

A Business Partner Solution for the Cross Industry Sector

Make Content From Any Application

Lighthouse Computer Services

Universal Content

Technology Description

Lighthouse Computer Services' Universal Content tool provides a mechanism to capture content from virtually any application, not just the applications that have already been integrated with IBM FileNet P8. It installs as a print driver or as a Microsoft Office plugin. A user can select the printer from any application that can print and then capture as a PDF the window that is currently being worked on. For example, all content on a web page can be captured as a multipage PDF, even if the users would normally have to scroll up or down on the web page to view additional content. Green screen applications with information that the user wants to freeze in time can be captured as a PDF and sent directly to FileNet P8 as well. In addition, any content being captured can be declared as a record at the time of capture.

Features & Benefits

- Enable capture with legacy applications painlessly.
- Provides simple record declaration capability for virtually any application.
- Freeze dynamic data such as web pages or green screen applications to provide a point- in-time snapshot.

Value Proposition

IBM FileNet P8 provides a rich set of tools for gathering content from file systems, email systems, Microsoft Office and document capture programs. Lighthouse Computer Services Universal Content tool can extend these capabilities to legacy applications, web pages and green screen applications where a transaction may need to be captured and declared a record. The Universal Content tool installs as a print driver and allows any application that can print to capture content immediately and declared a record, if necessary. It works with the user's ID to allow the user to create content and declare records based on their FileNet P8 permissions and can save hundreds of hours that would otherwise have to be spent on custom integration work.

IBM Segment

- Enterprise Content Management

Business Function

- Transformation

Target Industry

- Cross Industry
