

Big Data Spatial Analytics at Ordnance Survey with IBM Netezza Spatial

Matt Kadillak – Spatial Architect, IBM Netezza Neil Taylor – Head of Commercial Markets, Ordnance Survey

#### Agenda

- Introductions
- IBM Netezza & Netezza Spatial Overview
- What is Big Spatial Data?
- IBM Netezza and Esri
- Introduction to Ordnance Survey
- Spatial Analytics at Ordnance Survey
- Business Benefits
- Conclusion

#### **IBM Netezza Overview**

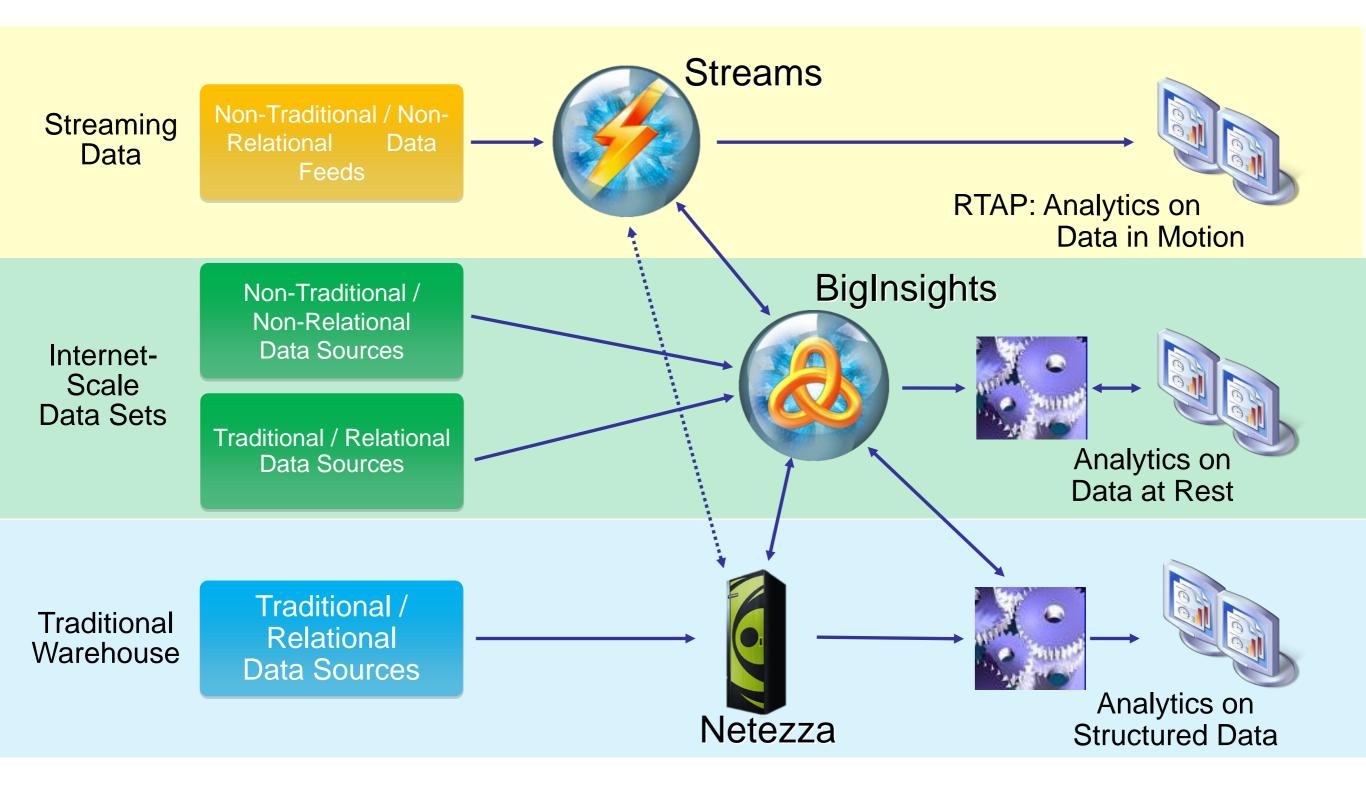

#### "Big Data Ecosystem": Interoperability is Key

#### The Netezza Performance Server<sup>™</sup>

IBM Netezza 1000

#### **Core Value Proposition**

- A high-performance, peta-scale data appliance that combines database, server and storage, and integrates easily into existing environments
- Delivers 10-100X the performance at half the cost of existing solutions
- Simplicity → installs in 1.5 days, load n' go architecture, no tuning or configuration

Speed – Simplicity – Time to Value

#### Managing The Netezza Appliance

#### No indexes and tuning

#### No storage administration

- No dbspace/tablespace sizing and configuration
- No redo/physical/Logical log sizing and configuration
- No page/block sizing and configuration for tables
- No extent sizing and configuration for tables
- No Temp space allocation and monitoring
- No RAID level decisions for dbspaces
- No logical volume creations of files
- No integration of OS kernel recommendations
- No maintenance of OS recommended patch levels
- No JAD sessions to configure host/network/storage

No software installation

Resources become Data Managers instead of Database Administrators

#### IBM Netezza TwinFin<sup>TM</sup> Architecture

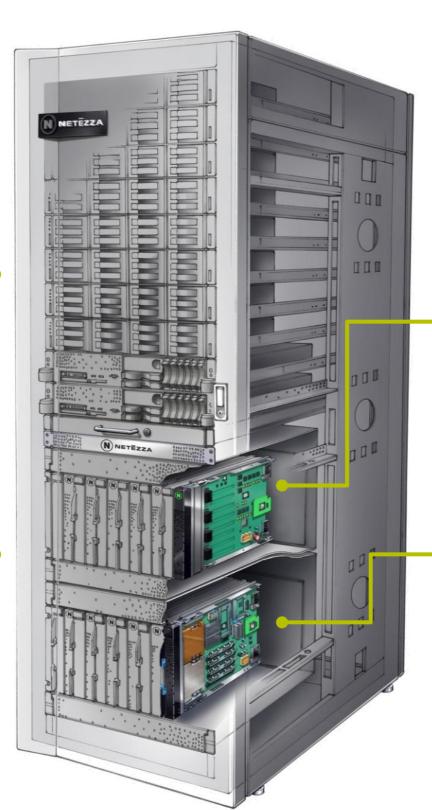

Inside the IBM Netezza 1000

#### Optimized Hardware + Software

Purpose-built for high performance analytics; requires no tuning

#### True MPP

All processors fully utilized for maximum speed and efficiency

#### Streaming Data

Hardware-based query acceleration for blistering fast results

#### Deep Analytics

Complex analytics executed in-database for deeper insights

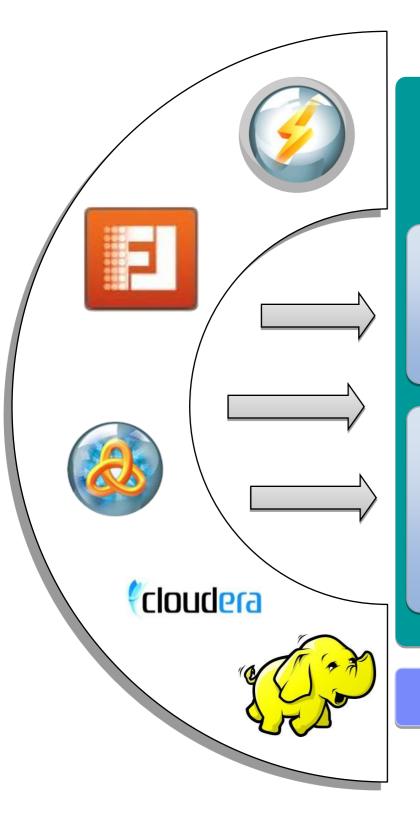

#### **IBM Netezza Analytics**

Software Development Kit

User-Defined Extensions (UDF,UDX, UDTF,UDAP)

Language Support (MapReduce, Java, Python, Lua, Perl, C, C++, Fortran, PMML) 3<sup>rd</sup> Party In-Database

Revolution

**Analytics** 

**Analytics** 

Fuzzy Logix

SAS 9.3+

Zementis

**IBM SPSS** 

Mathworks

Netezza In-Database Analytics

**Transformations** 

Mathematical

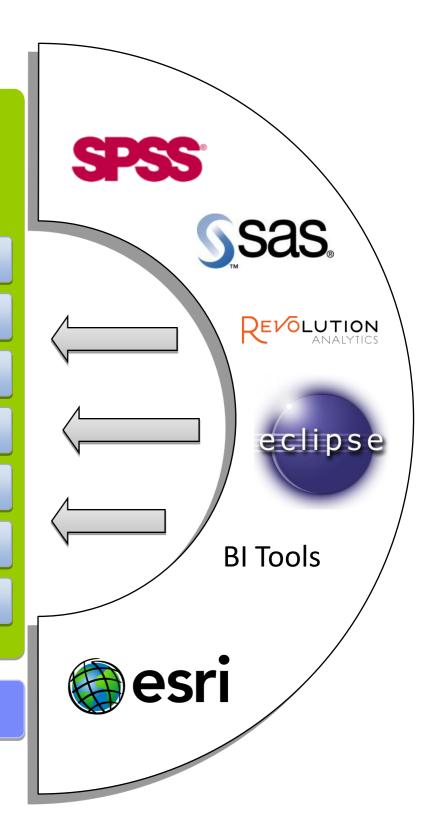

Geospatial

**Predictive** 

Statistics

Time Series

Data Mining

**IBM Netezza AMPP Platform** 

#### Appliance Family for Data Lifecycle Management

Skimmer	TwinFin	High Capacity Appliance
(Netezza 100)	(Netezza 1000)	(Netezza 1000C)
Development & Test System	Data Warehouse Analytics	Queryable Archiving Back-up/DR
1 TB to 10 TB	1 TB to 1.5 PB	100 TB to 10 PB

#### IBM Netezza Evaluation Approach

- Prove the value at no risk to us, our business, or our timelines.
- In about two weeks, they will:
  - Install a machine in your data center
  - Load all of your data.
  - Integrate with existing applications
  - Train / advise our staff
  - Work with us to scope and deliver analysis to meet our business requirements (no smoke & mirrors)
  - Improve performance by 10-100x
  - Provide complete and full disclosure.
- No pre-tuning of systems or applications for the purposes of the evaluation.
- Open access to the machine throughout the evaluation.
- New queries welcomed
  - An analytical environment should be flexible to meet new business requirements

#### IBM Netezza Spatial™

- Standard extension to the market leading NPS® DWA
- Native understanding of location and shape (vector)
- Orders of magnitude performance via parallelism
- Scales linearly
- Open, standards-based interface and data model
  - OGC Simple Features Specification 1.2.x
  - POSTGIS Libraries (GEOS/GGL/Custom)
  - ESRI Libraries Shape/PE/Custom
- ETL via Plug-In for Safe Software FME (Desktop/Server)
  - High Speed LAT/LONG import via NZ Loader

Analyze all your data all the time

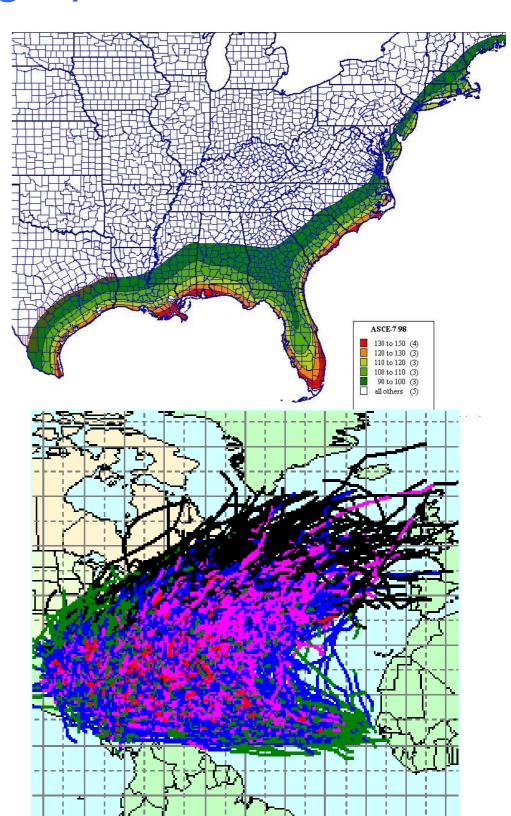

#### Spatial Analytic Applications - Big Spatial Data

- Insurance Demographics Data/ Risk Analysis
  - 120 million points (+/-) from Demographics providers
  - Coastal distance, elevation extraction (DTED), distance to Firestations, risk accumulation
- UK Government Mapping/Data Provider
  - 460 million features
- Government Intel
  - 400+ Million Points/Polygons
  - Spheroidal Buffer/Distance Calculations/Intersects
- Telco Location Data
  - 187 Billion Call Locations (CDR)
- Telematics/GPS in Rail, Trucking, Troop Movement, etc.
  - 50 Billion Lat/Long Locations
- Agriculture
  - -40-60 millions polygons (soil and land parcel)
- Cable Provider (Marketing)
  - Demographic assignment to market zones every 6-8 weeks
  - 116 million points
- Utilities Smart Grid

Netezza Spatial scales to these data volumes and more.....

#### It's About Place, not Space

Neil Taylor Head of Commercial Markets July 2012

#### Location

- Everything happens somewhere
- Location is a key driver of decision-making for the public and private sectors
- Over 80% of data has a spatial element

#### Ordnance Survey Great Britain

- Ordnance Survey is 220 years old
- Civilian organisation since 1983; 1150 staff
- Independent Government Department and Executive Agency reporting directly to a Government Minister
- Turnover of £140m £30m profit

#### Ordnance Survey today

- Creates and maintains the 'master spatial database' of Great Britain from which others derive benefit
- Manages complete national large scale digital data down to building level detail
- Maintains a database of 460 million features with approximately 5,000 changes made daily
- In 2010/11, 99.9% of real world features were represented in the database within six months of completion on the ground
- From the database, Ordnance Survey produces a range of digital data and paper maps for business, leisure, educational and administrative use

Provides the underpinning geographic framework for Great Britain

#### Updating the Ordnance Survey database

#### Wide Range of Customers and Markets

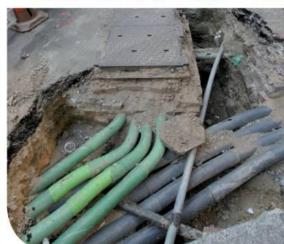

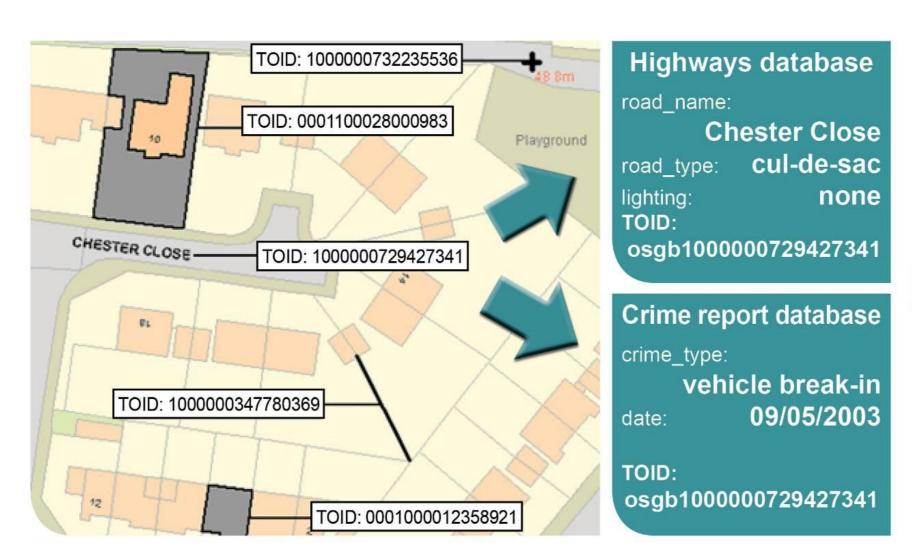

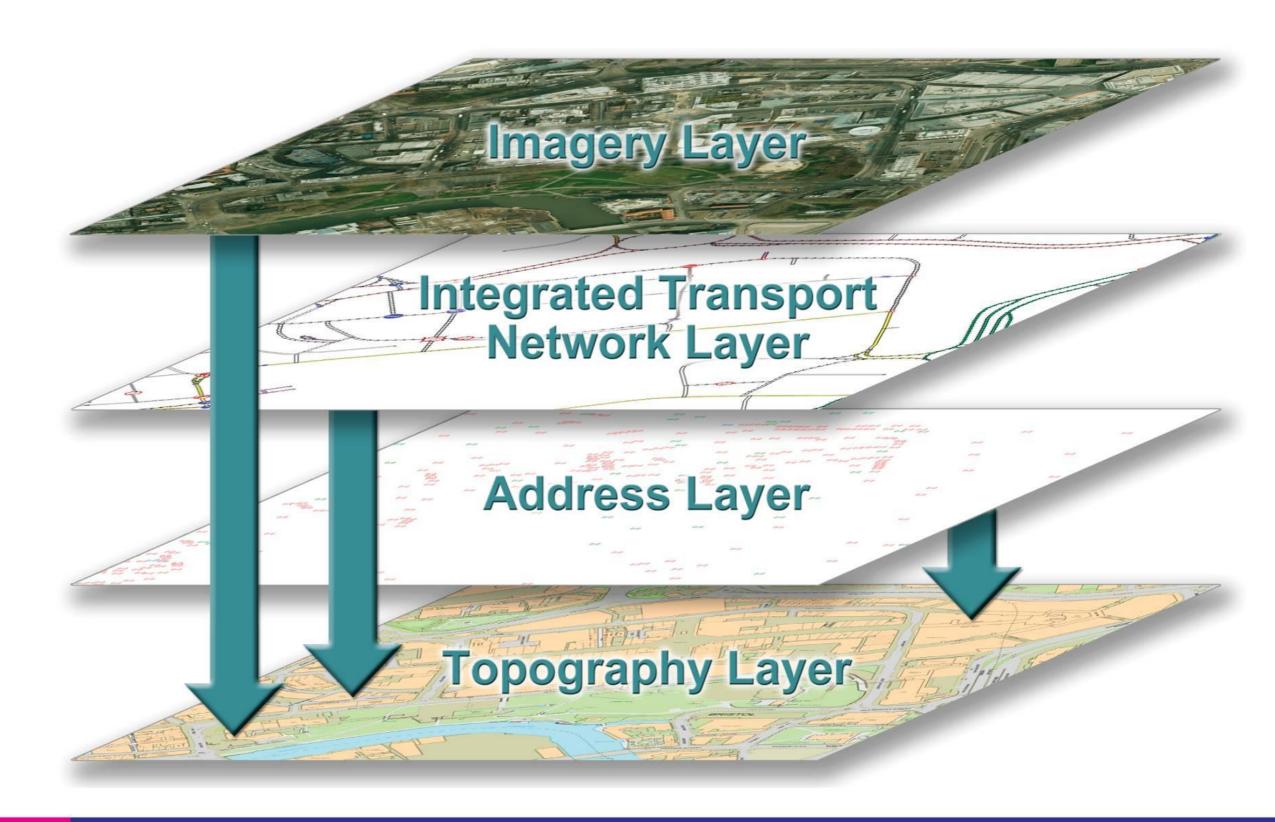

#### A database to connect via real world information

 Every object represented in OS MasterMap has a unique Reference identifier called a TOID. These TOIDs can be used to connect other information and are linked to other core references

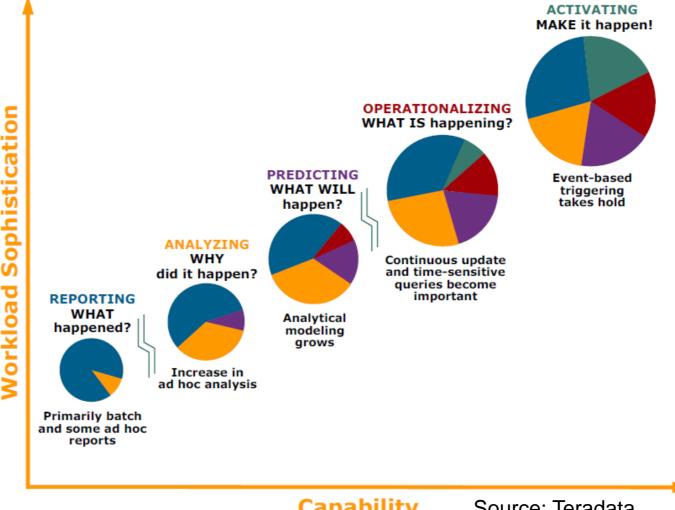

#### OS MasterMap current layers

#### Big data and location analytics is changing the world

- Big data gives us the ability to:
  - harness structured and unstructured data
  - ask provocative questions of it

Stage 5 Stage 4 Stage 3 Stage 2 Stage 1

Capability

Source: Teradata

#### Ordnance Survey and IBM Netezza

What does TAFKAT do for us?

### Stress Testing

#### Evaluation Results – Product Testing

Internal Analytics	Status	Current	Netezza
The Address Layer 2 queries listed in AI_M2_INTERFACE_DATA_SQL.sql (which test for any invalid combinations of attributes in the dataset).	Improve	~3 hours	17 mins
Topology check of OS MasterMap Topography Layer Topo Lines and Topo Areas.		N/A	3 mins 3 secs
Address Layer 2 features that are matched to Topography Layer buildings (TOID reference) but do not sit spatially within them.	New	N/A	25 mins
Features within each of the OS MasterMap layers which reference a feature that no longer exists in the product (e.g. Address Layer 2 "Reference to Cartographic Text TOID" to Topography Layer "TOID").	New	N/A	6x queries at ~1 min each
Count of OS MasterMap Topography Layer Topo Lines below 5cm (by length split at 1mm intervals).	New	N/A	37 secs
Number of OS MasterMap Topography Layer Topo Lines with a Descriptive Term of "Inferred Property Closing Links" which don't have a Topo Area with a Descriptive Term of "Multi Surface" on either side of them.	New	N/A	36 hrs

# Data Queries

#### Evaluation Results – Stakeholder Questions

External Analytics	Status	Current	Netezza
What length of the GB coastline is made up of	Improve	~2 weeks	4 mins 26
"beach"?	Improve		secs
What is the remotest point (point farthest from a	Improve	~1 gav	27 mins 22
metalled road) in the country?			secs
at is the farthest point from the coastline?	Improve	∼1 day	9 mins 12
	Improve		secs
What is the number of each Address Layer 2 base	Improve	~2 days	1 min 9 secs
function falling within each of the GOR boundaries?	Improve		
Locate potential high rise blocks of flats (using OS	Improve	~3 days	49 secs
MasterMap Address Layer 2 and Topography Layer).			45 3CC3
