

## IBM INFORMATION INTEGRATION & GOVERNANCE SYMPOSIUM 2012

*Delivering Trusted Information for Smarter Business Decisions*

# Introducing Data Quality into the Information Supply Chain

Sue Eris – Technical Sales

01/05/2012

# What we'll discuss

- Overview of Data Quality in the Information Supply Chain
- Challenges of Poor Data Quality
- Ensuring Data Quality Across the Enterprise
  - Understand & Define
  - Cleanse & Standardise
  - Monitor & Govern continuously
- Demo of InfoSphere Information Server

# Too many organisations are operating with blind spots

## 1 in 3

Business leaders frequently make decisions based on information they don't trust, or don't have

## \$5.7M USD

Lost time reformatting information between applications

## 1 in 2

Business leaders say they don't have access to the information they need to do their jobs

## \$5.3M USD

Lost time searching for the right information

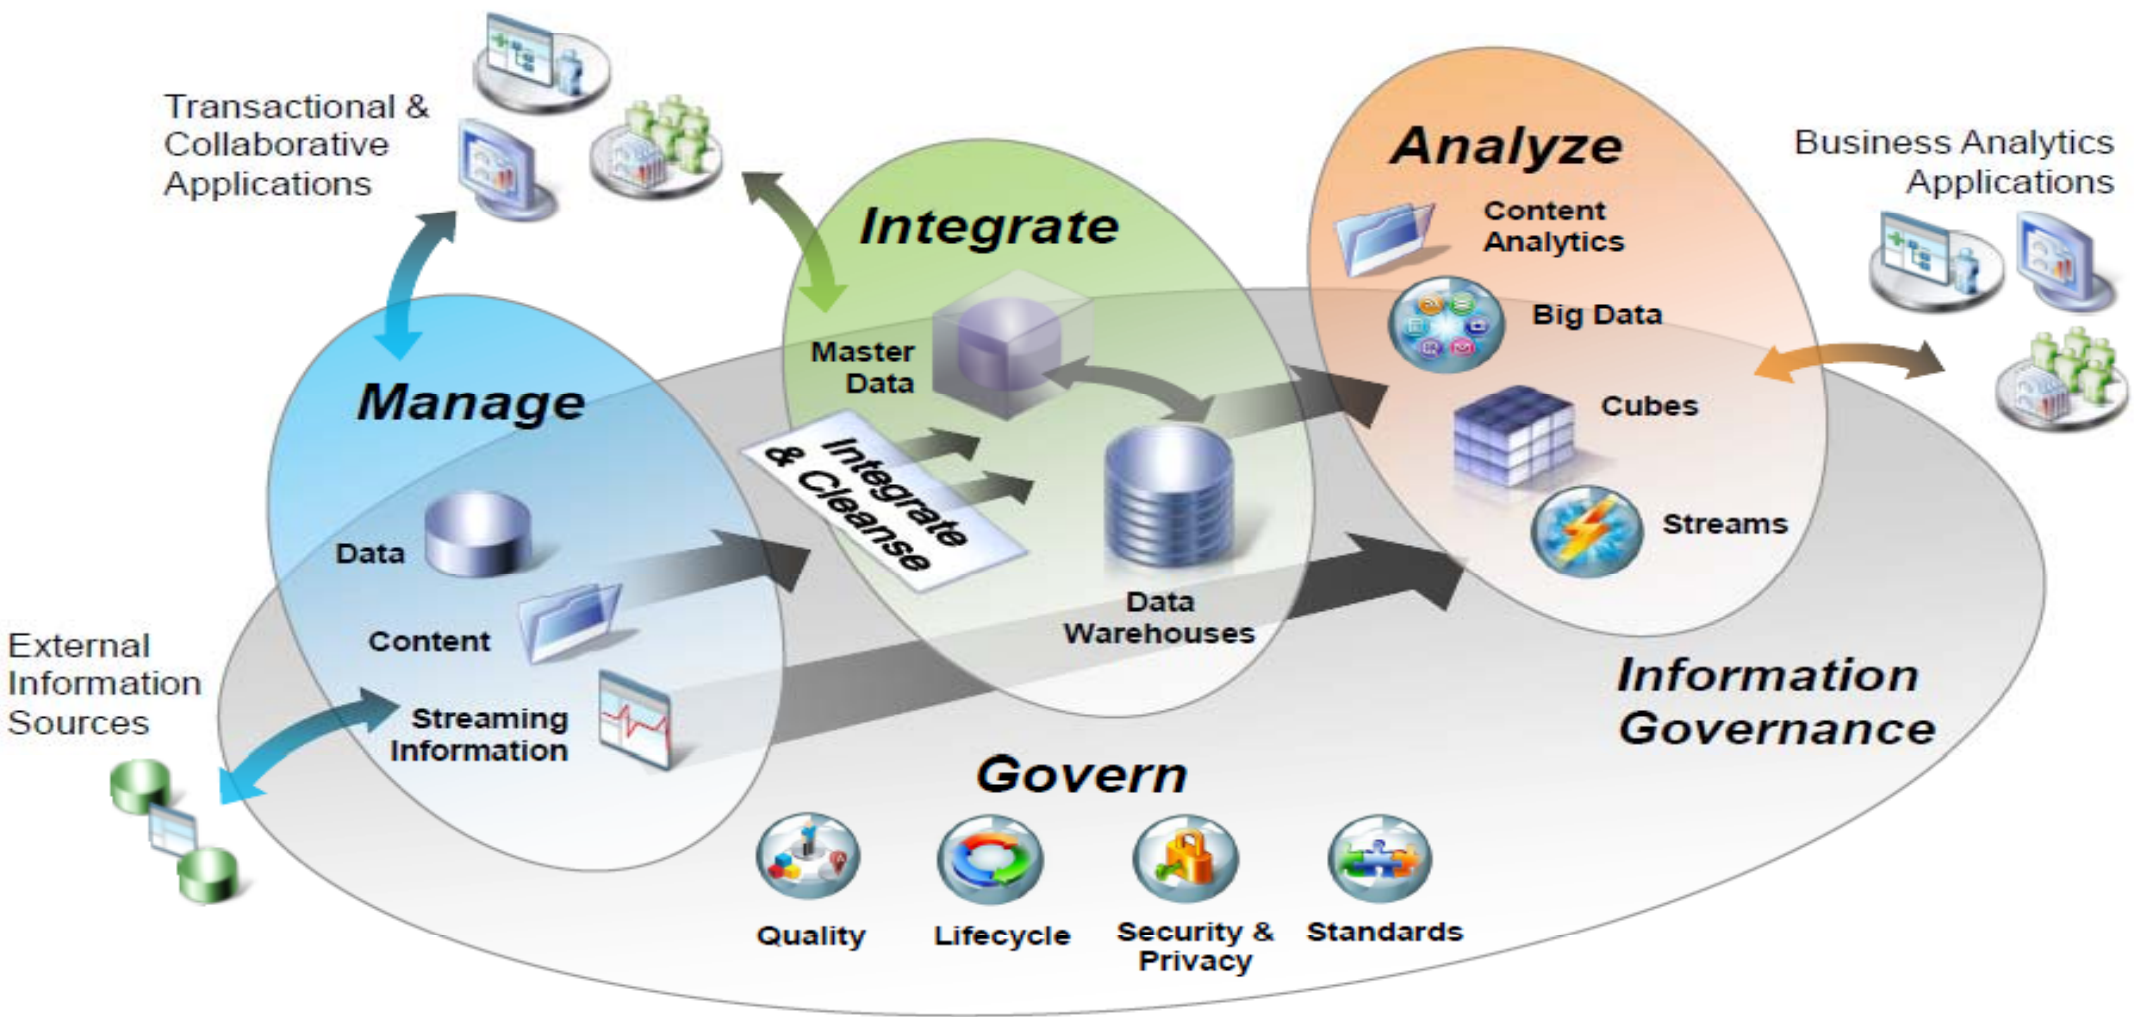

*Annual cost per 1,000 knowledge workers*

# Data Quality in the Information Supply Chain

- **Define** what ‘high quality’ data means within your business
- **Standardize and cleanse** data to enable strategic initiatives
- **Constantly monitor** for data quality issues and understand how to deal with an exception when it occurs
- Understand the **lineage** of your data

# Organisations continue to have Data Quality Challenges

- *Compliance and transparency pressures increasingly highlight data quality issues*
  - No method to maintain high quality data

- *Unreliable insights*
  - Low data quality leads to lack of trust and results in poor business decisions
  - Inability to identify source of quality issues
  - Unreliable insights are persisted to other strategic initiatives, which then base key business decisions on bad data

- *High costs & negative customer satisfaction*
  - Organisations are recognizing that there can be both direct (missed revenue opportunity) and indirect (low customer satisfaction and high churn) financial costs from poor data quality.

**Understand  
& Define**

# Can't Define Quality If You Don't Understand Your Data

## Challenge:

- Distributed heterogeneous sources
- No documentation on data structures and data relationships
- Inconsistent data definitions between Business User and Technical User
- Lack of trusted data – unknown quality
- Limited understanding of confidential data elements
- Data does not stand still, new data always added, but not necessarily evaluated for quality

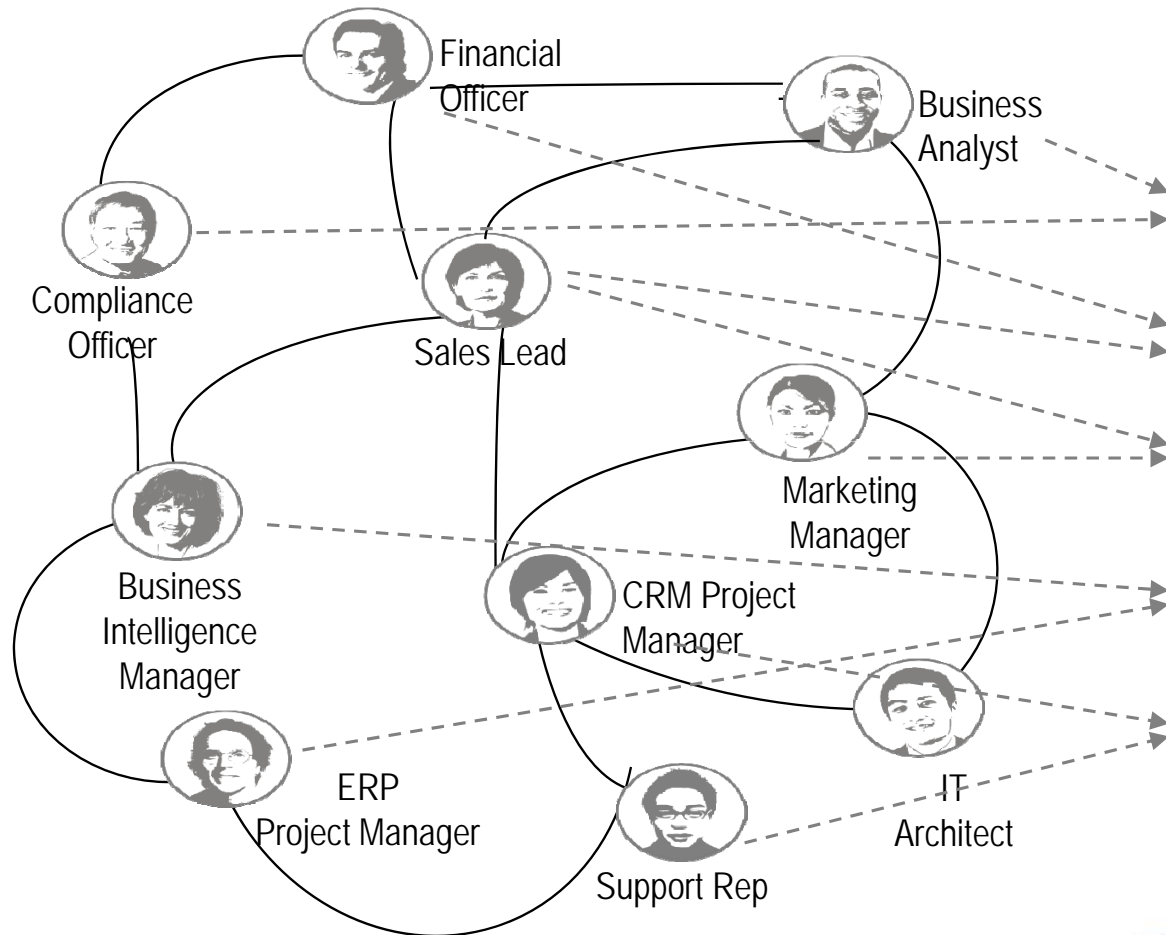

## Cost Prohibitive Alternative Solutions:

- Manual spot checking of data not feasible or reliable

# Lack of Consistent Terminology Propagates Poor Data Quality

Understand  
& Define

**How does each user define:**  
**“Active Subscriber”?**

- Mobile user who has used “any” service in the mobile network
- User who paid for the service at least 1 time in the past 90 days.
- Mobile user who has a phone plan, but not SMS
- Only post-paid customers, not pre-paid customers
- User who makes at least 1 call over the period of 90 days

# Why Should I Care About Cleansing Information

**Cleanse & Standardize**

Lack of information standards

Kate A. Roberts 416 St Kilda Rd #2, Saint Kilda, VIC 3182

# Monitor Data Quality with Integrated Data Rules

Monitor & Govern

- Data rules enable data quality monitoring over time and leverage data analysis at different points during an integration project
- Helps establish benchmarks and baselines to help track data quality – is it deteriorating or remaining constant?
- Is used to place indicators/flags in enterprise data which can be tested for valid/invalid values
- Flag bad data for audit

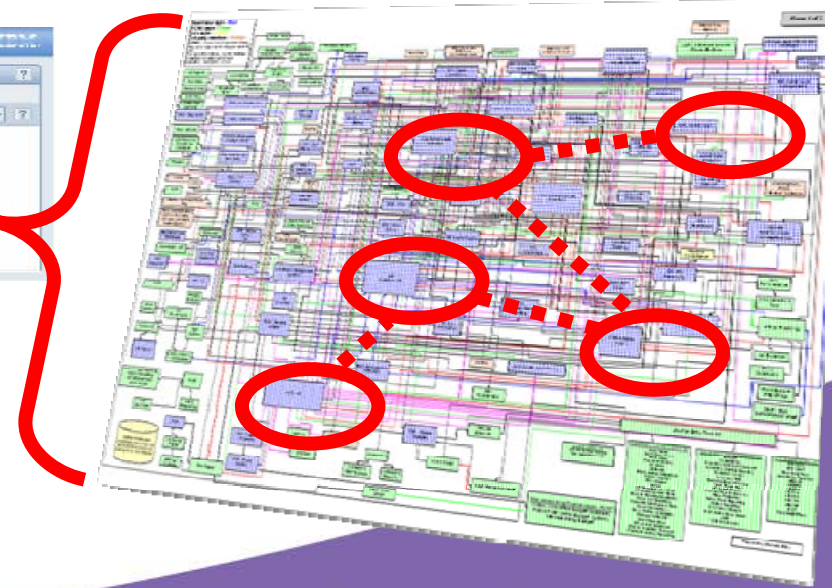

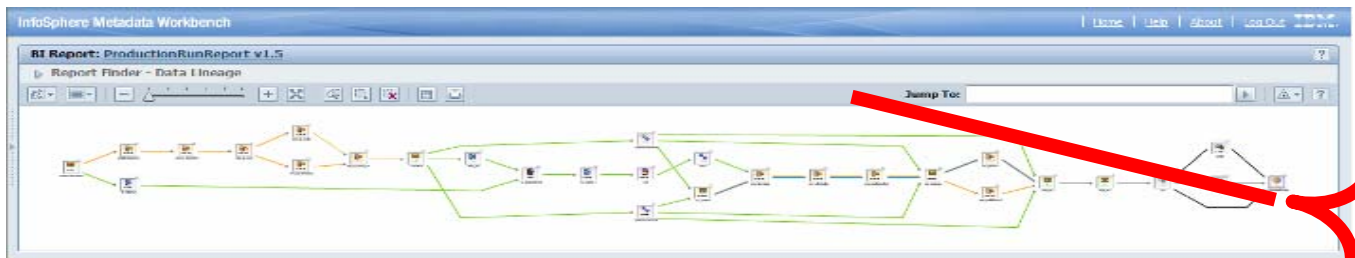

twitter: Follow @ANZ\_IM or mention #IIGS

# Govern the Information Supply Chain

**Monitor & Govern**

- Understand the impact of change
- Trace data lineage from sources, through processing and all the way through to data consumption

# IBM Provides Solutions for Creating High Quality Data

- A comprehensive Information Governance strategy for creating high quality data that helps you...
  - Ensure that your data contains accurate and complete information you can trust; while reducing the risk of propagating bad information throughout your organization.
  - Build a common understanding of your data across the enterprise among business and technical users.
  - Establish defined data quality rules or standards and continuously monitor the flow of data through the information lifecycle to enforce adherence to those rules and standards.
  - Provide the means to rapidly investigate and resolve data quality issues when they do occur.

**Understand  
& Define**

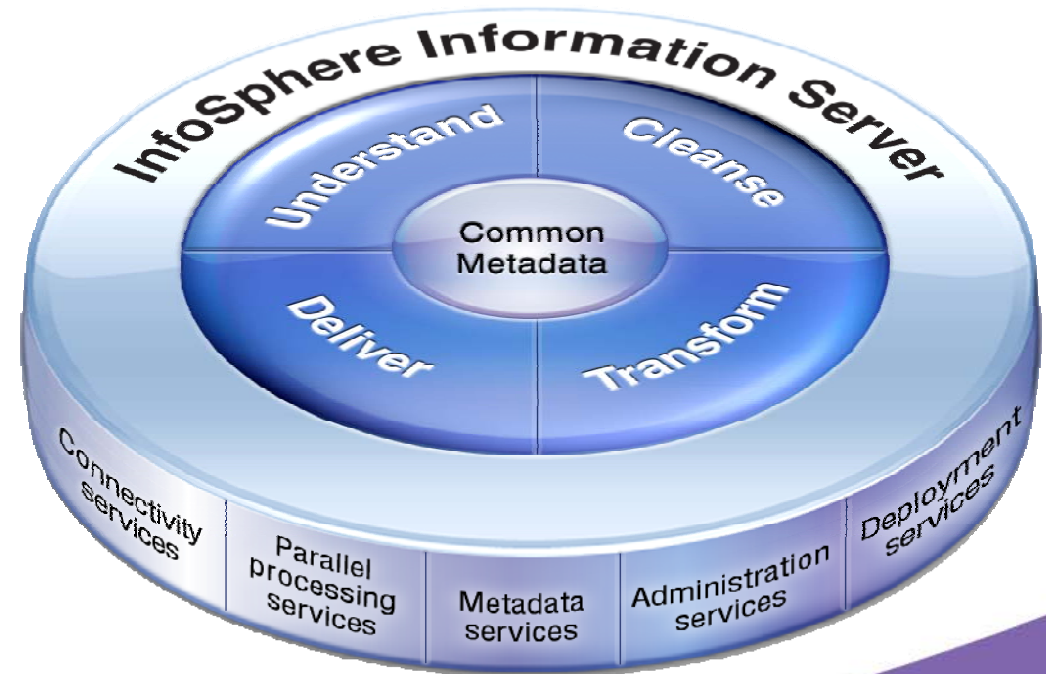

**Cleanse &  
Standardize**

**Monitor & Govern**

# IBM InfoSphere Information Server

## *A Platform for Data Quality and Information Governance*

- Provides the framework for defining a business vocabulary
- Promotes Stewardship
- Measures and monitors data quality
- Encourages collaboration
- “Touches” *everything*
  - Source and target data throughout the enterprise
  - Data movement and transformation
  - Business intelligence
- Illustrates end-to-end data lineage
- Powerful functionality surrounding a common “core” of managed metadata

---

# Demonstration Scenario

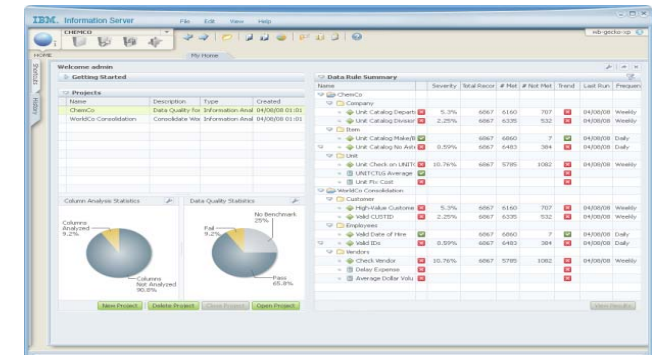

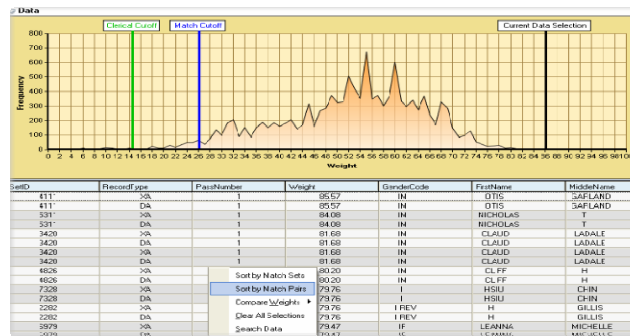

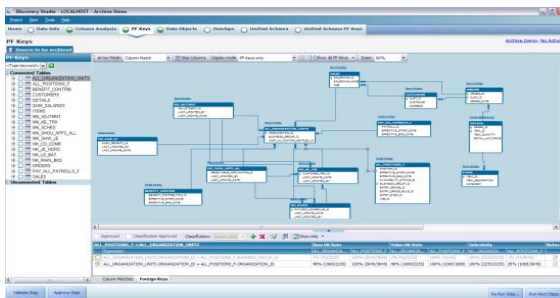

An orange decorative shape in the bottom left corner, resembling a curved wedge or a stylized 'C' shape.

# Business Problem

- Company had multiple sources
- Need to integrate and govern, but...
  - Do not know what they do not know
  - Do not know where the critical data is
  - People that know the sources are gone
  - Heterogeneous sources

# Business Problem Solution

---

# Demonstration

An orange decorative shape in the bottom left corner, consisting of a curved, wedge-like form.

# InfoSphere – the only vendor who is a leader in every category of Information Integration and Governance

**Leader!**

**Information  
Integration &  
Data Quality**

**27.5%** market share

**Leader!**

**Master Data  
Management**

**40%** market share

**Leader!**

**Information  
Lifecycle  
Management**

**76%** market share

**Leader!**

**Privacy &  
Security**
