

# SESSION ABSTRACT

## **E05 Introduction to IMS e-business Enabling Tools**

*Tom Ramey*

This topic provides an overview of the IMS e-business enablement tools and solutions, and the environments for using these solutions. These tools extend IMS applications and data out across the internet/intranet and into the rapidly emerging world of Java. This presentation explores the architecture used to “web-enable” IMS and introduces you to the IMS web-enabling tools and their IMS interfaces. It covers IMS’ role in the e-business framework and focuses on the currently available IMS connectors. It also discusses the direction these connectors will be taking in the future as they help customers implement their IMS solutions across the web and into the new worlds of Java and XML programming.
