IBM Lotus**Live**™ iNotes

Accessing Critical Information, Anytime, Anywhere

With LotusLive iNotes, your business email doesn't have to be one size fits all.

Email remains a critical business tool in today's fast-paced global environment. However, providing enterprise-grade email and collaboration to everyone in the company can be costly with existing solutions. Now, there is a business ready alternative – LotusLive iNotes.

LotusLive iNotes is an online webmail service that features essential email, calendaring and contact capabilities, multi-level administration and branded interfaces. Delivered as a software-as-a-service (SaaS) solution for corporate users who do not need full-fledged collaboration, LotusLive iNotes can co-exist with your existing on-premise email solution or be operated as a standalone solution to reduce overall cost of ownership. It is quick and simple to deploy, making it a smart choice for companies and resellers of all sizes.

With LotusLive iNotes you can give users email services that make sense for their role or job function, without overwhelming them with unnecessary features. And with LotusLive iNotes' unique design everyone in your organization can still operate under a single domain using a shared corporate directory whether they sit in the corporate office or work out in the field.

Extending traditional email solutions to all employees can mean a costly investment in additional server hardware to support the large increase in users. And additional servers mean higher deployment, maintenance and administration costs.

LotusLive iNotes is ideal for corporate workers who don't currently have access to corporate email or who are over-served by feature- rich collaboration capability that they don't use. Employees who need only basic email access to receive company updates, HR information and check schedules will benefit greatly from the simplicity and flexibility of LotusLive iNotes.

With LotusLive iNotes, you can...

- **Send and receive emails** in a secure environment anytime from a web browser.
- **Work off-line**, using any POP or IMAP compatible email client.
- **Use the personal calendar** to organize professional and personal lives all in one convenient place in the cloud.
- **Distribute a company calendar** to all employees to keep everyone up-to-date on company events and meetings.
- **Keep track of personal contacts** and access the corporate directory and distribution lists.
- **Protect your inbox** with powerful anti-spam and virus protection that can be customized to your preferences.

LotusLive iNotes Offers You:

- Low start-up and predictable monthly costs
- Simplified administration and fast implementation
- Secure transfer of mail between LotusLive iNotes and your existing mail platform
