

IBM zSeries Technical Exploration Center

IBM Tivoli OMEGAMON Seminars

Content

The seminar provides technical demos and lectures to help customers discover true end-to-end zSeries management with the newest releases of IBM Tivoli OMEGAMON family of products.

These solutions include products to monitor and manage zSeries operating systems and subsystems including z/OS, UNIX® System Services, CICS®, DB2, IMS, zSeries networks and storage.

Benefits

Peering inside the application server is a good way to reduce defects that slow your business processes. IBM Tivoli OMEGAMON® lets you see inside the "black box" to quickly pinpoint problems that can lead to a loss of customers and business. Performance problems that once took days or weeks to find can often be isolated in minutes or hours. And in production, it can monitor and centrally administer the performance of your critical applications.

Audience

- IT Technical Managers running zSeries DP centers
- Operations & System Management specialists
- zSeries Applications administrators
- IT Architects
