SESSION ABSTRACT

E46 IMS Online Recovery Service
Rick Long

This presentation introduces the /RECOVER command. Give IMS a database list—with IMS Online Recovery Service, it will do the rest! IMS Online Recovery Service will allocate whatever is needed, merge logs on the fly, and recover to a specified point in time if required. You can recover every database on a pack with one command. This topic details the use and syntax of the command, how to prepare IMS and DBRC for use, and examples of use with output.
