HiT Software
DBMoto

IBM

Solution Description

DBMoto is the preferred solution for heterogeneous data replication and transformation in an enterprise environment. Whatever the need (e.g., migrate data, synchronize data, create a new data warehouse/data mart, or build a business intelligence application) DBMoto is the solution of choice for fast, trouble-free, easy-to-maintain data integration projects.

DBMoto's Enterprise Manager offers a graphical point-and-click interface that makes it easy to drill down into databases, tables and columns to understand data elements. Its powerful, easy-to-use administration wizards make replication setup a simple task. Unlike other data replication solutions, DBMoto offers unlimited control over data replication and transformation using scripting technology. For management and auditing, DBMoto can record replication activity into a specialized log. While performing a replication, DBMoto offers a visual tool that provides real-time information on a replication status.

Features & Benefits

DBMoto addresses today's business needs to seamlessly integrate data from different sources in real-time. Key features include:

- Wide range of database platforms supported: IBM DB2 for Systemi5/AS400, IBM DB2 for zOS, IBM DB2 UDB

- Fast, intuitive replication configuration via wizards in the Enterprise Manager

- No programming needed on source or target database platforms

- Built-in transformation functions, with custom functions definable at any time

- Remote accessibility of Enterprise Manager for centralized configuration and management

- Standard protocols (.NET, OLE DB, ODBC) to access source and target databases

- Extensive log reporting and accessibility

- Visual tool to provide information on replication status

- Automatic creation of target tables

Value Proposition

DBMoto provides the power, flexibility and scalability needed to resolve data integration problems involving heterogeneous relational databases. It takes advantage of existing investments and expertise in the enterprise, yet allows for easy, accelerated implementation of data integration solutions. DBMoto offers intuitive replication configuration and monitoring tools, supporting a wide range of databases. With DBMoto, enterprise class replication is flexible, effective and affordable.

Company Description

HiT Software is a leading software provider of secure middleware data access and data replication products headquartered in San Jose, California. Since 1994, HiT Software products have enabled customers from large, medium and small companies to integrate relational data in mission-critical applications across all industries. HiT Software maintains offices in California and Europe, and works with resellers and partners worldwide.

IBM Segment
- Data Management
- Informix

Business Function
- Data Replication and Integration

Target Industry
- Cross Industry
