

A Business Partner Solution for Cross Industry

Sophisticated Maintenance System Designed for the Way Maintenance People Work

Norse Systems, Inc.

Capital Equipment Maintenance System (CEMP1)

Business Challenge

CEMP1 from Norse Systems, Inc. addresses the problems associated with managing maintenance for a variety of asset types. There are sophisticated features for managing the maintenance of fleets of vehicles or construction equipment as well as maintaining your facilities or plant equipment, all in a single maintenance implementation. A CEMP1 implementation can address all of your maintenance management needs for multiple sites, multiple equipment types, environmental and safety compliance issues and even centralized parts distribution with consignment inventory capabilities, regardless of the scale of your operation. One system that can manage your plant, fleet, construction equipment, marine, ground handling equipment, facility and infrastructure asset maintenance and management needs worldwide is now available.

Solution Description

The unique approach to maintenance embodied in CEMP1 makes it possible to manage literally any type of maintenance activity with confidence and ease. The system is designed to be used by real shop people, minimizing administrative effort, but still providing unmatched cost and performance management information with a complete audit trail to your general ledger. We have solved the inventory and administrative problems that often prevent successful implementation of competing products. The maintenance management loop (plan, execute, evaluate, and plan again) has finally been closed.

Value Proposition

The CEMP1 system from Norse Systems, Inc. is licensed as a complete application set, including hardware, software and system backup, for a monthly fee per user. It is ideal for multiple locations, or even job site deployment. Economical perpetual licensing is also available. The application licensing includes a license for the complete, 4th generation, application-development environment Screen Driver, which is used to build and maintain the system, providing even more flexibility.

Company Description

Norse Systems, Inc. has been designing building and providing integrated business solutions for the bus transportation and capital equipment industries for over 23 years. We take pride in making our clients more profitable, and in the superior functions and advanced technology of the applications we provide. We are proud to be partners with IBM.

IBM Segment

- Data Management
