

IBM Cognos Performance
Better Intelligence. Better Business.

Data Quality

Bjarne Jensen
IBM Information Management Technical Sales

Agenda

❖ **Introductie**

Wat is Data Qualiteit en waarom is het belangrijk?

Het Informatie Landschap

Het Data Governance Platform

Verbeterde Data Qualiteit door Infosphere Information Server

Samenvatting

Transform Your Organization with Information

Lack of Insight

1 in 3 managers frequently make critical decisions without the information they need

Inefficient Access

1 in 2 don't have access to the information across their organization needed to do their jobs

Inability to Predict

3 in 4 business leaders say more predictive information would drive better decisions

Agenda

Introductie

❖ **Wat is Data Qualiteit en waarom is het belangrijk?**

Het Informatie Landschap

Het Data Governance Platform

Verbeterde Data Qualiteit door Infosphere Information Server

Samenvatting

Definitie van Data Qualiteit

The state of completeness, validity, consistency, timeliness and accuracy that makes data appropriate for a specific use.

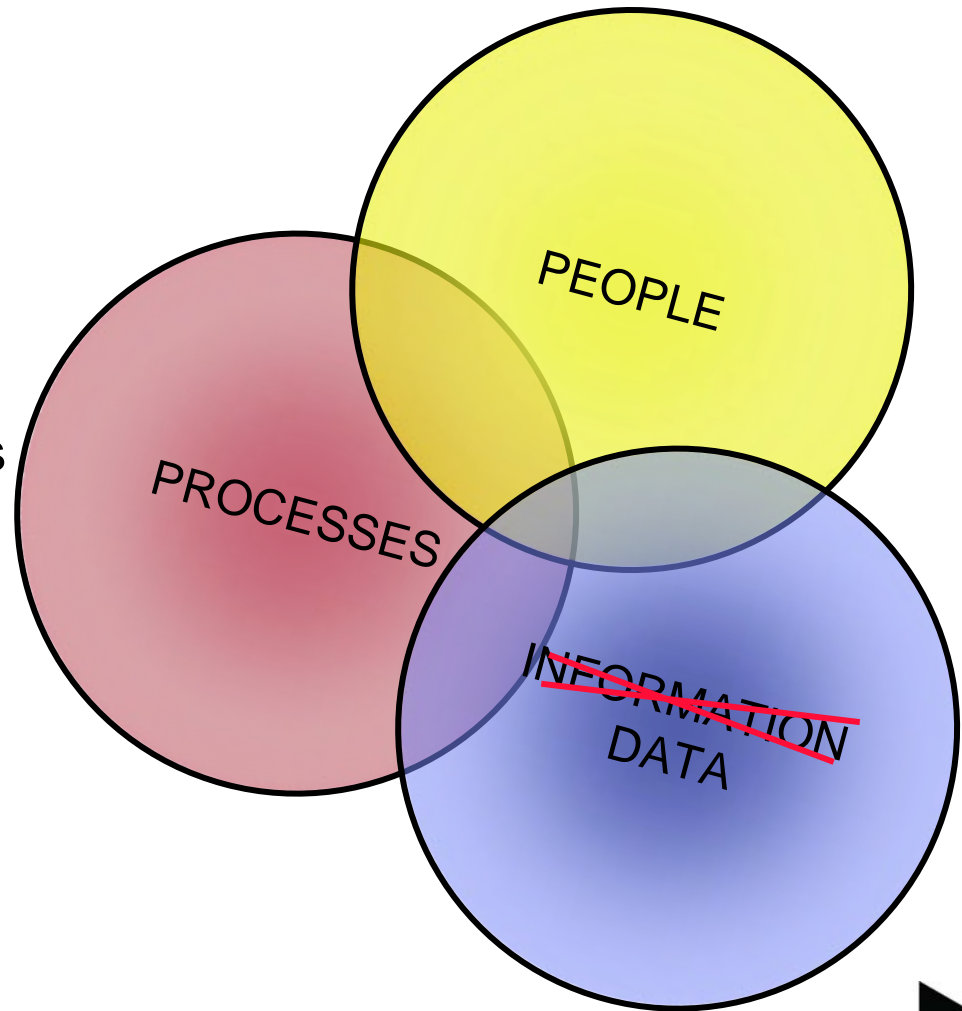

We have a customer information system, then my data quality is good, isn't it?

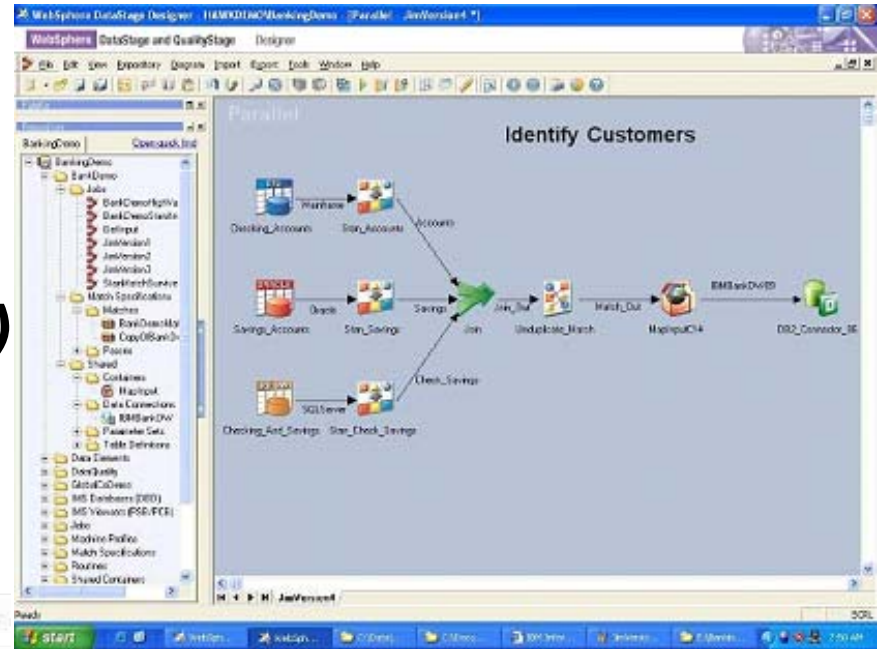

- Schizophrenia
- Free Import & Typing mistakes
- Creativity
- Spill Over
- New releases
- Merging of customer info systems
CRM systems are unique
Difference in the operatability, usability,
manageability, structure etc.
Customers in multiple CRM systems

Conclusion:

Same problems, but then worse

Manually?
Time consuming
Bad quality
One time (4% year 'pollution')
Uncontrollable

"It's hard to get good people, and even harder to keep them."

Automated process?
Consistent high quality
Re-usable
Fast and efficient
Controllable
Traceability

❖ **Het Data Governance Platform**

Verbeterde Data Qualiteit door Infosphere Information Server

Samenvatting

IBM Cognos Performance

How do I know that that I have an accurate view and how do I know what this data means?

Business Users

I need a graphical environment to easily adapt to future data requirements (SID..?)

Developers

Subject Matter Experts

How can I actively collaborate with developers, f.e. in the area of data mapping/business rules?

What about Governance, Security, Scalability?

How can I quickly tell the business where the data is coming from?

Data Analysts

Architects

Simplify administration, deployment, & maintenance

DBAs

Business & IT alignment in information delivery

Offer tailored collaborative solutions for both Business & IT

In order to take full control of information integration and enable the business to drive definition, rules and results a solution needs to deliver non-technical solutions to be able to:

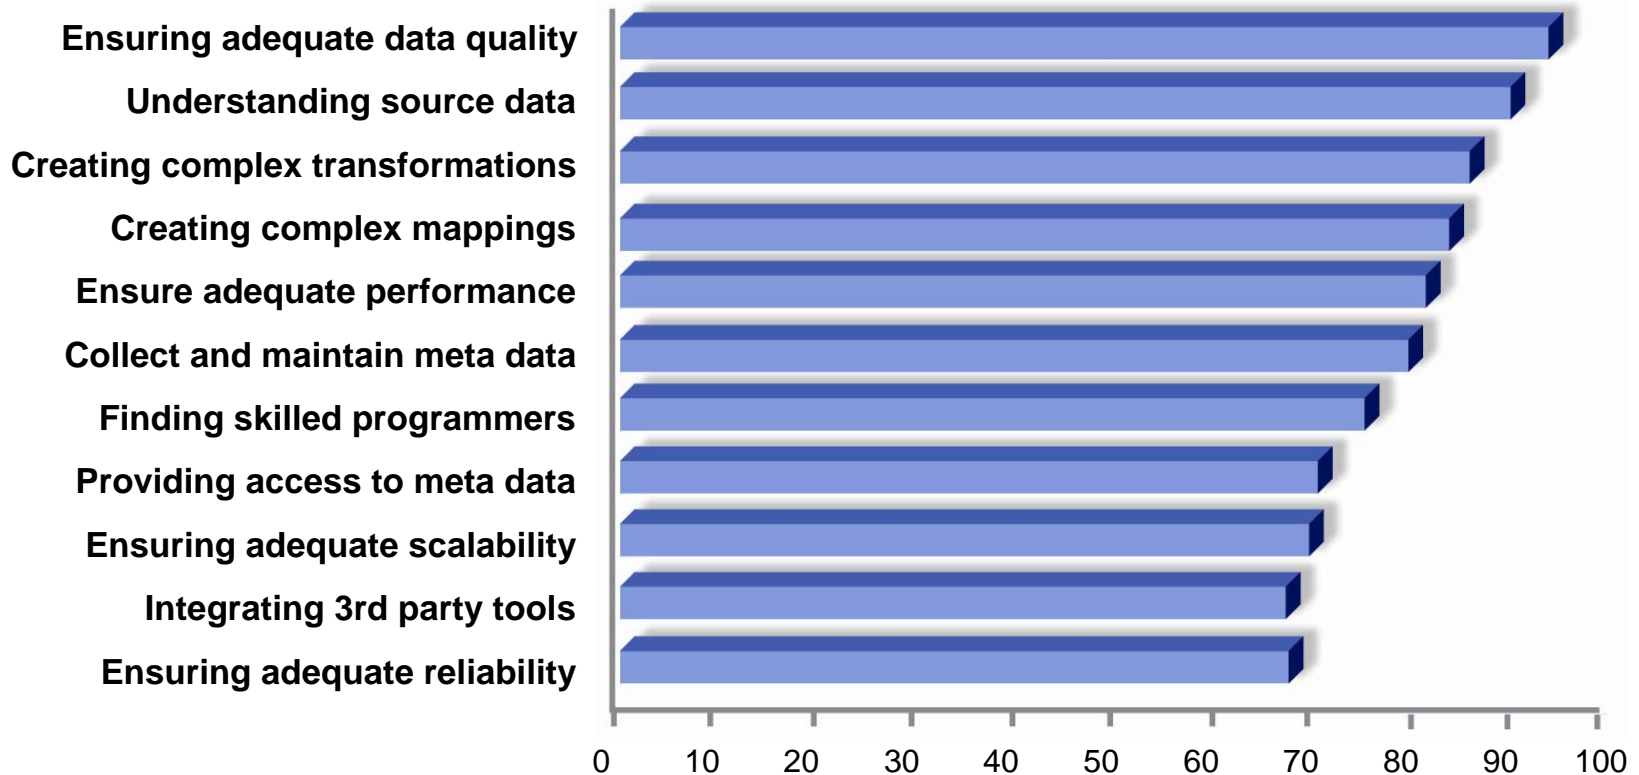

- Understand the nature of the data in all of its aspects
- Manage business definitions and terminology
- Manage and control source to target translations
- Leverage existing investments in data models
- Fully understand and control data traceability

This can only be achieved with a fully integrated platform

Information Integration

Critical Factors for Successful Information Integration

Source: TDWI World Conference

An Enterprise Data Governance Platform should...

1. ... Deliver a broad range of data integration capabilities ...
2. ... tailored to the needs of both business & IT users in doing their part of the work effectively and efficiently ...
3. ... in an integrated way to enable business & IT alignment, traceability/auditability and re-useability of information assets for collaboration to ensure better business outcome.

Samenvatting

The IBM Solution: IBM Information Server Delivering information you can trust

IBM Information Server

Unified Deployment

Understand

Discover, model, and govern information structure and content

Cleanse

Standardize, merge, and correct information

Transform

Combine and restructure information for new uses

Deliver

Synchronize, virtualize and move information for in-line delivery

Unified Metadata Management

Parallel Processing

Rich Connectivity to Applications, Data, and Content

Information Analyzer - Data Profiling

ERP from acquisition

Mainframe systems

Parts BOM

External Lists

Distribution

Demographic

Contact

Billing / Accounts

Critical Problems:

- Which data is really in your legacy systems?
- Sources are new and unknown, or have changed

Why?

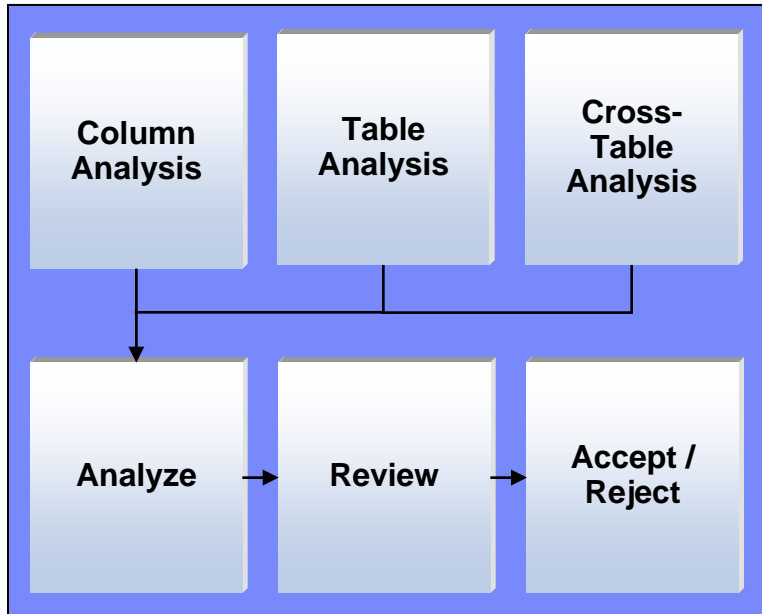

- Data values and relationships are inconsistent and divergent from documented (?) rules
- Documentation, if it exists, is incomplete
- Data sources are never static. They change without warning

Typical Strategy

- Labor intensive, resource devouring process
- Unable to review 100% of data elements

Information Analyzer - Data Profiling

- Enables understanding of data ***before*** starting development
- **Automates the profiling effort**
 - **Column analysis**
 - Generates frequency distributions for all values in all columns
 - **Relationship analysis**
 - Discovers join possibilities
 - **Table analysis**
 - Identifies primary and foreign key candidates
- **Performs baseline comparisons**
- **Helps validate schemas**

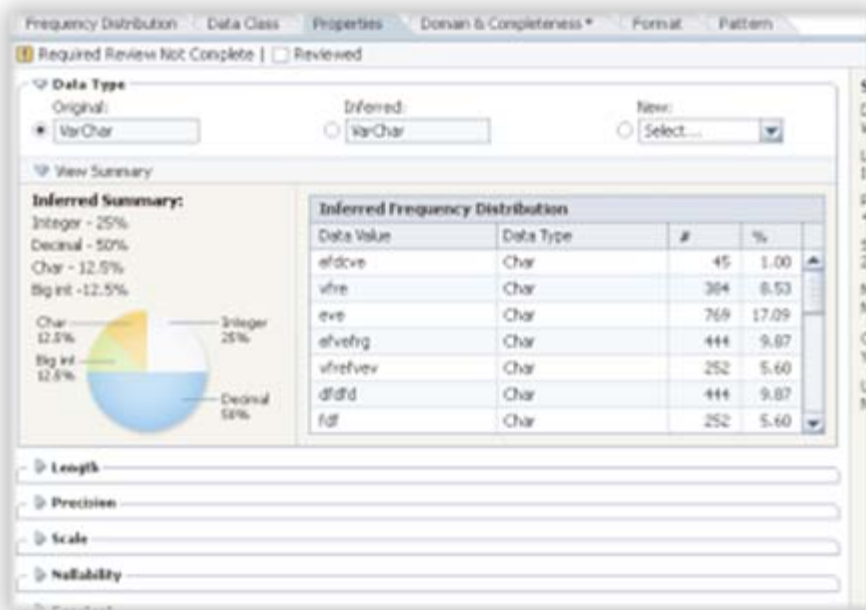

InfoSphere Information Analyzer

Information Analyzer

Analyze source data structures,
and monitor adherence to
integration and quality rules

Requirements

- Discover and analyze source data structure, content and quality
- Identify patterns and relationships across systems
- Identify data re-engineering needs

Benefits

- Identify information gaps early to reduce project risks
- Monitor information quality over time
- Visibility to enterprise information assets

Why Should I Care About Cleansing Information?

- **Lack of information standards**

- Different formats & structures across different systems
- **Data surprises in individual fields**
- Data misplaced in the database

- **Information buried in free-form fields (text)**

- **Data myopia**

- Lack of consistent identifiers inhibit a single view

- **The redundancy nightmare**

- Duplicate records with a lack of standards

Data Cleansing: Infosphere QualityStage

- Specialized data quality functions seamlessly integrated with DataStage
- Visual tools for defining complex matching and survivorship logic
- Ensures clean, standardized, de-duplicated information
- Enables a single version of the truth

4 Steps to clean your data:

- Free form investigation
- Standardize
- Match
- Survivorship

Subject Matter Experts

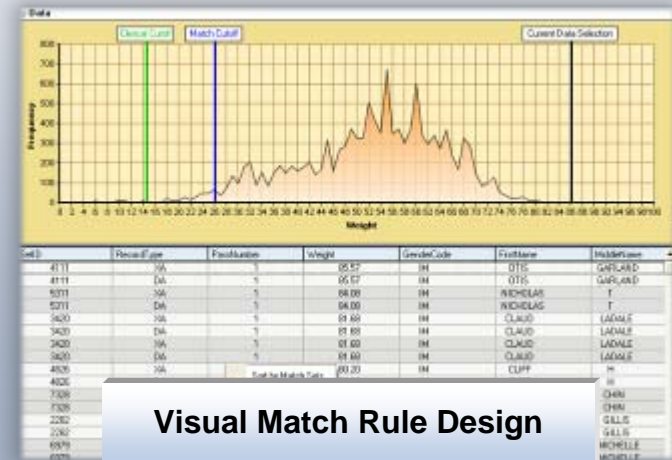

Data Analysts

Cleanse

Infosphere QualityStage™

Standardize and correct source data fields, and match records together across sources to create a single view

Information Landscape

Where does a field of data in this report come from?

- Import & Browse Full BI Report Metadata
- Navigate through report attributes
- Visually navigate through data lineage across tools
- **Increases trust and understanding of business information**

InfoSphere and Cognos

InfoSphere provides the foundation of trusted information for Cognos business intelligence & performance management

InfoSphere™
software

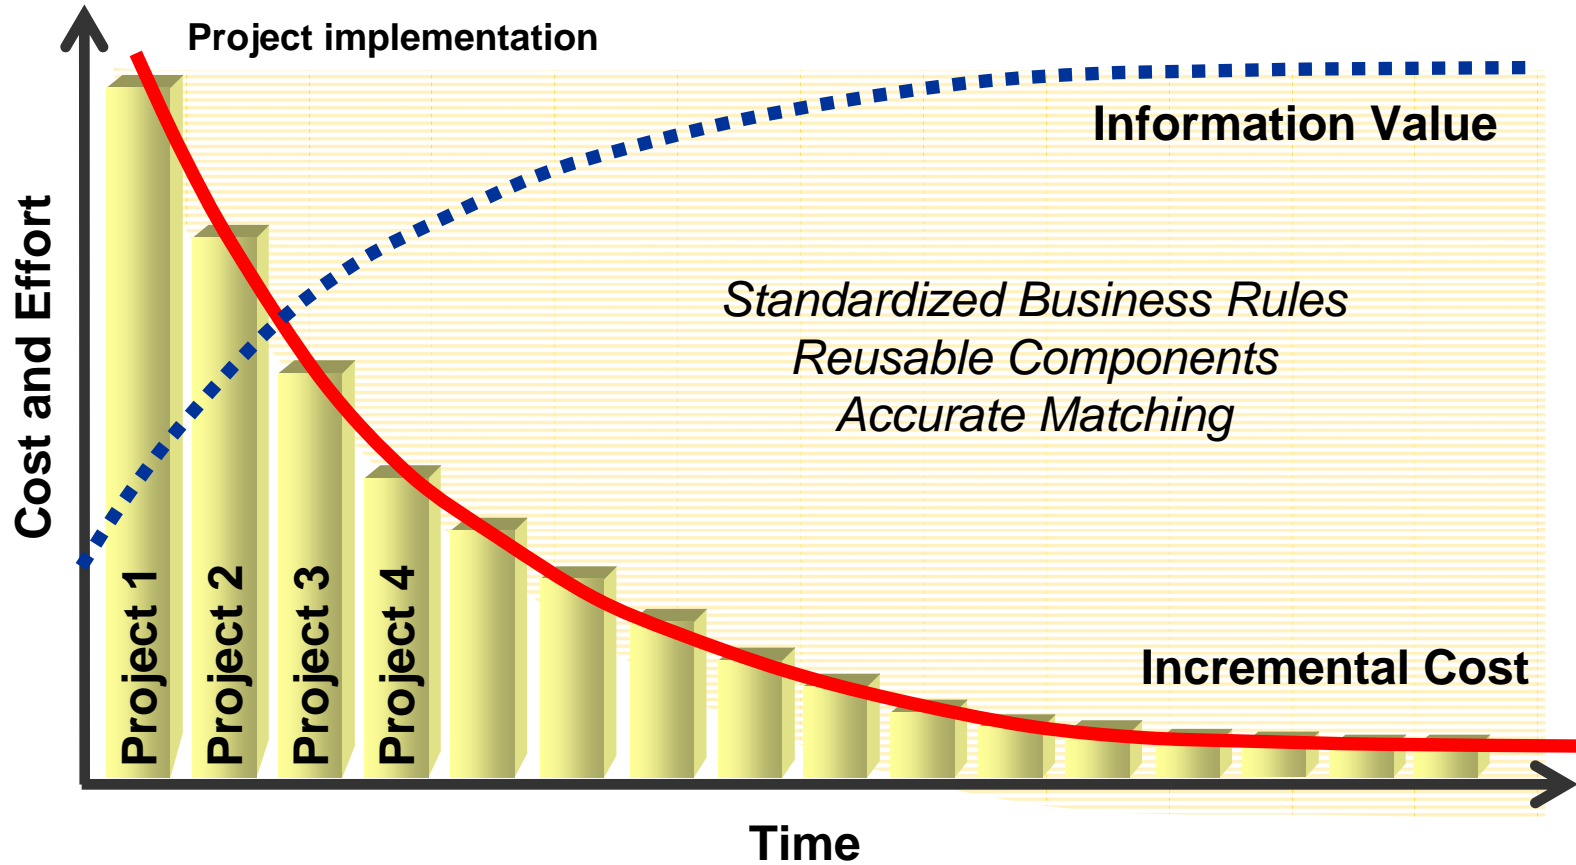

*Trusted
Information*

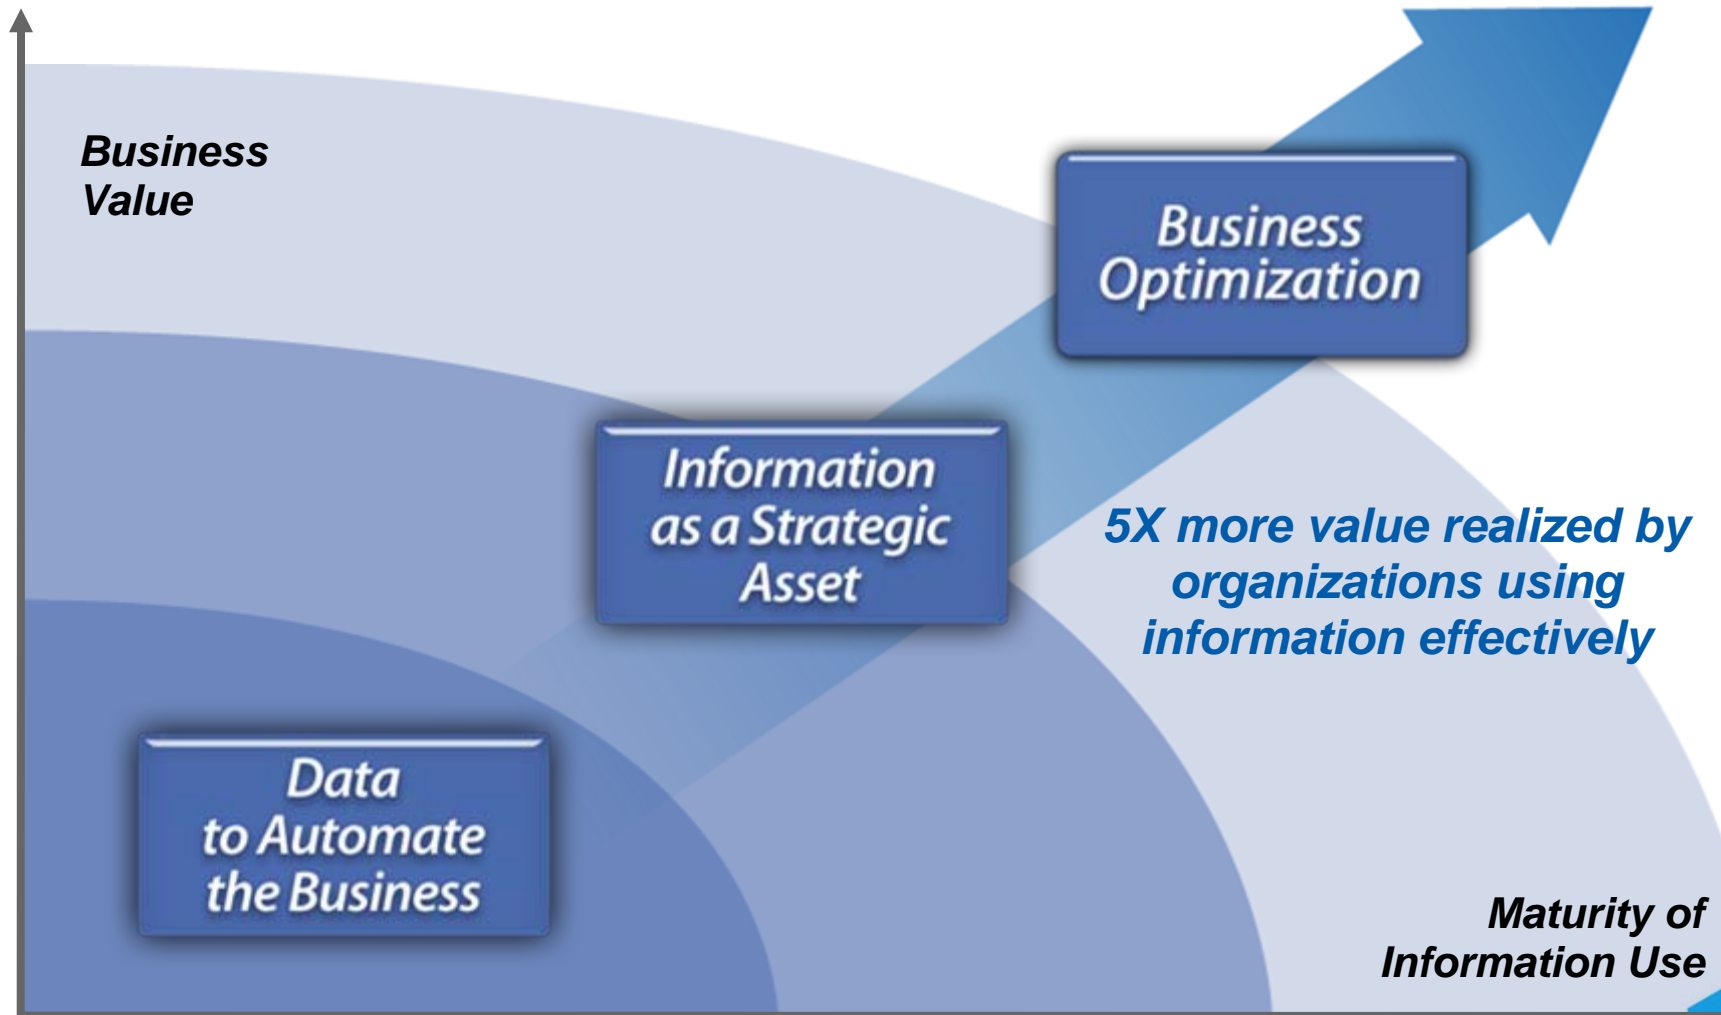

- ***Business metadata sharing***
- ***End-to-end data lineage***
- ***Data Profiling and Quality integration***
- ***InfoSphere DataStage with Cognos Data Manager***
- ***InfoSphere Change Data Capture with Cognos Now!***

Break-through Productivity With Information Server

Accelerating Your Journey to Business Optimization

Why Choose Information Server...

- **Complete, unified data integration capabilities**
 - *Removes the integration burden from you & allows for easy capability expansion*
- **End-to-end metadata management**
 - *Provides more insight and tracking of information – enables data governance*
- **Model-driven, metadata-driven development**
 - *Accelerates development, leverages industry assets, aligns business & technology*
- **Unified, market-leading data quality**
 - *Improves data, improves business trust, enables a single view*
- **Easy, visual, reuse-optimized development**
 - *Speeds time to value, lowers maintenance cost, Improves project to project leverage*
- **Snap-in, linear scalability through parallel processing**
 - *Handles any data volume, Optimizes hardware investment, Allows painless growth*
- **Extensive, native connectivity and change data capture**
 - *Allows all data to be integrated and accessed easily and efficiently with low impact to sources*
- **Extensive integration (Cognos, SOA, MDM, etc.)**
 - *Improves utility, Improves return on investments*
