

## IBM Quick Start Services for Alphablox

IBM is the leader in Business Intelligence technology, giving you an immediate advantage.

IBM Software Services consultants have the deep technical knowledge to ensure your analytical application solution is optimized for your environment and are continually focused on transferring that knowledge to your personnel.

### What's Involved

IBM Quick Start Services for DB2 Alphablox is a flexible three week or longer engagement, during which we will help you design, develop and deploy your first analytical application, while leaving your team with knowledge to both support and enhance that application in the future.

This offering involves your team in all aspects of the pilot application development process, and concludes with a technical workshop where one of our skilled Data Server consultants will walk your personnel through all aspects of the implementation and make recommendations for enhancements to the application. At this time, the consultant also presents potential additional DB2 Alphablox applications.

### Highlights

- **Leverage the deepest Alphablox skills in the industry to help you create your application and quickly obtain the ROI of your software investment**
- **Accelerate your first analytical application implementation**
- **Leverage IBM's expert Business Intelligence consultants to mentor your staff**

IBM DB2® Alphablox enables organizations to integrate analytics across all functions and lines of business, and provides powerful analytic solutions to business users at the front lines for improved decision making. It enables organizations to optimize various aspects of their business solutions, including:

- Self-service reporting and analysis applications
- Operational analysis applications
- Financial reporting and analysis applications
- Planning applications
- Business Performance and Key Performance Indicator (KPI) dashboards

Website before Alphablox

Website after Alphablox

The primary activities undertaken in this services offering are:

- Installation and configuration of DB2 Alphablox in both your development and production environments
- Scoping and requirements definition for the pilot application, focused on one subject area
- Analysis of the supporting multidimensional and relational databases for the target application
- Design and story-boarding of the analytical application
- Development, testing, and deployment
- Presenting a hands-on technical workshop for client personnel who will maintain and support the application.
