

Cloud Computing and IBM LotusLive™

Cloud computing is an emerging model for delivering IT related capabilities as a service. This new style of computing promises dramatically better ease of use, economies of scale and much greater flexibility in sourcing and adapting to change.

What is cloud computing?

From a user perspective, cloud computing provides a means of acquiring computing services without requiring understanding of the underlying technology. From an organizational perspective, cloud computing delivers services for consumer and business needs in a simplified way, providing unbounded scale and differentiated quality of service to foster rapid innovation and decision making. It is a service acquisition and delivery model for IT resources and, if properly used within an overall IT strategy, can help improve business performance and control the costs of delivering IT resources to the organization.

In a world where almost anyone and anything can connect to the internet, why use Cloud Computing?

- When you want to rapidly interact and collaborate with customers and partners
- When you need to access and share information on-demand
- When you want transparent access to scalable computing and more intelligent networks
- When you want to grow without capital investment.

Business Benefits

- Responsiveness and agility in delivering new solutions – decreases time to market
- Enhanced employee mobility - access anytime, anywhere
- Incremental pricing means availability without capital outlays
- Rapidly adjusts the volume of users as workload increases or decreases
- New product releases are automatic and at no additional cost

IT Benefits

- Allows IT to choose areas of focus
- Integrate emerging technologies without the high risk and cost
- Leverage service provider expertise
- Optimize investment in existing infrastructure

What does Cloud Computing mean at IBM?

IBM considers cloud computing to be a potentially cost-efficient model for provisioning processes, applications and services while making IT management simpler and increasing business responsiveness. IBM believes that cloud computing can enable rapid business innovation by delivering easy-to-use computing services to users “on demand,” regardless of their location or the type of device they are using.

IBM brings you **LotusLive** - the destination for world-class online collaboration solutions for the business world! LotusLive is ideal for businesses looking to collaborate beyond corporate boundaries, expand their networks and discover new business opportunities and with all the security one would expect from IBM.
