HOW TO PURCHASE

You can choose from two convenient ways to order software in this catalog.

1. **By phone**— Call <PHONE NUMBER>, Monday through Friday from 8 a.m. to 8 p.m. ET. A purchase order or order letter will be required.
2. **Online**— Visit ibm.com/software/catalog to make a purchase by credit card.

ORDER FULFILLMENT

For your convenience, purchases may be fulfilled by electronic download. If you prefer product CDs or require product documentation, please make your request when you place your order by calling <PHONE NUMBER>.

PRODUCT PRICING

The prices listed in this catalog include one license and 12 months of software maintenance and reflect suggested retail price. Your prices may be lower based on your purchase history or membership in IBM Passport Advantage®.

If you are not a member of IBM Passport Advantage, join today for future purchases, and you may qualify for additional savings. This program will consolidate your account with a common set of agreements, processes and tools. Learn more at ibm.com/software/passportadvantage

New products. Just what you need to address new business challenges—or old ones.

IBM realizes that no sooner do you tackle one pressing problem than another one takes its place. That's why we never stop working on developing software that helps you support the business priorities you have today—and the ones you'll face tomorrow. Throughout this catalog you can learn more about our broad range of exciting new products.

Look for this symbol to know which products in the catalog are new!

EVERYTHING YOU NEED FROM A TO SYSTEM Z.

Although the range of software in this catalog can help you tackle myriad business challenges, there is another catalog of IBM software for System z™.

For the online repository where you can view and access IBM System z software—robust online business tools and software for the leading System z mainframe platform—please visit ibm.com/software/zseries

IBM SOFTWARE PORTFOLIO

The IBM software portfolio is an award-winning, comprehensive and integrated set of solutions based on open standards.

DB2 Information Management Software
Delivering the business value of information

Lotus software
Integrating people with business processes

Rational software
Software and system development

Tivoli software
Infrastructure management

WebSphere software
Transaction management and integration

IBM Workplace software
Simply a better way

KEEP YOUR EXISTING IBM PRODUCTS UP WITH THE TIMES. RENEW SOFTWARE MAINTENANCE.

SAVE TIME. With software maintenance, you get:

- **Unlimited access to IBM Software Support Centers worldwide**—by voice and, where available, electronically. You and your IT department don't have to wait to get answers and assistance for your routine technical support questions and needs.
- **Emergency support for critical problems 24x7.** If the unthinkable happens, your business can be back up and running quickly.

SAVE MONEY. Software maintenance gives you:

- **Upgrade protection**—no-cost access to new releases and enhancements as they roll out for the software you rely on every day.
- **Trade-up options and pricing**—to keep the software you run in synch with your changing business needs.

If your software maintenance is not up to date, you may be missing out on significant new capabilities and enhancements. Find out about recent product upgrades and their benefits at ibm.com/software/support

Take advantage of tightly integrated IBM product bundles—look for this symbol.

IBM Express Middleware

IBM Express Middleware provides best-of-breed functionality from the ground up for midsize businesses. The offerings are certified to meet benchmarks in ease of use, installation and total cost of ownership. When you purchase IBM Express Middleware, you get what you need to install and run the product for one low price. IBM Express Middleware requires only a single server, runs on key operating systems and can be easily upgraded as your business grows.

 **IBM Tivoli® Monitoring Express**
Helps small and medium businesses automate the monitoring of essential system resources to detect bottlenecks and potential problems and automatically recover from critical situations.

D57FZLL

 **IBM Tivoli Provisioning Manager Express for Inventory**

New low-cost, easy-to-use inventory management solution that collects, stores and maintains hardware and software information, and delivers customizable reports using a standard, Web-based interface.

D57L8LL

D57L4LL

 **IBM Tivoli Provisioning Manager Express for Software Distribution**

New low-cost, easy-to-use software distribution solution containing all the capabilities included in Tivoli Provisioning Manager Express for Inventory, plus the ability to quickly distribute software and security patch updates.

D57MMLL

D57MHLL

 **IBM Tivoli Storage Manager Express Edition**

Provides quick, reliable and easy backup and recovery for small and midsize businesses, departments and remote offices. Fast backup to disk means minimized backup window and network bandwidth. Easy install and configuration means you can conduct your first full backup in less than 30 minutes. Also works as agent for Microsoft Exchange and SQL.

Tivoli Storage Manager Express

D57I1LL

Tivoli Storage Manager Express for Microsoft SQL

D57HWLL

Tivoli Storage Manager Express for Microsoft Exchange

D57HZLL

 **IBM Tivoli Identity Manager Express**
Enables companies to effectively manage the integration, security and compliance of their on demand business infrastructure. This simple and secure identity management solution provides essential password management, user provisioning and access rights auditing capabilities.

D5742LL

IBM Tivoli Directory Integrator Express

Synchronizes identity data in real time across the enterprise to their authoritative sources without needing a proprietary, centralized data store. Captures changes to critical data, and updates directory and application identity repositories to verify that information used in security, portal management and other services is accurate, authoritative and up to date.

D54Q4LL

IBM DB2 Universal Database™ Express Edition

Provides a full-function relational database management system. Self-tuning, self-managing and self-configuring capabilities increase reliability while minimizing complexity.

D52BILL

D52BKLL

D535PLL

IBM Informix® Dynamic Server (IDS) Express Edition

Designed with midsize businesses in mind, it combines a self-managing database engine that provides the power, function and reliability needed for an on demand business with simplicity in packaging, installation and deployment—at a minimal investment cost.

D550BLL

D5509LL

D5507LL

“IBM WebSphere Application Server - Express offers us the ease of use and affordability that we need to automate our internal business processes. It also supports J2EE™, which gives us a way to build dynamic Web user interfaces with a drag-and-drop development methodology.”

Harry Johns,
Manager of
Insurance Information Technology,
AAA Carolinas

IBM Express Runtime

An integrated infrastructure offering that integrates the core server components of IBM WebSphere Application Server - Express, DB2 Universal Database Express, IBM HTTP Server and a common admin console. These components are provided in one preintegrated and configured package.

D54VTLL

D54VRLL

IBM Express Runtime Plus

Provides a growth path from IBM Express Runtime, with limits increased up to four processors.

D54VILL

D54VPLL

IBM DB2 Everyplace® Express Edition

Provides an attractively priced mobile database and synchronization solution for small and midsize businesses.

D52XJLL

D52XLLL

IBM Lotus® Domino® Messaging Express

Offers business-grade messaging and group scheduling software to organizations with 1,000 or fewer employees. Supports the full range of client access types — from simple Web mail and browser applications, through standards-based POP3 and IMAP e-mail, to rich, dynamic HTML-based messaging, to IBM Lotus Notes® or Microsoft® Outlook®. Includes collaboration tools such as discussion databases, basic workflow for documents, integrated presence awareness and interactive, online conversations.

D53V5LL

IBM Lotus Domino Collaboration Express

Includes all the capabilities of Lotus Domino Messaging Express plus a powerful platform to run collaborative applications. Available to businesses with 1,000 or fewer employees.

D52VQLL

IBM Lotus Domino Utility Server Express

Provides virtually unlimited access to collaborative applications (not individual mail files) for organizations with 1,000 or fewer employees. Companies can choose to provide access to their Lotus Domino applications through a Web browser or through a separately acquired Lotus Notes client — to make applications available to internal or external users as needed.

D52VULL

IBM Workplace™ Services Express

A team collaboration solution with an integrated portal that makes it simple to get teams and projects up and running, by providing easy-to-use and easy-to-customize team spaces to create, edit and share documents.

D54Q8LL

D54QALL

IBM WebSphere Application Server - Express

Creates, tests, deploys and manages dynamic Web sites, applications and Web services. Wizards, samples and application templates simplify building applications.

D520ELL

D522LLL

D522PLL

IBM WebSphere Business Integration Server Express

Allow businesses to quickly and easily integrate their applications to better serve customers, partners and suppliers. Include adapters, collaborations, simplified tooling and necessary prerequisites. WebSphere Business Integration Server Express Plus includes additional adapters, additional tooling and optional add-on adapters and collaborations.

WebSphere Business Integration Server Express

WebSphere Business Integration Server Express Plus
D53QHLL

WebSphere Business Integration Server Express Plus Adapter Capacity Pack
D53QJLL

WebSphere Business Integration Server Express Plus Collaboration Pack
D53QLLL

IBM WebSphere Commerce - Express

A complete end-to-end solution providing the core capabilities that growing midsize businesses need to create or expand their B2B or B2C e-commerce site with a minimum investment.

WebSphere Commerce - Express
D53WYLL

WebSphere Commerce - Express Developer Edition
D53WVLL

IBM WebSphere Commerce - Express Developer Edition

Includes a single seat of the development environment, and additional seats can be purchased.

D53WVLL

IBM WebSphere MQ Express

Provides simple application-to-application connectivity for Microsoft Windows® and Linux® environments, enabling existing investments to be integrated without complex network coding.

D52VFLL

IBM WebSphere Portal - Express

Allow for easy deployment of sophisticated portal solutions that support employees, trading partners and customers. Each user can customize content, applications, portal page organization and graphical appearance. WebSphere Portal - Express Plus adds collaboration features that help teams of individuals work together effectively on projects.

WebSphere Portal - Express

ON DEMAND BUSINESS™

IBM Express Middleware 5

Application servers

The foundation of a resilient and responsive enterprise, IBM application servers support the business logic for an application program. IBM application servers manage interactions between users and applications and between applications and data to deliver the reliable performance and scalability that your On Demand Business needs to succeed.

“IBM WebSphere Application Server Network Deployment allows us to plug in just about any third-party security solution.”

David Solan,
Head of Technical Architecture,
FINEOS Corporation Ltd.

IBM Lotus Domino Enterprise Server

In addition to the features of IBM Lotus Domino Messaging Server (see description on page 12), this server provides a robust platform for developing and deploying collaborative applications on a wide variety of operating systems. It also offers clustering capabilities for failover and load balancing.

Lotus Domino Enterprise Server
D51NRLL

Lotus Domino Enterprise Server for Linux on zSeries
D53HBLL

IBM Lotus Domino Utility Server

Provides access to nonmail collaborative applications only. If accessed by a Web browser, no client access license (CAL) is required. (Allows Lotus Notes client access, with separately acquired Lotus Notes CAL.) Designed for deploying Lotus Domino applications with a high number of users who are difficult to track. Includes entitlement to IBM Lotus Workflow and IBM Lotus Domino Document Manager.

Lotus Domino Utility Server
D51NYLL

Lotus Domino Utility Server for Linux on zSeries
D53HDLL

IBM Lotus Domino Utility Server Express

See description and part number on page 4.

IBM WebSphere Application Server

An industry-leading J2EE and Web services application server that builds, deploys and manages on demand business applications. Fully J2EE 1.4 certified, it delivers a high-performance and extremely scalable transaction engine for dynamic business applications.

D5CB9LL

IBM WebSphere Application Server Network Deployment

Expands on WebSphere Application Server to provide advanced Web services features and extended deployment services such as clustering and high availability. Provides a robust, secure infrastructure to help ensure 24x7 availability of business-critical Java applications.

D5ALTLL

IBM WebSphere Extended Deployment

Extends the capabilities of WebSphere Application Server Network Deployment to deliver a dynamically scalable, high-performance environment with extended manageability for distributed WebSphere applications. Supports on demand scaling, simplifies operation management and improves quality of service for applications running very high transaction volumes.

D545CLL

IBM WebSphere Application Server for Developers

The functional equivalent of WebSphere Application Server, providing an easy-to-use development environment to build and test on demand applications (licensed for development use only).

D51JXLL

IBM WebSphere Application Server Community Edition

A lightweight J2EE application server built on Apache Geronimo. Harnesses the latest innovations from the open source community, and provides a readily accessible, flexible foundation for building and deploying Java applications. Download code from IBM at no charge. IBM offers technical support as an annual subscription, priced per server.

Commerce

These commerce offerings accelerate the implementation, automation and integration of hundreds of cross-channel marketing and sales processes, helping companies of all sizes become an On Demand Business and allow their customers to conduct business when they want, how they want and where they want. These offerings support both B2C and B2B or hybrid commerce business models — with a single common infrastructure.

IBM WebSphere Commerce Business Edition

Provides a powerful, flexible infrastructure based on a unified platform for running large, high-volume B2B and advanced B2C e-commerce Web sites for a global on demand business. Supports customer-specific pricing, terms and entitlements that involve individuals with varying levels of authority.

D53VBLL

IBM WebSphere Commerce Developer Business Edition

Provides a corresponding development environment for WebSphere Commerce Business Edition.

D53VGLL

IBM WebSphere Commerce Professional Edition

Increases site functionality for B2C and multichannel retailers by personalizing customer buying experiences, streamlining order processes, reducing cycle times, optimizing operational efficiencies and accommodating high transaction volumes. Provides infrastructure to support and integrate multiple sales channels, including Web, kiosk, POS, buy online and pickup in store, and more.

D53WLLL

IBM WebSphere Commerce Developer Professional Edition

Offers a corresponding development environment for WebSphere Commerce Professional Edition.

D53WRLL

IBM WebSphere Commerce - Express

A complete end-to-end solution providing the core capabilities that growing midsize businesses need to create or expand their B2B or B2C e-commerce site with a minimum investment.

D53WYLL

IBM WebSphere Commerce - Express Developer Edition

Includes a single seat of the development environment, and additional seats can be purchased.

ON DEMAND BUSINESS™

Business integration, mobile, speech and enterprise access

IBM business integration software helps you create seamless connections between your people, processes and information by breaking down silos within your IT environment. It gives you the flexibility to quickly adapt to changing business conditions and to deliver the right information to the right people and applications at the right time.

“We were looking at the best way to integrate our IT infrastructure, and we chose WebSphere MQ as the framework for messaging between SAP and legacy applications.”

Vito Cammarota,
IT Architecture and Application Manager,
Alenia

Application integration

IBM WebSphere MQ

Delivers reliable integration for applications and Web services, allowing existing software and hardware investments to be fully leveraged across more than 80 platform configurations. Provides an award-winning messaging backbone as a proven transport for enterprise service bus (ESB). Supports JMS, SSL, SOAP, Eclipse and IPV6.

D523ZLL

IBM WebSphere MQ Everyplace

Extends business integration to mobile devices using secure and dependable application messaging. Connects seamlessly to many WebSphere offerings by providing a mobile transport layer that can operate over semi-connected wireless and wireline networks. Available in two editions.

WebSphere MQ Everyplace Network Edition for integrating mobile and wireless devices with the enterprise
D51TKLL

WebSphere MQ Everyplace Retail Edition for integrating retail store controllers and point of sale with head-office systems
D51TNLL

IBM WebSphere Information Integrator

See descriptions and part numbers on page 19.

IBM Lotus Enterprise Integrator®

High-performance, scalable exchange of data between Lotus Domino and native access to host and relational data systems. With point-and-click ease, creates, manages and schedules batch and real-time access to provide integration with relational systems such as IBM DB2® and Oracle, Sybase and more.

D51QVLL

IBM Lotus Connector for SAP R/3 with MTA and Workflow

This set of tools provides scheduled or event-driven SAP data access, mail transfer to and from SAP and Lotus Domino, or integration of SAP workitems within your Lotus Notes mailbox.

D525QLL

IBM WebSphere MQ Extended Security Edition

This enhanced edition of WebSphere MQ provides a multiplatform security management solution with end-to-end, application-level data protection features. Enables enterprise-wide, remote management of security policies on the MQ network and can be deployed to existing production environments without changes to existing WebSphere MQ applications.

D52DOLL

IBM WebSphere Enterprise Service Bus

Provides Web services connectivity, Java Messaging Service and service-oriented integration, allowing customers to quickly and easily build and deploy interactions between applications.

D56UCLL

IBM WebSphere Message Broker

Builds on WebSphere Event Broker (formerly WebSphere MQ Event Broker and WebSphere Business Integration Event Broker) to provide a further level of intermedia-tion between applications using different message structures and formats including XML, COBOL, C, EDI, SWIFT and other standards. Supports any-to-any transformation, database integration and Web services.

D5245LL

IBM WebSphere DataStage® TX Extender for Message Broker

Extends the range of message formats and protocols that Message Broker can handle, including very large, complex semistructured data sets. Offers wide support for industry standards with predefined industry PACKs.

D56ESLL

IBM WebSphere Message Broker with Rules and Formatter Extension for Multiplatforms

Expands on WebSphere Message Broker functionality by providing a high-performance rules function that uses predefined criteria to process messages with complex structures and multiple variables. Also features continuity, compatibility and investment protection to existing WebSphere MQ Integrator, Version 2.1.

D5249LL

IBM WebSphere Message Broker File Extender

Extends WebSphere Message Broker by adding information brokering for file-based business data. Plug-in nodes extend the processing further to include file content and messages. Supports conversion of files to messages and messages to files, and provides transformation, enrichment and logging.

D5501LL

IBM Tivoli OMEGAMON® XE for Messaging

Makes it easy to determine the availability and performance of critical messaging and business process components for managing and monitoring WebSphere MQ, IBM WebSphere MQ Integration Broker and IBM WebSphere InterChange Server. Monitors the status of key components and provides comprehensive monitoring and management capabilities with robust security features through a powerful set of tools. Supports WebSphere MQ, Version 6.

D54UVLL

IBM WebSphere Adapters

Plug into your business applications and data sources to reveal information held inside, how it is structured and what can be done with it. Control information flow in and out of applications without changing the application. Prepackaged products help customers integrate legacy and packaged applications, technologies and main-frame systems, addressing industry-specific and cross-industry needs. Complement other WebSphere Business Integration products.

WebSphere Adapter for SAP

WebSphere Adapter for JDBC
D555PLL

WebSphere Adapter for Flat Files
D555TLL

Business process management

IBM WebSphere MQ Workflow

Facilitates rapid process deployment to people, applications and Web services, based on the WebSphere software platform and WebSphere MQ. Scalable, fault-tolerant and optimized for parallel distributed processing in a service oriented architecture.

D524LLL

IBM WebSphere Business Integration Server Express

See description and part numbers on page 5.

IBM WebSphere Process Server

Next-generation process server for integrating and automating business processes using enterprise services based on a service oriented architecture.

D558JLL

IBM WebSphere Integration Developer

New Eclipse 3.0-based tool to assemble business processes with minimal programming skills.

D5571LL

IBM WebSphere Partner Gateway Advanced Edition

Provides a consolidated B2B gateway for partner community integration, capable of serving multiple B2B protocols and standards. Ensures consistent security and service levels apply to all external partner connections.

D5553LL

D554XLL

D5557LL

IBM WebSphere Partner Gateway Enterprise Edition

Provides a consolidated B2B gateway for partner community integration, capable of serving multiple B2B protocols and standards. Ensures consistent security and service levels apply to all external partner connections. Licensed to an unlimited number of partner connections.

D554ZLL

D554VLL

IBM WebSphere Partner Gateway - Express

See description and part numbers on page 5.

IBM WebSphere Business Integration Server Foundation

Delivers a next-generation integration environment for building, deploying and choreographing Web services to form composite applications within a service oriented architecture. Combines the benefits of a native Business Process Execution Language for Web Services (BPEL4WS) process choreographer and business rule beans with the scalability and market-leading features of WebSphere Application Server Network Deployment-hosted J2EE application components (see page 6).

ON DEMAND BUSINESS™

Business integration, mobile, speech and enterprise access 9

“With IBM’s help we can move forward with a service oriented architecture that helps us respond to today’s challenges and gives us a flexible architecture to respond to future challenges.”

Ram Sunkara,
Manager,
Integration Competency Center,
Xerox

IBM WebSphere Business Modeler

WebSphere Business Modeler products help organizations fully visualize, comprehend and document their business processes. Rapid results can be obtained through the collaboration functionality, where a subject-matter experts team clearly defines business processes and models, then deploys, monitors and takes actions based on KPIs, alerts and triggers for continuous optimization. Business processes then get tightly linked with strategic corporate objectives and honed as required.

WebSphere Business Modeler Basic

IBM WebSphere Business Integration Workbench

An easy-to-use process modeling tool that allows testing, analyzing, simulating and validating of business processes and software models. Offers a full range of business process models, from the creation of process flow diagrams to the validation of process.

WebSphere Business Integration Workbench User
D527TLL

WebSphere Business Integration Workbench Server
D527WLL

IBM WebSphere Business Monitor

Displays real-time information from a variety of environments to enable decisive business innovation and optimization. The monitor feeds this data back into process modeling tools, with alerts and notifications to key users, to deliver continuous business process improvements. Allows the monitoring of nonprocess data by retrieving information from external databases. Tightly integrates with both WebSphere Business Modeler and WebSphere Process Server—providing support for the Common Event Infrastructure by leveraging the Common Base Event (CBE) format.

D527QLL

IBM WebSphere Host Access Transformation Services

Provides all the tools needed to quickly and easily extend host applications to business partners, customers and employees. Makes 3270 and 5250 applications available as HTML through the most popular Web browsers, while converting host screens to a Web look and feel. Makes it easy to improve the workflow and navigation of host applications without any access or modification to source code. IBM iSeries™ versions are available.

D53H4LL/D54R7LL

D56QDLL/D56Q7LL

IBM WebFacing Deployment Tool with HATS Technology

A single product that offers the advantages of both IBM WebFacing Tool and HATS. Makes 5250 applications available as HTML through a browser, or in a portlet, while converting host screens to a Web look and feel. Helps improve the workflow and navigation of host applications.

D575WLL

D575ZLL

D5762LL

D5765LL

D575QLL

IBM Host Access Client Package for Multiplatforms

Allows managed migration of Web-to-host technologies at a customized pace. At one price per user, provides access to legacy applications for all types of users regardless of their needs. This package includes IBM Personal Communications for traditional emulation and WebSphere Host On-Demand for browser-based emulation. iSeries version is available.

D5BGCLL

IBM CICS® Transaction Gateway

A J2EE connector to CICS applications that supports the J2EE Connector Architecture (JCA) 1.5 specification. Enables CICS applications to be used in comprehensive and sophisticated J2EE and Web services solutions that are hosted on powerful application servers, such as WebSphere Application Server.

D5D8DLL

IBM WebSphere Host Integration Solution

This single offering includes virtually everything needed to create and deploy advanced on demand business applications that rely on host systems. Included are IBM Personal Communications, WebSphere Host On-Demand, WebSphere Host Access Transformation Services, IBM Communication Servers, WebSphere Application Server and an IBM Rational Software Development Platform tool. iSeries versions are available.

D58IDLL/D54PCLL

D58I4LL/D54P2LL

IBM Software Solution for On Demand Workplace

A single offering that combines IBM Workplace™ Collaboration Services (see page 14) and IBM WebSphere Portal Enable (see page 13). Gives users the ability to integrate custom-built and third-party applications and data with an integrated, secure access point.

D53KALL

Mobile, speech and enterprise access

IBM WebSphere Voice Application Access

Allows customers, suppliers and employees to use any phone to access WebSphere Portal, providing a consistent visual and voice experience for the end user while leveraging the existing portal infrastructure.

D520ALL

IBM WebSphere Everyplace Access

Transforms an organization into an On Demand Business by extending access to critical information and applications using mobile devices.

Starter Edition (50-user license)

D52C0LL

Enterprise Edition

D5196LL

IBM WebSphere Everyplace Connection Manager

Secure, roaming access across a wide variety of networks from a wide variety of devices.

Starter Edition (50-user license)

D52CYLL

Enterprise Edition

D52CSLL

IBM WebSphere Everyplace Deployment

End-to-end platform including a server-managed client, tools and server components to build, deploy and maintain solutions that can adapt to device and network conditions and deliver a rich graphical user interface.

Starter Edition (with 50 client licenses)

D558TLL

Enterprise Edition

D558QLL

IBM Workplace Managed Client for WebSphere

The client function and toolkit to build and deploy solutions with a rich graphical user interface that can adapt to device and network conditions. Order in addition to WebSphere Everyplace Deployment if more than 50 clients are needed. Product is ordered and delivered as IBM WebSphere Everyplace Deployment for Windows and Linux 6.

WebSphere Everyplace Deployment for Windows and Linux 6

D55DQLL

IBM Lotus Domino Everyplace

A wireless solution that gives mobile Lotus Notes and Domino users access to their e-mail, calendars, to-do lists, directories and other applications from virtually anywhere, at any time. Supports multiple mobile devices, including personal digital assistants (PDAs), smartphones and pagers — from a single platform.

D5216LL

IBM Lotus Sametime® Everyplace

Provides mobile users with instant messaging and awareness capabilities of Lotus Sametime from WAP- and SMS-enabled mobile devices.

D5D2NLL

IBM WebSphere Everyplace Mobile Portal Enable

See description and part numbers on page 13.

ON DEMAND BUSINESS™

Business integration, mobile, speech and enterprise access 11

Messaging, collaboration and portal

IBM messaging and collaboration software can help your organization manage, communicate and collaborate effectively internally and externally. Bring people together through unified e-mail, calendaring, instant messaging, Web conferencing, team spaces, learning and collaborative applications. Integrate real-time interaction of people, applications, information and business processes, to increase responsiveness and make better, faster decisions with personalized, role-based portals for B2E, B2B and B2C.

“My positive experience with Lotus Domino during previous development projects made me confident that it would be the ideal choice for Nemetschek’s project information application.”

Siegbert Heinecke,
CEO,
rivera GmbH

IBM Lotus Domino products

IBM Lotus Domino Messaging Server

Includes integrated messaging and directory services that provide world-class e-mail, calendaring and scheduling, discussion databases and address books in a unified, easy-to-manage architecture. Includes collaboration tools such as discussion databases, basic workflow for documents, presence awareness and interactive, online conversations.

IBM Lotus Domino Utility Server Express

See description and part number on page 4.

The following two Lotus clients can be used separately or together to provide maximum flexibility. To license, combine with one or more of the above Lotus server offerings.

IBM Lotus Notes

This premier, high-function integrated desktop client for accessing Lotus Domino server combines enterprise-class messaging, calendaring and scheduling capabilities with a powerful platform for collaborative applications.

For messaging only
D5CPILL

For messaging and applications
D5CS2LL

IBM Lotus Domino Web Access and Lotus Domino Access for Microsoft Outlook

A sophisticated client that provides users with access to leading Lotus Domino messaging and collaboration features—delivered through a Web browser. Includes Lotus Domino Access for Microsoft Outlook for easy migration from Microsoft Exchange to Lotus Domino, allowing users to continue working with familiar Outlook clients.

For messaging only
D5D5ILL

For messaging and applications
D5CGLLL

IBM Lotus Sametime

An IBM market-leading platform for real-time collaboration based on three on demand capabilities—presence awareness, instant messaging and Web conferencing.

D5CT2LL

IBM Lotus Web Conferencing

Delivers all the benefits of Web conferencing while offering the cost savings of an on-premise deployment. With concurrent user pricing, the same license can be used to hold internal and external meetings. Based on Lotus Sametime.

D5D7GLL

IBM Lotus QuickPlace®

An enterprise-ready, self-service workspace expressly designed for team collaboration. Users can create secure workspaces on the Web, providing a place to collaborate on projects.

D5CSULL

IBM Lotus Workflow

A stand-alone application development tool that works with Lotus Domino and speeds the creation and deployment of workflow-oriented applications. Allows organizations to standardize and streamline time-consuming, people-based activities and track their progress.

D52E1LL

IBM Lotus Domino Document Manager

Makes it easy for many levels of users to securely capture, store, manage and provide access to collaborative business documents. Helps manage the complete life cycle of office documents from collaborative authoring to review, approval and archival.

D53KXLL

IBM Lotus Domino Unified Communications

Allows e-mail, voice and fax messages to be stored in a single mail file. Extends message access to additional devices and technologies, such as mobile phones, pagers, PDAs and browsers. Can alert subscribers in different ways when a message meets certain criteria.

Lotus Domino Unified Communications for Avaya processors

Lotus Domino Unified Communications for Captaris processors
D51WGLL

Lotus Domino Unified Communications for Cisco processors
D51WJLL

IBM Lotus Learning Management System

Allows customers to manage both e-learning and classroom training programs from a single platform, so they can efficiently administer their organizations' learning activities and deliver training in a more convenient, cost-effective and timely manner. Integrates with IBM Lotus Virtual Classroom for blended learning sessions.

D525ELL

IBM Lotus Virtual Classroom

Delivers live, Web-based interactive training to employees, suppliers and trading partners. Virtual whiteboarding, breakout sessions, structured Web conferencing and record-and-playback capabilities help ensure effective learning while saving on travel costs.

D51J4LL

IBM WebSphere Portal products

IBM WebSphere Portal Enable

An industry-leading solution delivering a single point of personalized interaction with applications, content, documents and business processes. Helps build scalable and reliable process-driven portals based on open standards that provide an onramp to a service oriented architecture. Now with support for orchestrated workflow, virtual portals, enhanced content management and IBM i5/OS™.

D50TLL

IBM WebSphere Portal Extend

Builds on the features of WebSphere Portal Enable with extended search capabilities to optimize productivity, a Web analysis function to provide vital business intelligence and collaboration tools like instant messaging, team workspaces and a people finder portlet to enhance productivity.

D50TNLL

IBM WebSphere Portal - Express and Express Plus

See description and part numbers on page 5.

IBM WebSphere Everyplace Mobile Portal Enable

Provides browser-based, device-independent access to portal content. Its Intelligent Content Adaptation technology reduces development and maintenance cost. Reduces time to market by automatically adding support for new devices.

IBM Workplace for Business Controls and Reporting

Provides a Web-based foundation for monitoring business controls in response to Section 404 of the Sarbanes-Oxley Act or other control initiatives, such as CoBIT. Can help companies gather and monitor information about controls in a consistent manner.

D53ZILL

Information management

Information management solutions from IBM optimize business value by integrating, analyzing and efficiently managing all your information assets throughout their life cycle. IBM's portfolio delivers a comprehensive information infrastructure to leverage all information assets regardless of format, location or platform.

IBM DB2 Universal Database

DB2 Universal Database is the database management system that delivers a flexible and cost-effective database platform to build robust on demand business applications. The DB2 Universal Database family also includes solutions tailored for specific needs like data warehousing or high-volume transaction systems.

IBM DB2 Universal Database Enterprise Server Edition

Designed to meet the database server needs of midsize to large businesses. Can be deployed in Linux, UNIX® and Windows environments on many sizes of servers.

D518GLL

Priced option for DB2 Universal Database Enterprise Server Edition

Database Partitioning Feature

Allows DB2 Universal Database Enterprise Server Edition customers to partition a database within a single server or across a cluster of servers.

D518JLL

IBM DB2 Universal Database Workgroup Server Unlimited Edition

Offers a simplified per processor licensing model for deployment in a departmental or small business environment. Can be deployed in Linux, UNIX and Windows environments on systems with up to four CPUs.

D51NDLL

IBM DB2 Universal Database Workgroup Server Edition

Designed for deployment in a departmental or small business environment with a small number of internal users. Can be deployed in Linux, UNIX and Windows environments on systems with up to four CPUs.

D5B7FLL

D5B77LL

Priced option for DB2 Universal Database Workgroup Server or Express

High Availability Disaster Recovery (HADR)

Provides a high-availability solution by replicating data from a source database (called the primary) to a target database (called the standby). Protects for both partial and complete site failures.

D53Z9LL

IBM DB2 Universal Database Express Edition

See description and part numbers on page 3.

IBM DB2 Universal Database Personal Edition

Provides a single-user database engine ideal for deployment to PC-based users. Can be remotely managed, allowing for deployment in occasionally connected or remote office implementations that don't require multiuser capability.

D5B69LL

IBM DB2 Everyplace

DB2 relational database and enterprise synchronization architecture for mobile and embedded devices.

IBM DB2 Everyplace Enterprise Edition

A relational database and enterprise synchronization solution enabling enterprise applications and enterprise data to be extended to mobile devices.

D519ALL

IBM DB2 Everyplace Express Edition

Provides an attractively priced mobile database and synchronization solution for small and midsize businesses.

ON DEMAND BUSINESS™

Information management 15

“DB2 Universal Database provides robust information management features to meet the needs of our business managers. Our decision to go with DB2 turned out to be a fortunate choice for us because it gives us precise, granular control of the information going to our users.”

Francesco Amabile,
IT Director,
Alleanza Salute Italia, S.p.A.

Data warehousing and analytics

Gather, manage and analyze data, generating information to develop insight for informed decisions.

IBM DB2 Universal Database Data Warehouse Enterprise Edition

Offers a complete enterprise level for customers building demanding business intelligence solutions.

D5298LL

IBM DB2 Data Warehouse Base Edition

For a price-sensitive customer not in need of regular business intelligence functionality such as mining, ETL, query management and Web-based analytics.

D56Y6LL

IBM DB2 Alphablox

Enables rapid customization with a platform of open standards-based components that significantly decrease the time needed to design, develop and embed advanced analytics into business processes.

D53YHLL

IBM DB2 Connect™

Enables fast, secure access from the Web to enterprise data stored in both relational and nonrelational databases. Provides extensive tools for developing client-server and Web applications. Integrates mobile PC and pervasive computing device users with current data from database servers.

IBM DB2 Connect Personal Edition

Licensed for use by one user on a single workstation, allowing connection to mainframe and minicomputer database servers.

D5AQYLL

IBM DB2 Connect Enterprise Edition

Available with the standard server/user model licensing option.

D5AW0LL

D5AW9LL

IBM DB2 Connect Application Server Edition

License charges are based on the number of processors used by the Web or application servers connecting to DB2 Connect.

D51PVLL

IBM DB2 Connect Unlimited Edition

Unlimited usage model based on millions of service units (MSU) per hour based on the mainframe DB2 Universal Database entitlements.

D5AQPLL

IBM DB2 Multiplatform Tools

Optimize DB2 Universal Database by recovering data quickly and precisely, pinpointing data changes, protecting sensitive data and automating database administration tasks.

IBM DB2 Performance Expert for Multiplatforms

Helps database administrators simplify database performance management and tuning.

D512GLL

IBM DB2 High Performance Unload for Multiplatforms

High-speed tool for unloading, extracting and repartitioning data from DB2 databases.

D512ALL

IBM DB2 Recovery Expert for Multiplatforms

Provides powerful diagnosis, reporting and automated recovery capabilities to maintain accurate data and high availability.

D512DLL

IBM DB2 Test Database Generator for Multiplatforms

Creates subsets of DB2 production data while masking out any sensitive or confidential data.

D53FYLL

IBM DB2 Data Archive Expert for Multiplatforms

Autonomic tool that offers a fast, flexible and efficient way to archive and retrieve DB2 data objects.

D54Y2LL

IBM DB2 Web Query Tool for Multiplatforms

Connects Web-based users directly to multiple enterprise databases. Builds, shares and runs queries and converts query results to XML and other highly transportable file formats.

D50R4LL

IBM DB2 Table Editor for Multiplatforms

Updates, creates and deletes data across multiple DB2 database platforms, including the Informix Dynamic Server, with security, referential integrity and support for the advanced capabilities of DB2. DB2 Table Editor for Multiplatforms is accessible to both Windows and Java-based users.

D50R7LL

IBM DB2 Toolkit for Multiplatforms

With the purchase of one license, the toolkit offers the following DB2 Multiplatform Tools — at a significant cost savings:

- IBM DB2 Data Archive Expert for Multiplatforms
- IBM DB2 High Performance Unload for Multiplatforms
- IBM DB2 Performance Expert for Multiplatforms
- IBM DB2 Recovery Expert for Multiplatforms
- IBM DB2 Test Database Generator

D57E3LL

Informix

Providing industrial-strength, near-zero-administration computing, Informix Dynamic Server (IDS) offers high levels of performance and reliability with a low cost of administration.

IBM Informix Dynamic Server (IDS)

Provides online transaction processing capabilities, turnkey disaster recovery and selective replication of data across geographic locations. Automated backup and restore functions can help eliminate many manual administration tasks.

Informix Dynamic Server Enterprise Edition Unlimited
D6DAXLL

ON DEMAND BUSINESS™

Information management 17

“IBM content management software provides a basis for managing many types of content and providing fast, easy access to it.”

Geoff Yeats,
Chief Information Officer,
Transit New Zealand

IBM DB2 Document Manager

Develops and distributes critical business documents across an organization. Built-in integration with DB2 Records Manager.

D54QPLL

IBM DB2 Records Manager

Scalable, Web-based infrastructure tool that applies structured retention and disposition rules to records whether they are digital or traditional paper-based documents. Helps reduce evidence-discovery costs and demonstrate compliance with regulations.

D54T1LL

IBM WebSphere Content Discovery Server

Enables organizations to understand user intent and application context.

D576ALL

IBM WebSphere Content Discovery for Commerce

Helps online retail and catalog companies convert shoppers into buyers by making it easy for people to find the products and services that best match their specific needs.

D576CLL

IBM WebSphere Content Discovery for Self Service

Helps organizations increase portal adoption and reduce customer service costs by empowering customers, partners and employees to easily tap disparate information available across intranets, extranets and corporate portals.

D576JLL

IBM WebSphere Content Discovery for Online Support

Online support solution to reduce inbound e-mails and phone calls.

D576RLL

IBM WebSphere Content Discovery for Contact Centers

Delivers contextually relevant information located across an organization to efficiently resolve support inquiries without escalation, increase online resolution rates, improve customer satisfaction and enhance agent productivity.

D5774LL

IBM WebSphere Content Discovery for Case Resolution

Intercepts online service requests and immediately responds to people with accurate answers, which may prevent the need to escalate to the contact center.

D5776LL

IBM Classification Module for WebSphere Content Discovery

Classifies long-form requests such as e-mails, case management notes and discussion group comments.

D57DXLL

IBM DB2 CommonStore

Archives key data, documents and e-mail, while giving users on demand direct access to content from SAP, Exchange Server and Lotus Domino applications.

IBM DB2 CommonStore for Exchange Server and IBM DB2 CommonStore for Lotus Domino

Provides e-mail archival and retention solutions to help comply with e-mail message retention requirements and gain operational efficiency. Manages unstructured content types, including content from Windows file servers and Microsoft SharePoint® Portal, to integrate images, documents, printouts and more for policy-driven archive. Built-in integration with DB2 Records Manager.

DB2 CommonStore for Exchange user

D54T9LL

DB2 CommonStore for Lotus Domino user

D54TBLL

IBM DB2 CommonStore for SAP

Enables SAP customers to manage the growth of SAP application data through periodic archiving to improve and control overall system performance.

D54T7LL

IBM WebSphere Information Integration

Integrates and transforms data to deliver information that can be trusted for critical business initiatives. Facilitates understanding, cleansing and enhancement of information, while governing its quality.

IBM WebSphere Information Integrator OmniFind™ Edition

Powers intranets, extranets and corporate public Web sites with an enterprise search capability.

WebSphere Information Integrator OmniFind Edition
D54U4LL

WebSphere Information Integrator OmniFind Edition Connector
D54U2LL

IBM WebSphere Information Integrator Content Edition

Provides companies with real-time, integrated access to business information — structured and unstructured, mainframe and distributed, public and private — across and beyond the enterprise.

D544QLL

IBM WebSphere Information Integrator Replication Edition

Replicates across mixed relational data sources and focuses on high-throughput queue replication.

D51VTLL

IBM WebSphere Information Integrator Standard Edition

Provides federation and replication, including powerful cost-based query optimization and integrated caching.

D51LILL

IBM WebSphere Information Integrator Advanced Edition

Provides federation and replication, including cost-based query optimization and integrated caching plus an unrestricted license for DB2 Universal Database Enterprise Server Edition 8.2.

D51KLLL

IBM WebSphere DataStage®

Integrates enterprise information and transforms data, simplifying administration and speeding implementation. Integrates data with a high-performance parallel framework and extended metadata capabilities.

D55A6LL

Enterprise Edition
D55ACLL

IBM WebSphere QualityStage

Provides a framework for developing and deploying data investigation and analysis, standardization, probabilistic matching and survivorship, as well as for integrating data in support of master data management initiatives. In batch and real time, the same data quality services are seamlessly deployed to facilitate data validation, cleansing or consolidation of entities such as customers, products and materials.

D55B3LL

IBM WebSphere ProfileStage

Automates the important first step in data integration — data profiling and source system analysis — and reduces the time it takes to profile data from months to weeks or even days. Builds data models to facilitate source-to-target mapping, accelerating time to market and reducing overall costs for data integration projects.

ON DEMAND BUSINESS™

Information management 19

Software development

The IBM Rational Software Development Platform enables organizations to govern the business process of software and systems development. Based on open standards and on the Eclipse open-source framework, this IBM platform provides transparency across the software development and delivery life cycle. It helps organizations manage geographically distributed development, address regulatory compliance, and construct and govern service oriented architectures.

“We felt that Rational ClearQuest was probably the easiest tool for us to get immediate results and that Rational RequisitePro was the most important for getting long-term results. In the short-term, we needed to be able to track what we were doing and to show what was happening – the short learning curve of Rational ClearQuest helped us do that. We also felt that getting the requirements right for each project and making sure things were done right the first time would have the biggest pay off long-term.”

Bill Lucas,
Data Processing Manager,
Florida Department of Health

IBM Rational Computer Based Training

Hone your skills and learn more about Rational tools with this comprehensive set of self-paced training classes. Take the classes at your own pace, at your own time and repeat any number of times. These classes are purchased as a product that you install on your own network or local machine.

D54XVLL

IBM Rational Web Based Training

Get foundational and prerequisite knowledge on Rational tools with this comprehensive set of self-paced training classes that can be accessed anywhere you have access to the Internet — 24 hours a day, 7 days a week.

D552PLL

Requirements and analysis

IBM Rational RequisitePro

An easy-to-use requirements and use case management tool that lets teams author and share their requirements using familiar document-based methods and leverage database-enabled capabilities such as requirements traceability and impact analysis. The result: better communication and management of requirements with an increased likelihood of completing projects on time, within budget and above expectations.

D53NZLL

D532PLL

IBM Rational Rose® Data Modeler

A visual modeling tool that makes it possible for database designers, analysts, architects and developers to work together, capture and share business requirements and track them as they change throughout the process. Provides the realization of the Entity Relationship (ER) methodology using UML notation to bring database designers together with the software development team.

D53NJLL

D532KLL

IBM WebSphere Business Modeler

See description and part numbers on page 10.

IBM WebSphere Business Monitor

See description and part number on page 10.

IBM Rational Software Modeler

Architects, system analysts and designers are responsible for specifying and maintaining various views of a system under development. This visual modeling and design tool enables users to clearly develop and communicate their designs using UML, the industry-standard system modeling language. Built on top of the open and extensible Eclipse platform, it leverages several open industry standards to provide an unprecedented level of extensibility.

IBM Lotus Domino Designer

Allows developers to rapidly build Lotus Domino-based multiplatform applications to help streamline business processes and increase workflow efficiency.

D5CSCLL

IBM Workplace™ Designer

A new standards-based development tool that script developers, Lotus Domino application designers, Visual Basic developers and others can use to easily create components for the IBM Workplace environment, supporting a service oriented architecture.

D5592LL

IBM Rational Data Architect

A comprehensive data modeling and integration design tool that helps data architects understand information assets, map assets to each other and create database and integration schemas. This product is integrated with other facets of the life cycle, including requirements and version management, and provides flexibility to easily design anything from a simple relational database to a complex federated database.

D56SGLL

D56SMLL

IBM Rational Data and Application Modeling Bundle

Bundle of IBM Rational Data Architect and IBM Rational Software Modeler that combines enterprise data modeling, integration and development capabilities with UML visual application modeling tools for the developer responsible for both data and application development.

D57T4L
D57T0LL

IBM Rational Application Developer for WebSphere Software

A comprehensive, integrated development environment optimized for rapidly designing, developing, analyzing, testing, profiling and deploying applications to WebSphere Application Server using Java, J2EE, Web, Web services, service oriented architecture and portal technologies. Under a new name, this is the newest version of WebSphere Studio Application Developer technology.

D54N4LL
D54SDLL
D54NBLL

IBM Lotus Enterprise Integrator

See description and part number on page 8.

IBM Lotus Connector for SAP R/3 with MTA and Workflow

See description and part number on page 8.

IBM Rational Professional Bundle

Includes all the desktop tools an enterprise needs to design, construct and test J2EE, portal and service oriented applications on both Windows and Linux, and to test .NET applications. This single bundle provides eight powerful software tools and only requires one maintenance contract to manage. Provides complete flexibility for individual practitioners, who can install and use only the tools they need to do their job.

D54KALL
D54S5LL
D54KDLL

IBM Rational Rose Technical Developer

A robust, model-driven development solution that supports the most advanced modeling constructs, including model execution and fully executable code generation. Provides fully automated design-to-code translation for Java, C and C++, runtime model execution, fully executable code generation and visual debugging. Automatically builds drivers, stubs, test harnesses and actual test scripts.

D53PDLL
D533CCLL

IBM Rational Software Architect

Software architects and senior developers are responsible for specifying and maintaining all aspects of an application's software architecture. Unifies all aspects of architecture and development into one powerful and easy-to-use design and development tool. Leverages model-driven development with UML, enabling users to create well-architected applications and services. Built on top of the open and extensible Eclipse platform, it leverages open industry standards.

D54LILL
D54S7LL
D54LALL

IBM Rational Suite® for Technical Developers

A full life-cycle solution for developers who create code for the most challenging products and systems, such as real-time and embedded applications. Provides complete cross-functional support through product integration and workflow to optimize real-time and embedded development, and includes the Rational Team Unifying Platform™ to manage development across the life cycle.

D5320LL

IBM Rational Suite Development Studio for UNIX

A full life-cycle solution consisting of analyst, developer and tester products. Unifies cross-functional teams through key product integration and workflow, and supports UNIX software projects, from requirements to release. Includes Rational Team Unifying Platform to manage development across the life cycle.

D5331LL

ON DEMAND BUSINESS™

Software development 21

“After the first two years of using RUP and Rational tools, 85% of our projects were completed on budget. And, our revenue has grown 700%, with an annual compound growth rate of 43%. IBM Rational tools were a major factor in those gains.”

Bruno Guicardi,
Project Director,
Ci&T Software S.A.

IBM Rational Systems Developer

An integrated design and construction product built on top of Eclipse. It leverages all the power of Eclipse, and then includes plug-ins that enable software architects and model-driven developers to create well-architected C/C++ and Java J2SE applications using Unified Modeling Language, Version 2 (UML 2).

D555FLL

D555BLL

IBM Rational Web Developer

A visually driven, integrated development environment that simplifies and accelerates the development, testing and deployment of applications to WebSphere Application Server using Web, Web services and service oriented architecture technologies. Under a new name, this is the newest version of WebSphere Studio Site Developer technology.

D54NHLL

D54SBLL

D54NMLL

IBM WebSphere Studio Application Developer Integration Edition

Leverages the latest innovations that build on J2EE standards to accelerate large-scale application development projects. Exploits innovations in real-time application flexibility to deliver applications that can adapt in an on demand environment.

D513QLL

IBM WebSphere Studio Application Monitor

See description and part number on page 27.

IBM WebSphere Developer for zSeries®

Leverages innovations that build on J2EE and Web service standards to accelerate large-scale composite and traditional application development projects.

Embraces Java, component reuse, model-based development and integrated traditional transactional environments (CICS and IBM IMS™) and languages (COBOL and PL/I). In addition, code in an enterprise generation language (EGL) can generate COBOL, Java or both.

D5520LL

Software quality

IBM Rational Manual Tester

Innovative manual test authoring and execution tool for business analysts and testers struggling to optimize the quality and accelerate the execution of their manual testing efforts. Provides a fully customizable rich text editor to optimize test clarity, and introduces a novel test step reuse palette to minimize the impact of application change on test script maintenance.

D54MXLL

D54SFLL

D54MDLL

IBM Rational Functional Tester

Top analyst-rated tool for automating the functional and regression testing of Java, VS.NET and Web-based applications. Overcomes test automation roadblocks with advanced features, including self-correcting test scripts and data-driven test assistance. Runs on Windows and Linux platforms. Ships with a copy of Rational Manual Tester and enables you to download entitlements to IBM Rational TestManager and IBM Rational ClearCase® LT.

D53NFLL

D54SHLL

D530BLL

IBM Rational Functional Tester Plus

Bundles Rational Functional Tester and Rational Robot for automated functional and regression testing for a wide variety of client/server technologies, including VS.NET, C/C++, Java, Web and packaged applications such as thick-client Oracle Forms, Sybase PowerBuilder and Borland Delphi.

D57N2LL

D57NBLL

IBM Rational Functional Tester Extension for Terminal-based Applications

Extends Rational Functional Tester to support testing of 3270 (zSeries) and 5250 (iSeries) terminal-based applications.

D53ZXLL

D53ZVLL

IBM Rational Functional Tester Extension for Siebel Test Automation

Extends Rational Functional Tester to enable customers deploying Siebel 7.7 across their organization to use automated GUI functional and regression testing to verify that Siebel applications will function as desired.

D554HLL

IBM Rational Robot

A versatile, automated functional and regression testing tool for teams working with a wide variety of client/server technologies, including packaged applications such as thick-client Oracle Forms, Sybase PowerBuilder and Borland Delphi. Includes an easy-to-learn test scripting language and extensible test control support. Ships with a copy of Rational TestManager.

D53NDLL

D52ZFLL

IBM Rational Performance Tester

A load- and performance-testing solution for teams concerned about the scalability of their Web-based applications. Combines multiple ease-of-use features with deep detail, and simplifies the test creation, load generation and data collection processes that help teams ensure their applications can accommodate required user loads.

D54LRLL

D54LTLL

IBM Rational Performance Tester Extension

Provides performance and scalability testing of SAP solutions.

D56TBLL

IBM Rational Performance Tester Extension for Siebel Test Automation

Provides load-testing capabilities designed to enable customers to ensure that their Siebel 7.7 applications deliver the performance and scalability required to meet the needs of their entire organization.

D554ELL

IBM Rational PurifyPlus™

A suite of runtime analysis tools built for developers who need to optimize application reliability and performance on Windows, Linux and UNIX platforms. Pinpoints memory leaks, profiles application performance and analyzes code coverage for Java, C/C++, Microsoft Visual Basic® and managed .NET languages, including C# and VB.NET.

Rational PurifyPlus for Windows
D5304LL

Rational PurifyPlus for Linux and UNIX
D52ZYLL

Rational PurifyPlus Enterprise Edition
D52ZDLL

IBM Rational Purify®

A highly scalable, nonintrusive memory leak and memory corruption detection tool. Analyzes Java, C/C++, Visual Basic and managed .NET languages, including C# and VB.NET. Also ships as part of Rational PurifyPlus.

Rational Purify for Windows
D53QNLL

Rational Purify for Linux and UNIX
D53QQLL

IBM Rational Test RealTime

A component testing and runtime analysis solution for embedded, real-time and other cross-platform software development. Performs memory leak detection, code coverage analysis, bottleneck exposure and unit testing for C, C++, Java and Ada in an embedded environment—from an 8-bit microchip to a 64-bit RTOS—using an innovative, customizable target deployment technology.

D52ZBLL

Deployment management

IBM provides a complete set of tools to help you provision, configure, troubleshoot and tune applications. Please see pages 27-29 for more information.

ON DEMAND BUSINESS™

Software development **23**

“Rational ClearCase and Rational ClearQuest are really part of our company’s culture. They have become part of the day, part of our infrastructure like e-mail or the telephone. If we didn’t have these tools, it would be very difficult for us to do business as a software company.”

Kelly Cloud,
Chief Quality Officer,
EPL

Change and configuration management

IBM Rational ClearCase

Provides comprehensive software configuration management for medium-to-large development teams. Extends the value of Rational ClearCase LT by adding transparent, real-time access to files and directories, advanced build and release management and mainframe development support.

D5315LL

IBM Rational ClearCase MultiSite®

An option to Rational ClearCase that supports distributed access to software assets through automatic replication and synchronization of Rational ClearCase repositories.

D531KLL

IBM Rational ClearCase LT

Version control tool for small, local development teams. Easy to install and manage, it supports parallel development, automated workspace configuration and disconnected usage on Linux, Windows and UNIX platforms. Local, remote and Web interfaces and integration with leading IDEs enable access virtually anywhere, anytime.

D531ELL

IBM Rational ClearQuest®

Provides change management across the software life cycle. Process automation helps create repeatable, enforceable and predictable processes. Defect and change tracking helps document and manage issues to completion. Electronic signatures, user authentication and audit trails help meet regulatory compliance requirements. Local, remote and Web interfaces and integration with leading IDEs enable access virtually anytime, anywhere.

D53NSLL

D531LLL

IBM Rational ClearQuest MultiSite

An option to Rational ClearQuest that supports distributed access to software assets through automatic replication and synchronization of Rational ClearQuest repositories.

D531SLL

Process and portfolio management

IBM Rational Portfolio Manager

Offers holistic, end-to-end visibility across the enterprise, providing portfolio oversight and control of projects, resources, costs, demand, services, assets, risks and returns. By providing an extensive reporting capability and the data required for informed decision making and project execution, it enables organizations to achieve better governance and optimize investment returns.

D540XLL

D540ZLL

D5411LL

IBM Rational Method Composer

The next evolution of the IBM Rational Unified Process®, representing a quantum leap forward in providing a process solution that goes beyond software development. A flexible process platform built on top of the Eclipse Process Framework that contains tooling, process libraries and unified method architecture for use throughout IT lifecycle management (ITLM).

D532ILL

IBM Rational Team Unifying Platform

Provides teams with complete, integrated life-cycle management, including tools, process guidance and traceability to manage activities and assets across teams and projects—including requirements management, change management, test management and automated project metrics.

D53NHLL

IBM Rational Suite

Provides a full life-cycle solution of analyst, developer and tester products to unify cross-functional teams from requirements to release.

D53PHLL

D5337LL

Security

Deploy a flexible, reusable security architecture with automated security management software. The IBM identity management offerings help you quickly bring users, systems and applications online while effectively managing users and access rights throughout the identity life cycle. Automated security management offerings help you actively identify security vulnerabilities and policy violations on systems, applications and PCs, allowing a quick response to IT security exposures and incidents across your on demand business.

IBM Tivoli Access Manager for e-business

An award-winning, policy-based access control solution for On Demand Business and enterprise applications. Lets organizations control both wired and wireless access to applications and data and provides Single Sign-On for authorized users. Integrates with on demand business applications to deliver a secure, personalized experience for authorized users.

D516WLL

D53HVLL

IBM Tivoli Access Manager for Business Integration

A multiplatform security management solution for WebSphere MQ (see page 8) that upgrades native security services of WebSphere MQ to those provided by WebSphere MQ Extended Security Edition. Provides application-level data protection for WebSphere MQ-based applications, without needing to modify or even recompile them.

D511TLL

IBM Tivoli Access Manager for Operating Systems

A policy-based access control system for UNIX and Linux operating systems. This comprehensive security solution effectively addresses many system vulnerabilities surrounding UNIX and Linux super-user or root accounts. Many security failures in UNIX and Linux environments are from super-user account abuse or a hack that results in gaining access to these accounts. Version 6.0 provides centralized auditing and reporting, helping customers easily and efficiently comply with regulations and corporate protocols by having a centralized repository for auditing data and preconfigured reports.

D512TLL

IBM Tivoli Directory Integrator Express

See description and part number on page 3.

IBM Tivoli Access Manager for Enterprise Single Sign-on

A product suite powered by Passlogix that provides a unified enterprise single sign-on and authentication experience for a user's applications. Helps companies address their compliance needs, enforce security, reduce administrative costs and increase productivity.

Tivoli Access Manager for Enterprise Single Sign-on D57HNLL

Tivoli Access Manager for Enterprise Single Sign-on Desktop Password Reset Adapter D57I4LL

Tivoli Access Manager for Enterprise Single Sign-on Provisioning Adapter D57HQLL

Tivoli Access Manager for Enterprise Single Sign-on Authentication Adapter D57HULL

Tivoli Access Manager for Enterprise Single Sign-on Kiosk Adapter D57IILL

IBM Tivoli Federated Identity Manager

A cutting-edge identity management and access control solution based on award-winning technology. Accelerates and secures the integration of companies and their business partners. Through federated single sign-on, business ecosystems can integrate their users in an efficient, secure and economic manner, while providing a streamlined user experience. By securing Web services, companies can integrate application platforms both within their enterprise and with their business partners.

“We compared several products and chose IBM Tivoli Identity Manager because we felt it was the most complete solution for managing security.”

Rafael Fernandez,
IT Security Officer,
Banco de España

IBM Tivoli Directory Server

Provides a powerful Lightweight Directory Access Protocol (LDAP) identity infrastructure that is the authoritative data source for identity management and advanced services like WebSphere Portal solutions. Built on the robust, proven DB2 data engine, it offers advanced replication capabilities and a high-performance proxy server for massive scalability.

D533ILL

IBM Tivoli Identity Manager

Provides a secure, automated and policy-based solution that helps effectively manage user accounts and access permissions and passwords from creation to termination across heterogeneous environments. Helps enterprises better capture user and account information, and enhance visibility into security management operations.

Tivoli Identity Manager unlimited user model

D516SLL

Tivoli Identity Manager

D52E5LL

Tivoli Identity Manager for Applications

D52EHLL

Tivoli Identity Manager for Host

D52ELLL

IBM Tivoli Risk Manager

Can help centrally manage security incidents and vulnerabilities across an enterprise from a single security console. Helps avoid clutter, such as false positives, while quickly identifying and managing security incidents and vulnerabilities to help administrators respond with adaptive security measures.

Tivoli Risk Manager node

D514ZLL

Tivoli Risk Manager managed processor

D512MLL

IBM Tivoli Security Compliance Manager

Acts as an early warning system for organizations looking to identify security policy violations and potential security vulnerabilities. Helps organizations define consistent security policies based on internal or industry standards and then monitor compliance.

D53RFLL

D53RILL

Systems management

To effectively manage your IT infrastructure, you need to understand how each resource affects applications and business processes it supports. IBM systems management software can help your enterprise sense, anticipate, plan and control responses to real-time IT production requirements. These advanced offerings can help you effectively provision and configure servers, operating systems, middleware, applications, network devices and more.

IBM Tivoli Monitoring

Automates monitoring of essential system resources to detect bottlenecks and potential problems and enables automatic recovery from critical situations. Can also help increase the availability of servers.

D50ZGLL

IBM Tivoli Composite Application Manager for Response Time Tracking

Monitors transaction performance and availability to provide a positive customer experience. Offers a comprehensive display of an end-user transaction path.

D50ZKLL

IBM Tivoli Composite Application Manager for WebSphere

Helps maintain the availability and performance of on demand applications. Quickly pinpoints, in real time, the source of bottlenecks in application code, server resources or external system dependencies. Enables viewing of all J2EE transactions that are "in flight" (that have not finished execution), correlating and profiling transactions that span multiple subsystems, analyzing application performance and setting resource or application traps.

D55GGLL

IBM WebSphere Studio Application Monitor

Provides monitoring infrastructure for J2EE applications, enabling users to perform problem determination, availability monitoring and performance management for enterprise J2EE, IMS and CICS applications running on IBM z/OS®, IBM OS/390®, IBM AIX®, HP-UX, Linux, Sun Solaris and Windows environments.

D53ZELL

IBM Tivoli Composite Application Manager Basic for WebSphere

A self-contained monitoring solution helps you maintain the availability and performance of WebSphere applications by pinpointing the source of bottlenecks or other defects in application code, server resources or external system dependencies.

D56ZDLL

IBM Tivoli Composite Application Manager for SOA

Monitors, manages and controls the Web services layer of IT architectures while drilling down to the application or resource layer to identify the source of bottlenecks or failures, and to pinpoint services that take the most time or use the most resources.

D55I3LL

IBM Tivoli NetView®

Discovers TCP/IP networks, displays network topologies, correlates and manages events and SNMP traps, monitors network health, identifies root causes of network failures and gathers performance data.

D512WLL

D515NLL

IBM Tivoli OMEGAMON XE for Messaging

See description and part number on page 9.

ON DEMAND BUSINESS™

Systems management 27

“By aligning technology services with business needs, IBM Tivoli Business Systems Manager helps us to implement service management best practices as outlined by ITIL.”

Benedicto Gallego,
Service Manager,
Department of Information Technology,
AEAT

IBM Tivoli Business Systems Manager

Provides a single, simple-to-use interface for consolidating management information into a business-centric view, from across an environment, including distributed, Web and mainframe components. Can leverage automatically discovered IT resources and their relationships based on integration with various discovery technologies.

D5149LL

IBM Tivoli Enterprise Console®

Provides sophisticated, automated problem diagnosis and resolution to optimize system performance and minimize support costs. The auto-discovery feature allows users to understand the environment and process events appropriately. The Web console enhances visualization while providing remote access to events and console operations.

D510WLL

IBM Tivoli Monitoring for Virtual Servers

Centrally monitors server virtualization and consolidates resource performance and availability. Uses advanced resource models for problem identification, notification and correction, and provides tasks to automate and execute daily and routine operations. Includes three Proactive Analysis Components (PACs) that support the Citrix MetaFrame Access Suite, VMware ESX and Microsoft Virtual Server.

D550GLL

IBM Tivoli License Manager

This software asset management solution provides advanced software inventory, monitors use and includes contract and reporting capabilities to help organizations effectively manage their software licenses and contracts.

D521NLL

IBM Tivoli System Automation for Multiplatforms

Now available with two orderable components. The base component provides high availability for mission-critical Linux- and AIX-based business applications and middleware. The end-to-end component provides automated operations for high availability across entire multitiered, distributed and heterogeneous business applications that span any combination of z/OS, Linux and AIX environments.

Base

D520ULL

End-to-end

D551NLL

IBM Tivoli Service Level Advisor

Automatically analyzes service level agreements and evaluates compliance, while using predictive analysis to help avoid service level violations. Provides graphical, business-level reports by the Web to demonstrate the IT business value and ease IT service level management.

D513ALL

IBM Tivoli Switch Analyzer

Discovers and manages complex switched networks and quickly pinpoints problems through root cause analysis. Extends Tivoli NetView capabilities to provide analysis of routers and switches.

D515HLL

D515KLL

IBM Tivoli Configuration Manager

An integrated solution for deploying software, automating patch management for Windows environments, and tracking hardware and software configurations. After systems have been deployed, the inventory module lets users automatically scan for and collect hardware and software configuration information from computer systems across an enterprise.

D511ELL

D515SLL

Prices shown are the suggested retail price and include one license and 12 months of software maintenance. Additional savings on volume purchases and trade up options may apply.

Published April 2006. Prices current as of publication date and subject to change.

IBM Tivoli Intelligent Orchestrator

Continually evaluates real-time IT resource status and dynamically responds based on business priorities. Provisions IT resources utilizing automated decision making based on customer best-practice policies and workflows. Aligns IT resources to business policies to help reduce hardware, software and IT staff costs.

D52UXLL

D52Y5LL

IBM Tivoli Provisioning Manager

Provisions and configures servers, operating systems, middleware, applications and network devices acting as routers, switches, firewalls and load balancers. Uses workflows to automate the manual provisioning and deployment process.

D52UVLL

D52VHLL

IBM Tivoli Workload Scheduler

Automates, monitors and controls the workflow through an enterprise's IT infrastructure on both local and remote systems. From a single point of control, analyzes the status of the production work and drives workload processing according to installation business policies.

D50ZSLL

IBM Tivoli Provisioning Manager Express for Software Distribution

See description and part numbers on page 3.

IBM Tivoli Provisioning Manager Express for Inventory

See description and part numbers on page 3.

IBM Tivoli Workload Scheduler for Applications

Integrates the scheduling features of Tivoli Workload Scheduler to on demand business application environments. Leverages built-in workload capabilities of Oracle e-Business Suite, PeopleSoft 8, SAP R/3 and SAP Business Warehouse.

D510HLL

IBM Tivoli IntelliWatch®

Provides a comprehensive system management solution for Lotus Domino. Offers a wide range of features, including automated problem detection and correction, system-wide product configuration options, custom statistics and reporting capabilities, and fault recovery.

D54UKLL

IBM Tivoli Application Dependency Discovery Manager

Provides agentless discovery of infrastructure configurations and maps relationships between application components.

D575LLL

INSIDE

IBM Express Middleware 3

Address the needs of midsize organizations with specially designed, affordable offerings.

Application servers 6

Run interoperable applications on a proven, security-rich, flexible platform.

Commerce 7

Facilitate tailored marketing, sales and order processing with an integrated package.

Business integration, mobile, speech and enterprise access 8

Connect people, processes and information across and beyond the enterprise.

Messaging, collaboration and portal 12

Drive productivity with these communication tools and role-based environments.

Information management 15

Store, access and analyze data in any environment.

Software development 20

Support processes for designing, constructing and deploying applications.

Security 25

Protect confidentiality, integrity and privacy of information systems.

Systems management 27

Monitor, control and optimize computing resources.

Storage management 30

Maximize the accessibility, availability and performance of stored information.

ON DEMAND BUSINESS™

Systems management 29

Storage management

A resilient, automated storage infrastructure to help improve data and application availability, optimize storage resource utilization and enhance storage personnel productivity while lowering costs. The IBM TotalStorage® Open Software Family of products includes comprehensive storage infrastructure management, hierarchical storage management, archive management and recovery management offerings.

“Had we not been using IBM Tivoli Storage Management software, the chances of us collecting the data would have probably been nil. Tivoli software enabled us to help our client protect its trade secrets and maintain its position in the industry.”

Jeffrey Beallor,
President,
Global Data Vaulting

Hierarchical storage, archive and recovery management

IBM Tivoli Storage Manager

Part of the IBM TotalStorage Open Software portfolio, Tivoli Storage Manager protects an organization's data from hardware failures and other errors by storing backup and archive copies of data on offline storage. Scales to protect hundreds of computers running dozens of operating systems.

D5127LL

D5158LL

IBM Tivoli Storage Manager Extended Edition

Expands on the base product of Tivoli Storage Manager by adding a disaster-planning capability, Network Data Management Protocol control for network-attached storage filers and support for large tape libraries.

D51MFLL

D51MKLL

IBM Tivoli Storage Manager Express Edition

See description and part numbers on page 3.

IBM Tivoli Storage Manager for Application Servers

Provides a software module that works with Tivoli Storage Manager to protect the infrastructure and application data and optimize the availability of WebSphere Application Server (see page 6) to provide an applet GUI to perform reproducible, automated online backup of a WebSphere Application Server environment.

D510BLL

IBM Tivoli Storage Manager for Copy Services

Integrates with Microsoft Exchange Volume Shadow Copy Service architecture to integrate hardware- and software-based snapshot capabilities with Tivoli Storage Manager and other data protection modules to perform high-efficiency data backups and archives of business-critical applications. Virtually eliminates performance impacts on the host.

D57HBLL

IBM Tivoli Storage Manager for Databases

Provides a software module that works with Tivoli Storage Manager to protect a wide range of application data by protecting underlying database management systems holding that data. Exploits backup-certified utilities and interfaces provided for Oracle, Microsoft SQL Server and Informix.

D510ELL

IBM Tivoli Storage Manager for Data Retention

Facilitates compliance with stringent regulatory requirements in a flexible and function-rich manner. Helps manage and simplify retrieval of the ever-increasing amount of data that organizations must retain for strict records retention regulations.

D53H2LL

IBM Tivoli Storage Manager for Advanced Copy Services

For AIX environments, integrates hardware- and software-based snapshot capabilities with Tivoli Storage Manager and other data protection modules to perform high-efficiency data backups and archives of business-critical applications. Virtually eliminates performance impacts on the host. Extends IBM FlashCopy® support in IBM Tivoli Storage Manager for Hardware to include support for SAN volume controller, DS6000 and DS8000 devices.

D56UALL

IBM Tivoli Storage Manager for Enterprise Resource Planning

Captures reliable online full or differential recovery points for application servers and feeds the backup data into the Tivoli Storage Manager hierarchy.

D512QLL

IBM Tivoli Storage Manager for Mail

Provides a software module for Tivoli Storage Manager that automates the data protection of e-mail servers running either Lotus Domino or Microsoft Exchange. Uses APIs provided by e-mail application vendors to perform online “hot” backups without shutting down the e-mail server.

D5102LL

IBM Tivoli Storage Manager for Space Management

Automatically and transparently migrates rarely accessed files to Tivoli Storage Manager storage.

D51N1LL

IBM Tivoli Storage Manager for Storage Area Networks

Extension that introduces storage agents to allow both server and client computers to make the bulk of backup/restore and archive/retrieve data transfers over the SAN instead of the LAN, either directly to tape or to the Tivoli Storage Manager disk storage pool.

D51MULL

D51MYLL

IBM Tivoli Storage Manager for System Backup and Recovery

Provides a flexible backup method for AIX systems, helps protect data and offers bare metal restore capabilities. Also includes a comprehensive system backup, restore and reinstallation tool.

D521YLL

IBM Tivoli Continuous Data Protection for Files

Provides real-time, continuous data protection designed specifically for laptops and desktops. Instead of waiting for scheduled intervals, it backs up users' most important files the moment they are saved.

D55H9LL

D55H7LL

Storage infrastructure management

IBM TotalStorage Productivity Center for Data

Provides a set of policy-driven automated tools for managing storage capacity, availability, events and assets in an enterprise environment, including DAS, NAS and SAN technologies. Because it is policy-based, this intelligent console for the storage environment uses autonomic self-healing and self-configuring capabilities to detect potential problems and automatically make adjustments based on established policies and actions.

D54V6LL

IBM TotalStorage Productivity Center for Fabric

Part of the IBM TotalStorage Productivity Center, it provides a single standards-based solution for SAN management and includes automatic device discovery, real-time monitoring of performance and availability, and alerts, zone control and SAN error prediction capabilities.

D54V4LL

IBM TotalStorage Productivity Center for Disk

Part of TotalStorage Productivity Center, it minimizes the complexity of managing SAN storage devices by allowing administrators to configure, manage and monitor the performance of their storage from a single console.

D54QGLL

IBM TotalStorage Productivity Center Standard Edition

Get the best value for your storage infrastructure with this bundle that includes TotalStorage Productivity Center for Data, TotalStorage Productivity Center for Fabric and TotalStorage Productivity Center for Disk in a single package.

D54THLL

IBM TotalStorage Productivity Center for Replication

Part of TotalStorage Open Software Family, it is designed to simplify and optimize the configuration and management of replication and advanced copy services on network storage devices.

D54QMLL

IBM TotalStorage SAN Volume Controller

The premier IBM storage virtualization offering, with storage management functions to significantly improve application availability, optimize storage resource utilization and greatly enhance storage management personnel productivity. Eliminates many of the causes of storage-related application downtime. Provides the administrator with the capability to combine islands of capacity into a single storage pool. Available for purchase via a tiered pricing scheme. This software operates only on IBM TotalStorage SAN Volume Controller hardware. Orders for both hardware and software must be placed at the same time.

INSIDE

IBM Express Middleware	3
<i>Address the needs of midsize organizations with specially designed, affordable offerings.</i>	
Application servers	6
<i>Run interoperable applications on a proven, security-rich, flexible platform.</i>	
Commerce	7
<i>Facilitate tailored marketing, sales and order processing with an integrated package.</i>	
Business integration, mobile, speech and enterprise access	8
<i>Connect people, processes and information across and beyond the enterprise.</i>	
Messaging, collaboration and portal	12
<i>Drive productivity with these communication tools and role-based environments.</i>	
Information management	15
<i>Store, access and analyze data in any environment.</i>	
Software development	20
<i>Support processes for designing, constructing and deploying applications.</i>	
Security	25
<i>Protect confidentiality, integrity and privacy of information systems.</i>	
Systems management	27
<i>Monitor, control and optimize computing resources.</i>	
Storage management	30
<i>Maximize the accessibility, availability and performance of stored information.</i>	
Product index and supported operating systems	32
<i>Quickly find the products you need—and that are right for your environment.</i>

IBM Training

GETTING THE MOST OUT OF YOUR IT INVESTMENT IS EASY, AFFORDABLE AND CONVENIENT.

900+ Courses • Public Classes • On-site Classes • eLearning • Technical Conferences

EASY...

Call 1-800-426-8322 to request your FREE IBM Training catalog.

AFFORDABLE...

Purchase an IBM Education Pack - online account, visit ibm.com/training/us/savings

- It can be used for designated U.S. public classes, on-site classes, instructor mentoring, selected e-learning courses, and technical conferences.
- It's a great way to get more training for less.

CONVENIENT...

Visit ibm.com/training/us and click on "Training eCatalog."

ENROLL TODAY...

Visit ibm.com/training/us/ to enroll in an IBM class or sign up for one of these 2006 U.S. software conferences:

- **IBM Tivoli Technical User Conference**
April 24 - 27 • Chicago, IL
- **IBM Rational Software Development Conference**
June 4 - 8 • Orlando, FL
- **Transaction & Messaging Technical Conference**
June 12 - 16 • Atlanta, GA
- **IBM Information On Demand 2006**
October 15 - 20 • Anaheim, CA
- **WebSphere Technical Exchange**
October 30 - November 3 • San Francisco, CA

For highlights, agenda and registration information for all IBM U.S. conferences, visit ibm.com/training/us/conf
