

Database Developer skills roadmap for IBM DB2 Universal Database for Linux, Unix, and Windows

Role

The database developer is responsible for implementing the database design as defined by the Data Architect, including tables, indexes, views, constraints, triggers, stored procedures, and other database-specific constructs needed to store, retrieve, and delete persistent objects.

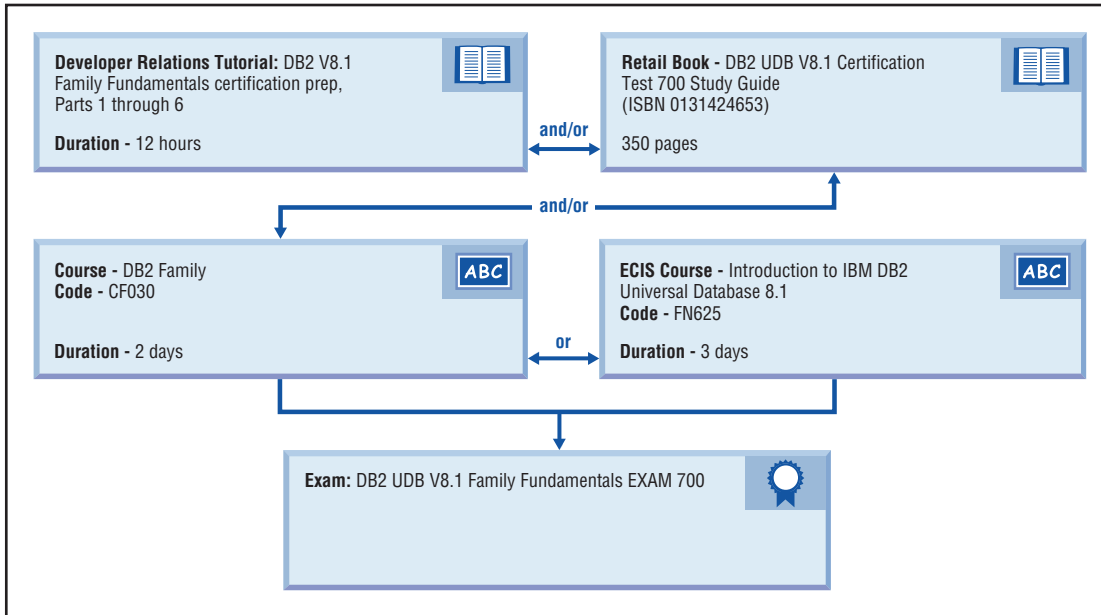

Assumption

Knowledge of the system or application under development

Objectives

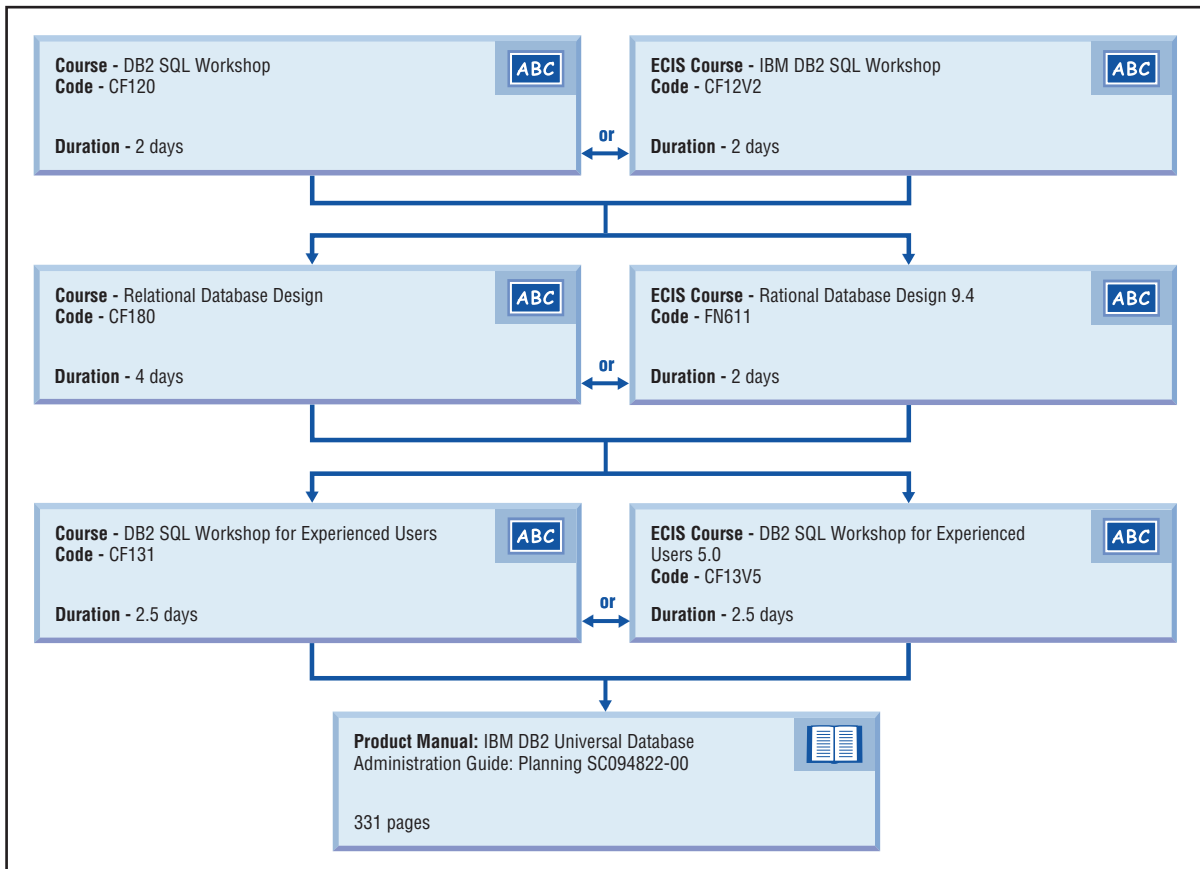

1. Data modeling, database design
2. Object-Oriented Analysis and design techniques
3. System architecture, including database and system performance tuning, as well as hardware and network workload balancing
4. Database administration

1 Understand industry information models
