SIA/CedBorsa - IMS Shared Message Queue Implementation

LUIGI CETORELLI

Anaheim, CA

October 23 – 26, 2000

Società Interbancaria per l'Automazione - Cedborsa S.p.a.

- Customer location

SIA S.p.a. EDP center located in
Milano

Agenda

- Customer scenario
- Customer needs
- Project plan
- Naming convention and Structures sizing
- IMS/ESA SMQ test
- IMS/ESA SMQ behaviour
- IMS/ESA problems
- IMS/ESA SMQ results
- Summary
- SIA IMS future directions

SIA - Italy's largest IT company focused on financial services

1998 revenue:

- ▼ 160.000.000 Euro

R&D & investment p.a:

- ▼ 50.000.000 Euro

1998 Net Income pre tax:

- ▼ 24.000.000 Euro

Total staff:

- ▼ 500 professionals

Offices:

- ▼ Milan, Rome and London

Company Mission

The company's mission is to study, design, develop, implement and supply IT systems and services to institutional bodies, market corporations, banks and financial market operators, and to the companies and investors which interact with the financial system, both in Italy and abroad.

Business area

- Management of electronic financial markets (wholesale and retail)
- Payment, clearing and settlement systems
- National Interbank Network
- Data transport and security services
- Internet services

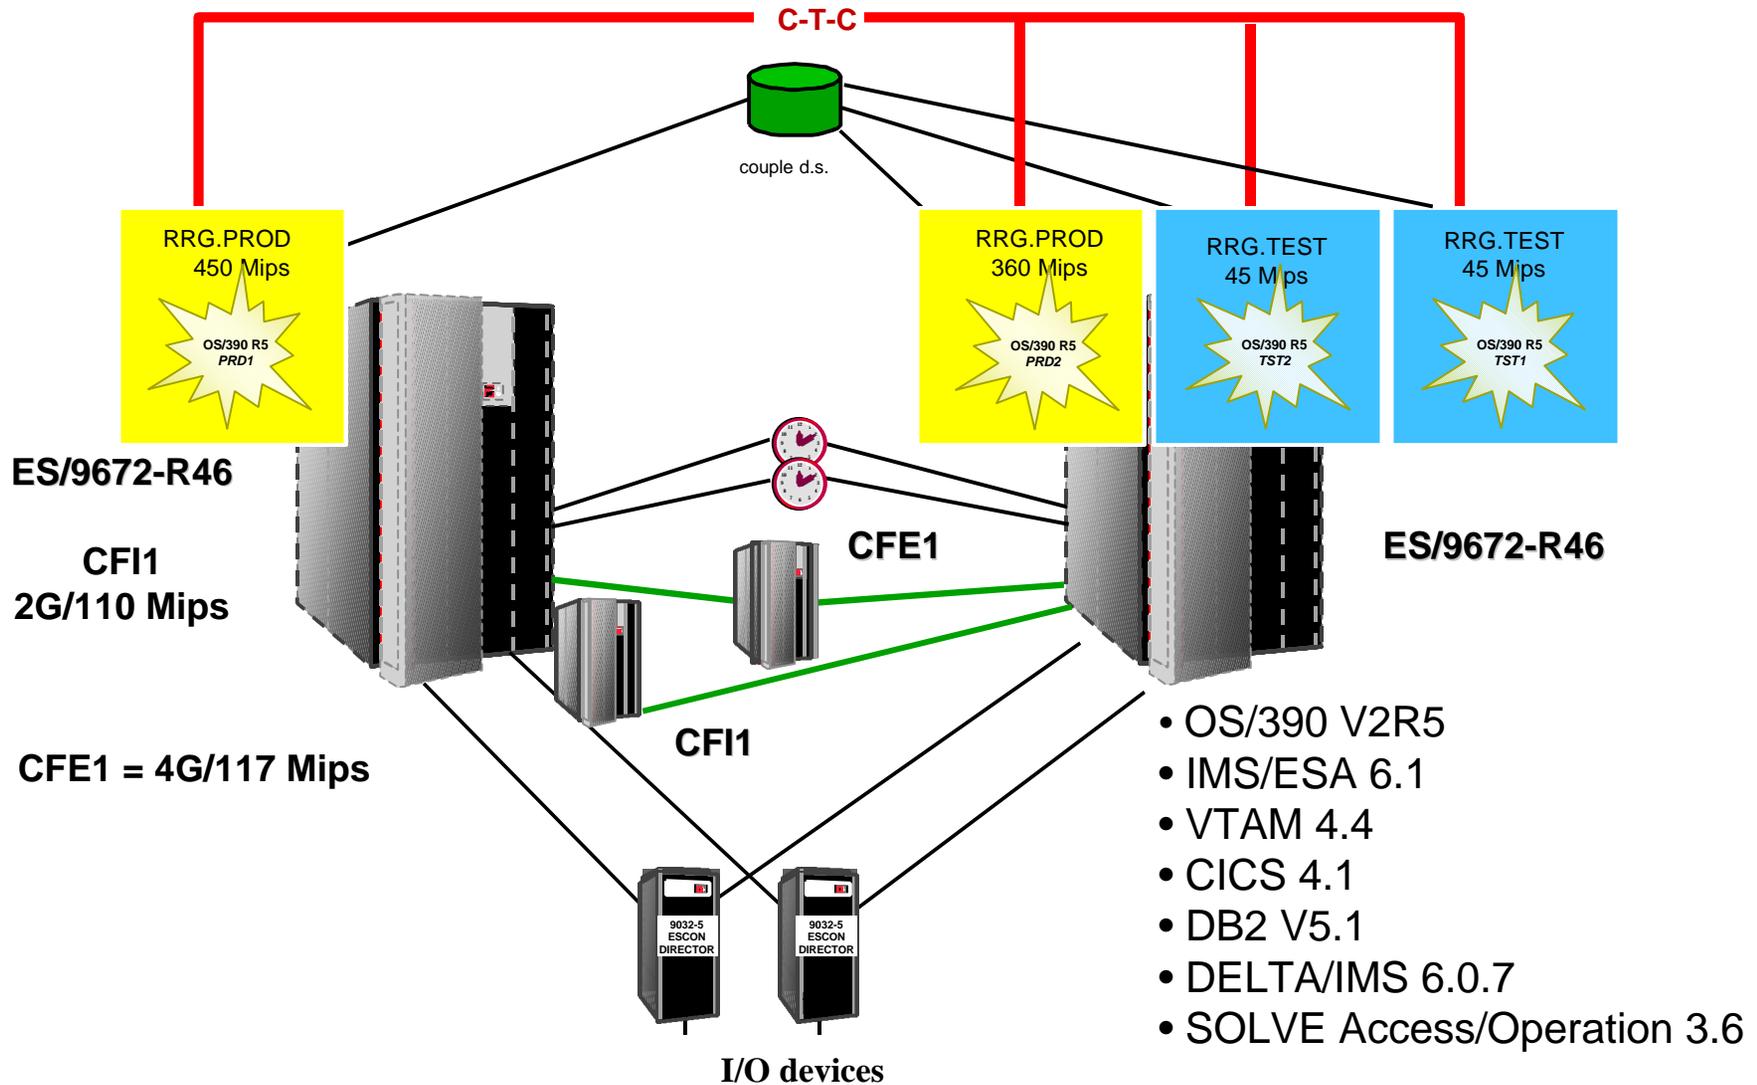

Top scores

- Stock exchange operations handled by SIA
 - ▼ About 700,000 full operations processed per day (close to 2,000,000 on peak days)
 - ▼ More than 180,000,000 basic back office operations in 1999

HW/SW environment

Customer needs

- Why IMS Shared Message Queue ?
 - ▼ Parallel Sysplex exploitation
 - ▼ Workload balancing
 - ▼ Continuous availability
 - ▼ Readiness to " dynamic " workload
 - ▼ Part of a larger GeoPlex project

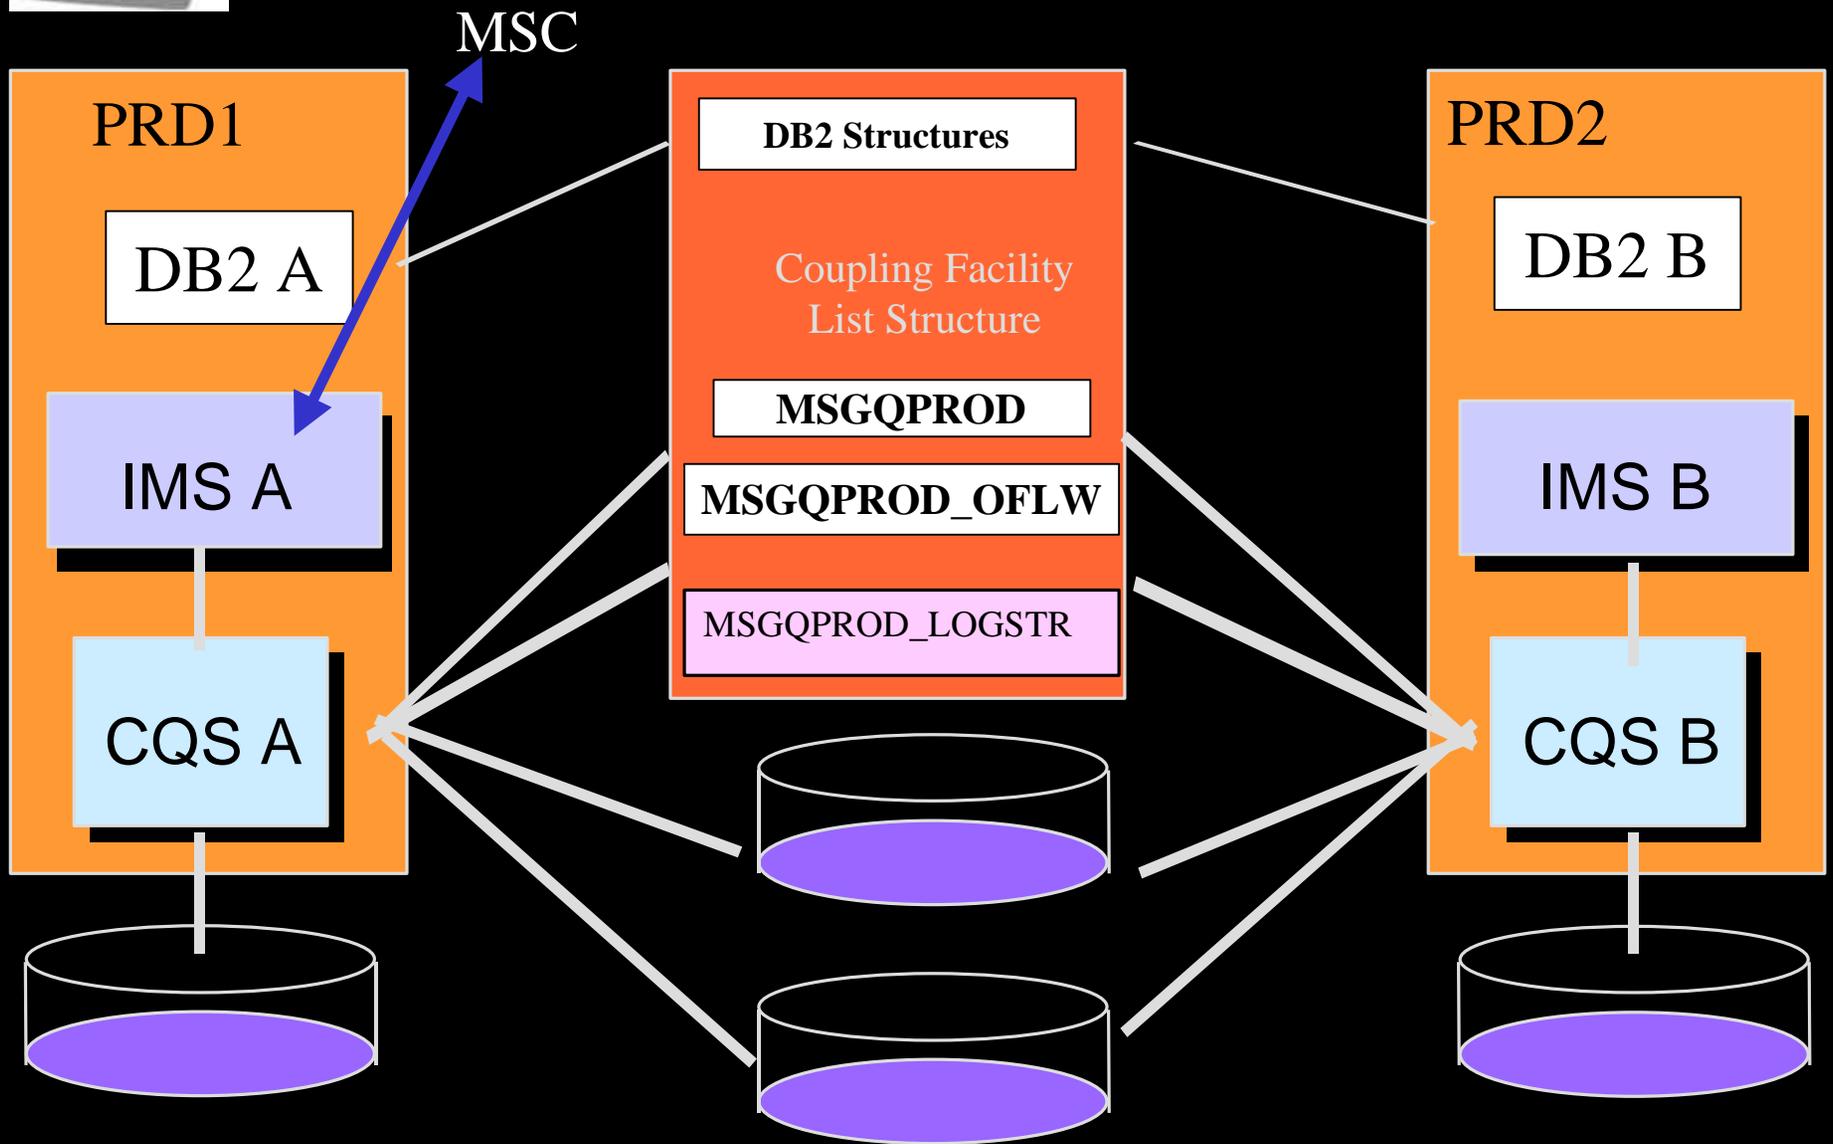

Project plan

- 09/98 HW set up, IMS/ESA V6, DB2 V5 in production
- 11/98 OS/390 V2.5 and DB2 V5 Data Sharing in production
- 01/99 Partner IMS/ESA cloned
- 02/99 IMS/ESA SMQ in test
- 05/99 IMS/ESA SMQ in Application Development System
- 11/99 IMS/ESA SMQ in production

IMS/ESA SMQ

Environment Definition

- CQS and IMS definition parameters
 - ▼ DFSPBxxx member for each IMS
 - Sharedq=pra/prb (IMS SQ local memb suffix)
 - Lgmsg , Shmsg and Qbuf size
 - ▼ DFSSQpra/prb - IMS SQ members
 - CQS subsys and procedure name
 - Primary msgq str name
 - SQ group name
 - ▼ CQS procedure definition
 - BPE config member name (BPE trace def)
 - CQS local IP (init.parm.) member suffix

Environment Definition

- ▼ CQSIPpra/prb - CQS local init. members
 - subsys and CQS group name
 - local and global STR def members suffix
- ▼ CQSSLpra/prb - local STR def. for each CQS
 - primary str and chkpt ds name
 - chkpt frequency = 50000
- ▼ CQSSGprd - global STR definition
 - str's name (primary and overfl.)
 - ovflwmax = 80
 - objavgsz = 2000
 - SRDS name and Logstrname

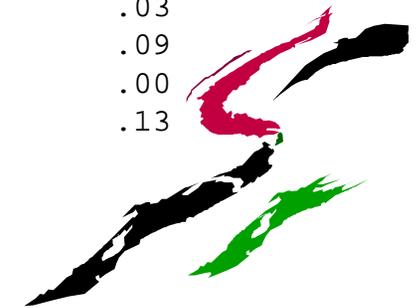

Structures sizing

MESSAGE QUEUE POOL STATISTICS

	COUNT	/TRANSACTION	INTERVAL : /SECOND

IMS/ESA SMOQ test

- IMS and CQS normal and abnormal termination
- IMS and CQS warm and cold start
- CQS structures full condition
- CQS structures full, alter, rebuild and recovery
- IMS SQ and MSC interaction
- IMS fallback scenario
- IMS SMOQ Disaster Recovery test
- IMS SQ Message Requeuer test
- OEM product test
- IMS SQ implementation impact on current appls
- Application stress test partially performed

IMS SMQ considerations

- U0758 still received if DRRN exhausted
 - ▼ DRRN exhausted for uncommitted msgs
- Review Short and Long LRECL to accommodate as many msgs in the Qbuf as possible: IMS QBUF needs to be adjusted
 - ▼ If $\text{msg} < \text{shmsgsz}$ shmsg Qbuf used
 - ▼ If $\text{shmsgsz} < \text{msg} < \text{lgmsgsz}$ lgmsg Qbuf used
 - ▼ If $\text{msg} > \text{lgmsgsz}$ lgmsg Qbuf used, msg moved also to the SQ before commit and backed up if needed

IMS SMQ considerations Cont..

- LGMSGSZ and SHMSGSZ influence LE/DE utilization
 - ▼ If $msg < shmsgsz$ then one LE and needed DE (as many $DE=512$ as required to save the msg)
 - ▼ If $shmsgsz < msg < lgmsgsz$ then one LE and needed DE (as many $DE=512$ as required to save the msg)
 - ▼ If $msg > lgmsgsz$ then one LE required for each $lgmsgsz$ and DE as needed (if $msg=5120$ and $lgmsgsz=1024$ then 5 LE and 10 DE ($10 \times 512 = 5120$))

IMS SMQ considerations Cont..

99315/113200

IMS SMQ considerations

- IMS SMQ Queue management performance overhead
 - ▼ mass msg isrt BMP NON-SQ and SQ comparison
 - ▶ no difference on elapsed time
- SRDS chkpt
 - ▼ 2 consecutive srds chkpt's taken at 08.00 and 13.00 to accomplish LogStr offload cleanup
- LogStream
 - ▼ Stg_Duplex(YES) Duplexmode(UNCOND)
Highoffload(50)

IMS/ESA SMO behaviour

- Different msg queue cleanup approach
- IMS SQ Serial tran processing
- /DIS Lterm/Tran different meaning
- /DIS QBUF only shows local Qbuf info
 - ▼ msg kept in the Qbuf until commit
- Consequences of a Structure Full condition
 - ▼ new TP tran rejected DFS070 unable to route msg
 - ▼ Msg isrt from BMP are saved on the IMS log
 - ▼ MSC link stopped

IMS/ESA problems

- ABEND80A during /ERE apar PQ28880/UQ35039
- ABEND0C4 in DFSQLD00 apar PQ30336/UQ36651
- Structure full with SMASTER msg apar PQ27131/UQ34972
- Unresolved UOWE unknown PQ27818/UQ33973 and PQ32590/UQ41845 plus RDC
- Doc. change submitted to clarify QBUF value set
- /DIS QCNT MSGAGE 0 performance PQ27923/UQ35155

IMS/ESA problems

- CQS U0014 RC390 - msg CQS0242E
RC0D000012 during Disaster Recovery test
PQ36869/UQ44795
- Bad performance BMP in SMOQ: EXPRESS=YES
- MSC trx duplicated after IMS crash and Link
restart PQ31757/UQ42452
- DFS681I (BMP CHKP) not issued if IMSabend
before chkpt/call completion PQ32811/FIN
- DB2 Data Sharing problem PQ25818/PQ24935

SMQ Design Change Request

- REQ00075690 SMQ Commands abbreviation
- REQ00075692/PQ27821 Total number of received and unprocessed transaction in SQ (as ENQCT and QCT) / global and local Q count not clear
- REQ00075693 /DIS QCNT LTERM
- REQ00075694SCAN process interval

SMQ Design Change Request

- REQ00075691 unres. UOWE automatically written out
- REQ00075803 DFS681I issued synchronously: not specific for SQ
- REQ00075806 MRQ to reprocess unres. UOWE
- REQ00075816 automatic MSC link restart
- REQ00076276 GBLQCT on /DIS OVERFLOWQ STRUCTURE cmd

IMS/ESA SMQ results

- IMS SMQ objectives reached
 - ▼ Workload balanced on two IMS subsystems
 - ▼ more capacity
 - ▼ increased availability
- Real DB2 Data Sharing exploitation
- Y2K cross over with IMS SMQ
- IMS SMQ part of the Disaster Recovery scenario

Customer's final considerations

- IMS SMQ new architecture implementation effort
- Some logic functionality discovered during project run
- Great help obtained from IBM (STL C/T and Lab, local team)
- Very satisfied of IMS SMQ behaviour
- No problem encountered on production since production switch

IMS: now and future ...

- VGR to fully exploit availability, capacity and workload balancing implemented in 1stQ/2000
- GeoPlex exploitation
 - ▼ a CF defined in the remote system
 - Looking to
- MVS WLM implementation
- IMS e-business and Internet connections
