Cost Effective Digital Storage Solution offering Security, Compliance and Scalability

Iron Mountain Digital Virtual File Store

Solution Description

As companies search for cost-effective solutions to manage massive amounts of digital information, Iron Mountain Digital's Virtual File Store solution offers secure, long-term storage of inactive data at off-site data centers. The Virtual File Store solution is an enterprise-class, cloud-based storage archiving service designed to help companies reduce costs of storing and managing static data files. This greatly reduces the investment in an expensive on-site storage infrastructure and supporting regulatory compliance initiatives.

Features & Benefits

The key benefits of the Virtual File Store service include:

- No Large Capital Investment Required – Because the Virtual File Store service is integrated with existing infrastructure and fits into the monthly operating budget, no large upfront outlay is required.
- Reduced Total Cost of Ownership (TCO) – Virtual File Store enables predictable, manageable costs without ongoing system investments or maintenance headaches.
- Scalability to Adjust to Business Needs – Additional capacity is immediately available with the service for short term storage spikes, long-term structural changes, such as acquisitions, and rapidly expanding digital file archives.

Value Proposition

With virtually unlimited storage capacity, Virtual File Store can be integrated with a company's existing storage infrastructure to migrate inactive files over the VPN network to Iron Mountain's secure, redundant data centers. Authorized users and applications can then retrieve files on-demand via a secure Internet connection from anywhere at anytime within the corporate environment

The Virtual File Store leverages the security, compliance and scalability of the Storage-as-a-Service framework to manage large volumes of inactive digital data to reduce overall storage expenses. With the solution, companies can deploy cost-effective cloud-based storage with enterprise-grade security, which reduces the risk, cost and complexity of managing digital information
