

# Business Events Processing

## WebSphere Business Events

**Balogh Péter**  
SOA Architect

**WebSphere** software

# Event Processing Can Dramatically Improve and Change the Way Businesses Operate

**Enables detection of business situations, providing real-time insight and providing earlier and intelligent insight for timely and effective business decisions**

*Value is in recognizing the significance of an event from a business context*

Getting the right information in the right granularity to the right person at the right time

**Information Dissemination**

Quick observation into exceptional business behavior and notification to the appropriate people

**Business Monitoring**

Diagnose problems based on symptoms and solve them

**Active Diagnostics**

Mitigate or eliminate predicted events

**Predictive Processing**

**Detect  
Decide  
Respond**

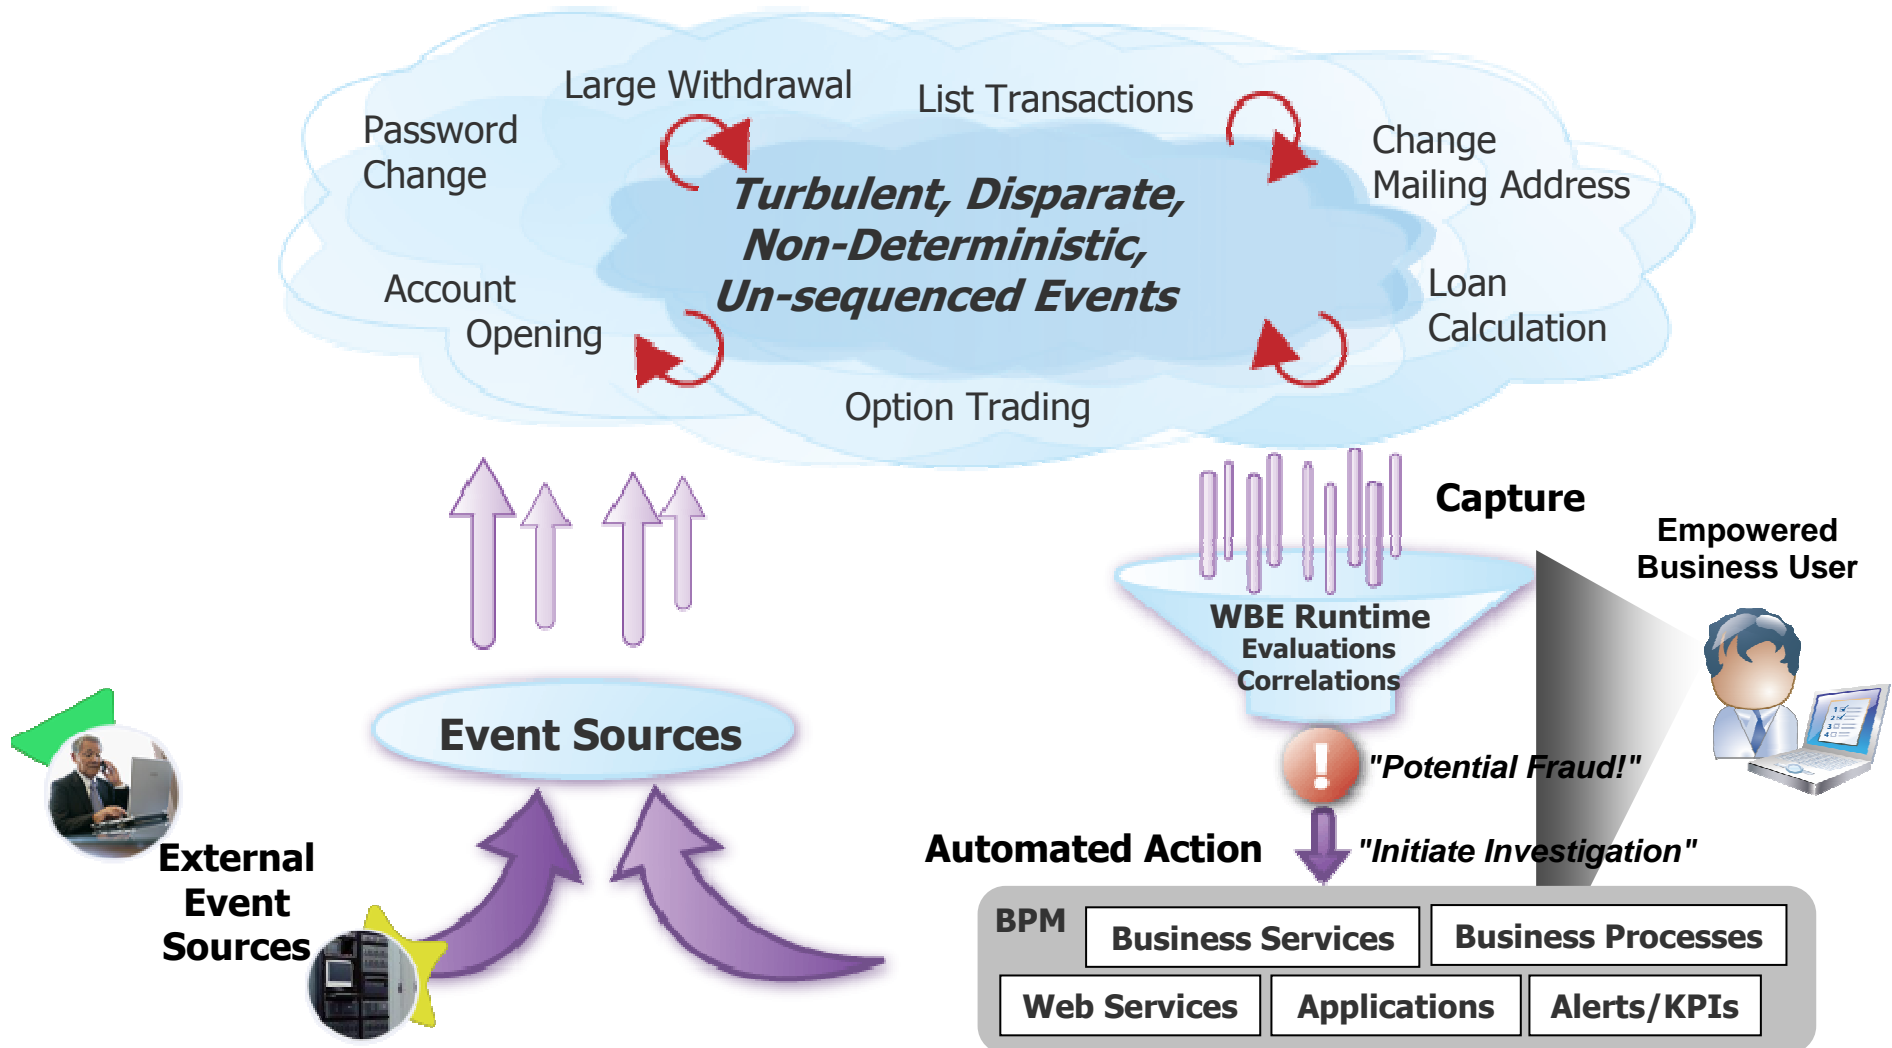

**Service Availability**

Real-time business service visibility based on IT events

# WebSphere Business Events

Correlation of business events from any source, over any time frame

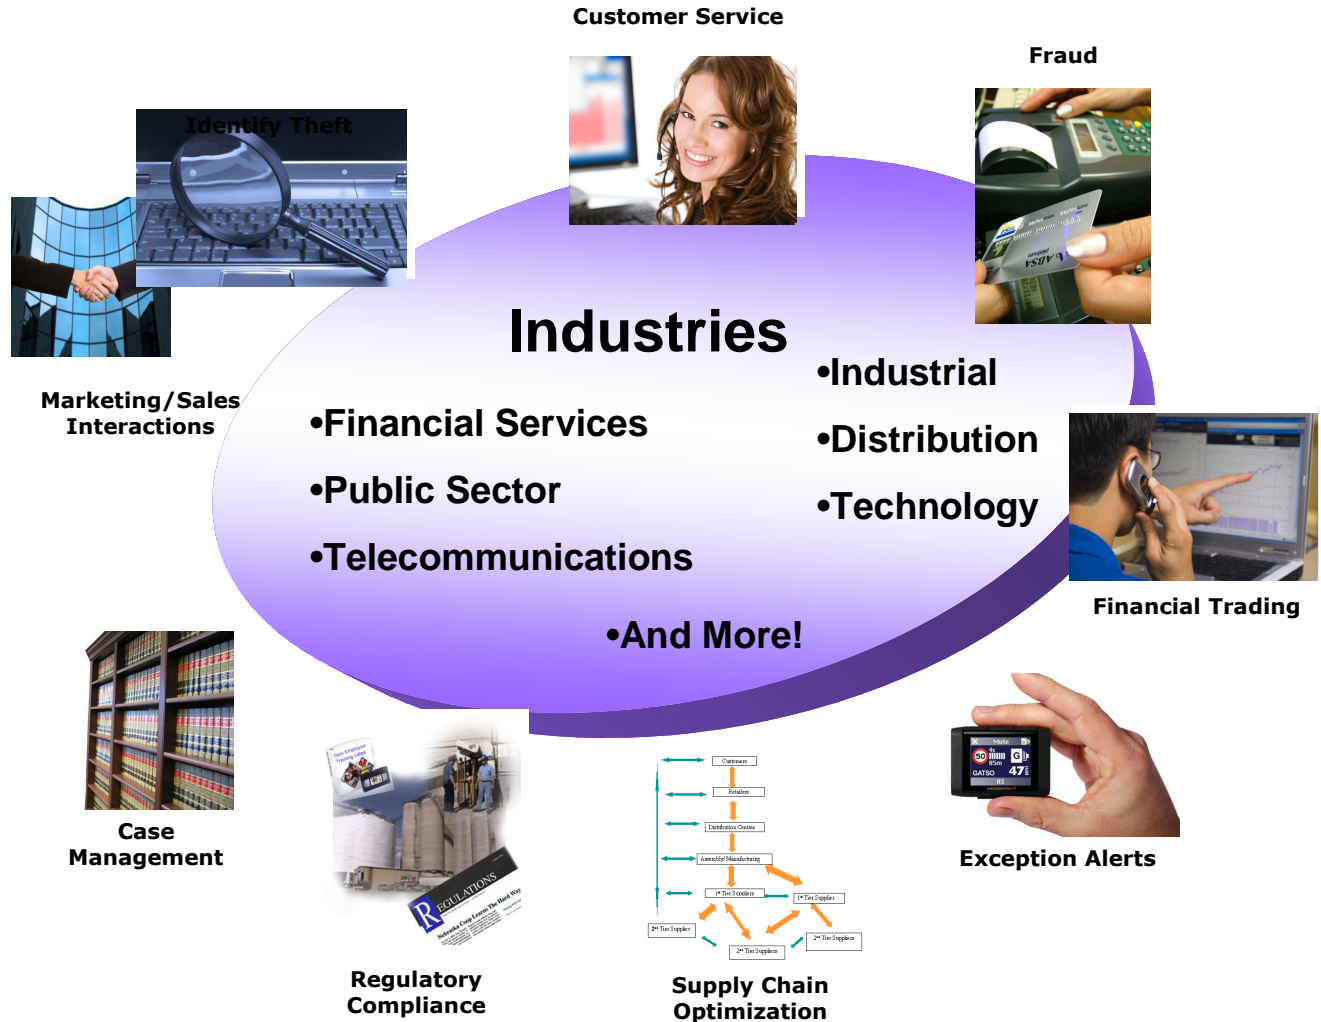

# Broad Applicability to Industries and Applications

✓ Actionable events and patterns

✓ Time and order of events are unpredictable

✓ Event processing scenarios (logic) change frequently

✓ Business users need to directly manage the event process

# Extending BPM with Business Event Processing (BEP)

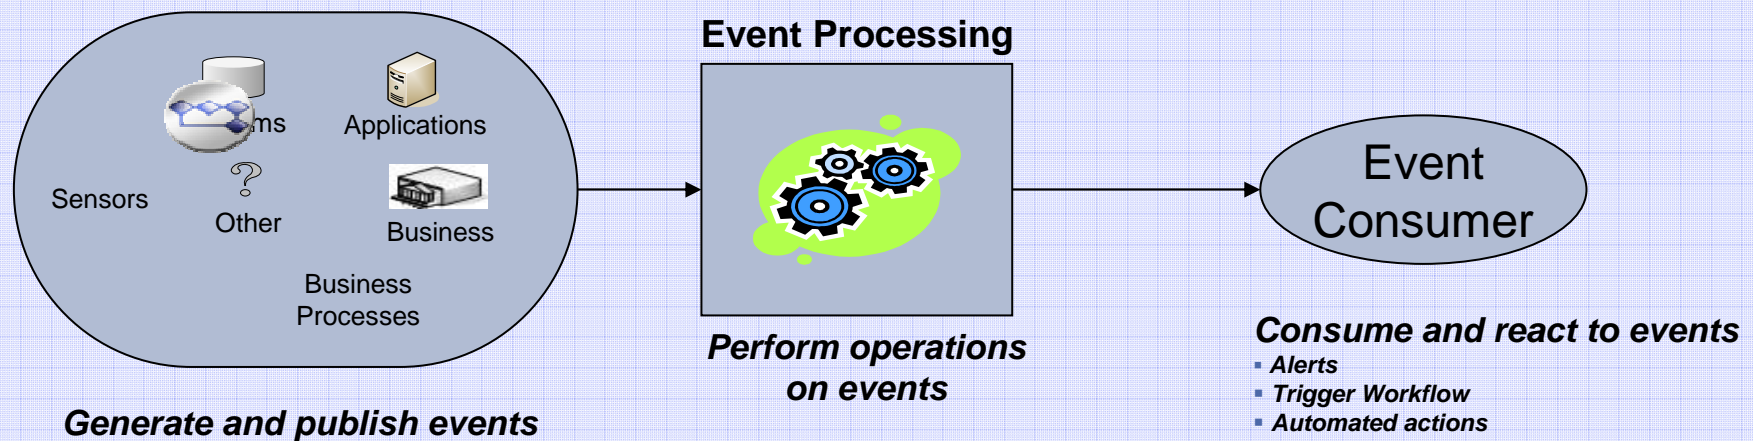

## *New Capability*

### **Business Event Processing is the ability to...**

- Receive or extract events from multiple sources
- Detect “business situations” based on event patterns and data
- Derive new events (i.e. through aggregation, information enrichment, etc.)

### **Business Event Processing provides two key benefits:**

- Earlier and more intelligent insight leading to timely and effective business decisions
- Loose coupling of applications to improve time-to-deployment, flexibility and maintenance

# Introducing....

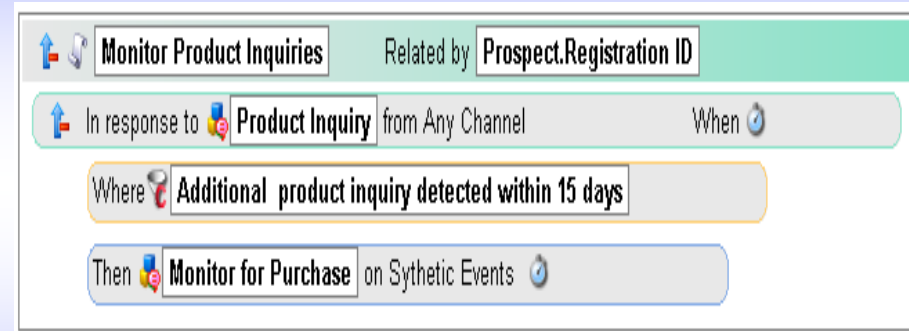

A convergence of power and ease of use

## WebSphere Business Events =

**Advanced Event Processing**

+

**Business User Interface**

Correlation of business events from any source over any time frame to respond to opportunities and threats, such as fraud detection, up-sell, cross-sell, and more

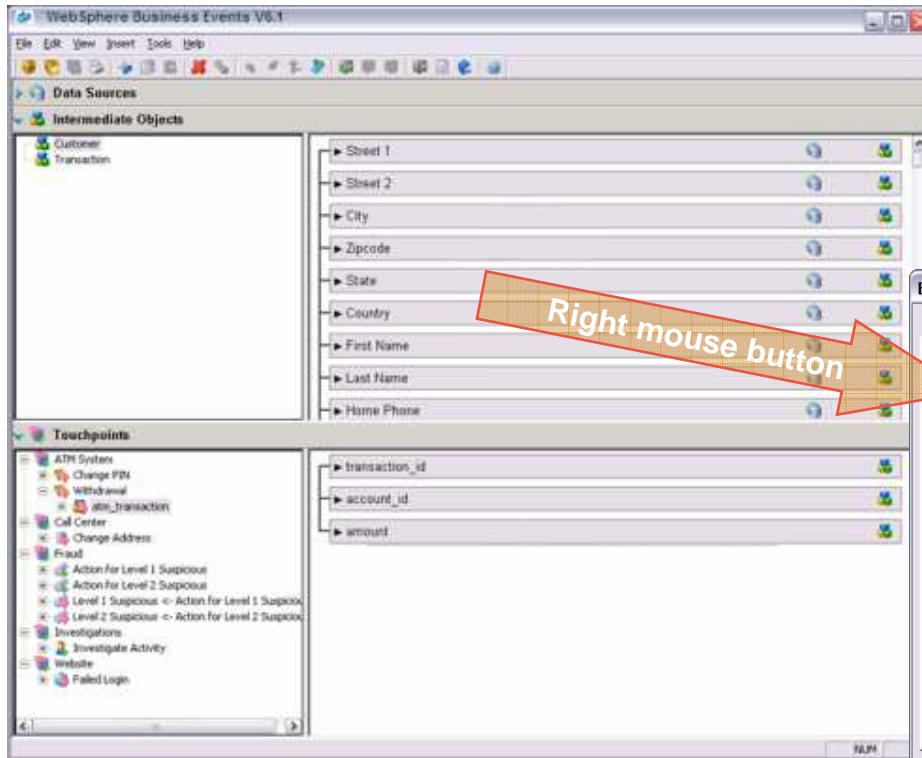

# Identify the Building Blocks

*Information available for processing – events, actions, properties...*

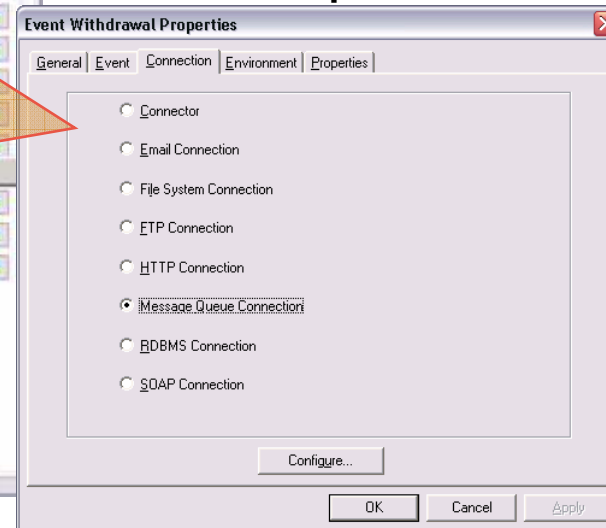

IT Developer

## Basic Data Definitions

## Data Properties

IT involvement minimal but necessary

# Define Business Interactions

Event processing logic using drop-down, point & click

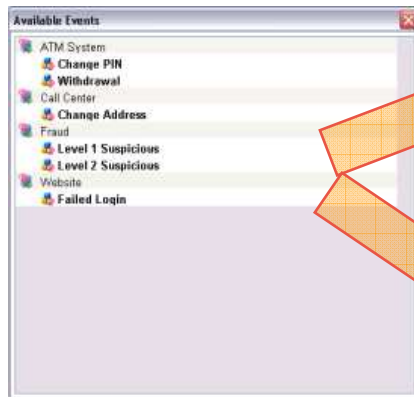

Business User

Business Analyst

## Building Blocks

## Condition UI

**Large Transaction** Checks if  
Transaction.Amount **Is Greater Than or Equal To** 1000

**Recent PIN Change** Checks if  
Occurrences Of Change PIN Within 1 day **Is Greater Than** 0

Data Value

Event Pattern

Event  
Conditions  
Actions

## Interaction UI

**Watch for Suspicious Activity** Related by Customer.Customer ID

In response to **Withdrawal** from ATM When

Where **Large Transaction**  
and **Recent PIN Change**

Then **Deny Transaction** on Transaction Server

Then **Investigate Activity** on Investigations

With building blocks created, Business takes over

# Assemble Event Flows

*Drag & drop to visualize relationship between Interactions*

Business User

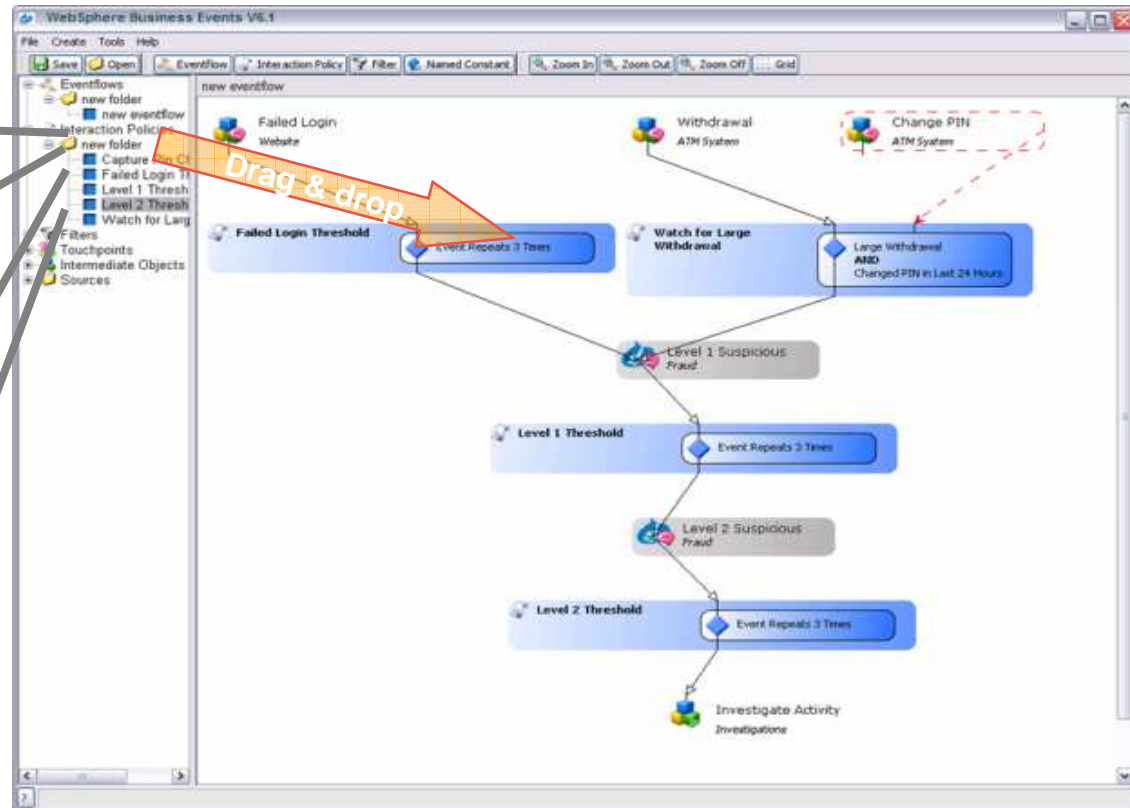

Business Analyst

## Event Flow

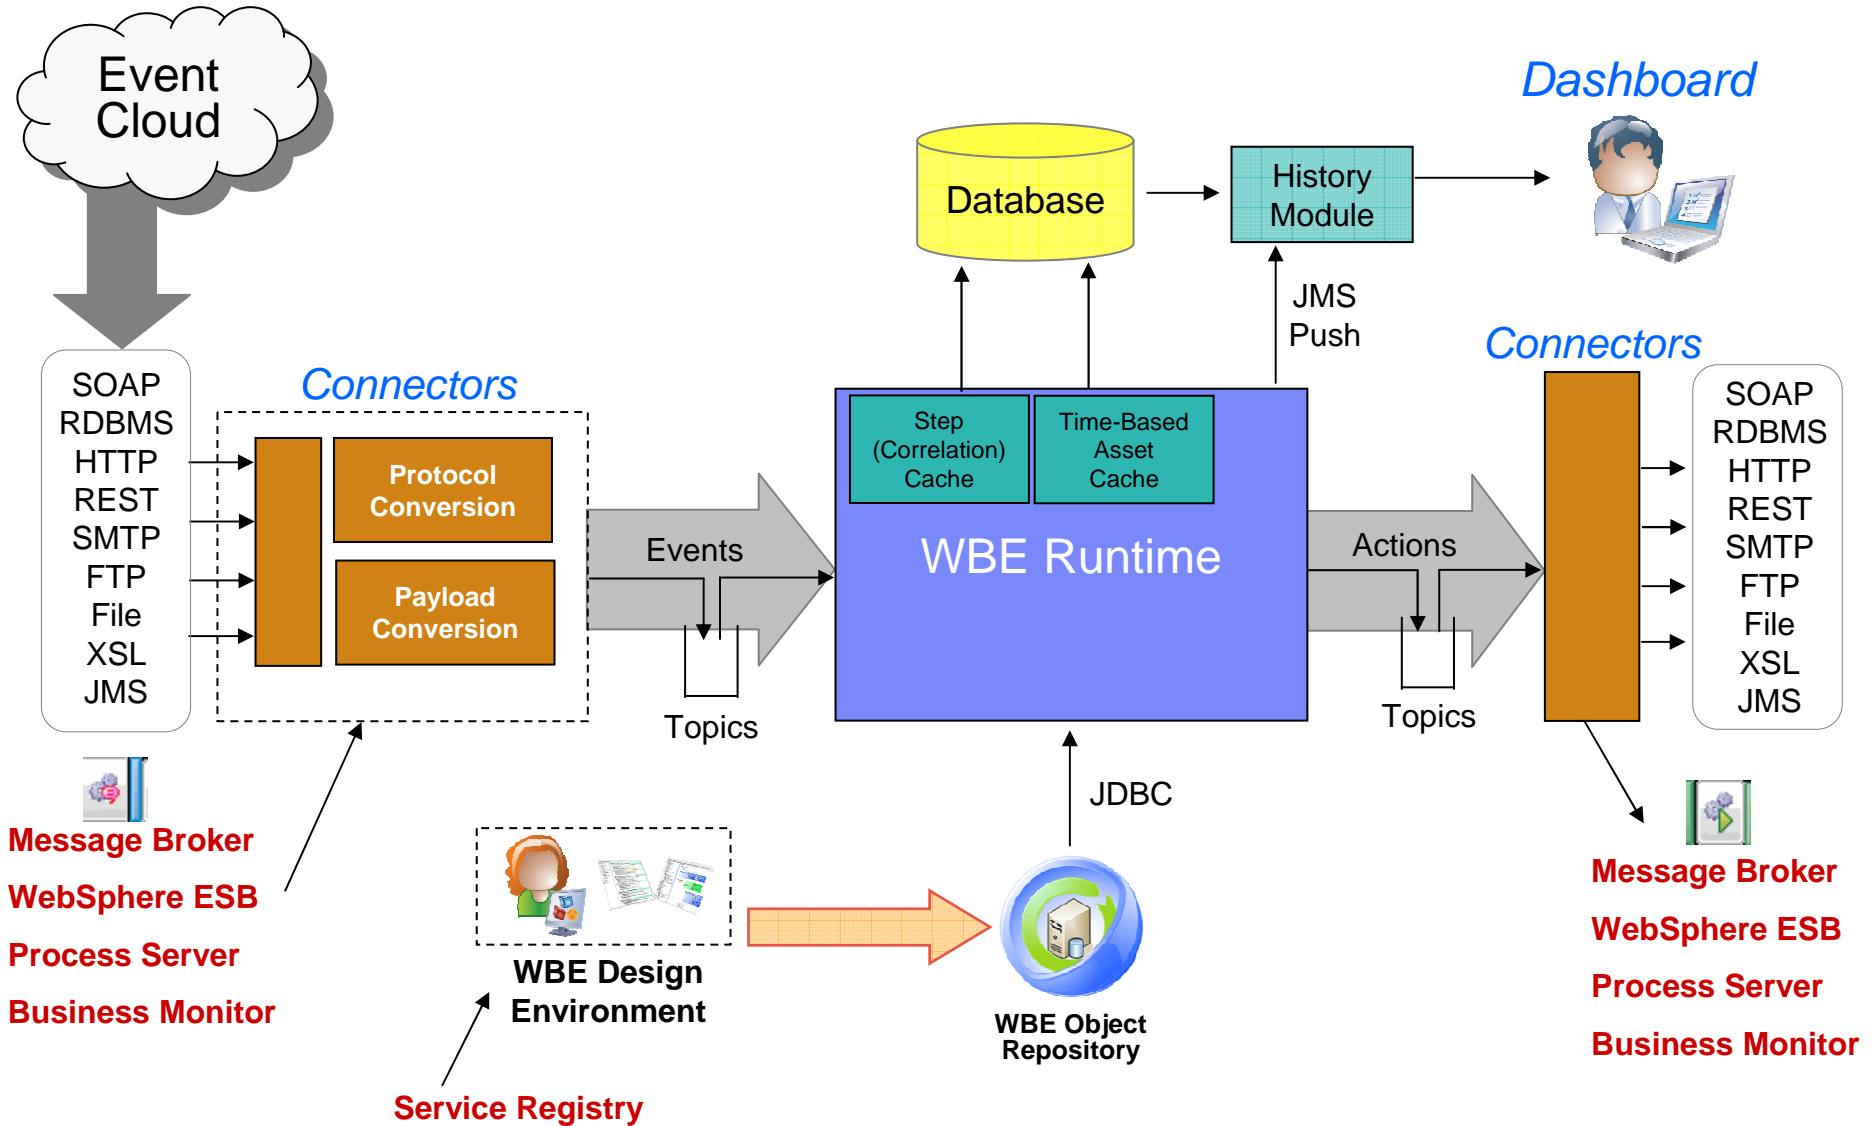

### Interactions

- Failed Login Threshold** Related by **Customer.Account ID**
  - In response to **Failed Login** from Website
  - Where **Event Repeats 3 Times**
  - Then **Level 1 Suspicious** on Fraud
- Watch for Large Withdrawal** Related by **Customer.Account ID**
  - In response to **Withdrawal** from ATM System
  - Where **Large Withdrawal** and **Changed PIN in Last 24 Hours**
  - Then **Level 1 Suspicious** on Fraud
- Level 1 Threshold** Related by **Customer.Account ID**
  - In response to **Level 1 Suspicious** from Fraud
  - Where **Event Repeats 3 Times**
  - Then **Level 2 Suspicious** on Fraud
- Level 2 Threshold** Related by **Customer.Account ID**
  - In response to **Level 2 Suspicious** from Fraud
  - Where **Event Repeats 3 Times**
  - Then **Investigate Activity** on Investigations

With event logic defined, Business maps out the event flow

# Announcing - AptSoft Acquisition

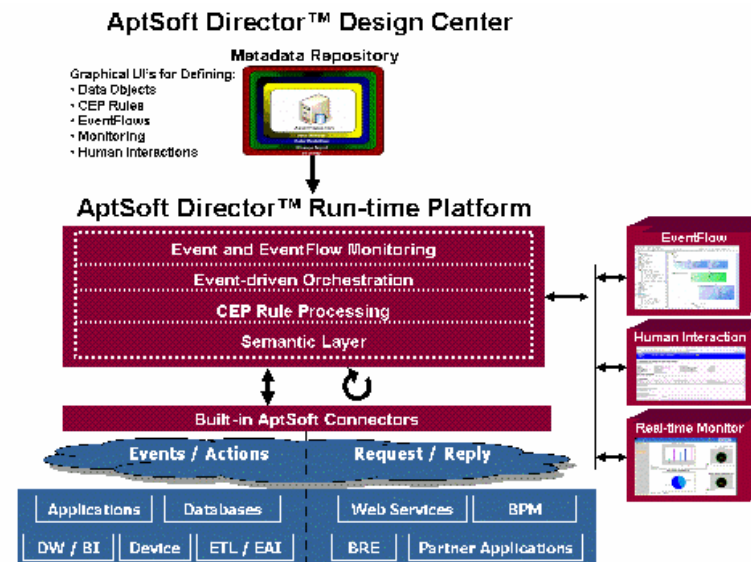

**Business Overview:** Private, founded in 2002 by Frank Chisholm the CEO. The company provides a Complex Event Processing (CEP) design and execution platform to help companies implement a new class of event-driven applications as part of a service oriented architecture (SOA).

**Location:** Headquartered in Burlington, MA

## Key Products / Technology:

- AptSoft Director for CEP
- AptSoft Director Design Center
- AptSoft Director Run-time Platform

**Customers:** 19

AptSoft will add to IBM's rich portfolio of event-driven technologies. AptSoft provides intuitive business-user tools to define, implement, and manage events-driven applications. Aptsoft's products will be incorporated into IBM WebSphere as part of the overall Business Process Management portfolio.

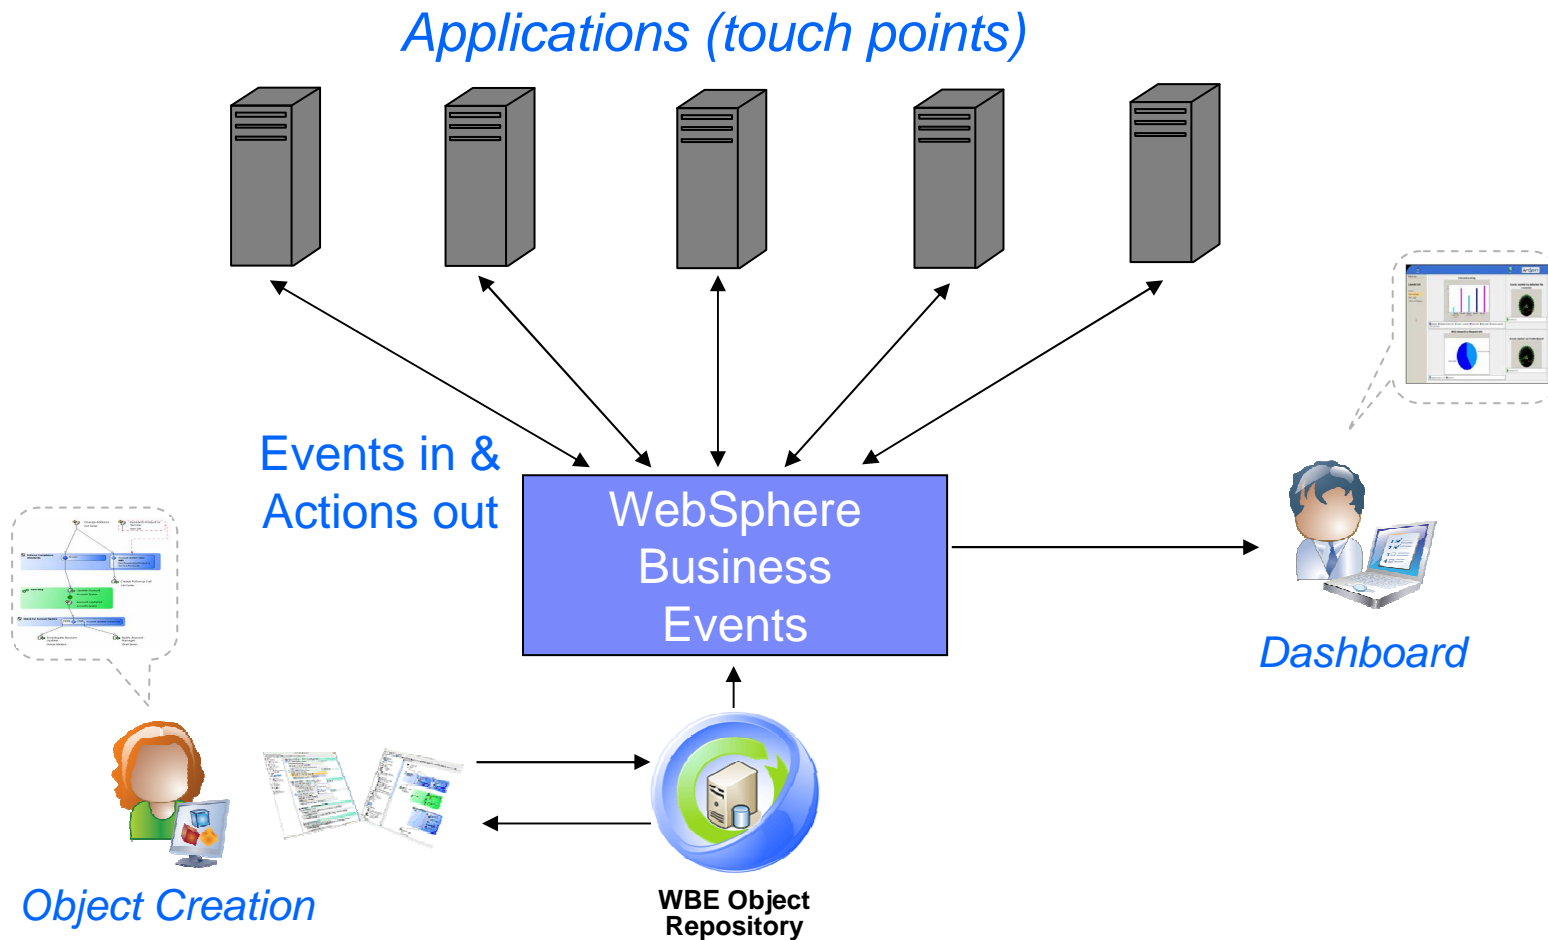

## WebSphere Business Events - Timeline

- Announcement April 1, 2008
- Launch at IMPACT April 6, 2008
- Sales & Tech Sales Enablement starting April 20, 2008
- Product eGA May 31, 2008
  - Fast Start Sales Program – Focused on any deals that have 2Q close potential

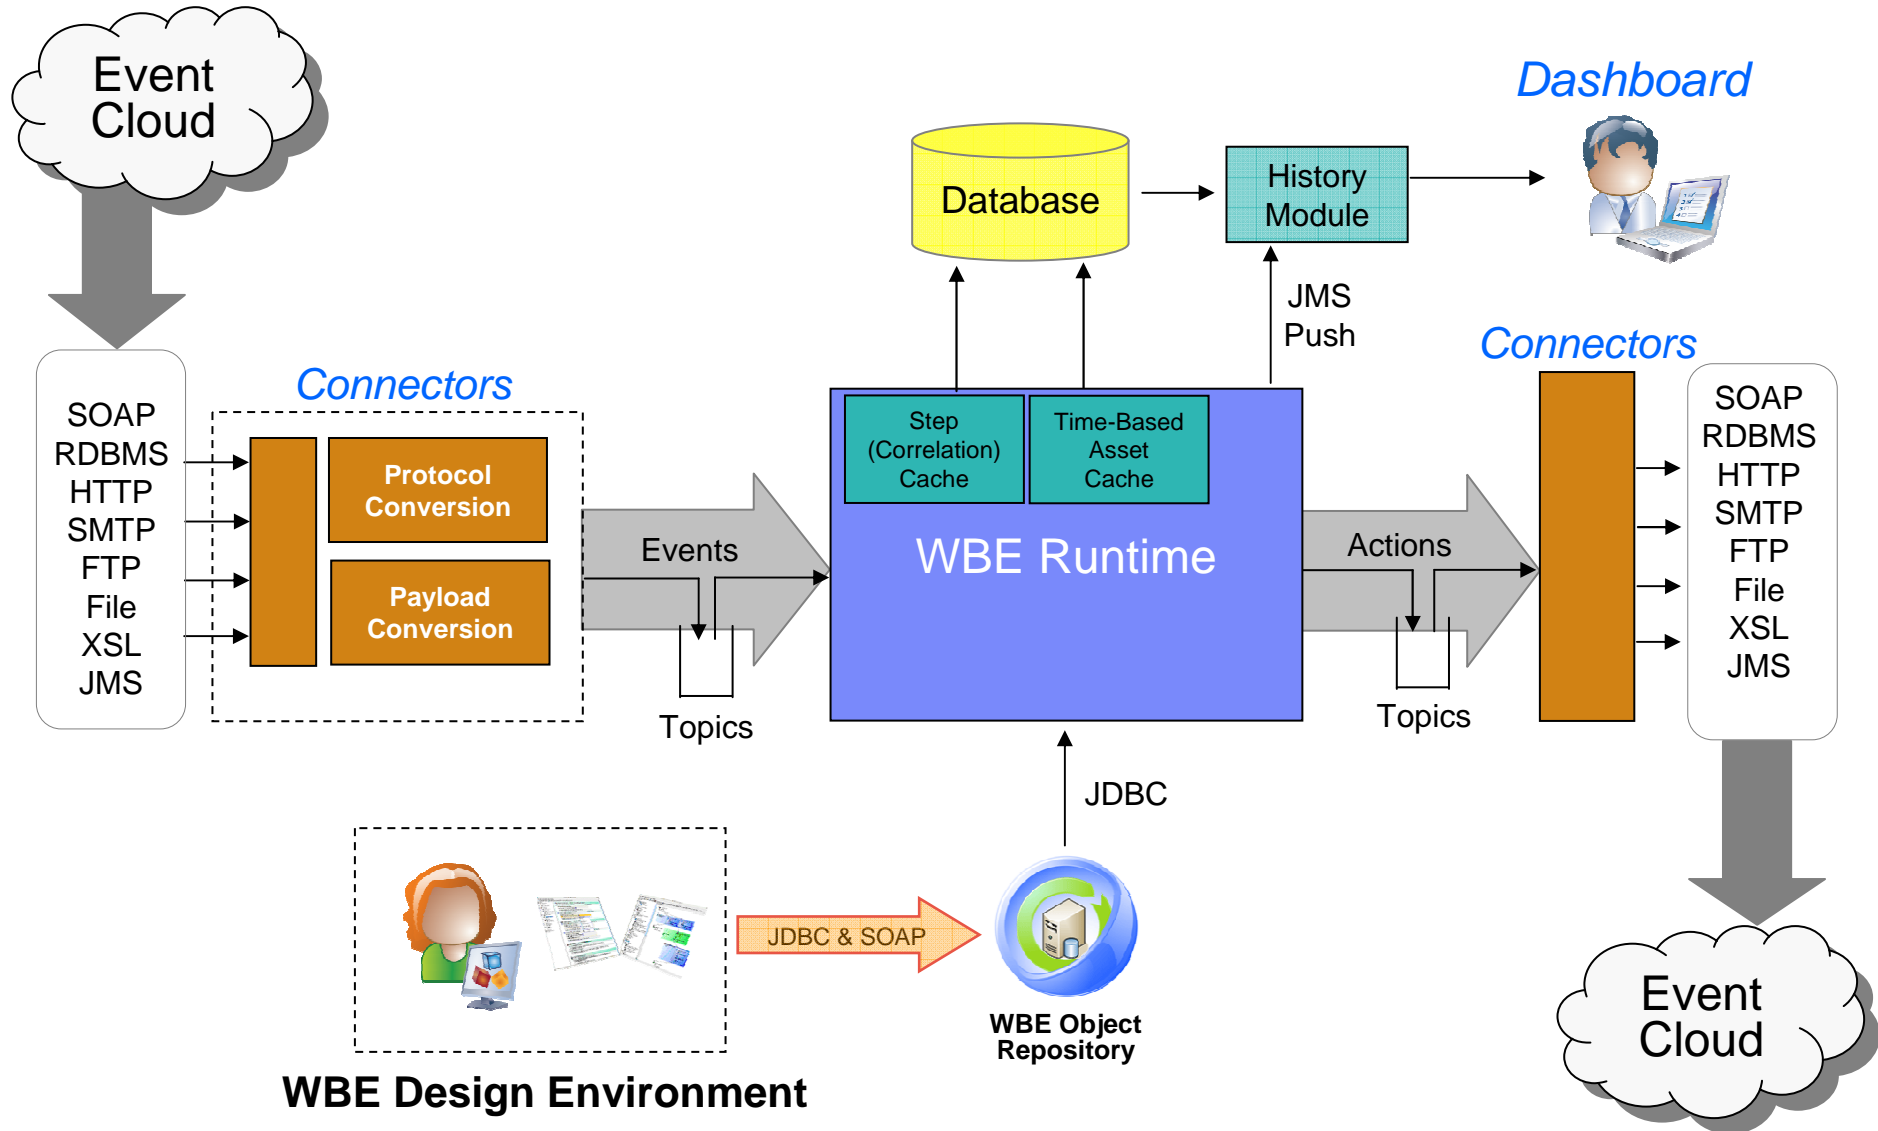

# WebSphere Business Events

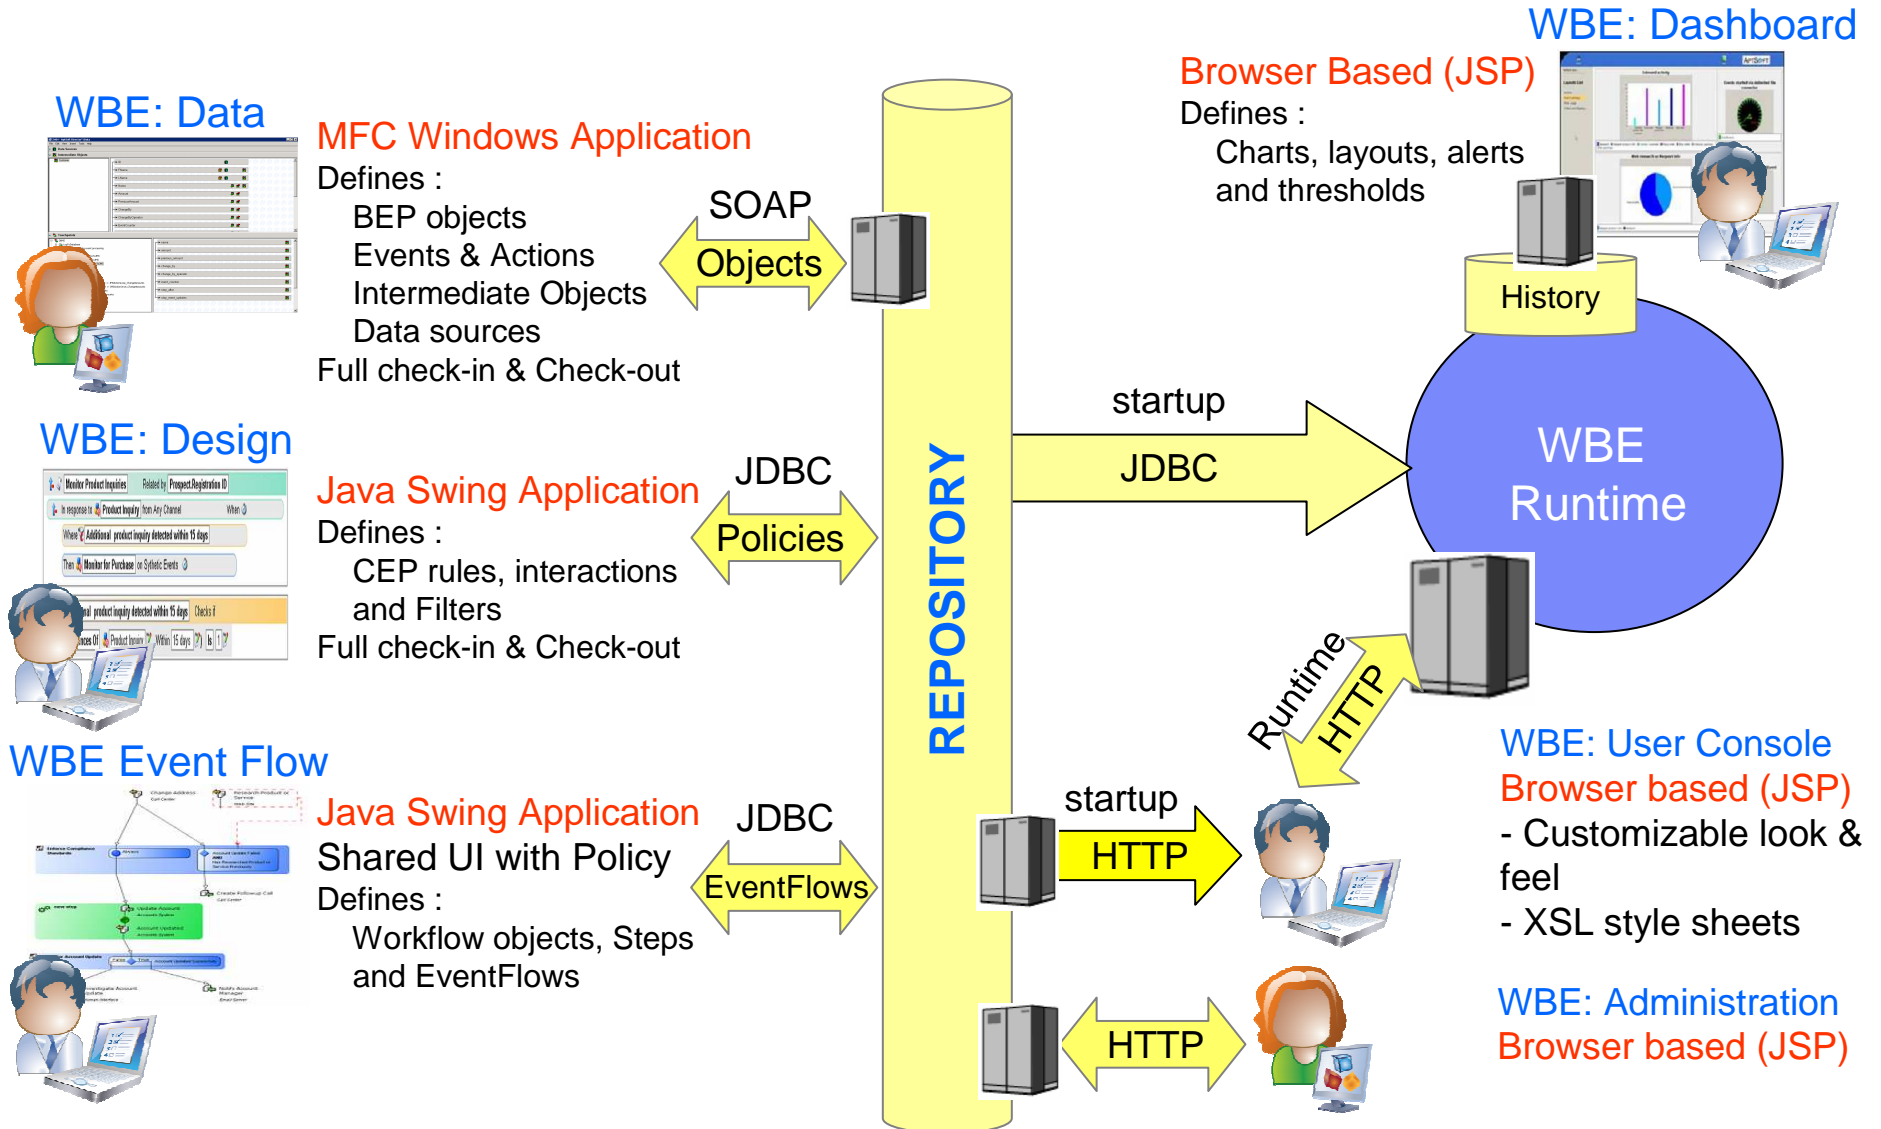

An external system or application that sends Events and/or receives actions from WebSphere Business Events is referred to as a "Touch point".

# WebSphere Business Events v 6.1 Architecture

# WebSphere Business Events Components

# WebSphere Business Events V6.1 (2Q08) (AptSoft Bluewash)

## Base Content

*Existing AptSoft Capability*

*Open source remediation*

*Certified to run on WAS ND, WAS CE, and uses these app servers out of the box*

*Install package*

- including simple install for download*
- setup and usage script for the free download with heavy UCD input*
- SEL enabled installer*

*Bluewash splash screens, copyright statements etc*

*Connector support for integration to WebSphere Business Monitor*

*AptSoft documentation migrated to InfoCenter*

*ITLM enabled*

*Removal of existing AptSoft Licence Keys*

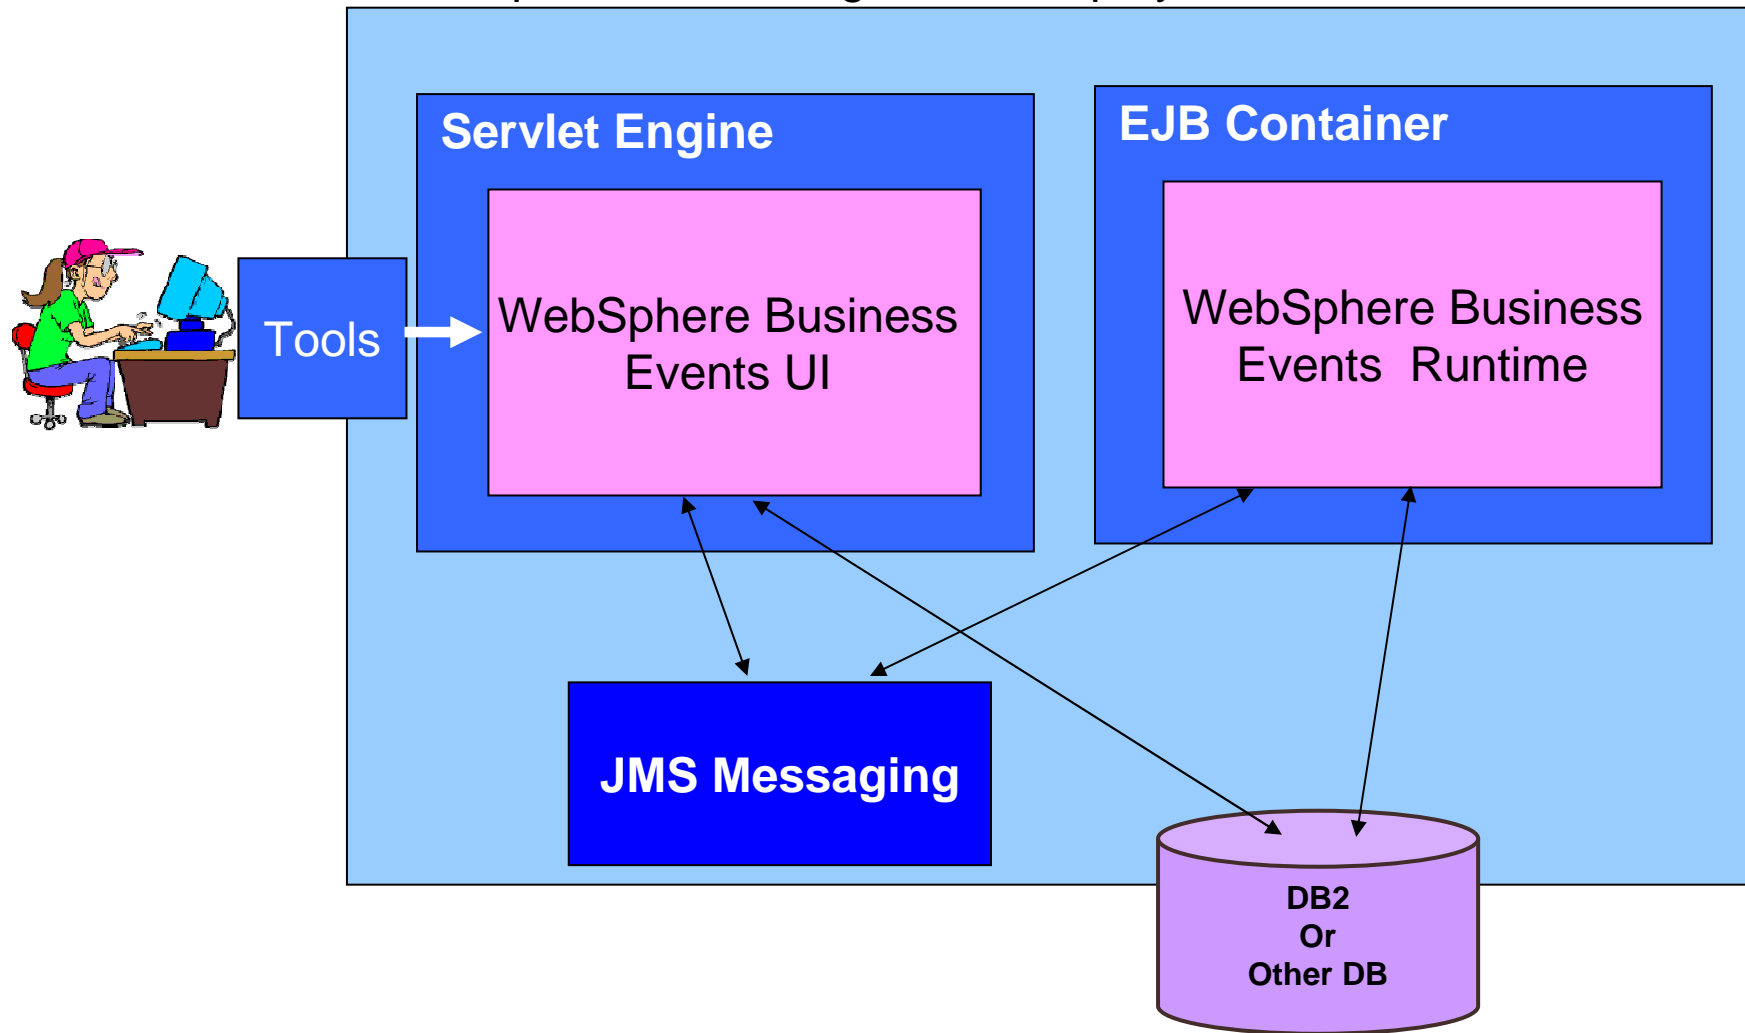

## Migration

*Aptsoft customers will be able to migrate with no changes to their apps  
Seamless compatibility with future release*

# WebSphere Business Events 6.1 Runtime

WebSphere ND – Single node deployment

# Overall Release Objectives Summary

Theme	To be addressed by:	Intended change / enhancement
<p>1. <i>First release of broad-based initiative to lay claim to the Business Event Processing space</i></p> <ul style="list-style-type: none"> <li>▪ <i>Extend existing leadership in Event Processing, SOA and BPM to the Business Events Processing (BEP) space.</i></li> </ul>	<p><i>Bluewash of AptSoft acquisition under the WebSphere Brand</i></p>	<ul style="list-style-type: none"> <li>▪ <i>Existing AptSoft Capability</i></li> <li>▪ <i>Open source remediation</i></li> <li>▪ <i>Certified on WAS CE and ND</i></li> <li>▪ <i>Branding</i></li> <li>▪ <i>Documentation using InfoCenter</i></li> </ul>
<p>2. <i>WebSphere Business Monitor able to consume and react to events emitted by WBE</i></p>	<p><i>WebSphere Business Events and WebSphere Business Monitor interoperate</i></p>	<ul style="list-style-type: none"> <li>▪ <i>WBE Connector support for WBM</i></li> </ul>
<p>3. <i>Free restricted trial version for LoB to try Business Event Processing</i></p>	<p><i>Free self extracting downloadable SDK for non-production use</i></p>	<ul style="list-style-type: none"> <li>▪ <i>Imbed WAS CE and Derby</i></li> <li>▪ <i>Includes setup/usage script</i></li> </ul>
<p>4. <i>Interoperability with WebSphere Message Broker &amp; WebSphere ESB</i></p>	<p><i>Collateral to inform customers on how-to</i></p>	<ul style="list-style-type: none"> <li>▪ <i>Testing</i></li> <li>▪ <i>No product change required</i></li> </ul>

# Offering Plan Content – WebSphere Business Events v6.2

## Base Content Themes

### Update acquired code to IBM standards

- First Class SWG offering
- Improve product quality

### Integrate with the BPM&C stack

- Extend SOE to align with Affinity Products
- Support consistent binding with Affinity Products
- Integration with WESB and WMB
- Tighter integration with WebSphere Business Monitor
- Usage of WSRR to retrieve shared WebSphere portfolio artifacts

### Ability to scale up and out

- Clustering support for HA
- Support for horizontal scalability
- Define and document supported installations
- Create and document performance metrics

### Extend reach

- Integration with WebSphere eXtreme Scale
- Packaging and installation support of WebSphere deployments
- Exploitation of WAS ND

### Competitive and differentiating functionality with LoB focus

- Automatic data sharing across events

### “WBE eXtreme Scale” (New PID)

- Bundle WBE V6.2, WXS V6.1 (separate installs)
- Sense presence of WXS and exploit
- Improved persistence
- Programming interface for preprocessing payload of events

## Extended Content

(stretch goals and ‘agile’ items subject to reprioritization)

### Update acquired code to IBM standards

- Accessibility (size for final priority decision)
- BiDi support – Hebrew and Arabic
- Transactional behaviour

### Integrate with the BPM&C stack

- Integration with ESB tools
- HP-UX, Vista (clients)
- Usage of WSRR for versioning and lifecycle management

### Extend Reach

- Embeddable component for eWAS (Sceptre)
- Complete integration with WAS ND

### Competitive and differentiating functionality with LoB focus

- Event flow enhancements
- Synchronous support
- Runtime data garbage collection
- Active termination
- Adjusting the execution of an application

## Migration

**Backward compatibility for artifacts to WBE v6.1 and AptSoft v4.5**

**Seamless technical upgrade from WBE v6.1**

# New – WebSphere Business Events eXtreme Scale

*Correlate without Coding, Scale without Limitations*

## Designed to Provide:

- Unparalleled speed and real-time correlation at the fingertips of the business user
- Capability for processing massive cloud of raw events, including:

**Cache for extreme speed  
and access**

**Optimal distribution across  
multiple servers**

**Scalability across  
across geographies**

# IBM Powers Events on the Mainframe

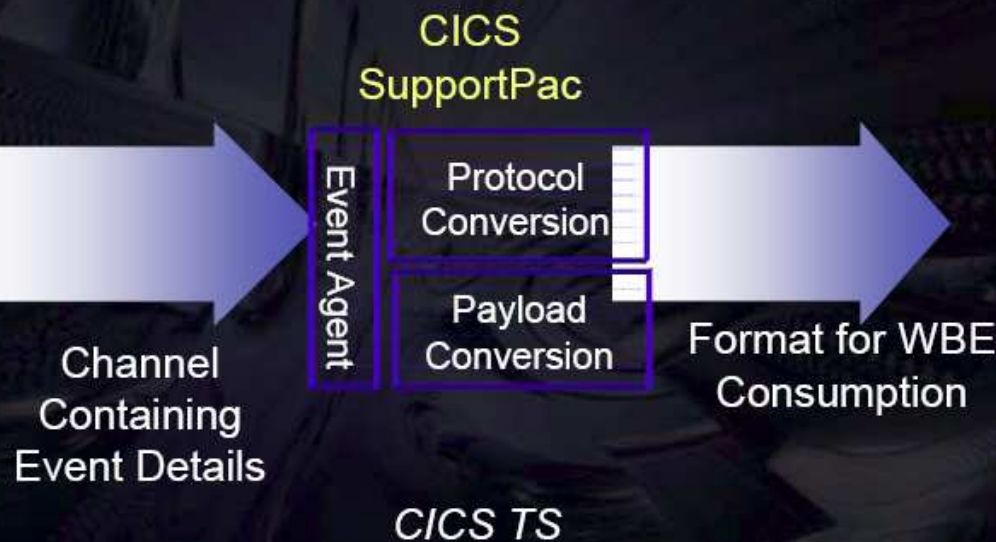

*Providing Business Event Processing to nearly 3,000 CICS users*

## Event Sources

## Conversion

## Business Action

**Designed to achieve visibility, business agility, governance and fraud recognition**

# Product Roadmap

## WebSphere Business Events v6.2

- Distributed platforms
  - zLinux
- Improved Stack Integration (WMB, WESB, WAS, BAM, WPS, WSRR & WBSF)
- Globalisation
  - QoS – High throughput, Scaling and HA
  - eXtreme Scale bundle PID

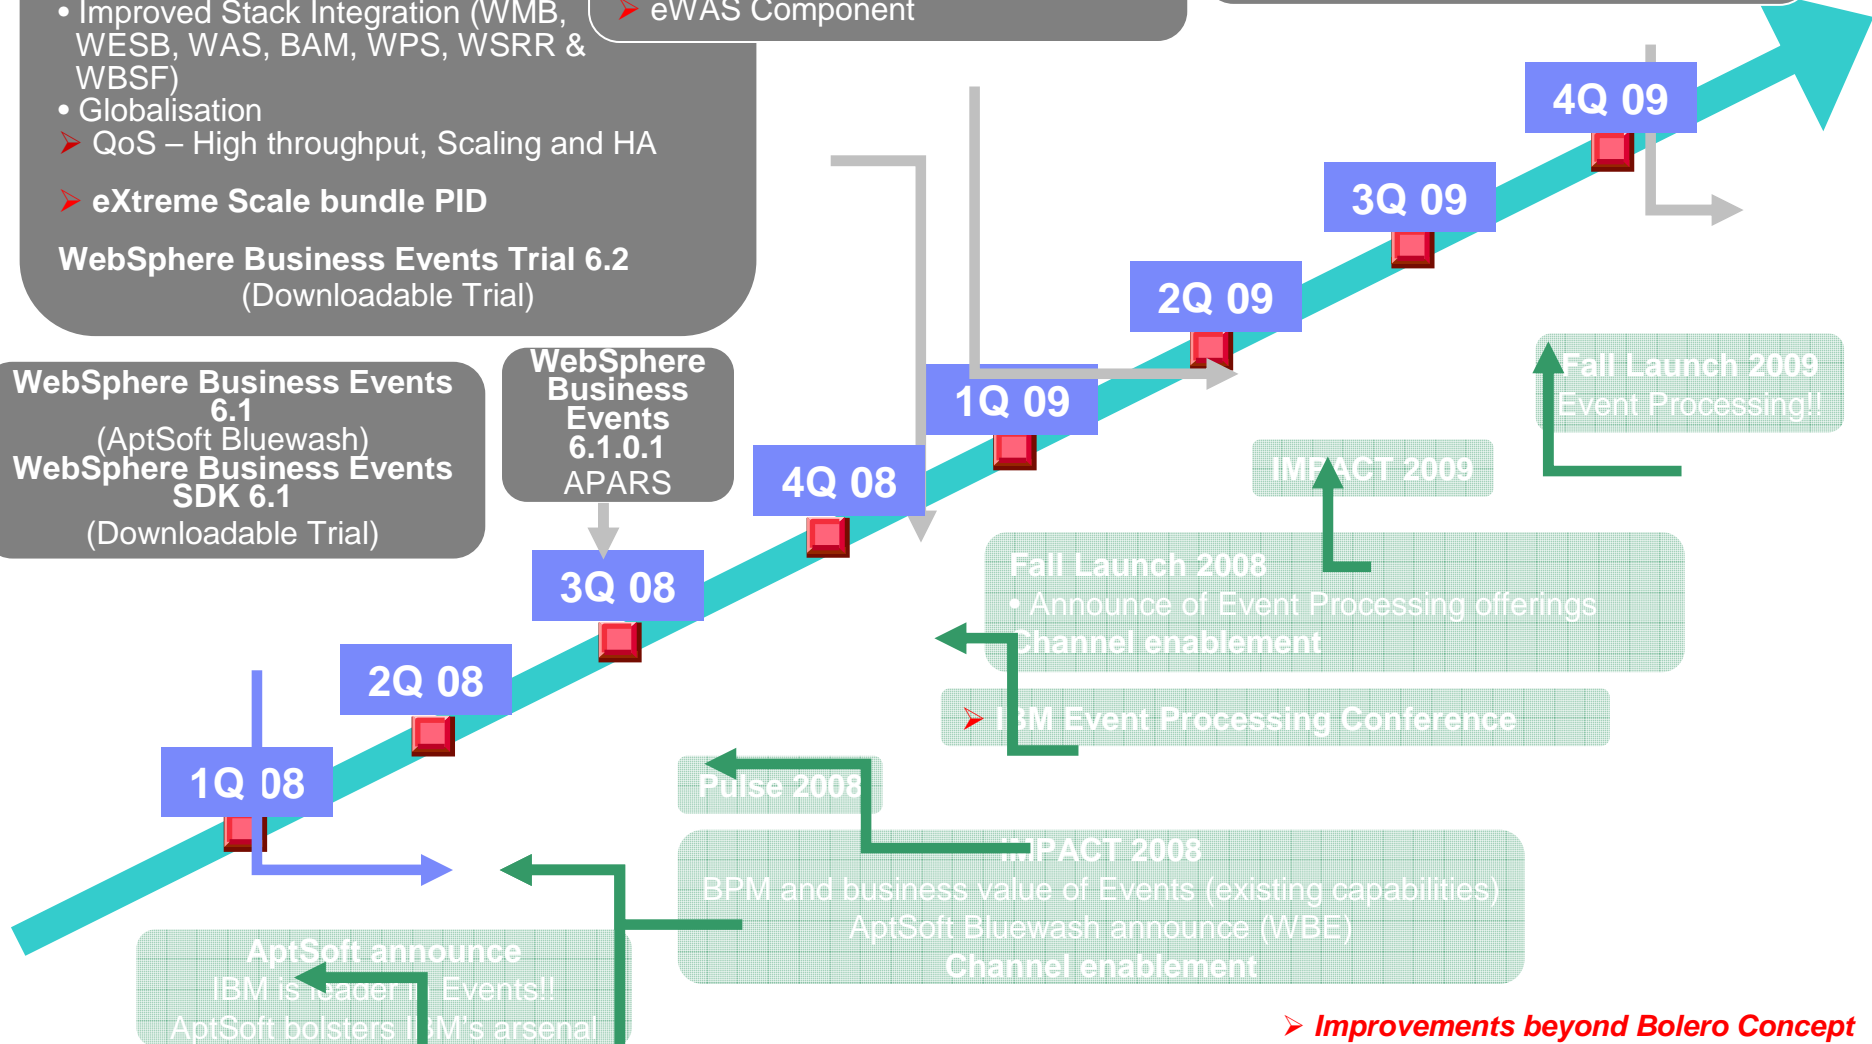

WebSphere Business Events Trial 6.2  
(Downloadable Trial)

## WebSphere Business Events v6.2.1

- zOS,
  - CICS Support (Europa)
  - eWAS Component

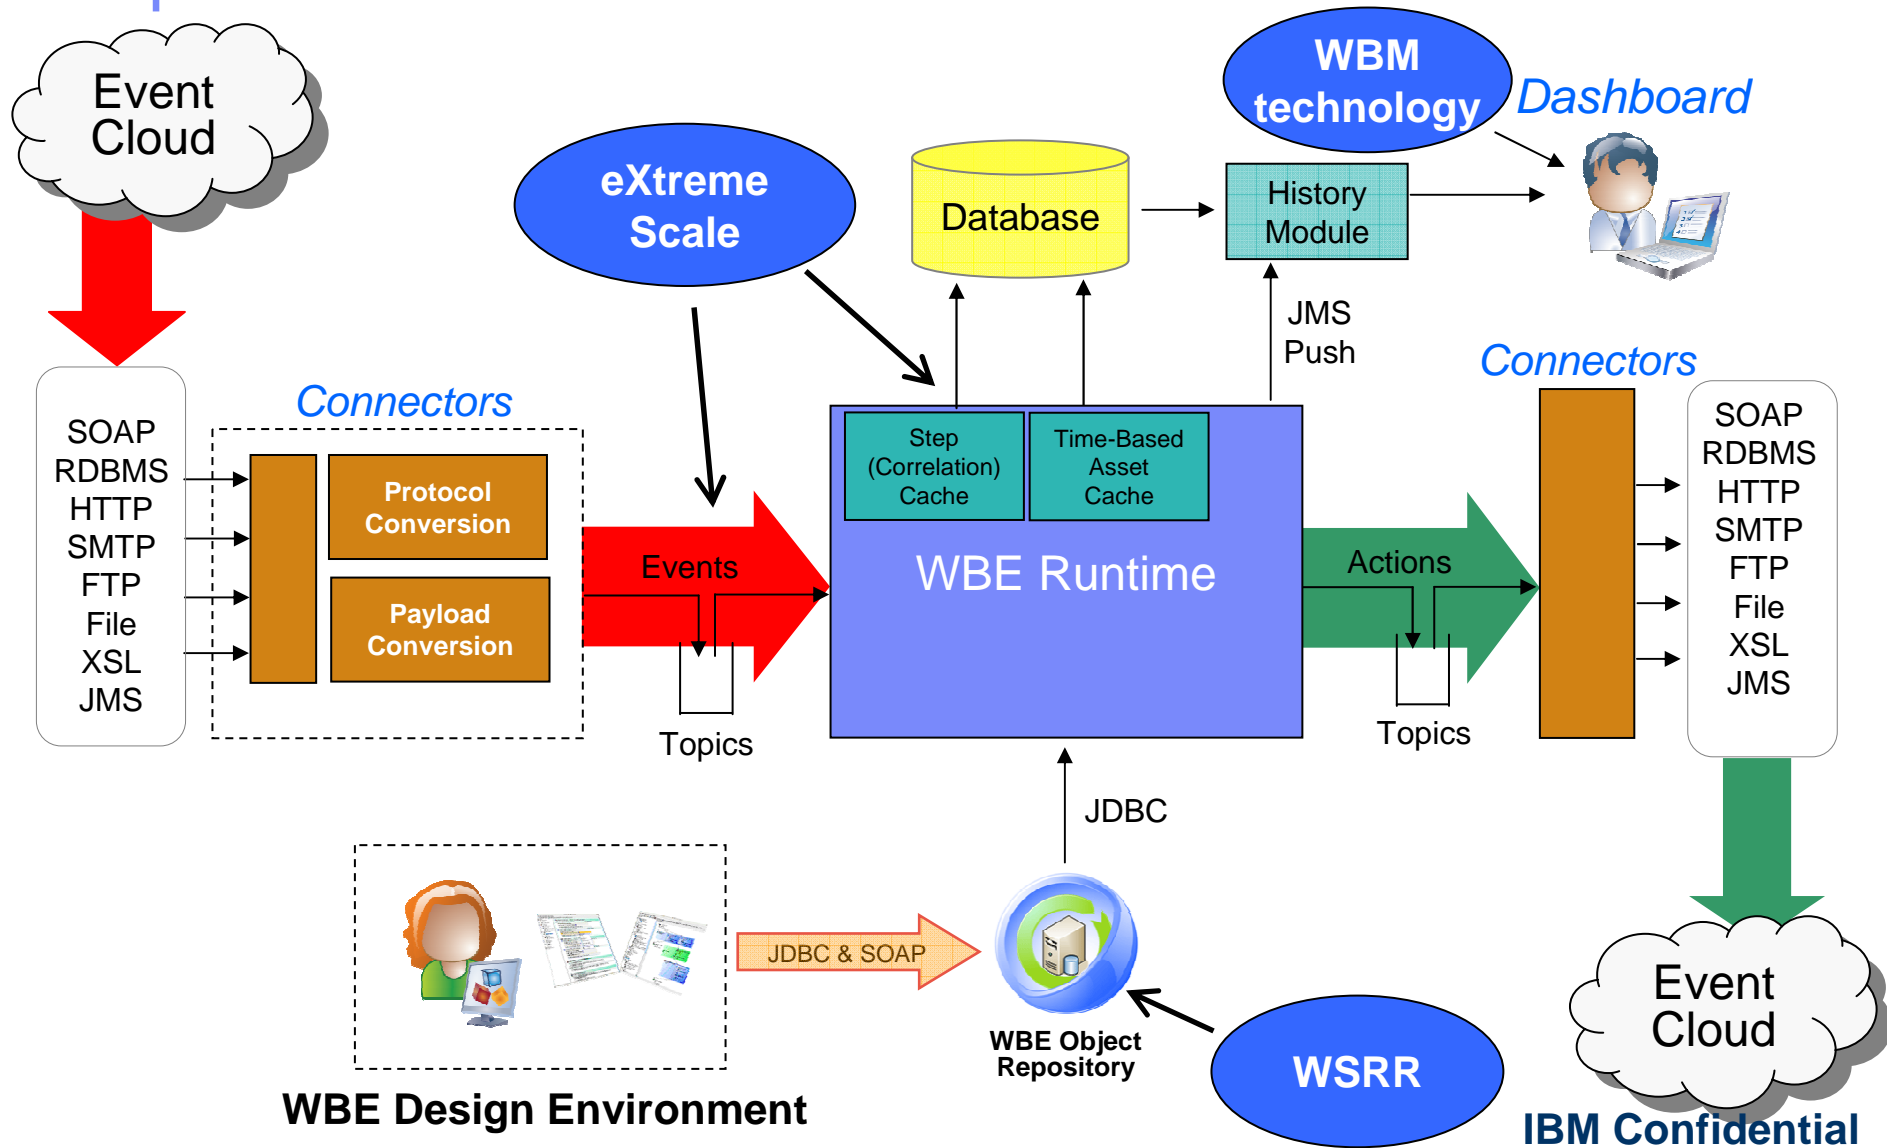

WebSphere Business Events v7  
WebSphere Business Events v7 zOS

- Distributed platforms and zOS
- QoS - High throughput Low latency

➢ *Improvements beyond Bolero Concept*

# Proposed v6.x Architecture

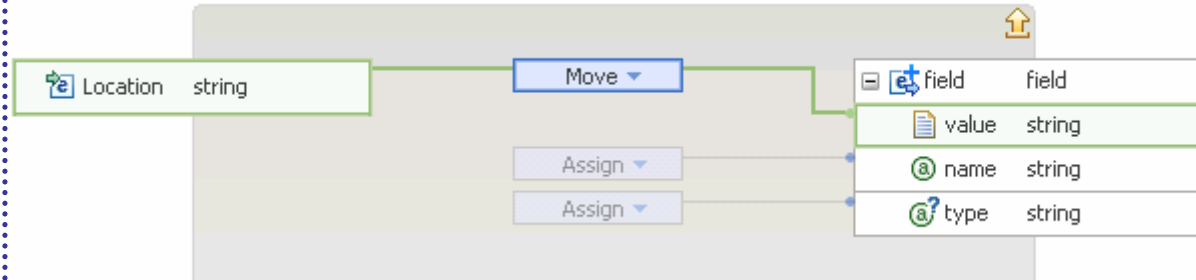

IBM Confidential

# Interoperability with Enterprise Service Bus today

Transformation to WBE format – e.g XSLT, ESQL, Java

WMB message flow

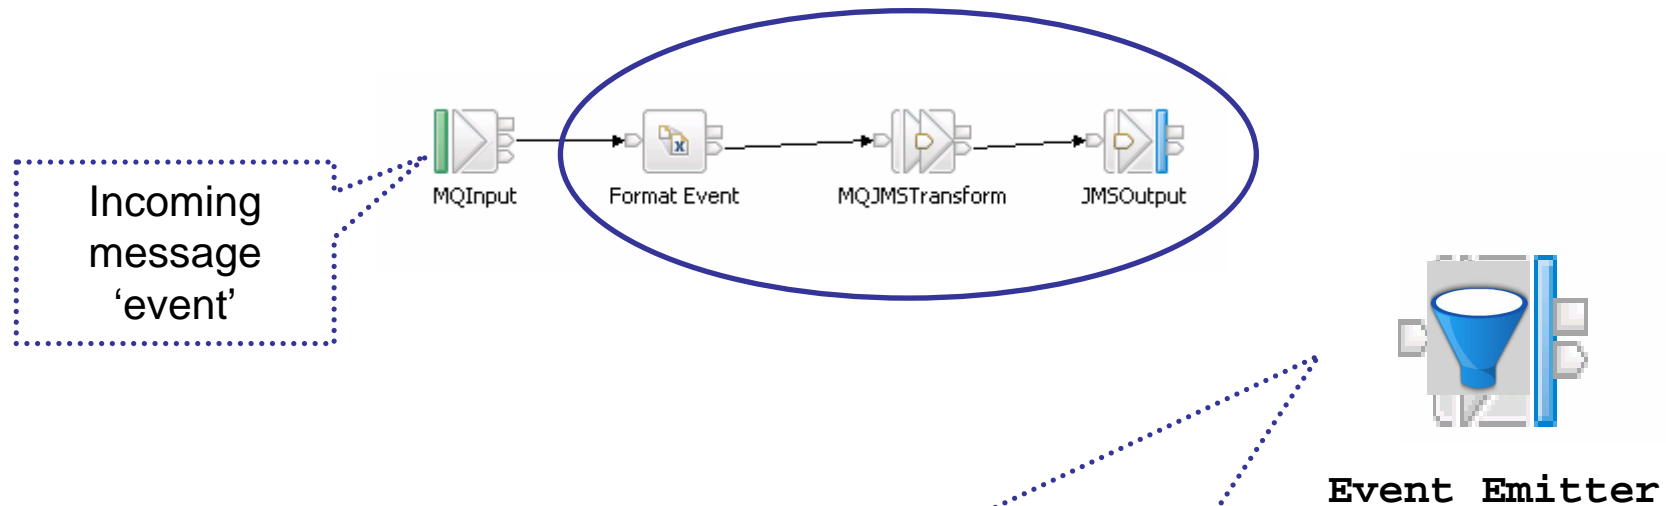

Incoming message 'event'

JMS messaging to WBE server

Description		<b>JMSOutput Node Properties - JMSOutput</b>	
Basic			
JMS Connection			
Advanced		JMS provider name*	WebSphere MQ
Validation		Initial context factory*	com.sun.jndi.fscontext.RefFSContextFactory
		Location JNDI bindings*	file:/C:/temp
		Connection factory name*	TopicConnectionFactory

JMS 'publish' event to WBE

# Mediation primitives for WBE

Replace with 'Event Emitter' primitive

- Removes need for JMS configuration
- Reformats the message into format for WebSphere Business Events

Also 'Action Listener' input node for receiving 'action' messages from WebSphere Business Events

## WebSphere Business Events future releases

### Continuing focus on Business-user tools

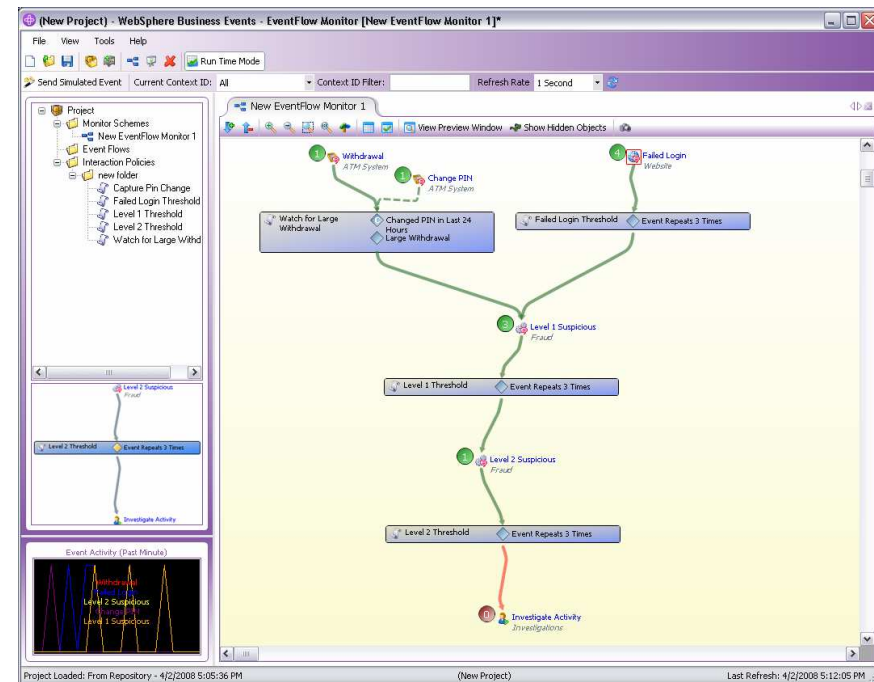

- Event flow simulator for test
- Event flow monitor for test and production

### Advanced Event Processing rules

- Cross-event data
- Context termination

### Increasing Qualities of Service

- Enhanced scalability and transactionality
- Increased throughput
- Improved debugging

Further integration with the WebSphere family

**IBM Confidential**

## Direction, Priorities, Focus – Today and Tomorrow

### Sources & Connections

- Broadest spectrum of sources and connections
- **Connections:** Direct JMS, WebSphere ESBs, WBE connectors etc.
- **Sources:** BPM, RFID, CICS based mainframe events

### Future

- Smart pattern detection (based on events warehouse)
- Support unstructured events voice and video
- Extend support to the z/OS platform

### Volume & Scale

- Massive event volumes and Linear scalability
- High QoS
- In-memory management Supports terabytes of data; Thousands of servers

### Future

- Ever-expanding “event cloud”
  - Enhanced cache
  - Higher availability
  - Distributed event processing
- Ever-decreasing latencies via streaming interfaces

### Business User

- Codeless, graphical business user tooling
- Detect actionable patterns
- Correspond to “business situations”

### Future

- Enhanced simulations
- Industry focus
- Predict and pre-empt
  - Historical analysis,
  - Predictive analytics,
  - Impact analysis

# Business Event Processing – Direction

## Agile Event Processing

Business user can extract events from multiple channels, detect actionable patterns that correspond to “business situations” and drive automated action

### Integrated with:

- WebSphere Business Monitor
- WebSphere Process Server
- WebSphere Business Services Fabric
- WebSphere Message Broker
- WebSphere ESB

### Key Customer Benefits:

- Allows earlier and more intelligent insight leading to timely and effective response
- Empowers the business user to manage the business event process
- Provides connectivity to the widest range of business events across the enterprise

## Scalable Event Processing

### Ever-expanding “event cloud”

- Enhanced cache for LRU events
- High availability
- Adapters and connectivity

### Determinism

- Realtime JVM

### Topology

- Distributed event processing (e.g., at the edges)

### Ever-decreasing latencies

- Streaming interface

### Business Events + IT Events

### Key Customer Benefits:

- Start small with Business Event Processing and scale without discontinuity
- Even more intelligent insight

## Intelligent Event Processing

### Event warehouse

- Keep track of actionable events for future mining, using same tools

### Smart advice

- Track of event flows and subsequent actions

### Unstructured events

- Voice, Video

### Pattern recognition

- Mine event warehouse to discover interaction patterns

### Predict and pre-empt

- Historical analysis
- Predictive analytics
- Impact analysis

### Key Customer Benefits:

- Action based on empirical evidence
- Identify potential problems before they occur and act immediately to pre-empt
- Assess business impact based on historical data of event

Today

2010

2012

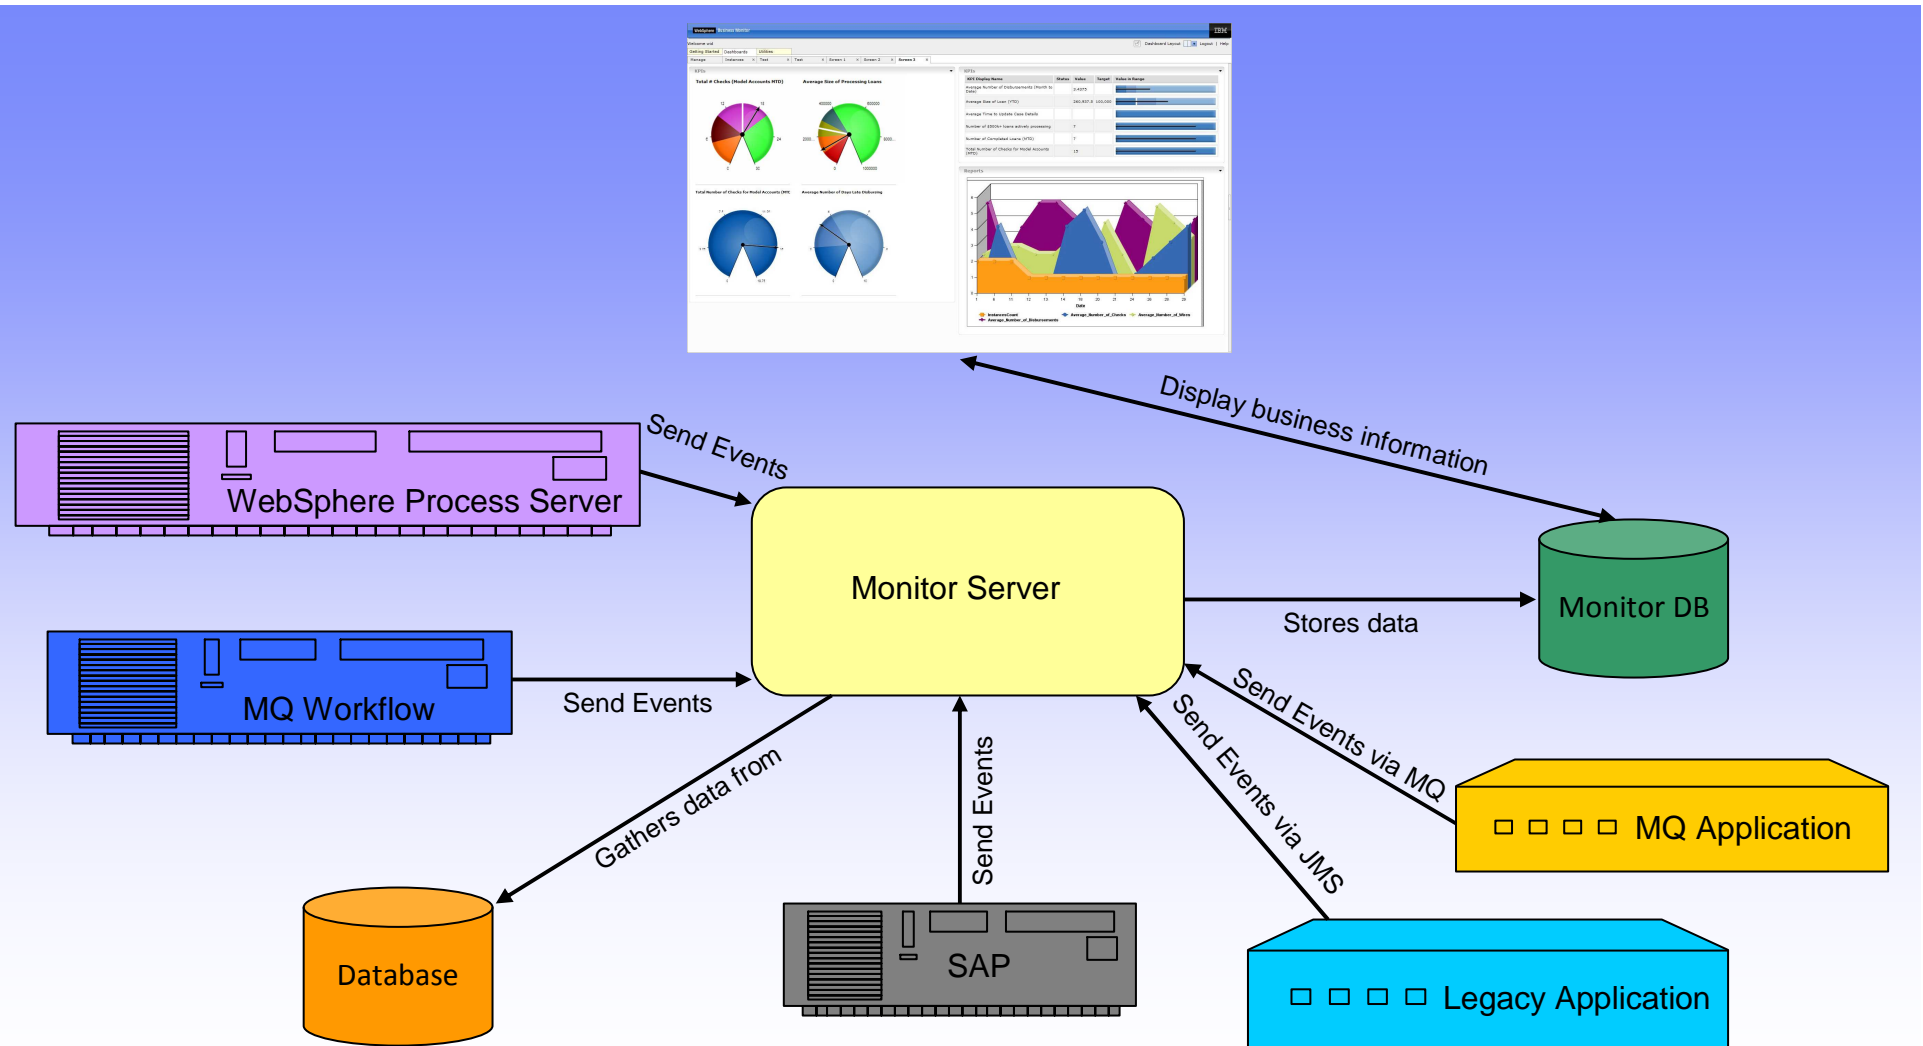

## Summary

- Business Event Processing:
  - *Distilling disparate events into actionable patterns to predict and respond to new opportunities and threats*
  - *Enhances BPM and SOA*
- WebSphere Business Events
  - *Codeless, graphical authoring tools*
  - *Detect, evaluate and react to business events in real time*
- Interoperation and integration across WebSphere and SWG portfolio

# How does Monitor accomplish this?

The workshops, sessions and materials have been prepared by IBM or the session speakers and reflect their own views. They are provided for informational purposes only, and are neither intended to, nor shall have the effect of being, legal or other guidance or advice to any participant. While efforts were made to verify the completeness and accuracy of the information contained in this presentation, it is provided AS IS without warranty of any kind, express or implied. IBM shall not be responsible for any damages arising out of the use of, or otherwise related to, this presentation or any other materials. Nothing contained in this presentation is intended to, nor shall have the effect of, creating any warranties or representations from IBM or its suppliers or licensors, or altering the terms and conditions of the applicable license agreement governing the use of IBM software.

References in this presentation to IBM products, programs, or services do not imply that they will be available in all countries in which IBM operates. Product release dates and/or capabilities referenced in this presentation may change at any time at IBM's sole discretion based on market opportunities or other factors, and are not intended to be a commitment to future product or feature availability in any way. Nothing contained in these materials is intended to, nor shall have the effect of, stating or implying that any activities undertaken by you will result in any specific sales, revenue growth or other results.

Performance is based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput or performance that any user will experience will vary depending upon many factors, including considerations such as the amount of

multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve results similar to those stated here.

All customer examples described are presented as illustrations of how those customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics may vary by customer.
