IBM EXPRESS SERVERS AND STORAGE.

Not for small companies.

Not for large companies.

Just for your company.

Optimize your infrastructure to make the most of what you already have. Tighten security to protect your most

valuable assets. Do more as a company with IBM Express solutions. They combine a wide range of innovative

hardware and software offerings, with tailor-made services and a variety of financing options. Plus all solutions

meet three main criteria: They're easy to buy. Easy to deploy. And competitively priced.

Moreover, they're packaged and configured to meet the unique needs of your business. And as your needs

change, so can your choice of Express offerings. Because we keep adding more solutions to help you meet

your goals.

IBM EXPRESS SERVER AND STORAGE PORTFOLIO SOLUTIONS.

Not for small companies.

Not for large companies.

Just for your company.

FOUR NEW SOLUTIONS JUST ADDED TO THE EXPRESS PORTFOLIO.

Mid-sized companies are some of the world's most innovative businesses. IBM Express Server & Storage offerings are designed to be just as innovative.

xSeries with xTended Design Architecture Based on Intel's new EM64T processor, these highly affordable servers let you do more with less. With a single server, you can run your 32-bit apps faster—right now; and upgrade to 64-bit whenever you're ready. Plus with self-managing features like IBM Director, xSeries EM64T Express servers can virtually run themselves. All this helps to reduce costs and increase the productivity of your assets.

IBM Infrastructure Consolidation Express You don't need a big staff, just a smart solution. Consolidate your old Windows NT or UNIX-based server farms onto a simpler, open, and more flexible architecture. How? This solution streamlines your IT infrastructure with advanced OpenPower Virtualization, and allows you to deploy common IT tasks with fewer servers. Includes an IBM OpenPower server and SUSE Linux OS, plus proven Open source and commercial apps.

IBM Integrated Platform for Web Application Serving This solution provides the foundation for bringing your applications to the Web. And links your business processes together so your people can collaborate rather than work in silos. As an affordable entry into e-business, you gain fast, productive development and deployment. And it can be enhanced with added storage capacity as needed.

IBM TotalStorage DS300 and DS400 The value of your company's data is incalculable. Secure it. How? By separating it from your server onto one of our new low cost disk subsystems. They allow data to be stored off the server to protect it in case of server failure. Choose from multiple RAID levels to drive your disaster preparedness and business resiliency efforts. Help lower your risk. And boost your IT security.

See how IBM Express Server and Storage offerings can help optimize your infrastructure and improve your security.
