

Highlights:

- Leverage IBM technology and expertise to quickly implement a powerful, agile data warehousing and analytics solution on the cloud
 - Quickly take advantage of the built-in analytics to analyze data to get more precise insights
 - Leverage proven practices and tools to accelerate data movement
 - Build dashDB skills quickly and effectively with expert advice and knowledge transfer directly from our experienced consultants
-

IBM dashDB Services

Accelerate your deployment of a cloud-based infrastructure for warehousing and analytics

IBM dashDB™ is a fast, fully managed, cloud data warehouse that leverages integrated analytics to deliver answers --- fast! dashDB provides the simplicity of a data warehouse appliance with the agility and flexibility of the cloud for any size organization. Powered by in-memory database technology, users will experience a powerful, simple, and agile cloud solution for running analytics queries.

What we offer

Our Analytics Services team offers many services that can help accelerate your adoption of this new exciting technology. Any client looking for rapid prototyping and deployment of a data warehouse and analytics as a service on the cloud will benefit from our services.

IBM dashDB QuickStart

We will help you implement the foundation for an IBM dashDB solution. This on-premise offering will include an introduction to dashDB and its architecture, how to create and load a database, how to administer dashDB, the tools and interfaces available and other relevant topics. At the conclusion of the engagement, you will have a functioning dashDB environment, including client data loaded.

Data Movement to IBM dashDB

We will help you leverage your existing data warehouse, by helping you to move data from an existing data warehouse to IBM dashDB. The source data for this offering can be IBM DB2®, IBM PureData® System for Analytics or raw data. This service can be delivered on-premise or remotely. If you choose to have this service delivered remotely, you have the option to purchase this service using Accelerator part numbers. The quantity of parts you need to purchase is determined by the size of the uncompressed data being moved. This cost effective service will help to move data as quickly as possible and get you up and running with your first application.

Custom projects

Our technical experts will support your existing data warehouse and analytics as a service on the cloud solution or any other type of custom project you may have.

About IBM Analytics Services

The Analytics Services organization provides expert services exclusively focused on the IBM Analytics product portfolio. Our depth of experience and extensive proven practices help clients mitigate risks, raise the quality of their implementations and build valuable skills. We have provided guidance, advice, reviews, assessments and assistance to thousands of clients around the world enabling them to maximize the return on investment for both their on premise and cloud based analytics solutions.
