IBM zSeries Tools to Help You Simplify Migration to the New Releases of CICS Transaction Server

Feb 2006

ON DEMAND BUSINESS™

© 2004 IBM Corporation

Preface

The following are trademarks of International Business Machines Corporation in the United States, other countries, or both: IBM, CICS, CICS/ESA, CICS TS, CICS Transaction Server, CICSplex, DB2, MQSeries, OS/390, S/390, WebSphere, z/OS, zSeries, Parallel Sysplex.

Java, JavaBeans, and all Java-based trademarks and logos are trademarks of Sun Microsystems, Inc. in the United States, other countries, or both.

Microsoft, Windows, Windows NT, and the Windows logo are trademarks of Microsoft Corporation in the United States, other countries, or both.

Other company, product, and service names and logos may be trademarks or service marks of others.

Agenda

- Tools to support version to version migrations
 - CICS Interdependency Analyzer
 - Debug Tool Utilities Advanced Functions
 - Modernizing COBOL Programs
 - CICS Configuration Manager
 - CICS Performance Analyzer
- CICS Version Migration Scenarios
 - ▶ Scenario 1 – Migrating to V3.1, resources in CSD
 - ▶ Scenario 2 - Migrating to V3.1, resources in CICSplex SM repository
 - ▶ Scenario 3 – Implementing SOA on CICS TS 3.1
- More information

This presentation will give you an overview of the CICS Tools portfolio.

IBM Software Group

Migration Considerations

ON DEMAND BUSINESS™

© 2004 IBM Corporation

CICS Integration Enhancements

CICS 22	CICS 23	CICS 31
EJB support <ul style="list-style-type: none">- Session Beans- EJB deployment tooling- JNDI (COS or LDAP) Link 3270 Bridge ECI over TCP/IP SOAP for CICS	EJB Support <ul style="list-style-type: none">- Performance enhancements- JNDI caching- Improved monitoring- IIOP Authentication CCI Connector for CICS	Web services Web service assistants HTTP 1.1 HTTP outbound API Transport layer security SSL performance Additional cipher suites

CICS Application Transformation Enhancements

CICS 22	CICS 23	CICS 31
SDK for z/OS 1.3.1 - JVM Resettable mode - JDBC 2.0 XML for COBOL & PLI	SDK for z/OS 1.4.1 -Continuous mode -Shared Class Cache -Storage Protection -zSeries Application Assist Processor JCICS APIs -WEB -Document -Extract Debugging Enhancements	SDK for z/OS 1.4.2 LE assembler Channels & Containers New example application

CICS Enterprise Management Enhancements

CICS 22	CICS 23	CICS 31
<p>CICS DB2 enhancements</p> <ul style="list-style-type: none"> - OTE exploitation - Group Attach - RMI purge <p>Sign-on retention</p> <p>CF rebuild and duplexing</p>	<p>Additional Thread Safe commands</p> <ul style="list-style-type: none"> - ASKTIME - FORMATTIME - DOCUMENT <p>MRO timeout</p> <p>TN3270 address display</p> <p>Statistics enhancements</p> <p>CPSM Enhancements</p> <ul style="list-style-type: none"> - Definitional Web User Interface - Workload Management for LINK3270 bridge 	<p>OTE exploitation</p> <ul style="list-style-type: none"> - OPENAPI <p>XPLINK for C & C++</p> <p>Thread Safe Web Cmds</p> <p>CPSM enhancements</p> <ul style="list-style-type: none"> - User favorites - Group profiles - Filters - Result set warnings - BATCHREP access

Migration Considerations

- Migration to CICS TS 3.1
 - Is comparable
 - Standard migration activities
 - SIT changes
 - Resource definition changes
 - Global and Task related user exits
 - CICS supplied transactions
 - Systems programming interface (INQ/SET commands)
 - Performance benchmarking
 - Threadsafe considerations
 - Detecting unsupported COBOL versions

Migration Differences

- CICS TS 2.2
 - ▶ Translator support for pre-Language Environment compilers is withdrawn
- CICS TS 2.3
 - ▶ CICS interfaces for the VS COBOL II, OS PL/I and C/370 runtimes are removed
 - Will need run-time libraries distributed with LE to execute current load modules
 - ▶ CICS interfaces for OS/VS COBOL are maintained
 - CICS will create reentrancy environment when program is loaded
- CICS TS 3.1
 - ▶ OS/VS COBOL support has been removed

Migration Differences...

- CICS TS 13 to CICS TS 23/31
 - ▶ CICS will build a pool of open TCBs for use by DB2
 - TCBLIMIT of DB2CONN definition is a subset of MAXOPENTCBS
 - ▶ DB2 CPU time will be included in CICS 110 records
 - DB2 Class 1 time will be included in the CICS CPU time
 - May increase due to now accounting for CREATE Thread
 - L8 CPU time will be greater or equal to DB2 class 1 time
 - May also contain thread create or termination time
 - If application is threadsafe:
 - Will contain CPU time spent in application
 - QR CPU time will decrease
 - DB2WAIT field will be zero
 - Represents elapsed time spent waiting for a DB2 request to complete
 - With OTE there is no CICS dispatcher wait for a subtask
 - Can be large difference between DB2 Class 1 and Class 2 CPU times
 - CICS RMI code and threadsafe application code
 - CICS tracing

Migration Differences...

- CICS TS 2.2 to CICS TS 3.1
 - ▶ Migration from the SOAP for CICS Feature
 - ▶ Coexistence supported for migration
 - Version 2 feature may be installed on CICS TS 3.1
 - Provides the same level of function as on Version 2
 - ▶ Migration to CICS TS 3.1 Web Services requires
 - Modifying your message adapters to use the new interfaces
 - Review your use of containers. The SOAP for CICS feature uses BTS containers; the Web services support in CICS TS V3.1 does not use BTS. The containers names used in the Web services support, are different from the names used in the SOAP feature
 - Replacing the user-written handlers with SOAP header handlers defined in the PIPELINE configuration file

IBM Software Group

Tools to help

Overview

ON DEMAND BUSINESS™

© 2004 IBM Corporation

CICS Tools Support for Version to Version Migration

- All tools exploit CICS TS 3.1 functions where relevant
 - ▶ Support and new function exploitation at General Availability
- Improved speed of version to version migration projects
 - ▶ Prepare for migration: prioritize and optimize
 - Application understanding
 - CICS Interdependency Analyzer and WebSphere Studio Asset Analyzer/ATW
 - Performance and application analysis to improve design and performance
 - CICS Performance Analyzer
 - ▶ Improve speed of migration
 - Migrate through Test, Quality Assurance regions and into production faster
 - CICS Configuration Manager for improved productivity and control of CICS resource definitions
 - CICS Interdependency Analyzer for improved quality of testing

CICS Tools Support New Function Exploitation

- Identify candidate applications for new function exploitation
 - ▶ Make applications thread safe
 - CICS Interdependency Analyzer helps understand applications that conform to thread safe standards
 - CICS Performance Analyzer reports can show CPU usage by your thread safe CICS applications
 - ▶ Enable CICSplex SM
 - CICS Interdependency Analyzer identifies affinities
 - CICS Configuration Manager can simplify management of resource definitions in a CICSplex environment
- Improved efficiency to support SOA implementations
 - ▶ Use CICS IA, PA and CM to help implement web services
 - ▶ CICS Operations management tools help move closer to 24/7 operation, a key requirement for SOA.

IBM Software Group

Tools to Simplify Migration

CICS Interdependency Analyzer

ON DEMAND BUSINESS™

© 2004 IBM Corporation

What is CICS Interdependency Analyzer ?

- CICS Interdependency Analyzer for z/OS (CICS IA)
 - ▶ Run-time and batch reporting tool
 - ▶ Captures resource relationships such as
 - what programs have potential affinities due to the CICS API commands within them
 - which resources (Programs, Files, TSQs TDQs etc) are required by a transaction
 - what resources are no longer used
 - which transactions have affinities to other transactions and the type and lifetimes of these affinities
 - the sequencing of transactions within an application
 - which transactions have affinities to particular CICS regions
 - Includes CICS, DB2, WebSphere MQ and IMS DB resources
 - ▶ Relationship data loaded onto a DB2 data base
 - Ad hoc analysis
 - ▶ Loadlib Scanner and VSAM File Reporter
- CICS IA 2.1 GA - November 2005
 - ▶ Product number - 5697-J23

IBM CICS Interdependency Analyzer for z/OS and OS/390 (CICS IA) is a unique run-time tool that helps you identify resource relationships within your CICS system using report data stored in a DB2 data base. These reports, which can be interrogated on-line, will help you to improve your ability to maintain, enhance, and migrate your business applications.

Why do you need CICS Interdependency Analyzer?

Maintaining, extending and enhancing your CICS applications more efficiently

Does any of this apply to you?

- CICS systems and applications evolved over many years (as many as 30!)
- Many changes to the applications went undocumented
- Some documentation went missing
- Source code is missing
- Even if the source code and documentation are available, the runtime application behavior differs from the original design (e.g. changed by use of exits)
- You have been through a merger/acquisition, so the information about inherited CICS systems is not available, or, if some available, time spent on the discovery process is critical to avoid business disruption
- You are providing outsourcing services, and need a complete picture of CICS resource relationships in your customer systems
- You are implementing workload balancing and need to identify affinities
- You need to minimize impact of CICS application maintenance for your customers

Potential problems:

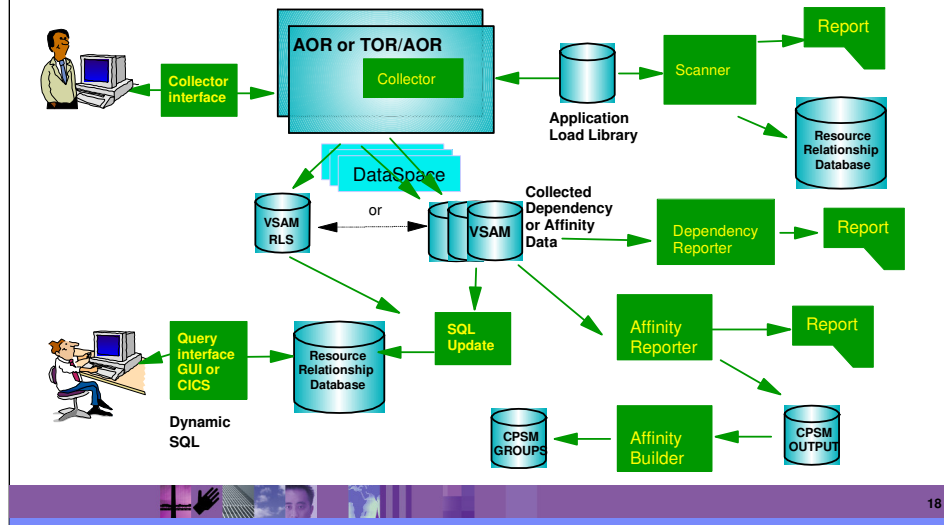

- Costly and lengthy manual investigation
- Errors during the application changes
- High application maintenance costs
- ...even outages

Information provided by CICS IA can help to:

- Use CICS resources more efficiently
- Split workload for continuous availability
- Improve the speed and reduce cost of application maintenance
- Reduce time of problem resolution
- Minimize the impact of routine application maintenance for the end user
- Gain better understanding of how CICS components can be aggregated to form services for SOA implementations.

CICS customers are looking to reuse and maintain their core asset, CICS applications, more efficiently, at a lower cost. As you can see from this chart, CICS Interdependency Analyzer offer the capabilities CICS customers need to reduce time and effort of application reuse and maintenance. CICS IA helps our customers to understand their CICS applications (some over 30 years old! With documentation lost or incomplete) in order to maintain and update these applications with the full knowledge of resource relationships involved.

CICS IA - Overview

CICS IA automates the process of collecting the data on the relationships between CICS resources.

CICS IA collects Interdependency data or Affinity data.

CICS IA works in two ways - off-line and online.

Online Components

The Collector intercepts CICS commands which may be involved in an interdependency and records the details of the resources used. For efficiencies sake the data is stored in a data space, which under user control, may be offloaded to the Collected dependency data component. These data sets may be aggregated together and stored in a DB2 Database.

Off-line Components

The Dependency Reporter presents the dependency information collected by the Collector for a selected CICS region, in a structured format.

The Affinity Reporter presents the affinity information collected by the Collector for a selected CICS region, in a structured format. It also provides input to the Builder function. The Builder Function generates CPSM groups for those affinities reported.

The Scanner provides the additional capability to scan the load module data sets detecting EXEC CICS commands that may cause transaction resource dependency or affinities and to produce a printed report. The scanner data can be loaded into DB2 tables.

New in CICS Interdependency Analyzer for z/OS V2.1

- An Eclipse-based graphical user interface and improved query management facilities
 - make it easy for you to access the collected data and use it in the day-to-day analysis.
 - The GUI is based on the XML application programming interface (API), so automated processes can query the database as well.
- ▶ Timer based Collector control,
 - allows the user to start the collector for a given time of day to enable targeted data collection
 - For example, you can set the tool to schedule collection in different regions throughout the data collection process.
- Helps you to
 - work around high volume time periods
 - target collection for when an application is active.
- ▶ Enhanced single point of control capabilities
 - You can turn data collection for multiple CICS regions on and off with a single CINT command to speed selection.
- A selective program and transaction Exclude list to eliminate extraneous data and reduce overhead during data capture.
- Provision of CSD dataset name and group-list information
- ▶ Automation of tracking of runtime impact on application change by providing program version information, enabling removal of old data by version and comparison of data by program version.
- ▶ Improved installation and customisation, as well as other enhancements

Why use CICS IA?

- Helps you understand your active Application Inventory
 - ▶ Documentation lost or incomplete
 - ▶ Time pressure
 - ▶ Merger / Acquisition
- Helps you maintain or enhance Applications
 - ▶ Identifies the resources that are affected directly and indirectly
 - Transactions, programs, data elements:
 - Files , Queues , Screens, ...
 - ▶ Helps formulate the request for change
 - What to change, what to build, what to test, what needs to be communicated to roles involved
 - ▶ Looks across boundaries, including through shared data - files, databases or queues
- Need to balance CICS work across regions for greater availability?
 - ▶ CICS IA helps quickly identify resource relationships which need to be changed to enable transactions run anywhere
 - ▶ CICS IA helps quickly clone regions
- Version to version migration assistance
 - ▶ Build a database of application topology knowledge to reference throughout the migration process
 - ▶ Make applications threadsafe
 - CICS IA provides information needed to understand which applications conform to threadsafe standards
 - ▶ Identify OS/VS COBOL programs
- CICSplex SM enablement
 - CICS IA identifies system and transaction affinities

IBM Software Group

Tools to Simplify Migration

Debug Tool Utilities Advanced Functions V5

ON DEMAND BUSINESS™

© 2004 IBM Corporation

IBM COBOL Modernization Solutions:

- ▶ IBM Websphere Asset Analyzer
 - Static z/OS Analysis and Reporting tool
 - Reports CICS, batch, IMS TM, and DB2 program dependencies
 - Determines Inventory validation
 - Reports change impact analysis
- ▶ IBM CICS Interdependency Analyzer
 - Runtime reporting
- IBM Debug Tool Utilities and Advanced Functions
 - ▶ Debug Tool COBOL Modernization Utility
 - ▶ Debug Tool Coverage Utility
 - ▶ Debug Tool Interactive Debugger
 - Supports all versions of IBM COBOL

What is Debug Tool Utilities and Advanced Functions?

- IBM Debug Tool Utilities and Advanced Functions
 - ▶ Debug Tool COBOL Modernization (conversion) Utility
 - ▶ Debug Tool Code Coverage Utility
 - ▶ Debug Tool Interactive Debugger
 - Supports all versions of IBM COBOL

- How does it help in the migration effort?
 - ▶ Helps convert old COBOL:
 - OS/VS COBOL
 - VS COBOLII (or later) w/ CMPR2
 - ▶ To ANSI 1985 conforming COBOL, Language Environment LE
 - ▶ Once in 1985 standard you can change compilers at any time
 - ▶ Migrate gradually
 - ▶ Before putting back in production, utilize DTUAF code coverage and debugger to confirm code was properly tested.

Debug Tool COBOL Modernization Utility

- Analyze, Report, and Convert COBOL source to be compliant with supported versions of COBOL
 - Assess the current COBOL source inventory and report the “size” of the conversion effort
 - Convert COBOL source to be compliant with supported LE COBOL compilers
 - Facilitate the project management of the conversion effort

Portion of a sample conversion report

```

1  2  3
000179      IF ERROR-FLAG = ZERO
000180          MOVE "TEST CASE LCPST09 IS SUCCESSFUL." TO OUTPUT-RECORD
000181          WRITE OUTPUT-RECORD
000182  *OLD*  OTHERWISE          ABJ0021 00 OTHERWISE REPLACED BY ELS
000183          ELSE
000184              MOVE "TEST CASE LCPST09 FAILED." TO OUTPUT-RECORD
000185              WRITE OUTPUT-RECORD.
000186
000187      COPY CLOSE.
000188+      CLOSE IN-FILE.
000189+      CLOSE OUT-FILE.
000190+      CLOSE PRINT-FILE.
000191+      STOP RUN.
    
```

Old language syntax replaced by conversion utility

Debug Tool Code Coverage Utility

- Application runtime tool that will collect and report called and executed COBOL programs at a source statement level
 - ▶ Identify the call sequence of programs invoked by a CICS transactions, IMS TM transactions, and batch jobs to define groups of COBOL programs for conversion
 - ▶ After COBOL conversion, validate the testing of converted COBOL programs

- See sample summary report on next page
 - ▶ Lists total number of code statements and the number executed, as well as number of branches and number of branches executed
 - ▶ Lists statements that were not executed
 - ▶ Lists conditional branches that have not had both paths executed

Summary for all PAs:				133	118 88.7	76	63 82.9

This is the generic report showing how this tool collects coverage stats at a program statement level for each CU. It also collects branch information. This report shows four load modules. It could be thousands.

This report information is also generated in XML for import into other tools.

Debug Tool Interactive Debugger

- Source level interactive debugger supporting all versions of COBOL (i.e. OS/VS COBOL, COBOL II, Enterprise COBOL, etc)
 - Diagnose and fix COBOL conversion issues
 - Capture baseline and post baseline execution runtime results for test validation

```

GUI Interface for Interactive Debugger

This example shows the GUI interface to DEBUG TOOL that is available in Websphere Developer for zSeries.

This is the first introduction to the GUI. Make sure and say that this is a no charge feature and that it is an "ease of use" alternative to the MFI.

IBM Software Group

CICS Configuration Manager

Overview

ON DEMAND BUSINESS™

© 2004 IBM Corporation

What's the problem?

- Configuring CICS systems consists of
 - Server configuration
 - Resource provisioning
 - Application deployment
- All three require creation/modification of CICS resource definitions
- Definitions must be migrated from development, to test, to production environments
- Topology of CICS regions can be complex; different topologies in each environment can require changes to the definitions
- Definitions can be stored in CSD files or CICSplex SM data repositories
- Migration to a new version of CICS Transaction Server adds an extra dimension of complexity

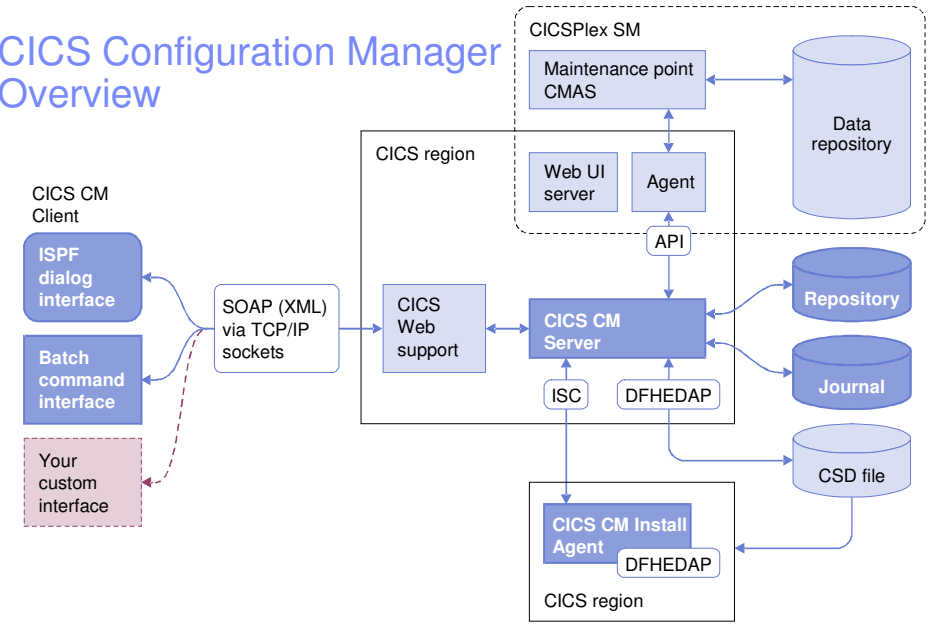

What is CICS Configuration Manager?

- CICS Configuration Manager for z/OS enables you to
 - ▶ Manage CICS resource definitions in CSDs within your enterprise from a single point of control
 - ▶ Manipulate definitions seamlessly across CSD files and CICSplex System Manager data repositories
 - ▶ Create, edit, compare, copy, move and remove definitions, individually or in groups
 - ▶ Edit definitions whether the CICS regions that use them are active or inactive
 - ▶ Migrate multiple definitions in a single step with the option to transform definitions automatically to match the target environment
 - ▶ Use the audit trail to generate reports and back out changes to any previous version of the definitions
 - ▶ Create reports to identify redundant definitions, analyze resource definition status, relationships and history, across any combination of CSD files and data repositories
 - ▶ Take advantage of the optional change control capability where approval is required from authorized users before migrating definitions
 - ▶ Use an XML SOAP API and batch facility for scripting and integration with your existing applications
- Current release – CICS Configuration Manager for z/OS V1.1
 - ▶ GA April 2005
 - ▶ CICS Configuration Manager V1.2 announced 2 May in plan for GA 9 June
 - ▶ Product number - 5697-I78

CICS Configuration Manager Overview

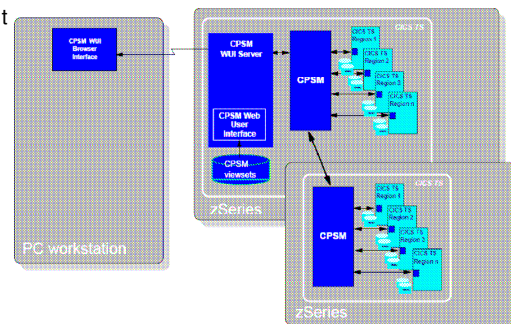

Configuration Manager Benefits

- Helps IT Managers, System Programmers and Application Developers to be more productive, as it:
 - ▶ Improves productivity of day-to-day CICS system management and administration.
 - ▶ Simplifies managing new application development through test and deployment.
 - ▶ Improves change control and auditability.
 - ▶ Ease migration between releases of CICS Transaction Server, especially to Version 3.1
 - ▶ Simplifies CICS systems administration thus lowering costs and reducing downtime due to administrative errors.

CICSplex SM at a glance

- Enterprise systems management for CICS on z/OS via
 - Web User Interface
 - Batch repository update
 - Application Programming Interface
- Single System Image & Single Point Control
 - Resource definition
 - Operations
 - Monitoring
 - Workload Management
 - Threshold Analysis
 - Automation
- Tivoli Business System Manager Integration

IBM Software Group

Tools to Simplify Migration

CICS Performance Analyzer

ON DEMAND BUSINESS™

© 2004 IBM Corporation

CICS PA Overview

- CICS Performance Analyzer for z/OS
 - ▶ Comprehensive Performance Reporting and Analysis for CICS
 - Including DB2, WebSphere MQ, and MVS System Logger
 - ▶ Extensive Tabular Reports and Extract Data Sets
 - ▶ Historical Database (HDB)
 - Trending and Capacity Planning
 - ▶ ISPF Dialog to build, maintain, and submit reports and extracts
- Part of IBM systems management strategy
 - ▶ Complements IBM online monitors for a complete solution
 - Tivoli OMEGAMON XE for CICS on z/OS
 - ▶ Complements other IBM batch performance analysis tools (e.g. IMS PA)
 - ▶ Complements IBM enterprise wide historical trend analysis solution (Tivoli Decision Support for z/OS) with detailed CICS analysis for fast online problem resolution, CICS tuning and capacity planning
- Current release - CICS PA V1.4
 - ▶ 5655-F38

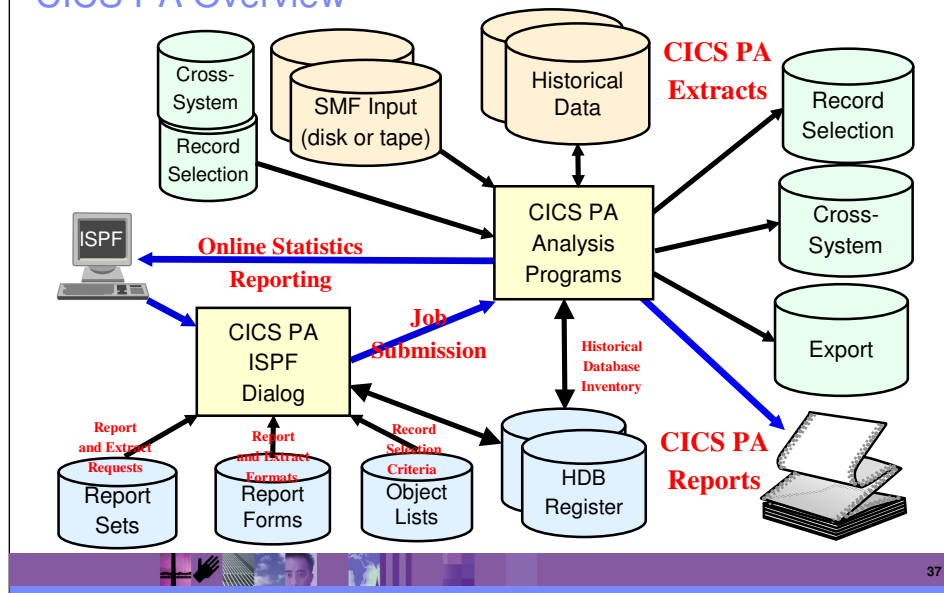

IBM CICS® Performance Analyzer for z/OS V1.4 is a powerful off-line reporting tool that analyzes the System Management Facilities (SMF) records created by the CICS Monitoring Facility (CMF), CICS Statistics, CICS Server Statistics, as well as SMF data from the related subsystems (DB2 and WebSphere® MQ®), to produce a wide range of reports and extracts that will help you tune and manage your CICS systems. CICS PA also provides z/OS system logger reports using the system logger data.

CICS Performance Analyzer for z/OS V1.4 is built to address the needs of everyone involved in CICS performance analysis, and CICS system tuning and planning capacity for future use, including those who build, manage, and deploy complex mainframe CICS applications.

CICS Performance Analyzer provides the level of detail and flexibility that easily helps you find new ways to improve CICS system performance, lower maintenance costs, and strategically plan IT investments.

CICS PA complements your online monitoring tools, like [IBM Tivoli® OMEGAMON® XE for CICS® on z/OS®](#), as it can help to respond quickly to online performance issues by drilling down deeply into CICS performance data to identify the cause of the problem. CICS PA also complements the enterprise-wide historical performance capabilities of [IBM Tivoli Decision Support for z/OS](#) with the additional deep and detailed CICS-related performance data, which can be used for focused CICS performance problem determination, bottleneck analysis, tuning and capacity planning.

CICS PA Overview

This visual shows the main components of CICS PA; including the TSO Interactive System Productivity Facility (ISPF) dialog, it's related data sets and the CICS PA batch analysis, reporting programs and data sets.

CICS PA at a Glance

- ISPF Dialog to build, maintain, submit reports
 - ▶ Tailor your reports easily using Report Forms
 - ▶ Extensive online help available, field descriptions, ...
- CICS PA reports and data extracts analyze all aspects of your CICS systems, including ...
 - ▶ CICS application performance
 - ▶ CICS system resource usage
 - ▶ Cross-System performance
 - ▶ Transaction Resource Usage
 - ▶ External Subsystems used by your CICS applications ...
 - including WebSphere MQ, DB2 and IMS (DBCTL)
 - ▶ MVS Workload Manager (WLM)
 - ▶ Exception events that cause performance degradation
- CICS PA Statistics online reporter provides comprehensive reporting of CICS Statistics data
- CICS PA Historical Database
 - ▶ Flexible and easy-to-use facility for collecting and managing historical performance data for your CICS systems
 - ▶ Data can be exported into DB2 or CSV format
 - ▶ Helps trending and capacity planning
- Extract Data Sets
 - ▶ Cross-System Work
 - ▶ Export for further processing using PC tools
 - ▶ Record Selection for faster processing

Here are some of the types of reports and extracts that can be produced using CICS PA.

The flexibility of CICS PA allows you to easily tailor your report and extract requests to meet your specific performance reporting and analysis requirements. CICS PA allows you to keep pace with the ever-changing nature of CICS by providing a flexible and easy to use dialog that allows you to report on all aspects of your CICS system's performance.

CICS Transaction Server for z/OS Version 2.2 collects over 239 specific performance data fields in 17 groups. Also, if the monitoring MCT options APPLNAME=YES and RMI=YES are specified, an additional 10 performance data fields in 2 groups are collected. And, if used, DBCTL adds a further 32 specialized fields. With the advent of CICS Transaction Server Version 2 and EJB support, the number of groups and data fields within existing groups continues to grow.

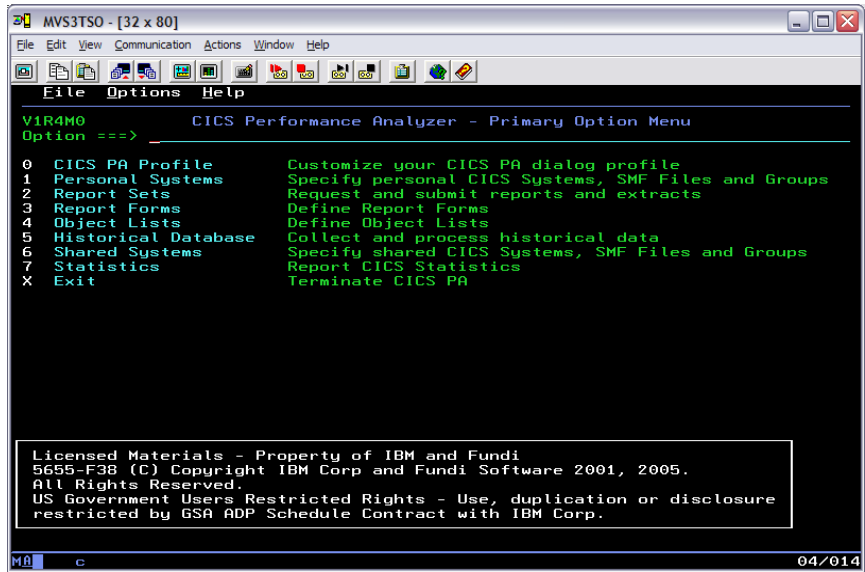

CICS PA can process CMF data from a single CICS system, or from multiple CICS systems that share the transaction workload by using MRO or ISC. Using the **Cross-System report** provides a consolidated report showing the complete transaction activity across connected CICS systems.

The **Transaction Resource Usage reports** provide a detailed analysis of the Resource class records collected by the CICS Monitoring Facility (CMF).

The **Workload Activity report** provides a detailed and/or summary report highlighting the MVS Workload Manager (WLM) Service Class and Report Class, and reporting phase for each transaction.

The **CICS Business Transaction Services (BTS) report** is a detailed report that shows the correlation of the transactions performed by the same or different CICS systems on behalf of a single CICS Business Transaction Services (BTS) process.

CICS PA Overview

The screenshot shows a terminal window titled "MVS3T50 - [32 x 80]". The window contains the "CICS Performance Analyzer - Primary Option Menu". The menu is displayed in green text on a black background. The menu items are numbered 0 through 7, with an 'X' for 'Exit'. Each item has a corresponding description. At the bottom of the window, there is a copyright notice for IBM and Fundi, dated 2001 and 2005, and a notice regarding US Government Users Restricted Rights.

CICS Performance Analyzer – Unique capabilities

- Ease of use
 - ▶ No additional setup or customization required – will process your existing SMF data
 - ▶ Familiar CICS terms and concepts
 - ▶ No additional overhead – SMF data collection overhead only
- Powerful and flexible analysis capabilities
 - ▶ ISPF Dialog to build, maintain, submit reports
 - Over 130 sample reports provided to meet your analysis requirements
 - ▶ Tailor your reports easily to meet your analysis needs
 - ▶ Extensive online help available, including field descriptions
- Comprehensive data coverage and a variety of reports
 - ▶ Extensive Tabular Reports and Graph Reports
 - ▶ Cross-System Work for complete transaction performance tracking
- Historical database capability to aid trend analysis and capacity planning
- Customizable extracts capability to improve speed of processing

CICS PA is easy to use:

- No additional setup or customization required
- Familiar CICS terms and concepts

CICS PA reports on all aspects of CICS system activity and resource usage. The flexibility of CICS PA allows you to easily tailor your report requests to meet your specific requirements. You can use the ISPF dialog to generate your report and extract requests. The dialog assists you in building reports and extracts specific to your requirements without you having to understand the complexity of the CMF data.

CICS PA's ISPF dialog interface can be used to create the command language and JCL that is used to run the reporting program in batch.

CICS PA has extensive online help facilities and a powerful command language that is used to select, sort and customize the report formats and data extracts.

CICS PA provides a comprehensive suite of reports and data extracts for use by:

System Programmers - to track overall CICS system performance, evaluate the effects of CICS system tuning efforts, ...

Applications Programmers - to analyze the performance of their applications and the resources they use.

DBAs - to analyze the usage and performance of CICS Resource Managers and database systems such as IMS and DB2.

Managers - to ensure transactions are meeting their required Service Levels and measure trends to help plan future requirements and strategies.

IBM Software Group

CICS Version To Version Migration Scenarios

ON DEMAND BUSINESS™

© 2004 IBM Corporation

IBM Software Group

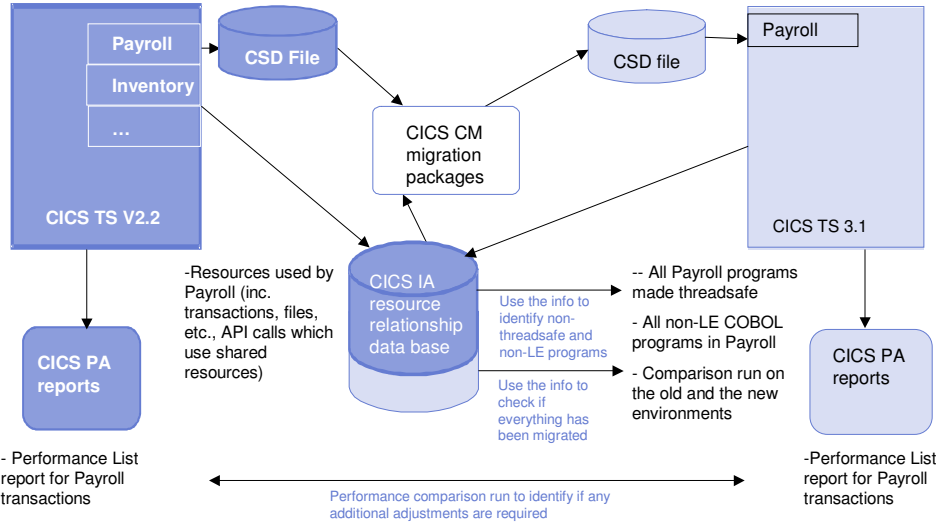

Scenario 1: Migration to CICS TS 3.1 - CICS resource definitions remain on CSD in target environment

ON DEMAND BUSINESS™

© 2004 IBM Corporation

Migration to CICS TS 3.1 - CICS resource definitions remain on CSD in target environment

Scenario 1: Migration to CICS TS 3.1 - CICS resource definitions remain on CSD in target environment

1. CICS IA identifies resources for each set of applications that needs to be migrated (in runtime and via the load lib scanner). This info can be used to:
 1. Identify non-LE and OS VS Cobol programs. If any are found, Debug Tool Utilities & Advanced Functions can be used to convert these.
 2. Identify applications which do not conform to threadsafe standards. In order to improve performance (if needed) on CICS TS 3.1, CICS applications need to conform to threadsafe standards
 3. Identify a group of resources for each application which need to be migrated from the current CICS TS test environment to CICS TS 3.1 test environment. This info will be used by CICS CM.
2. Use CICS CM to build change packages based on the information provided by CICS IA to migrate resources to CICS TS 3.1 test regions. CICS CM transformation rules can also be applied to enable transformation of resource attributes during migration to target CSD.
3. Before switching into production you might want to run CICS IA in the new environment, and use the info to compare resources in the two environments, to check if everything you need has been migrated.
4. Following the migration, CICS PA Performance List reports can be run for comparison between the two environments.

Status of OS/VS COBOL and COBOL II with CICS:

- CICS TS 2.2 announcement:
 - ▶ Translator support for the earlier (pre-Language Environment) compilers is withdrawn in this release
 - ▶ "It is planned that run-time support for OS/VS COBOL programs, regardless of run-time library used, and for any other programs running under pre-Language Environment run-time libraries will be withdrawn in the next release."
- CICS TS 2.3
 - ▶ OS/VS COBOL load module must run with the LE runtime
 - ▶ Any modules attempting to use the OS/VS COBOL runtime will abend at initialization
- CICS TS 3.1
 - ▶ CICS interfaces for the VS COBOL II, OS PL/I and C/370 runtimes are removed
 - Will need run-time libraries distributed with LE to execute current load modules
 - ▶ CICS interfaces for the OS/VS COBOL are removed
 - CICS will terminate any OS/VS COBOL program with an APCE abend

Identifying OS/VS COBOL programs with CICS IA

- What the CICS IA scanner provides for is as follows :-
- It attempts to find the language type from the Language byte in the API call. if it has not identified it from the API call then it checks the prologue (stub) for DFHYA for Assembler etc.
- It reports the following types
 - ▶ ASSEMBLER - Assembler language constant
 - ▶ COBOL II - COBOL II language constant (or any COBOL after OS/VS, COBOL FOR MVS etc.)
 - ▶ C/370 - C/370 language constant
 - ▶ COBOL - COBOL language constant (OS/VS COBOL)
 - ▶ PL/I - PL/I language constant
- We also identify if the program is runnable under LE/370.
- The CICS IA scanner will identify OS/VS COBOL programs and informs you whether they have been linked with LE or not.

Connected to remote server/host demomvs.demopkg.ibm.com using port 9993 HP DeskJet 880C on LPT1:

How CICS IA can help with making programs threadsafe ?

A threadsafe program:

- Must be written to threadsafe standards.
 - ▶ Must use appropriate serialization techniques when accessing any shared resources.
- Must be Language Environment-conforming or assembler programs.
- Must be capable of executing concurrently on multiple TCBS
- Cannot rely on QR to serialize access to shared resources and storage.
 - ▶ Use serialization techniques
 - Compare and swap
 - Enqueue/Dequeue
 - ▶ All programs accessing a shared resource must be threadsafe.

What are the shared resources ?

- Typical examples of shared resources are the CICS CWA, global user exit global work areas and storage acquired explicitly by the application program with the shared option.
- You can check whether your application programs use these types of shared storage by looking for occurrences of the following EXEC CICS commands:
 - ▶ ADDRESS CWA
 - ▶ EXTRACT EXIT GASET
 - ▶ GETMAIN SHARED
- CICS IA collects and records this information

What else can CICS IA do ?

- CICS IA reports the current TCB mode for each EXEC CICS (or DB2, MQ, DLI) call.
- Users who are converting their programs to threadsafe can use this during testing to assist in finding out which TCB modes their program runs in. This helps to identify programs that have CICS API calls that are not threadsafe and cause TCB mode swapping.
- Users can run a query on the relationship DB2 database for the list of API calls that are not threadsafe to identify programs that use these calls.

Scenario 2: Migration from to CICS TS 3.1 -
CICS resource definitions are moved to CPSM
BAS in target environment

ON DEMAND BUSINESS™

© 2004 IBM Corporation

Scenario 2: Migration to CICS TS 3.1 - CICS resource definitions are moved to CICSplex SM BAS in target environment

1. CICS IA identifies resources for each set of applications that needs to be migrated (in runtime and via the load lib scanner). This info can be used to:
 1. Identify non-LE and OS VS Cobol programs. If any are found, Debug Tool Utilities & Advanced Functions can be used to convert these.
 2. Identify applications which do not conform to threadsafe standards. In order to improve performance (if needed) on CICS TS 3.1, CICS applications need to conform to threadsafe standards
 3. Identify a group of resources for each application which need to be migrated from the current CICS TS test environment to CICS TS 3.1 test environment. This info will be used by CICS CM to create CICSplex SM BAS definitions to be stored in CICSplex SM repository.
 4. Identify Affinities and use this information to build CICSplex SM definitions. CICS IA creates and enables you to manage affinity groups. Alternatively, this information can be used to eliminate affinities prior to CICSplex SM enablement.
2. Use CICS CM to build change packages based on the information provided by CICS IA to help migrate resources to CICS TS 3.1 test regions. CICS CM transformation rules are also applied to enable transformation of resource attributes during migration to target CICSplex SM Data Repository.
3. Before switching into production you might want to run CICS IA in the new environment, and use the info to compare resources in the two environments, to check if everything you need has been migrated, and that new affinities have not been introduced.
4. Following the migration, CICS PA Performance List reports can be run for the CICS TS 2.3 and CICS TS 3.1 environment for comparison. CICS PA Cross Systems report can also be run if and workload separation or workload balancing is implemented as part of the move to exploit CICSplex SM capabilities.
5. Use CICS PA for measure

CICS IA 2.1 - Affinity Analysis

- ▶ What are transaction affinities and why do we care ?
 - Exist when persistent state data is created in a CICS Application Owning Region.
 - Subsequent instances MUST execute in the same AOR.

- ▶ What does CICS IA provide for those planning to use CICS workload management
 - Single point of data collection for both, interdependencies and affinities
 - Single point of access to interdependency and affinity data in the DB2 data base
 - Ability to create CICSplex SM definitions and manage groups of definitions in DB2
 - Flexible and easy to use interface for managing affinity data, to help you answer questions like:
 - show me all Inter Transaction Affinities by region
 - show me all ENQ/DEQ type affinities by application
 - show me all affinities for program ABCD
 - show me Transaction System Affinities for transaction XXXX
 - show me all affinity groups which have CPSM groups built.

**Scenario 3: Exploiting WebServices capabilities
in CICS TS 3.1 - Converting existing CICS
business logic into WebServices.**

ON DEMAND BUSINESS™

© 2004 IBM Corporation

Sample Scenario: Exploiting WebServices capabilities in CICS TS 3.1 - Converting existing CICS business logic into WebServices.

1. ATW and WSAA identify business processes to be exposed as WebServices and componentize them.
2. CICS IA provides application topology and program linkage to determine a set of programs to be exposed as WebServices.
3. WDz used to develop these programs as CICS WebServices
4. CICS CM used to create the required resource definitions - PIPELINE, WEBSERVICE, URIMAP, TCPIPSERVICE
5. CICS PA CICS WebServices reports used to provide performance data for the new developed CICS WebServices and for comparison with baselines CICS TS 2.3 Performance List report
6. Any performance problems can be further investigated using Application Performance Analyzer.

Explore

- WSAA identifies those programs that are good candidates for conversion to Web Services

In this example we are looking at details for a program

4. Following migration and as the WebServices capabilities of CICS TS 3.1 are used to develop and deploy CICS WebServices, CICS CM is used to create the required resources definitions such as the URImap shown here.

CICS Transaction Server for z/OS Version 3.1 Support

- 5. CICS PA CICS WebServices reports used to provide performance data for the new developed CICS WebServices and for comparison with baselines CICS TS 2.3 Performance List report
- CICS Performance Analyzer provides customize reports ...
 - ▶ Custom reports are provided which enables extensive performance analysis of the many new functions introduced in CICS Transaction Server V3.1
 - ▶ Detailed and summary reports provided include ...
 - Transaction CPU Analysis – including CICS TCB usage for ...
 - OPENAPI Applications, XPLink, ...
 - Web services applications
 - CICS Web support and Secure Sockets Layer (SSL) enhancements
 - Application Transformation - inter-program data transfer ...
 - Channel Container usage, Program request channel activity, ...
 - ▶ Online Statistics Reporting is available for all CICS statistics data ...
 - Including the new statistics data on the CICS resources for Web services ...
 - PIPELINE, URIMAP, and WEBSERVICE
 - And the CICS Web support enhancements to TCP/IP Services

Summary

IBM zSeries tools help you ease the migration path to CICS TS V3.1 and then continue to provide ongoing productivity benefits:

- Help manage application availability
- Improve day-to-day administration of CICS systems and applications
- Provide detailed information to support application reuse projects, including SOA implementations
- Improve application understanding and provide audit trails to help achieve regulatory compliance (e.g. SOX)

- Visit ibm.com/cics/tools
