Mediware Information Systems, Inc
Medication Management

IBM

Solution Description

The Mediware Medication Management Software suite is a comprehensive solution that provides healthcare facilities anytime, anywhere access to tools that improve medication safety. This solution suite provides rapid information access and high performance on a platform that is easy and cost effective to maintain. Mediware's solution ensures that from physician order, to pharmacy verification and fulfillment, to nurse administration at the bedside, that the correct medications are given to the correct patient, in the correct dose, at the correct time.

Features & Benefits

The Mediware Medication Management Software Suite consists of the following components:

WORx Pharmacy Management - WORx® is a feature-rich drug therapy management system designed to meet the demanding needs of today's care providers.

MediMAR Bedside Administration – MediMAR enables medication administration accuracy and creates a communication platform for nursing, pharmacy and physicians to ensure that information is not lost between shifts or in transfers of care.

MediREC Medication Reconciliation - With the introduction of MediREC™, Mediware brings the industry an electronic solution that speeds up the medication documentation and reconciliation processes.

MediCOE Electronic Orders - MediCOE™ delivers electronic ordering capabilities and enables physicians, nurses and pharmacists to quickly enter, review or modify pharmacy orders, regardless of time of day or physical location.

HOS Ascend - Ascend easily manages inpatient pharmacy operations and facility-wide medication management practices in a wide variety of healthcare settings.

Value Proposition

Mediware's approach for medication safety unites patient record-centric applications within a single medication database. This connects the clinical support team with communication tools, safety checks and real-time information to ensure that drugs are accurately administered. The result is safety, accuracy and efficiency that exceeds the capabilities of interfaced solutions, to create a truly closed loop environment that connects each component of the medication process, from admission through discharge.

Company Description

Mediware Information Systems, Inc. is a leading provider of best-of-breed clinical information systems to the health care industry in three areas: pharmacies, blood banks and surgical suites. More than 1100 Mediware systems are installed in hospitals and health care institutions in the United States and around the world. They deliver superior clinical functionality using state-of-the-art technology, flexibility and ease of use.
