**Technical level:** Basic - intermediate

---

Today's big data initiatives and technologies capture and share information from a myriad of sources, more than ever before, and they are augmented with business analytics and decisions engines to exploit this data for better business decision-making. Simultaneously, organizations need to lower risks and control costs. With more organizations moving their analytics closer to where transactional data is stored, many rely on the IBM® System z® platform for its scalability and its unmatched security. Nonetheless, it remains a target for hackers, criminals and unauthorized insiders to gain access to highly sensitive personal, financial and business data.

## Webcast

Join us for this complimentary webcast and learn how the latest version of IBM InfoSphere® Guardium® 9.0 helps proactively protect more of your data than ever to help further reduce business risks and the cost of compliance. You gain peace of mind through:

- Preventative and proactive data security controls
- Real-time data threat detection and monitoring alerts
- Support for transactional and big data information
- Extensive integration capabilities
- Automated workflows, predefined compliance reports and policies
