once to test different IMS functions, to measure performances while changing some IMS parameters, or to evaluate system behavior at different transaction rates.

A great deal of effort has been given to making this tool as IMS release-independent as possible and to minimizing its impact on the IMS system.

DATA MAPPING PROGRAM, 5785-EAP, -EAQ, DESCRIPTION/OPERATIONS

The Data Mapping Program is a data manager designed for non-programmers.

Using simple commands, an end user can define his data structure and enter, update, and delete data which is immediately available for query at the terminal. He can generate ad hoc reports interactively and store commands to generate standard reports. No application programming is needed for these functions.

Data is stored in a flexible manner which permits indexing on any field. As a result, it is very simple to define new reports using existing data.

The data structure can be extended at any time without reorganizing existing data, thus new applications can be added without affecting existing production work.

SYSTEM/370 - NETWORK CONTROL PROGRAM BUILDER, IFF 5785-EAL, DESCRIPTION/OPERATIONS

A major effort in setting up and maintaining Systems Network Architecture (SNA) networks is the construction and modification of Network Control Programs (NCPs).

The Network control Program Builder program creates NCP source programs from simple tables built by the user. It also automatically generates all the required node names according to a tried and tested, universally applicable convention, thus saving the user the effort of devising his own convention.

Partitioned Emulation Programs (PEPs) and local or remote NCPs can be constructed using the program.

This manual provides the information needed to understand, install, and successfully use the NCP Builder program.

An understanding of Systems Network Architecture and particularly Network Control Programs is also required.

SYSTEM/370 OS/VSI AND MVS UP, MP, OR JES1 MULTI-ACCESS SPOOL  
CHAINED JOBS SCHEDULING, IFP 5785-GAK, NOTICE

The Chained Job Scheduling program, running under the OS operating system, controls the execution of a set of jobs linked by logical dependencies.

The program, using control cards defining the consequential links, permits execution of the single jobs at the appropriate time. The program receives, by means of standard System Management Facilities (SMF) exits, communications from the operating system on event course and controls the job queue, releasing the jobs which may be executed. An automatic operator function is performed.

This availability notice describes the program and contains information to enable the user to perform the operations required to install and run it.

CONVERSION AID FOR BATCH JOB STREAMS, IFP 5785-EBF

The process of converting batch application programs from DOS/VS or DOS/VSE to MVS requires identification of programs and files that need to be converted, the ability to convert accurately large amounts of job control language (JCL), and sufficient information to create a detailed project plan.

This Conversion Aid for Batch Job Streams is designed to monitor the DOS/VS applications (in this document DOS/VS includes DOS/VSE unless otherwise stated) and to provide a printed profile containing the programs and files actually used. It thus identifies the programs and files that need to be converted. This information can be used in project planning, particularly for setting up realistic checkpoints, and for planning manpower and machine time requirements. The Conversion Aid also constructs the MVS JCL required to run the original applications.

CICS/VS DATA ENTRY FACILITY, IFP 5785-WAE, NOTICE

In most data processing installations the need often arises for direct entry of data at the place of origin (the end user department) to avoid double effort (writing coding sheets and keypunching) and reduce turnaround time.

Besides, it is in most cases desirable to eliminate the impractical manipulation of card decks and use modern devices, such as display stations, instead.

Since the data is usually in a variety of formats, the data processing department must create a number of special-purpose programs to provide this service. This process may be difficult and expensive.

CICS/VS Data Entry Facility (hereinafter referred to as CICS/VS/DEF) is designed to solve these problems and reduce the necessary effort and expense. CICS/VS/DEF enables the user of CICS/VS to enter any kind of data on an IBM 3270 Information Display System and to store them on data sets residing on disk devices.

CICS/VS/DEF is easy to learn and handle. It is basically designed for the end user, but through its efficient buffering and blocking mechanism CICS/VS/DEF is also a tool for a central, performance oriented, data entry

pool.

 DESCRIPTION/OPERATIONS PROGRAM OFFERING

This Program Description and Operations Manual contains a general introduction to HSSR and to HSSR Buffer Handler Services.

This System Overview describes functional descriptions, supported functions, restrictions, and system requirements, refers to installation and maintenance, describes the debugging tools provided, describes special facilities available to system programmers, and describes performance measurements made at the Swiss Bank Corporation.

In this manual, the High-Speed Sequential Retrieval Version 2.1 Program Logic Manual, LB11-5502 is referred to as the HSSR PLM.

Manual, 8 1/2 x 11 inches, 222 pages, 2/84

## LB11-5502

LOGIC HIGH-SPEED SEQUENTIAL RETRIEVAL

This Program Logic manual contains an introduction to the most important functions of High-Speed Sequential Retrieval Version 2.1 (HSSR). It describes the logic flow and gives an overview of HSSR functions, describes the HSSR control blocks, and gives a detailed description of HSSR functions and methods of operation. It also summarizes the IMS dependencies of HSSR and briefly describes HSSR coding conventions.

The reader should be familiar with the High-Speed Sequential Retrieval Version 2.1 Program Description and Operations Manual, SB11-5501, the User's Guide to the High-Speed Sequential Retrieval Version 2.1 Buffering Services, SB11-5558, and with the IBM Information Management System (IMS).

## GB11-5514

COBOL & PL/I CONVERSION AID, IFP 5785-EBG, NOTICE

The conversion of ANS COBOL and PL/I Optimizer programs from DOS/VS to MVS requires a detailed knowledge of the differences between their DOS/VS and OS/VS implementations and in particular the MVS variations. In addition, the MVS user should take advantage of device independence, which involves the rearranging of certain parameters between the program and the Data Definition (DD) statements in the Job Control Language (JCL). The same process must be repeated for all such programs in the installation.

The COBOL and PL/I Conversion Aid is designed to assist with these problems by processing valid DOS/VS ANS COBOL or PL/I Optimizer source programs and producing an MVS version, with the DOS/VS statements converted to their MVS equivalents, as far as possible. Statements having no function in MVS are deleted, and those which prevent use of MVS spooling are flagged. Reserved words in OS/VS COBOL have their last character altered and a warning message is produced. The ENVIRONMENT clause in PL/I is deleted.

Flyer, 8 1/2 x 11 inches, 4 pages, 10/80  
 ///5785-EBG/WT-ONLY

## SB11-5515

COBOL & PL/I CONVERSION AID, IFP 5785-EBG,  
 DESCRIPTION/OPERATIONS

The COBOL and PL/I Conversion Aid is designed to process valid DOS/VS ANS COBOL or PL/I Optimizer source programs and produce an MVS version, with the DOS/VS statements converted to their MVS equivalents, as far as possible. Statements having no function in MVS are deleted, and those which prevent use of MVS spooling are flagged. Reserved words in OS/VS COBOL have their last character altered and a warning message is produced. The ENVIRONMENT clause in PL/I is deleted.

A listing of the new source program is produced, showing the action taken by the conversion aid and any further action to be taken by the user. The other output file contains the converted source programs.

ASSEMBLER MACRO CONVERSION AID, IFP 5785-EBE, NOTICE

The Assembler Macro Conversion Aid (Program Number 5785-EBE) is an International Field Program designed to assist in converting application programs written in DOS/VS Assembler language from a DOS/VS or DOS/VSE to an MVS environment.

The Aid consists of a preprocessor program and converter program. There are two versions of each, one to run under DOS/VS and DOS/VSE and one for MVS and CMS. If the converter is to be run under MVS, or under a DOS/VS system without POWNER/VS, the preprocessor can be used to prepare the input file to the converter. The user is therefore assumed to have a working knowledge of DOS/VS and an appreciation of MVS (batch or TSO/SPF) or CMS, sufficient to be able to run jobs in whichever environment will be used to make the conversion. Where ever DOS/VS is referenced read also DOS/VSE unless otherwise stated.

## SB11-5533

A RELATED GROUP OF ORIENTATIONAL SCREENS  
 DESCRIPTION/OPERATIONS

This International Field Program, consists of a set of displays, macros, and procedures that can simplify the use of the VSE/Interactive Computing and Control Facility (henceforth called ICCF). It is designed to be used with the IBM 3270 Information Display System.

This program consists of ICCF macros, ICCF procedures, and a set of screens, arranged to ease the use of ICCF. It operates under control of ICCF, using Terminal Transaction

SB11

Facility (TTF) or CICS/VS as the terminal control system.

Orientation Screens allows users with only a basic knowledge of ICCF to take advantage of practically all the functions of the ICCF system. It may reduce training costs and provide a high level of productivity in a relatively short time.

USER'S GUIDE TO THE HIGH-SPEED SEQUENTIAL RETRIEVAL BUFFERING SERVICES, IFP 5787-LAC

This manual describes in detail the buffering services available with High-Speed Sequential Retrieval Version 2.1 (HSSR).

Users have two options. The first is to use the default buffering specifications of HSSR and achieve high performance improvements over DL/I. In this case, this manual is not needed.

The reader should be familiar with IMS/VS and the High-Speed Sequential Retrieval Version 2.1 Program Description and Operations Manual, SB11-5501, referred to in this manual as the HSSR PDOM.

VIDEOTEK TERMINAL FACILITY NOTICE

The Videotex Terminal Facility International Field Program allows Videotex terminals to be attached through switched lines to a 3705 Communications Controller running ACF/NCP/VS and NTO in conjunction with a System/370 or a 303X or 4300 processor as host processor running ACF/VTAM under MVS. User-written applications running under CICS, or as VTAM programs, can be used to communicate with the terminals.

This allows a Videotex service to be implemented as an integral part of an installation's SNA network, and means that use can be made of SNA's extensive network management facilities.

DOS/VSE JOB MONITOR SYSTEM

The Disk Operating System/Virtual Storage Extended (DOS/VSE) Job Monitor System (ABSIS) is designed to improve the reliability of processing batch partitions, thus freeing the operator from the need to continuously watch the system console, and preventing the loss of cancel information.

For any job controlled by ABSIS a relevant message is sent to the operator in the case of a detected error, and the system will wait for an answer. This enables the operator to react in a timely and efficient manner, even when POWER is used, and when there are many batch partitions.

DOS/VSE PL/I INTERACTIVE DEBUG FACILITY NOTICE

The DOS/VSE PL/I Interactive Debug Facility is designed to improve the productivity of PL/I programmers in a DOS/VSE environment. Programming is often a bottleneck, which impedes timely completion of computer applications. Of the programming tasks, debugging is one of the most time-consuming and probably the most critical. The DOS/VSE PL/I Interactive Debug may contribute to remedy this situation by enhancing the debugging process, both in speed and quality.

Programs can be monitored from a video display terminal. Whenever an error occurs or at points selected by the programmer, control is given to the terminal user. The flow of control within the program can be examined, program variables displayed and their values changed. After successful debugging, the programmer may end the session, or resume program processing from the point of interruption or any other specified location.

COBOL CONVERSION AID DESCRIPTION/OPERATIONS PROGRAM OFFERING

This publication provides a general introduction to the COBOL Conversion Aid programs and the necessary information for those who wish to understand, install, and run them. The COBOL Conversion Aid is a set of programs and commands designed to assist the user with the conversion of OS/VS COBOL source code into VS COBOL II source code. The program is designed to identify and convert source code incompatibility. It reduces the effort required to convert programs and minimizes conversion errors.  
Manual, 8 1/2 x 11 inches, 164 pages, 9/85

RESEARCH QUEUEING PACKAGE VERSION 2 TSO USER GUIDE PROGRAM OFFERING

The Research Queueing Package, Version 2 (RESQ) is a system for constructing and solving extended queueing network models. Refer to the class of RESQ networks as "extended" because of characteristics which allow effective representation of system detail. RESQ incorporates a high level language to concisely describe the structure of the model and to specify constraints on the solution. A main feature of the language is the capability to describe models in a hierarchical fashion, allowing an analyst to define submodels to be used analogously to use of macros in programming languages. RESQ also provides a variety of methods for estimating accuracy of simulation results and determining simulation run lengths.

This FDP, written in ALC, is a series of programs and procedures designed to assist in the conversion of GE-415 COBOL programs to IBM ANS COBOL as well as translation of GE-415 tape files to EBCDIC. The system operates under DOS, but has capability of producing output for either DOS or OS environments. The conversion programs will operate under DOS on any System 360/370, Model 22 or larger with a partition size of 14K. The use of the tape file conversion program will require two tape drives, one of which may be 7-track drive.

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program. Manual, 29 pages

GB21-0999

DOS SOURCE STATEMENT LIBRARY MAINTENANCE FOR ANS COBOL ON S/370 AVAILABILITY NOTICE

This document describes the purpose and highlights of DOS Source Statement Library Maintenance for ANS COBOL on System/370. This program is written in Assembler. DOS ANS COBOL users have been reluctant in the past to use the extended source program library facility. In order to update the library, the programmer must prepare a new set of control cards for the DOS MAINT program. He must also convert the COBOL statement numbers (the first six positions) to MAINT statement numbers (the last four positions). This program allows updating the library with the same control cards used in compiling the program. The time required to make new control cards and correct errors can be eliminated.

The convenience of maintaining complete COBOL program libraries on disk may be realized. Programs may be compiled directly from the source statement library with changes submitted on cards. When a program has been fully tested, the change cards may be used to update the library, providing a final version for later use.

This Availability Notice contains complete ordering instructions for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it. Flyer, 2 pages

GB21-1008

DOS/VS ASSEMBLER TESTING AID, FDP 5798-AWJ, NOTICE

This document describes the purpose and highlights of DOS/VS Assembler Testing Aid. This program is written in Assembler.

This program can merge coding into the user's assembler source deck. When an UPSI card is placed in JCL at

LB21

execution time, the labels in the name fields of executed instructions print on SYSLST. When testing is complete, the program may be used to remove the added code. (Without UPSI card, code is transparent to user.)

This Availability Notice contains complete ordering instructions for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it. Notice, 4 pages

CMS SORT FOR VM/370, FDP 5798-BDW, NOTICE

This FDP provides several sort programs and subroutines which run under the CMS component of VM/370. They may be invoked from a COBOL, PL/I, FORTRAN, or Assembler program, or as a CMS command. Compared with the SORT component of CMS, these programs offer a compatible replacement for the CMS sort command with improved function and performance. The new "extension feature" (Specify 9564, 9565) offers functional and performance improvements which include:

- Support for Extended Files in BSEPP Release 6 (over 65533 records)
  - Support for Standard Files (up to 65533 records)
  - Faster variable length record sorting
  - Specification of up to 16 sort fields

## GB21-1456

EXTENDING SEQUENTIAL DISK FILES FOR DOS/VS, FDP 5798-CBN, NOTICE

This document describes the purpose and highlights of the program.

This FDP can help improve performance and reduce disk storage requirements for applications that add records to the end of a sequential disk file, thus, eliminating the need to re-copy the files. The subroutines in this FDP will be included in the user's assembler or COBOL programs through a CALL instruction. The FDP supports 2314, 3330, and 3340 DASD devices, and does not require special pre-formatting of extents. Blocked or unblocked fixed length records may be added to sequential files and subsequently access through the standard DOS/VS sequential access methods via logical IOCS. Multiple files may be accessed in a user's program though only one copy of the FDP is included in the user's program.

This Availability Notice contains complete ordering information for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

## GB21-1513

POWER/VS COST & PERFORMANCE ANALYZER, FDP 5798-CDG NOTICE

This document describes the purpose and highlights of this Analyzer.

POWER/VS provides accounting records which contain important information concerning system utilization. The FDP reads these records and generates summary reports which should prove to be of significant benefit to data processing management. Reports include Execution (CPU), I/O Device activity, RJE, and a cost analysis report based on user-specified cost figures. The FDP provides the facility to accumulate daily information for monthly reports. A user modification and/or addition may be developed to use these summary records for monthly billing.

The POWER/VS Cost and Performance Analyzer will provide valuable operating information to Data processing and Operation Managers. System tuning will be possible by using the Performance Report to change placements of high activity files and indicate where excessive time and resources are used. From the Monthly Cost Analysis (which may be run at any desired frequency), a more enlightened view of computer costs may be obtained. Billing is facilitated because the data needed is available in a tape or disk record and need only be processed against the users customer data as bills are printed.

This Availability Notice contains complete ordering information for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

## GB21-1546

1400 COMPATIBILITY ACCESS ROUTINE, FDP 5798-CDB, NOTICE

This document describes the purpose and highlights of the 1400 Compatibility Access Routine.

Through the use of this Field Developed Program a System/370 COBOL or Assembler Language program can access disk data files which are in the 1400 Emulator format. The FDP does not require the use of the 1400 Emulator, therefore, orderly conversion of 1400 emulated applications to System/370 native mode operations under DOS/VS is possible. The FDP supports 1311, 1301 and 1405 type files emulated on a 3330 or 3340 Direct Access Storage Device. Data files can be in the track or sector format and in either move or load mode.

This Availability Notice contains complete ordering information for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

## GB21-1680

MTCS/VS, FDP 5798-CFK, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The minimum Tele-Communication System/Virtual Storage (MTCS/VS), written in Assembler, is a generalized data communication system designed for the smaller DOS/VS user. In addition to data communication facilities, it provides interface and control functions so that installation files and databases can be accessed to implement a small scale data base/data communication (DB/DC) system.

MTCS/VS is designed to be installed quickly with a minimum expenditure for man and machine resources. The advantages of a DB/DC system can be realized sooner because long lead times are not required for specialized training of application and system programmer, and the low main storage requirements permit installation with minimum expenditure for additional equipment.

MTCS/VS is the third in a series of "MTCS" Field Developed Programs (the first was Minimum Teleprocessing Communication System (MTCS) 5798-AAV, the second was Minimum Tele-Communication System for System/370 (MTCS/370), 5798-ALN).

MTCS/VS provides the following improvements to, and features not available in, MTCS/370:

- o Access to VSAM Datasets
- o Access to DL/I Entry Databases
- o Enhanced CICS/DOS/VS Compatibility
- o Technological Improvements achieved through:
  - Utilization of DOS/VS capabilities which are not available in the non-VS Disk Operating System
  - Addition of New Features

GB21

- Improved Installability, Usability and Operational Flexibility.

DOS DASDI JCL CONVERSION AID - FDP 5798-CHA, NOTICE  
This Availability Notice contains complete ordering information for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.  
This FDP, the DOS DASDI JCL Conversion Aid, written in Assembler Language, is a program developed to significantly reduce the manual effort required to convert DOS Job Control Language decks when changing types of disk drives. Although changes for permanent assignments and standard labels can be manually accomplished without much difficulty, ASSGN, DLBL, and EXTENT cards imbedded in JCL decks can require many hours of manual labor. This FDP allows the user to define conversion requirements with one master control card and a series of cards which describe the relationship between the old and new devices. There may be as few as two cards per disk drive. The DOS DASDI JCL Conversion Aid can provide substantial savings in personnel costs when large program libraries must be converted to reflect installation of new disk drives.  
Availability Notice, 6 pages, 12/75

IMS MONITOR SUMMARY AND SYSTEM ANALYSIS PROGRAM II  
(IMSASAP II), FDP 5798-CHJ, NOTICE  
This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.  
IMSASAP II (FDP 5798-CHJ), a Productivity Aid written in ALC, extends the significant features of IMSASAP (FDP

GB21

5798-CDT) to IMS/V5 1.1 and provides key reporting and usability enhancements for both IMS/V5 1.0.1 and IMS 1.1 users.

IMSASAP II is comprised of a set of report processors which execute under the System for Generalized Performance Analysis Reporting (FDP 5798-CPR). It processes IMS/V5 monitor output to provide management, analyst, and programmer level reports which assist in the analysis of an IMS/V5 system environment.

Significant features include:

- New Reports
  - System IWAIT Reports
  - Transactions by Time Period
  - Detail PSB Activity Reports
- Enhanced Reports
  - Summary Reports
  - Region Histogram
  - Program Trace
- Hierarchical reporting structure, from system
- summarizes to program trace reports.
- Elapsed time per event distributions provided on appropriate reports.
- Reporting of schedules in progress at trace start and trace end, including wait-for-input and BMP programs.
- Report and content selection by report type, time period, region, and PSBNAME or DDNAME groups.
- Selection of reports and reporting options through use of a command language.

APL/DATA LANGUAGE, 5798-CHR, NOTICE  
This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.  
This Field Developed Program is written in APL. This FDP expands the capability of APL by providing the APL application programmer with a powerful data management facility. It complements APL's extensive data manipulation facilities with a dictionary driven, data independent, data storage and retrieval system. The user can retrieve data across a network of inter-related files.  
APL data language can help eliminate the usually large amounts of user written data manipulation and housekeeping code.  
Data handling can be standardized, improving code

GB21

readability and documentation. It improves programmer productivity through more problem solving; less data handling activities. Applications previously abandoned or delayed due to complex data requirements may now be feasible.

The data base management services of APL Data Language assist the user in:

- handling complex data access and maintenance problems
- description and definition of data bases
- creation of data bases
- auditing of data base activity.

Availability Notice, 6 pages, 12/75  
////5798-CHR

GB21

The program gathers statistics about user transactions and runs under the control of CICS/VS to assist in system performance analysis and resource utilization. Information gathered includes CPU execution time, total transaction time, largest amount of storage used and the number of entries to file control access methods. Enhancements to the original version include terminal message-size monitoring, DL/I activity monitoring, summary information by terminal operator ID, increased number of user counters and accumulators, and usability enhancements to the problem determination analysis model. Enhanced data reduction and display capabilities include graphic display of CPU utilization, task rates, and EXCP rates.

DOS/VS DASD SPACE UTILIZATION ANALYSIS - FDP 5798-CHW, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This Field Developed Program is written in Assembler language. The DOS/VS Disk Space Utilization Report FDP produces three reports to assist the installation manager in analyzing disk space utilization.

A physical sequence report displays for each disk volume, the data sets, their record size, block size, lower extent, upper extent, and amount of space allocated to the data set. An Alphabetic Sequence report displays the same information in data set alphabetic sequence. In addition, there is a graphical representation report which graphically shows the physical location of each data set on the disk volume.

CMSERVICE, FDP 5798-CJZ, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, is a general utility program which runs under the Conversational Monitor System (CMS) of Virtual Machine/370. It makes computer services more readily available to new time sharing users of limited experience other than control functions or unit record. It performs typical utility functions such as tape-to-card, card-to-disk, etc., but with sufficient prompting to enable inexperienced operators to: 1) store and maintain control of intermediate unit record files; 2) invoke utilities such as sort and merge to eliminate intermediate punched card output; 3) generate jobstreams by imbedding data within appropriate JCL; and 4) reduces contention for initiators or partitions and devices of co-resident systems.

IMS HISTORY REPORTING SYSTEM, FDP 5798-CLB, NOTICE

This FDP is written in Basic Assembler Language. The IMS History Reporting System FDP is designed to provide the IMS/VS DC user with the ability to obtain information about the utilization and performance of his online system on an ongoing basis. The FDP provides routines which, using the IMS/VS log tape, edits and stores information pertaining to system load and performance in an IMS database. A command language is then used to construct tailored reports from the

6B21

database on a demand basis. Summary and/or detail reports can be obtained for any desired combination of date range, time span, and transaction codes. The reports can be produced as a normal OS/VS batch job, or can be invoked as terminal output to a TSO session. A method is provided to identify periods of deviation from the user-observed and/or statistically defined performance norms. The program can also be used to reconstruct transaction codes and conversational SPA contents for terminals active at the time of an IMS/VS system failure, which information can be used to assist in system reconstruction during exceptional IMS/VS Emergency Restart situations.

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

SYSTEM/370 VS BASIC CONVERSION, FDP 5798-CLH, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP is written in Assembler to run on a S/370 under DOS/VS or OS/VS. It is designed to assist users of G. E. Mark III, CDC call/370 Basic, and Tymeshare Superbasic in converting programs and data to VS Basic and the required data formats. Program conversion includes modifying the format of Basic statements; replacing Basic statements, functions and operators with equivalent VS Basic statements, functions and operators; changing BCD characters to EBCDIC characters (optional), and flagging statements which have no equivalent in VS Basic and can not be converted. Data conversion includes replacing commas (or another delimiter) with blanks, and enclosing character fields in quotes.

IMS SOURCE PROGRAM AND JOB DEVELOPMENT SYSTEM II,  
FDP 5798-CLP, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

IMS Source Program and Job Development System (IMSJDS II), written in Assembler, is a new FDP and is an enhanced version of the FPD IMS Online Program and Job Development System (IMSJDS) (5798-CDR), released June 27, 1975.

The IMS Source Program and Job Development System II provides the capability to develop, edit, modify, test and execute OS/VS jobs from IBM 3277-2 and 3275 Display Stations supported by the IMS DB/DC and IMS/VS DB/DC systems.

Release 1 of IMSJDS II has all the basic functions of the original product plus:

SB21

- o Extended 72 character mode editing
- o Extended 80 character mode editing
- o Extended execute function allowing for dynamic include of other input acts or copy members
- o Job status display
- o Enhanced installation procedure
- o Extended Copy Function
- o Online display of OS/VS data sets
- o Multiple generations of SYSOUT data
- o Additional user exit so users can use existing library management systems with IMSJDS
- o Support for MVS
- o Enhanced data display
- o Software tabbing
- o Improved user statistics
- o Performance improvements
  - Load balancing
  - No resident BMP requirement
  - Copy function 50% less calls
  - Delete performance improvements
  - More efficient data base organization
  - Elimination of previously required high overhead functions
  - Significant improvement in performance of execute function.

TSO PROGRAMMING CONTROL FACILITY-II, FDP 5798-CLW, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

PCF II, written in Assembler, offers the features of the TSO/VS2 Programming Control Facility FDP, 5798-BBJ, to users of MVS Release 3.7 with TSO/VTAM, RACF, or the TSO Command Package installed. Those PCF features which have been compatibly extended into the new environment include:

- o TSO command subsetting and program execution control by user
  - o File access control by file category and PCF authorization level
  - o SMF accounting data optionally recorded for each command and major subcommand
  - o Use of a semicolon as command delimiter for multiple commands entered per line
  - o User direct access space control by volume.
- New and enhanced capabilities include:
- o Improved command authorization control
  - o Volume control enhancements to support multiple volumes per user
  - o Standardized system interfaces for ease of MVS maintenance
  - o Full SMP support for installation
  - o Continuous support.

This package enhances the functional capabilities of MVS/TSO while providing basic security and integrity features, and complements other new functions such as RACF.

The software prerequisite for this FDP is TSO/VTAM Selectable Unit or TSO Command Package Program Product (5740-XT6).

DOS/VS 3330/3340 DATA SET CONVERSION AID - EXTENSIONS  
FDP 5798-CNA, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This Field Developed Program, written in Assembler, is an extension of FDP 5798-AMN, which is a prerequisite.

The Data Set Conversion program extensions is a utility program which copies data sets from 3330s and 3340s to either 3330 Model 11, 3350s (compatibility mode) or 3344s. This enhancement allows conversion from any IBM DASD supported by DOS/VS Release 32 to any other larger IBM DASD supported by DOS/VS Release 32.

The following data set organizations are supported: sequential, ISAM, and Direct.

IMS/VS LOCAL COPY-II, FDP 5798-CLZ, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, provides the local 3270 terminal user with hardcopy capability for locally attached components of the IBM 3270 Information Display System. When invoked, an image of the display screen is queued to a designated IBM 3284, 3286, or 3288. The program allows for user specification of either the PA3, or PFK12 keys to invoke the copy function. The program also provides for the printing of the terminal ID of the requesting terminal as well as for dynamic alteration of the destination printer by the system operator.

This support has been designed and implemented to be procedurally compatible with IMS 3270 Local Copy (5796-AHL).

IMS/VS Local Copy II was written in Assembler Language and has been tested with OS/VS1 Release 5.0, and IMS VS Release 1.1.1 as well as OS/VS2 Release 3.7, and IMS/VS Release 1.1.3.

3770-P BATCH TRANSMISSION SERVICES, FDP 5798-CNX, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, provides a host program that will maintain a library of 3770 function programs and transmit to and receive from the programmable models of the IBM 3774, and 3775. The library maintenance function builds and maintains a VSAM library from the data set created by the Program Validation Services program (BQBLIBI). The transmission function will process function programs, terminal commands, and data through either the Basic Telecommunications Access Method (BTAM) using Binary Synchronous Communications or the Virtual Telecommunications Access Method (VTAM) using Synchronous Data Link Control. This FDP contains all of the function provided by the IBM 3770 Communications Utility (5798-CKZ) plus SDLC support and other minor enhancements. The FDP is designed to operate under either DOS/VS or OS/VS.

3770 SORT, FDP 5798-CNY, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, is designed to sort 3770 user datasets on the IBM 3770. The program accepts as input the SORT key and a reference back to the source data. The FDP sorts in either ascending or descending sequence, uses sort key lengths of 8, 16, 32 or 64, and sorts user data or new data being entered from a terminal. The program sorts user indexes so that user-indexed data sets may be accessed using binary search techniques.

VIDEO CORRECTION OF OCR DATA, FDP 5798-CPE, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The primary function of this FDP, written in Assembler, is to provide a simple method of correcting unrecognizable characters resulting from a 3886 Optical Character Reader run. The programs are designed to operate under CICS using the 3270 Information Display System with the VIDEO-COLLECT RPR.

The subject of correcting errors (unrecognizable characters) resulting from optical scanning is sometimes not only a technical problem, but frequently a psychological problem to be overcome by the prospective user.

The FDP provides a sequential disk file where the output of a 3886 Optical Character Reader run is stored. This data file normally contains characters which were unrecognizable to the Reader. The CICS program scans this file until an unrecognized character is encountered. It then displays the data string in the vicinity of the unrecognized character along with the video image of that character using the VIDEO COLLECT feature of the 3270 and 3886. The operator then

interprets the character and enters the correct character via the 3270 System. The program inserts the correct character in the data stream, and constructs a corrected data file.

Statistics on counts of records read, the frequency of unrecognized characters by type, etc., are maintained. A program is provided to display the statistics.

## GB21-2069

MVS/TSO/VTAM DATA SET PRINT, FDP 5798-CPE, NOTICE

This Field Developed Program provides the ability for a TSO user to have a specified data set directed to any 3284/3286/3288 printer or 3790 print data set that is attached and defined to the VTAM network.

An additional feature provides support for SNA character string (SCS) operation of IBM 3287 and 3289 printers attached to IBM 3276 and 3274 controllers operating in SNA mode.

This program is intended for use only on those TSO/MVS systems that have a VTAM network. The system environment may be either VTAM only, or a mixed TCAM and VTAM, but it is necessary that the designated printer be under control to VTAM.

This program provides the same facility to the TSO/VTAM user that the TSO Command Processor FDP (5798-AYF) provides to the TCAM only TSO user.

CONSOLE SPOOLING UNDER POWER/VS, FDP 5798-CPQ, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This Field Developed Program, written in Assembler, collects the console messages generated in a POWER/VS controlled partition and prints them out on a line printer, following the normal printed output for the job.

Many DOS/VS users find that it is difficult and awkward to obtain information from the DOS/VS console. In many cases vital debugging information is printed only on the console (SYSLOG) and not on the user's printout (SYSLST).

Providing the user with automatically generated console messages can improve programmer productivity, decrease the

time required to determine why a job failed, and minimize the number of times the computer operator is interrupted with requests to locate previous console entries. Console messages can be automatically routed to the submitting RJE terminal.

CICS Source Program Maintenance Online II (5798-CFT) users can display their console listings on a local or remote 3270 Display Station.

DP Managers and Auditors may find the printed output provides valuable audit and control information showing which jobs were executed, when they were executed, and which devices were accessed.

SYSTEM FOR GENERALIZED PERFORMANCE ANALYSIS REPORTING (GPARG) - FDP 5798-CPR, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who This FDP is written in Assembler.

The System for Generalized Performance Analysis Reporting (GPARG) is a productivity aid which is the base for application-specific performance analysis sub-systems including IMSASAPII (5798-CHJ), IMSPARS (5798-CQP), GTFPARS (5798-CQQ) and VTAMPARS (5798-CTW).

By itself, GPARG provides facilities that can assist the writer of reporting programs and thus reduce cost and improve program quality. GPARG incorporates record processors that respond to execution time commands to prepare time-event graphs, data distribution plots and to dump and copy selected records from any sequentially organized data set. A Parallel Access Loader (GPARG-PAL) function is included so that existing, conventionally written programs may be executed concurrently with related GPARG standard record processors during a single pass of a sequential data file.

Release 2.0 provides the following new functions:

- VSAM Data Set Support
  - Parallel Access Loader (PAL)
  - Distribution Record Processor
  - Execute command Chaining
  - GPARG Programmer's Guide
  - Error Correction and Minor Report Format Improvements
- A GPARG Programmer's Guide describes GPARG functions, macros and subroutines and illustrates how to use these programming productivity aids in the preparation of user-written reporting programs.

VIRTUAL MACHINE FACILITY/370 PERFORMANCE/MONITOR ANALYSIS, FDP 3798-CPX, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This extended support FDP, written in PL/I, enables VM/370 systems analysts and administrators to obtain reports and graphs portraying the performance and utilization of a running VM/370 system. The FDP uses data collected by the VM/370 MONITOR command. It requires little previous knowledge of VM/370 and should be of value to new VM/370 installations as well as to experienced users.

The functions available with Release 2.0 are:

- An attached processor report that presents information on the rate of page reads, page writes, real external interrupts and virtual SVCs attributed to the attached processor, the main processor and the total system.
- An attached processor report that presents information 2. The following functions are available with Release 3 and processor environment. It provides data on both spin locks and on activity deferred due to the inability of acquiring a lock.
- Provides a count of the number of times a virtual machine waited on the global system lock.
- Provides the user with the ability to subtract I/O time from the calculation of expansion factors.
- Provides the user with the ability to calculate storage utilization based on either real main storage size or on the number of pageable pages available.
- Provides support for the "MONITOR-to-DISK" Facility of VM/370 Release 5.

The use of the "MONITOR-to-DISK" Facility of VM/370 Release 5 eliminates the need for a tape to be dedicated for collection monitor data. Monitor tape input is still Release 3.0 contains support for VM/Systems Extensions (SEPP), 5748-XE1, and VM/Basic System Extension (BSEPP), 5748-XX8 monitor data, enhanced processing of spool files, ACUM files and reports, plus error correction to Release 2.0. The following functions are available with Release 3.0:

- Facilities to assist users in creating subsets of ACUM history files.
- A program to sequentially page number a set of VMAP reports
- A new PROFILE EXEC for automatic data reduction of Monitor Spool files
- Facilities to uniquely identify ACUM files based on the creation date and time of the original Monitor data
- A three-part report reflecting feedback information on the Resource Manager of the SEPP and BSEPP program products.
- Two additional SEPP reports: one summarizing migration activities, the other presenting shadow table maintenance activities.

CICS/VS MVS PEER ADDRESS SPACES - FDP 5798-CQE, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, facilitates the running of multiple copies of CICS/VS in an MVS environment. It helps users to realize the performance potential of a multi-processing environment (AP and MP configurations). This is achieved by distributing the function over multiple copies of CICS/VS. One copy of CICS/VS (designated as the DC copy) is primarily concerned with controlling the terminal network. It passes transactions via the FDP to the other copy(s) of CICS/VS (designated as TX copies) for processing. Terminal I/O requests in the TX copies are intercepted and passed to the DC copy for execution. The FDP and this concept of operation offers greater CICS/VS system protection from errant application programs. New applications, for example, can be brought up in their own TX copy of CICS/VS but still use the same terminal network which supports the production system. All MVS CICS/VS users (including UP configuration) can benefit from this aspect of the FDP.

All copies of CICS/VS may retain the capability to perform all CICS/VS functions. The DC copy can process transactions and the TX copies can control additional terminals at the users option.

Accounts considering proposing this FDP should review their plans with the Palo Alto Systems Center. A feature (Specify 9550, 9551) is available that will extend the Central Service support for CICS/VS MVS Peer Address Spaces, 5798-CQE, until August 31, 1980.

The original Central Service period for 5798-CQE ended 6/15/79.

GIS/VS 3270 FORMATTING AID, FDP 5798-CQN, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP is written in Assembler. The GIS/VS 3270 Formatting Aid FDP is designed to assist the user of GIS/VS in an IMS/VS terminal environment. The user is provided with a series of 3270 IMS/VS screen formats which will guide him through a terminal session and enable him to easily enter GIS/VS queries. Screen formats are provided which will help him enter queries from a skeletal 3270 screen, edit queries and maintain the GIS/VS task data base, call a GIS/VS "HELP" function, and review user data base segment and field names as defined to GIS/VS.

It will enable the user to converse with the system in order to submit data base queries. A tailoring facility will let the user standardize queries in any form desired. Users will be able to concentrate on the logic of the query rather than syntax requirements.

IMS/VS PERFORMANCE ANALYSIS AND REPORTING SYSTEM (IMSPARS), FDP 5798-CGP, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related

documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in ALC, is a Performance Analysis and Tuning Aid for IMS/VS DB/DC systems and provides a variety of reports designed to help the user improve the productivity of the IMS/VS system. The reports, derived from the IMS/VS log tape, provide information in the areas of

- Transaction response times
- IMS system resource usage
- IMS system resource availability

The IMSPARS reports are designed for different working levels within the data processing organization. A management summary report lets management know if IMS is functioning within expected limits. A series of summary reports are intended for administrators and analysts who want various types of operating information in easy to read summary form. Finally, detail reports assist analysts and programmers involved in problem solving.

IMSPARS executes under, and requires, the System for Generalized Performance Analysis Reporting (GPAR), (Program Number 5798-CPR). It supports log tapes produced by IMS/VS 1.1.4, and it is released with extended support. Flyer, 8 1/2 x 11 inches, 4/78

GENERALIZED TRACE FACILITY PERFORMANCE ANALYSIS (GTFPARS),  
FDP 5798-CQG, AVAILABILITY NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in ASM, is a performance analysis and tuning aid for OS/VS Operating Systems. Data input is created by the Generalized Trace Facility (GTF), a standard feature of OS/VS systems.

GTFPARS provides the system programmer with a comprehensive collection of reports that help identify problems which impact overall OS/VS system performance or performance sensitive online applications such as IMS/VS, CICS/VS, or TSP. It produces Job and System Summary Reports, as well as Detail Trace Reports. Summary Reports include information on SVC, Page Fault, I/O, Seek Distribution and Arm Movement, System Resources Manager, External Interrupt, Contents Supervision, etc.

Detail Trace Reports provide the user with a chronological listing of events when the Summary type of information is inadequate to pinpoint a problem area.

GTFPARS executes under the System for Generalized Performance Analysis Reporting (GPAR) FDP 5798-CPR. Flyer, 8 1/2 x 11 inches, 12 pages, 12/77  
 ///5798-CQG

## SB21-2143

GENERALIZED TRACE FACILITY PERFORMANCE ANALYSIS (GTFPARS)  
PROGRAM DESCRIPTION/OPERATIONS MANUAL

GTFPARS VIM3 contains two distinct report programs. One of

these programs executes in an OS/VS environment, and the other executes in an MVS/XA environment. Separate data set libraries should be maintained for each program, according to the user's environment. Please review the installation requirements/procedures in this manual, and the comments preceding the installation JCL located in file 7 of the GTFPARS distribution tape.

The program has the following enhancements. It specifies free space on all requested volumes during a VOLMAP Report. It specifies when VTOC's are indexed. Like the 3084, it summarizes four CPU's executing at the same time. It tests and ignores RACF protected data sets. It corrects timings when specific SVCs (for example, TIMESVC and TYPESVC) are requested.

All GTFPARS VIM3 modules have been resequenced. The "VER=" operand on the PROCs included in the control JCL file can be very useful in specifying and controlling the two GTFPARS environments provided in this release.

MVS SECONDARY OPERATOR, 5798-CRE, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, provides facilities to simplify MVS console operation and reduce the possibility of operator delays and errors. This FDP runs as an MVS job and has two major functions: Command/Job Procedure Processing; and Time-of-Day Event Scheduling.

Command/Job Procedure Processing allows operators to request execution of complex procedures containing OS/MVS, JES, VTAM, and/or TCAM commands. Parameter substitution and control logic facilities are provided. Procedures may submit jobs to MVS for execution.

Time-of-Day Event Scheduling will automatically submit production and/or backup jobs for execution at dates and times specified by the user. A checkpoint/catch-up facility covers the possibility that the system is down at the requested schedule time. Command procedures and write-to operator messages may also be executed at specified dates and times.

IMS FAST REORGANIZATION RELOAD, FDP 5798-CXT

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, is designed to rapidly reload an IMS/VS database. It uses as input the unloaded dataset produced by either the IMS Fast Scan Utility 5798-CTP or the IMS HD Reorganization Unload Utility (5740-XX2). It produces a database that is IMS/VS Version 1 compatible, but does not utilize IMS/VS facilities. The program operates as a non-DL/I batch job under OS/VS.

This product is designed to reduce the time required to reorganize HD-type databases. It also generates dataset, segment, and segment pointer statistics that may be valuable database tuning aid. While this FDP is particularly applicable to large database users, it offers performance improvements to most IMS/VS DL/I users. Faster reorganization should allow more frequent database reorganization thus enhancing the performance of jobs accessing the database. Faster reorganization also means the database is unavailable to the online IMS Control Region for a shorter period of time.

HDAM SEQUENTIAL RANDOMIZER GENERATOR EXTENSIONS, FDP 5798-CXN, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, generates a randomizer which has the capability of placing keys of an IMS/VS Hدام data base into collating sequence. It is an extension to IMS/VS Sequential Randomizer Generator FDP 5798-CQG, which is a prerequisite. The enhancements allow the generation of randomizers that utilize less memory due to the implementation of advanced compression techniques. Improved handling of large irregular key sets, key analysis routines and zone sequential randomizer generation are provided.

Flyer, 4 pages, 11/78

## GB21-2350

OS/VS DATA SET EDITOR, FDP 5798-CXQ, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in ALC, is a productivity aid designed to help reduce the time and effort required for modifying data sets, or members, that result from hardware and/or software changes.

The program provides the user with editing capability for sequential data sets and libraries. It can process the library as a single entity or by selecting members.

- Highlights:
- The ability to globally change cylinder allocations for non-specific volumes or via a volume list for specific volumes
  - The ability to process all or selected parts of a library via easy-to-use keyword selection.
  - Updates done online or a job stream can be built to run later.
  - Automatic expansion of data as required (continuation records may also be generated under user control).
  - Maintains alias names for members.
  - Test option allows the user to review the changes before updating the library.
  - AND OR and NOT logic provided for both FIND and CHANGE processing.
  - Automatic library compression as required under user control.
  - User controlled report capability.

CAPACITY PLANNING EXTENDED, FDP 5798-CYM, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it. Capacity Planning Extended (CPX) is a capacity planning and analysis aid which executes under the system for Generalized Performance Analysis Reporting (GPAP), Release 2. CPX reports, measurements and computational facilities are designed for use by Data Processing management and their staffs to assist with both planning and analysis activities in either OS/VS1 or OS/VS2 installations.

CPX is compatible with USAGE (Understanding Your System and Application Growth Environment), and automates many of the calculations associated with capacity planning technique. The use of CPX, however, extends capacity planning and analysis beyond USAGE, which concentrates on measurements of CPU utilization.

CPX extracts SMF (System Management Facilities) and RMF (Resource Measurement Facility) measurements, then summarizes and stores them on a history file. This extensive set of measurements falls into 6 generic categories:

- USAGE study measurements
- CPU measurements
- Input/output measurements
- Paging activity measurements
- Batch workload measurements
- TSO activity measurements

Users can request reports that quantify these measurements over selected historical time periods and project growth of resource utilizations to future planning milestones.

CPX is a member of the GPAP family of performance and capacity planning products that includes GTFPAP (5798-CQQ), VTAMPARS (5798-CTW), IMPARS (5798-CPQ), IMSASAP II (5798-CHJ), and the recently announced NETPAP (5798-CZX).

NETPARS, 5798-CZX, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP is written in ALC. NETPARS is a productivity aid which will assist the system programmer to diagnose and investigate the NCP SDLC/BSC network operation, design, and usage. NETPARS uses the Network Performance Analyzer (NPA), FDP 5798-CZR log tape and executes under Generalized Performance Analysis Reporting System (GPAR), FDP 5798-CPR.

NETPARS reads the chronological data collected by NPA to produce reports to assist in analysis for network capacity planning, resource optimization and problem management; in helping to tune VTAM, TCAM, NCP; comparison can be made between installation defined criteria and actual operation on a timely basis.

NETPARS provides the following reports:

- Network Capacity Planning Report
- Summary Report
- Detail Trace Report

DOS/VS SYSTEM FOR GENERALIZED PERFORMANCE ANALYSIS REPORTING (DOS/GPAR), FDP 5798-DAA, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP is written in Assembler. The DOS/VS System for Generalized Performance Analysis Reporting (DOS/GPAR) is a productivity aid for the development of performance evaluation, capacity planning, tuning and general purpose data reduction and analysis programs.

This FDP is designed for presenting data from performance data logs or other sequential files, and is the base for CICSPARS (FDP Program 5798-DAB).

It is similar to the GPAR base product (FDP 5798-CPR) previously released for OS/VS environments. DOS/GPAR provides facilities designed to reduce the cost and effort of complex report program development, while increasing the quality of dependent report programs. DOS/GPAR provides a common user interface to the execution of varying report programs, and enables a user to obtain time-event graphs and distributions from sequential data log records with minimal programming.

CUSTOMER INFORMATION CONTROL SYSTEM PERFORMANCE ANALYSIS REPORTING SYSTEM (CICSPARS), FDP 5798-DAB, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP is written in Assembler. It is a new performance reporting and capacity planning aid which gives users information about their CICS/VS systems. The functions which are available include storage analysis, data gathering and reporting capability and a CICS/VS Monitoring Facility (CMF) data reporting capability.

The storage analysis function provides the user with information gathered on-line and reported with on-line displays or batch reports. These reports range from general management level reports to detailed system information. These reports give information regarding real and virtual storage utilization and page fault activity.

The CMF data post-processing capability takes performance data captured by CICS/VS V1 R5 and provides the user with a detail list, summary and final totals reports and up to 19 different graphs. Additionally, a detail list report is provided for CMF's exception and accounting data.

The batch reporting function of CICSPARS requires the System for Generalized Performance Analysis and Reporting (GPAR) FDP, 5798-CPR for OS/VS and 5798-DAA for DOS/VS, a productivity aid which provides facilities designed to reduce the cost and effort of complex report program development.

NETWORK ERROR MANAGEMENT FACILITY, FDP 5798-DAM, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in ALC, enables the user to perform problem determination of incidents on communications networks in the OS/VS and DOS/VS operating environments. The design of this FDP permits a structured approach to problem determination through a hierarchical display of error information for each of the operating modes beginning with all errors summarized by each attached resource. Successive iterations lead quickly to the failing component, whereupon the detail data of the error event and the probable cause are available.

Using DOS/VS, error data is recorded and displayed in any of three modes: NCP, EP, and local. In NCP mode, error data from devices utilizing start/stop, bi-sync or SDLC line discipline is supported. In EP mode, devices utilizing start/stop or bi-sync line control are supported. Local mode supports error records for channel attached devices.

Using OS/VS, error data is recorded and displayed in each of two modes: EP and local. In EP mode, error data from devices utilizing start/stop or bi-sync line disciplines is supported. Local mode supports error records from channel attached devices.

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in ALC, is specifically designed to automate the core elements of systems management with an integrated set of interactive application programs and batch report programs as follows:

The problem management application provides preformatted screens to ensure consistent problem reporting, assignment and resolution of system or network incidents. It has create, update, display, and browse functions, allowing multiple assignments on problems and permits extensive comments. All fields except the comments are editable and searchable. History files can be created for batch reporting.

The change management application provides preformatted screens to enable planned, coordinated change activities including: equipment installation or relocation; new application programs; PUT and engineering changes, and feature changes. It likewise, has create, update, display and browse functions and includes an approver/reviewer facility. All fields are editable and searchable. History files can be created for batch reports.

The network configuration application provides an online data base of network components and the ability to create, update and display records containing component details. Detail may include: component name, id characteristics, location, phone numbers, vendor information, etc. The configuration file supports display of the physical connectivity of components. The batch report facility provides a network map, component detail listings and change activity.

VSE SYSTEM INSTALLATION PRODUCTIVITY OPTIONS/EXTENDED CICS/VS INSTALLATION AID NOTICE

This document describes the program product and provides information on price, ordering, installation, and service.

This FDP written in Assembler is an aid to the effective use of the Interactive Productivity Facility in a CICS/VS environment. Existing source decks for the commonly used CICS tables (PPT, PCT, FCT, TCT), created using CICS/DOS/VS Version 1 Release 4.1, CICS/DOS/VS Version 1 Release 4.0 or CICS/DOS/VS Version 1 Release 3, are processed under VSE/ICCF to produce Interactive Productivity Facility internal control tables. The user may then use the productivity advantages of the Interactive Productivity Facility for continued maintenance of these tables without

incurring the tedious effort of entering the existing table entries manually.

In addition, the FDP will highlight those existing entries that are not Interactive Productivity Facility compatible. The accompanying documentation will offer suggestions on handling incompatible items in the ICCF/Interactive Productivity Facility environment. Flyer, 8 1/2 x 11 inches, 4 pages, 6/81

This document describes the program product and provides information on price, ordering, installation, and service.

This FDP written in PL/I, automates the process of generation of path macros in ACF Release 3 level networks. It selects routes between SNA subareas, identifies the routes using up to eight explicit route numbers and generates path macros, which are used to define routing tables for NCP and host nodes.

SYSTEM ERROR MANAGEMENT FACILITY CICS/VS NOTICE

This document describes the program product and provides information on price, ordering, installation, and service.

This FDP written in Assembler, provides an on-line view of errors occurring in a central electronics complex. Machine checks, channel checks, miscellaneous data records (MDR) and outboard records (OBR) are recorded in a "HARDWARE" error data base. Additionally, all tape and disk MDR and media related OBR records are recorded in a "MEDIA" error data base. The hardware data base (VSAM) is indexed by CPU name, channel name and device address, whereas, the media data base (VSAM) is indexed by volume serial number. This method of logging errors allows a real-time analysis of system problems and provides the ability to differentiate between media and hardware failures.

FAST SCAN UTILITY II NOTICE

This document describes the program product and provides information on price, ordering, installation, and service.

This FDP written in ASM is an extension of the IMS Fast Scan Utility FDP 5798-CTP. It is a performance-oriented program designed to retrieve segments from a DL/I HB Database (HIDAM or HDAM) in hierarchic (GET NEXT) sequence and produce multiple output datasets for use by other IMS/Vs Utilities or user programs. Each output dataset can contain a different compliment of segments as indicated by a user specified PSB in conjunction with optional user exits. Three output formats are provided, or the user may elect to handle the output function.

CICS/VS FORMATTED DUMP ONLINE II NOTICE

This FDP is written in COBOL, Assembler. This document describes the program product and provides information on price, ordering, installation, and service. This FDP assists in making CICS/VS transaction dumps more readily accessible to the CICS/VS application programmer, thus improving productivity. With the FDP, the dumps are dynamically stored on a direct access dataset and may be selectively viewed on an IBM 3270 display immediately after they are produced. Upon completion of dump analysis, the programmer may delete the dump from the dataset or may save it for batch printing. The dumps may be selectively printed in batch without closing or switching the dump dataset. The FDP also assists in CICS/VS system administration by being able to exclude unwanted transaction dumps for being captured. Excluded dump codes may be added or deleted while the system is active and are retained between CICS/VS start-ups. The system operator is notified of all transaction dumps as they occur. No modifications are made to the existing CICS/VS Dump Control Program and it may be reactivated at any time during a CICS/VS execution. The FDP replaces and updates FDP 5798-CQY, CICS/VS Formatted Dump Online.

6670 PREPROCESSOR NOTICE

This program is written in Assembler and PL/I. This document describes the program product and provides information on price, ordering, installation, and service. This FDP enhances the usability of the 6670 Information Distributor in the data processing environment. The program provides the capability to process files generated by a variety of applications so that the files print acceptably on the 6670. The source of these files may be a program such as the Document Composition Facility (DCF) or one that produces system printer output files formatted originally for output on a printer such as the 3800. The 6670 Preprocessor also provides the capability of inserting Operator Control Language (OCL) instructions to handle font switching, line spacing and several other 6670 formatting operations. The use of this program allows a document to be created without requiring the author to have a detailed knowledge of 6670 OCL or know that the end printer will be the 6670.

VM FILE STORAGE FACILITY NOTICE

The VM File Storage Facility (VMFSF) provides disk space and data file management services for users of VM/CMS. These services are available to users within a single host environment or within a multiple-system computing network. Data and disk space may be shared, on a voluntary basis, with varying levels of protection selected by individual users. A hierarchical file directory permits users optionally to cluster data files in a logical manner, and to increase resolution in the identification of data files. VMFSF capabilities offer potential improvements in user productivity, in more effective use of data storage space, and in system performance.

DMS/CICS/VS DEBUG II DESCRIPTION/OPERATIONS

This Program Offering is designed to operate in conjunction with the Development Management System (DMS)/CICS/VS Program Product, a powerful application development tool, to increase productivity in the testing phase of online application development. It is an online interactive debugging aid which allows the application developer to examine the data areas used by the application programs and the DMS/CICS/VS management modules, as the application executes under CICS/VS. The data areas may be viewed in either a field by field formatted display or in a standard character/hex dump format. This Program Offering may help to significantly reduce program test/debug time in the DMS/CICS/VS environment.

DMS/CICS/VS MODELS BASED APPLICATION GENERATOR GENERAL INFORMATION

This Program Offering is an enhancement to the Development Management System (DMS)/CICS/VS Program Product, extending the current DMS/CICS/VS capability by providing a models based file maintenance application generation facility. The generator combines the data structure definition and the models, and produces DMS/CICS/VS panels. The panels may then be customized by the application developer to conform to a unique application requirement. These customizations include display of field and heading locations and content, as well as application unique data field manipulation. Additionally, the documentation includes coding examples to guide the application developer in developing applications other than the file maintenance application for a single file.

The use of this Program Offering methodology may result in greater application development productivity.

 ///5796-PDG

GB21-9903

INTERACTIVE QUERY & REPORT PROCESSOR (IQRP), IUP 5796-PDG,  
GENERAL INFORMATION

This Document contains general information on IQRP which consists of nine on-line programs, of which three contain several modules, together with five additional modules which provide an efficient interface with CICS/VS. The entire system is highly modularized to permit ease of maintenance and provide for efficient operation in Virtual Storage. In addition to the on-line programs, IQRP includes a set of utility programs to prepare the system for operation, provide a journal, gather statistics on system use, etc.

In the operation of IQRP, the user at a terminal interacts with the system by entering his identification and the report name and, optionally, the selection criteria and report format and contents. This interaction is thereupon interpreted by IQRP, and passed to one of several IQRP query processors.

System files are used to determine whether a user has the proper security clearance to access the information he has requested, as well as to translate any special terms the user has included in his interaction. Data names supplied by the user are likewise translated into field names recognized by the access methods and any further information regarding structure required to permit access to the data is also provided from the system files. The system files also supply information on predefined report formats and any modifications to the standard format which this user may have predefined.

Using the information regarding the physical nature of the data, the IQRP processor proceeds to search the appropriate data file for the information required on the basis of the criteria provided by the terminal user. IQRP manipulates the data, performing any sorting, totalling, or arithmetic operations required. The information is then formatted into the appropriate two-dimensional report structure and output is sent to the terminal or system printer. Should the IQRP interpreter detect a user request that is incomplete or incorrect, IQRP will return a message to the terminal indicating the nature of the problem. The user should then reinsert the corrected request.

Manual, 18 pages

HOST LOADED YALE ASCII COMMUNICATIONS SYSTEM

This document describes the program offering and provides information on price, ordering, installation, and service. The Host Loaded Yale ASCII Communications System Program Offering connects up to 48 full duplex ASCII devices to a system running VM/CMS. The terminal control program executes in a 4994 ASCII Device Control Unit down loaded from the host. ASCII display terminals appear to the host as emulated 3270-type terminals. Other output devices such as printers and plotters are supported in native ASCII mode.

The 4994 appears to the host as a locally attached 3272 terminal controller. Terminals that may be used with the

system include the 3101, IBM Personal Computer and non-IBM ASCII terminals that meet certain minimum functional requirements.

The emphasis of the system is to provide access to interactive CMS functions on a host from a wide range of ASCII terminals. It also includes human factors and functional capability enhancements over those found on a standard 3277.

NOTE: This product is for USA use only.

SYSTEM/370 AND 4300 PROCESSORS BIBLIOGRAPHY OF INDUSTRY SYSTEMS AND APPLICATION PROGRAMS

This bibliography describes technical publications needed by those who plan for, install, program, or operate industry systems and licensed application programs for System/370 and 4300 Processors.

Industry (sub)systems covered are the IBM 3600 Finance Communication System, the IBM 3730 Distributed Office Communication System and all others, including the IBM 3790 Communication System.

Licensed programs included are all completed applications running under System/370 or 4300 Processors programming (or under Type I programming if for System/370 or 4300 Processors only). Completed applications are those for specific industries such as finance, insurance, or manufacturing and those applicable to many industries.

Features, and the kinds of information included, are:  
Titles and abstracts, with page counts;  
Clustering and sequencing of items by title;  
Second listing in order-number sequence, with subject codes explained and indexed;

Specific page lookup by program acronym;  
 Latest editions of publications listed, with TNLs;  
 SLSS publication profiles used in distribution, with an  
 explanation of these profiles;

Details on order numbers, including pseudonumbers.  
 For System/370 machine components, support programming,  
 DB/DC and supplementary information, refer to the IBM  
 System/370 Bibliography, GC20-0001.  
 Manual, 8 1/2 x 11 inches, 401 pages, 11/82

## GC20-1618

NUMBER SYSTEMS - STUDENT TEXT

This IBM student text on number systems presents a brief  
 review of the principles of positional notation, as applied  
 to the binary and hexadecimal systems of notation. The  
 publication covers the operations of binary and hexadecimal  
 arithmetic, decimal-binary - hexadecimal base conversion,  
 and the principles of base and base-minus-one  
 complementation.

Student Text, 32 pages

## SC20-1637

A GUIDE TO PL/I FOR FORTRAN USERS: STUDENT TEXT

This manual is an introductory guide to PL/I written  
 especially for those who have a working knowledge of FORTRAN  
 II or IV. No particular machine implementation of FORTRAN  
 or PL/I has been assumed. Part 1 gives a broad survey of  
 PL/I. A sample program illustrating some of the principle  
 features of the language is explained step by step.

Part 2 gives sufficient detail for the user to be able  
 to write a straightforward program for himself. It is  
 not a rigorous exposition. Examples have been used to  
 clarify the text. The terminology used is intended to be  
 that which is familiar to a FORTRAN user

Part 3 describes concepts not familiar to FORTRAN  
 users, although some of them are familiar to those who  
 know COBOL or ALGOL. Where references to COBOL or ALGOL  
 will help readers who know these languages, the reference  
 is made, but the explanation is also given in full for  
 those who do not.

This guide does not attempt to cover all the features  
 of the language. Many facilities have not been mentioned  
 at all, and some of the statements and features have not  
 been explained in full detail.

Student Text, 38 pages

SLSS: ORDER NO. SUBSCRIPTION ONLY

## SC20-1646

A PROGRAMMER'S INTRODUCTION TO IBM SYSTEM/360 ASSEMBLER  
LANGUAGE: STUDENT TEXT

This student text is an introduction to System/360 Assembler  
 Language coding. It provides many examples of short  
 programs shown in assembled form. Some elementary  
 programming techniques and the specific instructions  
 illustrated in the programs are discussed in simple,  
 relatively nontechnical terms. Much of the text is based  
 on information in IBM SYSTEM/360 PRINCIPLES OF OPERATION  
 (GA22-6821). This includes a brief review of relevant  
 System/360 concepts and descriptions of selected assembler  
 language instructions for arithmetic, logical, and branching  
 operations. Standard (fixed-point), decimal, and floating-  
 point arithmetic are discussed. The book also includes  
 an elementary introduction to assembler language and the  
 assembler program, and chapter on base register addressing  
 and on program linkages and relocation. The coding of  
 many other common programming techniques, such as the use  
 of branches, loops, and counters, is shown. The use of  
 macro instructions is demonstrated, but not covered in  
 detail. Program flowcharting and input/output operations

are beyond the scope of the book.

The publication is a sampler rather than a comprehensive  
 textbook. It is intended for supplementary reading for  
 the student in a regular course of study on System/360  
 assembler language coding, and for the novice programmer.  
 In general, the reader will find that the program examples  
 are quite simple at the beginning of each chapter, or major  
 subject division, and become progressively more complex.  
 If the going seems difficult, it is suggested that he  
 simply skip to the next subject and come back later.

The student should have access to two IBM System/360  
 System Reference Library (SRL) manuals for reference  
 purposes: the PRINCIPLES OF OPERATION and the assembler  
 specification manual for one of the System/360 operating  
 systems. (All publications and their form numbers are  
 listed at the end of the Preface.) He should also be  
 familiar with fundamental concepts of data processing and  
 the basic operating principles of System/360. Two IBM  
 programmed instruction (P.I.) courses, or their equivalent,  
 are prerequisite to a full understanding of this student  
 text: COMPUTING SYSTEM FUNDAMENTALS and INTRODUCTION TO  
 SYSTEM/360. The student who is not enrolled in a  
 comprehensive programming course will find the P.I. book  
 FUNDAMENTALS OF PROGRAMMING a valuable guide to problem  
 analysis and program flowcharting.

Student Text, 160 pages

## SC20-1651

A GUIDE TO PL/I FOR COMMERCIAL PROGRAMMERS (STUDENT TEXT)

PL/I is a multipurpose, high-level programming language  
 that enables the programmer not only of commercial and  
 scientific applications but also of real-time and systems  
 applications. It also permits a programmer to use the full  
 power of his computer in an efficient manner and to program  
 applications in a relatively machine-independent fashion.

This publication presents those features of PL/I that  
 apply to commercial data processing. It does not restrict  
 itself to a particular aspect of commercial data processing  
 but attempts to discuss all features of PL/I that may be  
 used in the full spectrum of commercial applications.

OCR INPUT PREPARATION GUIDE FOR THE IBM 1287/1288 OPTICAL  
CHARACTER READERS

This manual is a guide to achieving acceptable input quality  
 for IBM's 1287 and 1288. The topics stressed include  
 sample document designs from several application areas,  
 human factors considerations, document design specifications  
 and procedures, a discussion of important considerations  
 for each type of OCR input device, and a description of  
 some OCR support services available to IBM customers.

GC20-1730

GUIDE TO S/370 MODEL 165  
This guide presents hardware, programming systems, and other pertinent information about the IBM System/370 Model 165 that describes its significant new features and advantages. Features of a Model 165 II are indicated also. The contents are intended to acquaint the reader with the Model 165 and to be of benefit in planning for its installation. Manual, 160 pages 3165//01//

GC20-1733

1287/1288 OCR ERROR RECOVERY GUIDE  
Discusses tools, techniques, and methods of importance for error recovery when planning, programming, and installing the IBM 1287 and IBM 1288 Optical Character Readers. Data Processing Technique Manual, 28 pages //04/1287,1288/

GC20-1738

GUIDE TO S/370 MODEL 135  
This guide presents hardware, programming systems, and other pertinent information about the IBM System/370 Model 135 that describes its significant new features and advantages. The contents are intended to acquaint the reader with the Model 135 and to be of benefit in planning for its installation. Associated with this guide are three optional supplements that describe operating systems for the Model 135 that supports a virtual storage environment. Each supplement has its own form number and must be ordered individually, if required. Optional supplements are the following:  
o DOS/Virtual Storage Features Supplement (GC20-1756)  
o OS/Virtual Storage I Features Supplement (GC20-1752)  
o Virtual Machine Facility/370 Features Supplement (GC20-1757)  
Manual, 316 pages 3135//01//

GC20-1750

3881 OPTICAL MARK READER FORMS KIT  
This manual contains 41 forms designed for the IBM 3881 Optical Mark Reader. Along with each document is a brief description of the application and the use of the form with the IBM 3881. The forms are illustrated in two colors to aid with applications spanning several industries. All forms should be reviewed, as the data entry characteristics in one application are similar to those of other applications in other industries. Manual, 88 pages //04/3881/

GC20-1751

3881 OPTICAL MARK READER SYSTEMS DESIGN GUIDE  
This manual is a guide to the design of a data entry system using OMR. The material includes forms design, operations, and programming techniques. It is intended to be used both as an instruction guide and as a resource during systems installation design. Manual

GC20-1754

GUIDE TO S/370 MODEL 158 FOR S/370 MODEL 155 USERS  
This guide presents hardware, programming systems, and other pertinent information about the IBM System/370 Model 158 that describes its significant new features and advantages. Knowledge of the IBM System/370 Model 155 is assumed. Features common to Models 155 and 158 are indicated but not discussed in detail. The contents of the guide are intended to acquaint the reader with the Model 158 and to be of benefit in planning for its installation. Associated with this guide are four optional supplements that describe operating systems for the Model 158 that support a virtual storage environment. Each supplement has its own form number and must be ordered individually, if required. Optional supplements are the following:  
o DOS/Virtual Storage Features Supplement (GC20-1756)  
o OS/Virtual Storage I Features Supplement (GC20-1752)  
o OS/VS2 SVS Features Supplement (GC20-1753)  
o Virtual Machine Facility/370 Features Supplement (GC20-1757)  
Manual, 120 pages 3155,3158//01//

GC20-1755

GUIDE TO S/370 MODEL 168 FOR S/370 MODEL 165 USERS  
This guide presents hardware, programming systems, and other pertinent information about the IBM System/370 Model 168 that describes its significant new features and advantages. Knowledge of the IBM System/370 Model 165 is assumed. Features common to Models 165 and 168 are indicated but not discussed in detail. The contents of the guide are intended to acquaint the reader with the Model 168 and to be of benefit in planning for its installation. Associated with this guide are three optional supplements that describe operating systems for the Model 168 that support a virtual storage environment. Each supplement has its own form number and must be ordered individually, if required. Optional supplements are the following:  
o OS/Virtual Storage I Features Supplement, GC20-1752  
o OS/VS2 (SVS) Features Supplement, GC20-1753  
o Virtual Machine Facility/370 Features Supplement (GC20-1757)

GC20-1756

DOS/VIRTUAL STORAGE FEATURES SUPPLEMENT  
This supplement discusses DOS/VS features and organization as of Release 34. Only concepts and functions of DOS/VS that are new to and significantly different from those of DOS Version 4 are presented in detail. Transition from DOS Version 4 to DOS/VS is discussed also. Manual, 118 pages 3031,3138,3148,3145,3135,3158//20//5745-010

GC20-1760

3886 OPTICAL CHARACTER READER FORMS KIT  
This manual includes 30 forms designed for the 3886 and text describing the application. Forms are printed in two colors to illustrate design and use of forms in various industries. Manual

//04/3886/

## GC20-1767

OPTICAL MARK READ/CARD PRINT APPLICATION SOLUTIONS IBM 3504 and 3505 CARD READERS IBM 3525 CARD PUNCH  
This manual contains brief descriptions of application solutions using the 3504/3525 Card Subsystem with System/370 Model 125 and the 3505/3525 Card Subsystem with all models of System/370. The application solutions highlights the Optical Mark Read feature on the card reader, and the Card Print feature on card punch.

The two-color card form samples accompanying the majority of application descriptions illustrate the variety of ways of using the card subsystem to solve data processing problems in many industries. Data printed in black within the sample cards simulates 3525 card printing.

It is assumed that punched hole data will be contained in many of the application cards discussed, but the punched holes have not been represented in these illustrations.

All card documents illustrated in this publication are reduced in physical size from the standard specifications for an 80-column card.

Manual, 75 pages

3350 3344 INSTALLATION AND CONVERSION GUIDE

This guide describes the requirements and procedures to accomplish a successful installation of 3350 and 3344 Direct Access Storage Devices. It covers such aspects as features, compatibility modes, addressing, and hardware and programming considerations.

Special emphasis is given to the procedures for converting from different types of DASD, and several examples are explained in detail. In the same way, the checklist included in the guide will assist in the implementation of a good conversion plan.

A bibliography related to the 3350/3344 DASD is also included, as well as space utilization tables.

## GC20-1786

PLANNING GUIDE FOR THE DOS/VS "CARDLESS" SYSTEM

This manual is for systems programmers, application programmers, and operators who are planning to use the System/370 Model 115 or 125 in a "cardless" environment. It discusses the Disk Operating System/Virtual Storage (DOS/VS) programming support provided for the IBM 3540 Diskette Input/Output Unit. Aspects of system operation, system generation, conversion, and application development are covered with regard to systems that do not use a conventional card reader or punch.

An operational knowledge of DOS/VS and POWER/VS is basic to understanding this publication. Planning for a cardless system should include understanding the operation of the 3540 and the use of the diskette in the data entry area.

Manual  
3115,3125//30/3540/5745-010

## GC20-1787

GUIDE TO S/370 MODEL 168 FOR S/360 USERS

This guide presents hardware, programming systems, and other pertinent information about the IBM System/370 Model 168 that describes its significant new features and advantages. Knowledge of the IBM System/360 Model 65 is assumed. The contents of the guide are intended to acquaint the reader with the Model 168 and to be of benefit in planning for its installation.

Associated with this guide are three optional supplements that describe operating systems for the Model 168 that support a virtual storage environment. Each supplement has its own form number and must be ordered individually, if required. Optional supplements are the following:

- o OS/Virtual Storage 1 Features Supplement (GC20-1752)
- o OS/Virtual Storage 2 Single Virtual Storage (SVS) Features Supplement (GC20-1753)
- o Virtual Machine Facility/370 Features Supplement (GC20-1757)

GC20-1792

S/3 TO DOS/VS CONVERSION GUIDE

This guide is intended to assist the System/3 user who is converting to a DOS/VS system, to be used as the primary reference document for the conversion. It presents a comparison of System/3 and DOS/VS features and gives procedures for converting to DOS/VS, either manually or with programming tools. Through numerous examples, the user can see how to change his current programs, files, and operation control language to comparable DOS/VS programs, files and job control language. Where comparable functions do not exist, an alternate approach is suggested. The guide also presents a suggested migration plan and a checklist of things to consider, and directs the user to available migration tools.

The guide will be of interest primarily to people within the data processing department. The DP manager will find introductory information, migration guidelines, and system comparisons. The system programmer will find information on the system control program, system generation, and library considerations. The application programmer will find specific information on program conversion, control card conversion, sorts and utilities. In addition management outside the data processing department may be interested in the overview, the advantages of DOS/VS, and migration considerations.

Manual, 8 1/2 x 11 inches, 7/77

VIRTUAL MACHINE FACILITY/370: INTRODUCTION

This publication introduces VM/370, and defines the minimum equipment configuration necessary to execute it. It is intended for anyone who is interested in VM/370. However, the reader should have a basic understanding of IBM data processing.

VM/370 (Virtual Machine Facility/370) is an operating system that manages the resources of a single System/370 computer so that multiple computing systems (virtual machines) appear to exist. VM/370 consists of a Control Program (CP), which manages the real computer, a Conversational Monitor System (CMS), which is a general-purpose conversational time sharing system that executes in a virtual machine, a Remote Spooling Communications Subsystem (RSCS), which spools files to and from geographically remote locations, and an Interactive Problem Control System (ICPS), which provides problem analysis and management facilities.

The first section of the publication is an introduction; it describes what VM/370 can do. The second, third, and fourth sections describe the Control Program, Conversational Monitor System, and Remote Spooling Communications Subsystem, respectively. The appendixes include information about system requirements and related VM/370 publications for CMS users.

This publication is a prerequisite for the VM/370 system library.

Manual, 8 1/2 x 11 inches, 64 pages, 10/76

GC20-1801

VM/370 SCP 5749-010, PLANNING & SYSTEM GENERATION GUIDE (CURRENT RELEASE)

This publication is intended for those responsible for the planning and installation of a VM/370 system. It includes information on virtual machine concepts, operating systems in a virtual machine, and planning and system generation considerations for a VM/370 installation. The IBM Virtual Machine Facility/370 Introduction, Order No. GC20-1800, is a prerequisite for understanding this publication.

Manual, 249 pages

//34//5749

GC20-1806

VM/370 SCP 5749-010, OPERATOR'S GUIDE (CURRENT RELEASE)

This publication is intended for those responsible for the operation and administration of a VM/370 System. It includes the I/O resources and operating characteristics of VM/370, the associated virtual machines, and the real hardware configuration. Also included is information on spooling, resource allocation, system startup and shutdown procedures, and VM/370 service programs.

VM/370 SCP 5749-010, SYSTEM PROGRAMMER'S GUIDE (CURRENT RELEASE)

This publication is intended for VM/370 system programmers and VM/370 system analysts. It provides information that is needed to maintain, tune, modify, and debug VM/370. The VM/370 System Programmer's Guide is divided into four sections that discuss:

- Debugging with VM/370 - describes the procedures, commands, and techniques used to debug VM/370. This section also discusses how to read VM/370abend dumps.
- VM/370 Control Program - provides an overview of the internal processing of the VM/370 control program. There are also topics that discuss performance guidelines, performance tunings, accounting records, virtual machine communication facilities, and system modifications that can be made by an installation.
- Conversational Monitor System (CMS) - provides an overview of the internal CMS processing. This section also discusses installation modifications to CMS.
- Remote Spooling Communication Subsystem (RSCS) - discusses the purpose of RSCS and how VM/370 uses it. Also provided is an overview of internal RSCS processing.

Refer to the latest System/370 Bibliography, GC20-0001 for the titles and abstracts of related publications.

**VM/370 SCP 5749-010, CP COMMAND REFERENCE FOR GENERAL USERS (CURRENT RELEASE)**

This publication is a reference manual for the general class of users that are running systems such as OS, DOS, OS/VS, DOS/VS, CMS, and RSCS in a virtual machine under VM/370. Each CP command available to the general class of user as well as those CP commands that are available to all users are listed alphabetically and contain general usage information, the command line format, descriptions of all allowable operand values and default values for operands. Also included are tables showing the relationship of the general class of CP commands to the entire set of VM/370 CP commands.

IBM VIRTUAL MACHINE FACILITY/370: OPERATING SYSTEMS IN A VIRTUAL MACHINE

This publication is for system programmers who plan to use System/360 or System/370 operating systems under the control of VM/370. It is also for VM/370 system programmers who plan to use these operating systems or VM/370 under the control of VM/370.

The publication describes common aspects of running any operating system under VM/370, and it describes how to use VM/370 functions more efficiently when running operating systems under VM/370. The book also provides specific system planning and operating considerations when running VM/370, DOS/VS, DOS/VSE, OS/VS and under VM/370.

VM/370 INTERACTIVE PROBLEM CONTROL SYSTEM (IPCS) USER'S GUIDE

This is a reference publication for users of the Interactive Problem Control System (IPCS) component of VM/370. It is specifically directed to the system programmer or the IBM program support representative. IPCS standardizes the problem reporting process and provides:

- . Online problem management
- . Interactive problem diagnosis
- . An online debugging facility for disk-resident CP abend dumps
- . A problem-tracking facility that can be updated either by the user or, automatically, by the system

This publication contains IPCS command formats and instructions for their use. IPCS programs, subroutines, and files are listed.

VM/370 DIRECTORY MAINTENANCE, LIC PROG 5748-XE4, INSTALLATION AND SYSTEM ADMINISTRATOR'S GUIDE (CURRENT RELEASE)

This publication contains all the installation and functional detail on the Directory Maintenance Program Product. As this publication is to be used by the VM/370 system administrator, that is the person responsible for assigning the resources of the real system to the users of virtual machine, it contains all the commands (syntax, usage and response information) that are used by the system administrator as well as those used by the general user. The commands for the general user are included in the administrator's publication for convenience to save him the annoyance of having to look in a second book. In fact, the general user commands are only about 25% of the total, and most installations will only use one copy of this guide. In addition to command information there is planning and system installation material. All messages that can be issued by this program product are contained in an appendix. This appendix can then be detached and inserted in the back of the VM/370 System Messages for common reference.

VM/370 DIRECTORY MAINTENANCE, LIC PROG 5748-XE4, GUIDE FOR GENERAL USERS (CURRENT RELEASE)

The introduction in this book will provide an overview of the function and facilities of the Directory Maintenance Program Product. It will clearly delineate the function that is available to the general user from the function provided the system administrator. This publication will contain all information on the Directory Program Product pertinent to the general user; that is commands, command syntax, command description and usage information along with response and system messages. All system messages will be contained in an appendix in a format compatible to the VM/370 System Messages. In this way, the message section can be extracted from this publication and filed at the back of the VM/370 System Messages Publication for common reference. Directory Maintenance commands available to the general user represent only about 25% of the total in the product. It is expected that a large number of this guide will be made available in each installation.

INTRODUCTION TO DOS/VS SYSTEM INSTALLATION PRODUCTIVITY OPTION (IPO) PROG 5750-AA5

This manual is a general summary of the IBM DOS/VS System Installation Productivity Option (IPO). Its purpose is to provide users of the DOS/VS System IPO with an introduction to the system.

The manual has seven major parts:

- Part 1: WHAT IS THE DOS/VS SYSTEM IPO? briefly describes the major characteristics of the system.
- Part 2: DISTRIBUTION MATERIAL describes the material received by the user of the DOS/VS System IPO.
- Part 3: HOW TO BEGIN summarizes the activities necessary to begin the installation process. This part includes a description of aids provided with the DOS/VS System IPO as well as information on printing the machine readable documentation.
- Part 4: INSTALLATION PROCESS OVERVIEW describes the basic steps required to install a product.
- Part 5: VERIFICATION PROCESS OVERVIEW describes the basic steps required to verify correct installation of a product. Included is a discussion of Installation Verification Procedures (IVPs).
- Part 6: WHAT IS THE TARGET SYSTEM BEING BUILT? describes the DOS/VS System layout that will be built if the user installs the system using the recommendations within the DOS/VS System IPO. This part is divided into sections by DASD device type.
- Part 7: SYSTEM REQUIREMENTS describes the hardware and software configurations supported by the DOS/VS System IPO.

The reader is expected to have a knowledge of DOS/VS and the products to be installed.

GC20-1868

SYSTEMS NETWORK ARCHITECTURE: SESSIONS BETWEEN LOGICAL UNITS

This book describes Systems Network Architecture (SNA) as it relates to sessions between logical units (LUs). LUs are the ports through which application programs, terminals, and terminal operators communicate across an SNA network. LU to LU sessions support communication between these end-users. This book describes the structure of an LU and defines the characteristics of five types of LU to LU sessions (types 1

GC20

through 4, and type 6). It also describes the data streams that are valid for each type of LU to LU session. This book does not describe any specific equipment or programs that may implement SNA, nor does it describe any implementation subsets or deviations from the architecture. These matters, as well as information on product installation and system definition, are described in implementation literature for the applicable products.

This book is intended for systems programmers and others who need detailed information about SNA in order to develop or adapt a product or program to function within an SNA network.

An understanding of SNA concepts is assumed throughout this book. The basic concepts can be obtained by reading SNA Concepts and Products (GC30-3072).

VSE SYSTEM IPO/E INSTALLATION GUIDE (CURRENT RELEASE)

This manual describes the installation steps for all VSE System Installation Productivity Option/Extended (VSE System IPO/E) 1.4.0 users (including VM/VSE Feature Users).

Manual, 8 1/2 x 11 inches, 96 pages, 6/83  
SLSS: ORDER NO. SUBSCRIPTION ONLY

GC20-2013

VSE SYSTEM IPO/E REFERENCE (CURRENT RELEASE)

This manual contains detailed information concerning the VSE System IPO/E 1.4.0 and should be used for reference as required. It contains detailed reference information about the following topics: DASD layouts, Distribution tape formats, Procedure library member listings, Sample library job stream listings, VSE/POWER job stream listings.

Manual, 8 1/2 x 11 inches, 200 pages, 6/83  
SLSS: ORDER NO. SUBSCRIPTION ONLY

GC20-2014

VSE SYSTEM IPO/E FEATURE GUIDE (CURRENT RELEASE)

This manual provides detailed information on how to install VSE System IPO/E 1.4.0 and the VM/VSE Feature under VM/SP. It is not a substitute for but, should be used in conjunction with the VSE System IPO/E Installation Guide (GC20-2012). It also contains sample VM/SP directory entries required for running VSE under VM, and a discussion of multiple CPUs and DASD sharing in a VM/VSE environment.

Manual, 8 1/2 x 11 inches, 108 pages, 6/83

GC20-2021

A GUIDE TO THE 4381 PROCESSOR

This guide presents hardware, I/O device, programming systems, and other pertinent information describing the significant new features and advantages of the 4381 Processor. Knowledge of System/370 or 4300 hardware and I/O devices is assumed. The content of the guide is intended to acquaint the reader with the 4381 Processor and to be of benefit in planning for its installation.

Manual, 136 pages, 2/84

GC20-8096

INTRODUCTION TO DATA MANAGEMENT STUDENT TEXT

This publication is an introduction to the concepts of data management and information processing. It is intended to address both programmer and non-programmer. Topics presented are Data Management and Information, Fields and Records, Data Storage Devices, Data Organization, Functions of Data Management, and Concepts of a Data Base System.

Manual, 8-1/2 x 11, 60 pages  
SLSS: ORDER NO. SUBSCRIPTION ONLY

GC20-8152

FLOWCHARTING TECHNIQUES

Adherence to standard techniques for the preparation of flowcharts of data processing systems and procedures greatly increases the effectiveness of communication between the programmer-analyst and the many groups with whom he deals. The manual describes in detail the preparation of system and program flowcharts. The symbols used are those provided by the IBM Flowcharting Template (GX20-8020). A flowchart worksheet (GX20-8021) is a means of standardizing documentation. It provides space for drawing program flowcharts and contains an area for identification of the job, including application, procedure, date, and pagination.

Manual, 38 pages

GC21-5004

OS DATA MANAGEMENT SERVICES AND MACRO INSTRUCTIONS FOR IBM 1285/1287/1288

This publication defines and describes the data management macro instructions and services for the IBM Optical Readers. The macro instructions are used in the IBM System/360 Operating System Assembler language. The macro instruction descriptions and definitions apply to OS/MFT, OS/MVT, OS/VS1, and OS/VS2.

For OS/MFT and OS/MVT, the corequisite publication is IBM System/360 Operating System: Assembler Language, GC28-6514; for OS/VS1 and OS/VS2, the corequisite publication is OS/VS and DOS/VS Assembler Language, GC33-4010.

SC21-5005

IBM DOS RPG II LANGUAGE, PROG. NO. 5736-RG1

This publication contains the fundamentals of the RPG II language along with the RPG II language specifications for the IBM System/360 Disk Operating System. The DOS RPG II compiler and generated program can be used for System/360 Models 25, 30, 40, 50, 65, and 75.

Job set up information for coupling and executing an RPG II program is also included in the publication.  
Manual, 568 pages, 3/75  
///5736-RG1

GC21-5006

OS DATA MANAGEMENT SERVICES AND MACRO INSTRUCTIONS FOR IBM 1419/1275

This publication tells how to plan, write, and execute programs for the IBM 1419 Magnetic Ink Character Reader and the IBM 1275 Optical Character Reader under the MFT, MVT, VS1, and VS2 options of the operating system (OS). It is intended for system analysts, assembler language programmers, or other personnel who need information on how to use the 1419 or the 1275 under OS. The IBM 1419 and the IBM 1275 read, under control of a processing program, information transcribed on checks and other documents. They also sort these documents under program control.

This publication describes device characteristics

GC21

(such as document processing times) that the user must consider and the routines he must write to use the 1419 and the 1275 under OS. This description includes data management macro instructions needed, storage requirements for IBM-supplied 1419/1275 support routines, JCL requirements, timing considerations for various OS options, and sample user-written routines.  
Manual, 50 pages

SC21-5014

OS IBM 1288 BASIC UNFORMATTED READ SYSTEM: A DATA CAPTURE UTILITY PROGRAM, PROG. NO. 5734-UT3  
This publication is a reference manual designed to assist you in implementing data entry applications using the IBM 1288 Optical Page Reader. The data must be printed or typed in either USASCSOCR size A or ISO OCR size I font in the unformatted mode.

This manual describes the control and functions of the 1288 Basic Unformatted Read System, which include:

- o Input and output
- o Error handling routines
- o Job control language

The program operates under the IBM Operating System with:

- o MFT - multi-programming with a fixed number of tasks.
- o MVT - multi-programming with a variable number of tasks.
- o VS1 - virtual storage, 1.
- o VS2 - virtual storage, 2.

Manual, 30 pages

DOS RPG II AUTO REPORT FEATURE, LIC PROG 5736-RG1, GENERAL INFORMATION

This manual introduces the function of the DOS RPG II Auto Report Feature for potential customer management, customer analysts, and for IBM personnel involved in marketing this feature.

Auto Report is a DOS RPG II program product feature. This feature extends the capabilities of the PRG II language and aids the RPG II user by reducing the programming effort required to code and debug his application programs.

This publication provides general descriptions of the four functions of the Auto Report Feature; discusses the compatibility and performance of Auto Report; and has an example showing an Auto Report job, from the coding needed to produce a report, to the specifications generated by Auto Report for that job, and finally to the report produced as output. Prerequisite publications are:

- o Concepts and Facilities for DOS and TOS (GC24-5030)
- o Introduction to RPG II (GC21-7514)

General Information Manual, 15 pages  
///5736-RG1

SC21-5056

DOS RPG II AUTO REPORT FEATURE, LIC PROG 5736-RG1, REFERENCE

This manual contains three types of information about the RPG II Auto Report Feature:

1. Introductory and tutorial information on Auto Report for beginning users.
2. Reference information on Auto Report specifications for more experienced users.
3. Information on the internal operation of the Auto Report Feature for personnel with maintenance responsibility (replaces the program logic manual).

The Auto Report Feature is a program that operates prior to the RPG II compiler and that calls the compiler when it has finished processing. Auto Report generates complete RPG II source specifications for simple reports from simplified RPG II output specifications, standard RPG II specifications, and a special statement that copies previously catalogued specifications from a source library. Auto Report also provides for selection and sorting of input records prior to processing by the RPG II object program.

Readers of this manual must have some knowledge of RPG II.

3740 BTAM/TCAM PROGRAMMER'S GUIDE

This publication supplements the base access method and operating system publications. It describes the access method facilities and macro instructions associated with writing an application program that defines, activates and controls a 3741 Model 2 Data Station, a 3741 Model 4 Programmable Workstation, or a 3747 Data Converter with the Communications Adapter. The BTAM related information in this guide applies to these operating systems: DOS/360, DOS/370, DOS/VS, OS/360, OS/VS1, OS/VS2. The TCAM related information applies to: OS/360, OS/370, OS/VS1, OS/VS2. This guide is for programmers who have a knowledge of teleprocessing, basic assembler, the access method and data management techniques.

Manual, 8 1/2 x 11 inches, 509 pages, 07/66

INTRODUCTION TO RPG II AND RPG III: BATCH PROCESSING WITH PROGRAM DESCRIBED FILES

This simple introduction to the RPG programming language is intended for people with no previous knowledge of computers or programming. It explains how to produce printed reports from batch processing with program described files. It does not discuss interactive processing or externally described files.

Chapter 1 describes, in general terms, how a system operates and what you must do to run a program. Chapter 2 describes the RPG cycle and the RPG specifications you must write to do particular tasks. Chapter 3 explains an RPG programmer's job more fully by indicating the things a programmer must do from start to finish of a sample program. Manual, 8 1/2 x 11 inches, 165 pages, 8/80

DATA SECURITY THROUGH CRYPTOGRAPHY

Prevention of unauthorized physical and logical access to confidential information has been the traditional method of protecting the secrecy of computer data. Cryptography provides such protection in situations where the traditional method is not effective or possible.

Cryptography preserves the secrecy of computer data that could be accessed by the unauthorized by concealing the information using a process in which intelligible data is transformed into non-intelligible data. This manual describes the sale of cryptography in data security. Manual, 8 1/2 x 11 inches, 40 pages, 10/77

SCP SPECIFICATION FOR OS/VS2 MVS JES3 RELEASE 3 FOR MVS RELEASE 3.8

This document describes JES3 Release 3 and its support of MVS Release 3.8.  
Flyer, 1 page, 3/79

## GC23-0038

OS/VS2 JES3 OVERVIEW

This publication introduces the terminology, organization, functions, and features of Job Entry Subsystem 3 (JES3). Readers need not be familiar with JES3, but should have an introductory level understanding of the Multiple Virtual Storage (MVS) System. This publication is a companion to Introduction to JES3, GC23-0607. The two manuals will provide a foundation for using the remaining manuals in the JES3 library.  
Manual, 8 1/2 x 11 inches, 76 pages, 10/79  
///5752-826

## GC23-0039

JES3 INTRODUCTION (CURRENT RELEASE)

This book will introduce you to Job Entry Subsystem 3 (JES3). JES3 is a component of MVS that reads jobs, prepares them for execution, and processes output data produced by the jobs. In multiple-processor complexes, JES3 manages processors in a way where one processor exercises centralized control over the others and distributes jobs to the others via a common job queue.

It doesn't matter whether you are an installation manager, system programmer, application programmer, operator or student, or if you are currently using JES3 or just considering or planning a JES3 installation. You should read this book to get a perspective on JES3, and to get the maximum benefit from the other books in the JES3 library. There are no prerequisites for this book. It would be helpful, but not essential, for you to have a general knowledge of operating systems.

This edition applies to the JES3 component of MVS/System Product-JES3 Release 2 and to all subsequent releases and modifications until otherwise indicated in new editions or technical newsletters.  
Manual, 8 1/2 x 11 inches  
//20//5740-XYN

## SC23-0040

JES3 OVERVIEW

This book introduces the terminology, organization, function and features of Job Entry Subsystem 3 (JES3). It is not essential that you be familiar with JES3 to read this book, but to get the most out of it you should first read JES3 Introduction, GC23-0039. (The Introduction describes JES3 from an external point of view, emphasizing what JES3 is and how it can be used; this book describes JES3 from an internal point of view, emphasizing how JES3 is organized and how it works.) This book does require an introductory-level understanding of MVS.

This edition applies to the JES3 component of MVS/System Product-JES3 Release 2 and to all subsequent releases and modifications until otherwise indicated in new editions or technical newsletters.

Manual, 8 1/2 x 11 inches  
//20//5740-XYN

## SC23-0041

JES3 INSTALLATION PLANNING AND TUNING (CURRENT RELEASE)

This book is intended for JES3 system programmers or for anyone who plans to install, initialize, customize, or tune JES3. This book describes:

- The planning that must be done before installing JES3
- How to define resources for JES3
- How to use JES3 initialization statements to customize JES3
- How to initialize remote job processing, both BSC and RJP
- How to tune JES3
- How to add your installation to a job network

Before reading this book, you should read JES3 Introduction, GC23-0039 and JES3 Overview, SC23-0040. This edition applies to the JES3 component of MVS/System Product - JES3 Release 2 and to all subsequent releases and modifications until otherwise indicated in new editions or technical newsletters.

Manual, 8 1/2 x 11 inches  
//34//5740-XYN

## SC23-0042

JES3 USER MODIFICATIONS AND MACROS (CURRENT RELEASE)

This book is intended for the system programmer who plans to modify JES3 control programs. It includes instructions on how to write JES3 user exit routines and dynamic support programs (DSPs) and how to use the JES3 macro instructions to aid in writing exit routines and DSPs.

This edition applies to the JES3 component of MVS/System Product - JES3 Release 2 and to all subsequent releases and modifications until otherwise indicated in new editions or technical newsletters.

Manual, 8 1/2 x 11 inches  
//36//5740-XYN

## SC23-0043

JES3 DIAGNOSIS (CURRENT RELEASE)

This book provides reference information for debugging Job Entry Subsystem 3 (JES3) and user-written extensions of JES3. Readers must have a working knowledge of JES3 functions and logic. Topics include Debugging and Service Aids, Dump and Trace Formats, How to Find Information in a Dump, Error Indicators, Data Areas, SNA RJP Problem Analysis, and JES3 Completion Codes.

This book is intended for use only in debugging. None of the information contained should be construed as defining a programming interface.

Manual, 8 1/2 x 11 inches  
//37//5740-XYN

GC23-0044

JES3 MESSAGES (CURRENT RELEASE)

This book contains documentation for the messages issued by the JES3 component of MVS/System Product - JES3 Release 2.

This edition applies to the JES3 component of MVS/System Product - JES3 Release 2 and to all subsequent releases and modifications until otherwise indicated in new editions or technical newsletters.

Manual, 8 1/2 x 11 inches  
//40//5740-XYN

SC23-0045

JES3 COMMANDS (CURRENT RELEASE)

This book contains the information required for a system console operator to effectively control the JES3 component of MVS/System Product - JES3 Release 2.

You should use this book in conjunction with Operator's Library: OS/VS2 MVS System Commands, GC28-1031 which provides information on controlling the MVS portion of MVS/System Product - JES3.

This edition applies to the JES3 component of MVS/System Product - JES3 Release 2 and to all subsequent releases and modifications until otherwise indicated in new editions or technical newsletters.

Manual, 8 1/2 x 11 inches  
//40//5740-XYN

SC23-0046

MVS/SP-JES2 VERSION 1 INITIALIZATION AND TUNING (CURRENT RELEASE)

This publication describes both the general functions and the network job entry functions of the JES2 part of MVS/System Product-JES2. The manual is intended for use by system programmers who are to install, initialize and tune JES2. It contains information about the installation and initialization of JES2, JES2 processing, remote job entry (RJE) supported by JES2, and factors that affect JES2 performance. The manual also describes JES2 support for user exit routines, spool offloading, system error procedures and multiple routing of output.

Manual  
//34//5740-XYN

SC23-0048

MVS/SP JES2 COMMANDS (CURRENT RELEASE)

This publication describes both the general commands of JES2 and the commands which implement the networking functions of the JES2 part of MVS/System Product - JES2. These commands are used to control jobs, SYSIN, SYSOUT and various devices for JES2. This manual can be used by operators, application programmers, system programmers and IBM maintenance personnel, but primarily provides the JES2 information required by a system console operator. This publication is intended for use with the Operator's Library: OS/VS2 MVS System Commands, GC28-1031.

Manual, 8 1/2 x 11 inches, 192 pages, 11/85  
//40//5740-XYN

GC23-0049

MVS/XA MVS/SP-JES3 INTRODUCTION (CURRENT RELEASE)

This edition applies to Version 2 of MVS/System Product-JES3 (5665-291). This book explains the external features and characteristics of JES3. It discusses what JES3 is, what JES3 can do, and how JES3 fits into the MVS environment. If you are unfamiliar with JES3, this is the first JES3 book you should read.

Manual, 03/83  
//20//5665-291

SC23-0050

MVS/XA MVS/SP-JES3 VERSION 2 OVERVIEW

This edition applies to Version 2 of MVS/System Product-JES3 (5665-291). This book looks at JES3 from a high-level internal view point. It introduces the major components of JES3 and discusses what they do and how they do it. Before reading this book, you should read the JES3 Introduction, GC23-0049.

Manual, 3/83  
//20//5665-291

GC23-0051

SUPPLEMENT FOR SU18 TO MVS JES3 DEBUGGING GUIDE JES3 MSS

Provides information for use in debugging JES3 to program support representatives and system programmers whose installation supports the 3850 Mass Storage System.

Manual, 8 1/2 x 11 inches, 204 pgs, 3/77  
SLSS: ORDER NO. SUBSCRIPTION ONLY

GC23-0058

SUPPLEMENT FOR SU29 TO MVS JES3 DEBUG GUIDE 3838 VPSS

This is a supplement to base publication JES3 Debugging Guide, GC28-0703-1. It contains information in support of JES3 Release 2 (SU12) and JES3 3850 MSS (SU18).

Manual, 8 1/2 x 11 inches, 11 pgs., 8/77  
SLSS: ORDER NO. SUBSCRIPTION ONLY

SC23-0059

MVS/XA MVS/SP-JES3 VERSION 2 INITIALIZATION AND TUNING (CURRENT RELEASE)

This publication applies to Version 2 of MVS/System Product-JES3. It should be used by anyone who plans to install, initialize, customize or tune JES3. It describes an overview of the planning that must be done before installing JES3, how to define resources to JES3, how to code JES3 initialization statements, how to make BSC or SNA remote workstations part of a JES3 complex, how to tune JES3 and how to include a JES3 complex as part of a NJE facility. Before reading this publication, users should read JES3 Introduction, GC23-0049 and the JES3 Overview, SC23-0050.

Manual, 03/83  
//34//5665-291

SC23-0060

MVS/XA MVS/SP-JES3 VERSION 2 USER MODIFICATIONS AND MACROS

This publication provides information for system programmers to use when modifying JES3 control programs in installations that include MVS/Extended Architecture (MVS/XA) systems or MVS/XA an MVS/370 systems. It includes instructions on how to write JES3 user exit routines and dynamic support programs (DSPs) and how to use JES3 macro instructions to aid in writing the exit routines and DSPs. This edition applies to MVS/SP-JES3 Version 2.

Manual, 8 1/2 x 11 inches, 346 pages, 03/83  
//36//5665-291

SC23-0061

MVS/XA MVS/SP-JES3 VERSION 2 JES3 DIAGNOSIS

This book provides reference information for debugging Job Entry Subsystem 3 (JES3) and user-written extensions of JES3. Readers must have a working knowledge of JES3 functions and logic. Topics include Debugging and Service Aids, Dump and Trace Formats, How to Find Information in a Dump, Error Indicators, Data Areas, SNA RJP Problem Analysis, and JES3 Completion Codes.

This book is intended for use only in debugging. None of the information contained should be construed as defining a programming interface.

MVS/XA JES3 MESSAGES (CURRENT RELEASE)  
This edition applies to Version 2 of MVS/System Product-JES3, 5665-291. This manual documents messages issued by JES3. The causes of the messages are explained, the accompanying actions by the operating system are described and appropriate responses are suggested. This manual is intended for any JES3 complex that runs MVS/XA or for any JES3 complex that runs both MVS/XA and MVS/370.  
Manual, 8 1/2 x 11 inches, 03/83

SC23-0064

MVS/XA MVS/SP-JES2 VERSION 2 OPERATIONS JES2 COMMANDS (CURRENT RELEASE)  
This publication provides the system console operator, application and system programmer with the information required to control JES2 on a system running under MVS. The publication is intended for use in any JES2 complex that runs MVS/Extended Architecture. It is also intended for use in any JES2 complex that runs both MVS/XA and MVS/370. It should be used with MVS/Extended Architecture Operations: System Commands, 6C28-1206.  
Manual, 8 1/2 x 11 inches, 264 pages, 01/83  
//40//5740-XC6

SC23-0065

MVS/XA MVS/SP-JES2 VERSION 2 INITIALIZATION AND TUNING (CURRENT RELEASE)  
This publication describes the general functions of the job entry subsystem (JES2) of MVS Extended Architecture/Program Product: JES2. This book is intended for JES2 system programmers responsible for installing, initializing, and tuning JES2. This book is specifically designed for installation running MVS/XA and for installations with a multi-access spool complex that contains MVS/XA systems or both MVS/XA and MVS/370 systems. When both MVS/XA and MVS/370 systems are being used in one complex, certain considerations and restrictions exist; these, as applicable, are presented. Information about the installation and initialization of JES2, JES2 processing, remote job entry (RJE) supported by JES2, and factors affecting performance is described. Also included is JES2 support for user exit routines, spool offloading, system error procedures, and multiple routing of output.  
Manual, 8 1/2 x 11 inches, 406 pages, 03/83  
//34//5740-XC6

VM/XA SF LIBRARY USER'S GUIDE AND MASTER INDEX

This publication is intended for all users of VM/XA Systems Facility publications.

It's purpose is to help these users locate information in the VM/XA SF library.

The publication is a library overview and guide, a glossary and a master index.

Manual, 8 1/2 x 11 inches, 300 pages, 01/86  
 //39//5664-169

## SC23-0167

VM/XA SYSTEMS FACILITY VM PLANNING

This publication is written for system programmers who have the responsibility of running operating systems in virtual machines.

Manual, 8 1/2 x 11 inches, 65 pages, 9/85  
 //34//5664-169

## SC23-0169

VM/XA SF DIAGNOSIS GUIDE

This publication aids the VM/XA SF diagnostician to locate problems and collect documentation on the CP component of VM/XA SF.

Manual, 8 1/2 x 11 inches, 65 pages, 9/85  
 //37//5664-169

## GC23-0173

MULTI-SYSTEM CONFIGURATION MANAGER INSTALLATION

This publication contains information intended for the person installing MSCM. It has examples for the customer to use when installing MSCM. In conjunction with the program directory, it presents all the information needed to install MSCM.

Manual, 8 1/2 x 11 inches, 32 pages, 10/85  
 ///5665-342

## SC23-0174

MULTI-SYSTEM CONFIGURATION MANAGER PROGRAMMING

This publication contains programming instructions used in writing application programs to the MSCM Programmable Operator Interface.

Manual, 8 1/2 x 11 inches, 88 pages, 11/85  
 //40//5665-342

## GC23-0175

MULTI-SYSTEM CONFIGURATION MANAGER PLANNING

This publication is for the person(s) responsible for designing and planning MSCM configurations and switching matrixes. It contains the information needed to plan and design switching configurations for MSCM. It explains switching concepts and terminology, matrixes, subsets and supersets, authority levels, restricted accesses, file backups and multiple data sets, and gives examples.

It should be used in conjunction with Multi-System Configuration Manager: Planning Worksheets, GC23-0188.

Manual, 8 1/2 x 11 inches, 160 pages, 11/85  
 //34//5665-342

## SC23-0176

MULTI-SYSTEM CONFIGURATION MANAGER ADMINISTRATION

This publication provides how-to and reference information needed to use Multi-System Configuration Manager (MSCM) panels to build a switching data base, assign authority

## GC23

levels and passwords, and do switching. It is designed for the configuration administrator, the person responsible for using MSCM panels and commands to build and maintain the switching data base.

Manual, 8 1/2 x 11 inches, 280 pages, 11/85  
 //40//5665-342

## SC23-0177

MULTI-SYSTEM CONFIGURATION MANAGER, 5665-342 OPERATOR'S REFERENCE CARD

This card provides a quick reference to MSCM switching commands.

Reference card, 25 3/8 x 8 1/2 inches, 16 panels, 11/85  
 //40//5665-342

## SC23-0178

MULTI-SYSTEM CONFIGURATION MANAGER MESSAGES AND PROBLEM DETERMINATION

The MSCM panel messages, system-console messages and contents of the MSCM log are listed and explained when necessary. Procedures for displaying and deleting integrity marks in the MSCM data base are provided, as well as guidelines for general problem determination for this product.

Manual, 8 1/2 x 11 inches, 75 pages, 11/85  
 //37//5665-342

## GC23-0179

MULTI-SYSTEM CONFIGURATION MANAGER SPECIFICATIONS

This publication provides highlights, lists the hardware and software requirements, and states the warranty for the Program Product.

Flyer, 8 1/2 x 11 inches, 4 pages, 11/85  
 //00//5665-342

## SC23-0186

VM/SP HPO SYSTEM DEFINITION FILES (CURRENT RELEASE)

This publication contains the sample system definition files previously provided in the VM/SP HPO Installation Guide, SC38-0107. Sample directories are provided for the 3330, 3350, 3375 and the 3380 device types. These sample directories identify the required minidisks and minidisk sizes associated with each userid. When initialization is complete the directories should be customized by entering unique userid and read/write passwords in order to establish data security.

Manual, 150 pages, 11/85  
 //34//5664-173

## GC23-0187

VM/SP HPO RELEASE 3.6 LIBRARY GUIDE GLOSSARY AND MASTER INDEX (CURRENT RELEASE)

This publication describes the VM/SP HPO Library. It tells how to order the library, defines VM/SP HPO terms, and directs the reader to the appropriate publication within the library by giving the index entries. This is a component of GBOF-0002 and GBOF-0003.

Manual, 8 1/2 x 11 inches, 200 pages, 8/85  
 //20//5664-173

## GC23-0188

MULTI-SYSTEM CONFIGURATION MANAGER PLANNING WORKSHEETS

This publication is for the person(s) responsible for designing and planning MSCM configurations and switching matrixes. It contains the worksheets that the MSCM Configuration Planner completes when designing an MSCM switching system. It should be used in conjunction with

GC23

Multi-System Configuration Manager: Planning GC23-0175.

SC23-0221

SMP/E PROGRAM PACKAGING GUIDE  
This publication explains how to package programs so that they can be installed by SMP/E. There are descriptions of concepts and considerations that will help users plan for this task. This publication is intended for system programmers who are familiar with SMP/E, MVS/370 or MVS/XA, and VSAM.  
Manual, 8 1/2 x 11 inches, 108 pages, 3/86  
////5668-949

SC23-0224

MVS/BDT VERSION 2 INSTALLATION  
This publication is a guide to installing the MVS/Bulk Data Transfer (BDT) Version 2 licensed program. It explains how to define BDT to MVS and ACF/VTAM, allocate BDT and TQI (transaction queuing integrity facility) data sets, write BDT initialization statements, write BDT and TQI start procedures, and write BDT user exit routines. This publication is intended for systems programmers.  
Manual, 8 1/2 x 11 inches, 300 pages, 7/86  
//34//5665-264

SC23-0226

MVS/BULK DATA TRANSFER VERSION 2 COMMANDS  
This publication is a guide and reference to MVS/Bulk Data Transfer Version 2 commands. The guide part explains which commands to use to accomplish various tasks. The reference part presents the commands in alphabetic order, listing for each command its purpose, format, usage notes, results when issued and examples. This publication is intended primarily for system programmers and system operators. End users can also use it to find out how to display information about their jobs.  
Manual, 8 1/2 x 11 inches, 120 pages, 7/86  
//40//5665-264

SC23-0227

MVS/BULK DATA TRANSFER VERSION 2 MESSAGES AND CODES  
This publication describes the messages and completion codes issued by MVS/Bulk Data Transfer (BDT) Version 2. For each message and each code it lists an explanation, system action, user, operator, or system programmer response and issuing module. This publication is intended for systems

SC23

operators, systems programmers and end users.  
Manual, 8 1/2 x 11 inches, 300 pages, 7/86

OFFICE INFORMATION ARCHITECTURES CONCEPTS  
This manual introduces Document Interchange Architecture (DIA) and two types of Document Content Architecture (DCA) to those who need to learn the concepts and benefits of these architectures in office system networks. The two types of Document Content Architecture described are Revisable-Form-Text DCA and Final-Form-Text DCA. This is the basic publication about DCA and DIA for managers, system designers, and others involved in making decisions about planning or implementing office system networks. This book is not a primer on electronic office system products. Although no specific prerequisite reading is suggested,

readers of this book are assumed to be somewhat familiar with the purposes and capabilities of office system products.

Manual, 8 1/2 x 11 inches  
SLSS: ORDER NO. SUBSCRIPTION ONLY

SC23-0776

NETWORK 3270-PLUS PIM USER GUIDE

This publication describes and illustrates the use of PIM (Programmer Interface Modules) to automate the interaction between Network 3270-PLUS (running on a local computer) and a host central processing unit.

It is a component of SBOF-0155.  
Manual, 8 1/2 x 8 1/2 inches, 120 pages, 03/87  
SLSS: ORDER NO. SUBSCRIPTION ONLY

SC23-0781

DOCUMENT INTERCHANGE ARCHITECTURE: TECHNICAL REFERENCE

DIA is a program-to-program communication architecture which defines the protocols and data structures that enable programs to communicate processing intentions and to interchange data in an office systems network. It describes the DIA information interchange base (DIA concepts, protocols, data structures, and session services); Document Distribution Services; Document Library Services; and Application Processing Services. Restrictions and limitations imposed by product implementation of the architecture are not covered.

The chapters are organized according to the information needs of the audience. This includes overview for data processing managers and increasing detail for designers, systems programmers and application developers.

Manual, 332 pages, 4/85

GC24-3964

4381 PROCESSOR INPUT/OUTPUT CONFIGURATION PROGRAM USER'S GUIDE AND REFERENCE

This publication is intended for personnel who are responsible for defining and configuring the channels, control units and I/O devices for the 4381 Processor when it operates in 370-XA (extended architecture) mode. The reader should have knowledge for the 4381 Processor and the characteristics of its I/O resources.

Briefly, the manual gives an overview of the Input/Output Configuration Program (IOCP) for the 4381 Processor, describes how IOCP operates, describes the information the user must provide for IOCP, explains the reports and messages produced by IOCP, shows sample listings of IOCP input, shows the IOCP parameter values that are specified in the IODEVICE, and CNTLUNIT macros, and highlights the differences between 4381 and 308X IOCP instructions.

Manual, 100 pages, 02/84

DOS OLTEP

This reference publication describes the Disk Operating System (DOS) On-Line Test Executive Program (OLTEP) that controls online testing of I/O units under the DOS supervisor. It explains the functions of the program and gives procedures for running the test programs that are obtained from the IBM Customer Engineer.

For titles and abstracts of associated publications, see the IBM System/360 and System/370 Bibliographies.  
Manual, 48 pages

SLSS: ORDER NO. SUBSCRIPTION ONLY

GC24-5090

OS/VS1 PLANNING AND USE GUIDE

This publication contains planning information about OS/VS1, to assist installation personnel who are responsible for the selection and evaluation of an operating system.

The use part of the Guide contains information on implementing, modifying, or extending capabilities of VS1 control program.

The information in the Planning part is presented in two major categories: Concepts and Considerations. The Concepts section describes the facilities, features supported, and principles of operation of VS1. The Considerations section contains suggestions on how to make the most effective use of the system. The test is supplemented by illustrations showing a representative job input stream, the scheduling sequence of the system, and examples of possible partition configurations for various sized systems.

The information in the Use part of the Guide is presented in self-contained sections, each dealing with a separate capability or function of the control program.

The publication is intended for people who are familiar with the concepts and operation of the IBM System/360 Operating System. Prerequisite reading should include the IBM System/370 Advanced Operating System, System Summary, GA22-7001, and its associated Technical Newsletters.

The Use part of the publication is intended for system programmers responsible for maintaining and updating the VS1 system.

Manual, 400 pages  
//34//5652

GC24-5091

OS/VS1 PROGRAMMER'S REFERENCE DIGEST

This publication contains quick-reference information about the VS1 operating system. It is intended for experienced programmers and field support personnel. For the most part, definitions, restrictions, and limitations have been omitted. Information about program debugging and control blocks is not included in this publication.

This publication is divided into nine sections containing: general information; system information; supervisor information; data management information; JCL, operator commands, SMF, RES, and CRJE information; linkage editor and loader information; BTAM/TCAM/VTAM information; utilities and service aids information.

Linkage Editor and Loader Information  
BTAM/TCAM/VTAM Information

GC24-5093

OS/VS1 DEBUGGING GUIDE

This publication is written for those involved in debugging application and system programs. It contains material on

how to start debugging, a section on functional information (system concepts) to help the reader see the system as a whole and to give some particularly useful concepts, and a section on output formats and uses in the debugging situation. A series of appendixes provide additional reference information for convenience.  
Manual, 168 pages  
//37//5652

## GC24-5094

OS/VS1 STORAGE ESTIMATES

This publication is intended for two types of users: System programmers, and problem programmers. It contains instructions, formulas, and charts that can be used to estimate the real, virtual, and auxiliary storage requirements for VS1. Real storage is system (hardware) storage and corresponds to main storage in other IBM operating systems. Virtual storage is an addressing storage concept that provides the installation with as many as 16,777,216 bytes of storage accessible to programs. Auxiliary storage is comprised of the input/output devices required to contain virtual storage, system residence libraries, job queues, spooled data sets, and work space required by control and processing programs.

Each type of user can use this publication differently.

- o System programmers can use this publication to determine the amount of real, virtual and auxiliary storage that must be allocated during system generation or Initial Program Load.
- o Problem programmers can use this publication to determine the sizes of partitions in virtual storage.

Manual, 240 pages, 7/75  
//34//5652

## GC24-5095

DOS AND DOS/VS TO OS/VS1 IMPLEMENTATION GUIDE

Provides reference information on altering DOS and DOS/VS programs and files to be compatible with the OS/VS1 system control program. It describes the similarities and differences between DOS and OS/VS1, thus helping programmers to:

- o Modify existing DOS and DOS/VS programs and files only where needed, and
- o Take advantage of OS/VS1 facilities not provided in DOS and DOS/VS

This manual includes many examples of equivalent DOS and DOS/VS and OS/VS1 coding. It also describes the use of the DOS emulator to effect a gradual transition from DOS to OS/VS1. The major topics in the manual are:

- o System Generation
- o Resource Allocation
- o Performance Considerations
- o Job Entry Subsystem (JES)
- o Linkage Editor
- o System Assembler
- o Job Control Language
- o Data Sets (Files)
- o Data Management Macros
- o Utilities
- o Service Aids
- o Telecommunications
- o Emulation

The intended audience is system and application programmers in a DOS or DOS/VS installation making the transition to the OS/VS1 system control program. Readers should be familiar with DOS or DOS/VS its system facilities, and the DOS or DOS/VS versions of the compilers or assemblers used in the programs to be changed.

Prerequisite publications:

- o DOS and DOS/VS to OS/MFT, OS/MVT, OS/VS1 Management Planning Guide, GC24-5082
- o OS/VS1 Planning and Use Guide, GC24-5090

Manual, 300 pages  
//34//5741,5745-010,5652

## GC24-5099

OS/VS1 JCL REFERENCE

This publication defines the facilities provided with the job control language and contains the information necessary to code job control language statements. It is intended for use by programmers who understand the concepts of job management and data management. Prerequisite publication:

OS/VS1 JCL Services, GC24-5100

Manual, 244 pages  
//36//5741,5652

## GC24-5100

OS/VS1 JCL SERVICES

This publication describes the operating system services that can be requested by coding JCL (job control language) parameters. It is written for applications programmers with a basic knowledge of computer operating systems and some familiarity with JCL. Part 1 contains a brief overview of the nine JCL statements and an introduction to the organization of the services in the book. Part 2, which describes the use of JCL services, is divided into five sections: running your job; defining and describing data sets; special data sets; obtaining output; cataloged and in-stream procedures.

Not every service provided by JCL is described in the book. Included is a list of JCL services, showing the publication in which each is described, and the parameter, subparameter, or statement used to request it. JCL parameters are discussed only in the context of requesting services. Complete parameter descriptions and syntax rules are in the Companion book. OS/VS1 JCL Reference, GC24-5099.  
Manual, 130 pages

## GC24-5115

OS/VS1 SYSTEM MANAGEMENT FACILITIES (SMF)

This publication assists installation managers and system programmers in planning for, installing, and using System Management Facilities (SMF). SMF collects and records accounting, data set, subsystem, system and volume information. It also has exits that can link to user-written routines for monitoring a job or job step.

This publication describes the basic SMF functions and the relationship of SMF to the operating system and to user-written exit routines. It also explains:

- How to include SMF and user-written exit routines in the operating system.
- The additional storage required by SMF.
- How to switch and dump the SMF data sets.
- How to plan, write and test exit routines.
- When each SMF record is written and the information contained in each record.

## GC24-5116

OS/VS1 RELEASE 6 GUIDE

Describes the ordering and distribution procedures, special considerations, and change activity of Release 6 of the OS/VS1 SCP (Operating System/Virtual Storage Option 1 System Control Program). It provides installation managers, system programmers, and IBM Field Engineering personnel with information useful in planning for, and implementing this

release.

The three chapters of this publication contain:

1. A functional summary of features available and devices supported in this release and special considerations for generating and running this release.
2. Ordering and distribution procedures for this release, including program material shipped with the system and optional material available.
3. A summary of change activity to the system, including APARs, PTFs resolved, engineering change levels, and publications.

Manual, 44 pgs, 11/76

VSE/ADVANCED FUNCTIONS, LIC PROG 5746-XE8, TAPE LABELS (CURRENT RELEASE)

The types of labels that may be written on magnetic tape by VSE/Advanced Functions are defined and described in this manual. The processing performed by the system, and the specifications that the user must supply, are described. The processing of standard, user-standard, and nonstandard labels, and unlabeled files, is explained, primarily in

regard to the function performed for volume, header, and trailer labels when the user ties specifications directly to IOCS through the DTF entries. Illustrations of volume layouts show the various arrangements of labels and data records that can be handled. For a thorough understanding of this manual, the reader should have a basic understanding of the Input/Output control systems (IOCS) as described in VSE System Data Management concepts, 6C24-5209, and VSE/Advanced Functions Macro User's Guide, SC24-5210. Manual, 8 1/2 x 11 inches, 60 pages, 10/79

VM/IPF SYSTEM TAILORING (CURRENT RELEASE)

This publication aids the VM/IPF (Virtual Machine/Interactive Productivity Facility) systems administrator in tailoring the system. The administrator is responsible for tailoring system files (DMKRIO, DMKSNT, DMKSYS, and DMKBOX), generating and maintaining the system,

managing disks.

Manual, 8 1/2 x 11 inches, 1 year, 370 pages, 05/87

SC26-3740

OS TSO ASSEMBLER PROMPTER, LIC PROG 5734-CP2, USER'S GUIDE

The assembler prompter is a program product that makes it easy to call Assembler F from a terminal. The prompter, which is a command processor, operates only under the Time Sharing Option (TSO) of the IBM System/360 Operating System.

This book is for the assembler-language programmer who wants to use TSO to write, assemble, and execute programs from a terminal using the assembler prompter.

Section 1, which supplements the manual IBM SYSTEM/360 OPERATING SYSTEM: TIME SHARING OPTION TERMINAL USER'S GUIDE (GC28-6763), explains how to use the ASM command by itself to assemble source code and obtain object code for existing source code. It also explains how to use ASM as an operand of the RUN command and of the RUN subcommand of the EDIT command to assemble, load, and execute assembler-language source code.

Section 2, which supplements the book IBM SYSTEM/360

OPERATING SYSTEM: TIME SHARING OPTION COMMAND LANGUAGE REFERENCE (GC28-6732), describes the format of the ASM command and lists the operands, with a brief description of each, in alphabetic order.  
Manual, 30 pages  
////5734-CP2

## GC26-3758

OS ASSEMBLER H, LIC PROG 5734-AS1, GENERAL INFORMATION  
Assembler H is a new assembler-language processor that extends the basic assembler language and the macro and conditional-assembly language. It is designed to perform high-speed assemblies on IBM System/360 Models 40 and larger that have at least 256K bytes of main storage.  
This publication describes the language extensions. It also provides information on system requirements and performance estimates. This manual is designed to aid both planning and programming personnel. The reader is assumed to be familiar with the assembler language and with macro and conditional-assembly language processing.  
Manual, 42 pages  
////5734-AS1

## SC26-3759

OS ASSEMBLER H, LIC PROG 5734-AS1, PROGRAMMER'S GUIDE  
This book tells how to use Assembler H. It describes assembler options, cataloged Job Control Language procedures, assembler listing and output, sample programs, and programming techniques and considerations.  
Assembler H is an assembler-language processor for the IBM System/360 Operating System. It performs high-speed assemblies on an IBM System/360 Model 40 or higher with at least 256K bytes of main storage.  
This book is intended for all Assembler H programmers. It should be used in conjunction with the OPERATING SYSTEM ASSEMBLER LANGUAGE Manual, Order Number GC28-6514; the ASSEMBLER H LANGUAGE SPECIFICATIONS, Order Number GC26-3771; and the ASSEMBLER H MESSAGES, Order Number SC26-3770. Systems Reference Library Manual, 52 pages  
////5734-AS1

## SC26-3768

OS ASSEMBLER H, LIC PROG 5734-AS1, SYSTEM INFORMATION  
IBM System/360 Operating System Assembler H System Information Program Number 5734-AS1 was designed to improve many features of Assembler F, and has expanded capabilities as a macro assembler for both system and user defined macro languages.  
This publication describes installation considerations and system-generation procedures for Assembler H, and is intended primarily for programmers responsible for installing the assembler.  
This manual is divided into three independent chapters:  
o Performance Estimates,  
o Storage Estimates, and  
o System Generation.  
Program Product Manual, 44 pages  
////5734-AS1

## SC26-3770

OS ASSEMBLER H, LIC PROG 5734-AS1, MESSAGES  
This book describes the assembly error diagnostic messages and the abnormal assembly termination messages issued by Assembler H. Assembler H is an assembler-language processor for the IBM System/360 Operating System. It performs high-speed assemblies on an IBM System/360 Model 40 or higher with at least 256K bytes of main storage.  
This book is intended for all Assembler H Programmers. It should be used in conjunction with the OPERATING SYSTEM ASSEMBLER LANGUAGE MANUAL, Order Number GC28-6514; the

ASSEMBLER H LANGUAGE SPECIFICATIONS, Order Number GC26-3771; and the ASSEMBLER H PROGRAMMER'S GUIDE, Order Number SC26-3759.

For each error message, this book describes the number and text of the message, the explanation of the error, the assembler's handling of the error, and the programmer's response to correct the error. The introduction to this book describes the format, content, and placement of the error messages.  
Systems Reference Library Manual, 70 pages  
////5734-AS1

## GC26-3771

OS ASSEMBLER H, LIC PROG 5734-AS1, LANGUAGE  
This manual provides language specifications for the IBM System/360 Operating System Assembler H. Primarily intended as a reference manual for assembler-language programmers, it is designed to be used in conjunction with IBM SYSTEM/360 OPERATING SYSTEM ASSEMBLER LANGUAGE, Order Number GC28-6514.  
Sections 2 - 5 of this manual describe assembler language extensions.  
Sections 6-10 of this manual describe extensions to the macro language.  
Program Product Manual, 54 pages  
////5734-AS1

## GC26-3791

OS/VS1 SYSTEM GENERATION REFERENCE  
This publication provides the information for generating an OS/VS1 System Control Program adapted to both the machine configuration and data processing requirements of an installation. It is intended for people who plan and select components for an OS/VS1 System Control Program and install it.  
This publication contains the information necessary to:  
o Plan the OS/VS1 System Control Program  
o Prepare for the generation of an OS/VS1 System Control Program  
o Execute system generation  
o Test the system that has been generated  
o Restart system generation  
In addition, this publication contains:  
o Guidelines for performing a system generation using a starter system  
o Examples of a complete, nucleus, and I/O device generation  
o The types of system generation messages produced  
In using this publication, a knowledge of the information contained in the following publications is required:  
OS/VS1 Planning and Use Guide, GC24-5090  
IBM System/360 System Summary, GA22-7001  
OS/VS1 Storage Estimates, GC24-5094.  
Manual, 242 pages  
//34//5652

## GC26-3792

OS/VS2 SYSTEM GENERATION REFERENCE  
This publication is intended for system programmers who are to plan for and install an OS/VS2 system control program and a JES2 job entry subsystem.  
This publication contains the information necessary to:  
o Plan for an OS/VS2 system control program and a JES2 job entry subsystem  
o Prepare for system generation and JES2 generation  
o Perform a system generation and a JES2 generation  
o Restart system generation if errors occur  
o Test the newly installed OS/VS2 system control program

- o In addition, this publication contains:
- o Guidelines for performing a system generation using a starter system
- o The information needed to generate JES2 multi-leaving remote terminal processor programs for job entry from remote terminals
- o Examples of parameter specifications for a complete system generation, on I/O device generation, and a JES2 generation
- o The types of system generation and JES2 generation messages produced during processing

In using this publication, a knowledge of the information contained in the following publications is required:

Introduction to OS/VS2 Release 2, GC28-0661  
 OS/VS2 Planning Guide for Release 2, GC28-0667  
 OS/VS2 Release 2 Guide, GC28-0671

Manual, 250 pages  
 //34//5752

## GC26-3795

OS/VS TAPE LABELS

This publication describes how VS processes magnetic tape volumes with IBM standard labels, American National Standard labels, nonstandard labels, or no labels. Included for the guidance of programmers and operations analysts are discussions of:

- o Label formats and contents
- o Tape volume layouts
- o Label processing for input, output, multiple data set, and multiple volume conditions
- o Tape characteristics
- o Nonstandard label processing routines and volume label editor routines
- o Component considerations
- o Using tape volumes created by other systems
- o External labels

Manual, 140 pages  
 //30//5741,5652,5752

## GC26-3813

OS/VS LINKAGE EDITOR AND LOADER

This publication provides the information necessary to use the linkage editor or loader program to prepare the output of a language translator for execution. The intended audience is a customer applications programmer coding in a higher-level language or a system programmer responsible for installing and maintaining the system. An introductory knowledge of the concepts and facilities of OS/VS is required to use this reference guide effectively.

The linkage editor combines and edits modules to produce a single module that can be brought into real storage by program fetch for execution. It operates as a processing program rather than as part of the control program. The linkage editor provides several processing facilities that are either performed automatically or invoked in response to control statements prepared by the programmer.

The loader combines the basic editing and loading functions of the linkage editor and program fetch in one job step. It is designed for high-performance loading of modules that do not require the special processing facilities of the linkage editor and fetch, such as overlay. The loader does not produce load modules for program libraries.

Manual, 195 pages  
 //31//5652,5752

## GC26-3819

OS/VS VIRTUAL STORAGE ACCESS METHOD (VSAM) OPTIONS FOR ADVANCED APPLICATIONS

This publication is intended for system programmers who develop utility programs and system control programs using OS/VS VSAM.

VSAM is an access method for use with direct-access storage devices. It provides macros for gaining access to data. Its companion service program, Access Method Services, provides commands for working with data sets and catalogs.

This publication explains options of OS/VS VSAM for advanced applications in system programming. It tells how to gain access to the contents of a control interval instead of to individual data records; how to process the records of a VSAM index; and how to build the parameter lists of the GENCB, MODCB, SHOWCB, and TESTCB macros.

Prerequisite publication: OS/VS Virtual Storage Access Method (VSAM) Programmer's Guide, GC26-3838.

Manual, 30 pages  
 //30//5652,5752

## GC26-3829

INTRODUCING THE IBM 3800 PRINTING SUBSYSTEM AND ITS PROGRAMMING

The IBM 3800 Printing Subsystem is a non-impact, high-speed, general-purpose system printer that uses an electrophotographic process to print on single-ply computer output paper. This book briefly introduces the 3800 and its programming support. The intended audience is data processing installation managers and system analysts planning for the 3800, and others seeking an introduction to it.

New Functions available with the 3800 include:

- Printing with any two (or any four if optional character generation storage is added) of 20 different character sets intermixed for the same data set, and the ability to change these character sets between data sets without operator intervention. Character sets are available in 10, 12, and 15 pitch.
- Printing with a vertical line spacing of 6, 8, or 12 lines per inch, or an intermix of these on the same page.
- Multiple copies can be printed on single-ply paper under program control.
- Forms overlay permits printing of specialized forms as data is being printed.
- Copy modification permits changing or suppressing printing of selected data from copy to copy when multiple copies are being printed.
- Graphic character modification allows the substitution or extension of graphic characters in an already-defined character set.

Manual, 40 pages  
 //03/3800/

## GC26-3830

OS/VS2 SYSTEM PROGRAMMING LIBRARY: DATA MANAGEMENT (CURRENT RELEASE)

This book provides information on how to modify and extend the data management capabilities of the OS/VS2 system control program; the intended audience is system programmers. Prerequisite Publications: GC33-4010, GC26-0683, GC26-3836, GC35-0005, GC26-3874, GC26-3875, GC26-3872, GC26-3873.

Manual, 116 pages  
 //30//5752

## GC26-3837

**OS/VS1 DATA MANAGEMENT FOR SYSTEM PROGRAMMERS**

This manual provides information on how to modify and extends the data management capabilities of the OS/VS1 System Control Program. The intended audience is system programmers. Prerequisite publications: GC33-4010, GC24-5103, GC24-5100, GC35-0005, GC26-3874, GC26-3875, GC26-3872, GC26-3873.

topics included are:

- o Maintaining the system catalog
- o Maintaining the Volume Table of Contents
- o Executing Your Own Channel Programs
- o Using XDAP to Read from and Write to Direct-Access Devices
- o Password Protecting Your Data Sets

The OS/VS1 system control program provides simpler ways (for example, job control language, utility programs, access method routines) to do each of the preceding. The information presented in this book (consisting of macro specifications and how-to information) is intended to provide greater flexibility of implementation methods.

Other topics presented are:

- o Using system macro instructions to refer to, validate, and modify system control blocks
- o Adding a UCS image or FCB image to the system image library

This book makes reference to the DEB validity checking (DEBCHK) macro instruction and the authorized program.

Readers are expected to understand how to:

- o Code programs in assembler language as described in OS/VS and DOS/VS Assembler Language, GC33-4010
- o Use the standard linkage conventions as described in OS/VS1 Supervisor Services and Macro Instructions, GC24-5103.
- o Maintain the catalog and VTOC as described in

OS/VS1 JCL Services, GC24-5100, OS/VS Utilities GC35-0005 and OS/VS Data Management Services Guide, GC26-3783.

- o Use the access method to do input/output using the data management macros as described in OS/VS Data Management Services Guide, GC26-3783 and OS/VS Data Management Macro Instructions, GC26-3793.
- o Protect data sets as described under "IEHPROGM" in OS/VS Utilities, GC35-0005.

Manual, 124 pages  
//30//5652

## GC26-3838

**OS/VS VIRTUAL STORAGE ACCESS METHOD (VSAM) PROGRAMMER'S GUIDE**

This publication is intended for system and application programmers who use OS/VS VSAM with assembler language. It is also intended for higher level language programmers who want to convert indexed-sequential data sets to VSAM's format and to use ISAM interface.

VSAM is an access method for use with direct-access storage devices. It provides macros for gaining access to data. Its companion service program, Access Method Services, provides commands for working with data sets and catalogs.

This publication introduces programmers to OS/VS VSAM, guides them in using it, and serves as a reference. It tells how to code programs to gain access to data stored in VSAM format. Prerequisite publications:

VS1 Data Management Services Guide, GC26-3874  
MVS Data Management Services Guide, GC26-3875  
OS/VS1 JCL Reference, GC24-5099  
OS/VS2 JCL, GC28-0692

Manual, 125 pages

## GC26-3840

**OS/VS1 ACCESS METHOD SERVICES**

This publication is intended for system and application programmers who want to establish and maintain VSAM data sets using OS/VS1 Access Method Services

Access Method Services is a multifunction service program that allows you to define data sets, alternate indexes, and catalogs, to alter or delete catalog entries, to copy and print data sets, to make a data set or catalog portable between systems, and to provide for catalog recovery.

This publication introduces programmers to Access Method Services, guides them in using it, and serves as a reference. It also provides the background information about VSAM that is required to make effective use of Access Method Services. It tells how to code Access Method Services commands to establish and maintain data sets. It also provides general information about how to optimize VSAM's performance and how to use VSAM's security and integrity features through the values specified in Access Method Services commands.

Prerequisite publications:

OS/VS Virtual Storage Access Method (VSAM) Programmer's Guide, GC26-3838

VS1 Data Management Services Guide, GC26-3874

MVS Data Management Services Guide, GC26-3875

## GC26-3841

**OS/VS2 ACCESS METHOD SERVICES**

This publication applies to release 3 and is intended for system and application programmers who want to establish and maintain VSAM data sets using Access Method Services.

Access Method Services is a System/370 OS/VS2 MVS multifunction service program that allows you to define data sets and catalogs to list catalogs, to alter or delete catalog entries, to copy and print data sets, to load and reload catalogs for backup, to make a data set or catalog portable between systems, to convert OS catalog entries into entries in an existing VSAM catalog in an OS/VS2 system, and to list tape volumes that were mounted at the time of a checkpoint.

This publication introduces programmers to Access Method Services, guides them in using it and serves as a reference. It also provides the background information about VSAM that is required to make effective use of Access Method Services. It tells how to code Access Method Services commands to establish and maintain data sets. It also provides general information about how to optimize VSAM's performance and how to use VSAM's security and integrity features through the values specified in Access Method Services commands.

Prerequisite publications:

OS/VS Virtual Storage Access Method (VSAM) Programmer's Guide, GC26-3838

## GC26-3842

**PLANNING FOR ENHANCED VSAM UNDER OS/VS**

VSAM (Virtual Storage Access Method) is an access method of OS/VS (Operating System/Virtual Storage). This book enables prospective users to prepare for VSAM and describes for

GC26

current users the enhanced functions and capabilities that improve VSAM's performance and make it a more versatile access method for a wider range of applications.

The intended audience is data processing managers whose decisions will influence the use of VSAM, system and application programmers who will use VSAM in new and existing programs, and others seeking an introduction to VSAM.

The reader is expected to be familiar with basic concepts such as access method, direct access storage, and the distinctions between data set organization and data set processing. Appropriate sections of the VSI and MVS Data Management Services Guide, GC26-3874 and GC26-3875, are suitable for preparatory reading.

Manual, 100 pages  
//30//5752,5741,5652

GC26-3846

3800 PRINTING SUBSYSTEM PROGRAMMER'S GUIDE

This publication provides:

planning and conversion information for the 3800 Printing Subsystem. The intended audience is data processing managers, system planners and system programmers planning to incorporate a 3800 into an OS/VS1 or OS/VS2 MVS system. Information on how to use the 3800: this is intended for application programmers and system programmers who will be using the 3800.

Manual, 148 pages, 12/75

GC26-3847

VS/APL, 5748-API, 5799-AJF, -AGC, LANGUAGE REFERENCE (CURRENT RELEASE)

This publication is a language reference for users of the APL language. The systems under which the APL language is provided are VS APL (program Number 5748-API), APL Shared Variables (APLSV) Version 3, PRPQ M66282 (Program Number 5799-AQC), and the IBM 5100 Portable Computer, Models A and C. APL is an interactive, general-purpose programming language designed for use in many disciplines and applications. Differences among the APL systems served by this manual, such as reading and writing data sets and using the auxiliary processors provided with each system, are provided in APL Shared Variables (APLSV) Version 3 User's Guide, SH20-9087, VS APL for CMS: Terminal User's Guide, SH20-9067, IBM 5100 APL Reference Manual, SA21-9213, and VS APL for VSPC: Terminal User's Guide, SH20-9066.

Manual, 132 pgs, 2/78  
SLSS: ORDER NO. SUBSCRIPTION ONLY

GC26-3855

OS/VS AND DOS/VSE ANALYSIS PROGRAM-1 (AP-1) USER'S GUIDE (CURRENT RELEASE)

This publication is intended for operators whose systems include the IBM 3344 or IBM 3350 Direct-Access Storage. The material introduces operators and programmers to Analysis Program-1 (AP-1), its operating procedures, and its output. The material is presented in general terms and assumes that the reader knows how to operate his computer system.

AP-1 is a utility program for use with the 3344 and 3350. AP-1 examines the drive and the user's data to determine if there are errors. When AP-1 detects an error, it prints a message to the operator and prints diagnostic information on the system's printer.

Manual, 3/76

GC26-3864

OS/VS2 MVS CVOL PROCESSOR

This publication is intended for the systems programmer installing OS/VS2 MVS. The CVOL Processor is supplied to lessen your installation considerations when using OS/VS2 MVS.

This book describes (1) the purpose and functions supported by the CVOL Processor, (2) how to use the CVOL Processor, and (3) restrictions and limitations of the CVOL Processor.

Manual, 28 pages, 7/76  
//30//5752

GC26-3872

OS/VS1 DATA MANAGEMENT MACRO INSTRUCTIONS

This publication contains descriptions and definitions for the data management macro instructions, other than those of VSAM (virtual storage access method), available in the assembler language. It provides application and system programmers with the necessary information to code the macro instructions.

This publication is divided into these parts:

- o "Introduction," which contains a general description of macro instructions, the rules to be followed when macro instructions are coded, and a description of the notational conventions used throughout the publication.
- o "Macro Instruction Descriptions," which describes the function of each macro instruction and defines how each macro instruction is to be coded.
- o Appendix A: Status Information Following an Input/Output Operation.
- o Appendix B: Data Management Macro Instructions Available by Access Method.
- o Appendix C: Device Capacities.

- o Appendix D: DCB Exit List Format and Contents.
- o Appendix E: Control Characters.
- o Appendix F: Data Control Block Symbolic Field Names.
- o Appendix G: Event Control Block.
- o Appendix H: PDABD Symbolic Field Names.
- o Index, which provides topic references to information in this book.

**Prerequisite Publications**

Before coding data management macro instructions, you should be familiar with the information in the following publications:

- o OS/VS-DOS/VS-VM/370 Assembler Language, GC33-4010
- o OS/VS1 Data Management Services Guide, GC26-3874
- o OS/VS1 Supervisor Services and Macro Instructions, GC24-5103

Manual, 240 pages, 8/76  
//30//5652

**GC26-3873****OS/VS2 MVS DATA MANAGEMENT MACRO INSTRUCTIONS**

This publication is intended for application programmers who write programs in assembler language. It contains a brief description of each macro instruction and a description of each operand that can be specified in each macro instruction for the following data management access methods:

- o Basic direct access method (BDAM)
- o Basic indexed sequential access method (BISAM)
- o Basic partitioned access method (BPAM)
- o Basic sequential access method (BSAM)
- o Queued indexed sequential access method (QISAM)
- o Queued sequential access method (QSAM)

This publication does not describe macro instructions for specialized application programs such as teleprocessing, graphics, magnetic readers, Time Sharing Option (TSO), or VSAM.

These Macro instructions are discussed in separate publications that are listed in the IBM System/370 Bibliography, GC20-0001.

Before using this publication to code macro instructions, you should be familiar with the information in OS/VS and DOS/VS Assembler Language, GC33-4010, and OS/VS2 MVS Data Management Services Guide, GC26-3875.

Manual, 240 pgs, 11/76  
//30//5752

**GC26-3874****OS/VS1 DATA MANAGEMENT SERVICES GUIDE**

This book describes the services provided by the operating system that allow the programmer to organize data into data sets on auxiliary storage devices, to read information from these data sets into virtual storage, and, after processing the information, to record it on auxiliary storage devices.

This book is intended for application programmers who write assembler language programs that create and process data sets. It describes the assembler language macro instructions used to request input and output operations. The format of the macro instructions is explained in OS/VS1 Data Management Macro Instructions, GC26-3872, which should be used with this book.

In addition to describing the characteristics of data sets and direct-access storage devices, the book describes the techniques you can use to process sequential, partitioned, indexed sequential, and direct data sets. This book assumes that you have a basic knowledge of the operating system and of the assembler language. Some books that contain information about these subjects are OS/VS1 Planning and Use Guide, GC24-5090, IBM System/370 System Summary, GA22-7001. It also assumes that you are familiar with job control language, especially the DD statement, as described in OS/VS1 JCL Services, GC24-5100, and in OS/VS1 JCL Reference, GC24-5099.

This book does not discuss macro instructions used for

the time sharing option or for graphics, teleprocessing, optical character readers, optical reader-sorters, magnetic character readers, or VSAM. These macro instructions are discussed in separate publications that are listed in the IBM System/370 Bibliography, GC20-0001.  
Manual, 167 pages, 9/76

**GC26-3875****OS/VS2 MVS DATA MANAGEMENT SERVICES GUIDE**

This publication describes how to write assembler-language programs that will create and process data sets.

To use this book, you must have a basic knowledge of:

- o OS/VS2, described in OS/VS2 Planning and Use Guide for Release 2, GC28-0667.
- o Assembler Language, as described in OS/VS and DOS/VS Assembler Language, GC33-4010.
- o Job control language (JCL), as explained in OS/VS2 JCL, GC28-0692.

Manual, 168 pgs, 11/76  
//30//5752

**GC26-3876****OS/VS1 CHECKPOINT/RESTART**

This publication describes Checkpoint/Restart, a technique for recording information about a job at programmer-designated checkpoints so that, if necessary, the job can be restarted at the beginning of a step or at a checkpoint within a step. It is intended for use by programmers and system analysts.

A general understanding of job control language and data management is prerequisite knowledge for understanding the information in this publication.

Manual, 88 pages, 9/76  
//36//5652

**GC26-3877****OS/VS2 MVS CHECKPOINT/RESTART**

This publication describes Checkpoint/Restart, a technique for recording information about a job at programmer-designated checkpoints so that, if necessary, the job can be restarted at the beginning of a step or at a checkpoint within a step. Checkpoint/Restart is intended for use by programmers and system analysts. A general understanding of job control language and data management is prerequisite knowledge for understanding the information in this book.

Manual, 84 pages

SUPPLEMENT FOR SU32 TO OS/VS UTILITIES MESSAGES:  
MVS SYSTEM SECURITY, 5752-832

This supplement contains replacement pages for OS/VS Utilities Messages, GC38-1005-7 to support the OS/VS2 MVS System Security Support Selectable Unit (SU).

The System Security Support SU has five prerequisites:

- OS/VS2 MVS Scheduler Improvements SUID 5752-804
  - OS/VS2 MVS Supervisor Performance #1 SUID 5752-805
  - OS/VS2 MVS Supervisor Performance #2 SUID 5752-807
  - OS/VS2 MVS Data Management SUID 5752-808
  - OS/VS2 MVS Scheduler/IOS Support SUID 5752-816
- Manual, 8 1/2 x 11 inches, 6 pgs, 6/77

GC26-3900

DOS/VS IBM 3800 PRINTING SUBSYSTEM PROGRAMMER'S GUIDE

This book provides:

- o Planning and conversion information for the IBM 3800 Printing Subsystem. The intended audience is data-processing managers, system planners, and system programmers planning to incorporate a 3800 into computer installations.
- o Information on how to use the 3800. This is intended for application programmers and system programmers who will be using the 3800.

There is no prerequisite reading, although a basic knowledge of computers and system printers assumed.

Manual, 8 1/2 x 11 inches, 150 pages, 10/77

SC26-3916

OS/VS ACCESS METHOD SERVICES CRYPTOGRAPHIC OPTION, LIC PROG 5740-AM8

This book describes the Access Method Services Cryptographic Option, a program product which enables a user to protect his offline data. This option is invoked by users of the Access Method Services REPRO command, which has been extended so that data can be copied to yield a data set whose contents are unintelligible. Another function of REPRO converts the data back to an intelligible form. The REPRO command uses the Programmed Cryptographic Facility program product, 5740-XY5.

The book is intended for installation managers and system programmers who are responsible for the software data security of their installations. It is assumed the reader is familiar with Access Method Services, its command language format, notational conventions, JCL requirements, etc. This information is contained in OS/VS1 Access Method Services, GC26-3840, and OS/VS2 Access Method Services, GC26-3841.

DIRECT ACCESS STORAGE DEVICE MIGRATION AID, LIC PROG 5668-002, USE AND DIAGNOSIS

This publication is required for anyone using the Direct Access Storage Device Migration Aid program product. This publication is divided into two distinct parts:

- Part 1 is intended for people who plan for migrating non-VSAM data sets to a new DASD, as well as for those who create and maintain the JCL and utility control statements, and procedure libraries required for migrating these data sets.
- Part 2 is for diagnosticians and IBM local and central service personnel who diagnose DASD Migration Aid errors and correct them. It describes how to determine the type of programming error that occurred and the DASD Migration Aid program it occurred in.

The following publication may be useful when first becoming familiar with the product:

MVS/XA MAGNETIC TAPE LABELS AND FILE STRUCTURE

This publication explains, for programmers and operations analysts, how the MVS/Extended Architecture (MVS/XA) system processes magnetic tape labels.

Prerequisite publications are:

MVS/Extended Architecture Conversion Notebook, GC28-1143;

MVS/Extended Architecture JCL, GC28-1148;

MVS/Extended Architecture Data Administration Guide,

GC26-4013.

VS COBOL FOR DOS/VSE LANGUAGE REFERENCE (CURRENT RELEASE)

This reference manual describes DOS/VS COBOL and gives the rules for writing COBOL source programs that are to be compiled by the DOS/VS COBOL compiler under DOS/VSE.

The DOS/VS COBOL Compiler and Library, Release 3, is designed according to the specifications of industry standards, as understood and interpreted by IBM as of May 1980. A significant number of extensions are included.

Manual, 480 pages, 05/81

GC26-4007

DATA FACILITY PRODUCT GENERAL INFORMATION

This publication provides general information about the MVS/Extended Architecture (MVS/XA) Data Facility Product (DFP) to enable managers, systems programmers, and others to evaluate the DFP for use at their installations. The manual will help them to: evaluate the usefulness of the Data Facility Product, understand what the DFP provides, evaluate the compatibility of the DFP with current installations, estimate the resources required to install and use the DFP, and understand the tasks required to prepare for installation and use of the DFP.

There is no prerequisite reading for this publication, but it is assumed that the reader has a general knowledge of data management and program management.

Manual, 8 1/2 x 11 inches, 52 pages, 02/84

GC26-4009

MVS/XA INSTALLATION SYSTEM GENERATION

This manual provides information on how to perform the following for an MVS/Extended Architecture (MVS/XA) system:

A complete sysgen, the process of creating system libraries tailored to the data processing requirements and machine configuration of your installation.

Some of the system libraries can be updated to reflect certain changes to the installation without requiring another complete sysgen by performing:

An I/O device generation, used to reflect certain changes to the machine configuration or to device specifications.

An eligible device table generation, done when various

versions of the EDT are needed for use on different processors or with different job mixes.

Manual, 8 1/2 x 11 inches, 204 pages, 02/84  
//34//5665-284

## GC26-4010

MVS/XA SYSTEM DATA ADMINISTRATION

This publication is for system programmers and provides information about Data Facility Product components of MVS/XA and how to modify and extend the data management capabilities of the operating system.

Readers are expected to understand how to code programs in assembler language, to use standard linkage conventions, the EHLIST and IEHPROGM utility programs, and data management access methods and macro instructions. Required and related publications are listed in the preface.

Manual, 8 1/2 x 11 inches, 232 pages, 02/84  
//30//5665-284

## GC26-4011

MVS/XA LINKAGE EDITOR AND LOADER USER GUIDE

This publication provides application programmers with the information necessary to use the linkage editor and loader to prepare the output of a language translator for execution.

The diagnostic messages issued by both the linkage editor and the loader program are described in GC28-1376, MVS/XA Linkage Editor and Loader Messages, Volume I and GC28-1377, MVS/XA Editor and Loader Messages Volume II. The description of each message includes an explanation, a system action, and a problem determination action to be taken. The reader should be familiar with Job Control Language.

Manual, 8 1/2 x 11 inches, 220 pages, 02/84  
//31//5665-284

## GC26-4012

MVS/XA CHECKPOINT/RESTART USER'S GUIDE

This publication describes checkpoint/restart for MVS/Extended Architecture (MVS/XA), including its components, its dependencies, and information on data set security. It also describes how to set up checkpoints for job steps, how to request various types of restart, and how the checkpoint/restart routine handles user data sets.

This manual is intended for use by programmers and system analysts. A general understanding of job control language and data management is a prerequisite.

Manual, 8 1/2 x 11 inches, 88 pages, 02/84  
//36//5665-284

## GC26-4013

MVS/XA DATA ADMINISTRATION GUIDE

This publication describes all MVS/XA data administration use the data management access methods other than VSAM (virtual storage access method) to process data sets. It does not cover such specialized applications as time sharing option (TSO), graphics, teleprocessing, optical character readers, optical reader sorters, and magnetic character readers.

Prerequisites for using this book are knowledge of assembler language and MVS/XA job control language, GC28-1148,

programs that create and process data sets.  
Manual, 8 1/2 x 11 inches, 232 pages, 02/84  
//30//5665-284,5665-291,5740-XC6

## GC26-4014

MVS/XA DATA ADMINISTRATION MACRO INSTRUCTION REFERENCE

This publication contains descriptions and definitions for data management macro instructions, other than those of VSAM (virtual storage access method), available in the assembler language. It provides application and system programmers with the necessary information to code macro instructions.

The prerequisite is knowledge of assembler language.

Manual, 8 1/2 x 11 inches, 252 pages, 02/84  
//30//5740-XC6,5665-284,5665-291

## GC26-4015

MVS/XA VSAM ADMINISTRATION GUIDE (CURRENT RELEASE)

This publication describes the use of VSAM (virtual storage access method). It is intended for programmers who use VSAM macro instructions, access method services commands, or JCL to process VSAM data sets.

This publication also describes the options and factors that influence or determine VSAM's performance and it discusses control interval and control area size, free space, key ranges, buffer management, index options, and the staging of VSAM data sets for certain MSS applications. Other topics include control interval processing, data security and integrity, sharing a VSAM data set, sharing resources among data sets, and user-written exit routines.

The reader requires a background in programming, including catalog administration, job control language, and principles of operation.

Manual, 8 1/2 x 11 inches, 260 pages, 02/84  
//30//5665-284,5665-291,5740-XC6

## GC26-4016

MVS/XA VSAM ADMINISTRATION MACRO INSTRUCTIONS REFERENCE

This publication contains the macro instructions that are used for VSAM (virtual storage access method). It is intended for programmers who use VSAM macro instructions, access method service commands, or JCL to process data. It contains return codes for macros used to open and close data sets, manage control blocks, and issue data management requests. It describes the standard way to build parameter lists.

Required and related publications are listed in the preface.

Manual, 8 1/2 x 11 inches, 192 pages, 02/84  
//30//5665-284,5665-291,5740-XC6

## GC26-4017

MVS/XA CACHE DEVICE ADMINISTRATION

This publication is intended to give system programmers an overview of the access method services commands used with the 3880 Storage Control. The reader should be familiar with the information in Introduction to Storage Control Model 11, GA32-0061, and Introduction to 3880 Storage Control Model 13, GA32-0062.

Related publication are listed in the preface.

Manual, 8 1/2 x 11 inches, 60 pages, 02/84  
//34//5665-284

## GC26-4018

MVS/XA UTILITIES (CURRENT RELEASE)

This publication describes how to use the MVS/Extended Architecture (MVS/XA) utility programs. The user should be familiar with virtual storage management, data management, and job control language.

It summarizes the utility programs and gives information on

GC26

the differences among system, data set, and independent utility programs.  
Manual, 8 1/2 x 11 inches, 460 pages, 02/84  
//32//5665-284

GC26-4019

MVS/XA INTEGRATED CATALOG ADMINISTRATION ACCESS METHOD SERVICES REFERENCE (CURRENT RELEASE)

This publication contains reference information about the access method services commands used to manipulate VSAM (virtual storage access method) catalogs and VSAM data sets. The format, a description, and examples of each access method services command used is given.

Required and related publications are listed in the preface. Readers should have a background in MVS/XA job control language, data management and catalog administration.

Catalog User's Guide, GC26-4041. For information on the use of VSAM macro instructions, VSAM optimization options, and various VSAM algorithms affecting performance, see VSAM Reference, GC26-4016. Readers of this book are assumed to have a background in programming.  
Manual, 8 1/2 x 11 inches, 344 pages, 02/84

GC26-4023

BASIC GENERAL INFORMATION (CURRENT RELEASE)

This manual contains information to help evaluate and plan for using IBM BASIC, which runs under VM/System Product-CMS. It is not intended as a specifications manual.

This publication describes the added dimensions of IBM BASIC to existing BASIC languages. Also described are operating environments, operating considerations, file handling, supported options and language, and available commands. This manual lists programming and machine requirements, and describes the relationship of IBM BASIC to VS BASIC. It also describes the manuals available with this product.  
Manual, 8 1/2 x 11 inches, 68 pages, 08/83

SC26-4025

BASIC/VM INSTALLATION AND CUSTOMIZATION GUIDE (CURRENT RELEASE)

This publication describes how to plan for, install, and customize BASIC/VM. Users should be familiar with VM/SP-CMS. This book lists the machine, program and storage requirements and describes the planning needed to install the product. It gives information on changing the processor's reserved word table and on customizing intrinsic functions. There is a list of the library modules

SC26

for the intrinsic functions and a list of cross-references to other modules they call, and maintain an organization's operating system and is to be used in conjunction with the IBM BASIC Program Directory.  
This is a component of SK2T-0901.  
Manual, 8 1/2 x 11 inches, 48 pages, 11/83  
//5668-996

GC26-4026

BASIC LANGUAGE REFERENCE

This manual provides reference material on the IBM BASIC language. It presents definitions and examples of IBM BASIC statements and commands.  
In addition to a discussion of BASIC statements and commands, this book contains a discussion of the following subjects: structure of a BASIC program, constants, variables, arrays, expressions, intrinsic functions, and IBM BASIC file capabilities.  
This is a component of SK2T-0902.  
Manual, 8 1/2 x 11 inches, 300 pages, 11/83

ASSEMBLER H VERSION 2 INSTALLATION

This publication is primarily for users who are responsible for the installation of the assembler. It describes how to generate the assembler and include it in your operating system. It gives information for installation either on OS/VS systems or on CMS systems under VM.  
This book tells how to select, allocate, and specify target and distribution libraries and how to install the distribution tape. It also explains how to specify installation options, how to place procedures in the

procedure library, and how to execute the installation verification program.  
Manual, 8 1/2 x 11 inches, 45 pages, 01/83  
//20//5668-962

GC26-4035

ASSEMBLER H VERSION 2, 5668-962, GENERAL INFORMATION

Assembler H is an assembler-language processor that extends the basic assembler language and the macro and conditional-assembly language. It is designed to perform high-speed assemblies on System/370, 303X, 3081, and 43XX processors that have at least 200K bytes of storage.

This publication documents the language extensions. It also provides information on system requirements and performance estimates. This manual is designed to aid both planning and programming personnel. The reader is assumed to be familiar with the assembler language and with macro and conditional-assembly language processing.  
Manual, 8 1/2 x 11 inches, 40 pages, 12/81  
///5668-962

SC26-4036

ASSEMBLER H VERSION 2 APPLICATION PROGRAMMING GUIDE

This manual is for application programmers coding in the Assembler H language. It is intended to help you assemble, link-edit and execute your program. It describes assembler options, how to invoke the assembler, assembler listing and output, assembler data sets, error diagnostic facilities, sample programs, programming techniques and considerations, messages, and storage estimates.

This manual contains information relating to the various operating systems under which the assembler operates: that is, OS/VS2, MVS, MVS/Extended Architecture, MVS/System Product, OS/VS1, and CMS.  
Manual, 8 1/2 x 11 inches, 150 pages, 01/83

GC26-4037

ASSEMBLER H VERSION 2, LIC PROG 5668-962, APPLICATION PROGRAMMING LANGUAGE REFERENCE

This manual is for application programmers coding in the Assembler H language. It is not tutorial, but is for reference only. This manual describes what the assembler does, gives the relationship of the assembler to the operating system, and supplies some coding aids. The following subjects are also covered: the structure of the assembler language, terms, expressions, control and dummy sections, symbolic linking, machine instruction types and formats, and assembler instructions. This manual describes the macro instruction statement and tells how to prepare macro definitions and how to write macro instructions.  
Manual, 8 1/2 x 11 inches, 300 pages, 1/83

//20//5665-295

GC26-4061

MVS/370 DATA FACILITY PRODUCT LINKAGE EDITOR AND LOADER USER'S GUIDE  
This publication provides application programmers with the information necessary to use the linkage editor and loader to prepare the output of a language translator for execution. Information on the operation and use of the linkage editor and loader is directed to the system programmer responsible for installing and maintaining the operating system.  
The diagnostic messages issued by both the linkage editor and the loader program are described in MVS/370 Linkage Editor and Loader Messages, GC26-4067. The description of each message includes an explanation, a system action, and a

GC26

problem determination action to be taken.  
Manual, 8 1/2 x 11 inches, 212 pages, 12/85  
//31//5665-295

GC26-4062

MVS/370 DATA FACILITY PRODUCT MASTER INDEX (CURRENT RELEASE)  
This master index is provided to assist the user in finding information in the MVS/370 Data Facility Product library. It lists index entries alphabetically and uses a code to name the publications in which they are discussed. The indexes of the individual manuals provide the exact page numbers.  
Manual, 8 1/2 x 11 inches, 124 pages, 04/83  
//20//5665-295

GC26-4063

MVS/370 INSTALLATION SYSTEM GENERATION  
This publication provides information on how to do a system generation of an OS/VS2 MVS System with the installation of MVS/370 Data Facility Product. Included are the steps in planning a sysgen and detailed information on selecting and coding the sysgen macro instructions. It also describes the procedures for allocating space for the system data sets and cataloging them in the master catalog. The causes for unsatisfactory completion of sysgen are explained, and there are examples of sysgen error messages. Also discussed are the procedures for testing the newly installed system and the procedure for substituting data sets from the old production system. The publication also lists the generic names that are assigned during the sysgen process and lists the devices that are functionally equivalent.  
Manual, 8 1/2 x 11 inches, 200 pages, 12/85  
//34//5665-295

GC26-4064

MVS/370 DATA FACILITY PRODUCT MAGNETIC TAPE LABELS AND FILE STRUCTURE ADMINISTRATION  
This publication explains for programmers and operations analysis how the MVS/XA system processes magnetic tape labels. Prerequisite publications are OS/VS2 Conversion Notebook, GC28-0689, OS/VS2 MVS JCL, GC28-0692, and MVS/370 Data Management Services, GC26-4058.  
Manual, 8 1/2 x 11 inches, 160 pages, 04/83  
//30//5665-295

GC26-4065

MVS/370 DATA FACILITY PRODUCT UTILITIES DATA ADMINISTRATION  
This publication describes how to use the MVS/370 DFP utility programs. The reader should be familiar with virtual storage terms and concepts. It summarizes the utility programs and gives the differences among system, data set, and independent utility programs. Utility program functions and the programs that perform them are listed, and there is a description of the macro instructions used to invoke a utility program from a problem program. This publication also contains information about linking to and returning from optional user-supplied exit routines. There is a description of processing user labels and a review of DD statements for defining mountable devices.  
The following utilities are not discussed in this publication: IDCAMS, Device Support Facilities, Data Facility Data Set Services, and Offline 3800 Utility. The prerequisite publications are listed in the preface.

GC26-4066

MVS/370 DATA FACILITY PRODUCT VSAM USER'S GUIDE  
This manual describes the use of virtual storage access method (VSAM). It is intended for programmers who use VSAM macro instructions, access method services commands, or JCL to process VSAM data sets. VSAM, Access Method Services, and related publications are listed in the preface.  
Manual, 8 1/2 x 11 inches, 194 pages, 04/83  
//30//5665-295

GC26-4067

MVS/370 LINKAGE EDITOR AND LOADER MESSAGES  
This publication lists the messages produced by the Linkage Editor and Loader programs. The causes of the messages are explained, the accompanying actions by the system are described, and the appropriate responses are suggested. This manual is intended for use by application and system programmers.  
Manual, 8 1/2 x 11 inches, 36 pages, 04/83  
//40//5665-295

GC26-4068

MVS/370 DATA FACILITY PRODUCT UTILITIES MESSAGES  
This publication lists the messages produced by the IBM-supplied utility programs contained in MVS/370 Data Facility Product (MVS/370 DFP). It explains the causes of the messages, describes accompanying actions by the operating system, and suggests appropriate responses. The messages are found in alphabetic order by message identification.  
Manual, 8 1/2 x 11 inches, 100 pages, 04/83  
//40//5665-295

GC26-4069

MVS/XA DATA FACILITY PRODUCT MASTER INDEX  
This publication is provided to help you locate information in the MVS/Extended Architecture (MVS/XA) Data Facility Product library. It lists index entries alphabetically and uses a code to name the publications in which they are discussed. The indexes of the individual manuals provide the exact page numbers.  
Manual, 8 1/2 x 11 inches, 124 pages, 01/83  
//20//5665-284

GC26-4070

DATA EXTRACT GENERAL INFORMATION  
The purpose of this book is to introduce Data Extract (DXT) and to enable managers and other interested persons to evaluate DXT for use in their organizations. The book answers questions on what the product is, what benefits it provides, who will use it, and, in general, how it works.  
Manual, 8 1/2 x 11 inches, 46 pages, 06/83  
//20//5668-973

GC26-4071

QUERY MANAGEMENT FACILITY GENERAL INFORMATION (CURRENT RELEASE)  
Query Management Facility (QMF) is a query and report-writing product that runs under MVS/370, MVS/Extended Architecture (MVS/XA), or IBM Virtual Machine/System Product (VM/SP). QMF can be used by persons with little or no data processing experience as well as by data processing experts. This book may be read by managers with little or no data processing background as well as by data processing managers and provides information about QMF with which the reader can judge the applicability of QMF for use in a particular installation.  
Manual, 8 1/2 x 11 inches, 52 pages, 06/83  
//20//5668-972

SC26-4072

VS FORTRAN MASTER INDEX (CURRENT RELEASE)  
This manual is intended as an aid to locating information in the VS FORTRAN publications. It is a supplement to the individual book indexes and contains code letters representing the title of the publication containing the information. Publications indexed are:  
VS FORTRAN Application Programming: Guide (APG), SC26-3985;  
VS FORTRAN Compiler and Library General Information (GIM), GC26-3983;  
VS FORTRAN Compiler and Library Installation and Customization (IRM), SC26-3987;  
VS FORTRAN Application Programming: Library Reference (LIB) SC26-3989;  
VS FORTRAN Application Programming: Language Reference (LRM), GC26-3986; and  
VS FORTRAN Application Programming: System Services Reference Supplement (SSR), SC26-3988.  
Manual, 8 1/2 x 11 inches, 32 pages, 10/82  
///5748-F03,5748-F03,5748-LM3

GC26-4073

DATABASE 2 GENERAL INFORMATION (CURRENT RELEASE)  
The publication is an overview of the DATABASE 2 product. It is intended to be used as an evaluation tool for this product. A demonstration diskette, 6V26-1021 is also included with this publication. The diskette contains a storybook and can be run on a personal computer.  
Manual, 8 1/2 x 11 inches, 40 pages, 05/87  
//20//5740-XVR

GC26-4074

MVS/370 VSAM ADMINISTRATION MACRO INSTRUCTION REFERENCE DATA FACILITY PRODUCT  
This publication is a reference manual and contains the macro instructions that are used for VSAM. It is intended for programmers who use VSAM macro instructions, access method services commands, or JCL to process data. This book describes the macros used to open and close a data set, manage control blocks, and issue data management requests.

SC26-4077

DB2 DATA BASE PLANNING AND ADMINISTRATION GUIDE (CURRENT RELEASE)  
This book is for those users of DATABASE 2 (DB2) who perform the tasks of data base administration. It discusses what a data base administrator should know about administering data bases in a DB2 environment. The reader is assumed to have a familiarity with data base systems, experience as a data base administrator, and a general knowledge of the structure and function of DB2 as presented in IBM DATABASE 2 General Information, GC26-4073.  
Manual, 8 1/2 x 11 inches, 256 pages, 11/83  
//34//5740-XVR

SC26-4078

DATABASE 2 REFERENCE (CURRENT RELEASE)  
This publication presents reference information for the tasks of system administration, data base administration,

application programming, and operation. It contains descriptions of each tool and is particularly useful for users who know the task and program well and need only check details of syntax and semantics (although this book can also be useful to new users). Prerequisite knowledge is necessary of one of the transaction managers (IMS/VS Version 1, CICS/OS/VS), or TSO. Knowledge of a programming language (Assembler, PL/I, COBOL, or FORTRAN) and of OS/VS MVS JCL and of Structured Query Language (SQL) is also necessary. Manual, 8 1/2 x 11 inches, 350 pages, 07/84 //40//5740-XYR

SC26-4079

DATABASE 2 APPLICATION PROGRAMMING GUIDE FOR IMS/VS USERS (CURRENT RELEASE)  
This publication describes Database 2 (DB2), a data base management system for the MVS/SP environment and how to develop application programs that access DB2 data in an IMS/VS environment. The purpose of the publication is to show application developers how to use Structured Query Language (SQL) to access DB2 data; it also explains how to prepare, execute, test, and document an application program. Manual, 8 1/2 x 11 inches, 350 pages, 11/83 //40//5740-XYR

SC26-4080

DB2 APPLICATION PROGRAMMING FOR CICS/OS/VS USERS  
This book describes IBM DATABASE 2 (DB2) a data base management system for the MVS/SP environment and how to develop application programs that access DB2 data in a CICS/OS/VS environment. The purpose of the book is to show application developers how to use Structured Query Language (SQL) to access DB2 data; it also explains how prepare, execute, test, and document an application program. Manual, 8 1/2 x 11 inches, 416 pages, 11/83 //40//5740-XYR

SC26-4081

DATABASE 2 APPLICATION PROGRAMMING GUIDE FOR TIME SHARING OPTION AND BATCH USERS  
This book describes IBM DATABASE 2 (DB2), a data base management subsystem for the MVS/SP environment, and how to develop application programs that access DB2 data in a TSO environment or in batch environment. The purpose of the book is to show application developers how to use the structured query language (SQL) to access DB2 data. It also explains how to prepare, execute, test, and document an application program. Manual, 8 1/2 x 11 inches, 320 pages, 11/83 //40//5740-XYR

GC26-4082

DATABASE 2 SQL LEARNER'S GUIDE (CURRENT RELEASE)  
This publication tells how to begin using DATABASE 2 to manage relational databases, how to write and enter SQL statements, how to embed SQL statements in application programs written in COBOL, and how to prepare application programs that contain SQL statements for execution. Manual, 8 1/2 x 11 inches, 124 pages, 06/87 //40//5740-XYR

SC26-4083

DATABASE 2 OPERATION AND RECOVERY GUIDE (CURRENT RELEASE)  
This publication has been prepared for installations that plan to operate DATABASE 2 (DB2) under MVS/370 or MVS/Extended Architecture (MVS/XA), with TSO, IMS/VS Version 1, and/or CICS/OS/VS. It is designed to assist data base administrators and system administrators who are responsible

for designing operating and recovery procedures for their installations. Prerequisite knowledge of MVS and TSO; and operational knowledge of IMS/VS Version 1 (for users in the IMS/VS environment); and (for users in the CICS/OS/VS environment) operational knowledge of CICS/OS/VS are necessary. Manual, 8 1/2 x 11 inches, 250 pages, 07/84 //40//5740-XYR

SC26-4084

DB2 INSTALLATION  
This publication explains how to install DATABASE 2 (DB2) Program Product. It is intended to be used by the system programmer who will install DB2 as a subsystem under MVS. This publication assumes that the installer knows the basic concepts and facilities of DB2, the MVS Time Sharing Option (TSO) and the MVS Interactive System Productivity Facility (ISPF), and the basic concepts of SQL. It also assumes the installer knows how to define and allocate MVS data sets using MVS job control language (JCL), how to define and allocate VSAM data sets using Access Method Services, and how to use the System Modification Program (SMP) to install program products. Manual, 8 1/2 x 11 inches, 266 pages, 06/87 //34//5740-XYR

SC26-4085

DB2 SYSTEM PLANNING AND ADMINISTRATION GUIDE  
This publication is for users of DATABASE 2 (DB2) who perform the task of system administration. It contains information that the reader needs to know about how DB2 is designed (in general terms), how to choose system definition parameters for the DB2 subsystem, how to provide security for the DB2 subsystem, and how to monitor the DB2 subsystem. This publication assumes some familiarity with data base systems and general knowledge of the structure and function of DB2. Manual, 8 1/2 x 11 inches, 352 pages, 11/83 //34//5740-XYR

SC26-4086

DATABASE 2 SAMPLE APPLICATION GUIDE  
This guide provides information to help application programmers, data base administrators, and system administrators understand how to use the sample applications shipped with DB2. It includes a description of the components of DB2, including the function and structure of its application-related and programming-related tables. Manual, 8 1/2 x 11 inches, 462 pages, 11/83 //40//5740-XYR

GC26-4087

DATA EXTRACT SPECIFICATIONS  
This publication is the licensed program specifications for the Data Extract program product. Flyer, 8 1/2 x 11 inches, 3 pages, 11/83 //20//5668-973

SC26-4088

DATA EXTRACT OPERATIONS  
This book has been prepared for operation planners who will need to plan for, set up and control that part of Data Extract (DXT) that performs the actual data extraction. Prerequisite knowledge is the writing of JCL, preferably for IMS/VS Version 1 batch jobs and batch message processing jobs, and non-MVS batch jobs. Related and other publications are listed in the preface. Manual, 8 1/2 x 11 inches, 92 pages, 04/84

//40//5668-973

SC26-4089

DATA EXTRACT QUERY MANAGEMENT FACILITY USER'S GUIDE AND REFERENCE

This publication is for those Data Extract (DXT) users who will be writing jobs to extract data from DL/I data bases, VSAM files, and/or physical sequential files for loading into relational data base tables or physical sequential data sets. It provides both guidance and reference information on how to write such jobs.

Manual, 8 1/2 x 11 inches, 128 pages, 11/84

//40//5668-973

SC26-4091

DATA EXTRACT MESSAGES AND CODES

This book lists Data Extract (DXT) messages with explanations and suggested responses. It is intended for use by DXT users and diagnosticians to determine the cause of a problem. It briefly describes how messages are formed and what they mean, lists operator messages, lists DXT messages, lists DXT messages issued by DXT Dialogs, and gives a list of the DXT macros issued and the codes returned by each.

The book assumes the user has read Data Extract: General Information, GC26-4070.

Manual, 8 1/2 x 11 inches, 320 pages, 04/84

////5668-972,5668-973

SC26-4092

DATA EXTRACT DIALOGS INSTALLATION GUIDE (CURRENT RELEASE)

This manual is directed to data base administrators and system programmers who need to know about planning for installation and installing DXT dialogs, and verifying their installation. A brief overview of the product is provided. Additional information on installation will also be found in the program directory delivered with the product. Knowledge of the structure and function of DXT Dialogs is assumed, as is familiarity with MVS System Modification Program (SMP) and VM/SP Related publications are listed in the preface. The General Information manual is GC26-4070.

Manual, 8 1/2 x 11 inches, 136 pages, 05/85

//34//5668-973,5668-972

SC26-4094

QUERY MANAGEMENT FACILITY LEARNER'S GUIDE (CURRENT RELEASE)

This book is a learning model of QMF for people not experienced in using computers. It gives more attention to fundamental topics that new users need, and it omits less-frequently used topics altogether. This book explains how to use a query language and how to format reports, and it contains examples and exercises for the novice. There are no prerequisites.

Manual, 8 1/2 x 11 inches, 160 pages, 11/83

//40//5668-972

GC26-4095

QMF SPECIFICATIONS (CURRENT RELEASE)

Flyer, 8 1/2 x 11 inches, 6 pages, 04/85

//20//5668-972

SC26-4096

QUERY MANAGEMENT FACILITY USER'S GUIDE AND REFERENCE (CURRENT RELEASE)

This book tells you how to use QMF to display data base

contents. It tells how to insert, update and delete data and how to format reports. This book describes how to give a QMF command, how to view a report on a terminal screen, and how to end a QMF session. Also described is how to write a query to ask questions of the data base, and how to use a form to format a report. Among other things, the reader will learn how to write a procedure and how to create a table. The QMF commands and subcommands are listed along with descriptions of their effects. In addition, there is a chapter on the Structured Query Language (SQL) that tells how to write queries in SQL, and a chapter on QBE (Query By Example) that tells how to write queries in QBE.

Manual, 8 1/2 x 11 inches, 428 pages, 04/85

//40//5668-972

SC26-4097

QUERY MANAGEMENT FACILITY PLANNING AND ADMINISTRATION GUIDE FOR MVS

This book discusses QMF administrative tasks and how to perform them. After introducing background information relevant to the administrator, it discusses those aspects of planning for QMF that bear directly on administration. It then describes the steps necessary to get a user started with QMF and those necessary to disenroll the user. There is also one chapter describing on-going administrative services for individual users and one describing more general on-going administrative services. The appendix presents the three QMF tables that must be maintained. Prerequisite and related publications are listed in the preface.

Manual, 8 1/2 x 11 inches, 80 pages, 11/83

//34//5668-972

SC26-4098

QUERY MANAGEMENT FACILITY INSTALLATION GUIDE FOR MVS

This book is a guide for administrators and system programmers who will plan for and install QMF. It is to be used along with the Program Directory shipped with the PID tape and assumes familiarity with MVS, SMP, TSO, DB2, ISPE, and a general knowledge of QMF. The book lists the necessary software and storage requirements, along with the steps involved in installation and those involved in verifying that QMF has been successfully installed. It explains how to install QMF sample tables, queries, views and the graphic sample program, DSQSAMPP, and how to accept and maintain the permanent libraries. Appendixes contain sample ICC and control statements, sample tables and queries, all error codes, and IPSTART command program parameters.

Manual, 8 1/2 x 11 inches, 130 pages, 11/83

SC26-4099

QUERY MANAGEMENT FACILITY PLANNING AND ADMINISTRATION GUIDE FOR VM/SP (CURRENT RELEASE)

This publication describes the tasks of planning and administration for the Query Management Facility (QMF) running under Virtual Machine/System Product (VM/SP).

Manual, 8 1/2 x 11 inches, 04/84

//34//5668-972

SC26-4100

QUERY MANAGEMENT FACILITY INSTALLATION GUIDE FOR VM/SP (CURRENT RELEASE)

This manual is for administrators and system programmers who will install QMF under VM/SP and it should be used in conjunction with the program directory. This book assumes familiarity with VM/SP, CMS, ISPF, SQL/DS, GDDM, and QMF. The software and storage requirements are discussed, along

with the steps in installing QMF and making it operational. Also included are the steps for verifying successful installation. This book contains sample EXECs, sample SQL statements and sample tables and queries. It also contains initialization error reason codes and instructions for applying emergency PTFs. In addition, this book tells how to install the sample graphics program and how to install QMF into a different data base after the initial QMF installation is done.

Manual, 8 1/2 x 11 inches, 125 pages, 04/84  
//34//5668-972

## GC26-4101

QUERY MANAGEMENT FACILITY INTRODUCTION (CURRENT RELEASE)

This book introduces Query Management Facility (QMF), a program product that lets the user obtain answers to questions about information in a computer data base. The purpose of this book is to help decide whether QMF could be useful. To that end, the book concentrates on telling what QMF can do; tells in general what to do to make it happen; and omits specific details, such as exactly what keys to press.

For specific, step-by-step instructions for using QMF, see Query Management Facility: Learner's Guide, SC26-4094, first. That book tells exactly how to do many of the simplest things that QMF can do. After that, for a full description of what can be done with QMF, see Query Management Facility: Users's Guide and Reference, SC26-4096. Manual, 8 1/2 x 11 inches, 72 pages, 04/84  
//20//5668-972

## SC26-4105

BASIC/MVS INSTALLATION AND CUSTOMIZATION

This manual describes how to plan for, install, and customize the BASIC/MVS program product. It assumes familiarity with MVS, TSO, a file editing program, and SMP and should be used in conjunction with BASIC/MVS Program Directory. The book describes the BASIC Processor, Library, and HELP information, lists the machine, program, and storage requirements, discusses installation under MVS, and provides information on changing the Processor's reserved word table and on customizing intrinsic functions. The appendixes list and describe the Processor and Library modules, list the Library modules for the intrinsic functions (along with cross references to other modules they call), and describes the formats of arguments passed to the Library functions, as well as the modifications of the default values for the product after installation.

Manual  
////5665-948

## SC26-4106

BASIC/MVS SYSTEM SERVICES

This manual is intended for application programmers who need guide and reference material to run BASIC programs under MVS/TSO or MVS. Readers should be familiar with BASIC statements, commands, and functions, as well as with TSO commands. This book gives information on how to run BASIC programs in the TSO and MVS batch environments and gives explanations and examples of TSO commands.

Manual, 8 1/2 x 11 inches, 100 pages, 11/83  
////5665-948

DATABASE 2 PUBLICATION GUIDE AND MASTER INDEX

This publication is written for anyone who wants an introduction to the DB2 publications and online information. The purpose of this publication is to acquaint the user with the DB2 library. It discusses the task-oriented approach with which the library is organized, the goals used in designing the library, and the distinctive features of the library. This publication also provides an overview of the data processing tasks associated with DB2 and lists the publications needed to perform those tasks.

This publication also contains information that was formerly in the DATABASE 2 Master Index, SC26-4112. There are no prerequisites to GC26-4111.

Manual, 8 1/2 x 11 inches, 160 pages, 06/87

## SC26-4117

VS FORTRAN INTERACTIVE DEBUG INSTALLATION (CURRENT RELEASE)

The purpose of this manual is to assist in planning for and installation of VS FORTRAN Interactive Debug. It is intended to complement additional installation information provided in the program directory. This manual contains a short overview of the installation process, lists the hardware and software requirements for installation, and provides detailed procedures for installing under VM and under MVS or MVS/XA. It also explains the program product support services and structures. Related manuals are listed in the preface; there are no prerequisites.

Manual, 8 1/2 x 11 inches, 30 pages, 05/84  
 //25//5668-903

## SC26-4118

VS FORTRAN PROGRAMMING GUIDE (CURRENT RELEASE)

This publication describes how to design, develop, test, and run programs using VS FORTRAN at the 1978 level. It is designed for engineers and scientists who use FORTRAN as a tool in mathematical problem solving; and application programmers who use the FORTRAN features to code FORTRAN programs. It is not intended as a tutorial on the FORTRAN language, but is designed for the user who has basic knowledge of FORTRAN and wants to apply it to coding VS FORTRAN programs.

This is a component of SK2T-0899.  
 Manual, 8 1/2 x 11 inches, 480 pages, 11/84  
 ////5748-F03,5748-F03,5748-LM3

## SC26-4119

VS FORTRAN LANGUAGE AND REFERENCE LIBRARY (CURRENT RELEASE)
