

## **E07 What's Happening with Linux on the Mainframe?**

*Joe Kreitz*

Few announcements in recent memory were afforded the media attention that was devoted to Linux running on S/390 when it was introduced as an advanced technical project in December 1999. Since that time, there has been a continual stream of subsequent enhancements and offerings. IMS Connect can be used by an application running on Linux to access local applications and data residing in IMS. This session summarizes current offerings and discusses the role of Linux in enterprise computing. Linux is a trademark of Linus Torvalds.
