

Developing tomorrow's applications using the foundations of yesterday's work

Brett Wallace – Client Technical Professional

27 November 2012

- 250 Billion lines of Cobol Code in existence**
- 1 Million Cobol Applications currently Active**
- 5 Million lines of Cobol Code written every year**
- 80 % of all active Code is Cobol**

So what does this mean

The mainframe is alive and well!

The mainframe is not going away anytime soon!

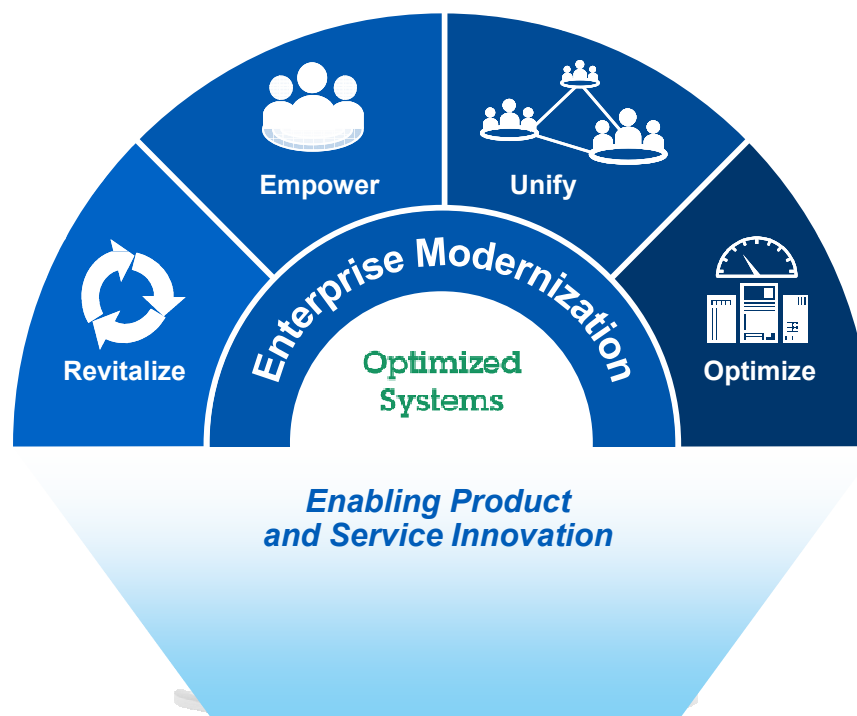

BUT...

In today's mobile world, applications are becoming disposable. The mainframe needs to be accessible.

In today's economic climate enterprises have to find ways to leverage and reuse the assets they already have!!

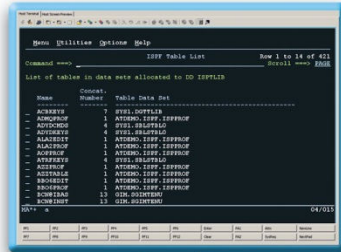

IBM Enterprise Modernization

An incremental and continuous approach to achieving greater value and performance from your IT investments

Rational Host Access Transformation Services

Achieve fast ROI with low risk

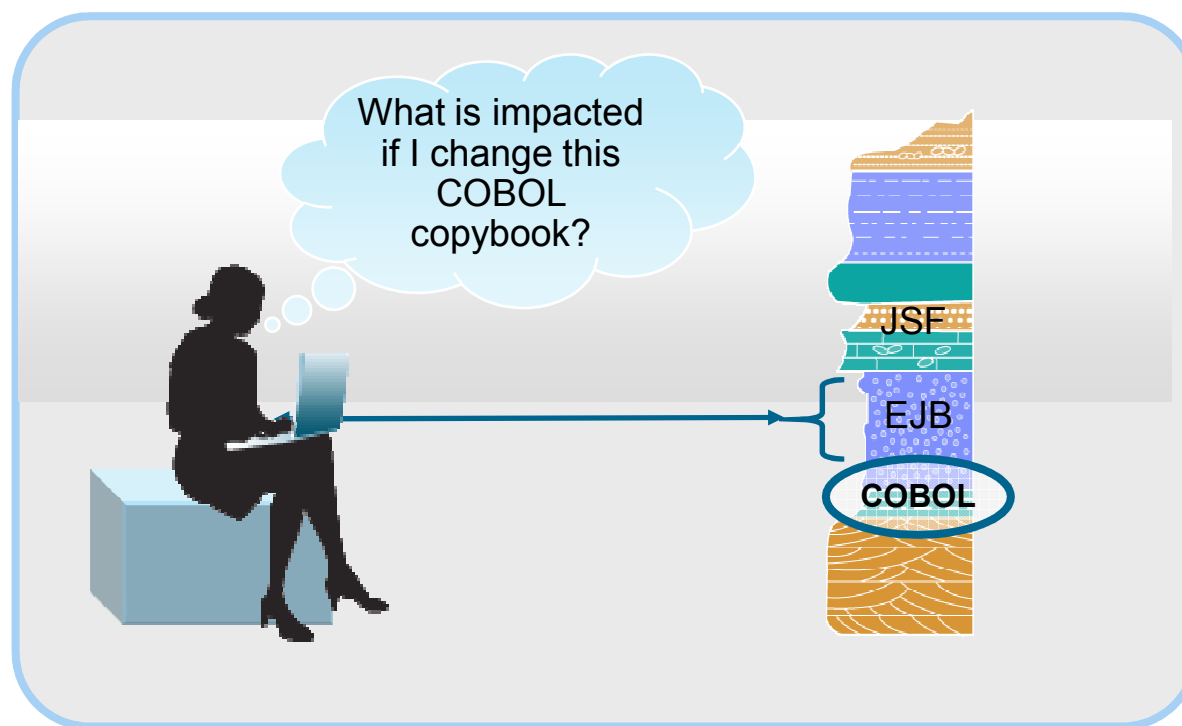

IBM Host Access Transformation Services

- Quickly and easily transform green screen
- Low cost and low risk
- Increase productivity and reduce training costs
- Integrate host business processes and data

Enterprises want to...

Understand the impact and cost of changes to their IT systems, harvest, minimize rework reduce maintenance costs

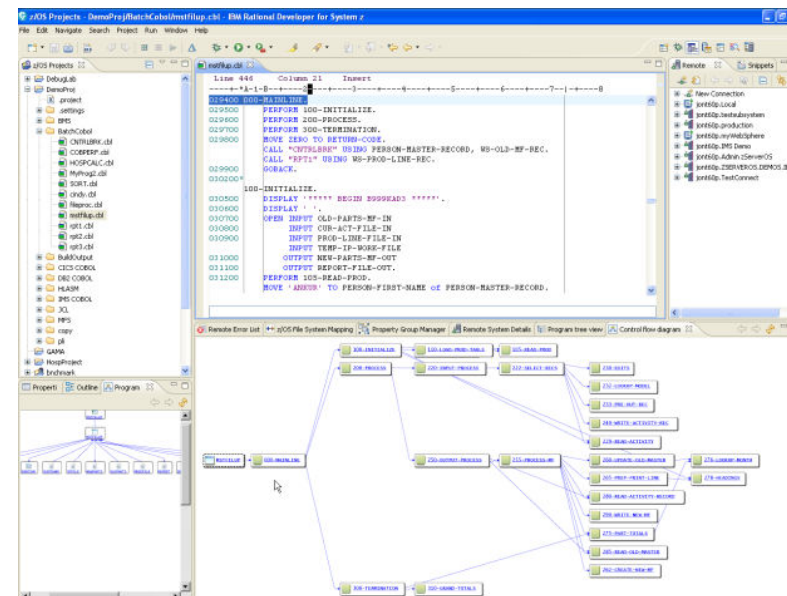

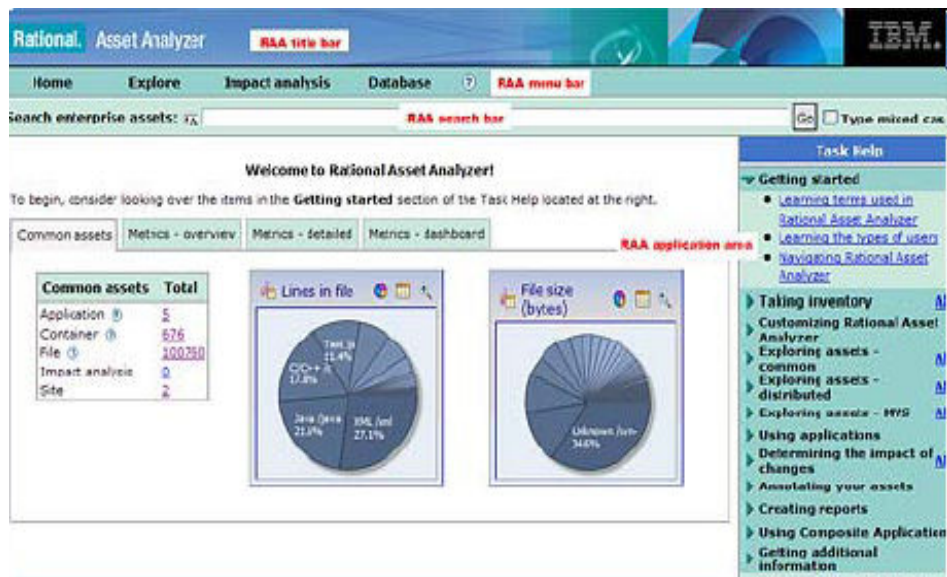

But...

They have no business intelligence inventory of their application assets, relying instead on manual, error-prone processes and incomplete knowledge. They must compensate with more extensive planning and extra testing and by manually 'searching' for code affected by business decisions.

Rational Asset Analyzer

- Quickly understand flow and relationships across the enterprise with little or no documentation
- Reduce time to market & risk of resource shortage by understanding the impact of change, upfront
- Choose from two user interfaces for ease of access and use
- Supports enhanced usage Scenarios
 - COBOL Business Rule identification and capture

Enterprises want to...

Increase productivity of their mainframe application development staff, as well as attract new employees to this work

But...

They have antiquated development tools which deliver low productivity and are unattractive and unfamiliar to younger staff

Complete set of System z Development and Test capabilities from an integrated development environment

Integration with Team Concert for Lifecycle and Source Management

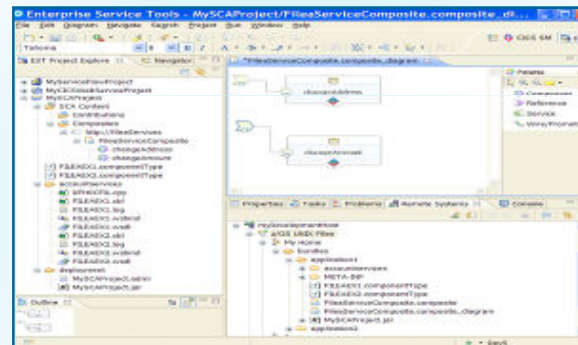

Access to typical System z sub-system functionality in z/OS, CICS, IMS, DB2, WAS

Integration with Asset Analyzer for Application Understanding and Impact Analysis

Rational Developer for System z

A modern IDE for productive development of cross-platform applications written in COBOL, PL/I, HLASM, Java, EGL or C/C++ in System z CICS, IMS, DB2, Batch applications

Integration with Debug Tool for Development and Test

Integration with Fault Analyzer for Dump Analysis

Integration with File Manager for file and test data handling

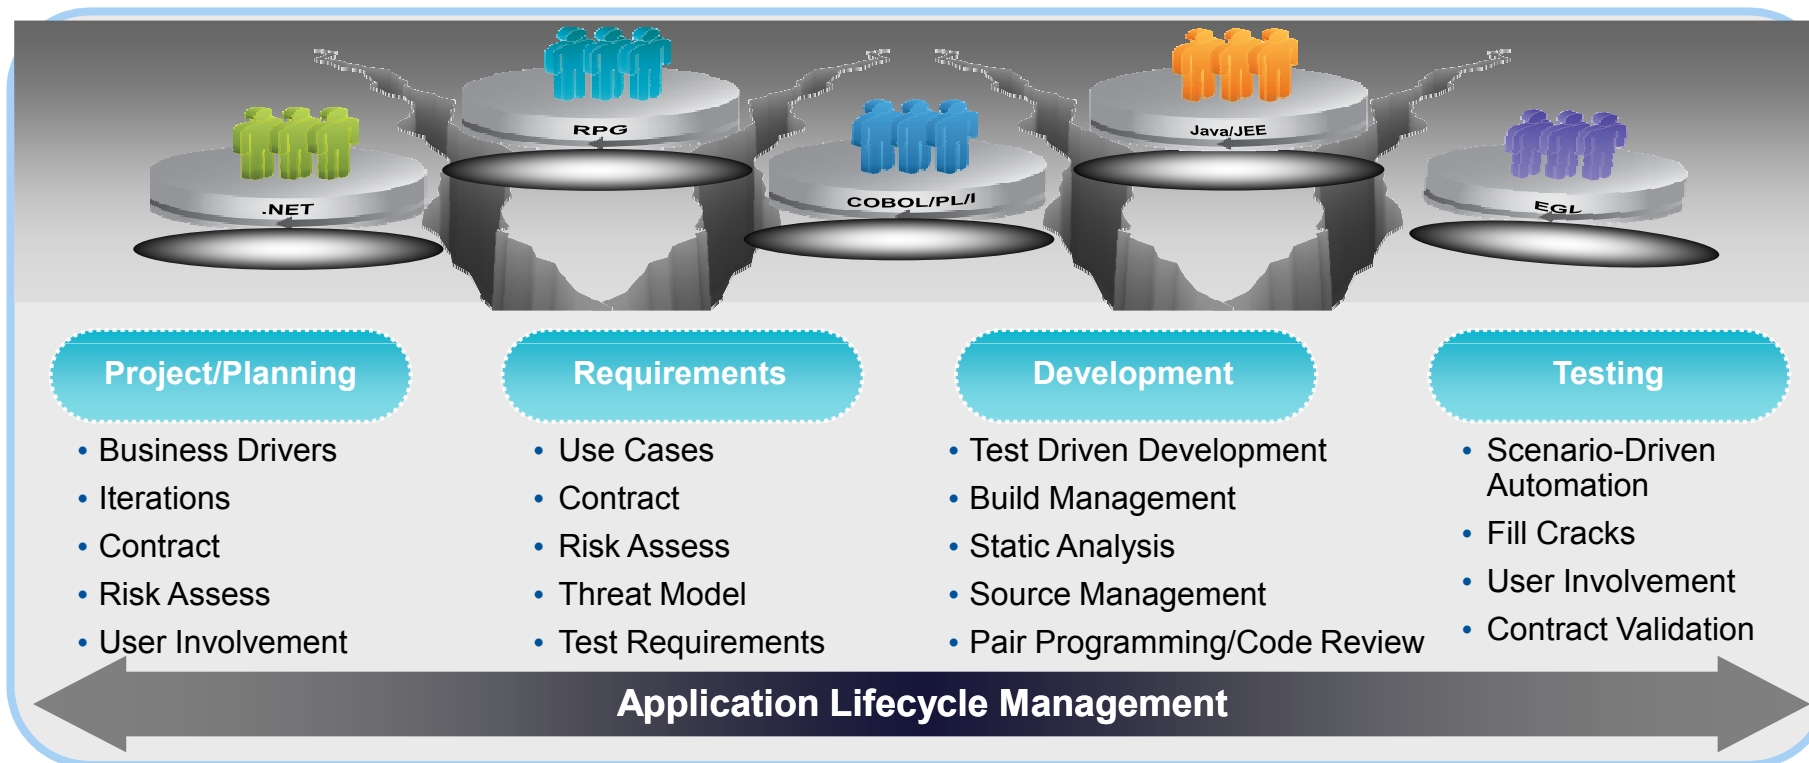

Integration with RD&T for flexible access to System z environment

Enterprises want to...

Deliver to market faster and cheaper by exploiting agile and test-driven development practices, effectively tracking end-to-end requirements, reducing team infrastructure costs and increasing cross-geo collaboration and governance

But...

They have “islands” of development, each with different tools and processes that do not support real-time collaboration, integration, comprehensive oversight, or lifecycle traceability, all of which results in reduced quality and slower time to market

A Unified Development Process

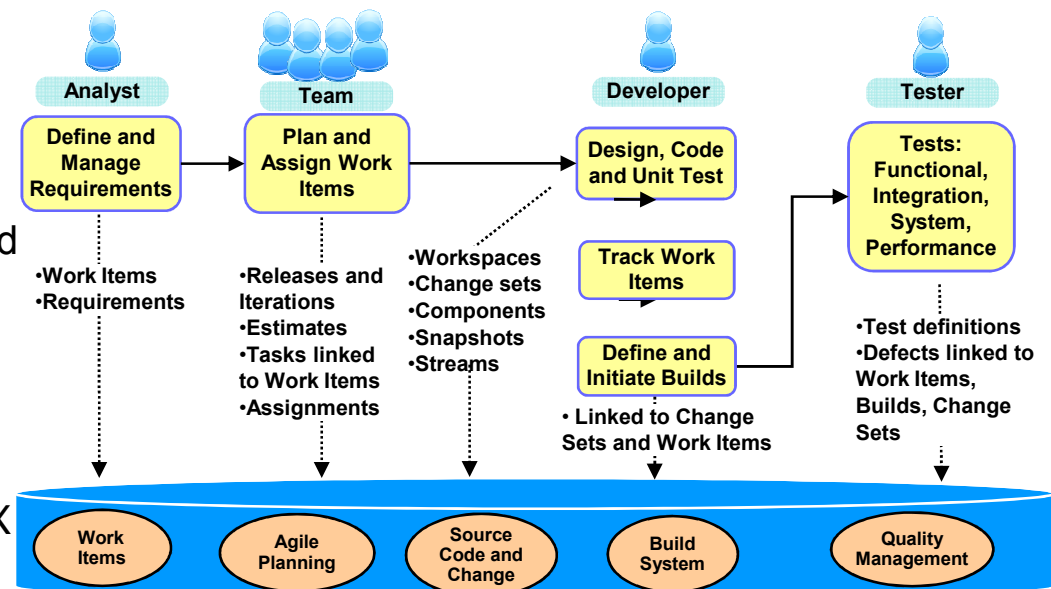

- Rational Team Concert team support includes

- Cross platform repository
- Planning & Work item management
- Team Processes
- Collaboration
- SCM support
 - Replace existing mainframe and distributed based SCMs
 - Single, enterprise-wide, cross platform SCM
- Build and deployment

- Same tool for z/OS, Linux on System z, AIX Linux

- A single User Interface to manage development for all environments

- Browser or Eclipse client
- Provide cross platform project status view

Common repository and data schemas for all environments

Enterprises want to...

Reduce application development MIPs usage and increase development autonomy

Application Development

Operations

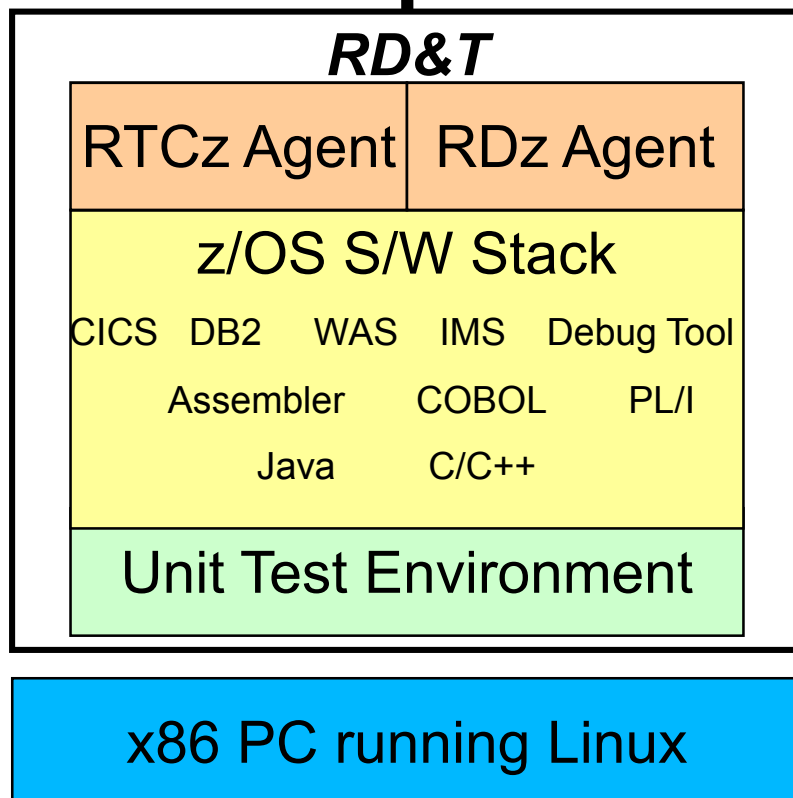

Cost

But...

Testing requires System z MIPs and negotiation for time with the production team

Rational Development and Test Environment for System z frees up Mainframe MIPS and improves testing processes

RD&T consists of:

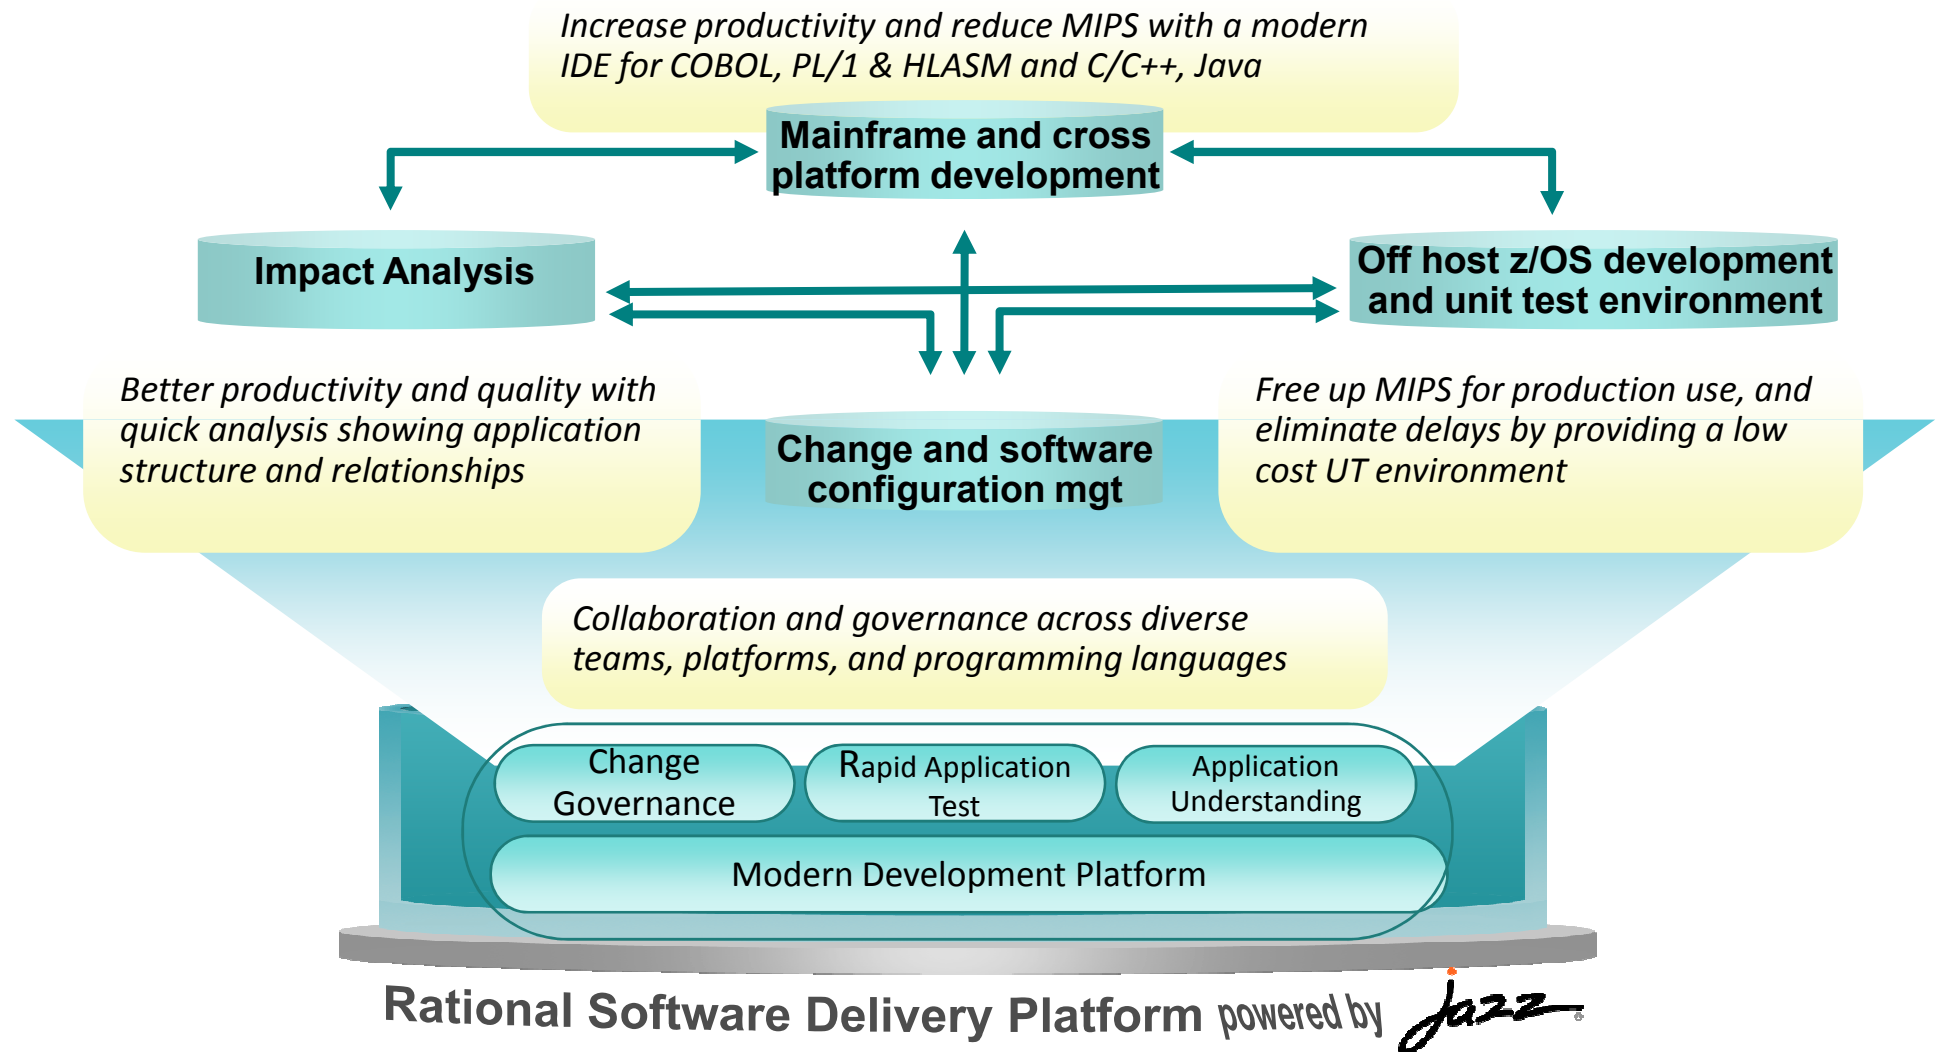

- **Unit Test Environment**
 - ▶ Unit Test Environment can provide a System z development platform on a PC
 - ▶ capable of running z/OS
 - ▶ provides great flexibility to run a customized environment
- **Software stack** provides a choice of IBM middleware test environments
 - ▶ actual middleware software (including z/OS)
 - ▶ actual enterprise compilers
 - ▶ no API simulation
- **RDz and RTCz agents**
 - ▶ packaged for simplification
 - ▶ still need RTC and RDz client license(s) to activate

Benefits

- ▶ Liberate developers to rapidly prototype new applications
- ▶ Improved application quality using actual IBM runtimes
- ▶ Free up mainframe development MIPS for production capacity
- ▶ Eliminate costly delays by reducing dependencies on operations staff

Note: This Program is licensed only for development and test of applications that run on IBM z/OS. The Program may not be used to run production workloads of any kind, nor more robust development workloads including without limitation production module builds, pre-production testing, stress testing, or performance testing.
