### Characteristics of September Spam Test Set

- Totaled 9,675,334 e-mail;
- Contained unique e-mail message bodies;
- Was destined for a domain for which the device expects to receive e-mail;
- Had RFC-compliant FROM and TO addresses.

### Live Anti-Spam Testing

ICSA Labs is beta testing the live version of anti-spam testing. During this beta testing and for at least the next couple months we will test both ways. That is we will test with spam that is no more than about 6 hours old as we do now and we will test with live spam. Whether or not we will continue to test both with live and slightly older spam will be decided in the next couple months.

### "No Results" Between Sep 5-7

There is no data for Saturday 9/5, Sunday 9/6, and Monday 9/7. Some unexpected occurrences correctly triggered the anti-spam test bed's error-checking subroutines on Friday 9/4. Since the issue did not get fully resolved on that date, daily test runs scheduled to occur over the weekend did not start. Since Monday was a holiday, its scheduled test runs were also affected by the behavior.

### New ICSA Labs Website & Logo!

ICSA Labs updated its Website and logos on 9/21. Your customers and prospects can find products tested and certified by ICSA Labs on a page dedicated to you. They can also find information related to certification by technology area (e.g., anti-spam, network IPS, anti-virus, etc.) as well. In terms of anti-spam, all MASS reports dating back to January are published as are graphs of all vendor effectiveness scores. And next month the site will include graphs for false positives for all certified products as well.
