

Smarter systems for a smarter planet.

## Business Agility in Action

The event series on BPM, SOA and Application Integration

Give your business the flexibility it needs to capitalise on change.

# IBM WebSphere Cloudburst:

## A patterns-based approach to the cloud

David Schlosser – IBM Sydney

March/April, 2011

## We need a better way manage application environments

- Setting up meaningful application environments takes too long
- Recreating or migrating application environments is too hard
- Sharing infrastructure resources limited by the first two problems

## Virtualisation – image design

- Burn the big things into the image
- Prebuild the slow things
- Script for deployment variants

Patches

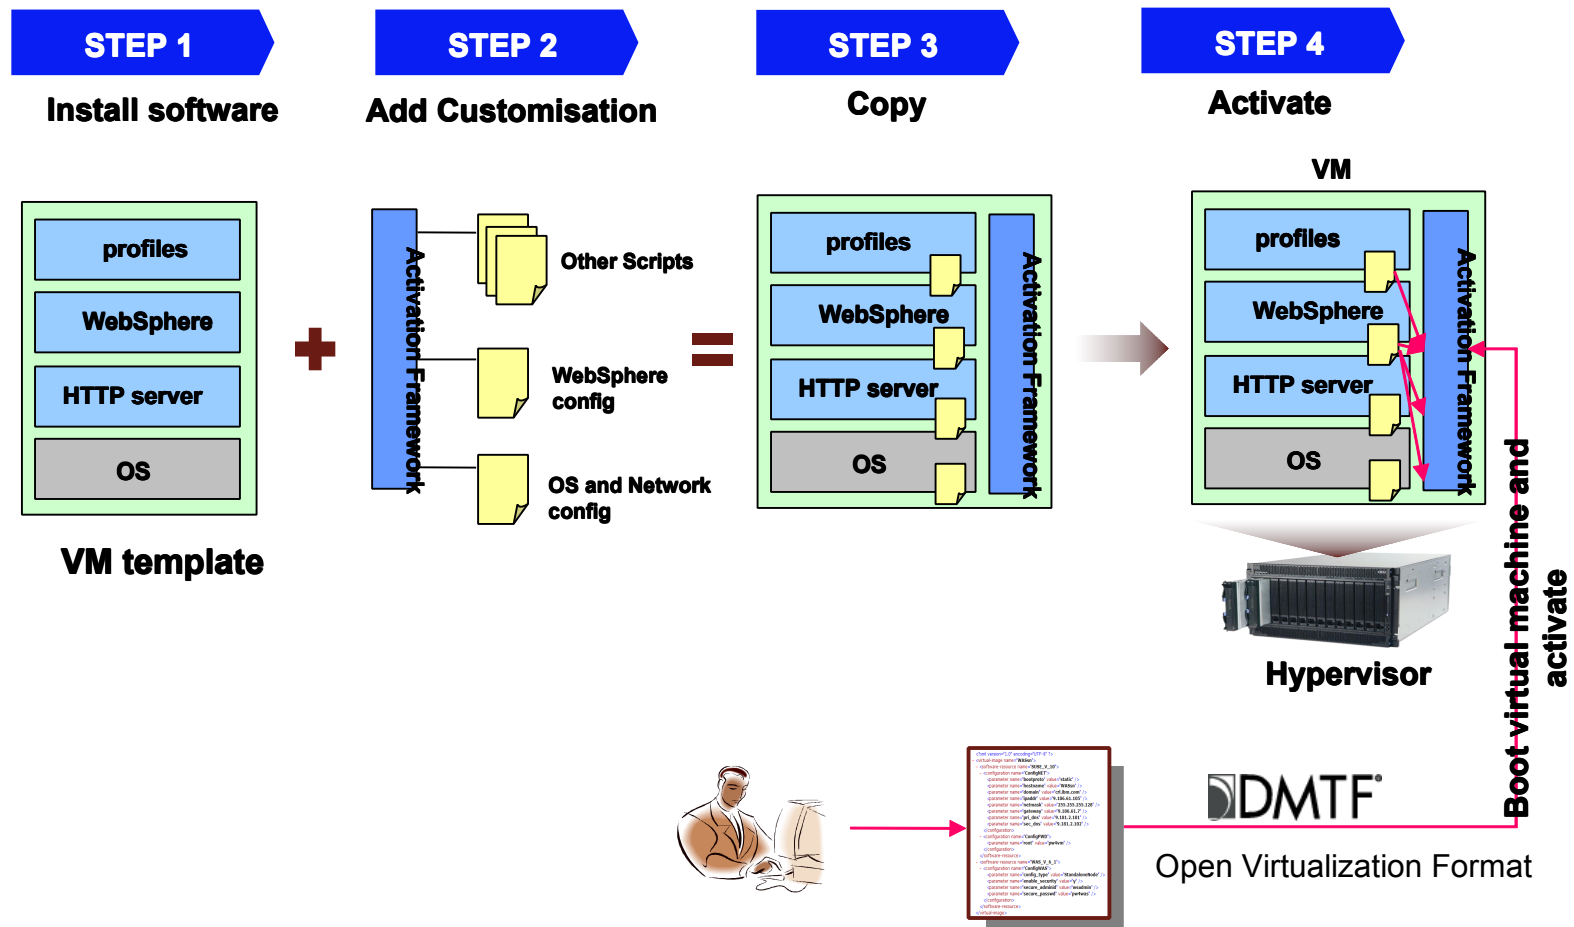

WebSphere  
config

OS and Network  
config

# Enhanced Image - Parameterisation & activation

## But virtualisation is not enough

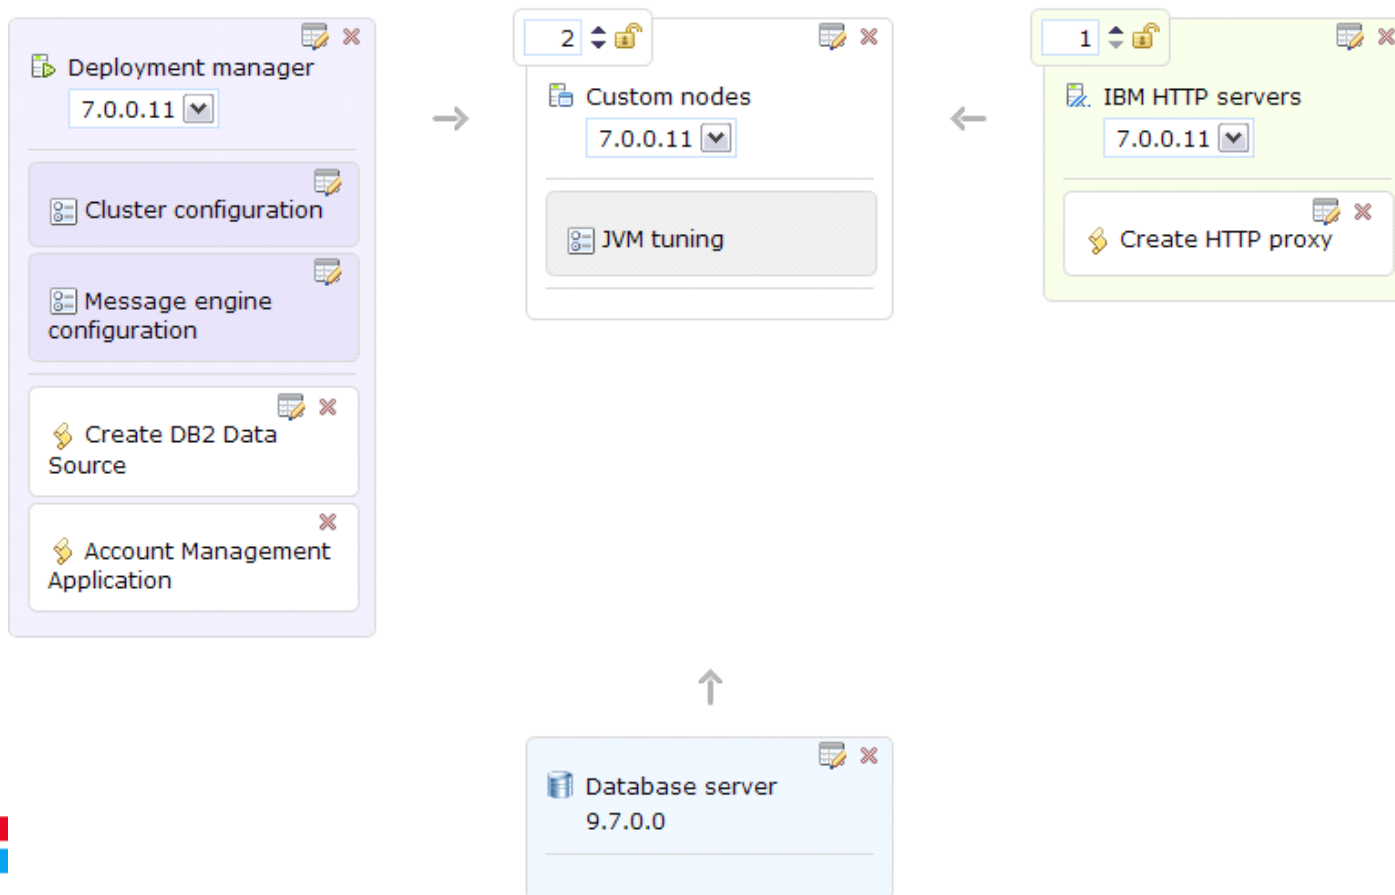

- Middleware application environments often require more than a single VM
- In this case, getting a VM fast only gets you so far
- You still retain responsibility for orchestration of inter-VM configuration

## Patterns bridge the gap

- Patterns are *deployable* units
- Patterns encapsulate and automate installation, configuration, and integration

## Welcome to WebSphere CloudBurst!

WebSphere CloudBurst is a hardware appliance that automates and optimizes the deployment of WebSphere Application Server environments.

### Deployment made easier

#### Step 1: Set up the appliance

Customize the appliance settings and create user accounts. You can also create user groups.

[Customize settings](#) | [Create users](#)

#### Step 2: Set up the cloud

Create the cloud by identifying IP groups and collections of hypervisors called cloud groups.

[Add IP groups](#) | [Add cloud groups](#)

#### Step 3: Create a virtual system

Create a virtual system by deploying a reusable pattern.

[Select a pattern to deploy](#)

#### Step 4: View virtual systems

View the current status, metrics, and details of virtual systems in the cloud.

[View virtual systems](#)

### Additional tasks

#### Add virtual images

Provide new virtual images to the catalog by uploading files or extending pre-built images.

[Add virtual images](#)

#### Add script packages

Provide your custom scripts and applications to the catalog.

[Add script packages](#)

#### Create reusable patterns

Create a custom pattern from the items in the catalog.

[Create patterns](#)

#### Use command line tools

Perform administrative and deployment tasks from the command line.

General Information

Created on: Mar 17, 2011 3:42:56 PM  
From virtual image: [WebSphere Application Server 7.0.0.11](#)  
Current status: Virtual machine has been started  
Updated on: Mar 20, 2011 7:24:36 PM  
On hypervisor: [ESX1](#)  
In cloud group: [Default ESX group](#)  
Registered as: DMGR\_3  
Stored on: Cloudburst2

IBM products (with PVU for isolated usage)

IBM WebSphere Application Server Hypervisor Edition (5724-X89): 50 PVU

Hardware and network

Virtual CPU count: 1  
Virtual memory (MB): 2048

Thankyou!
