Electronic Emission Notices

Federal Communications Commission (FCC) Statement

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

Properly shielded and grounded cables and connectors must be used in order to meet FCC emission limits. IBM is not responsible for any radio or television interference caused by using other than recommended cables and connectors or by unauthorized changes or modifications to this equipment. Unauthorized changes or modifications could void the user's authority to operate the equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

For Canada, Canadian Department of Communication Statement, GX27-3883, applies.

About this Book

Who Should Use This Book

This manual provides references to wrap plugs, console cables, and telecommunication interface cables used to connect any model of IBM 3745 to external consoles and telecommunication lines.

This manual is dedicated to managers and planners who intend to install the IBM 3745 communication controller. This manual is also useful to all those who will prepare the site for the setup of the controller, or during setup.

How This Book Is Organized

- | | |
|------------------|--|
| Chapter 1 | Presents the cables used to connect the 3745 to the consoles (local, alternate, remote) and to the RSF modem. |
| Chapter 2 | Presents the different TSS interfaces and the cables used to connect the LICs to the network. The LIC wrap tools, the PKD and PT2/3 interfaces are also described in that chapter. |
| Chapter 3 | Presents the HPTSS interfaces and cables used to connect the high-speed transmission subsystem to the network. HPTSS wrap tools are also described in that chapter. |
| Chapter 4 | Presents the token-ring subsystem interface and cables used to connect the TRSS to the token-ring network. |

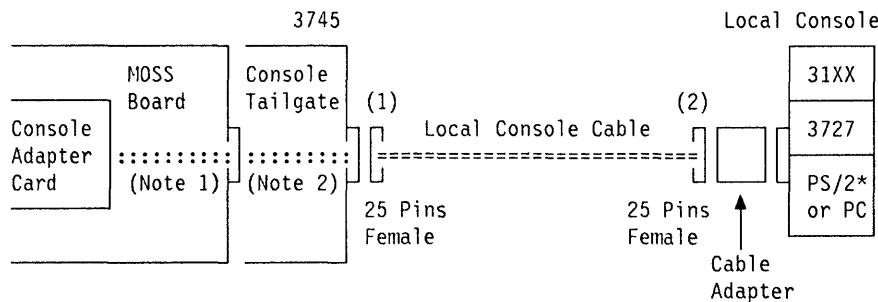

Where to Find More Information

For a complete list of the 3745 customer and service information manuals, see the bibliography in the *3745 Models 210, 310, 410, and 610 Maintenance Information Procedures (MIP)*, SY33-2054, or the bibliography in the *3745 Models 130, 150, and 170 Maintenance Information Procedures (MIP)*, SY33-2070.

A Service and Customer Bibliographies for the 3745 Models 210, 310, 410, and 610, and for the 3745 Models 130, 150, and 170 are provided at the end of this manual.

Chapter 1. Console and RSF Interface Cables

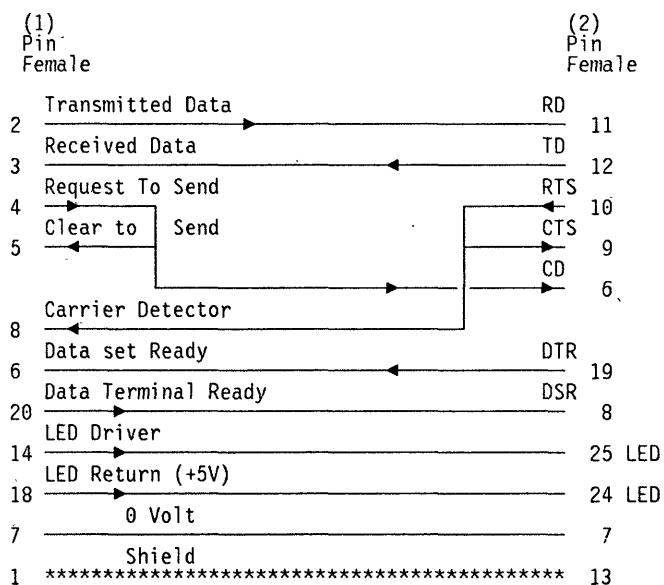

Cable from the 3745 to a Local Console

Note 1: Connection is 01A-Y0C5 in 3745 Models 130, 150 and 170
Connection is 01A-W0C2 in 3745 Models 210, 310, 410, and 610

Note 2: Connection is 01R-A0J3 in 3745 Models 130, 150 and 170
Connection is 01U-B0J4 in 3745 Models 210, 310, 410, and 610

Local Console Cable Wiring

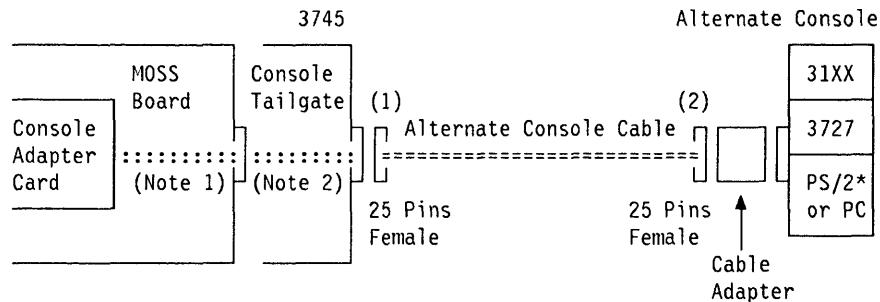

Local Console Cable Assembly

This assembly consists of a local console cable and adapters for a 31XX, 3727, PS/2* or PC (see "Cable Adapters for a Local/Alternate Console" on page 1-3).

3745 Model	Cable Type	Length, m (ft)	Cable Group	Assembly PN	Cable PN

Cable from the 3745 to an Alternate Console

Note 1: Connection is 01A-Y0B5 in 3745 Models 130, 150 and 170
Connection is 01A-W0B1 in 3745 Models 210, 310, 410, and 610

Note 2: Connection is 01R-A0J2 in 3745 Models 130, 150 and 170
Connection is 01U-B0J1 in 3745 Models 210, 310, 410, and 610

Alternate Console Cable Wiring

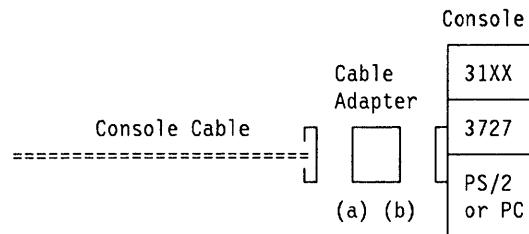

Same as "Local Console Cable Wiring" on page 1-1.

Alternate Console Cable Assembly

This assembly consists of a cable of variable length and adapters for a 31XX, 3727, PS/2 or PC (see "Cable Adapters for a Local/Alternate Console" on page 1-3).

3745 Model	Cable Type	Length, m (ft)	Cable Group	Assembly PN	Cable PN

Console Connection through the IBM 7427 Console Switching Unit

Principle: The 7427 is used to switch one console (31XX, 3727, PS/2 or PC) to as many as four 3745s for the local console, or up to six 3745s for the alternate console.

Cables from the 3745 to the 7427 Switching Unit (A)

(These cables are used **with adapters** as local/alternate console cables.)

Cable Wiring

Same as "Local Console Cable Wiring" on page 1-1.

Cable Assembly for Local Console

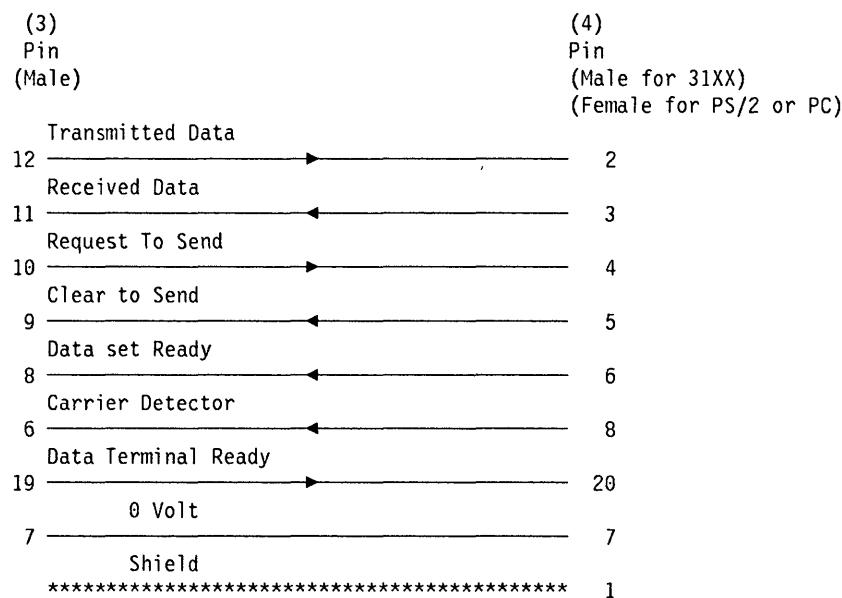

Same as "Local Console Cable Assembly" on page 1-1.
The cable is connected to the 7427 without an adapter.

Cable Assembly for Alternate Console

Same as "Alternate Console Cable Assembly" on page 1-2.
The cable is connected to the 7427 without an adapter.

Cable Wiring

Note: The MOSS microcode monitors data set ready (DSR) and ring indicator (RI) to know whether the remote or the alternate console tries to log on.

- If DSR is up without RI, the alternate console is connected.
- If RI goes up first without DSR, the remote console is calling.

Cable to Modem for RSF

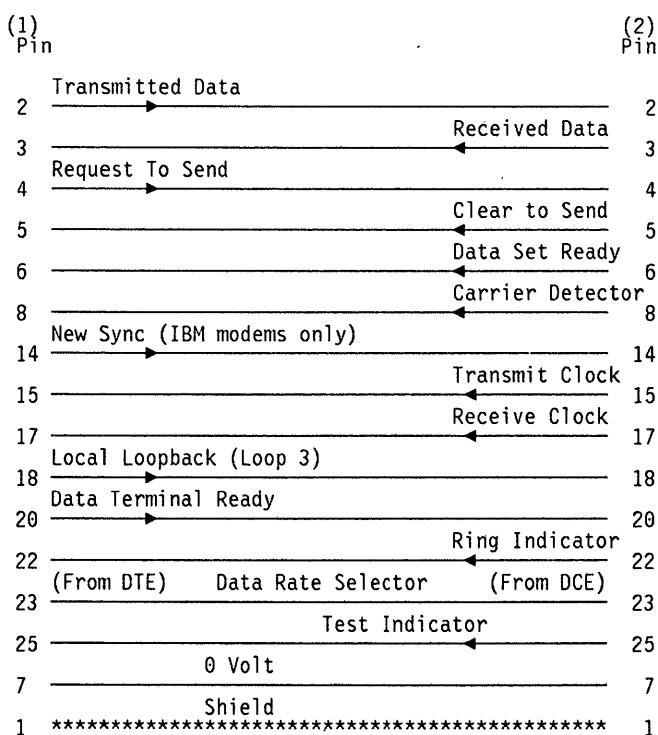

Note 1: Connection is 01A-Y0A5 in 3745 Models 130, 150 and 170
 Connection is 01A-W0C1 in 3745 Models 210 , 310, 410, and 610

Console Wrap Tools

Mating Side

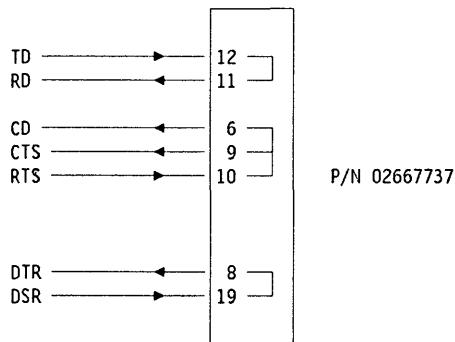

Wrap Tool (P/N 6398697) for Console Tailgate Connectors:

For a console link test, you can install this 25-position wrap socket (female) on any connector of the 3745 console tailgate (local, remote/alternate, RSF).

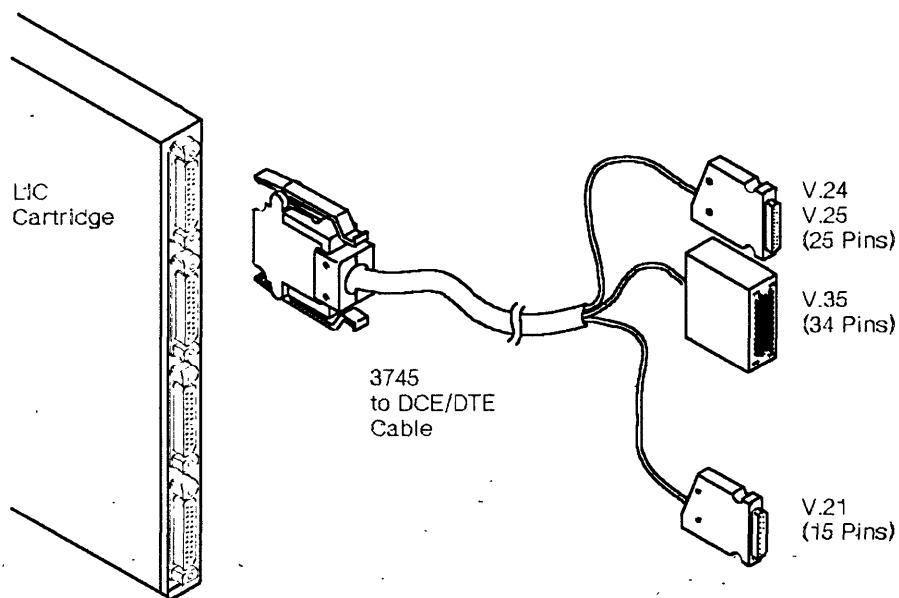

Wrap Tool P/N 02667737 for Local/Alternate/7427 Cable:

For a test of the cable when running a console link test, you can install this 25-pin wrap plug (male) in the connector at the console end of the 3745-to-local/alternate/7427 cable.

Chapter 2. TSS Interface Cables

LIC1 through LIC4 Interfaces and Cables

Ordering DCE/DTE Cables

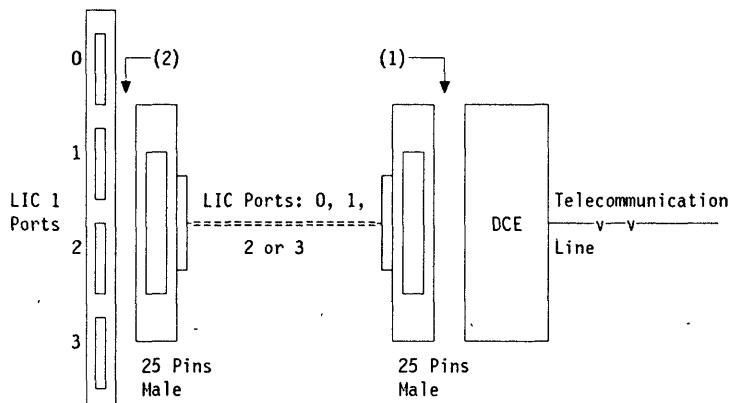

1. For cables less than 13.5 m long, order through cable group.
2. For European, Middle Eastern and African countries (fixed/standard length of 13.5 m) cables, order through BM number.
3. For the U.S.A. (fixed/standard length of 13.5 m) cables, order through cable group.
4. For cables longer than 13.5 m, order through part number.

Chapter 3. HPTSS Interface Cables

DTE/DCE Cable Connectors

For cable ordering, see the HPTSS cable descriptions in the following pages.

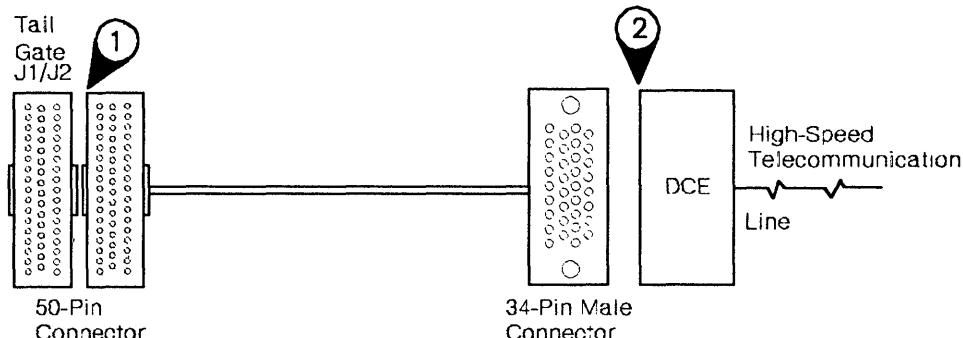

Feature Code: The HPTSS cable feature code is **4740** for 3745 Models 210, 310, 410, and 610 and feature code **4741** for 3745 Models 130, 150, and 170.

V.35 Interface to DCE

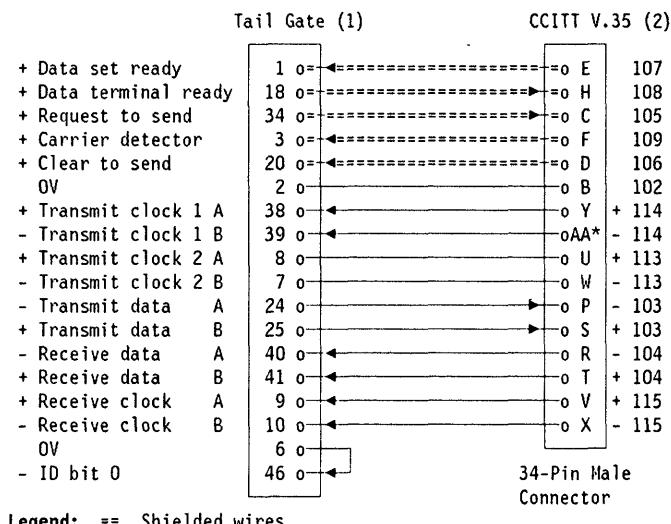

Cable Type	Length, m (ft)	Feature Code *	Cable Group	Cable PN
Standard Fixed	10 m (33)	4740/4741	5831	58X9344
Variable	Less than 10 m (33)	4740/4741	5830	58X9344
Variable	Up to 35 m (115) (See note below)	4740/4741	NA	58X9344

* Feature Code: 4740 is for 3745 Models 210, 310, 410, and 610
4741 is for 3745 Models 130, 150, and 170

Note: The 35 m (115 ft) maximum cable length is authorized only if the DCE provides support of circuit 113 (Transmit Clock 2) for clocking in the transmit data from the HPTSS. Circuit 113 is circuit 114 (Transmit Clock 1) from the DCE looped back to the DCE. The option to support circuit 113 may or may not be available on the manufacturer's DCE. Verify that this support exists by reading the documentation on your DCE, and select the options that correspond to your cable length. When circuit 113 is not supported by the DCE, the cable length is limited to 15 m (50 ft).

Chapter 5. AUI Ethernet** Interface Cables.

Both the office and standard access unit interface (AUI) Ethernet cables are provided by vendors and are not described in this document. The cable connectors must be equipped with a slide latch.

Warning:

1. All AUI Ethernet cables **must** conform to the ISO 8802-3.
2. Before connecting the AUI Ethernet cables to the media access unit (MAU), you should be aware of the following notes:
 - a. The Ethernet feature's performances have been checked with a wide range of OEMs media access units.
Although meeting the 802.3 standards, some MAUs are more sensitive than others to electromagnetic environment and may degrade the box performance related to the noise margin.
 - b. The MAU must be equipped with the SQE-TEST (also called HEARTBEAT) function.
