

IBM Information Management Software Services

Reference Data Management Hub Capability

Centralized creation and management of reference data provides you with the security and audit controls that allow you to feel confident in moving forward with your data governance agenda for your business.

The goal of our solution is to broaden your ability to manage reference data. The consumable UI's and flexible data model allows the reference data to be managed and owned by the business data stewards within you organization providing you with a closer alignment to your dynamic business needs.

Highlights

- *Improved process for managing your reference data*
- *Security and audit controls that support your data governance strategy*
- *Business data steward ownership of data model provides flexibility*

Many businesses today face the challenge of dealing with outdated, multiple or non-standardized copies of their Master Data Reference Information which can lead to risks around security and governance and result in faulty reporting, lower data quality and inefficient reconciliation processes.

To correct this issue, data is generally synchronized using a manual process which can be costly, time consuming and error prone.

The IBM RDM Hub solution provides you with an improved process for managing your reference data as well as a reference data standard that you can apply across your business.

Overview

The IBM Reference Data Management hub is built on the MDM MIH platform and supports the centralized management of enterprise reference data and enables a formal reference data governance program.

This solution can be implemented as a stand alone hub with out of the box support for importing, security, audit, version control, mapping and work flow. IBM RDM hub is a critical element of your data governance implementation.

Starting with the design phase we will work with you to create a gap analysis as well as a functional and architectural design for your RDM Hub. This will allow us to create a detailed project plan for the implementation and ensure the right configuration for your requirements and validation of your solution.

From the design of your solution through to the hands on implementation of the RDM hub software you can rely on our IM Software Services experts to provide you with the right technical advice and guidance for solution success.

Your independence is our greatest success

That is the underlying theme to our delivery approach for the Reference Data Management Hub Capability. We believe that nothing is more important than transferring our knowledge to your organization. This provides you with long-term self-sufficiency through our mentored and parallel working approaches.

Engage today

With a world-wide team of highly trained services professionals, the IBM Information Management Software Services team can help build your solution with confidence while assuring that the business needs and expectations of your organization are met.

Our experts are ready to assist your organization with:

- Establishing project goals and expectations
- Maximizing the return on your investment
- Reducing project delivery times, complexity and risk through the delivery of proven offerings
- Reducing total cost of ownership

Available for whatever the delivery approach your business requires, the IBM Information Management Software Services team will produce results quickly, and will help to put your project on the road to success.
