

# IBM Tivoli Composite Applications Manager for Transactions V7.3

## Internet Service Monitoring DHCP configuration

© 2012 IBM Corporation

IBM Tivoli Composite Applications Manager for Transactions V7.3, Internet Service Monitoring Dynamic Host Configuration Protocol (DHCP) configuration.

## Assumptions

Assumptions include that you have these skills, knowledge, and environment:

- Familiarity with Internet Service Monitoring profiles
- Ability to use the Tivoli Enterprise Portal Internet Service Monitoring Configuration Tool
- Completed installation of IBM Tivoli Composite Application Manager for Transactions, Internet Service Monitoring (ISM) V7.3

The developer assumes that you are familiar with Internet Service Monitoring profiles and can use the Tivoli Enterprise Portal Internet Service Monitoring Configuration Tool, and that you have completed IBM Tivoli Composite Application Manager for Transactions ISM installation.

## Objectives

When you complete this module, you can perform these tasks:

- Create an Internet Service Monitoring DHCP monitor
- Configure the monitor for a specific DHCP server
- Specify conditions for success or failure
- Create a profile to distribute and run the monitor on an Internet Service Monitoring agent

## Objectives.

When you complete this module, you can perform these tasks:

- Create an Internet Service Monitoring DHCP monitor
- Configure the monitor for a specific DHCP server
- Specify conditions for success or failure
- Create a profile to distribute and run the monitor on an Internet Service Monitoring agent

## Solution

There are several steps to complete the DHCP monitor configuration. The configuration uses the ISM agent and the ISM GUI, which is accessed through the IBM Tivoli Monitoring Tivoli Enterprise Portal (TEP).

Several steps are required to configure IBM Tivoli Composite Application Manager for Transactions ISM DHCP monitor. The configuration uses the ISM agent, and the ISM Configuration GUI which is accessed through the Tivoli Monitoring portal.

## Configuration

Steps to configure the Internet Services Monitor agent to create a DHCP monitor:

1. Log in to the Tivoli Enterprise Portal
2. Start the Internet Services Monitor Configuration Editor
3. Create a DHCP profile
4. Enter the DHCP server parameters
5. Distribute the DHCP monitor
6. Schedule the DHCP monitor to run

### Configuration.

This is a list of steps to configure the Internet Services Monitor (ISM) agent to create a DHCP monitor:

1. Log in to the Tivoli Enterprise Portal
2. Start the Internet Services Monitor Configuration Editor
3. Create a DHCP profile
4. Enter the DHCP server parameters
5. Distribute the DHCP monitor
6. Schedule the DHCP monitor to run

## (1 of 7) Configuring the ISM agent to create a DHCP monitor

1. Log in to the Tivoli Enterprise Portal
2. Start the ISM Configuration Editor; click **ISM** icon

3. Click the **Create Profile** icon

6

© 2012 IBM Corporation

Step 1. Log in to the Tivoli Enterprise Portal.

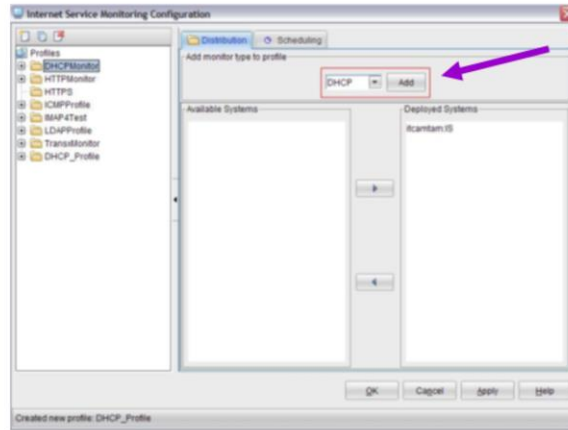

Step 2. To start the ISM Configuration Editor, click **ISM** icon on the main tool bar.

Step 3. Click the **Create Profile** icon. An **Input Profile Name** window displays.

## (2 of 7) Configuring the ISM agent to create a DHCP monitor

4. Enter the DHCP server parameters:

- a. In the Input Profile Name window, enter a name for the profile
- b. Select the type for the new profile, **DHCP** in this case, and click **Add**

7

Step 4a. In the **Input Profile Name** window, type a name for the Profile and click **OK**.

Step 4b. Select the type for the new profile, **DHCP** in this case, and click **Add**.

### (3 of 7) Configuring the ISM agent to create a DHCP monitor

Expand the new profile, and then select **DHCP**

Enter values for the DHCP server that is to be monitored

In the Internet Service Monitoring Configuration window, click the new DHCP monitor.

Type values into the fields for **server**, **local IP**, and **description**. Select the check box for **Active**.

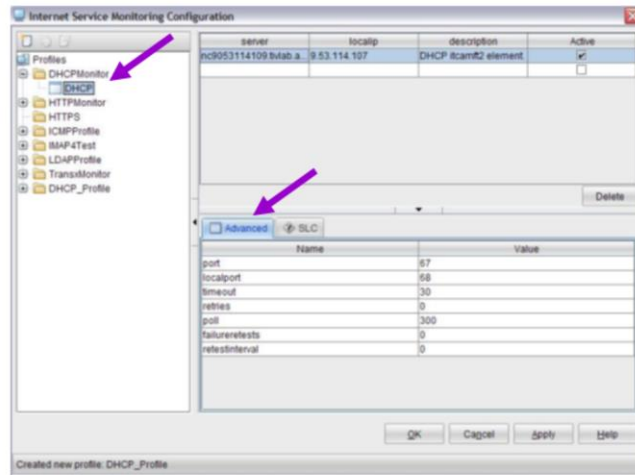

## (4 of 7) Configuring the ISM agent to create a DHCP monitor

4. Enter values for the DHCP server to be monitored

Description of the parameter values:

- **Server:** Host name of the DHCP server
- **Localip:** IP address of the ISM agent system
- **Local Port:** Port on the ISM agent system that is used to send Inform request
- **Port:** Port on which the DHCP server listens for requests

Step 4c. Expand the new profile and click **DHCP**.

Step 4d. Enter values for the DHCP server that is to be monitored.

On the **Advanced** tab, the fields are populated with default values. These values are typically correct, however you must set them to the actual ports used by the DHCP server being monitored. In addition, the other fields with poll interval and retries must be tuned for the environment.

The most important values in the DHCP configuration are:

**Server:** The host name of the system where the DHCP server is running.

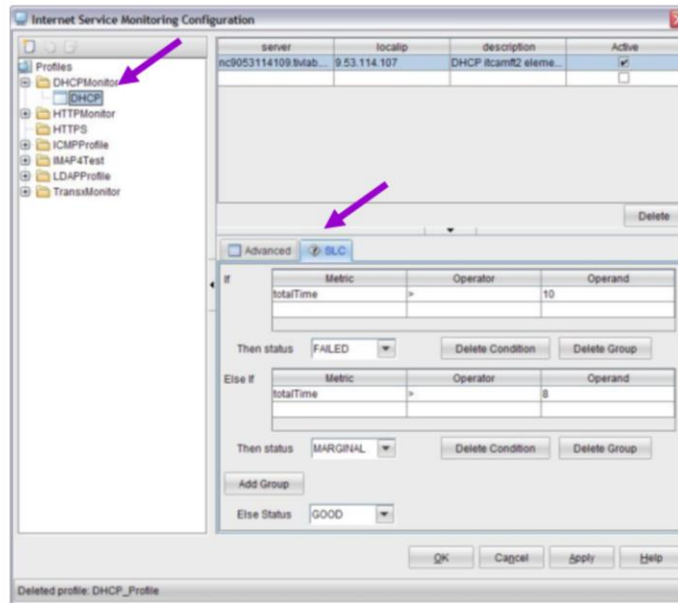

**Localip:** The IP address of the ISM agent system where the monitor is to be run.

**Local Port:** The port on the ISM agent system used to send the DHCP Inform request.

**Port:** The port that the DHCP server listens. Well known port is 67.

## (5 of 7) Configuring the ISM agent to create a DHCP monitor

- 4e. Use the **SLC** tab to configure the status conditions for the monitor.
- 4f. In the **Profiles** list, click **DHCP Monitor**.

10

Step 4e. Use the **SLC** tab to configure the status conditions and click **Apply** at the bottom of the screen.

Step 4f. In the **Profiles** list, click **DHCP Monitor**. The add window closes and returns you to the screen with the **Distribution** and **Scheduling** tabs. The **SLC** tab is used to configure the status for the monitor. You can customize the conditions for the particular DHCP server.

## (6 of 7) Configuring the ISM agent to create a DHCP monitor

5. Distribute the DHCP monitor. After the monitor is configured, it is deployed to an ISM agent. Select the monitor, and click the arrow to deploy the agent.

11

Step 5. Distribute the DHCP monitor. When the DHCP monitor is highlighted in the **Profiles** list, the Available Systems view lists ISM agents that you can deploy the monitor to.

Chose an ISM agent system and deploy the DHCP monitor. In the Available Systems column, click the monitor, and then click the arrow to deploy the monitor. The image shows the window after the monitor is deployed.

## (7 of 7) Configuring the ISM agent to create a DHCP monitor

6. The final step is to set a schedule for the monitor. The **All** button configures the monitor continuously, and the **Clear** button, clears the schedule.

12

The last step is to set a schedule for the monitor. The **All** button configures the monitor to run continuously. Alternatively, to specify times, click them or use drag to select several time periods. When configured, click **Apply**.

## Data displayed for the DHCP monitor

When the DHCP monitor is running correctly, there is data in the Service Statistics view of the Tivoli Enterprise Portal

13

When the DHCP monitor is running correctly, data displays in the Service Statistics view in the Tivoli Enterprise Portal.

## Process review

1. Log in to the Tivoli Enterprise Portal
2. Start the Internet Service Monitoring Configuration Editor
3. Create a DHCP profile
4. Enter the DHCP server parameters
5. Distribute the DHCP monitor
6. Schedule the DHCP monitor to run

### Process review.

The major steps in this module are to log in and start the ISM Configuration Editor. Then, Create a DHCP Profile, distribute it to specific ISM agents, and create a schedule.

## Summary

Now that you have completed this module, you can perform these tasks:

- Create an Internet Service Monitoring DHCP monitor
- Configure the monitor for a specific DHCP server
- Specify conditions for success or failure
- Create a profile to distribute and run the monitor on an Internet Service Monitoring agent

## Summary.

Now that you have completed this module, you can perform these tasks:

- Create an Internet Service Monitoring DHCP monitor
- Configure the monitor for a specific DHCP server
- Specify conditions for success or failure
- Create a profile to distribute and run the monitor on an Internet Service Monitoring agent
