IBM SPSS Collaboration and Deployment Services Deployment Manager 6 Installation

Before installing and working with IBM® SPSS® Collaboration and Deployment Services Deployment Manager, certain network components must exist for the initial configuration to be successful. The workstation used for the installation should have access to an active instance of IBM SPSS Collaboration and Deployment Services Repository.

IBM SPSS Collaboration and Deployment Services Deployment Manager can be installed directly from the server over a network or from installation media. Configuration of the IBM SPSS Collaboration and Deployment Services Deployment Manager may consist of:

Provisioning. Certain prerequisites must be met before beginning the installation. This includes verifying hardware and software requirements and determining the installation location of the server.

Installing. New users to IBM SPSS Collaboration and Deployment Services Deployment Manager have the opportunity to perform a clean installation using a wizard to guide them through the process.

Uninstalling. In the event that an installation becomes corrupted or the application needs to be reinstalled due to system errors, IBM SPSS Collaboration and Deployment Services Deployment Manager can be removed from a workstation and the system restored to its original state.

System Requirements

Before installing the application, verify that the necessary hardware and software requirements have been met.

Hardware requirements

Hardware requirements must be met before the installation.

The hardware requirements for other software, such as operating systems and databases, may be different than those shown.

Table 1. Hardware requirements.

Component	Requirement
Hard disk	10 GB
Memory	2 GB

Software requirements

The application can be installed on a variety of workstation operating systems.

In addition, a supported version of IBM SPSS Collaboration and Deployment Services Repository must be running and accessible. Make note of the installation path, database name (along with the root user name and password), and port numbers used.

Table 2. Supported operating systems. This table lists the operating systems, processors, and patch levels supported by the application.

Operating system
Windows 8 Enterprise x86-32

Table 2. Supported operating systems (continued). This table lists the operating systems, processors, and patch levels supported by the application.

Operating system
Windows 8 Enterprise x86-64
Windows 8 Professional x86-32
Windows 8 Professional x86-64
Windows 7 Enterprise x86-32
Windows 7 Enterprise x86-64
Windows 7 Professional x86-32
Windows 7 Professional x86-64
Windows Vista Enterprise x86-32
Windows Vista Enterprise x86-64
Windows Vista Business x86-32
Windows Vista Business x86-64
Windows XP Professional x86-32
Windows XP Professional x86-64

Installing IBM SPSS Collaboration and Deployment Services Deployment Manager

IBM SPSS Collaboration and Deployment Services Deployment Manager is distributed on IBM SPSS Collaboration and Deployment Services Disk 2. Before beginning the installation, verify that the user account has the necessary permissions to install software on the selected operating system.

Note: On Windows Vista, IBM SPSS Collaboration and Deployment Services Deployment Manager must be installed by the *Administrator* user. The application cannot be installed by any other user, even if the user is a member of the *Administrators* group.

Installing from the distribution disk

1. Insert Disk 2 and navigate to the drive location. If the autorun feature is enabled on Windows, the main menu appears.

Note: If autorun is not enabled, the installation can be launch by running `\DeploymentManager\32bit|64bit\install.exe`. Select 32-bit or 64-bit installation, depending on your system.

2. Click the **Install Deployment Manager** link to begin.
3. Follow the instructions as they appear on the screen.

Once the installation has successfully completed, the application is launched from the `<install_path>` directory specified during the installation, or from the location specified for shortcuts.

Installing from the repository

IBM SPSS Collaboration and Deployment Services Repository can be configured to enable Deployment Manager installation through a Web browser. For more information, see the repository installation and configuration guide. Once the repository has been configured:

1. Open a supported Web browser and verify connectivity to the IBM SPSS Collaboration and Deployment Services Repository.

Note: If you are using Microsoft Internet Explorer on Windows Vista, you must turn off protection mode before the installation.

2. Enter the URL of the IBM SPSS Collaboration and Deployment Services Repository and append it with */DMGRClientInstaller*. For example, if the server is normally accessed by an IP address on port 8080, enter *http://10.10.1.1:8080/DMGRClientInstaller*. The installation wizard appears.
3. If prompted by a security mechanism to install an application from a remote location, click **Yes**. The application begins downloading. Depending on network performance, this may take several minutes.

Once the download is complete, the installation wizard guides you through the rest of the process.

Silent Installation

Silent mode enables the installation without any user interaction. Installation parameters are specified as a properties file. This feature can be used to automate the application installation in large network environments.

The installation Disk 2 includes a properties file to enable a silent installation: *\Administration\<product name>\SilentInstallOptions*.

How to use the options file

1. Copy the options file from the DVD to the file system.
2. Open the copied options file in a text editor.
3. Change the options as needed. Some options require a string value, while others that correspond to choices in the installer can be set to 0 (off) or 1 (on).

To perform a silent installation

Execute the installation program from the command line with the following parameters:

```
install -i silent -f "<properties file path>"
```

You can use the direct or the relative properties file path. If no path is specified, the properties file must be in the same directory as the installation program.

Administration Consoles

Optional administration consoles for other products can be installed into the same location as IBM SPSS Collaboration and Deployment Services Deployment Manager to create a single interface for server administration tasks. For more information, see the installation documentation for the products supplying the consoles.

Note that the IBM SPSS Statistics 17.0.2 and earlier administration console cannot be installed over IBM SPSS Collaboration and Deployment Services Deployment Manager due to differences in the Java runtime engines used.

Uninstalling IBM SPSS Collaboration and Deployment Services Deployment Manager

In the event that an installation becomes corrupted or IBM SPSS Collaboration and Deployment Services Deployment Manager needs to be reinstalled due to system errors, the current version must be uninstalled. Uninstallation requires the presence of a JVM on the machine. If the JVM used for installation is no longer present, the uninstall process will fail. To uninstall the IBM SPSS Collaboration and Deployment Services Deployment Manager application:

1. If it is currently running, exit IBM SPSS Collaboration and Deployment Services Deployment Manager.

2. Back up any data or configuration information.
3. From the installation path, navigate to the `uninstall` directory.
4. Double-click the `.exe` file. The uninstall wizard launches.
Note: The uninstall wizard can also be launched from the Add or Remove Programs dialog box in Windows Control Panel.
5. Click **Uninstall** to begin uninstalling IBM SPSS Collaboration and Deployment Services Deployment Manager. When finished, a status screen appears.
6. Click **Done** to exit the wizard.
7. Manually delete any remaining folders and files in the installation folder. These typically correspond to features that were added or updated after the initial installation.

If your IBM SPSS Collaboration and Deployment Services Deployment Manager includes the optional administration consoles for IBM SPSS Statistics, IBM SPSS Modeler, or IBM SPSS Modeler Text Analytics , these components cannot be uninstalled using the wizards. The files for those components must be deleted manually. For more information, see the documentation for those consoles.

Notices

This information was developed for products and services offered in the U.S.A.

IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not grant you any license to these patents. You can send license inquiries, in writing, to:
