SESSION ABSTRACT

E67   IMS V6 Open Database Access (ODBA)
Dave Compton

This technical presentation describes the new IMS Version 6 Open DataBase Access (ODBA) callable interface to IMS DBCTL. It describes how an MVS address space can establish a connection to DBCTL and issue DL/I database calls for accessing an IMS database. It also describes how MVS Resource Recovery Services (RRS) is used to provide the sync point manager function. A DB2® stored procedure is used as an example of the processing flow.
