

A Business Partner Solution for the Cross Industry Sector

Protect and Extend your IBM FileNet P8 ECM Investment

Xenos – an Actuate company

Xenos Loader™ for IBM FileNet P8

Technology Description

Many organizations produce high volume document output in print stream and image formats such as IBM AFP, Xerox Metacode, PCL, TIFF, PNG and stacked PDF. IBM FileNet Content Manager treats documents as individual objects and associates properties (metadata) to each individual document for search and retrieval purposes rather than handling stacked print stream or image documents. The Xenos Loader™ for IBM FileNet P8 automates the import of high volumes of print stream documents, images and their associated metadata seamlessly into IBM FileNet Content Manager. This high performance solution logically breaks up stacked files into individual document objects, transforms formats as required and can extract additional indexing information directly from the content during processing. It extracts portions of document content into repurposable formats such as XML or CSV for downstream use. Additionally, it logically merges documents or images together to create unified views of business transactions.

This 100% Java application complements enterprise architectures, providing a central gateway between business-critical content and FileNet P8. Integrated with the Xenos Enterprise Server™, it provides a rollback mechanism to remove content from FileNet Content Manager if load issues occur, and logs all transactions for audit purposes.

Features & Benefits

- Supports loading of AFP, Metacode, PS, PCL, ASCII and EBCDIC Line Data, XML, TIFF, PNG, PDF and PDF/A, workstation documents, rich media file types, and structured data formats such as XML and CSV.
- Breaks up large “stacked” files into individual document objects.
- Associates existing document metadata with individual document objects and extracts additional metadata information from document content during processing.
- Transforms print formats into human readable formats such as PDF or TIFF and adds document overlays, PDF hyperlinks and external images within document content prior to load.
- Loads document and image objects and their associated metadata/indexes into defined FileNet P8 document classes and properties.

IBM Segment

- Enterprise Content Management

Business Function

- Import/Export

Target Industry

- Cross Industry

Value Proposition

The Xenos Loader for IBM FileNet P8 addresses all of the following challenges associated with high volume document handling:

- Separates “stacked” print streams or image files into individual document objects.
- Transforms content into appropriate business formats such as PDF, TIFF, PNG, etc.
- Associates document metadata and/or extract additional metadata from the content.
- Handles the nuances of printed copy to produce an exact electronic document replica.
- Integrates with upstream business applications to automate capture and load.
- Provides rollback and audit trails to ensure accuracy and compliance.

It enables your organization to automatically load print stream and image content such as statements, invoices, bills, policies, check images and customer correspondence directly into FileNet P8, together with their associated document properties. It also enables your organization to realize these business benefits:

- Protects and extends your FileNet P8 ECM investment.
- Reduces storage costs.
- Reduces the operational expenses of owning and operating multiple content repositories.
- Provides pervasive information access throughout your organization
- Provides a single gateway between business-critical content and your FileNet P8 platform.

Company Description

Xenos provides high-performance solutions that optimize enterprise content management (ECM) implementations by streamlining the movement of information across the enterprise and slashing document storage costs. Xenos solutions, based on the scalable Xenos Enterprise Server™, process, extract, transform, repurpose and personalize high volumes of data and documents for storage, real-time access, ePresentment, printing and delivery in numerous formats across multiple channels. Effective Feb. 1, 2010, Xenos became an Actuate company.
