

IIB Product Editions and license entitlement model													
Environment	IIB for Developers (free)	IIB Advanced	IIB Standard	IIB Express	IIB Adapter Deployment	IIB Scale	IIB Hypervisor						
Production	IIB Edition delivering full functionality, enabled for multiple execution groups. Restricted to 1 message per seconds.	IIB Edition delivering unrestricted, full functionality and capacity. Enabled for multiple execution groups	IIB Edition delivering a full functionality and capacity. With restricted process isolation. Enabled for 1 execution group	IIB Edition delivering a functional subset focussed on base ESB functionality Enabled for 1 execution group	IIB Edition delivering a functional subset focussed on endpoint adaption. Enabled for 2 execution groups	IIB Edition for customers transitioning from WebSphere Enterprise Service Bus. Functional subset	IIB Edition delivering IIB Advanced Edition pre-packaged as a virtual image for cloud deployment						
non-prod performance test								1,2					
non-prod functional test								1					
Other non-prod non-perf								1

No Entitlement													
Licensed - no charge													
Separate Part, Licensed at 1/5 full charge													
Licensed - charged													

note 1: When entitlement to IIB licenses are purchased, environments running in Developer Edition Mode should be changed to the purchased edition mode and licensed accordingly

note 2: Developer Edition has limited throughput of 1 message per second and therefore is generally not appropriate for actual performance testing

note 3: Standby Idle for IIB Express is not available for purchase. Either IIB Express Edition full license instances can be run as Standbys or Standbys can be colocated in the same operating system instance as a primary at no charge.
