

IBM Software Services for DB2 Information Management

IBM® Information Management software

IBM Quick Start Services for DB2 Enterprise Server Edition V9.1 for Linux, UNIX, and Windows

Highlights

- ***Leverage the deepest DB2 skills in the industry to help you get up and running with your new database in the shortest time possible***
- ***Work with IBM's expert database consultants to mentor your staff***
- ***Design your system optimally using IBM database best practices and avoid costly changes once a system is in production***

The latest release of IBM® DB2 9 for Linux, UNIX and Windows provides the ultimate in performance, scalability, reliability, availability, and security all in a cost-effective platform that is open and flexible and supports key industry standards. Additionally, improved integration with key development platforms makes application developers even more productive than ever.

This offering will help your organization get off to a quick start with your newly acquired DB2 software by providing assistance with the installation and configuration process. We help you assess and exploit DB2 9's new functionality around pureXML™, data compression, data partitioning and security.

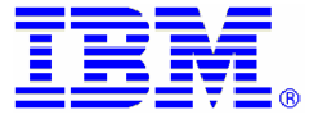

What's Involved

When engaging IBM Software Services, you can be sure that you are working with the industry's leading experts. Consultants from IBM Software Services for DB2 Information Management assist you with the installation and configuration of the DB2 Data Server family of products. Working jointly with your staff, the consultants provide technical assistance and knowledge transfer on the administration and operational procedures required to support the DB2 in your unique environment, ensuring that your team is prepared to support your new software.

The IBM software consulting team will also:

- Review with you the prerequisite activities, and scheduling
- Create and review an implementation task list with your team.

The IBM consulting team delivers a final report detailing the installation process for your specific environment, configuration modifications made to the default database settings, and specific operational information required to administer your unique database system.

The primary activities that will be undertaken in this services offering are:

- *Installation and configuration of DB2 9*
- *DB2 initial database creation*
- *Analysis and review of new DB2 9 functionality*
- *How to leverage DB2 Autonomics and Storage Management to minimize administration time and issues*
- *Mentoring of your IT staff*
- *Hands on training and knowledge transfer*
- *Knowledge sharing of DB2 training and education available publicly*
