

IBM AFP Font Collection

Highlights

- Provides a comprehensive set of AFP fonts for more effective, competitive documents
- Provides fonts for printing at 240 or 300 dpi, or higher resolutions using outlines
- Provides support for 48 languages, including doublebyte (DBCS) languages
- Font design feature converts

 Adobe and TrueType fonts to AFP

The IBM® AFP™ Font Collection provides fonts that can be used by most Advanced Function Presentation™ products. Skillful use of fonts in typography can dramatically improve the readability and effectiveness of your documents.

Enhanced presentation

Effective use of typography, the visual language of words, can greatly enhance the readability of a document and make printed information clear, organized and accessible. Fonts contain the elements of typography, and the AFP Font Collection contains fonts from several popular type families, including Times New Roman, Helvetica and Courier. These fonts come

in specific sizes and resolutions for older IBM AFP printers, and are supplied in outline format for WYSIWYG viewing, and for newer high-resolution IBM AFP printers (600 dpi).

Font flexibility

The tools that accompany AFP Font Collection offer flexibility in viewing or manipulating fonts. Resolution-independent outline fonts require no conversions as printer resolutions increase, and they require only a small amount of storage space. Outline fonts reside in most printers and you can download additional fonts easily. AFP Font Collection includes the IBM Core Interchange Fonts and lets you print in more than 50 languages.

Versatile formatting

Type Transformer and Utilities, an optional feature of the AFP Font Collection for Workstations and OS/400® (5648-B45) enables you to create new fonts or make changes to existing fonts. Type Transformer and Utilities for Windows® includes all of

AFP Font Collection at a g	lance: For expanded specifications, visit ibm.com /printers/font
