E29   Using the IMS Log and IMS Performance Analyzer to Tune Your IMS System

David Mierowsky

The IMS log contains a wealth of information that can be used to examine many of the performance aspects of your IMS system and to carry out post-event analysis of performance problems. Join this session to find out how the IMS Performance Analyzer can be used to provide detailed information about the operation of your IMS system without the overhead of any external monitoring facility. Find out more about the new Fast Path performance reports available with IMS PA Version 2. As part of this session you'll see real-life scenarios where IMS PA is used to analyze particular performance problems.
