

IBM SPSS Statistics for Linux Abbreviated Installation Instructions (Network License)

The following instructions are for installing IBM® SPSS® Statistics version 20 using a network license.

During installation, you will be prompted for the following information. Contact your site administrator if you do not have the following information.

Name:

Organization:

License Manager Server Name or IP Address:

Installing IBM SPSS Statistics

Your administrator might have given you an installation disk or identified a network location from which to install. Check with your administrator if you do not know how you are supposed to install IBM® SPSS® Statistics.

Note: To install SPSS Statistics, you must run the installation program as *root*.

Running Multiple Versions and Upgrading from a Previous Release

You do not need to uninstall an old version of IBM® SPSS® Statistics before installing the new version. Multiple versions can be installed and run on the same machine. However, do not install the new version in the same directory in which a previous version is installed.

Note for IBM SPSS Statistics Developer

If you are installing IBM® SPSS® Statistics Developer, you can run the product standalone. You can also install R Essentials and Python Essentials to develop with R and Python.

Installing from a Downloaded File

- ▶ Start a terminal application.
- ▶ Change to the directory where you downloaded the file.
- ▶ Extract the contents of the file.
- ▶ Change to the directory where you extracted the files.
- ▶ Make sure the permissions for *setup.bin* are set to execute.

- ▶ At the command prompt, type:
`./setup.bin`
- ▶ Follow the instructions that appear in the installation program. See [Notes for Installation](#) for any special instructions.

Installing from the DVD/CD

- ▶ Insert the DVD/CD into your DVD/CD drive.
- ▶ Start a terminal application.
- ▶ Change the directory to the DVD/CD mount point.
- ▶ At the command prompt, type:
`./Linux/setup.bin`

Note: The previous command will work only if you mounted the DVD/CD with the option to execute binary files. As an alternative, you can create a copy of the DVD/CD locally. Go to the *Linux* directory in the local copy and make sure the permissions for *setup.bin* are set to execute and then run *setup.bin*.

- ▶ Follow the instructions that appear in the installation program. See [Notes for Installation](#) for any special instructions.

Notes for Installation

This section contains special instructions for this installation.

Installer language. The first panel of the installer prompts for an installer language. By default, the language that matches your locale is selected. If you would like to display the installer in another language, select the language. Click OK when you are ready to proceed.

License type. Be sure to select Network (Concurrent) License.

Help language. IBM® SPSS® Statistics provides the ability to change the user interface language. If you want the help language to always match the user interface language, select the languages that you may use. Installing help for additional languages increases disk space requirements by 60-70 MB for each language.

License manager server name or IP address. This is the IP address or the name of the server on which the network license manager is running. If you have multiple addresses or names, separate them with a colon (for example, *server1:server2:server3*). Contact your administrator if you do not have this information.
