SESSION ABSTRACT

E87   IMS XML Enablement

Shyh-Mei Ho

XML is rapidly increasing in importance as an interchange standard for B2B applications.

This presentation highlights the XML strategic directions in IMS for both transactional messages and DL/I databases support, and positions IMS XML activities in the overall IBM XML metamodel for applications' initiatives - for example, CAM. This presentation also overviews enablement of these metamodels to drive XML based processing capability in IMS.
