## IBM's Smarter Planet

A Smarter Planet Overview

The technology is here.  
The people are ready.  
The time is now.

- |                |                 |
|----------------|-----------------|
| Overview       | Healthcare      |
| Energy         | Cities          |
| Traffic        | Water           |
| Food           | Public safety   |
| Infrastructure | Buildings       |
| Retail         | Work            |
| Intelligence   | Rail            |
| Stimulus       | Products        |
| Banking        | Education       |
| Telecom        | Government      |
| Oil            | Cloud computing |

Visions

Ideas

instrumented + interconnected + intelligent = smarter

## ***Smarter Business***

- Faster, better outcomes and results
- Today's focus
  - Optimize
  - Innovate
- Make your business smarter, more efficient, more effective

# Transform Your Organization with Information

## Lack of Insight

1 in 3 managers frequently make critical decisions without the information they need

## Inefficient Access

1 in 2 don't have access to the information across their organization needed to do their jobs

## Inability to Predict

3 in 4 business leaders say more predictive information would drive better decisions

## *Agenda*

### **Topic**

Introduction and objective

What is data governance?

Why is it there? What problems are underlying?

What you don't want...

How to solve this? How IBM can help you?

How do you gain?

Summary

## *Agenda*

### Topic

#### ❖ Introduction and objective

What is data governance?

Why is it there? What problems are underlying?

What you don't want...

How to solve this? How IBM can help you?

How do you gain?

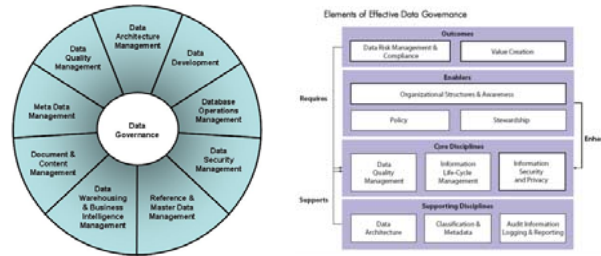

Summary

## *Introduction and objective*

- Share knowledge in the area of data governance, two ways:

- 1. Framework: IBM Data Governance Framework

- 2. Software: IBM Information Management portfolio

## *Agenda*

### **Topic**

Introduction and objective

### **❖ What is data governance?**

**Why is it there? What problems are underlying?**

**What you don't want...**

How to solve this? How IBM can help you?

How do you gain?

Summary

## ***Wat is data governance?***

Data governance is a quality control discipline for assessing, managing, using, improving, monitoring, maintaining, and protecting organizational information.

Volume of Digital Data

## *Why Data Governance? Is there a problem?*

- Most companies can't measure risks and forecast losses
- Most organizations don't have x-functional risk organizations and loss repositories that disseminate loss information to every stakeholder
- No organization is able to:
  - **Calculate exposure probabilities for operational and business decisions**
  - **Provide risk choices and model potential policy outcomes**
  - **Record decisions and compare them to results to improve business performance over time**
- No regulatory authority has any visibility into any of these processes and that hurts our markets and economies

**You need to make better decisions**

***What you don't want..***

*What happens if you do not have any data?*

## *We are all Victims of Toxic Content: Air France 447 on Bolivian TV*

## ***What you don't want..***

***What happens if you do not verify your data?***

*Bolivian News mistakes  
Flight 815 for Air France  
plane.mpg*

**Bolivian television lost creditability – no trusted data**

## ***What questions should we ask ourselves to prevent blunders?***

Could this type of event happen to me?

If not, why not? Why are my controls better?

If yes, how? What could the impact be?

What can I learn from this event? Are there lessons that can help my business become more effective?

Can we see any patterns and trends across different events that indicate a 'growing concern'?

Were there any warning signs? Indicators? How can I bring these measures into my business?

How did management respond to the event? How would our management respond if this event happened to us?

**You need to be able to trust your data**

## Agenda

### Topic

Introduction and objective

What is data governance?

Why is it there? What problems are underlying?

What you don't want...

❖ **How to solve this? How IBM can help you?**

How do you gain?

Summary

## Data Governance in your organisation

- Use of frameworks
  - Help at planning and execution
  - Gives insight of completeness
  - Describes scope
  - Is result oriented: Risiko Management, Compliance and Value creation
- Use of tools: software
  - Supports common language
  - Provides dataquality
  - Contains metadata and classification
  - Supports Informatie life cycle management
  - Rapports and Performance management

You need to have this in place

## *Use of Frameworks*

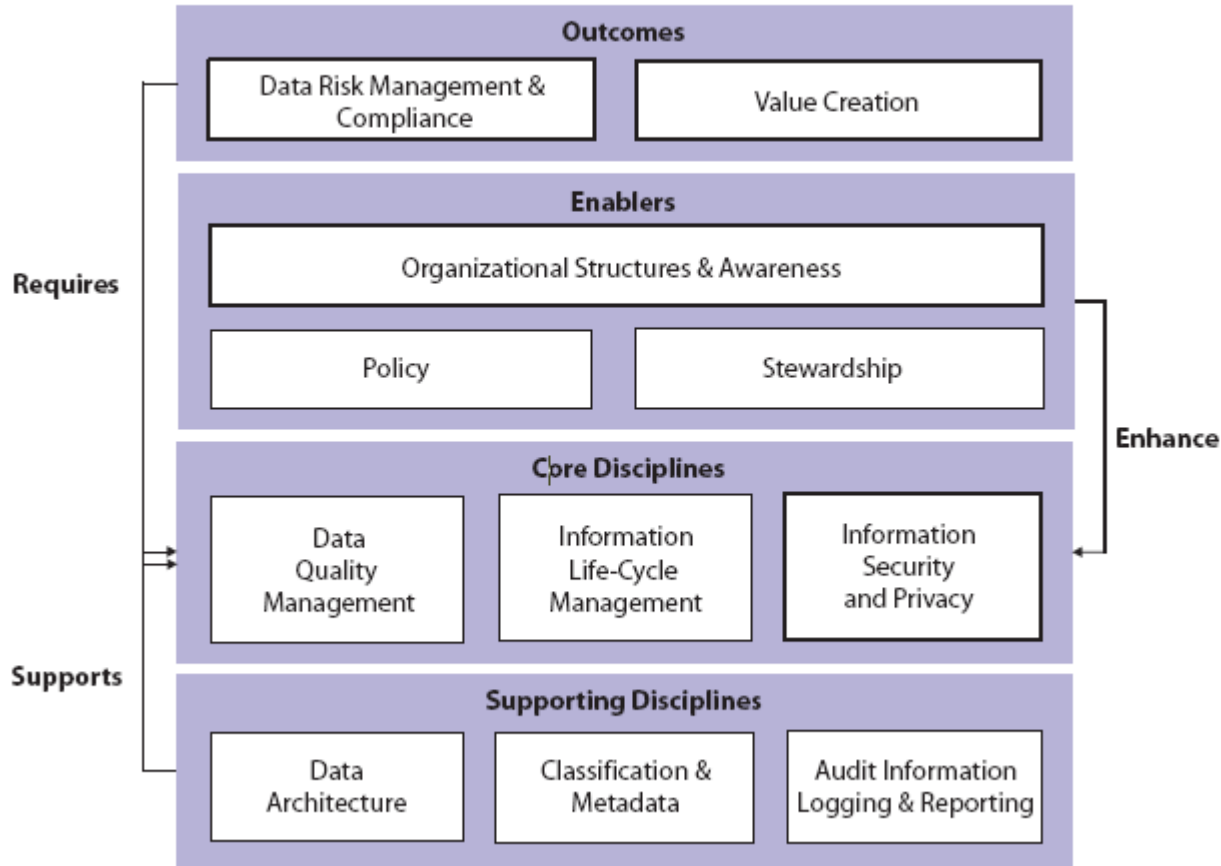

## *DAMA Functional Framework*

Source: *The DAMA Guide to the Data Management Body of Knowledge (DAMA DM BOK) framework categories*

## IBM Data Governance Council Framework

### Elements of Effective Data Governance

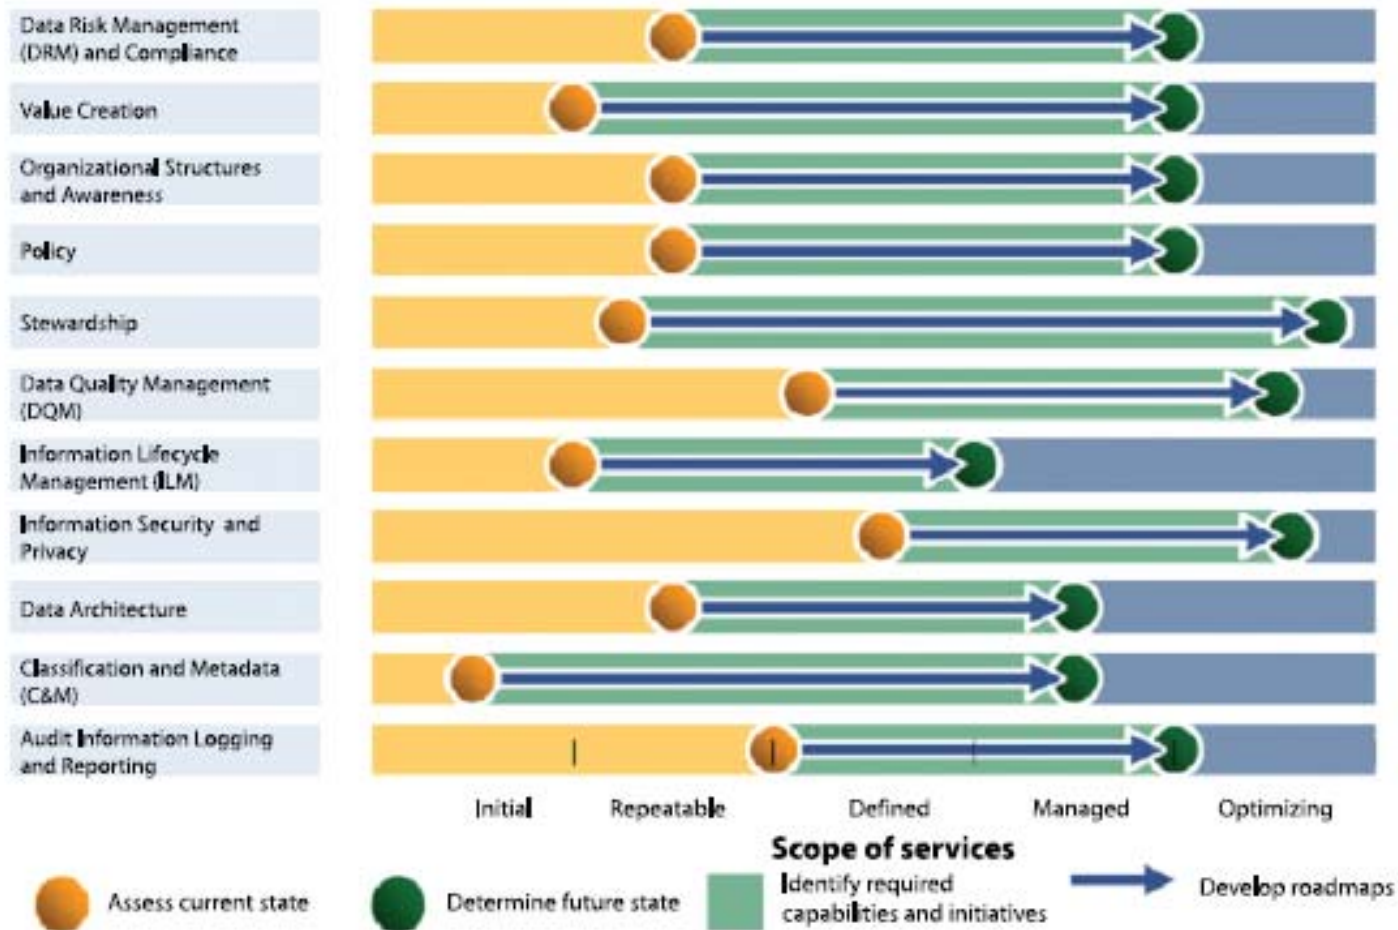

Source: IBM Data Governance Council, [www.ibm.com](http://www.ibm.com)

## *Six step approach*

1. Build an organization structure (Build)
2. Assess the current situation (Assess)
3. Create a strategy (Create)
4. Develop data stewardships (Develop)
5. Measure progress with key values (Measure)
6. Report results (Report)

***Use of tools: software***

# IBM Cognos Performance

*How do I know that that I have an accurate view and how do I know what this data means?*

**Business Users**

*I need a graphical environment to easily adapt to future data requirements (SID..?)*

**Developers**

**Subject Matter Experts**

*How can I actively collaborate with developers, f.e. in the area of data mapping/business rules?*

*What about Governance, Security, Scalability?*

*How can I quickly tell the business where the data is coming from?*

**Data Analysts**

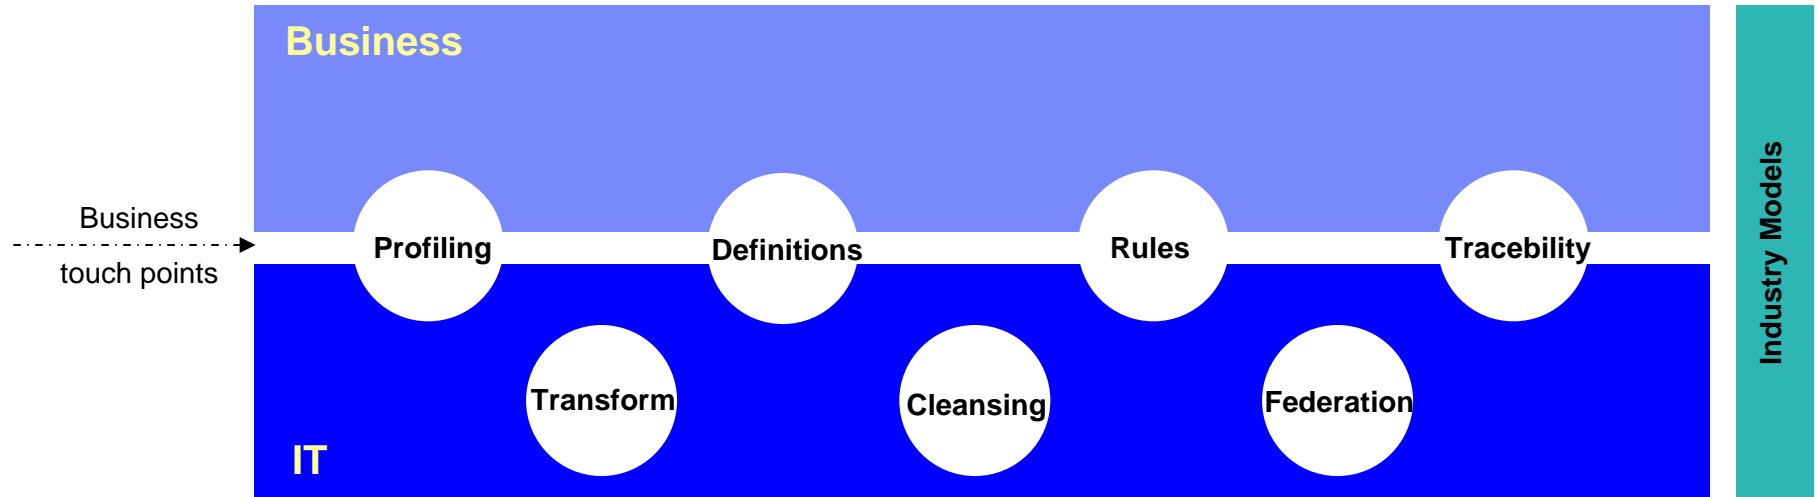

**Architects**

*Simplify administration, deployment, & maintenance*

**DBAs**

## **Business & IT alignment in information delivery** *Offer tailored collaborative solutions for both Business & IT*

In order to take full control of information integration and enable the business to drive definition, rules and results a solution needs to deliver non-technical solutions to be able to:

- Understand the nature of the data in all of its aspects
- Manage business definitions and terminology
- Manage and control source to target translations
- Leverage existing investments in data models
- Fully understand and control data traceability

This can only be achieved with a fully integrated platform

## Information Integration

### Critical Factors for Successful Information Integration

## Leaders Investing to Optimize Information Assets Clients Tell Us What They Are Looking For ...

### InfoSphere Capabilities

#### Insightful

Derive meaning from information changes

#### In Context

Real-time delivery of relevant information when and where it's needed

#### Complete

Related information reconciled into a single and holistic view

#### Accurate

Complex and disparate data transformed, cleansed and delivered

## ***An Enterprise Data Governance Platform should...***

1. ... Deliver a broad range of data integration capabilities ...
2. ... tailored to the needs of both business & IT users in doing their part of the work effectively and efficiently ...
3. ... in an integrated way to enable business & IT alignment, traceability/auditability and re-useability of information assets for collaboration to ensure better business outcome.
