

Using Data-Driven Decision-Making to Enhance Student and Teacher Performance

Moderator: Ellen Loos, Executive, Education

Panelists:

- *Dr. Kirk Kelly, Director of Accountability and Testing at Hamilton County Department of Education*
- Benjamin Silberglitt, PhD, Director, Software Applications, TIES

Student achievement and learning progress continue to challenge school districts and state Departments of Education. Tracking and managing student performance is critical as student success reflects on the investments our education leaders are making in driving the highest level of student achievement. With a strong focus on raising graduation rates, better preparation for continuing education or the workforce and the need for a more highly educated populace, education leaders must have greater visibility into student performance – from kindergarten to graduate education.

This panel session will focus on:

- How teachers, principals, school district heads and state DOE officials can use a Performance Management philosophy to accurately measure true student performance and institute changes that drive to the highest possible level of student achievement.
- Help teachers and principals identify those students and classrooms falling behind and take remedial action to get students and teachers back on track to achieve the learning objectives set forth.

Attend this panel and hear how to deliver on your promised learning agenda.
