

CICS Transaction Server for z/OS

CICSplex SM Managing Workloads

Version 3 Release 1

CICS Transaction Server for z/OS

CICSplex SM Managing Workloads

Version 3 Release 1

Note!

Before using this information and the product it supports, be sure to read the general information under "Notices" on page 49.

This edition applies to Version 3 Release 1 of CICS Transaction Server for z/OS, program number 5655-M15, and to all subsequent versions, releases, and modifications until otherwise indicated in new editions. Make sure you are using the correct edition for the level of the product.

Preface

This reference summary lists all of the CICSplex[®] System Manager API commands, and the CICSplex SM REXX functions and commands in alphabetical order.

For more detailed information about any of these commands, see the *CICSplex System Manager Application Programming Reference*.

Alternatively, use CICSplex SM's online help.

CICS system connectivity

This release of CICSplex SM can be used to control CICS[®] systems that are directly connected to it.

For this release of CICSplex SM, the connectable CICS systems are:

- CICS Transaction Server for z/OS[®] 3.1
- CICS Transaction Server for z/OS 2.3
- CICS Transaction Server for z/OS 2.2
- CICS Transaction Server for OS/390[®] 1.3

You can use this release of CICSplex SM to control systems running supported releases of CICS that are connected to, and managed by, your previous release of CICSplex SM. However, if you have any directly-connectable release levels of CICS, as listed above, that are connected to a previous release of CICSplex SM, you are strongly recommended to migrate them to the current release of CICSplex SM, to take full advantage of the enhanced management services. See the *CICS Transaction Server for z/OS Migration from CICS TS Version 2.3* for information on how to do this.

Table 1 shows which supported CICS systems can be directly connected to which releases of CICSplex SM.

Table 1. Directly-connectable CICS systems by CICSplex SM release

CICS system	CICSplex SM component of CICS TS 3.1	CICSplex SM component of CICS TS 2.3	CICSplex SM component of CICS TS 2.2	CICSplex SM component of CICS TS 1.3
CICS TS 3.1	Yes	No	No	No
CICS TS 2.3	Yes	Yes	No	No
CICS TS 2.2	Yes	Yes	Yes	No
CICS TS 1.3	Yes	Yes	Yes	Yes
TXSeries 4.3.0.4	No	Yes	Yes	No
TXSeries 5.0	No	Yes	Yes	No

Syntax notation and conventions

The syntax descriptions of the CICSplex SM commands in this reference summary use the following notation:

- Commands and parameters that are literals are shown in uppercase characters, like this:

CICSRGN

If a parameter may be abbreviated, the minimum permitted abbreviation is shown in uppercase characters, and the remainder is shown in lowercase characters, like this:

SUSPended

- Variable parameters are shown in lowercase characters, like this:

program

You supply your own data for these parameters. For example, in the view command:

MPROGRAM *program sysname*

you supply the name of an installed program in place of *program*, and the name of a CICS system in place of *sysname*.

- Square brackets [] enclose optional parameters. Parameters not enclosed by square brackets are required.
- The OR symbol | separates alternatives.
- CICSplex SM command parameters must be entered in the order shown, and must be separated from the command and each other by one or more blank spaces.

Some of the CICSplex SM views are displayed only when you hyperlink to them from another view; you cannot display them by entering a CICSplex SM view command. The descriptions of such views in this reference summary include the following text:

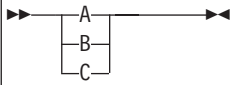

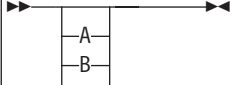

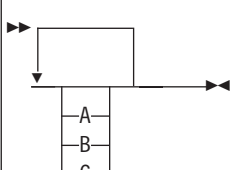

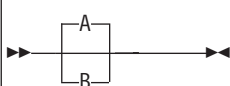

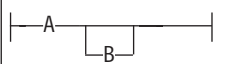

Hyperlink from (view name) only.

Syntax notation used for API comands in this book

In this book, the CICSplex SM API commands are presented in a standard way.

The EXEC CPSM that precedes the command name in the command-level interface is not shown, nor is the end-of-command delimiter. Likewise, the ADDRESS CPSM or var=EYUAPI() that is required for the REXX run-time interface is not shown.

You interpret the syntax diagrams shown in this book by following the arrows from left to right. The conventions are:

Symbol	Meaning
	A set of mutually exclusive alternatives, one of which you <i>must</i> code.
	A set of mutually exclusive alternatives, one of which you <i>may</i> code.
	A set of alternatives, any number of which you may code.
	Alternatives where A is the default.
 Name: 	See the separate syntax fragment whose name is shown.
Punctuation and uppercase characters	Code exactly as shown.
Lowercase italics	Code your own text, as appropriate (for example, <i>name</i>).

For example, with `CONNECT VERSION(data-value)` you must code `CONNECT VERSION` and `()` as they appear, but are free to code any four-character number that represents a valid release of CICSplex SM.

Summary of changes

This book is based on the CICSplex SM for CICS Transaction Server for z/OS, Version 2 Release 2 edition.

Changes for CICS Transaction Server for z/OS, Version 2 Release 3

New operations views are added for CICS Transaction Server for z/OS, Version 2 Release 3:

- BRFACIL
- BRFACILD
- BRFACILS

Changes for CICS Transaction Server for z/OS, Version 2 Release 2

New operations views are added for CICS Transaction Server for z/OS, Version 2 Release 2:

- EJCOSE4
- JVMPOOL
- JVMPOOLD
- JVMPOOLS
- TCPIPGBL
- TCPIPGBD
- TCPIPGBS

There has been a change in CICSplex SM field naming conventions in this release. Data set name fields such as DSNAME, file name fields such as LOCFILE and REMFILE and transient data queue name fields such as EXTRATDQ and INTRATDQ are now case-sensitive. When entering data set and file names into the CICSplex SM interfaces (EUI, API and WUI), ensure that you enter the data in the correct case. In previous releases of CICSplex SM, the data set names and file names are automatically converted to upper case.

Changes for CICS Transaction Server for z/OS version 2 Release 1

New operations view commands are added to support enterprise beans in CICS Transaction Server for z/OS Version 2 Release 1.

Two new chapters are added to include the CICSplex SM API commands and the CICSplex SM REXX functions and commands

Chapter 1. The CICSplex SM API commands

This chapter contains the syntax of the CICSplex SM API commands. It is intended for reference only. For full details see the *CICSplex System Manager Application Programming Reference*.

ADDRESS

Provide access to CICSplex SM storage areas.

CANCEL

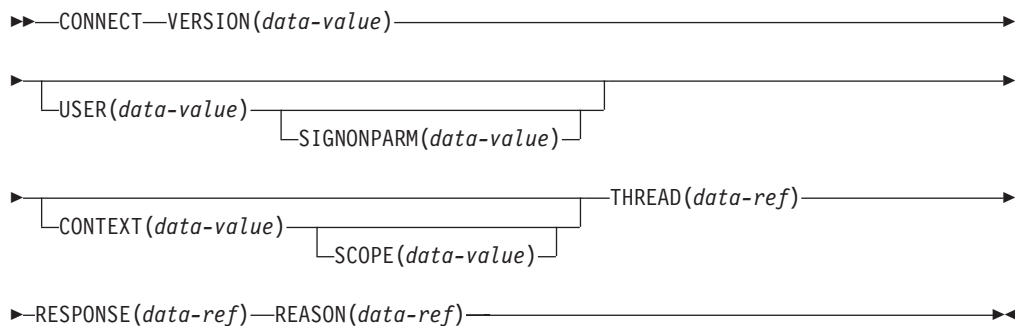

Cancel the notification request produced by a previous LISTEN command.

▶▶—CANCEL—NOTIFICATION(*cpsm-token*)—THREAD(*cpsm-token*)—RESPONSE(*data-ref*)————▶

▶—REASON(*data-ref*)————▶◀

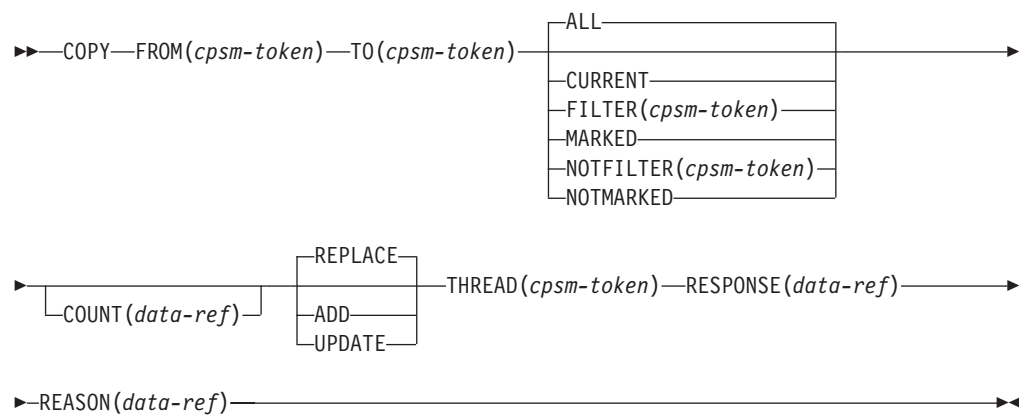

CONNECT

Establishes a connection with CICSplex SM, defines an API processing thread, and provides default settings to be used by the thread.

COPY

Copy resource table records.

CREATE

CREATE

Create a new CICSplex SM or CICS definition.

►►—CREATE—OBJECT(*data-value*)—FROM(*data-area*)—LENGTH(*data-value*)—►

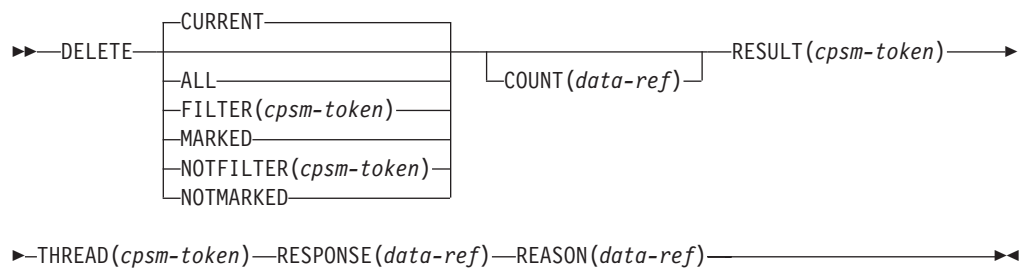

►└─┬──────────────────┬──────────────────┬──────────────────►

└─┬──PARM(*data-area*)—PARMLen(*data-value*)└─┬──CONTEXT(*data-value*)└─┬──►

►—THREAD(*cpsm-token*)—RESPONSE(*data-ref*)—REASON(*data-ref*)—►◄

DELETE

Delete resource table records.

DISCARD

DISCARD

Discard a result set, filter, or view.

DISCONNECT

Disconnects an API processing thread from CICSplex SM

►►—DISCONNECT—THREAD(*cpsm-token*)—RESPONSE(*data-ref*)—REASON(*data-ref*)————►◄

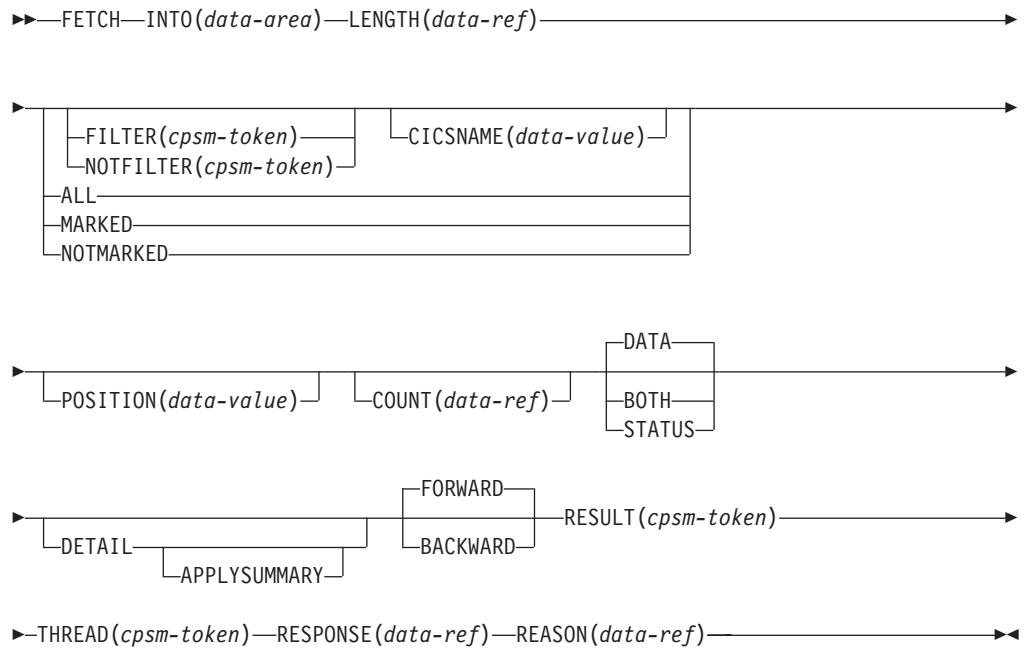

FEEDBACK

Retrieve diagnostic data.

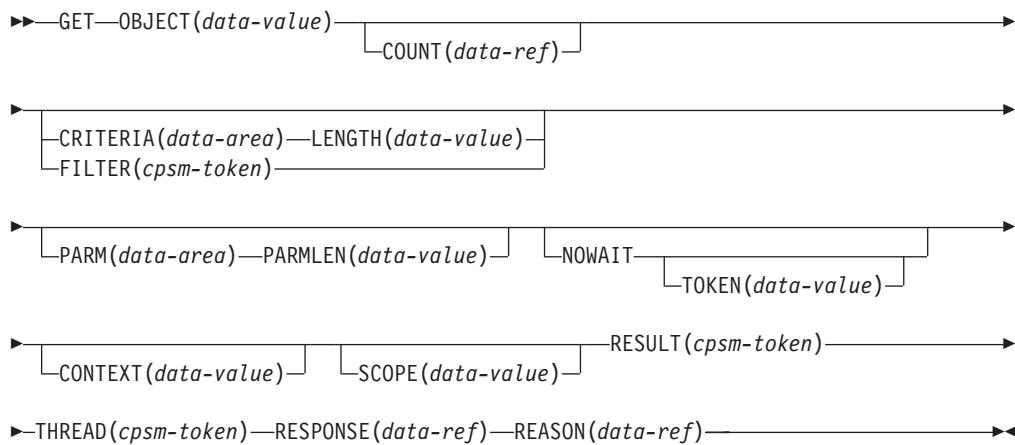

FETCH

Retrieve data and status information for resource table records.

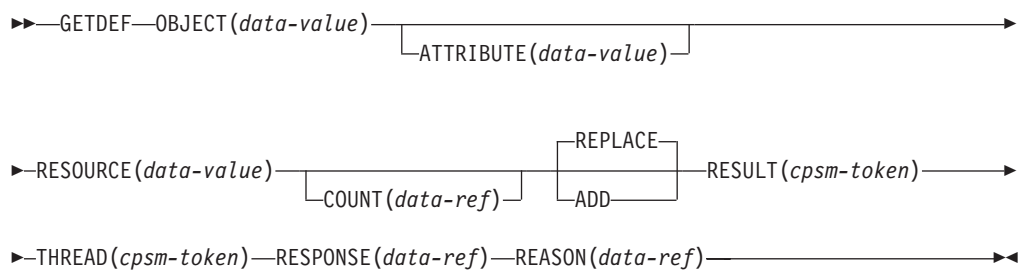

GET

Return a result set containing selected resource table records.

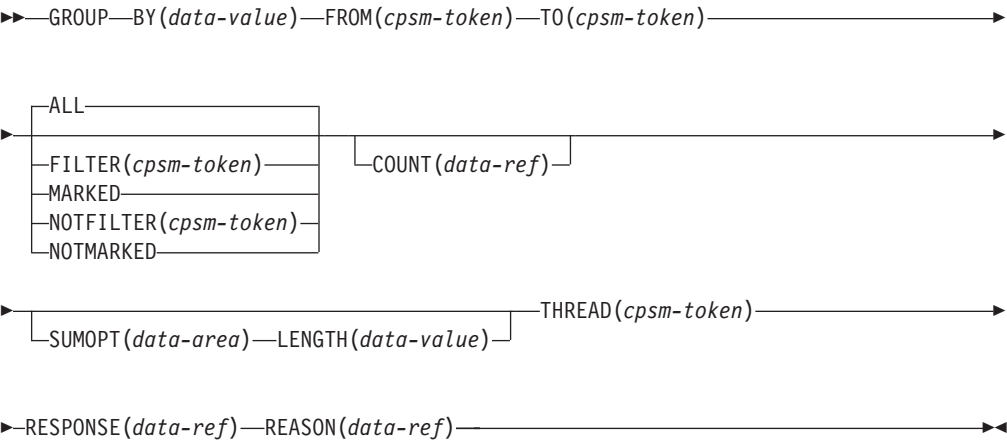

GETDEF

Return a result set containing selected descriptive records for a resource table.

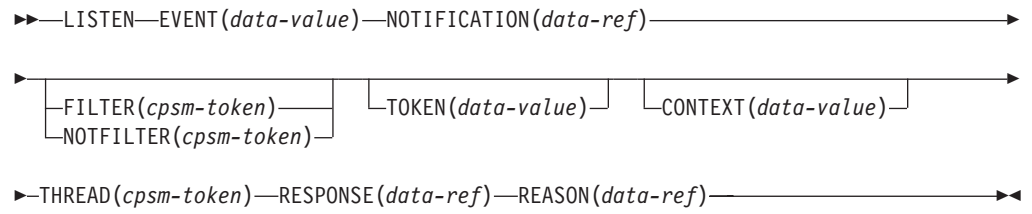

GROUP

Return a summarized result set.

LISTEN

Request a notification be sent to the processing thread.

\blacktriangleright —LOCATE—| *pointer_group* |—RESULT(*cpsm-token*)—THREAD(*cpsm-token*)— \blacktriangleright
 \blacktriangleright —RESPONSE(*data-ref*)—REASON(*data-ref*)— \blacktriangleright

The diagram shows two digital signals over time. The top signal, labeled `POSITION_group`, is a square wave that transitions from low to high and back to low. The bottom signal, labeled `FILTER_group`, is a square wave that transitions from low to high and back to low, with a longer period than the top signal.

A diagram showing a vertical stack of five rectangular boxes. The top box is labeled 'TOP'. The second box is labeled 'BOTTOM'. The third box is labeled 'POSITION(*data-value*)'. The fourth box is labeled 'FORWARD(*data-value*)'. The bottom box is labeled 'BACKWARD(*data-value*)'. A horizontal line extends from the right side of the stack.

Diagram illustrating the structure of the `cpsm-token`:

- `FILTER(cpsm-token)`
- `MARKED`
- `NOTFILTER(cpsm-token)`
- `NOTMARKED`
- `FIRST`
- `LAST`
- `NEXT`
- `PREV`

MARK

Mark selected resource table records in a result set.

records_group

ORDER

ORDER

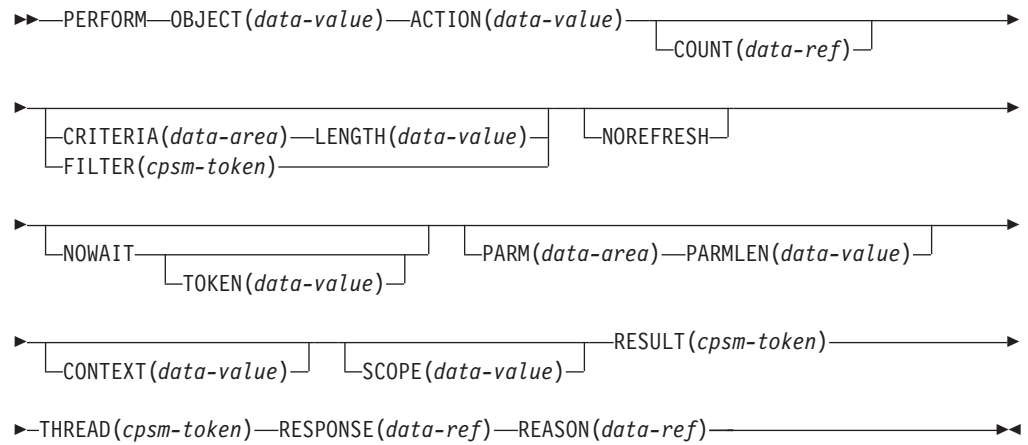

Sort the resource table records in a result set.

►►—ORDER—BY(*data-area*)—LENGTH(*data-value*)—RESULT(*cpsm-token*)—————►

►—THREAD(*cpsm-token*)—RESPONSE(*data-ref*)—REASON(*data-ref*)—————►◄

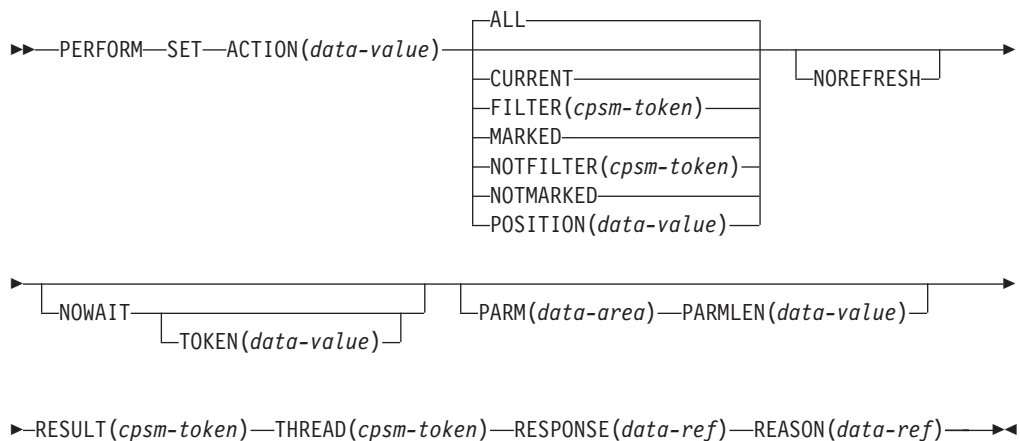

PERFORM OBJECT

Perform an action on one or more resources.

PERFORM SET

Performs an action on one or more resources.

QUALIFY

Define the CICSplex SM context and scope.

QUERY

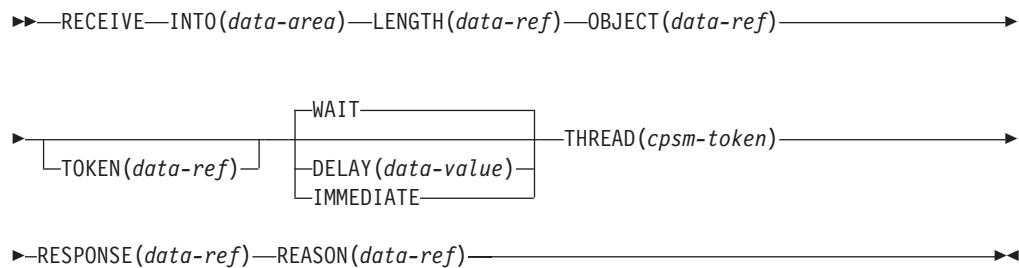

QUERY

Retrieve information about a result set and the resource table records it contains.

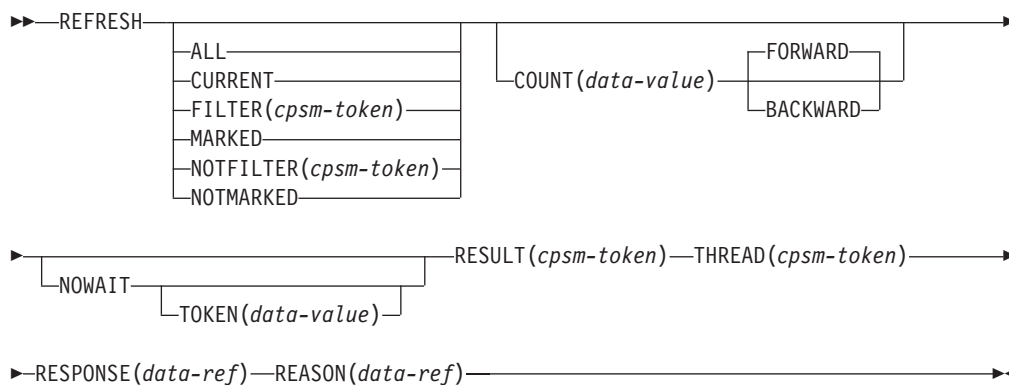

RECEIVE

Receive the output from completed asynchronous requests.

REFRESH

Refreshes the data for resource table records.

REMOVE

Remove a CICSplex SM or CICS definition from the data repository.

►►—REMOVE—OBJECT(*data-value*)—FROM(*data-area*)—LENGTH(*data-value*)————►

►┌—————┐┌—————┐————►
│PARM(*data-area*)—PARMLen(*data-value*)││CONTEXT(*data-value*)│

►—THREAD(*cpsm-token*)—RESPONSE(*data-ref*)—REASON(*data-ref*)————►◄

SET

```

sequenceDiagram
    participant Client
    participant Server
    Client->>Server: SET-MODIFY(data-area)-LENGTH(data-value)
    Server-->>Client: ALL  
CURRENT  
FILTER(cpsm-token)  
MARKED  
NOTFILTER(cpsm-token)  
NOTMARKED  
POSITION(data-value)
    Client->>Server: COUNT(data-value)
    Server-->>Client: FORWARD  
BACKWARD  
NOREFRESH
    Client->>Server: NOWAIT
    Server-->>Client: RESULT(cpsm-token)-THREAD(cpsm-token)
    Client->>Server: RESPONSE(data-ref)-REASON(data-ref)
  
```

SPECIFY FILTER

Defines an attribute or value filter and assign an identifying token to it.

►►—SPECIFY—FILTER(*data-ref*)—CRITERIA(*data-area*)—LENGTH(*data-value*)—————►

►—OBJECT(*data-value*)—THREAD(*cpsm-token*)—RESPONSE(*data-ref*)—REASON(*data-ref*)————►◄

SPECIFY VIEW

Build a customized view of a given resource table.

►►—SPECIFY—VIEW(*data-value*)—FIELDS(*data-area*)—LENGTH(*data-value*)————►

►—OBJECT(*data-value*)—THREAD(*cpsm-token*)—RESPONSE(*data-ref*)—REASON(*data-ref*)————►◄

TERMINATE

Terminate all API processing on all active threads.

►►—TERMINATE—RESPONSE(*data-ref*)—REASON(*data-ref*)—◄◄

TRANSLATE

Translate resource table attribute values.

UNMARK

Remove the marks placed on resource table records.

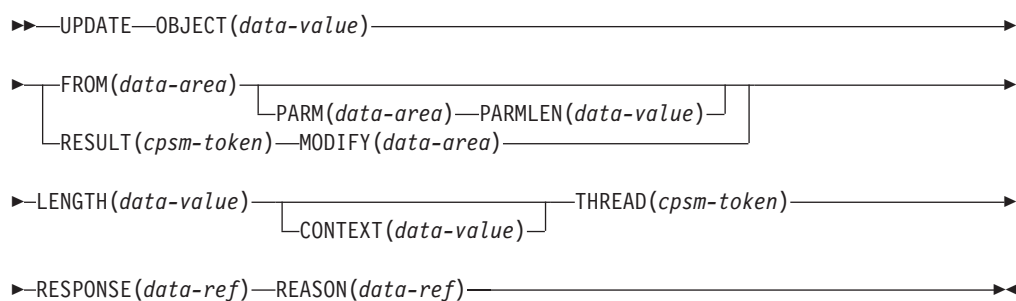

records_group

UPDATE

Update an existing CICSplex SM or CICS definition.

Chapter 2. REXX functions and commands

This chapter contains the REXX functions and commands supplied with CICSplex SM. These functions and commands can be used only with the REXX run-time interface.

REXX functions

EYUAPI()

EYUAPI()

Passes an API command to CICSplex SM.

```
var = EYUAPI(command string)
```

OR

```
var = EYUAPI('command string')
```

EYUINIT()

Initialize the CICSplex SM API environment and allocate the necessary resources.

```
var = EYUINIT()
```

EYUREAS()

EYUREAS()

Translate the numeric value returned by the REASON option of an API command.

```
var = EYUREAS(reason)
```

EYURESP()

Translate the numeric value returned by the RESPONSE option of an API command.

```
var = EYURESP(response)
```

EYUTERM()

EYUTERM()

Terminate the CICSplex SM API environment and release any allocated resources.

```
var = EYUTERM()
```

REXX commands

TBUILD

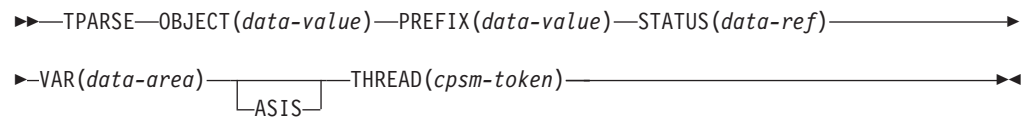

Build a resource table record from a set of variables.

```
▶▶—TBUILD—OBJECT(data-value)—PREFIX(data-value)—STATUS(data-ref)————▶  
▶—VAR(data-area)—└──┬───┘—THREAD(cpsm-token)————▶◀  
                   ASIS
```

TPARSE

TPARSE

Parse a resource table record from a variable into a set of variables.

Bibliography

The CICS Transaction Server for z/OS library

The published information for CICS Transaction Server for z/OS is delivered in the following forms:

The CICS Transaction Server for z/OS Information Center

The CICS Transaction Server for z/OS Information Center is the primary source of user information for CICS Transaction Server. The Information Center contains:

- Information for CICS Transaction Server in HTML format.
- Licensed and unlicensed CICS Transaction Server books provided as Adobe Portable Document Format (PDF) files. You can use these files to print hardcopy of the books. For more information, see “PDF-only books.”
- Information for related products in HTML format and PDF files.

One copy of the CICS Information Center, on a CD-ROM, is provided automatically with the product. Further copies can be ordered, at no additional charge, by specifying the Information Center feature number, 7014.

Licensed documentation is available only to licensees of the product. A version of the Information Center that contains only unlicensed information is available through the publications ordering system, order number SK3T-6945.

Entitlement hardcopy books

The following essential publications, in hardcopy form, are provided automatically with the product. For more information, see “The entitlement set.”

The entitlement set

The entitlement set comprises the following hardcopy books, which are provided automatically when you order CICS Transaction Server for z/OS, Version 3 Release 1:

Memo to Licensees, GI10-2559
CICS Transaction Server for z/OS Program Directory, GI10-2586
CICS Transaction Server for z/OS Release Guide, GC34-6421
CICS Transaction Server for z/OS Installation Guide, GC34-6426
CICS Transaction Server for z/OS Licensed Program Specification, GC34-6608

You can order further copies of the following books in the entitlement set, using the order number quoted above:

CICS Transaction Server for z/OS Release Guide
CICS Transaction Server for z/OS Installation Guide
CICS Transaction Server for z/OS Licensed Program Specification

PDF-only books

The following books are available in the CICS Information Center as Adobe Portable Document Format (PDF) files:

CICS books for CICS Transaction Server for z/OS

<i>CICS/ESA 3.3 XRF Guide</i>	SC33-0661

Determining if a publication is current

IBM® regularly updates its publications with new and changed information. When first published, both hardcopy and BookManager® softcopy versions of a publication are usually in step. However, due to the time required to print and distribute hardcopy books, the BookManager version is more likely to have had last-minute changes made to it before publication.

Subsequent updates will probably be available in softcopy before they are available in hardcopy. This means that at any time from the availability of a release, softcopy versions should be regarded as the most up-to-date.

For CICS Transaction Server books, these softcopy updates appear regularly on the *Transaction Processing and Data Collection Kit* CD-ROM, SK2T-0730-xx. Each reissue of the collection kit is indicated by an updated order number suffix (the -xx part). For example, collection kit SK2T-0730-06 is more up-to-date than SK2T-0730-05. The collection kit is also clearly dated on the cover.

Updates to the softcopy are clearly marked by revision codes (usually a # character) to the left of the changes.

Accessibility

Accessibility features help a user who has a physical disability, such as restricted mobility or limited vision, to use software products successfully.

You can perform most tasks required to set up, run, and maintain your CICSplex SM system in one of these ways:

- using a 3270 emulator connected to CICSplex SM
- using a 3270 emulator logged on to CICS
- using a 3270 emulator logged on to TSO
- using a 3270 emulator as an MVS™ system console
- using the CICSplex SM web user interface.

IBM Personal Communications (Version 5.0.1 for Windows 95, Windows 98, Windows NT and Windows 2000; version 4.3 for OS/2) provides 3270 emulation with accessibility features for people with disabilities. You can use this product to provide the accessibility features you need in your CICSplex SM system.

Programming interface information

This book is intended to help you write application programs using the CICSplex SM application programming interface (API). This book documents General-use Programming Interface and Associated Guidance Information provided by CICSplex SM.

General-use programming interfaces allow the customer to write programs that obtain the services of CICSplex SM.

Trademarks

Sending your comments to IBM

If you especially like or dislike anything about this book, please use one of the methods listed below to send your comments to IBM.

Feel free to comment on what you regard as specific errors or omissions, and on the accuracy, organization, subject matter, or completeness of this book.

Please limit your comments to the information in this book and the way in which the information is presented.

To ask questions, make comments about the functions of IBM products or systems, or to request additional publications, contact your IBM representative or your IBM authorized remarketer.

When you send comments to IBM, you grant IBM a nonexclusive right to use or distribute your comments in any way it believes appropriate, without incurring any obligation to you.

You can send your comments to IBM in any of the following ways:

- By mail, to this address:

IBM United Kingdom Limited
User Technologies Department (MP095)
Hursley Park
Winchester
Hampshire
SO21 2JN
United Kingdom

- By fax:
 - From outside the U.K., after your international access code use 44–1962–816151
 - From within the U.K., use 01962–816151
- Electronically, use the appropriate network ID:
 - IBMLink: HURSLEY(IDRCF)
 - Internet: idrcf@hursley.ibm.com

Whichever you use, ensure that you include:

- The publication title and order number
- The topic to which your comment applies
- Your name and address/telephone number/fax number/network ID.
