

IBM® Implementation Services for DB2® Information Integrator

IBM Implementation Services for DB2 Information Integrator, uses the Internet to help customers replicate, join and integrate multiple databases to create more efficient ways to access, store and mine information across the enterprise. The solution helps IBM DB2 Universal Database™ customers establish connectivity for data access and linkage to almost any database and non-relational database environment.

Relying on the experience of a global team

Your company's ability to identify new market opportunities, measure the effectiveness of marketing campaigns and monitor corporate growth can be improved through replication and joint strategies. IBM Implementation Services for DB2 Information Integrator builds on our service experience and product depth to help you accelerate your return on investment. By providing a comprehensive solution and shortening configuration time, we can help you make the most of your data and IT investments.

Highlights

- ***Uses proven engagement techniques for product installation and configuration***
- ***Enables IT team to focus on business-related activities rather than technical enablement***
- ***Educate your employees with data replication scenarios and upgrade strategies***
- ***Deploy diverse methods of accessing data stores across the enterprise***

Integrating multiple data sources for improved information access

Many companies' information technology (IT) infrastructures contain multiple types and brands of databases. To optimize capabilities, and to leverage information and data for improved decision making, companies are seeking to implement data replication strategies across multiple, multi-vendor relational and non-relational database systems (XML, Excel, Web Content, Flat Files, Message Queues, Content Repositories) to better coordinate applications and systems. Yet, historically, creating replication strategies across these different database systems has been technically challenging.

Applying established engagement techniques

IBM Implementation Services for DB2 Information Integrator is centered around three core components:

- *IBM DB2 Universal Database* links distributed IBM relational databases into a cohesive and integrated database solution.
- *IBM DB2 Federated Database Support* a multi-database server that is designed to provide high levels of data access and seamlessly integrate enterprise wide data. IBM and multi-vendor, relational, non-relational, local, remote and geographic data can be viewed as if it were local.
- *IBM DataPropagator™* a data replication solution for relational environments.

The combination of these three products allows for a replication strategy that supports the development of data warehouses, client/server applications or mobile computing across the enterprise.

Providing basic skills instruction

Although many companies have large, capable IT teams, the specialization of these resources into mainframe, client and distributed skill sets leaves an expertise gap when it comes to cross-technology solutions. IBM Implementation Services for DB2 Information Integrator provides basic instruction for your employees on replication strategies so they can learn how to best use legacy applications in a distributed environment.

What's Involved

This service offering is based on tested IBM engagement techniques, and includes the following implementation

phases:

- *Installation planning*
- *Installation, configuration and verification testing of the product*
- *Configuration and Strategies for access of Data Sources across the Enterprise*
- *Operational customization*
- *Basic skills transfer during the course of the engagement*
- *Installation record*
- *Upgrade strategies and assistance for migrating to DB2 Information Integrator*

Focusing on day-to-day business rather than technical enablement

The people of IBM Global Services - Integrated Technology Services have extensive experience in developing, deploying and supporting database replication solutions. By using IBM Implementation Services for DB2 Information Integrator, you can be confident that your implementation will go smoothly and quickly. Our professionals will help you better exploit the value of your data while your IT team focuses on the day-to-day aspects of running your business.

IBM Software Services for Data Management and IBM Global Services work closely to provide you with expertise in all aspects of your information management solution; whether you're looking for deep product expertise, business consulting, or project management, you can rely on experienced consulting services from IBM.
