

Lotus Discovery Server

Learn more about your information and people

Agenda

- Discovery Server Overview
- Discovery Server Architecture
- Demonstration

Lotus Discovery Server 2.0

What is it?

- A unique knowledge discovery server for finding documents, expertise, and communities of practice.
- A platform for advanced knowledge management measurement and reporting.
- Delivered as a server platform with extensible user interface and APIs, and with services for integration.

Lotus Discovery Server 2.0

What is it intended to do?

- Provide information discovery and expertise location capabilities to end users via search or browse UI.
- Connect users to the right information at the right time.
- Provide additional context, relevance, and value to "found" knowledge.

Lotus Discovery Server 2.0

What are the key features/functions?

- Assisted document categorization and classification.
- Automated person profiling and expertise mapping.
- Ability to search for documents & expertise
- Document valuation

What Does the Discovery Server Actually Do?

- ▶ create a knowledge map
- ▶ generate affinities
- ▶ create expertise profiles
- ▶ assign content value
- ▶ index everything

- ▶ cluster and organises documents
- ▶ relationships b/t people and topics
- ▶ mine skills, locate experts
- ▶ based upon computed metrics
- ▶ search for docs, people, topics, etc.

- **Discovery Server components constantly maintain and update themselves through a combination of automatic processes and administrative tools**

... Independently of Sources/Content Format

Discovery Server Spiders

- Domino Databases
- Quickplace
- Domino.Doc
- File System
- HTML

- Purpose - Extract content, metadata and normalizes to XML:
 - ▶ Over 40 file types, PDF, MS Office etc.
 - ▶ Security (ACL), Location to sources (used by search)
 - ▶ Text (for word, clustering, category analysis)
 - ▶ Author, Editor, Responder, etc. and Usage data (used by Metrics)

Discovery Server Spiders

- Directory Spiders
 - ▶ Domino Directory
 - ▶ Domino Database
 - RDBM's
 - ▶ LDAP
 - ▶ Atomica Enterprise Server

- Purpose - Extract "Base" person data
 - ▶ Name, Address Details, Phone Details etc

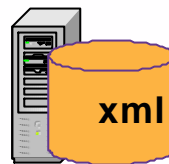

Discovery Server Spiders

- Email Spiders
 - ▶ Lotus Domino
 - ▶ MS Exchange
- Purpose - Extract Affinity Information
 - ▶ Analyzes content that clusters with existing K-map categories,
 - ▶ Matches & augments expertise scores
 - ▶ No data source pointers stored, no public access to e-mail document

Discovery Server Spiders

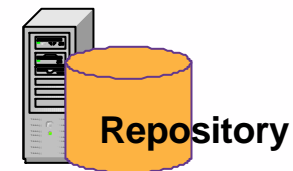

- XML Spider

server.xml
database.xml
document_1.xml
document_2.xml
document_N.xml

External application produces XML for the data contained in the repository and writes the XML to a directory which will be processed by the LDS XML Spider

Proprietary repositories
File System which are not Win32 compatible
Many other repositories

About the Knowledge Map (KMap)

- K-map is for browsing by your end users
- Users drill-down through category trees
- Designed for context sensitive searching

Editing/Maintaining the KMap

- Humans intervene, not by creating and refining rules, but by analysing the content of K-map categories to ensure they are meaningful to their organisations.
- Remember: The K-map is dynamic and will learn by example

Knowledge Map Editor: davidh-ds/IBM/AU - Lotus Discovery Server

dis·ease (dí-zēz') 

n.

1. A pathological condition of a part, organ, or system of an organism resulting from various causes, such as infection, genetic defect, or environmental stress, and characterized by an identifiable group of signs or symptoms.
2. A condition or tendency, as of society, regarded as abnormal and harmful.
3. *Obsolete.* Lack of ease; trouble.

[Middle English *diseise*, from Old French : *des-*, *dis-* + *aise*, ease; see [ease](#).]

Atomica for LDS - disease

lawns, pests, disease

disease, impairment of the normal state or functioning of the body as a whole or of any of its parts. Some diseases are acute, producing severe symptoms that terminate after a short time, e.g., pneumonia; others are chronic disorders, e.g., arthritis, that last a long time; and still others return periodically and are termed recurrent, e.g., malaria. One of the most common bases for classifying disease is according to cause. External factors that produce disease are infectious agents, including both microscopic organisms ([bacteria](#), [viruses](#), and [protozoans](#)) and macroscopic ones ([fungi](#) and various parasitic [worms](#)). Only infectious diseases can be transmitted—by humans, certain animals and insects, and infected objects and substances (see [communicable diseases](#)). Other external agents that can cause disease are chemical and physical agents (drugs, poisons, radiation), which can be encountered in specific work situations, deficiency of nutrients in the environment, and physical injury. Diseases that arise from internal (endogenous) causes include hereditary abnormalities (disorders inherited from one or both parents), congenital diseases (disturbances in the development of a normal embryo), allergies (hypersensitive reactions to substances in the environment), endocrine disorders (generally either overfunctioning or underfunctioning of an endocrine gland), circulatory disorders (diseases of the heart and blood vessels), and neoplasms, or tumors (masses of abnormally proliferating cells). Degenerative diseases occur as a result of the natural aging of the body tissues. Finally, a wide range of diseases are attributed to, or at least influenced by, emotional disturbances. Psychoses and neuroses result in disturbed behavior; the so-called psychosomatic diseases (certain kinds of colitis, many forms of headaches) are thought to be brought about by emotional stress. Most diseases occur as a result of a combination of both internal and external conditions, i.e., an interaction between the body and the environment. Thus a person may be hereditarily predisposed to tuberculosis, although the tubercule bacillus (the infectious agent) must be present for the disease to occur. In ancient times disease was ascribed to supernatural, spiritual, and humoral factors. The discovery by Louis Pasteur and others of the role played by microorganisms in infection and the study of cellular pathology by Rudolf Virchow in the 19th cent. were of the utmost importance in establishing the true nature of disease.

dis·ease (diz-`ēz)
n.
An impairment of the normal state of the living animal or plant body or one of its parts that interrupts or modifies the performance of the vital functions and is a response to environmental factors (as malnutrition, industrial hazards, or climate), to specific infective agents (as worms, bacteria, or viruses), to inherent defects of the organism (as genetic anomalies), or to combinations of these factors
[sickness](#) [illness](#) called also *morbus*. Compare [health \(1\)](#)

dis·eased (-`ēzd)
adj.

Atomica for LDS

The screenshot shows a Microsoft Internet Explorer browser window displaying an email response. The browser's address bar shows the URL: <http://davidh-ds.lotus.com/spider/Home.NSF/0/D75FAB3D608C2D3E852567AE00654DA4?Open>. The browser window has a title bar that reads "Response A1;0= of B0 to 'Crisps lawn again - is it really dormant or dead this time?' - Microsoft Internet Explorer".

On the left side of the browser window, there is a vertical navigation menu for "Atomica for Lotus Discovery Server". The menu items are: DS Documents, DS People, DS Categories, Did You Mean?, Dictionary, Encyclopedia, Thesaurus, Medical, Translations, Quotes About, User Links, and Web Search.

The main content area of the browser displays an email response. At the top, there are two buttons: "Edit Document" and "New Response". Below these buttons is a large orange box with the text "Save the trees...". Underneath this box, the email subject is "[RE: Crisps lawn again - is it really dormant or dead this time?]", the author is "Author: Ellen Fellows", and the date is "Date: 07/15/1999 04:26 AM".

The body of the email contains the following text: "My husband just read somewhere that during a drought, the grass will take care of itself, what you should water faithfully are your trees which may not recover as well. A weakened tree becomes more vulnerable to disease and pests and, of course, takes forever to replace if it dies. I grew up with a lawn that turned into Chinese noodles every July and always came back later, but a sugar maple gave up after years of too little water. *That* we really missed."

At the bottom of the browser window, there is a status bar with the text "Done" and "Local intranet". Below the status bar, there is a footer area with the page number "62", a link "Looking for a safe organic way to keep pests and disease under control in your vegetable patch", the date and time "2002-06-24-05.16.09.000", the name "David Harrison", and the application "Microsoft Word 97".

Atomica for LDS

The screenshot displays the Atomica for Lotus Discovery Server interface. The main window shows search results for the query "lawns, pests, disease". The results list includes names like David Harrison, Victor Hugo, Susanna Dilbert, Carol West, Peter Hamilton, Linda Urman, Jeffrey Falkland, Ellen Fellows, Maria North, and Andy Warhol. A detailed profile for David Harrison is shown on the right, including contact information, affinities (Vegetables, Gardening, Pests and Diseases, Lawns, Retaining Walls), and availability (Mon - Fri).
