TAKE THIS BOOK HOME.

Look at your boma with your mother or father. Is your boma like Wambui's?

- Does your boma have a good floor (a) so that all manure can be collected?
- Does it have a roof (b) to keep the rain and sun off the cow and off the manure?
- Does it have a covered drain (c) to collect the urine?
- Do your parents collect the urine and put it on the Napier and maize when it's over 1 foot tall?
- Does your cow sleep on bedding (d) and is this added to the manure heap, and do your parents allow the manure and bedding plenty of time to rot before using it?
- And is your manure heap (or pit) covered to protect it from the sun and rain (e)?
