

zEnterprise – The Ideal Platform For Smarter Computing

Developing Hybrid Applications For
zEnterprise

Smarter Computing Is Redefining The Data Center

Consolidate Infrastructure

Eliminate Redundant Software

Improve Service Delivery

Integrated Service Management

Visibility

Control

Automation

Leverage Data to Optimize Business

Smarter Computing Means Breaking Down Cultural Boundaries That Inhibit Optimum IT

Mainframe teams

Distributed teams

zEnterprise enables cultural integration

- Cultural barriers preclude fit for purpose optimizations
- Separate teams produce separate solutions
- Different skills inhibit optimum use of human resource

- Consolidate development and test around common tool set
- Optimize development process
- Reduce costs and overhead

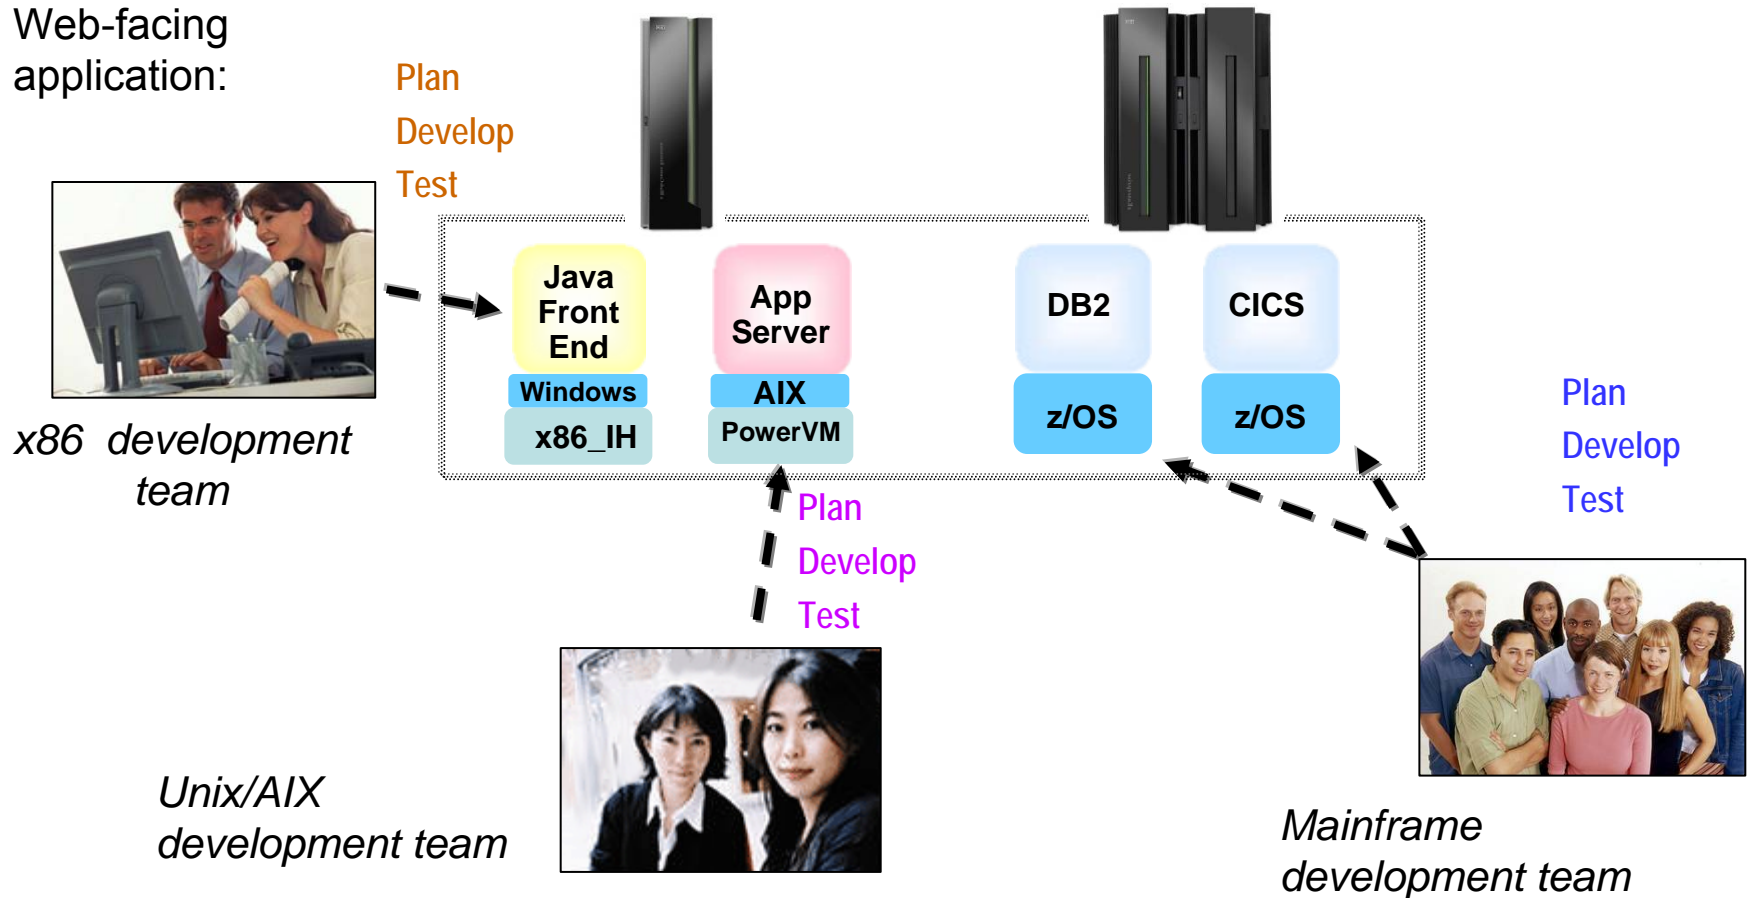

Traditionally, Different Platforms Meant Different Teams, Processes And Tools

Requirements gathering	Formal	Informal	Informal	
Collaboration across members	Limited	More formal (e.g., Agile Programming)	More formal (e.g., Agile Programming)	
Tools for edit, compile and debug	Specialized (e.g., ISPF)	More formal (e.g., Emacs)	Various and informal (e.g., .NET)	
Rigorous end-to-end testing methodologies	More formal	Moderate	Limited	
	Mainframe	UNIX	Intel /x86	
				
				

How Will These Different Teams Productively Coordinate A zEnterprise Solution?

Today's business applications are complex and multi-tiered

Typical 3-tiered
Web-facing
application:

What's Needed?

Requirements gathering	Formalized with centralized repository
Collaboration across members	Common and build-in
Tools for edit, compile and debug	Integrated across all platforms
Rigorous end-to-end testing methodologies	Extensive, high-quality

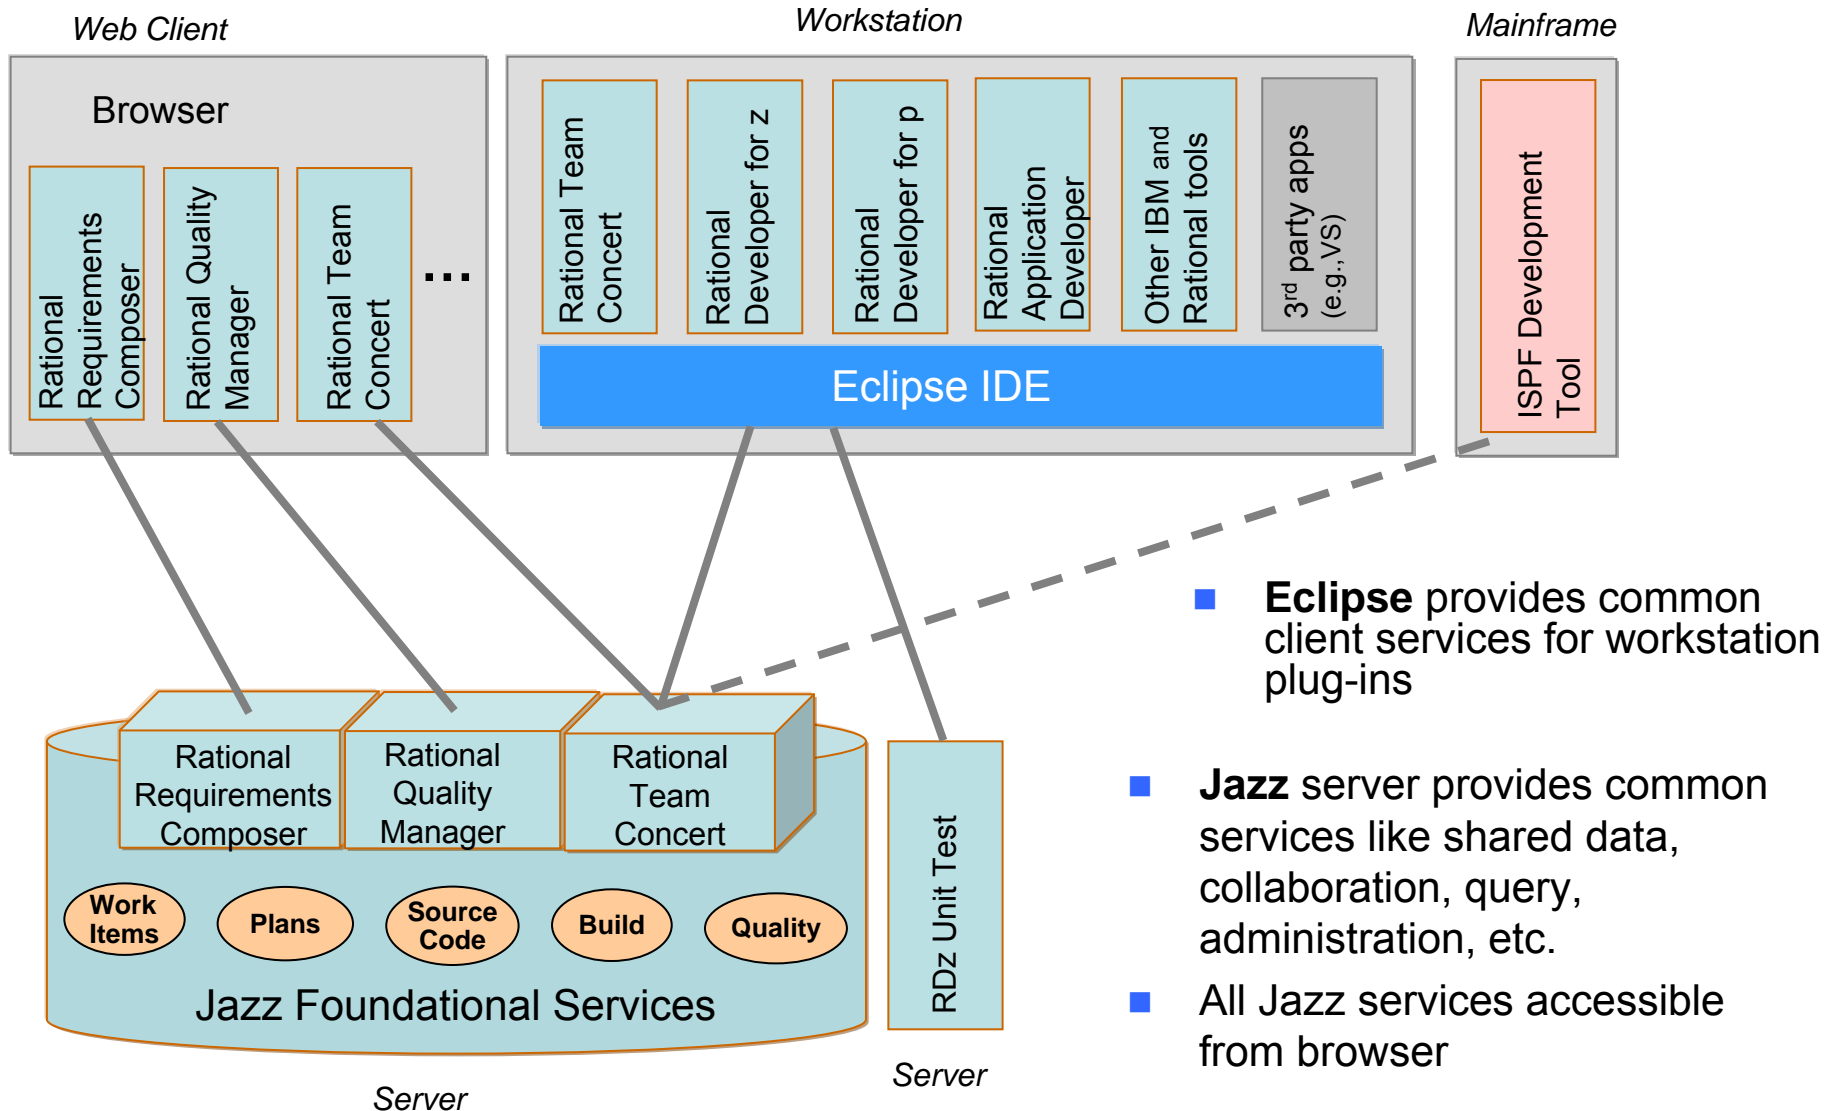

Intel/x86
UNIX
Mainframe

- Integrated platform that enables teams to develop hybrid solutions together
- Extensible and unified set of tools that support all teams and all platforms
- Lower cost, more rigorous approach to testing
- Collaborative approach

IBM Rational provides all this...

Rational Includes All Components For Developing zEnterprise Hybrid Applications

Importance Of Collaboration In Solutions Development

- 63% of stakeholders are *not* satisfied with the speed of internal application development¹...
- 58% are *not* satisfied with the quality¹...
- 50% of outsourced projects expected to *under-perform*²...

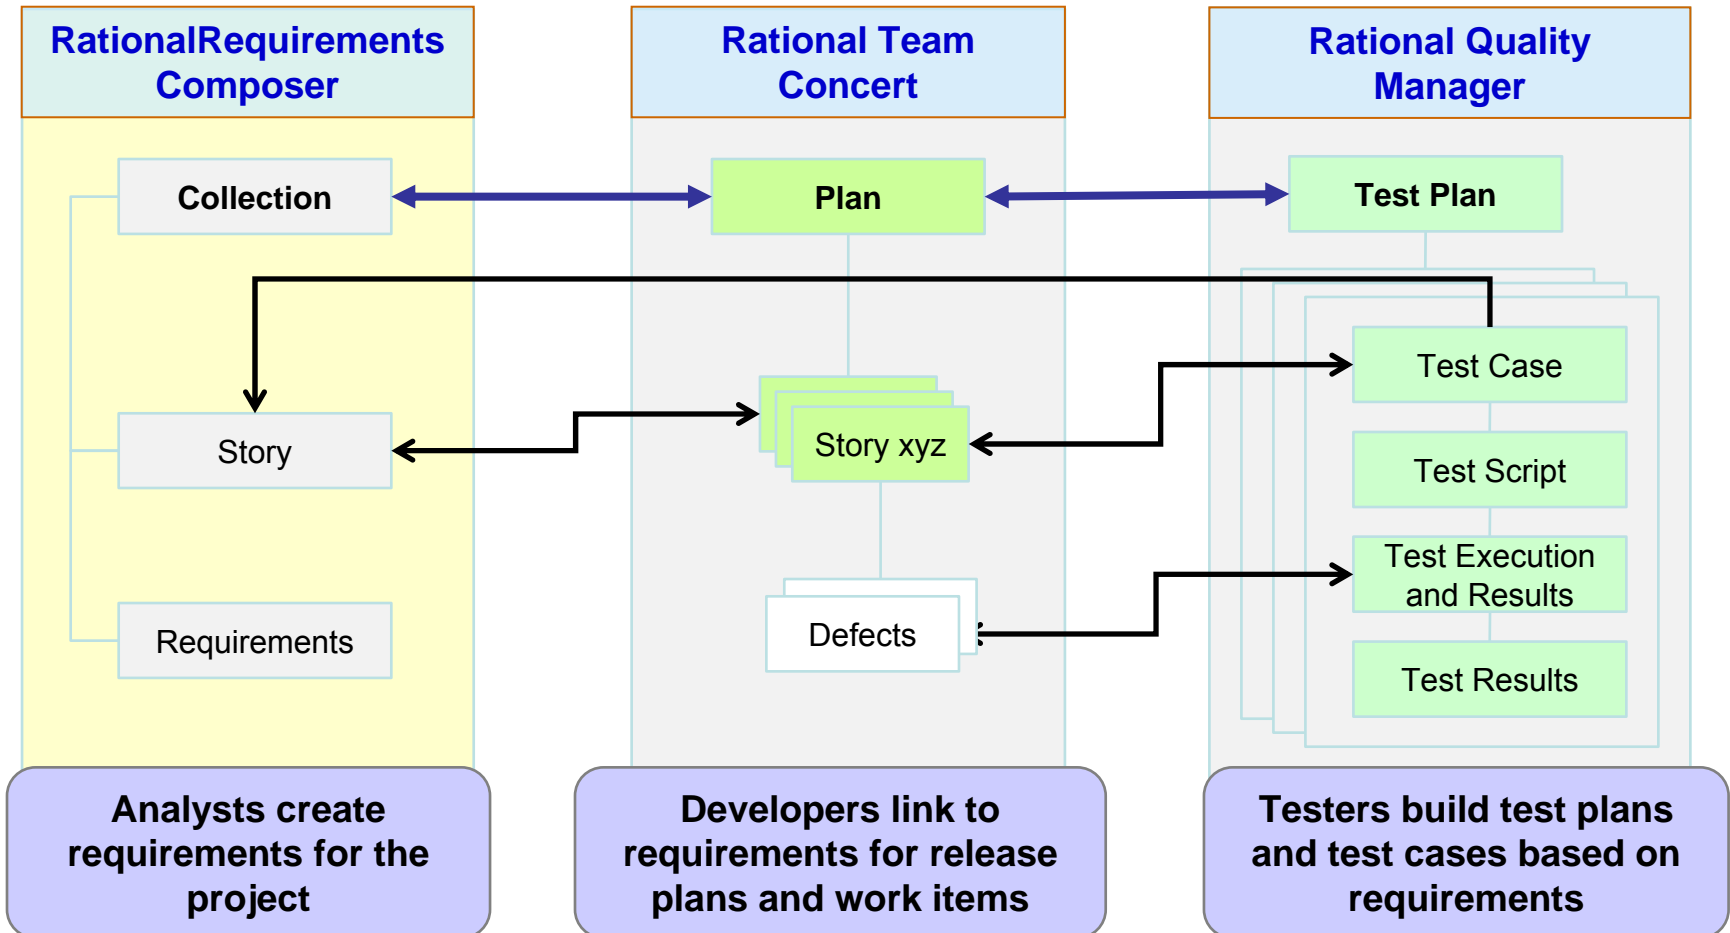

■ Collaboration-based development yields **better quality** and **more timely delivery**:

- ▶ Align project teams that are geographically dispersed
- ▶ Insure more efficient parallel development
- ▶ Collaboration-based process rules lead to fewer mistakes
- ▶ For hybrid applications, collaboration across teams means shared knowledge and skills

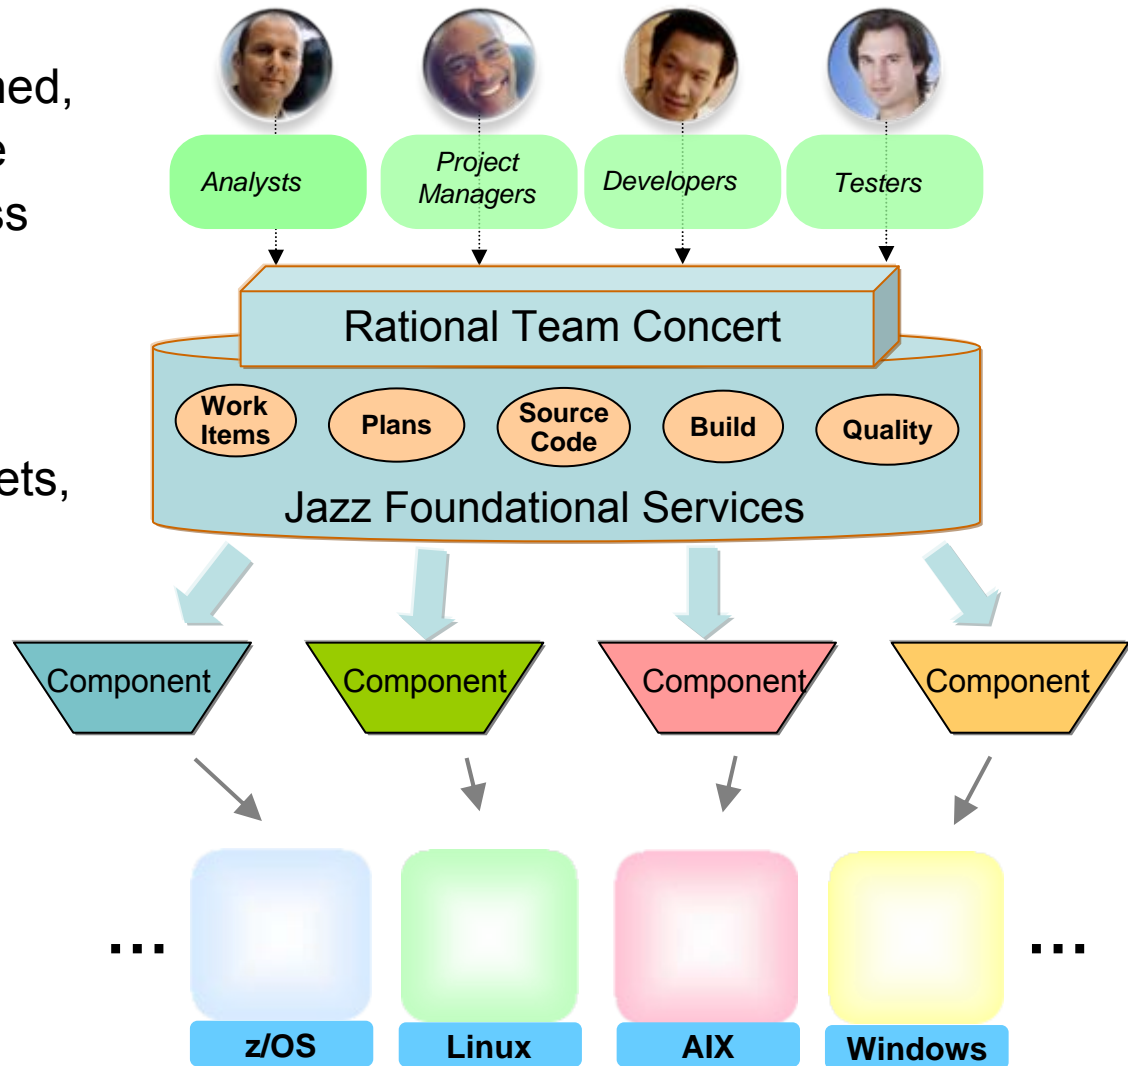

DEMO: Multi-tiered Software Projects Begin With Requirements And Plans

Simplify the planning process through a unified effort

Manage Complete Application Lifecycle From A Single Unified Environment

- Once requirements are defined, project managers can create and assign work items across all teams
- Rational Team Concert provides common shared repository of application assets, and data schemas for all environments
- All team members work on the same integrated set of project assets, using a common UI
- From one platform, develop components for multiple environments

DEMO: Project Manager Assigns Work Items To Appropriate Team Member

- Easily view all developers on the project
- Visually assess work load for each
- Quickly determine the best person to fix the particular issue

The screenshot displays the Rational Team Concert interface for a project named 'Team 1's Plan [M1]'. The interface shows a list of team members and their associated work items. A blue oval highlights the work item 'fix defects in two files for Natick' assigned to Haze. The work item details show it is a 'High' priority item, estimated to take 22 hours, and is currently 'New'.

Team Member	Work Item	Priority	Estimated Time	Status
Avijit	Define a new build	Medium	2	New
Fehmina	Share code with Jazz Source Control	Low	3	New
Haze	fix defects in two files for Natick	High	22	New
Jess	Define permissions	Medium	7	New
Li	Discuss Feature list with stakeholders	Low	11	New

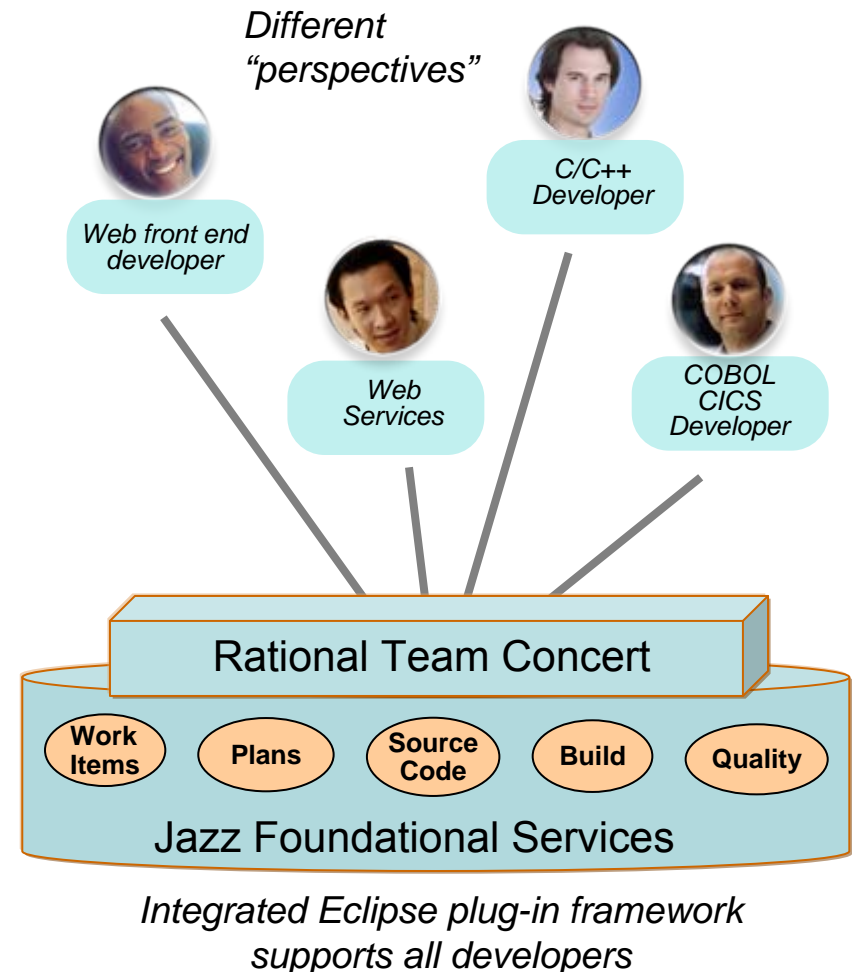

At the bottom of the screenshot, a table lists the work items found:

I.	Status	P	S	Summary	Owned By	Created By
22	New			fix defects in two files for Natick	Haze	Jess
11	New			Discuss feature list with stakeholders	Li	Jess
10	New			Fix text on splash screen	Monk	Jess
7	New			Define permissions	Jess	Jess

Integrated Development Environment Means Common Tools For All Platforms

- Develop cross-platform hybrid applications using *integrated* tools that support z/OS, AIX, and Linux
- Applications, Web and script developers use Rational Application Developer (RAD)
- Traditional mainframe developers use Rational Developer for System z (RDz)
- Unix / AIX developers use Rational Developer for Power Systems (RDp)
- Collaborating with Rational Team Concert (RTC)

Rational Delivers Integrated Development For zEnterprise Solutions

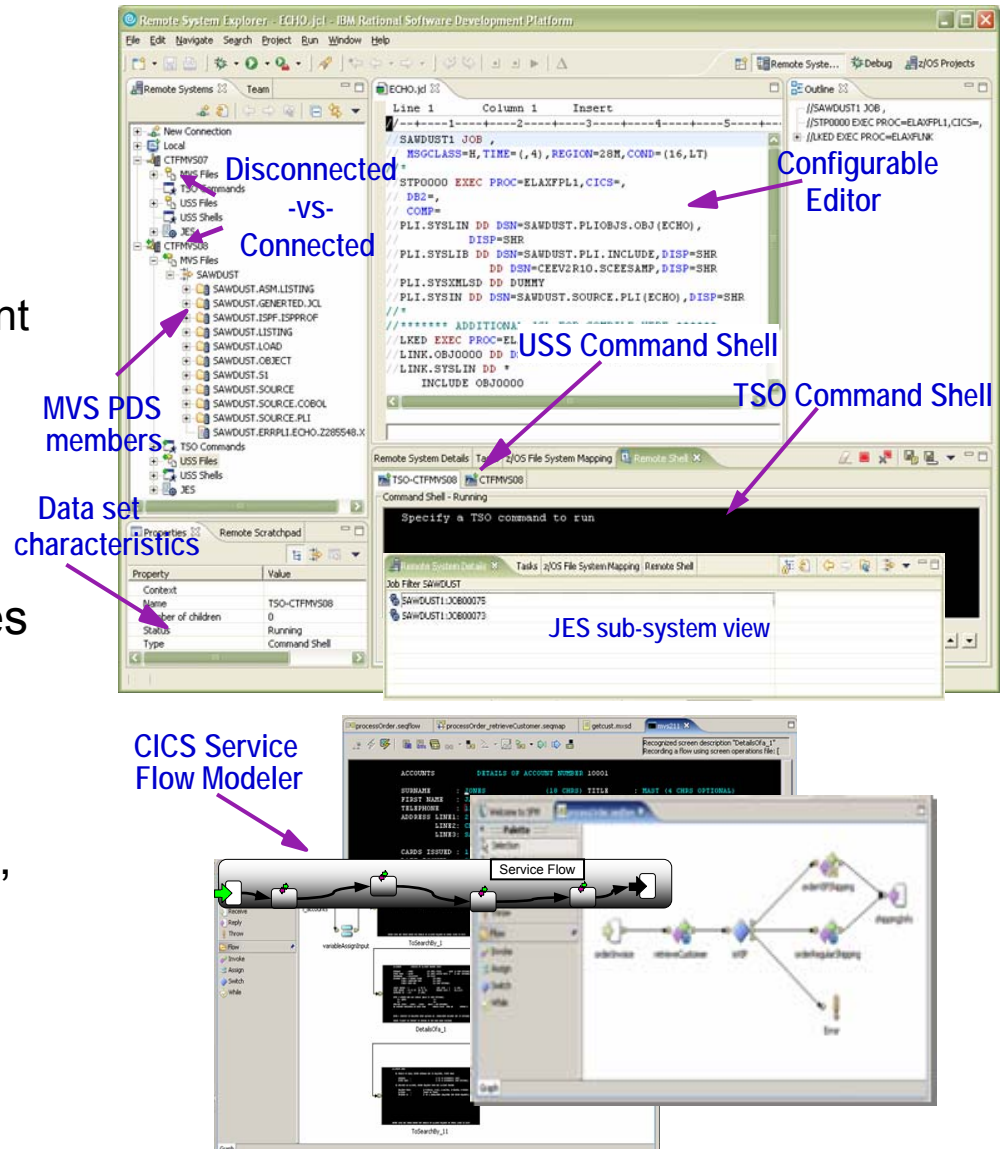

- Specifically designed for solutions development on zEnterprise
 - ▶ Rational Developer for zEnterprise
- Combines the functionality of z, Power Systems, x86 and applications development
- Addresses unique capabilities and requirements of zEnterprise
- Includes end-to-end debugging across all environments
- Lowers the cost of traditional mainframe application development
 - ▶ Uses selective workload offloading
 - ▶ Reduces MIPS used for common dev activities

Work with artifacts on multiple platforms in one GUI

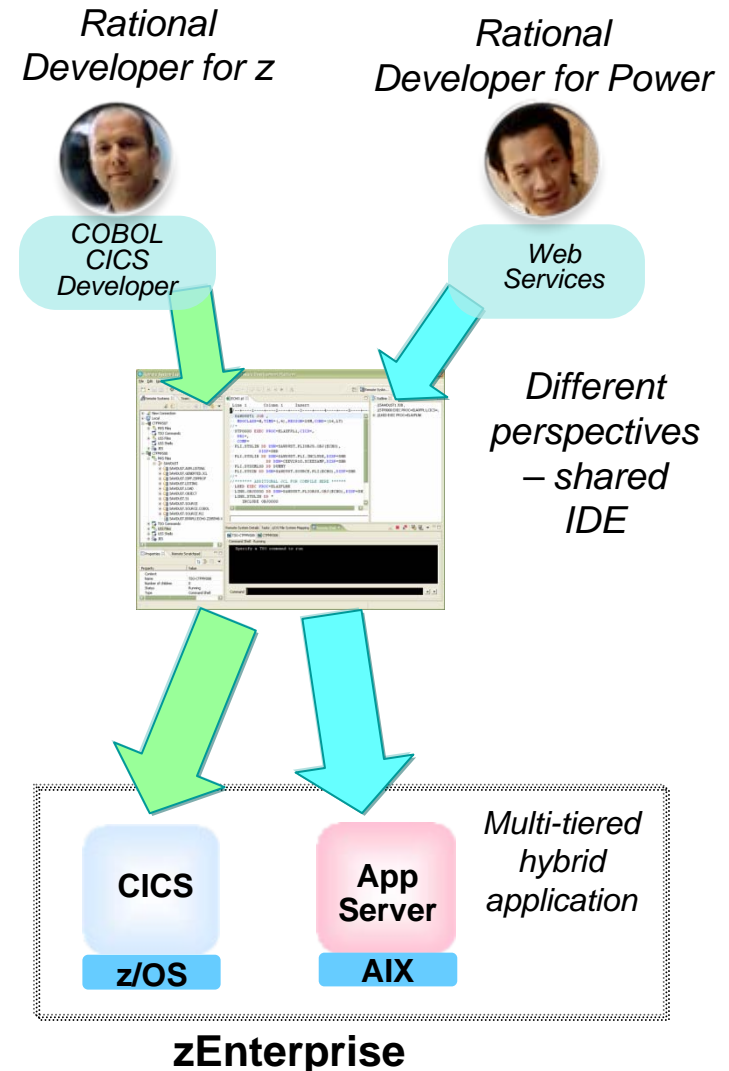

More Productive System z Software Development

- Mainframe developers move to a graphical integrated development environment
 - ▶ Rational Developer for System z provides full support for development and reuse of all mainframe assets
- Support for COBOL, PL/I, C, C++, HLASM, Java, EGL and Web services
- Supports existing and new runtimes
 - ▶ CICS, IMS, Batch, USS, DB2, WAS
- Interactive access to z/OS for debug, job generation, submission, monitoring, command execution, etc.

zEnterprise Power Developers Use The Same Integrated Development Environment

- Develop C/C++ and COBOL application components for AIX on Power
 - ▶ Rational Developer for Power
 - Also supports Linux and IBM I operating systems, plus RPG, Java, EGL, etc.
 - ▶ Same graphical IDE as System z developers, with same shared resources and collaborative team services
- Develop on workstation (remote), then upload to Power server to compile, execute and debug
- Includes compilers that exploit Power's parallel thread execution capability
 - ▶ Optimizations help to maximize performance
 - ▶ Data shows parallelization can reduce application execution times by 82%¹

Mainframe Programmers Can Continue To Develop Using Traditional Tools If Desired

- Traditional ISPF programmers can continue to use familiar green-screen interface...
 - ▶ ISPF Client for Team Concert
- ... but can integrate with Rational team services for software change management (SCM) functions
 - ▶ Use repository workspaces, change sets, link to work items, build requests, etc.
- Check out/check in code to native z/OS file system
- Facilitates phased implementation
- Reduces dependency on RDz deployment

Hybrid Multi-tiered Applications Are Easily Debugged

- All Rational developer tools include integrated debuggers
 - ▶ Debug and step across languages
 - ▶ Debug and step across environments
- Team services add collaborative aspects to debug efforts

Work with code in debugger on workstation

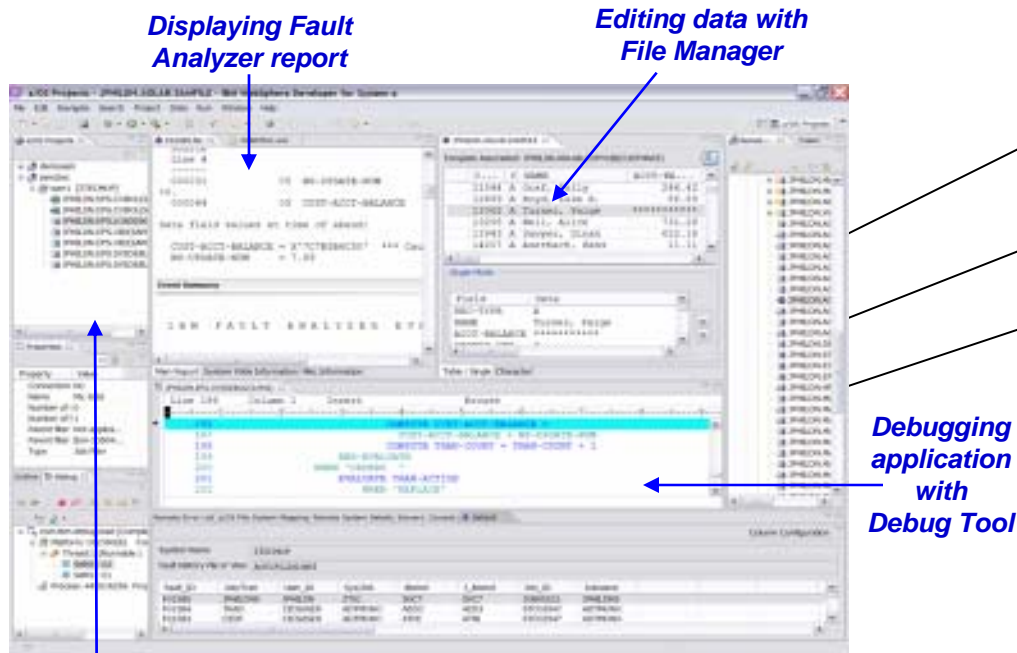

Debug applications running on all zEnterprise platforms

Debugging Includes Integration With Mainframe Problem Determination Tools

- Work with the PD Tools through the RDz client
- Easy access to all PD tools at the same time
- Debug and step through multi-tier applications
 - ▶ Across distributed *and* mainframe
 - ▶ Same debugger as for distributed systems

Developing System z application with RDz

Workstation

- End-to-end debug
- Edit VSAM data
- Analyze ABEND logs!

DEMO: End-To-End Debugging Of A Typical Multi-tiered Application On zEnterprise

- Example of end-to-end debugging
 - ▶ Start in middleware tier (JSP)
 - ▶ Step through to COBOL tier
 - ▶ Step back to beginning tier

Testing The Full Extent Of A Multi-tiered Application Is Critical

- Application quality is measured at many levels
 - ▶ Unit test, functional test, system test, performance test, etc.
- Quality needs to extend to all platforms (Mainframe, Power, System x, etc.)
- Test procedures need to seamlessly step across platforms for complete end-to-end debug
- Need to continue to use existing System z problem determination and debug capability...

... but it's critical that cost of testing be reduced if possible

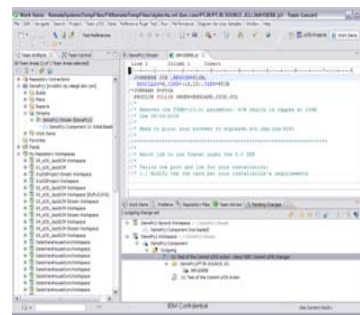

Unit Test Option For z/OS Applications Can Reduce Testing Costs

- z/OS runtime environment runs on x86 Linux workstation
 - ▶ **Compile and unit test** on the workstation
 - No zEnterprise hardware needed
 - ▶ Emulates System z general purpose processors, zIIPs, and zAAPs
- **Reduces development MIPS** for z/OS applications
 - ▶ Lower cost and better productivity
 - ▶ Enable new skills quickly
- Includes latest compilers, middleware, server load modules for RDz & RTC
- Also available for educational institutions

*Rational Developer
For System z Unit
Test*

**Edit/Compile
Unit Test**

RDz

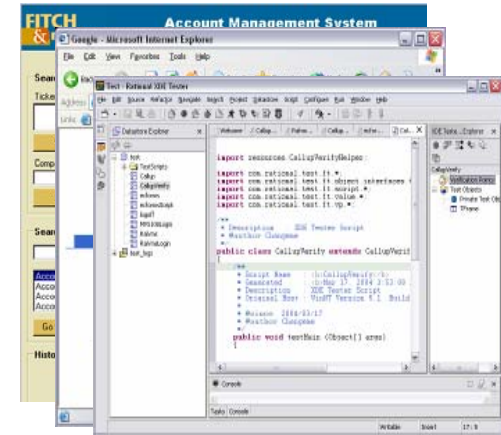

Run

Test All Aspects Of Application Using Integrated Quality Management Tools

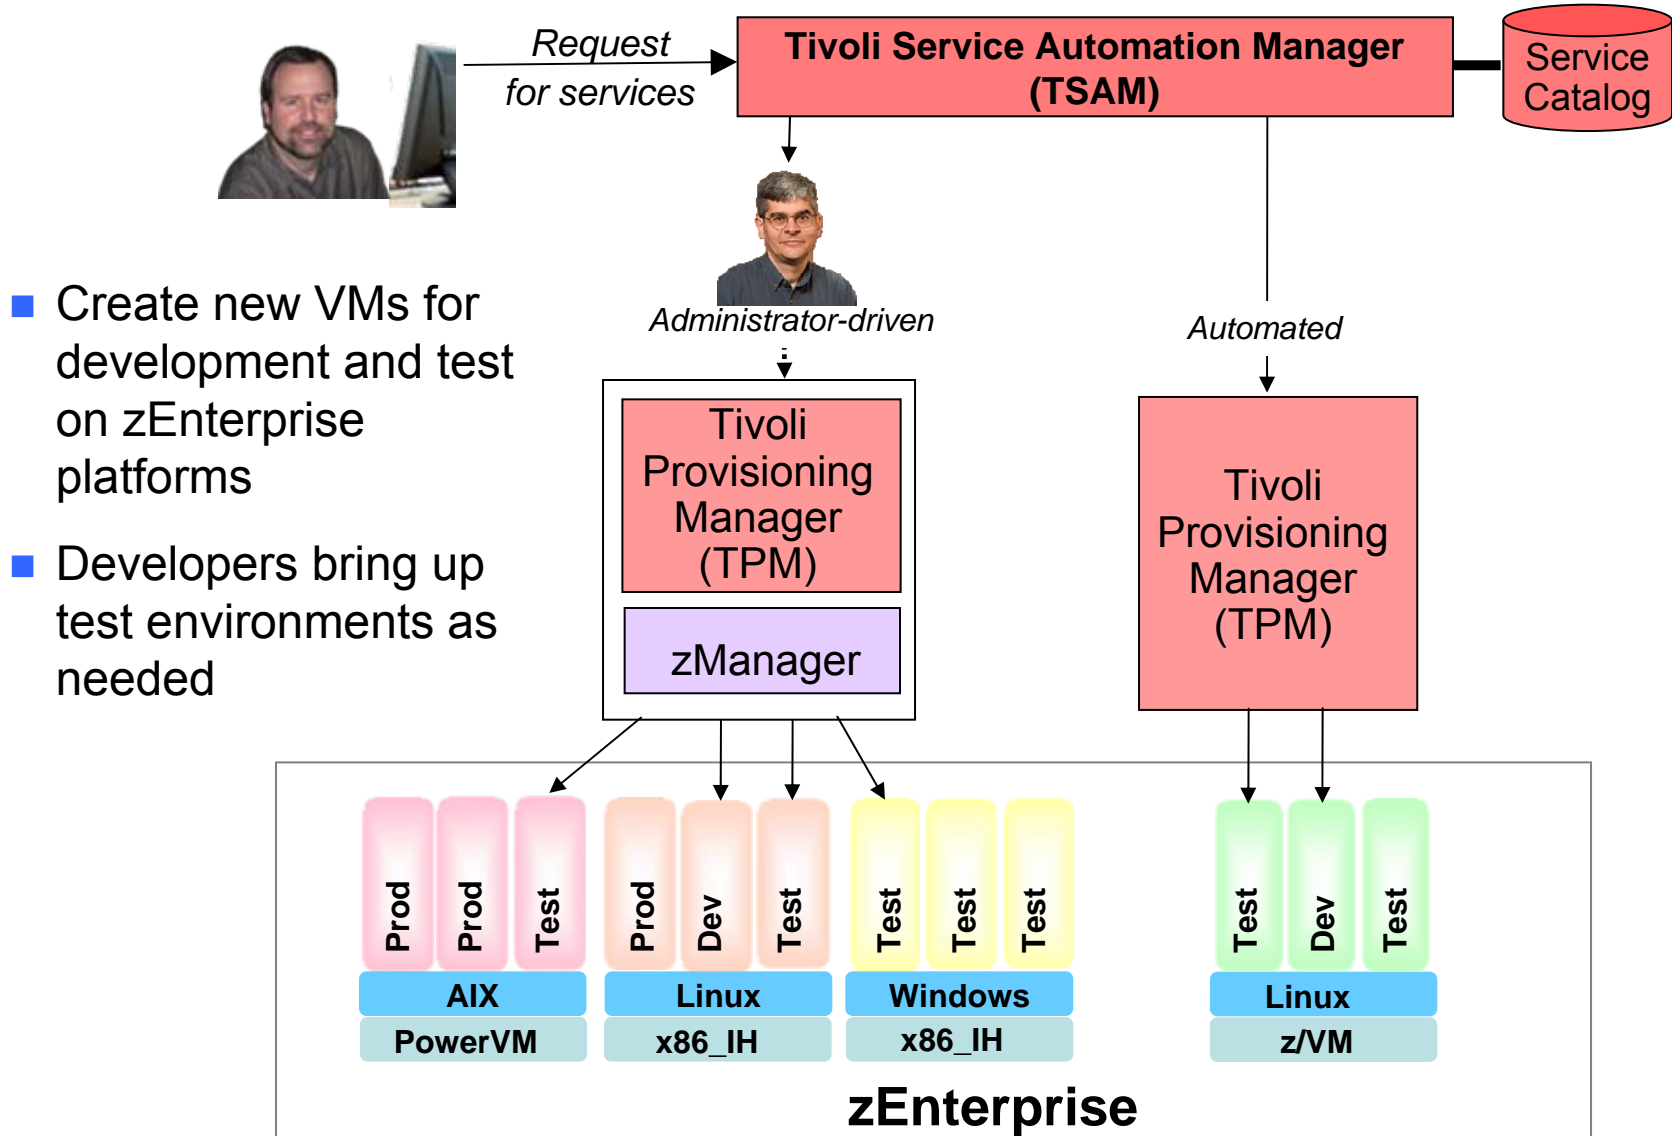

- Manage all integrated tests from one management tool
 - ▶ Rational Quality Manager
- Use script functions on Windows/Linux to functionally test any .NET, Web, or Java application (z or non-z)
 - ▶ Rational Functional Tester
 - ▶ Rational Functional Tester Extension for Terminal-based Applications
- Performance test any Web application (z or non-z)
 - ▶ Develop scripts on Windows/Linux and execute scripts on z/OS
 - ▶ Rational Performance Tester for z/OS
 - ▶ IBM Workload Simulator for z/OS and OS/390 to test terminal-based applications

Web and GUI Applications

System z Terminal UI

Use Tivoli And zManager To Create zEnterprise Runtimes For Compile And Test

Studies Show Rational Tools More Productive For Developing z/OS Applications

Comparison of Rational Developer for System z to ISPF:

Task	Test Results
Build a traditional CICS/COBOL/DB2 application	RDz was 1.2x faster
Enable CICS applications for Web Services	ISPF could not complete the task
Compile, test and debug	RDz was 1.2x – 1.7x faster

Conclusions:

- ✓ RDz was more productive for building robust real-world mainframe and Web based applications
- ✓ RDz was more productive at meeting applications requirements with minimum amount of tools

Studies Show Rational Tools More Productive For Developing zBX Applications

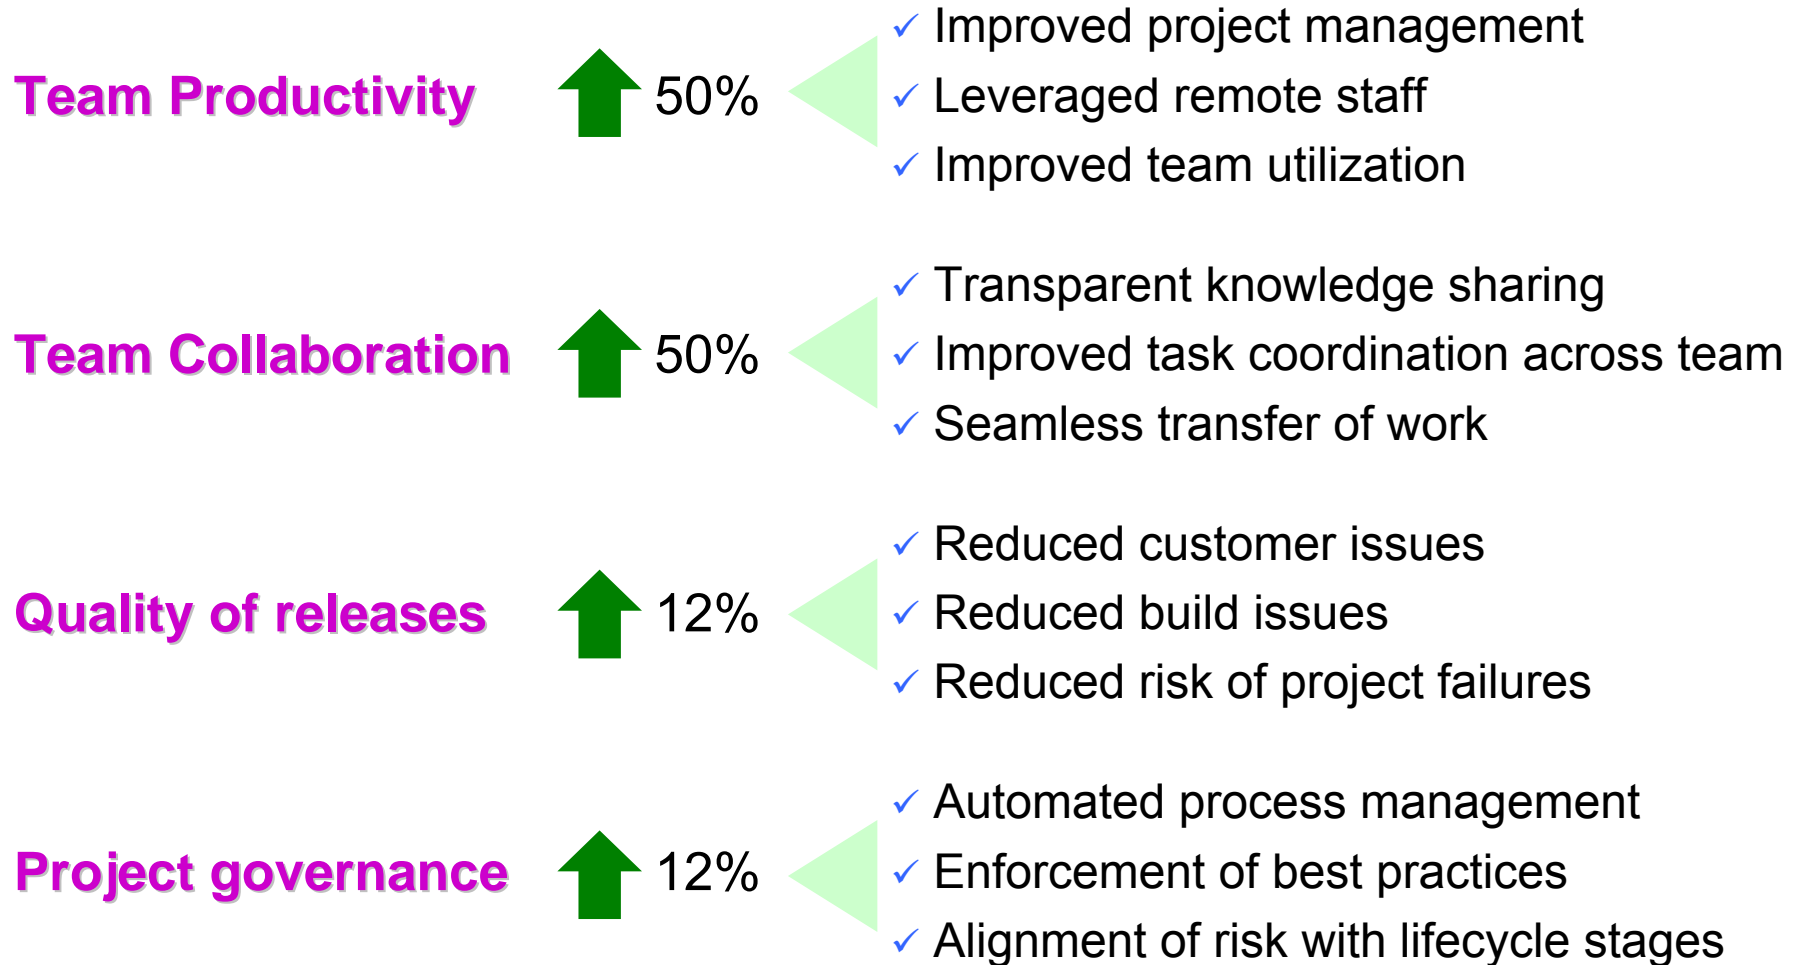

Comparison of Rational Application Developer to Microsoft Visual Studio:

Task	Test Results
Build a Web application	Microsoft was 1.1x faster
Build a Web Service from scratch	Rational was 2.1x faster
Create a distributed transaction across two databases	Rational was 1.5x faster
Model, simulate and test a workflow that consists of both an automated and human workflow	Microsoft could not complete the task
Model key components of the application	Rational was 2.4x faster

Conclusions:

- ✓ RDz was more productive for building robust server-side distributed-based applications
- ✓ RDz was more productive with a minimum amount of tools
- ✓ Rational provided more visual interface tools and wizards, resulting in less manual hand coding, more consistent and higher quality code, and higher developer productivity

Customer Data Shows Integrated Rational Tools Yield Significant Return On Investment

Summary of Today ...

Smarter Computing Strategies To Reduce Costs And Improve Value

Consolidate Infrastructure

Eliminate Redundant Software

Improve Service Delivery

Integrated Service Management

Visibility

Control

Automation

Cloud Computing

Leverage Data to Optimize Business

The IBM zEnterprise System Is The Ideal Platform For Smarter Computing

- World's first multi-architecture virtualization platform
- Workloads deployed on optimal platforms
- Unified system management
- Broad support for private clouds
- Superior platform for business analytics

**zEnterprise –
Optimized to deliver the
lowest cost per workload**
