

DevOps for enterprise systems: Mobilizing the mainframe – a healthcare example

Webcast – June 18, 2015

Highlights

Topics include:

- See an illustration of how to create mobile applications that are tightly integrated with back-end enterprise systems
- Find out how you can extend mission critical back-end applications to mobile client platforms
- Discover how you can take advantage of automation across the mobile application development life cycle for easier building, testing and deployment of mobile apps

Speaker

- *Derek Truong*, Manager, Debugger and CDA Development, IBM z Systems
- *Bill Alexander*, Senior Software Engineer, IBM z Systems

Broadcast date: June 18, 2015,
11:00 a.m. EDT / 3:00 p.m. GMT / 4:00 p.m. BST

Developed for: Software developers and system administrators

Technical level: Intermediate

Many businesses are focusing on building and deploying more mobile apps, but when that application is for an enterprise or business, it's no longer a "simple web app." You have to deliver it in short order, but manage all of the complexity of multi-platform, multi-tier applications that need to quickly scale and perform on multiple devices. It can be a challenge to integrate new mobile services with existing organizational processes without sacrificing the client experience.

Webcast

Join us for a complimentary webcast with Bill Alexander and Derek Truong who will demonstrate how an end-to-end, mobile-to-enterprise application can be built using IBM Rational® Developer for the Enterprise development tooling, including Rational Developer for z Systems, Rational Team Concert™ and the MobileFirst™ platform. As an example, they will show you how to build a mobile application for patient monitoring that is powered by z Systems. The application connects to new Bluetooth biosensors to collect information about the user's physical state and mental state, as well as providing a mechanism for the user to report when prescribed medication is taken.
